

1726 for King Victor Amadeus II of Savoy.

Juvenal, Decimus Junius (c.55–c.140), Roman poet. His harsh, bitter and direct satires denounced the affectations and immorality of the Empire. See also pp.1229.

Jyväskylä, port city in s central Finland, at the n end of Lake Päijänne. Chartered in 1837, it is the site of the first Finnish-language secondary school. Its industries include paper and wood products. Pop. (1976) 61,596.

K

K, eleventh letter of the alphabet, derived from the Semitic letter *kaph*, possibly from an earlier Egyptian hieroglyph for a hand. In Greek it became *kappa*, and in that form passed to the Romans. In English it generally has the same sound as the hard form of *c*, as in *kitten*, although in front of an *n*, as in *knot* or *knitting*, it is silent. See also pp.608–609.

K2 (Mount Godwin-Austen), peak in the Karakoram range, n Kashmir: second-highest peak in the world. First scaled in 1954 by the Italian Ardito Desio, it was named after the British surveyor and explorer Henry Godwin-Austen. Height: 8,616m (28,267ft).

Ka, or koi, in Egyptian mythology, a guardian spirit. Born with, and residing in, a person's body, it lives on after the body's death. It is often thought of, and translated, as a double of the person. Food for the Ka was customarily buried with the body. In Indian mythology, Ka is the absolute or BRAHMA.

Kaaba, or Ka'ba, central shrine of ISLAM, in the Great Mosque in MECCA. The object of pilgrimage, it is a cube of stone and marble, in one corner of which rests the Black Stone, which by tradition was given to Adam on his fall. Each pilgrim circles the shrine seven times, touching the Black Stone for forgiveness.

Kabaka, official title of the leader of the Buganda, a tribe in Uganda. The kabakas were among the few African rulers to use European colonization to further their own interests. The last kabaka, Mutesa II (r.1939–66), was deposed by Milton Obote, and the office was abolished.

Kabalevsky, Dimitri Borisovich (1904–), Russian post-Romantic composer of songs, piano pieces, concertos and operas including *Colas Breugnot* (1938) and a popular ballet *The Golden Spikes* (1940).

Kabbala, Jewish systematic mysticism, based on an interpretation of the scriptures that perceived mysteries and spiritual revelations in every word, letter or accent, especially in names for God. It achieved some popularity in the 13th century AD as a study of two main sources: the *Sefer Yetzira* (3rd century AD) and the *Sefer ha-Zohar* (allegedly based on a 2nd-century text). By the 15th century the Kabbala had a messianic interpretation, and has since had continuing influence among Hasidic Jews. See also p.1912.

Kabuki Theatre, stylish mixture of dance and music, mime and naturalism; a major form of moralizing entertainment in Japan since the mid-17th century. In contrast to the *no* theatre, which originated with the nobility, Kabuki was the theatre of the common people. It emphasizes visual appeal and acting skills.

Kābul, city and capital of Afghanistan, on the River Kābul. It was taken by GENGHIS KHAN in the 13th century and became part of the MOGUL EMPIRE 1526–1738. It was occupied by the British in 1842 and 1879 and modernized by the Emir ABD ER-RAHMAN KHAN, in the late 19th century, after the country had become independent. Today its products include textiles, leather goods, furniture and glass. Pop. (1973 est.) 318,094.

Kabyle, Algerian ethnic group of Berber origin living in farming villages in n Algeria. Each village is administered by

an assembly of adult males and divided into rival clans. They are MUSLIMS who follow a CASTE system.

Kádár, János (1912–), Hungarian Politician, premier 1956–58 and 1961–65. Active in the Communist Party since his youth, he fought in the resistance movement during WWII. From 1948–50, he served as Minister of the Interior and he was deputy Premier in Imre NAGY's government during the 1956 Hungarian revolution. He replaced Nagy as Premier on 4 Nov 1956, and pursued a policy of accommodation with the Soviets. See also pp.1725, 1725.

Kaddish, ancient Jewish prayer still in use particularly at services of mourning. It is a formal statement of praise and faith in the coming of God's Kingdom.

Kaden-Bandrowski, Julius (1885–1944), Polish short story writer and novelist whose works, including *Black Wings* (1928–29), are realistic portrayals of contemporary Poland.

Kadesh, city in ancient Palestine (w Syria), 24km (15 miles) sw of the modern city of Homs on the River Orontes. It was the scene of the battle between RAMESSES II and the HITTITES (c.1300 BC), which resulted in a victory for Rameses.

Kaffir, term formerly applied to any member of the Bantu races of South Africa (especially the XHOSA); now considered derogatory. The word derives from the Arabic *kafir* (unbeliever), and was also used to describe a native of Kafiristan (Afghanistan). It may also be spelt Kafir, Kaffer or Caffre. A long series of South African wars (1779–1878) between Bantus and Boers are often called the KAFFIR WARS.

Kaffir cat, also called African wild cat, small striped cat found in Africa, Asia and S Europe. It is thought to be an ancestor of the domestic cat. Length: to 110cm (43in) overall. Family Felidae; species *Felis caesia*.

Kaffir Wars, name given by the Cape colonists in southern Africa to the series of wars with the local people, mostly of the Xhosa tribe. African writers now call them the Wars of Dispossession. They began in 1779 and lasted until 1879, and when they ended the Xhosa had lost most of their lands and were confined to the Transkei. In 1853 part of their lands (British Kaffraria) was incorporated into the Cape Colony by the British for white settlement.

Kafirs, or Nuristanis, people of the Hindu Kush mountains in NE Afghanistan, who speak Dardic dialects. The women cultivate cereals; the men are hunters and herdsmen. Islam was introduced in 1895–96 against fierce opposition.

Kafka, Franz (1883–1924), Austrian novelist. The son of a successful Jewish businessman, he suffered under his father's dominance. Little known in his lifetime, he became famous after WWII with the English translation of his novels, such as *Metamorphosis* (1912), *The Trial* (1925), *The Castle* (1926), and *America* (1927). Short stories, with autobiographical undertones, foreshadowed the novels.

Kafre. See KHAFRE.

Kagan. See BUHARA.

Kagu, extremely rare, almost flightless, heron-sized New Caledonian bird. It has a large head with back-pointing crest, large black-and-white barred wings and orange-red legs. It feeds on insects and worms, and emits harsh calls, chiefly at night. Length: 56cm (22in). Species: *Rhynchosetos jubanus*.

Kagu-tsuchi, also called Ho-musubi, the god of fire in Japanese mythology. He was the destructive nature of fire but could be invoked to offer his protection.

Kahn, Gustave (1859–1936), French poet. An inaugurator of VERS LIBRE and a Symbolist, he wrote a preface explaining these terms in *Premiers Poèmes* (1897), a collection comprising his earlier volumes *Palais Nomades* (1887), *Chansons d'amant* (1891) and *Le Livre d'images* (1897).

Kahn, Louis Isadore (1901–74), us architect. His design for the Yale University Art Gallery (1953) included a space-frame ceiling and was considered a depar-

ture from the International Style. One of his most important works is the Richards Medical Research Centre at the University of Pennsylvania, Philadelphia (1957–61).

Kaieteur Falls, waterfalls on the River Potaro in the Guyana Highlands, central Guyana. They were discovered in 1870 by Barrington Brown of the us Geological Survey. Height: 226m (741ft). The surrounding area became Kaieteur National Park in 1930.

Kaikouras, two parallel mountain ranges in the NE of New Zealand's South Island. The highest peak is Mt Tapuenuku (2,885m; 9,465ft) in the NW part.

Kaimanawas, mountain range in the centre of New Zealand's North Island, rising to about 1,980m (6,500ft). The mountains are a popular deer-hunting area.

Kaingang. See CAINGANG.

Kaiser, German title equal to emperor. It derives from the Roman title Caesar and was first connected with Germany when OTTO I became Emperor of the HOLY ROMAN EMPIRE in 962. The last Kaiser was WILHELM II (r.1888–1918), whose father had adopted the title after the Franco-Prussian war of 1871.

Kaiser, Georg (1878–1945), German Expressionist dramatist. His reputation was achieved with *From Morn to Midnight* (1916). He abandoned realism and attacked the ethical futility of a civilization which he felt was bent on self-destruction. *The Corral* (1917) and *Gas, Parts I & II* (1918, 1920) reiterated this theme. After his work was proscribed by the Nazis in 1933, Kaiser was compelled to emigrate to Switzerland.

Kaiserslautern, city in w West Germany, on the River Lauter. The city was devastated during WWII. It has part of the campus of the University of Trier and Kaiserslautern (1970) and the remains of a 9th-century castle built by CHARLEMAGNE. Industries: ironworks, textiles, furniture, machinery, motor vehicles. Pop. (1974) 102,450.

Kajar dynasty. See QAJAR DYNASTY.

Kakapo, largest and most brightly coloured (moss-green and yellow-green with dark barring) of New Zealand parrots. It is now found only in Fiordland and Stewart Is.

Kala-azar, insect-borne disease carrying a high mortality and caused by infection with the parasite *Leishmania donovani*, apparently transmitted by the sandfly. The spleen is particularly affected and becomes enlarged. Additional symptoms include fever, anaemia and wasting. The disease occurs primarily along the Mediterranean coast, in Asia, and in South and Central America and Mexico.

Kalahari, desert region in Namibia, Botswana and South Africa, between the Orange and Zambezi rivers. Thorn scrub and forest grow in some parts of the desert, and it is possible to graze animals during the rainy season. The Kalahari is inhabited by the BUSHMEN, as well as by Africans and Europeans primarily engaged in rearing cattle. Area: 910,000sq km (351,000sq miles).

Kalanchoe, genus of succulent, perennial plants native to Old World tropics. They have oval, waxy leaves and scarlet flower clusters. Often grown as house plants, varieties include *K. pinnata*, with feathery leaves. Height: 17.8cm (7in). Family Crassulaceae.

Kale, hardy crop plant related to the CABBAGE. It is short-stemmed and has large, bluish-green, curly-edged leaves that are eaten as a vegetable. Grown mainly for autumn or winter harvest, it may reach a height of 61cm (24in). Family Brassicaceae; species *Brassica oleracea*. See also pp.684, 684.

Kalevala, Finnish epic poem, part of Finnish oral tradition. The verses remained in uncollected form until the 19th century, when Elias LÖNNROT edited them and wrote connecting passages. The first collection was published in 1835 and a second in 1849.

Kalgoorlie-Boulder, municipality in s central Western Australia state, Australia, created in 1947 by the merging of two towns. It is the largest settlement of the

Kalgoorlie-Boulder

Louis Kahn: interior of the Yale Art Gallery in New Haven Connecticut, built in 1953.

Kaiser William II, the last of the Kaisers who ruled from 1888 to the end of WWI.

Kalahari; many Boers died in this arid region during the treks of the 19th century.

Kali, the sinister goddess in her manifestation as Durga, killing the demon Mahishasura.

Kali

Kamikaze suicide plane as it dived onto the British aircraft carrier *Illustrious* in 1945.

Wassily Kandinsky; a section of his painting *Cossacks* in the Tate Gallery, London.

Kangaroos can run, or rather hop, at speeds of up to 64km/h (40mph).

Kansas City is called the heart of America because it is at the centre of the USA.

Western Goldfields which, after a decline in the 1920s, now produces 75 per cent of Australia's gold. The city also serves the nearby Kambalda nickel ore field. Pop. (1971 est.) 20,784.

Kali, supreme mother goddess of India, consort of SHIVA, also known in various aspects as Chandī, DURGA, PARVATI, Sakti, Uma and Mata. As Kali she is her destructive manifestation, depicted as black and many-armed, garlanded with skulls and bearing an iron hook and noose, symbols of death, devouring the life she has produced.

Kalidasa (388–455), Indian poet and dramatist. Considered to be the greatest writer in classical SANSKRIT literature, his work achieved a profundity and elegance that has never been surpassed. His best-known play is *Sakuntala Recognised*, a drama in verse that tells of romantic love and adversity. See also p.1252.

Kalimantan, name of four political divisions of the island of Borneo; the southernmost and largest section of the island, administered by Indonesia. It consists of four provinces: West, South, East and Central Kalimantan. Formerly part of the Netherlands East Indies, it became part of Indonesia in 1950. Economic development is hindered by thick tropical forest. Products: rice, millet, copra, pepper, oil, coal, bauxite, iron, industrial diamonds, timber. Area: 1,100,559sq km (424,926sq miles). Pop. (1970 est.) 5,172,000. See also p.2066.

Kalinin, Mikhail Ivanovich (1875–1946), Soviet political figure, first formal head of state of the Soviet Union (1919–46). He was elected Chairman of the Communist Party Central Committee in 1919 and joined the POLITBURO in 1925.

Kaliningrad (Königsberg), seaport in the Russian Republic (Rossijskaja sfsr), USSR, on the Pregol'a River; capital of Kaliningrad oblast. Founded in 1255 as Königsberg, the city was a member of the HANSEATIC LEAGUE. It became the residence of the dukes of Prussia in 1525 and later the coronation city of the kings of Prussia. The Russians took the city in 1945 after a long siege and its name was changed to Kaliningrad in 1946. Immanuel KANT, who was born in the city, taught in the university, which was founded in 1544. Industries: shipbuilding, food processing, motor vehicle parts. Pop. (1975) 338,000.

Kallio, Kyösti (1873–1940), President of Finland (1937–40). Leader of the Agrarian Party and Member of Parliament (1907–37), he served as Prime Minister four times between 1922 and 1937. He unsuccessfully resisted Russian pressure at the beginning of WWII, despite initial progress.

Kalmar Union (1397–1523), union of Denmark, Norway and Sweden. It began with the crowning of Eric of Pomerania, grand-nephew of Queen Margaret of Norway and Denmark, which was held in Kalmar, Sweden. Queen Margaret had appointed Eric heir after the death of her son Olaf IV. Under the terms of the union, succession was through election from amongst the sons of the late monarch. It established common defences but little else. It lasted until the coronation of Gustavus I as Swedish king in 1523, although Denmark and Norway remained united until 1814.

Kalmuck (Kalmykskaja ASSR), autonomous republic within the Russian Republic (Rossijskaja sfsr) in SE European USSR, on the Caspian Sea. The capital is Elista. The area comprises semi-desert and steppes, and fishing and the rearing of animals are the principal economic activities. During WWII the Kalmucks allegedly collaborated with the Germans in the Battle of Stalingrad. In 1944 the republic was dissolved and the Kalmucks were deported en masse to Soviet Central Asia. They returned in 1957; the republic was re-established in 1958. Area: approx. 75,900sq km (29,300sq miles). Pop. (1970) 268,000.

Kaltenbrunner, Ernst (1901–46), Austrian Nazi leader. He joined HIMMLER's staff after Germany annexed Austria (1938) and was appointed head of the Security Police in 1943. He was con-

victed at the Nuremberg Trials and hanged for the murder of Allied soldiers and thousands of Jews.

Kalvos, Andreas Ioannides (1792–1869), Greek poet. He benefited from earlier non-Greek Romantic influences, but employed popular Greek metres and forms. His mainly melancholy poetry includes *The Lyre* (1824) and *Odes* (1826).

Kamakura, city on SE Honshū, Japan, on the Sagami Sea at the mouth of Tokyo Bay. An important ancient Japanese city, it was the seat of the Yoritomo shōgunate (1192–1333) and the Ashikaga shōgunate (1333–1573). It has a noted bronze statue of Buddha, a museum of modern art and a museum of national treasures. Today it is mainly a residential and resort area and has a meat processing industry. Pop. 139,249.

Kama Sutra, Hindu text on eroticism, written before AD 500 by Vatsyayana. In it he discusses Kama (sexual pleasure) which, together with its counterparts dharma (religious law) and artha (material prosperity) is considered essential for true fulfilment.

Kamchatka (Kamcatka) Peninsula, peninsula in the far E USSR, separating the Sea of Okhotsk (W) from the Bering Sea and the Pacific Ocean (E). The region has several active volcanoes; mineral resources include oil, coal, gold and peat. Area: 270,034sq km (104,260sq miles).

Kame, conical and low steep-sided knoll or hummock, comprised chiefly of gravel and sand that was deposited by a subglacial stream near the terminal margin of a melting glacier. Long sinuous ridges deposited similarly are called ESKERS.

Kamehameha, name of five kings of Hawaii. Kamehameha I (c.1758–1819) had united all the Hawaiian Islands under the Kamehameha dynasty by 1810. He instituted harsh laws and punishment, but also abolished human sacrifice and offered peasants protection from their landlords. Kamehameha II, or Liholiho (1797–1824) was responsible for admitting the first US missionaries. Kamehameha III, or Kauikēāouli (1813–54), was the brother of Kamehameha II and came to the throne so young that Kaahumanu, Kamehameha I's favourite queen, acted as regent until 1832. Kamehameha III was a liberal ruler who adopted constitutions in 1840 and 1852 and secured foreign recognition of his country's independence. Kamehameha IV, or Alexander Liholiho (1834–63), made social and economic reforms and opposed annexation to the USA. His brother, Kamehameha V (1830–72), the last in the dynasty, was less democratic.

Kamenov, Leo Borisovich (1883–1936). Soviet political figure. Elected to the Communist Party POLITBURO in 1917, he joined the group of his former rival TROTSKY in opposing STALIN in 1926. After 1927 he was thrice expelled from the Party and was eventually tried and executed for treason, a victim of the Stalinist purges. See also p.1677–1678, 1679.

Kamerlingh-Onnes, Heike (1853–1926), Dutch physicist and the first to liquefy HELIUM (He). In the late 1880s he began studying low-temperature gases and in 1908, using a liquid HYDROGEN cooling system, he liquefied helium and found its temperature to be four degrees above absolute zero. He discovered that at this temperature some metals, eg mercury and lead, lose all electrical resistance and become superconductors. He was awarded the Nobel Prize in physics in 1913. See also p.847.

Kāmet, mountain peak in the Himalayas, in Uttar Pradesh state, N India, on the Indian-Chinese border. When it was first climbed in 1931, by F.S. Smythe and Eric Shipton, it was the highest mountain ever climbed. Height: 7,761m (25,462ft).

Kami, in ancient Japanese religion, the name given to all supernatural beings. Kami were usually beneficent fertility deities. They inhabited SHINTO shrines and sometimes symbolic objects, such as a sword or mirror. When BUDDHISM was introduced to Japan, ancestors and dead heroes were revered as Kami.

Kamikaze, name given to flight crews or their explosive-laden aircraft used by the Japanese during WWII. Their method of attack was to dive headlong into ships of the enemy fleet, a tactic first used in late 1944 and in 1945. Serious losses were inflicted on the US Navy at Okinawa. The name means "Divine Wind", and was a reference to the typhoon that destroyed the Mongol invasion fleet in 1281, thus saving Japan from imminent defeat.

Kampala, capital and largest city in Uganda, 34km (21 miles) NNE of Entebbe, the capital of the former British protectorate. Kampala became capital when Uganda attained independence in 1962. A modern city, it is the seat of Makerere University (1963). Linked by rail to Mombasa on the Indian Ocean, it has food processing industries and is the trading centre for the agricultural goods and livestock produced in Uganda. Pop. (1975 est.) 542,000. See also p.2152.

Kamperduin. See CAMPERDOWN, BATTLE OF.

Kampf, Mein. See MEIN KAMPE.

Kanagawa, Treaty of (1854), treaty of peace, friendship and commerce between the USA and Japan; it was the first treaty between Japan and a Western country. It resulted from an expedition authorized by President Millard Fillmore which sent Commodore Matthew C. PERRY to Japan. Under threat of force, Japan agreed to open two ports for trade and to have a US consul at Shimoda.

Kananga, city in s central Zaire, on the Lulua River; capital of Kasai-Occidental province. Formerly known as Luluabourg (until 1966), the city was founded in 1884 by the German explorer Hermann von Wissmann. It became a military post and, in 1895, was the scene of a revolt by African troops against the Belgians. The city grew in the early 20th century with the construction of the railways. Kananga is a distribution centre for a region producing cotton, coffee and diamonds. Pop. (1974 est.) 596,954.

Kanarese, or Kannada, language spoken in SW India, principally in the state of Karnataka (formerly Mysore), by about 18 million people. A member of the DRAVIDIAN family, it is one of the constitutional languages of India.

Kanaris, Constantine (1790–1877), Greek naval hero and statesman. His naval exploits against the Turks (1822–25) won him fame in the Greek war of independence. He served as prime minister (1864–65 and 1877), was involved in the overthrow of King Otto in 1862 and served as regent (1862–63).

Kanawa, Kiri Te. See TE KANAWA, KIRI.

Kānchenjunga (Kinchinjunga or Kanchenjunga), mountain in the E Himalayas on the border of Nepal and Sikkim. The third-highest mountain in the world, it is the main axis of the Himalayan range. It was climbed in 1955 by a British expedition led by Charles Evans. The highest of its five peaks reaches 8,591m (28,185ft).

Kanchipuram, city in s India, 64km (40 miles) WSW of Madras. One of the seven sacred HINDU cities of India, it has an important BUDDHIST school dating from the 8th century, and numerous temples and shrines built between the 3rd and 16th centuries. It has textile industries and is especially noted for its saris. Pop. (1971) 110,657.

Kandahār, or Qandahār, city and provincial capital in s Afghanistan, approx. 483km (300 miles), SW of Kabul. Situated on important Asian trade routes, it was conquered many times before becoming the capital of the independent Afghani kingdom (1747–73). It is now a commercial centre for the surrounding region, which produces fruit, wool, cotton and tobacco. Pop. 134,000.

Kandinsky, Wassily (1866–1944), Russian painter and theorist whose discoveries and experiments with abstract painting made revolutionary contributions to art. In 1910 he painted his first purely abstract work, generally referred to as *First Abstract Watercolour*. From 1911, he was an active member of the BLAUE-REITER, and his writings show the influence of Oriental art philosophy. After WWI his

White Line (1920) and **In the Black Circle** (1921) demonstrate the beginnings of a refinement of geometrical form which developed during his years at the **BAUHAUS** (1922-33).

Kandy, city in Sri Lanka, on the Kandy Plateau. The former capital of the ancient kings of Ceylon, it was occupied by the Portuguese in the 16th century and the Dutch in the 18th century before being captured by the British in 1815. It is the site of the Dalada Maligawa, a noted Buddhist temple, which contains what is traditionally believed to be one of Buddha's teeth, brought to Ceylon in the 4th century. The city also has a palace, art museum, oriental library and the University of Sri Lanka (1942): it is a market centre for a region producing tea, rice, rubber and cacao. The chief industry is tourism. Pop. 78,000.

Kane, Elisha Kent (1820-57), US Arctic explorer. He led an unsuccessful expedition to Greenland in 1850 in search of the missing explorer Sir John Franklin, and made a second journey in 1853 in an attempt to discover whether the North Pole was surrounded by sea. He conducted much research while in Greenland but was forced to abandon his ship in 1855. He wrote of his findings in *Arctic Explorations* (1856).

Kane, Paul (1810-71), Canadian painter. He crossed Canada with the HUDSON'S BAY COMPANY (1846-48) and painted many scenes of Indian life.

Kanem, central African empire (9th-19th centuries AD). Formed by the Saharan Sef dynasty in the area of Lake Chad, it became prosperous through trade. Its rulers were Muslim from the 11th century.

Kangaroo, hopping, furry herbivore found only in Australia, New Guinea and adjacent islands. It is the largest living representative of the MARSUPIALS, a group of mammals in which the young feed and develop in a pouch on the female abdomen. The three main types are the grey kangaroo, the red kangaroo and the wallaroo, or euro. The thick, coarse fur is red, brown, grey or black. The front legs are small, the hind legs long and used in leaping. Height: to 1.8m (6ft) at the shoulder; weight: to 70kg (154lb). Family Macropodidae, genus *Macropus*. See also pp.302-303, 318.

Kangaroo rat, tiny, desert-dwelling rodent of W North America that carries seeds in its cheek pouches. It has long hind legs and a long tail, and hops over the ground. It dries and stores seeds and seldom drinks. Length: to 41cm (16in), including the tail. Family Heteromyidae; genus *Dipodomys*.

Kangaroos, the name given to Australia's national rugby league team. They made their first tour in 1908, to Britain, a year after the sport was introduced to New South Wales. Hero of that tour was H.H. "Dally" Messenger, known as "The Master". The Kangaroos tour Britain, France and New Zealand, as well as playing those countries' teams at home and in World Cup Championship series. The greatest interest is generated by matches with Britain for the unofficial title of "world champion". Kangaroos' sides are usually renowned for their tough, hard-running forwards and fast, elusive backs.

K'ang-hsi (1654-1722), Chinese emperor (as Sheng-tsung, 1661-1722). He campaigned deep into Mongolia, conquered three provinces in the north (1662-1705), made a treaty with Russia on the northern border (1689), conquered Yunnan and Formosa (1683) and won control of Tibet (1705-21). While he ruled as a conqueror, keeping the peace with strategically placed garrisons, he adopted Chinese culture, and for a time actively encouraged the Jesuit scholar-missionaries; but in 1717 issued an anti-Christian decree. See also p.1532.

Kanhai, Rohan (1935-), West Indian cricketer, b. Guyana. An audacious batsman given to improvisation, he played in 79 Test matches between 1957 and 1974 (6,227 runs, average 47.53), 13 times as captain. During a long career he played for Guyana, Trinidad, Warwickshire and Western Australia.

Kanin, Garson (1912-), US author, producer and director. He wrote and directed *Born Yesterday* (1946), *The Rat Race* (1949) and the musical *Do Re Mi* (1955). He wrote several books, among them *Tracy and Hepburn* (1971) and *Hollywood* (1974), and directed such plays as *Diary of Anne Frank* (1955), which won a Pulitzer prize, the Antoinette Perry award and the Critics' Circle award; *A Hole in the Head* (1957) and *Idiot's Delight* (1970).

Kanishka (r.c. 120-162; died c. AD 162), king of what is now the northern part of India and Afghanistan. He convened the fourth Buddhist council at which commentaries on Buddhist canon were prepared, yet coins of the period indicate that he honoured Greek and Brahmanic gods. During his reign trade with the Roman empire increased. See also pp.1195, 1195.

Kannada. See KANARESE.

Kano, city in N central Nigeria; capital of Kano state. The city dates from before the 12th century when it was part of the HAUSA Empire. It became a MUSLIM possession in the 16th century, was conquered by the Fulani in the early 19th century and taken by the British in 1903. Today, Kano is a trading centre for a region producing cotton and nuts, and the city's chief industry is textiles. Pop. 399,000.

Kanō School, school of Japanese painting originating in the 15th century which became the Classical school in Japan. Although showing affinities with Chinese subject matter and ink technique, its style of expression was thoroughly Japanese - usually simple and restrained but occasionally elaborate, as in decorative screen painting. Kanō Masanobu (c. 1453-1530), the official painter to the SHOGUN, was the forerunner of the school. His son Kanō Motonobu (c. 1476-1539) was the school's founder and one of the foremost Japanese artists. When Motonobu's grandson Kanō Eitoku (1540-90) invented the use of gold leaf as a background to screen painting in opaque colour, a new and unparalleled richness was introduced to Japanese art. Eitoku and his followers worked both in Kyoto and in Edo. Artists working in Edo were thenceforth called the Edo Kanō, those in Kyoto being known as the Kyoto Kano. See also pp.1266-1267.

Kānpur (Cawnpore), city in Uttar Pradesh state, N India, on the River Ganges, approx. 800km (497 miles) NW of Calcutta; one of the largest cities in India. The city is a major industrial, commercial and transport centre. Kānpur was ceded to the British in 1801, and it became a British frontier post. During the INDIAN MUTINY in 1857, the entire British garrison in Kānpur was massacred by Indian forces. The city has a university, the Indian Institute of Technology and a Hindu temple. Industries: chemicals, leather goods, food processing, textiles. Pop. (1971) 1,154,388.

Kansas, state in central USA. Part of the Great Plains, the land rises from the prairies of the E to the semi-arid high plains of the W, which extend to the Rocky Mts. The area is drained by the Kansas and Arkansas rivers. Kansas is the leading producer of wheat in the USA. Corn, hay and sorghums are also grown and cattle raising is of great importance to the economy. Manufacturing has surpassed agriculture, however, in economic importance, the leading industries being transportation equipment, chemicals, petroleum products and machinery. Other important industries are food processing and aircraft. The major cities are Topeka, the capital, Wichita and Kansas City.

When the area passed from France to the new United States under the LOUISIANA PURCHASE of 1803 it was still Indian country, and not until 1854 was the Territory of Kansas created and the area opened up for settlement. Area: 213,094sq km (82,276sq mi miles). Pop. (1975 est.) 2,267,000. See also p.2161.

Kansas City, name of two adjacent ports in the USA: one in NE Kansas and the other in NW Missouri, both at the confluence of the Missouri and Kansas rivers. Situated on the Oregon and Santa Fe trails in the

19th century, the cities now form a large industrial and commercial centre, and a market for grain and poultry. Industries: food processing, oil refining, farm machinery, motor vehicle assembly, steel. Pop. (Kans.) (1973) 172,944; (Mo.) (1973) 487,799.

Kansas-Nebraska Act (1854), US Congressional measure introduced by Senator Stephen A. Douglas of Illinois which gave states the right to decide for themselves all questions related to slavery. It effectively negated the earlier MISSOURI COMPROMISE of 1820, which declared that all land in the LOUISIANA PURCHASE was to be non-slave, except for the state of Missouri. Written to appease Southern congressmen, the Kansas-Nebraska Act made slavery legally possible in the two vast new territories of Kansas and Nebraska, and revived the bitter slavery controversy. See also pp.1628-1629.

Kansu (Gansu), province in NW China, on the Chinese-Mongolian border; the capital is Lanzhou (Lanzhou). With the aid of irrigation, wheat, cotton, rice, maize and tobacco are grown, particularly in the valley of the Yellow River (Hwang Ho). Livestock are grazed on the mountain slopes. Mineral deposits include iron ore, oil and coal. The province is strategically important, controlling routes to Mongolia and the USSR. Area: 366,625sq km (141,550sq miles). Pop. 13,000,000.

Kant, Immanuel (1724-1804), German philosopher. From 1740-46 he studied at Königsberg University, then worked as a private tutor. In 1755 he returned to the university and was made a professor in 1770. The order, regularity and modesty of his life was undisturbed by the notoriety caused by the publication of his "critical philosophy", particularly *Critique of Pure Reason* (1781), *Critique of Practical Reason* (1788) and *Critique of Judgment* (1790). In addition to his technical treatises, Kant produced several topical essays in support of religious liberalism and ENLIGHTENMENT. See also pp.1652, 1652.

Kantor, MacKinley (1904-1977), US short story writer and novelist. He wrote numerous novels dealing with US history, including *Andersonville* (1955), for which he won the 1956 Pulitzer Prize.

Kantorovich, Leonid Vitalyevich (1912-), Soviet mathematician and economist. In 1939, while working to find ways of making efficient use of the Siberian railway, he devised a method for achieving maximum production despite such difficulties as limited resources. Although ignored at the time because it contradicted the government's economic ideals, it was for this theory of resource allocation that he shared the 1975 Nobel Prize in economics with Tjalling C. KOOPMANS.

Kaohsiung (Kaochiung), city in S Taiwan. Originally a small fishing village, it was developed as a port and manufacturing centre by the Japanese, who occupied Taiwan in 1895. The city has a large naval base, and its industries include shipbuilding, petroleum products, machinery, aluminium, sugar refining. Pop. (1972 est.) 884,200.

Kao K'o-kung (1248-c. 1310), Chinese painter. The first notable artist of the YUAN DYNASTY he is known for his wooded mountain landscapes.

Kaolack, port in W Senegal, on the River Saloum. It is the centre of the SUFI Muslim Tijaniyah brotherhood. An important market for groundnuts, linked by rail to Dakar and the River Niger, Kaolack's industries also include brewing, leather tanning and cotton processing. Pop. (1969 est.) 95,000.

Kaolin. See LANCHOW.

Kaoliang, name in China and Manchuria for any of several grain sorghums. They have slender, dry stalks; open, erect panicles; and small white or brown seeds. The grain is used for human food or alcoholic beverages, and the stalks for thatching, fuel or fodder.

Kaolin, or China clay, especially fine and pure clay composed chiefly of the mineral KAOLINITE, a hydrous silicate of aluminium. It is used in the manufacture of

Kant's *Critique of Pure Reason* explores the problems of human knowledge.

Kaolin, shown here in preparation for purification, is used in ceramics and medicine.

Karachi's Clifton Parade is an example of early 20th-century Mughal architecture.

Karakul sheep produce the expensive Persian lamb pelts known as Astrakhan.

Kaolinite

ceramics and fine porcelains. See also p.546.

Kaolinite, sheet silicate mineral of the kaolinite group, hydrous aluminium silicate $[Al_2Si_2O_5(OH)_4]$. It is a product of the weathering of feldspar and has triclinic system tabular crystals, clay-like masses and particles. It is white with a dull lustre and may be tinted by impurities. Hardness 2-2.5; s.g. 2.6. Kaolinite is important in the manufacture of pharmaceuticals, ceramics, and coated paper.

Kao Ming, 14th-century Chinese playwright. He wrote "hsi wen", southern Chinese plays noted for their freedom from foreign influence and featuring folk-songs and numerous scene changes. His most popular play, *Record of the Ballroom*, re-interpreted an old legend.

Kaon, or **K meson**, ELEMENTARY PARTICLE that is either a charged or neutral meson with zero spin.

Kapilavastu, town in s Nepal just inside the border with India, said to be the birthplace and childhood home of BUDDHA. It is near the modern town of Paderia.

Kapital, Das, (Capital), economic and historical study by Karl MARX, in three volumes (1867, 1885, 1894), the main exposition of his concept of dialectical materialism. The last two volumes were edited by ENGELS after Marx's death.

Kapitsa, or **Kapitza**, **Peter Leonidovich** (1894-), Russian physicist. He did extensive research in magnetism (in England with Sir Ernest RUTHERFORD) and discovered that helium II (the stable form below -271°C) has almost no resistance to flow - a phenomenon called superfluidity. He then worked on satellite research and thermonuclear fusion. In 1978 he won the Nobel prize for physics.

Kaplan, **Mordecai Menahem** (1881-), US rabbi, theologian and religious leader. b. Lithuania. He emigrated to the USA and became a teacher at the Jewish Theological Seminary; he settled in Israel in 1972. Kaplan founded the Reconstructionist movement, attempting to change Judaism to meet 20th-century needs. His books include *Judaism as a Civilization* (1934) and *Judaism without Supernaturalism* (1958).

Kapok, tropical tree with palmate leaves and white or pink flowers. Its seed pods burst to release silky fibres which are commonly used for stuffing and insulation. Height: to 50m (165ft). Family Bombacaceae; species *Ceiba pentandra*.

Kapp, **Wolfgang** (1858-1922), German right-wing politician, b. USA. He led a well-supported but ill-fated insurrection against the WEIMAR REPUBLIC in 1920. Kapp fled Germany but returned and died while awaiting trial.

Kapteyn, **Jacobus Cornelius** (1851-1922), Dutch astronomer noted for his study of stellar motion and the distribution of stars in the MILKY WAY. He discovered that all stars whose PROPER MOTION can be determined, move in one of two streams of stars moving in opposite directions in the plane of the galaxy.

Karachi, largest city in Pakistan, on the Arabian Sea, NW of the Indus River delta. Ruled for most of its history by Muslim dynasties, it passed in 1843 to the British, who developed it as a major port. It is still an important trading centre for agricultural produce from the surrounding region. Until 1960 it was the capital of Pakistan and it has an international airport. Industries: steel, engineering, textiles, food processing, chemicals, printing and publishing. Pop. 3,442,000.

Karafuto. See SAKHALIN.

Karadjordje (c.1768-1817), name, meaning "Black George", assumed by George Petrović, the leader of the Serbs in their fight for independence from Turkey. In 1804 he launched a successful war of independence, with token support from Russia. In 1812, Russia concluded a treaty with Turkey giving Turkey a free hand in Serbia, but the Serbs rose again in 1815. Karadjordje returned from exile in Russia in 1817 but was murdered by Miloš OBRENOVIĆ, the new leader. See also pp.1560, 1560.

Karadjordjevic dynasty, Serbian dynasty which ruled 1842-58 and 1903-45. It was

involved in a long-standing feud with the OBRENOVIĆ dynasty. Whereas the Obrenovići had kept Serbia within the Austrian sphere of influence since 1881, a coup in 1903 placed PETER I, an avowed Russophile, on the throne and altered the balance of power in the Balkans.

Karadzic, **Vuk Stefanovic** (1787-1864), Serbian scholar and writer. He published his 26,000-word *Serbian Lexicon* in 1818 and spent much time modifying the Cyrillic ALPHABET for Serbian use. He also collected national folk-songs and poems.

Karaim, **Karaites**, Jewish sect founded in Persia in the 8th century. Rejecting the authority of the TALMUD, the Karaites insisted on interpreting the Bible literally. They accused the talmudists of substituting a man-made law for the TORAH, and developed an oral law of their own which was in many ways more strict. Karaim declined after the 12th century, although some Karaites still exist in Israel and the Crimea.

Karajan, **Herbert von** (1908-), German conductor. He conducted the Berlin State Opera from 1938-45. In 1954 he became musical director of the Berlin Philharmonic Orchestra and in 1957 became a director of the SALZBURG Festivals. Between 1945-64 he was also director of the Vienna State Opera.

Kara-Kalpak (Karakalpakskaja ASSR), autonomous republic within the Uzbek Republic (Uzbekskaja SSR), in central Asian USSR; Nukus is the capital. The region is one of the USSR's chief producers of lucerne; other crops include rice, cotton, maize and jute. Livestock raising and the breeding of muskrats and silkworms are also important, and there is some light industry. The region came under Russian control at the end of the 19th century. Area: 165,600sq km (63,950sq miles). Pop. (1970) 702,000.

Karakorum, moun ain range in India and Pakistan that includes some of the world's highest peaks, among them K2 (Godwin Austen), at 8,616m (28,267ft) the second highest peak in the world. Length: approx. 480km (300 miles).

Karakorum, ancient capital of the Mongol empire, established by Genghis Khan in 1220 in central Mongolia, 322km (200 miles) WSW of modern Ulan Bator. It was abandoned after 1267 when the capital was moved to Khanbaliq. The Russian explorer N. M. Yartsev discovered the ruins in 1889 but they were not examined by archaeologists until the late 1940s.

Karakul, breed of SHEEP from Central Asia with coarse fur on the adults and glossy hair on the young. Tightly curled, black or grey pelts taken from lambs are called "Persian lamb". "Broadtail" pelts are obtained from still-born or new-born lambs. See also p.729.

Kara-Kum, desert area in southern USSR, extending from the Caspian Sea (W) to the River Amudarya (E), and including most of the Turkmen Republic (Turkmeneskaja SSR). The Kara-Kum Canal carries water approx. 800km (500 miles) from Arnu Darya to Ashkhabad and is used to irrigate a cotton-producing region. Area: 300,000sq km (115,830sq miles).

Karamanlis, **Konstantinos** (1907-), Greek politician. After practising law in Athens he was elected to Parliament in 1935. He became Prime Minister in 1955 and formed his own party, the National Radical Union, a year later. He reached agreement with Britain and Turkey over Cyprus in 1960 in an attempt to ease strained relations with those countries, but was forced to resign in 1963. During 11 years of self-imposed exile he was an opponent of the Greek military junta, and when it fell in 1974 he returned as Prime Minister.

Karamojong, Nilotic people of NE Uganda. They are semi-nomadic, although living in permanent hut settlements on the arid plains. The women cultivate grain and herd goats. Their economy is based on cattle, with which the men travel in search of water.

Kara Mustafa (1634-83) Turkish grand vizier (1676-83) under Sultan Muhammad IV. Allied with Hungarian rebels under Imre Thokoly against Holy Roman

Emperor Leopold I, he laid siege to Vienna in 1683, but retreated before the relief army of JOHN III SOBIESKI of Poland. When he reached Belgrade the sultan ordered his execution.

Karamzin, **Nikolai Mikhailovich** (1766-1826), Russian writer, historian and journalist. He was the leader of the Sentimental school of Russian literature, an example of which is his *Poor Lisa* (1792). *Letters of a Russian Traveller* (1789-90) is an account of his European travels. He also wrote the incomplete 12-volume *History of the Russian State* (1816).

Karanga, BANTU-speaking people in Zimbabwe (Rhodesia). Between the 14th and 15th centuries AD they built the city of Zimbabwe (the name commonly given by Africans to Rhodesia). Discovered by European explorers c.1870, the ruins of Zimbabwe were believed for a time to be the biblical Ophir where King Solomon had his mines. See also pp.1606, 1606.

Kara Sea, part of the Arctic Ocean off the northern USSR between Severnaya Zemlya and Novaya Zemlya. It is an important fishing ground, and main ports are Novyi Port and Dikson. The area is ice-bound except in August and September. Average depth: 127m (417ft).

Karate, martial art popularized in Japan in the 1920s. The technique, which involves a formal method of physical and mental training, includes a variety of blows using the hand, legs, elbows and head. The bony parts of the body in particular are used as weapons. In sport contestants are allowed to use only a few of the techniques so as to avoid serious injuries and all punches, blows or kicks are minimized.

Karavayev, **Lyuben** (1835-79), Bulgarian writer. He aimed to publicize his country's political difficulties in stories and studies collected in *Pamyatniki narodnago byta bolgar* ("Popular Bulgarian Monuments", 1861) and joined Bulgarian revolutionary émigrés in Bucharest in 1869. He continued his work in the journals *Svoboda* ("Freedom", 1869-72) and *Nezavisimost* ("Independence", 1873-74).

Karbala, city in central Iraq, 89km (55 miles) SSW of Baghdad, on the W edge of the Syrian Desert. A religious centre, it is the point of departure for Iranian pilgrims to Mecca and a holy place for Shi'ite Muslims. Hussein, the Shi'ite leader, was murdered in the city in AD 680. Its products include hides, wool, dates and religious objects. Pop. (1970 est.) 107,500.

Karel, **Rudolph** (1880-1945), Czech composer. Initially Romantic in style, his music later became vigorous, original and richly polyphonic. The symphonic poem *The Demon* (1920) is a masterpiece. Typical of the emotional patriotism of his late works is the *Revolutionary Overture* (1938-41). In 1943 Karel was imprisoned by the Nazis. He died in a concentration camp.

Karelia (Karelskaja SSR), autonomous region in NW European USSR, bounded by the White Sea in the E and Finland in the W. The capital is Petrozavodsk. Established in 1923 as an autonomous republic, it absorbed 36,260sq km (14,000sq miles) of Finnish land after the 1939-40 war between the USSR and Finland, after which its status was raised to a constituent republic, the Karelo-Finnish Republic. It returned to its present status in 1956. Farming is restricted by climate to the S where vegetables and cereal crops are grown and livestock are raised. Fishing and timber are the chief industries. The region has valuable mineral deposits, including lead, zinc, copper and iron. Area: 172,400sq km (66,564sq miles). Pop. (1970) 714,000.

Karens, Thai-Chinese cultural group, mostly farmers, living in Burma. They form about 10% of Burma's population. The hill people practise an animistic religion; the plain-dwellers are Christians and Buddhists. They speak the Karens languages and are deeply opposed to Burmese domination. In 1948-49 a revolt against the Burmese government won for the Karenni state (now Kayah state) a large measure of local autonomy.

Karg-Elert, **Siegfried** (1877-1933), German composer whose most enduring com-

positions are those for the harmonium and organ. They combine great harmonic and contrapuntal resourcefulness, despite a tendency to over-chromaticism, and number almost 200 items, most of which place great demands on performer and instrument alike.

Kariba Dam, hydroelectric scheme in s central Africa, in the Kariba Gorge on the River Zambezi, on the border between Zambia and Zimbabwe (Rhodesia). Built between 1955 and 1959, it is one of the world's largest dams. Kariba Lake, the reservoir formed behind the dam, is approx. 280km (175 miles) long and 32km (20 miles) wide. Dam length: 579m (1,900ft); height: 128m (420ft).

Karim Khan (c.1705-79), ruler of Persia (1750-79), founder of the Zand dynasty. He seized control, ruled peacefully as 'Vakil Al-Roaya', "Regent of the People", and beautified his capital, Shiraz, erecting the Mosque of Vakil and the Bazaar. His dynasty was overthrown in 1794 by the QAJARS, whom he had failed to subdue.

Karitan System, mother- and baby-care system in New Zealand and Australia, founded by Sir Truby KING in New Zealand in 1907. It stresses breast-feeding, or if that is impossible, correct use of cow's milk. There are many Karitan hospitals and clinics in Australia and New Zealand, and some in Britain.

Karlfeldt, **Erik Axel** (1864-1931), Swedish poet. His verse was an extension of Swedish peasant culture. It appeared in six volumes, including *Songs of Wilderness and Love* (1895), *Fridolin's Songs* (1898) and *The Horn of Autumn* (1927). He was awarded the Nobel Prize in literature in 1931.

Karli caves, Buddhist shrines in Mahārāshtra, W India. Cut from natural rock as early as the 2nd century BC. The entrance to the caves is famous for the large relief sculptures of amorous couples. The largest cave measures 38m by 14m (124ft by 45ft) and much of its rich decoration survives. See also pp.1195, 1254.

Karl-Marx-Stadt, city in s East Germany, 64km (40 miles) SW of Dresden, on the Chemnitz River; capital of Karl-Marx-Stadt district. Formerly Chemnitz, it was chartered in 1143 and granted a linen-weaving monopoly. Devastated during the THIRTY YEARS WAR, its economy recovered at the end of the 17th century with the introduction of the cotton industry. It has many old buildings including a 12th-century palace and church. Industries: machine tools, carpets, hosiery. Pop. (1974) 302,409.

Karloff, **Boris** (1887-1969), British character actor noted mainly for his roles in horror films, after his magnificent performance as the monster in *Frankenstein* (1931). He nearly always played evil or sinister characters, representing them as grotesque, but pathetic.

Karlowitz, **Treaty of** (1699), peace treaty between the Turks on the one side and Venice, Austria and Poland on the other, signed at Karlowitz, N Serbia. Turkey was forced to divide much of its European territory, ceding Transylvania and much of Hungary to Austria, part of the Ukraine and Podolia to Poland and the Peloponnese and most of Dalmatia to Venice. The treaty marked the beginning of the OTTOMAN EMPIRE'S fall.

Karlsruhe, city in SW West Germany, on the River Rhine, 56km (35 miles) S of Mannheim. Founded in 1715 by the margrave of Baden-Durlach, it became the capital of the duchy, later the state, of Baden. The city suffered severe damage during WWI. It has a university and several colleges, and has been a centre of atomic research since 1956. Industries: jewellery, chemicals, pharmaceuticals, oil refining. Pop. (1974) 261,250.

Karlstad, city in SW Sweden, on Lake Vänern. Originally called Tingvall, it was renamed in honour of Charles IX in 1584. After a fire in 1865 it was completely rebuilt and was the scene of negotiations for the treaty in 1905 ending the union of Norway and Sweden. Industries include heavy machinery and wood products. Pop. (1970) 72,290.

Karma, Vedic concept related to belief in

reincarnation. According to Karmic law, the acts in past incarnations explain present circumstances, just as acts in this life can affect future lives. Salvation involves cancelling the effects of past evil deeds by virtuous actions in this life. See also HINDUISM; REINCARNATION; VEDAS.

Kármán, József (1769–95), Hungarian writer, author of the sentimental story *Fanny's Testament*, important in the development of the Hungarian novel.

Kármán, Theodore von (1881–1963), US research engineer, b. Hungary, best-known for his work in the application of mathematics to aeronautics and space rocketry. He became a US citizen in 1936 and helped found the NASA Jet Propulsion Laboratory, the International Council of the Aeronautical Sciences, and the International Academy of Astronautics.

Karmathians, Muslim sect that ruled by terror and murder. Karmat was an Iraqi peasant and proselytizer who founded a communist-like movement in about AD 890. An independent state on the Persian Gulf was created by his missionary, Jan-nabi, who proceeded to terrorize Baghdad (899). His successor, Suleiman, seized the sacred Black Stone of Mecca in 930, whose return was demanded by AL-MANSUR and achieved in 951. Some of their traditions passed to the FATIMIDS and ASSASSINS.

Karnak, modern village, 550km (330 miles) SE of Cairo, near the site of Ancient Egyptian THEBES, the chief city of Upper Egypt. Thebes became a political and religious centre during the 11th dynasty, and the base from which the 17th and 18th dynasties drove the HYKSOS from Lower Egypt. Although it declined in importance from the 19th dynasty, many buildings from this period of dominance remain intact. On the east bank of the Nile is a temple to Amon-Re, king of the gods; built over a period of 2,000 years, it is massively imposing. The largest hall has 134 columns, some of which are 24m (78ft) tall. Around this temple was an enclosed area where there were smaller temples and a lake for ritual washing; nearby were temples to Montu (a god of war) and Amon's consort, Mut. An avenue lined with sphinxes led to the temples at LUXOR. On the west bank, the tombs of nobles have been found in cliffs; in valleys farther west, the tombs of kings and queens, including that of Tutankhamen, have been discovered.

Károly, Count Mihály (1875–1955), Hungarian statesman who entered parliament in 1910. He favoured Hungarian autonomy before WWI. He became Prime Minister in Oct. 1918 and then President (Jan. 1919), but resigned in March 1919 after failing to get his reforms adopted. He went into exile until 1946. From 1947 to 1949 he was Hungarian Ambassador to Paris, but resigned in protest against increasingly totalitarian government. Again he went into exile.

Karrer, Paul (1889–1971), Swiss chemist, b. Russia, who shared the 1937 Nobel Prize in chemistry with Sir Walter HAWORTH for research on flavins, carotenoids and vitamins. In 1930 he determined the formula of beta CAROTENE, the precursor of vitamin A, and in 1931 elucidated the structure of the vitamin itself. He also studied vitamin E and demonstrated that lactoflavin was part of the vitamin B2 complex.

Karoo, semi-arid region in SW Cape Province, Republic of South Africa. It consists of Little Karroo, which extends east to west approx. 320km (200 miles) and is separated from Great Karroo, which lies by the Swartberg Mts and is approx. 480km (300 miles) long. Parts of the Karroo are well irrigated and fertile, yielding citrus fruits and cereals.

Karsh, Yousuf (1908–), Canadian photographer, b. Turkey, who specialized in sensitive portraits of famous people. His outstandingly perceptive photograph of Winston Churchill embodying all the British leader's bulldog determination – and, unusually for Karsh, posed and shot in less than two minutes – made the photographer world famous.

Karst, limestone plateau characterized by

irregular protuberant rocks, sinkholes, caves, disappearing streams and underground drainage. Such topography is named after its most typical site in the Karst region of Yugoslavia; in Britain, the most spectacular example is above Malham, North Yorkshire. See also p.218.

Karttikeya, also called Skanda, in Hindu mythology, the six-faced god of war, symbolic of the planet Mars. He is the son of SHIVA and PARVATI. He is depicted with a bow and arrow or drum and sword in hand, riding a peacock.

Kasavubu, Joseph (c.1915–69), political figure of the Republic of the Congo (now Zaïre). A major protagonist in the Congolese quest for independence from Belgium, he became the first President (1960–65) but was obliged to enlist the services of Gen. MOBUTU before emerging successful in a dispute with Premier Patrice LUMUMBA. He was ousted by Mobutu.

Kashān, city in central Iran. Noted for the production of carpets and ceramic tiles in SAFAVID times, the city was a cultural and artistic centre, and was on an important caravan route. Traditional manufactures include silk textiles, copperware, wool and silk carpets. Pop. (1971 est.) 63,000.

Kashmir, former princely state; now Jammu and Kashmir state in NW India, with its capital in Srinagar in summer and Jammu in winter, and the Pakistani-controlled Azad Kashmir in NE Pakistan, with its capital in Muzaffarabad. It is a mountainous region and includes parts of the Himalayas and the Karakoram Range. The Vale of Kashmir, in the valley of the River Jhelum, is the most populated area, and wheat and rice are grown. After centuries of Hindu and Buddhist rule, Kashmir was conquered by Muslims in the late 14th century, and most of the population was converted to Islam. Since the partition of India in 1947, Kashmir has been a cause of friction – even war – between India and Pakistan. The situation was further complicated by the intervention of the Chinese in the late 1950s. Area: (India) approx. 139,000sq km (54,000sq miles); (Pakistan) approx. 84,000sq km (32,000sq miles). Pop. (India, 1971) 4,600,000. (Pakistan, 1971) 1,300,000.

Kashmir goat, also called CASHMERE goat, small goat that lives in the Himalayas of India and Tibet. It is domesticated for its silky underwool, which is often used in high-quality textiles.

Kasprowicz, Jan (1860–1926), Polish poet. His first book of poems *Poezje* (1889) contained elements of social reportage using realistic subject-matter and diction. In his later work he used a symbolist technique to explore everyday themes, as in the hymns *To a Dying World* (1901) and *Ballad of the Sunflower* (1908).

Kassala, city in NE Sudan, NE Africa. It was founded in 1834 as a military camp by MUHAMMAD ALI during his conquest of the Sudan, becoming a fort in 1840. The city was taken by the MAHDISTS in 1885 and the Italians in 1894, but was regained by the Egyptians three years later. Industries: cotton, fruit-growing. Pop. (1969) 81,000.

Kassem, Gen. Abdul Karim (1914–63), Iraqi military figure. While pursuing a successful career he assumed the leadership of several disaffected groups within the army. He became the head of the Republic of Iraq after the overthrow of the monarchy in 1958. In an attempt to assert his authority, he purged both right- and left-wing groups, losing the remaining military support when he failed to deal with the Kurdish rebellion of 1961. He was killed in a coup led by Abd as-Salam Arif.

Kasserine Pass, mountain gap 8km (5 miles) NW of the town El Kasserine in Tunisia. During WWII it was the scene of an AXIS POWERS breakthrough. The pass was retaken by Allied troops in what proved to be a decisive battle of the North Africa campaign. Width: 3.2km (2 miles).

Kassites, or Cassites, ancient people, possibly of Persian origin, who rose to importance in the 3rd millennium BC. By the

middle of the 18th century they were imposing on BABYLONIA. Their system of government was policed by a small feudal aristocracy of warriors who used the innovative horse-drawn chariot. The Elamites eventually forced the Kassites to withdraw to the Zagros Mts in Iran during the 1st millennium. The people disappeared after the beginning of the Christian era. See also p.1164.

Kastler, Alfred (1902–), French physicist, b. Germany, who was awarded the 1966 Nobel Prize in physics for the discovery and development of optical methods for studying resonance in atoms. He developed the technique of optical pumping, in which gas atoms absorb energy from bombardment with light and radio waves and release it a few milliseconds later, the mode of release varying according to the atomic species. This technique led to a new knowledge of atomic structure and the development of the LASER and MASER.

Kästner, Erich (1899–1974), German satirist, poet and novelist, who was prevented from publishing in Germany by the Nazis in 1933–45. His post-war works lean towards social philosophy but are highly entertaining. He was world famous for the subtlety, charm and humour of his books for children, *Emil and the Detectives* (1929) and *Three Men in the Snow* (1935). His collection of poems, *Lyrical Medicine Chest* (1936), was noted for its satire.

Katanga, southernmost province of Zaïre, rich in mineral deposits, notably copper. In 1960, soon after Zaïre (formerly the Belgian Congo) became independent, Moïse Tshombe led a secessionist movement in Katanga which was finally crushed in 1962, with the help of UN troops and after bitter fighting. In 1972 Katanga was renamed Shaba.

Katayev, Valentin Petrovich (1897–), Soviet author. His lightly satirical novels constitute a chronicle of Soviet society. They include *The Embezzlers* (1926), *Time, Forward!* (1932) *The Son of The Regiment* (1945) and *Winter Wind* (1960). The novel *Lonely White Spail* (1936) depicts the revolution of 1905 as seen by two schoolboys. As a dramatist, he wrote a number of popular plays, including the comedy *Squaring the Circle* (1928) about marriage and housing conditions. *Grass of Oblivion* (1967) is an autobiographical volume.

Katchen, Julius (1926–69), US concert pianist, who made his debut in 1937 with the Philadelphia Orchestra. Having toured Palestine in 1948, he later settled in Paris and gained success in a series of European concert tours.

Katchina, or kachina, divine intermediary between man and god among the Pueblo Indians, or a dancer masked to resemble one. Katchina were believed to be ancestral spirits who brought rain and corn. Elaborate rituals surrounded them.

Kathmandu. See KÄTMÄNDU.

Kätmändu, capital of Nepal, in central Nepal at the N foot of the Mahābhārāt mountain range of the E Himalayas. The administrative and commercial centre of the country, it is situated on an ancient pilgrimage route from India to China and Mongolia. Pop. (1971) 150,402.

Kato, Komei Takaaki (1860–1926), Japanese diplomat and political figure. He entered the foreign service in 1887, was ambassador to Britain between 1894–99 and 1908–13, and served briefly as Foreign Minister in 1900, 1906 and 1913.

As Foreign Minister in 1914–15 he imposed the "Twenty-one Demands on China", which conferred on Japan economic advantages in China. In 1913 he organized the conservative Kenseikai Party. As Prime Minister from 1924–26 he introduced universal suffrage, reduced government expenditure and the size of the military, and lessened the powers of the House of Peers. He also introduced universal military training and favoured the Peace Preservation Law, which severely penalized political dissent.

Kato, Tomosaburo (1859–1923), Japanese naval and political figure. He was Naval Chief of Staff (1894–95), chief

assistant to Admiral Togo during the Russo-Japanese War (1904–05) and navy minister (1915–23) when he directed Japan's navy during WWI and the expansion thereafter. He accepted the principle of naval limitation drawn-up at the Washington Conference in 1921–22. He served as Prime Minister 1922–23.

Katona, József (1791–1830), Hungarian playwright remembered for his five-act tragedy *Bánk Bán* (1815, first performed 1821) which, although set in 13th-century Hungary, reflected contemporary problems.

Katowice, industrial city in S Poland, 72km (45 miles) WNW of Kraków. Founded in the 16th century and chartered in 1865, it passed from Germany to Poland in 1921 but was occupied by the Germans throughout WWII. It is now one of Poland's foremost industrial centres, producing heavy machinery and chemicals. Pop. (1974) 320,400.

Katrine, Loch. See LOCH KATRINE. **Katsina**, city in N Nigeria, approx. 137km (85 miles) NW of Kano. The former capital of the ancient Katsina kingdom, it was a major city of the Hausa Empire in the 17th and 18th centuries before being taken by the Fulani in the 19th century. The modern city is an agricultural trading centre. It has a Muslim college and many buildings dating from the Hausa period. Products: skins, cotton, peanuts. Pop. (1971) 109,424.

Katsura, Taro (1847–1913), Japanese political figure. He served as Army Minister (1898–1901) and three terms as Prime Minister (1901–06, 1908–11 and 1912–13). During this period as Prime Minister Japan emerged as the major East Asian power by expanding its military forces, defeating Russia in 1904–05, and annexing Korea in 1910.

Kattegat, channel between S Sweden and the Jutland Peninsula of Denmark, in nautical miles between the Skagerrak and the Baltic Sea. Chief ports are Gothenburg (Göteborg) and Århus.

Katydid, green to brown leaf-like insect found throughout the world, named after its distinctive call. Its wings are arched over its back and it has long antennae. Length: to 3.5 cm (1.4 in). Family Tettigoniidae.

Katyn, village in the W Russian Republic (Rossijskaja SSR). It was occupied by Germany during WWII. In 1943 Germany announced the discovery in a nearby forest of a common grave containing the bodies of 4,250 Polish officers and accused the USSR of their murder during the Soviet infiltration of Poland in 1939. The USSR in turn blamed Germany for the massacre, supporting the charge with the findings of a Soviet investigating committee in 1944. In 1951–52 a special American Congressional committee investigating the allegations found the USSR guilty.

Katz, Sir Bernard (1911–), British bio-physicist, who shared the 1970 Nobel Prize in physiology and medicine with Ulf von Euler and Julius Axelrod for their work on the chemistry of nerve transmission. Katz discovered how the neurotransmitter, ACETYLCHOLINE, is released by neural impulses, causing muscles to contract.

Katzir, Ephraim (1916–), Israeli head of state and biophysicist. He has been professor of physics at the Weizmann Institute of Science since 1951. In 1966–68 he was the chief scientist at the defence department. He was President of Israel in 1973–8.

Kauffmann, Angelica (1740–1807), Swiss rococo portrait and decorative painter who worked in England from 1766 to 1782 decorating many interiors in conjunction with Robert ADAM.

Kaufman, George Simon (1889–1961), US playwright. He collaborated on the comedies *Beggar on Horseback* (1924) with Marc CONNELLY; *Dinner at Eight* (1932) and *Stage Door* (1936) with Edna FERBER; *You Can't Take It With You* (1936) and *The Man Who Came to Dinner* (1939) with Moss Hart. He contributed to George GERSHWIN's *Of Thee I Sing* (1932), *Guys and Dolls* (1951) and *Silk Stockings* (1955).

Kaunas

Kayak paddlers, sealed tightly in the canoe, can roll over and then turn upright.

Keas are parrots living in New Zealand; they are also called mountain nestor.

Buster Keaton, shown here in a scene from *The General*, seldom smiled.

John Keats, the English poet whose odes retain a unique place in English literature.

Kaunas, city and port in Lithuanian Republic (Litovskaja SSR), USSR, on the Neman River. Founded in the 11th century, it became part of Russia in 1795 after the third Partition of Poland. It was captured by the Germans during both World Wars. In between it was the capital of Lithuania. It has a 15th-century church of Vytautas and a university (1922). Industries: iron and steel, chemicals, plastics, textiles. Pop. (1975) 344,000.

Kaunda, Kenneth (1924–), President of Zambia from 1964 when the country gained its independence from Britain. He became leader of the United National Independence Party in 1960, nationalized the copper mines and, in 1973, imposed single party rule. See also p.1737.

Kaunitz, Wenzel Anton, Count von (1711–94), Austrian statesman. He entered the foreign service in 1740 and in 1748 negotiated the Treaty of Aix-la-Chapelle. He was ambassador to France (1750–53) and as chancellor and foreign minister (1753–92) favoured France over Austria's traditional ally, Prussia. His defensive alliance with France and Russia (1756) precipitated the SEVEN YEARS WAR (1756–63). He secured a share in the partition of Poland in 1772, but the French Revolution destroyed his French alliance.

Kauri pine, evergreen GYMNOSPERM tree native to New Zealand. It has flaky bark, bronze-green leaves and round cones. It was extensively milled by the early settlers of New Zealand. The trees made fine masts and their resin was used in the manufacture of lacquers and varnishes. The Maoris regarded the trees as forest gods and some trees lived for up to 500 years. Height: to 45m (150ft). Family: Araucariaceae. Species *Agathis australis*.

Kava, narcotic drink made from the roots of the kava plant, a variety of pepper (*Piper methysticum*) grown in many South Pacific islands. The roots are chewed or grated to produce a pulp which is placed in a bowl with water or coconut milk and allowed to ferment. Traditionally, ritual surrounded its production and it was consumed in kava ceremonies, but social and medicinal uses are also known.

Kavanagh, Patrick (1905–67), Irish poet. Entirely self-educated, as a young man he worked as a small farmer and a shoemaker. He published *Ploughman and Other Poems* (1936), his first collection of poetry, and *The Green Fool* (1938), an autobiography, before becoming a freelance journalist in Dublin. In 1955 he joined the staff of University College there. A master of rhythm, his later work includes the poem *The Great Hunger* (1942) and the verse collection *Come Dance with Kitty Stobling* (1960).

Kawabata, Yasunari (1899–1972), Japanese novelist. His best-known works, which are influenced by Western literature of the 1920s and Japanese linked verse, are *Snow Country* (1937), *Thousand Cranes* (1947) and *The Sound of the Mountain* (1954). He received the Nobel Prize in literature in 1968.

Kawasaki, city on central Honshu, Japan, on Tokyo Bay. The city suffered extensive damage from Allied bombing during WWII. It has a 12th-century temple. Industries: machinery, motor vehicles, petrochemicals, shipbuilding. Pop. (1970) 973,486.

Kay, John (1704–64), British engineer. In 1733 he patented his famous FLYING SHUTTLE which, by enabling a weaver to throw the shuttle automatically from side to side across the warp of a loom, doubled output. His invention, which was a major step in the development of automatic weaving, was seen as a threat to handloom weavers and he was forced to emigrate to France.

Kay, Ulysses Simpson (1917–), US composer who studied at the Eastman School of Music and at Yale University, under HINDEMITH. He wrote numerous works for chamber ensembles and his later compositions used QUARTAL HARMONY. Included in his works are two one-act operas and *Symphony* (1968).

Kayah State. See KARENS.

Kayak, CANOE of Eskimo origin, traditionally built of sealskins stretched over a

wooden framework. It is decked over, apart from the cockpit, and propelled by one double-bladed oar. Silent and manoeuvrable, it is still used by Eskimos for fishing and for hunting seals. See also CORACLE.

Kaye, Danny (1913–), US comedian and actor, real name David Daniel Kominski. He appeared on Broadway in several plays, including *Lady in the Dark* (1940) and *Let's Face It* (1941). Among his many films are *Up in Arms* (1944), *The Secret Life of Walter Mitty* (1947), *Hans Christian Andersen* (1952) and *The Five Pennies* (1959). Between 1963–67 he appeared regularly on US television in *The Danny Kaye Show*. Since 1953 he has travelled and performed all over the world as a goodwill ambassador for UNICEF.

Kayibanda, Grégoire (1924–), first President of Rwanda (1962–73) after it gained independence from Belgium. As leader of the Hutu tribe, he treated the Tutsi minority with moderation but was deposed by Gen. HABYALIMANA in 1973.

Kayser, Heinrich Gustav Johannes (1853–1940), German physicist known for his work on the properties of sound and his discovery in 1895 of HELIUM gas in the atmosphere. He collaborated with Carl D. T. RUNGE in the development of techniques for determining the characteristic spectra of various elements.

Kayseri, city in central Turkey, at the foot of Mount Erciyes. Originally called Caesarea, it was captured by the Mongols (1243) and the Mamelukes of Egypt (1419); the city became part of the Ottoman Empire in 1515. Its modern industries include textiles, sugar and agriculture. Pop. (1973) 183,128.

Kay-Shuttleworth, Sir James Phillips (1804–77), British educationalist. In 1839 he became secretary of the newly-established Committee of the Privy Council for Education. He increased government grants for education and introduced the system of government school inspection. In 1840 he founded the Battersea Training College for teachers and introduced the pupil-teacher system of training elementary schoolteachers.

Kazakhs, Turkic-speaking Muslim people who inhabit KAZAKHSTAN, USSR, and the adjacent Sinkiang province of China. In 1916 the Kazakhs rebelled against Russia, but the 1917 Bolshevik Revolution prevented the setting up of a Western-style state. Traditionally nomadic, they have become sedentary this century within the Soviet collective farm system.

Kazakhstan (Kazachskaja SSR), constituent republic of southern USSR, bordered by China in the E and the Caspian Sea in the W; the capital is Alma-Ata. The region was gradually taken by Russia between 1730 and 1853. It became an autonomous republic in 1920 and a constituent republic in 1936. The S and E of the region are mountainous, the central area is steppe and there are lowlands in the N and W. The area produces much of the USSR's wheat and wool, and cattle raising is also important. There are large deposits of iron ore and coal, and copper, lead and zinc are also mined. Industries: oil refining, textiles, pharmaceuticals, fertilizers. Area: 2,715,099sq km (1,048,300sq miles). Pop. (1975 est.) 14,200,000.

Kazan, Elia (1909–), US author and director, b. Istanbul, Turkey. He was one of the founders of the Actors' Studio and won the New York Drama Critics' Award for his direction of *The Skin of Our Teeth* (1942) and a Tony Award for *JB* in 1958. His work in the cinema includes *A Tree Grows in Brooklyn* (1945), *Gentleman's Agreement* (1947) – for which he received an Academy Award, – and *On the Waterfront* (1954). He wrote two bestsellers, *America, America* (1962) – which he made into a film – (1963), and *The Arrangement* (1967), filmed in 1969.

Kazan, port and state capital of the Tatar Republic (Tatarskaja ASSR), USSR, on the River Volga. Founded in 1437, Kazan' became the capital of the Tatar khanate (1438). Conquered by IVAN IV, it became an 18th-century outpost of Russian colonization in the E. The peasant leader Pugachev burnt the city in 1773, but it was

rebuilt by CATHERINE II. Both LENIN and TOLSTOY studied at the university, which was founded in 1804. Industries: electrical equipment, chemicals, footwear. Pop. 946,000.

Kazantzakis, Nikos (1885–1957), Greek politician and writer who studied law at Athens and Paris universities and directed the Greek ministry of public welfare (1919–27). He is best known for his novel *Zorba the Greek* (1946), but he also wrote poetry and analyses of the works of BERGSON and NIETZSCHE.

Kazin, Alfred (1915–), US critic of modern American literature. His first major work was *On Native Grounds* (1942); he has also published studies or edited editions of the works of F. Scott FITZGERALD, Theodore DREISER and Nathaniel HAWTHORNE. His *Bright Book of Life* (1973) is an analysis of US literature up to 1972.

Kazinczy, Ferenc (1759–1831), Hungarian writer and literary innovator who established the radical periodical *Orpheus* (1790). A vigorous champion of the Enlightenment, he was imprisoned for a time for his revolutionary activities and devoted his later life to reforming Hungarian literature. His poetry includes *Poetái epistolák* (1819).

Ken, large parrot with a crossed bill, found in the South Island, New Zealand. Its plumage is olive-green, with green and blue wings. It feeds on buds, fruit, worms and grubs. In winter it frequents sheep-rearing areas, feeding on carcasses. It is sometimes falsely accused of killing sheep. Species *Nestor notabilis*.

Keane, Edmund (1787/90–1833), British actor. His performance as Shylock in *The Merchant of Venice* (1814) launched him on a career of fiery roles, including Macbeth, Iago, Richard III and Barabbas. His last stage appearance (1833) was as Othello to the Iago of his son, Charles.

Kearney, Denis (1847–1907), US labour leader, b. Ireland. In 1877 he organized in California the Workingmen's Party in protest against current economic and political evils, including the use of Chinese labour. His followers – the "Sand-Lotters" – packed the state convention and influenced the 1879 Constitution. He later tried to gain support in the eastern states, but was unsuccessful.

Kearson, Cherry (1871–1940), British naturalist, photographer and author. Noted for his films and photographs of wild life, particularly of wild life in Africa and Australia, his books include *Shifting Sands of Algeria* (1924), *The Animals Come to Drink* (1932) and *The Lion's Roar* (1934).

Keaton, Buster (1895–1966), US film comic actor and director, real name Joseph Francis Keaton. His sophisticated, totally visual, slapstick style evolved from a family music-hall background and a series of two-reelers in which he first featured and later directed between 1917 and 1923. *Our Hospitality* (1923), *Seven Chances* (1925) and *The General* (1926), mainly filmed on location with an unusually perfectionist attention to period detail, are pre-eminent among the ten full-length features he released before 1928 and which established Keaton's reputation as a subtle and resourceful originator of silent screen comedy.

Keats, Ezra Jack (1916–), US author and illustrator of children's books. He was one of the first children's authors to create books that focused on children from minority groups. His books include *The Snowy Day* (1962), which was awarded the Caldecott Medal.

Keats, John (1795–1821), British poet whose short life saw the production of verse which has remained popular ever since. Originally intending to be a surgeon, he abandoned this course in his passion for poetry and because of ill-health. Despite the critical disdain with which the long poem *Endymion* (1818) was received, Keats went on to write the restrained *The Eve of St Agnes* and the haunting *La Belle Dame Sans Merci* (both 1819). At this time he also wrote the odes *On a Grecian Urn*, *To a Nightingale* and *On Melancholy*. He experimented with

verse drama, wrote perceptive letters and completed the long poem *Lamia* (1820) before consumption – of which he knew he was dying – overtook him.

Kebab, preparation of cooked meat, which originated in Arabic countries and is now popular in many parts of the world. Types include shish-kebab (pieces of meat cooked on a skewer) and doner-kebab (slices of mutton in unleavened bread). Both are often served with salad.

Keble, John (1792–1866), British clergyman ordained in 1816 and professor of poetry at Oxford University (1831–41). His sermon entitled *National Apostasy* (1833) is considered to have initiated the OXFORD MOVEMENT, an attempt to revive Catholic ideals within the Anglican Church. *The Christian Year*, published in 1827, and *Lyra Innocentium (Thoughts in Verse on Children)*, published in 1846, are examples of his poetic talent.

Kedah, state of Malaysia, bordered on the N and NE by Thailand. Occupations include fishing and the production of rice and rubber. Area: 9,479sq km (3,660sq miles). Pop. (1970) 955,374.

Keel, central longitudinal part of a boat's bottom; the "backbone" that gives strength to the hull. It extends from stem to stern and the ribs are attached to it. A "fin keel", used on yachts, gives stability by reducing sideways movement.

Keeler, James Edward (1857–1900), US astronomer. As head of the Allegheny Observatory (1891–98) he confirmed that SATURN's rings are not solid units but are composed of meteoric particles. He was director of the Lick Observatory (1898–1900) and using the new Crossley reflecting telescope established that a spiral GALAXY is the most common type of observable galaxy.

Keelhaul, punishment once common in the British and Dutch navies. An offender was dragged by rope underwater, below a ship and across the barnacled keel from side to side. It ceased as a practice during the 18th century and the word became naval slang for any severe reprimand.

Keeling Islands. See COCOS ISLANDS.

Keene, Laura (c.1830–73), British actress, who emigrated to the USA in 1855, and became the USA's first woman theatre manager (of Laura Keane's Varieties Theater, New York). In 1856 she opened Laura Keane's Theater and produced and starred in many comedies and melodramas until 1863. Her company was performing Tom Taylor's comedy *Our American Cousin* at Ford's Theatre, Washington, DC, the night Abraham LINCOLN was assassinated there in 1865.

Keeper of the Great Seal, also known as Lord Keeper, originally another name for the Lord Chancellor of England. The two offices were sometimes separated after the reign of Henry II, and in 1562 became the same. The office ceased to exist after 1760, and since then the Great Seal has been kept by the Lord Chancellor.

Keeshond, Dutch dog of Arctic origin; the national dog of Holland during the 18th century. It has a fox-like face with characteristic "spectacles", and small, triangular, erect ears. The compact body is set on straight legs; the tail is curled and high-set. The long, harsh coat is grey, black and cream. Height: to 46cm (18in) at the shoulder.

Kefallinia. See CEPHALONIA.

Keflavik, town on the SW coast of Iceland, approx. 35km (22 miles) WSW of Reykjavik, on the SW shore of Faxa Bay. It has an international airport and a NATO base. Fishing is the major industry. Pop. (1970) 5,663.

Keino, Kipchoke ("Kip") (1940–), Kenyan athlete. He set world records in the 3,000m and 5,000m events in 1965. He won the 1,500m at the 1968 Olympics and won the 3,000m steeplechase at the Olympics in 1972.

Keita, Modibo (1915–77), political leader who advocated federation of the French West African states, became President of the federation 1959, and of Mali in 1960. He inaugurated socialist programmes but was overthrown in 1968.

Keitel, Wilhelm (1882–1946), German general. His appointment as Chief-of-

Staff of the Supreme Command of the armed forces resulted from Adolf HITLER's assumption of power over the German army. He was Hitler's closest military adviser and ratified the unconditional surrender to the Allies. He was tried and executed as a war criminal.

Keith, Sir Arthur (1866–1955), British anatomist, conservator at the Royal College of Surgeons (1908) and professor of physiology at the Royal Institution, London (1918–23). He carried out work on the anatomy of the heart and applied his knowledge of general anatomy to an important study of human origins, reconstructing prehistoric man from fossil remains. His books include *The Antiquity of Man* (1915) and *A New Theory of Human Evolution* (1948).

Keith, George (c.1639–1716), Scottish Quaker missionary. He was frequently imprisoned for his preaching and emigrated to Philadelphia, USA, in 1689. He was banned from preaching there in 1692, and returned to London and conformed to the Anglican Church in 1700.

Kekkonen, Urho Kaleva (1900–), President of Finland (1956–), and a lawyer, writer and sportsman. He maintained good relations with the USSR and concluded the Finnish-Soviet Treaty in 1948 – extended in 1970 – which guarantees that Finnish territory cannot be used to launch an attack on the USSR.

Kekulé von Stradonitz, Friedrich August (1829–96), German chemist who discovered the ring structure of BENZENE. He became university professor first at Ghent, and later at Bonn. He worked on the structure of organic molecules and on the concept of VALENCY, particularly with respect to benzene and other aromatic compounds.

Kelantan, state in the central Malay Peninsula, Malaysia, on the South China Sea; bounded in the N by Thailand. Ruled by Java in the 14th century, Siam in the 19th and Britain in the 20th, it became part of the Federation of Malaya in 1957, and a state of Malaysia in 1963. Area: 14,970sq km (5,780sq miles). Pop. (1970) 680,626.

Keller, Gottfried (1819–90), Swiss writer. The range of his talent is shown in a collection of ten stories, *Die Leute von Seldwyla* (1856; *The People of Seldwyla*, 1919). Among his subsequent works are *Sieben Legenden* (1872; *Seven Legends*, 1929) and his autobiographical novel *Der grüne Heinrich* (1854; *Green Henry*, 1960).

Keller, Helen Adams (1880–1968), US social worker, writer and lecturer. With the help of her teacher Anne Sullivan, she overcame the loss of sight, hearing and speech, caused by an illness contracted at the age of 19 months. In 1904 she graduated with honours from Radcliffe College. She mastered several languages and lectured throughout the world, raising funds for the training of the handicapped. Her books include *The Story of My Life* (1902), *The World I Live In* (1908), and *The Open Door* (1957).

Kellermann, François Christophe de (1735–1820), French general. Made a *maréchal de camp* in 1788, Kellermann became an army commander in 1792, and it was the union of his troops with those of Dumouriez which led to the victory of Valmy in September of that year. Kellermann became a marshal in 1804. His son was a noted cavalry commander.

Kellogg, Frank Billings (1856–1937), US diplomat. He was the Republican senator for Minnesota (1917–23), an ambassador to Britain (1923–25) and Secretary of State (1925–29). He is best known for his negotiation of the KELLOGG-BRIAND PACT in 1928. He received the Nobel Peace Prize in 1929, later becoming a judge in the Court of International Justice.

Kellogg-Briand Pact (Pact of Paris) (1928), agreement that renounced war as a means of settling international disputes. It was proposed in 1927 by the French Foreign Minister Aristide BRIAND as a treaty between France and the USA and was enlarged in 1928 by the US Secretary of State Frank B. KELLOGG to include all nations. Although 64 countries signed the pact, many qualifications were expressed,

in particular about the right to wage war in self-defence. There were no provisions in the pact for enforcing it. After WWII it became part of the legal basis for the Nuremberg trials of war criminals.

Kelly, Book of. See BOOK OF KELLS.

Kelly, Edward ("Ned") (1855–80), most famous Australian bushranger (outlaw). From 1878 he led a gang which carried out a series of robberies in Victoria and New South Wales. He was captured and hanged after a siege in Glenrowan township, during which the rest of his gang were killed. He was well-known for his use of home-made armour.

Kelly, Ellsworth (1923–), US painter, best known for his HARD-EDGE paintings, such as *Red Blue Green* (1963), and his geometrical sculptures which were manufactured industrially.

Kelly, Emmett (1898–), US circus clown, best known for his role as "Weary Willie", a character which he created as a cartoonist and brought to life in 1923.

Kelly, Gene (1912–), US dancer, choreographer, film star and director. He was a major force in musical films in the 1940s and 1950s. His greatest films, co-directed with Stanley Donen, were *On the Town* (1949), *An American in Paris* (1951) and the popular *Singin' in the Rain* (1951). They featured Kelly's exuberant, athletic dancing and revealed his ambitious directorial style.

Kelly, George (1887–1974), US actor, playwright and director. Many of his plays portray the middle-class American way of life during the 1920s. *The Torchbearers* (1922) was his first Broadway success, followed by the even more successful comedy *The Show-Off* (1924). *Craig's Wife* (1925) won him the Pulitzer Prize and was made into the film *Harriet Craig* (1950).

Kelly, Sir Gerald (1879–1972), British portrait painter, elected to the Royal Academy in 1930. In 1945 he painted official portraits of King George VI and the Queen. He succeeded Sir Alfred MUNINGS as president of the Royal Academy (1949–54).

Kelly, Grace Patricia (1929–), US film actress until 1956, when she married Prince Rainier of Monaco. She began her film career in 1951 with *Fourteen Hours*. She appeared in *High Noon* (1952) and in 1954 won an Academy Award for her performance in *The Country Girl*. She retired from show business when she got married.

Kelly, Hugh (1739–77), Irish playwright. After moving to London, he edited several magazines. His plays include the comedies *False Delicacy* (1768), *A Word for The Wise* (1770) and *The School for Wives* (1773).

Kelly, John B., Sr (1891–1960), US oarsman who won the Olympic single sculls (1920) and double sculls (1920, 1924). Barred by his own professional status from competing at the amateur Henley Regatta, he had the satisfaction of seeing his son win the Diamond Sculls in 1947 and 1949.

Kelly, William (1811–88), US steelmaker. In c.1850 he invented a method of converting molten iron into steel by oxidation. The process, later known as the BESSEMER PROCESS, was taken up and patented by the British engineer Sir Henry Bessemer in 1856.

Kelmscott Press, founded (1891) by William MORRIS at Hammersmith, London, the first of a number of private presses undertaking experimental work which gradually transformed the standard of commercial typography. Morris based his type on 15th- and 16th-century prototypes, designing three typefaces: the Golden, the Troy and the Chaucer, the last of which was used for the Kelmscott Press edition of *The Works of Geoffrey Chaucer* (1896), its masterpiece.

Kelp, any of several large brown seaweeds commonly found on Atlantic and Pacific coasts, a type of BROWN ALGAE. A typical kelp has a root-like holdfast, stem-like stipes and leaf-like blades. Formerly a principal source of iodine and potassium compounds, it is now used in a number of industrial processes. Giant kelp (*Macro-*

Keeshond; the markings on the eyes of this dog make it look as if it is wearing spectacles.

Kekulé von Stradonitz made vital contributions to the theory of chemical structure.

Gene Kelly, no stranger to rain, poses by the statue of Eros in London's Piccadilly Circus.

Helen Keller, with her teacher Anne Sullivan, who communicated via the sense of touch.

Kent, Rockwell

cystis) exceeds 46m (150ft) in length. See also pp.359, 412.

Kelsen, Hans (1881-1973), us legal philosopher, b. Czechoslovakia. He contributed towards the 1920 Austrian constitution and taught at Harvard Law School (1940-42) and the University of California (1942-52). He was noted for his "pure theory of law", which opposes both natural law theory and sociological jurisprudence. His writings include *Legal Technique in International Law* (1939) and *The Law of the United Nations*.

Kelsey, Henry (1670-1729), English explorer and fur trader who began work with the Hudson's Bay Company in 1687 and explored Saskatchewan in 1690. A governor of several important trading posts between 1714-22, he sought a north-west passage, and was captured by the French in 1692. He returned to England in 1722 and died in unknown circumstances.

Kelvin, William Thomson Kelvin, 1st Baron (1824-1907), Scottish physicist and mathematician after whom the absolute scale of temperature is named. The success of the Atlantic submarine telephone cable was due to his researches into the transmission of electric currents for which, in 1866, he was knighted. In THERMODYNAMICS he was able to resolve conflicting interpretations of the first and second laws. He devised a method of measuring the earth's age and published more than 600 scientific papers. The Kelvin temperature scale has absolute zero (-273°C) as its zero point, each degree is the same size as the Celsius degree and the freezing point of water is 273°K. See also pp.635, 636, 846, 848.

Kemal, Yashar (1922-), Turkish novelist. After a number of occupations he worked on the newspaper *Cumhuriyet* (Republic) and published a book of short stories, *Yellow Heat* (1952). His first novel *Mehmed, My Hawk* (1955) won the Varlik Prize. In 1956 Kemal's work explored the experience of the Turkish peasant, using elements of myth and legend and developing themes of such breadth that he was compared with Tolstoy and Hardy. Holding strong political beliefs he was imprisoned for alleged Communist propaganda in the early 1950s and later in 1968, but was released on both occasions.

Kemal, Mustafa. See ATATÜRK, KEMAL.

Kemal Atatürk. See ATATÜRK, KEMAL.

Kemble, British family of actors of whom the most famous was Sarah Siddons, the eldest daughter of Roger (1722-1802), a travelling actor, nine of whose twelve children worked in the theatre. They included John Philip (1757-1823) who, after abandoning ideas of the priesthood, became a tragedian and successfully managed Drury Lane and Covent Garden; Stephen (1758-1822), a large and popular comic actor; and Charles (1775-1854), who was the first to introduce appropriately historical costumes and sets onto the English stage and who successfully played Malcolm to his brother John's Macbeth and excelled in such secondary roles. Frances Ann ("Fanny") (1809-93), the daughter of Charles, made a sensational debut as Juliet at Covent Garden in 1829 and maintained such performances in popular classical parts. She retired from the stage in 1847. Her sister Adelaide (1814-79) sang in opera; her brother John Mitchell (1807-57) was a Cambridge Anglo-Saxon scholar.

Kemény, Baron Zsigmond (1814-75), Hungarian novelist and political journalist. He became editor of the daily newspaper *Pesti Napló* and champion of liberalism and individuality. His novels, such as *Zord Idok* (*Grim Times*) (1862), are pessimistic in tone.

Kemény, Zoltán (1908-65), Hungarian-Swiss sculptor who also studied painting and architecture. From the 1950s he concentrated on reliefs into which he introduced mass-produced metal articles as well as archaeological and mineralogical materials; in doing so he created what has been regarded as a rhythmic and poetic sculptural style.

Kempe, Margery (c.1373-1440), English

writer and mystic. Chiefly famous as the author of probably the first known autobiography in English, *The Book of Margery Kempe*, which was not published in complete form until 1940, she turned to religion after her first pregnancy resulted in an attack of madness, cured by a vision of Christ. She left her husband in 1413 and lived a religious life, travelling to the Holy Land, Italy and Germany before returning to write her autobiography in 1432-36.

Kempe, Rudolph (1910-76), German conductor. Important posts included those with the Bavarian State Opera (1952-61) and the Royal Philharmonic Orchestra, London (1961-75). Renowned for his interpretations of the music of Richard Strauss and Richard Wagner, he was responsible for historic productions of the *Ring* cycle and *Lohengrin* at Bayreuth in the 1960s.

Kempeneer, Pieter (1503-c.1580), Flemish MANNERIST painter and tapestry designer. He studied and painted in Italy for 10 years before settling in Seville, Spain (c.1537), where he became known as Pedro de Campaña. His masterpieces include *Descent from the Cross* (c.1540) and *Presentation in the Temple* (1555), both in Seville Cathedral. In 1563 he returned to Brussels, where he became director of the tapestry factory.

Kempff, Wilhelm (1895-), German pianist and composer. From 1929 he toured throughout the world and received high acclaim for his sensitive interpretations of the music of Beethoven, Schubert and Schumann. His compositions include four operas, two symphonies and various chamber and choral works.

Kempis, Thomas à (c.1379-1471), German spiritual writer. Ordained in 1413, he remained in the same monastery for nearly all the rest of his life. In addition to copying manuscripts, he edited *The Imitation of Christ*, his most famous work, and wrote numerous treatises on the life of the soul. These include *Soliloquium Animae*, concerned with individual spiritual devotion, and *De Tribus Tabernaculis*, which deals with chastity, poverty and humility. He also wrote biographies of many saints.

Kemp-Welch, Lucy Elizabeth (1869-1958), British animal painter who gained popularity both in Britain and abroad with her pictures of horses, such as *Horses Bathing in the Sea*. In 1914 she became the first president of the Society of Animal Painters.

Kemsley, James Gomer Berry, 1st Viscount (1883-1968), British newspaper proprietor. In 1926, with his brother Lord Camrose, he obtained control of Amalgamated Press. He was chairman of Allied Newspapers, later Kemsley Newspapers (1937-59) and editor-in-chief of the *Sunday Times* (1937-59) which he sold to Lord Thomson in 1959.

Ken, Bishop Thomas (1637-1711), British churchman and religious writer. After ordination, he taught at Winchester College, writing the two famous hymns *Awake my Soul and With the Sun and Glory to thee, my God, This Night*. As King's Chaplain, he was made Bishop of Bath and Wells in 1685 and gave absolution to Charles II on his deathbed. In 1691 he was deprived of his see for declining to take the Oath of Allegiance.

Kendal, William Hunter (1843-1917), British actor-manager, real name Grimston, who in 1874 married Margaret ("Madge") Shafto Robertson (1848-1935). By their exemplary acting partnership they helped to raise the status of the Victorian acting profession and while Madge's naturalistic dramatic talents, in such contemporary works as SARDOU's *Dora*, often stole the limelight from William, he acted as an astute manager and nurtured the skills of many young actors in their company. They made regular provincial tours between 1874 and 1908, when both Kendals agreed to retire.

Kendall, Edward Calvin (1886-1972), us

Showalter HENCH and Tadeus REICHSTEIN.

Kendall, Henry Clarence (1839-82), Australian poet. His poems have a strong lyrical quality, especially in his descriptions of the forests and plains of New South Wales. *Leaves from Australian Forests* (1869) is generally considered to be his best book of verse.

Kendo, martial art, traditional Japanese form of fencing. The two contestants wear protective armour and fight with swords usually made of bamboo. For formal demonstrations real swords were used. Footwork with short, fast, gliding steps is an important part of the technique.

Kendrew, John Cowdery (1917-), British biochemist who determined the structure of myoglobin, a protein in muscle. Using X-ray DIFFRACTION analysis he was able to elucidate the arrangement of amino acids in the myoglobin helix. For this work he shared the 1962 Nobel Prize in chemistry with Max F. PERUTZ.

Keneally, Thomas Michael (1935-), Australian novelist. His first book was *The Place at Whitton* (1964). *Bring Larks and Heroes* (1967) and *Three Cheers for the Paraclete* (1968) each won the Miles Franklin Award.

Kenilworth castle, near town of the same name in Warwickshire, England. Begun in 1120, the castle passed to the crown in 1359. In 1563, Elizabeth I gave it to Robert Dudley, Earl of Leicester, who turned it into his own private stronghold. Sir Walter SCOTT's novel, *Kenilworth*, deals with this part of the castle's history.

Keniston, Kenneth (1930-), us psychologist. Professor of psychiatry at Yale University School of Medicine since 1962, he has written about us college campuses in the 1960s and 1970s. His books include *The Uncommitted* (1965), *Young Radicals* (1968) and *Youth and Dissent* (1971).

Kennan, George Frost (1904-), us diplomat and author who was largely responsible for the us State Department's policy of containment of the USSR. He was appointed ambassador to the USSR in 1952, and was later ambassador to Yugoslavia (1961-63). He won a Pulitzer Prize for *Memoirs 1925-50* in 1967.

Kennedy, Edward Moore (1932-), us senator, and the youngest of three brothers who were all senators. He was elected to finish his brother John's term as senator from Massachusetts in 1962. Democratic whip from 1969 to 1971, he worked for liberal legislation, particularly in health and welfare. Since his brothers John and Robert were assassinated, he has remained politically active and a potential presidential candidate.

Kennedy, James (c.1408-65), Bishop of St Andrews and founder of St Salvador's College, Scotland. As adviser to JAMES II, he opposed the growing influence of the DOUGLAS family in Scotland.

Kennedy, John Fitzgerald (1917-63), 35th President of the USA; he held the office from 1961-63. He was the son of Joseph P. Kennedy and the brother of Robert F. Kennedy and Edward M. Kennedy. After distinguished service in the navy in WWII, he was elected to the House of Representatives as a Democrat in 1946. He served there until he entered the Senate in 1953. He made an unsuccessful bid to become vice-presidential candidate in 1956 and immediately began preparations for the presidential nomination of 1960, selecting Lyndon B. JOHNSON as proposed Vice-President. He defeated Richard M. NIXON by a small margin, and at 43 became the second-youngest President. He called for increased federal involvement in civil rights, education and health services. It was foreign affairs, however, that occupied most of his attention. His most spectacular success occurred in Oct. 1962 when, during the CUBAN MISSILE CRISIS, he forced the USSR to remove its missiles from Cuba. In Nov. 1963, Kennedy embarked on a political tour of Texas and was assassinated in Dallas. The WARREN COMMISSION later found that the sniper, Lee Harvey Oswald, had no connection with any conspiracy. See also BAY OF PIGS INVASION; VIETNAM WAR.

Kennedy, Margaret (1896-1967), British

writer whose second novel, *The Constant Nymph* (1924), established her reputation and was later dramatized and filmed. Her other light works of fiction included *The Midas Touch* (1938) and *Troy Chimneys* (1953), which was awarded the James Tait Black Memorial Prize. Other works included a biography, *Jane Austen* (1950), and a volume of film criticism, *The Mechanized Muse* (1942).

Kennedy, Robert Francis (1925-68), us lawyer and political leader. In 1960 he managed the successful presidential campaign of his brother John F. Kennedy and became us attorney general from 1961 to 1964, a post in which he vigorously enforced civil rights laws and investigated corruption in organized labour. After his brother's assassination, he left the cabinet and was elected senator for New York in 1964. While a candidate for the Democratic presidential nomination, he was assassinated after a speech in Los Angeles in June 1968.

Kennedy, Cape. See CAPE CANAVERAL.

Kennedy Round (1964-67), trade and tariff talks held in Geneva among 54 countries under the General Agreement on Tariffs and Trade (GATT). Named after President John F. Kennedy, who proposed them, the talks were GATT's sixth round of trade negotiations. They resulted in a reduction for the participants of an average 35% in the tariffs on most industrial goods.

Kennelly, Arthur Edwin (1861-1939), us electrical engineer. In 1902, after Guglielmo MARCONI's experiments with radio waves, Kennelly noticed that the waves could reach beyond the Earth's horizon. He proposed that they did this by bouncing off a layer of ions high in the atmosphere. Physicist Oliver Heaviside made a similar proposition, and the layer is called the Kennelly-Heaviside layer.

Kennelly-Heaviside layer. See HEAVISIDE LAYER.

Kenneth, name of two kings of Scotland. Kenneth I (d.858) was the founder of the Scottish dynasty. He defeated the Picts in 846 and moved the seat of government to Scone. Kenneth II (d.995), the son of MALCOLM I, took the throne in 971, extended his kingdom N of the River Tay and established his authority over central Scotland.

Kennington, Eric Henri (1888-1960), British painter and sculptor, appointed Official War Artist (1916-19 and 1940-43). He sculpted the British memorial at Soissons, the memorial to Thomas Hardy at Dorchester and bronzes of T.E. Lawrence, including those in St Paul's Cathedral and the Tate Gallery. His books include *Drawing the RAF* (1942) and *The British Home Guard* (1945).

Kennington Oval. See OVAL, CRICKET GROUND, THE.

Kenny, Elizabeth (1886-1952), Australian nurse who became famous for her method of stimulating muscles affected by infantile paralysis (POLIO MYELITIS). Initially the method was not received enthusiastically by orthodox physicians, but by the 1940s her procedures had become generally accepted.

Kenny, Seán (1932-73), Irish stage designer who trained as an architect with Frank Lloyd WRIGHT and later designed many notable productions at Stratford-upon-Avon, Chichester and the National Theatre. His revolutionary contribution to theatre design, however, comprised elaborate and adaptable automated sets which moved onstage while performances were in progress and which were used to best effect in the musicals *Oliver!* (1960) and *Blitz* (1962).

Kent, James (1763-1847), us jurist and legal scholar who was twice elected to the New York legislature. He also served as the first professor of law at Columbia from 1793 to 1798 and as chief justice of the New York Supreme Court from 1804 to 1814. *Commentaries on American Law* (1826-30) was his most important work.

Kent, Rockwell (1882-1971), us painter, author and illustrator whose pictorial works realistically depict vivid dramatic scenes. He lived in Alaska, Newfoundland

and Greenland and often painted the inhabitants at work. Three of his best books, known for their harmony of text and illustration, are *Wilderness* (1920), *Voyaging Southward* (1924) and *Greenland Journal* (1962).

Kent, William (1684–1748), English architect interior designer and painter. He was an exponent of the PALLADIAN style. His best-known works are in London: the Horse Guards Building in Whitehall, the Royal Mews and 44 Berkeley Square.

Kent and Strathearn, Edward Augustus, Duke of (1776–1820), 4th son of GEORGE III. After serving in Gibraltar as Colonel and then Governor, he married Princess Mary Louisa Victoria of Saxe-Coburg-Gotha in 1818 and they produced an heir to the throne; the future Queen VICTORIA was born to them in 1819.

Kent, county in SE England, S of the Thames estuary and NW of the Strait of Dover. Apart from the North Downs, the area is mainly low-lying, with Romney Marsh in the SE. It is drained by the rivers Medway and Stour. Cereals, hops, fruit and vegetables are grown and sheep and cattle are reared. The chief industries are paper making, shipbuilding, chemicals and brewing. The county town is Maidstone. Area: 3,732sq km (1,441sq miles). Pop. (1976) 1,448,100.

Kentigern, Saint (c.518–c.603), also known as Mungo, which probably means "dear". The first Bishop of Glasgow, he was forced by the pagans to flee to Wales c.553, took refuge with St DAVID and founded the monastery of St Asaph. Returning to Scotland in 573, he founded Glasgow Cathedral.

Kentner, Louis (1905–), British pianist and composer who studied at the Royal Academy of Music in Budapest, then embarked on a concert career. His repertoire included works by 20th-century Hungarian composers such as Béla BARTÓK and Zoltán KODÁLY, several of whose pieces he was the first to perform.

Kenton, Simon (1755–1836), US pioneer who was an Indian scout for the governor of Virginia in 1774 and later a scout for Daniel BOONE, helping to fight both the Indians and the British. He was known for his bravery and resourcefulness and once saved Boone's life. He later served as a brigadier general of militia and fought in Kentucky's contingent during the War of 1812.

Kenton, Stanley Newcomb ("Stan") (1912–), US bandleader and composer who led his first band in 1941 and became known nationally with his hit theme *Artistry in Rhythm* in 1945. He continued to lead bands through the 1960s and has promoted the careers of many other jazz musicians and composers.

Kentucky, state in SE central USA. Most of the area consists of rolling plains, including the Bluegrass country for which Kentucky is famous. In the SE the Cumberland Mts dominate a rugged plateau region. The state is drained chiefly by the Ohio and Tennessee rivers. Tobacco is the chief crop, followed by hay, maize and soya beans. Cattle are reared and Kentucky is noted for breeding thoroughbred racehorses. The main industries are electrical equipment, food processing, machinery, chemicals and primary metals. Kentucky is one of the major producers of coal in the country. The main cities are Frankfort, the state capital, Lexington and Louisville.

The region was the first W of the Allegheny Mts to be settled. Daniel BOONE blazed the Wilderness Road from Virginia and North Carolina through the Cumberland Gap in SE Kentucky, and thousands of settlers followed this route. The territory was admitted to the Union in 1792. A border state between the North and the South, its loyalties were divided at the outbreak of the AMERICAN CIVIL WAR. Kentuckians fought in both the Union and Confederate armies and the state was invaded by both. Area: 104,623sq km (40,395sq miles). Pop. (1975 est.) 3,396,000. See also p.2161.

Kentucky Derby. See DERBY.

Kenya, independent nation on the E coast of Africa. Most of the population are dependent on agriculture although only a

small proportion of the land can be cultivated. The chief cash crops are coffee, tea and sisal. Since independence in 1963, manufacturing has increased with the aid of foreign investment. Tourism is of great importance to the economy. The capital is Nairobi. Area: 582,646sq km (224,960sq miles). Pop. (1975 est.) 13,349,000. See p.2086.

Kenya, Mount, snow-capped, extinct volcanic mountain in central Kenya, second highest mountain in Africa. The fertile slopes are cultivated by the Kikuyu people; at an altitude of between 1,525 and 3,660m (5,000 and 12,000ft) the slopes are forested and inhabited by a variety of big game animals. The highest peak is Batian, rising to 5,200m (17,058ft).

Kenya, Jomo (c.1893–1978), First President of Kenya. He entered politics to defend his own tribe, the Kikuyu, and black African rights. He was imprisoned in 1953 for Mau Mau terrorism, exiled and then elected president of the Kenya African National Union (1960). He helped to gain Kenya's independence from Britain in 1963 and became president in 1964, suppressing opposition and outlawing opposing political parties.

Kenyon, Dame Kathleen Mary (1906–78), British archaeologist. While Director of the British School of Archaeology in Jerusalem between 1951 and 1966 she showed that the walls of JERICHO, previously associated with JOSHUA, had been built at various periods and that a settlement had existed there in the 7th century BC. Her books include *Digging up Jericho* (1957), *Archaeology in the Holy Land* (1960) and *Digging up Jerusalem* (1974).

Kepler, Johannes (1571–1630), German astronomer who in 1609 put forward the theory that the planets travel round the Sun in elliptical orbits. He was assistant to the Danish astronomer Tycho BRAHE and, on Brahe's death, used his teacher's observations of the positions of the stars and the movements of the planets to formalize three fundamental laws of planetary motion, on which ISAAC NEWTON later based his theory of gravitational force, and on which modern astronomy is based. Kepler also revolutionized optics with his ray theory of light to explain vision. See also pp.775, 914–915, 914, 1026.

Kepler's laws, three laws of planetary motion, formulated by Johannes KEPLER and published between 1609 and 1618. The first law states that the orbit of a planet is an ellipse, with the Sun at one of the foci. The second and third laws state that a planet moves fastest when closest to the Sun, and that the SIDEREAL PERIOD of a planet is related to its distance from the Sun. See also pp.914–915.

Kerala, state of SW India, on the Arabian Sea; Trivandrum is the capital. It is one of India's smallest states and the most densely populated. It was formed in 1956 and a year later elected a Communist government. The central government regained power in 1959, but in the 1967 elections the Communist Party again came into power. Fishing is important, and chief products include rubber, tea, coconuts, cashew nuts, ivory, teak and minerals. Area: 38,864sq km (15,005sq miles). Pop. (1971) 21,347,375.

Keratin, fibrous protein present in large amounts in the superficial cells of the skin, where it serves as a protective layer. Hair and finger nails are made up of modified epidermal cells filled with keratin, which is also the basis of claws, horns and feathers in animals. See also pp.150, 150.

Keratitis, inflammation of the cornea of the eye. Among its many causes are infection, contact with irritants and physical injury.

Kerekou, Lt.-Col., Mathieu, political and military figure of Benin (formerly Dahomey). He led a military coup in 1972, to become chief of state.

Kerensky, Alexander Feodorovich (1881–1970), Russian political figure and head of the provisional government from July to Nov. 1917. Elected to the DUMA as a moderate socialist in 1912, he became prime minister in July 1917, shortly after

the overthrow of the tsar. He suppressed KORNILOV's uprising but had to flee after the Bolshevik Revolution of Nov. 1917. See also pp.1676, 1676.

Kerkira, Kerkira. See CORFU.

Kermadec Islands, group of volcanic islands in the S Pacific Ocean; a dependency of New Zealand since 1887. Sunday Island is the largest and only populated island of the group. Total area: approx. 34sq km (13sq miles). Pop. (1974) 9.

Kermānshāh, city in W Iran situated on the main route from Teheran to Baghdad. It is a trade centre for the surrounding agricultural region which produces cereals and fruits. The city's manufactures include carpets and textiles. Pop. (1971 est.) 190,000.

Kern, Jerome (1885–1945), US songwriter and a leading composer of film and show music, including *Sally* (1920), which launched the song *Look for the Silver Lining*, and *Roberta* (1933), which introduced *Smoke Gets in Your Eyes*. His outstanding musical is *Showboat* (staged 1927; filmed 1936, 1959), which contained the song *Ol' Man River*. His style influenced Richard RODGERS and George GERSHWIN.

Kerosene (paraffin), distilled petroleum product heavier than petrol but lighter than diesel fuel. Kerosene, known historically as an illuminant (paraffin oil), is now used in camping stoves, tractor fuels and turbine fuels for jet and turboprop aircraft. See also pp.441, 441.

Kerouac, Jack (1922–69), US poet and novelist whose *On the Road* (1957) is considered a pre-eminent work of the BEAT GENERATION. It drew the attention of the public to a subculture of poets, mystics, folk singers and eccentrics. He became a cult figure and a leader in the search for an alternative life-style.

Kerr, Deborah Jane (1921–), British actress who worked mainly in the USA where her refined beauty and formal diction won her roles requiring moral fervour and restrained passion. Her notable film successes, for which she was six times nominated for Oscars, include *Tea and Sympathy* (1956) *The King and I* (1956), *Separate Tables* (1958), *The Innocents* (1961) and *The Arrangement* (1970). Her most powerful performance was perhaps that of the lonely, susceptible army wife in *From Here to Eternity* (1953). Successful London stage performances have included roles in *The Day After the Fair* (1972) and *Candida* (1977).

Kerr, Sir John Robert (1914–), Australian lawyer and public official. He was deputy president of the Trades Practices Tribunal (1966–72), a judge of the Commonwealth Industrial Court and of the Supreme Court of the Australian Central Territories (1966–72), Chief Justice of the Supreme Court of New South Wales (1972–74) and Governor General (1974–77). He created controversy over the role of Governors General in COMMONWEALTH COUNTRIES when, without precedent, he dismissed the Labor government in office (under Gough WHITLAM), in 1975 and precipitated a general election.

Kerr, Walter Francis (1913–), US drama critic for the New York *Herald Tribune* 1951–66 and the New York *Times* from 1966. He wrote the revue *Touch and Go* (1949) and the musical, *Goldilocks* (1958).

Kerry, county in SW Republic of Ireland, in Munster province, on the Atlantic coast. It is a mountainous region with an indented coastline and many lakes, including the Lakes of Killarney. Oats and potatoes are grown and sheep and cattle raised. Industries: tourism, fishing, peat cutting, footwear, woollen goods. The main towns are Tralee, the county town, and Killarney. Area: 4,700sq km (1,815sq miles). Pop. (1971) 112,940.

Kerry blue terrier, working dog bred in Ireland. It has a long head and triangular folded ears. The body, with its short, straight back, is set on powerful legs, and the tail is short. The soft, dense coat is any shade of grey-blue. Height: to 49cm (19.5in) at the shoulder.

Kersh, Gerald (1911–68), US novelist, b. Britain. After serving in WWII he wrote

They Die With Their Boots Clean (1941) and *The Nine Lives of Bill Nelson* (1941) about his experiences. He wrote many other novels, horrific and forceful, and became a US citizen in 1959.

Kesey, Ken (1935–), US novelist who wrote *One Flew Over the Cuckoo's Nest* (1962) about the inmates of a mental hospital. It was made into a highly successful play and film.

Kesselring, Albert (1885–1960), German general. He was air chief of staff from 1936 and commanded air operations in the early years of WWII. He became supreme commander in Italy in 1943 and of the western front in 1945. Convicted as a war criminal, he served five years of a life sentence before he was released.

Kesten, Hermann (1900–), German novelist whose works include *Joseph sucht die Freiheit* (1927; *Joseph Breaks Free*, 1930) and *Der Scharlatan* (1932; "The Charlatan"), a novel attacking Hitler. As a result of the latter book, he was forced to flee from Germany, first going to The Netherlands and then the USA.

Kesteven, The Parts of, region in E England, one of three administrative districts into which Lincolnshire was divided until 1973. It occupied the SW region of the county, with its administrative centre at Sleaford.

Kestrel, also called windhover, small FALCON that lives mainly in Europe, and hovers over its prey before attacking. It feeds mainly on rodents, insects and small birds. Length: 30cm (12in). Species *Falco tinnunculus*.

Keswick Convention, annual summer meeting at Keswick, in England, of evangelical Christians for prayer and Bible study. It was first held in 1875.

Ket, Robert. See KETT, ROBERT.

Ketch, John ("Jack") (d.1686), public hangman of England from 1663. He hanged Lord William Russell and the Duke of Monmouth. Such was his fame that the name "Jack Ketch" was used to describe all hangmen for the next two centuries.

Ketch, small two-masted sailing boat used in coastal waters for trade, fishing and pleasure. Rigged fore and aft, it is identifiable from the mizzenmast's position forward of the rudderhead.

Ketchwayo. See CETEWAYO.

Ketone bodies, three chemical compounds: acetoacetic acid, β -hydroxybutyric acid and acetone. When present in the blood in high concentrations, they increase the blood's acidity. This occurs in starvation, DIABETES MELLITUS and low-carbohydrate high-fat diet and is known as ketosis. The ketone bodies are products of poor carbohydrate metabolism, and they accumulate in the body tissue and fluids, especially the urine.

Ketones. See ALDEHYDES: KETONE BODIES.

Kett, Robert (d.1549), English peasant leader. He was a tanner of an old Norfolk family and led about 12,000 men who gathered at Norwich in 1549 to protest against enclosure. Although their demands were moderate, the rebels were attacked and routed in August by a mercenary army under the Earl of Warwick. Kett was executed as a traitor.

Kettledrum. See TIMPANI.

Kettle hole, steep-sided basin formed when a chunk of ice left behind by a receding glacier is covered by rocks and debris previously pushed forward by the glacier. The ice melts and the rocks fall through, creating a kettle-shaped depression. See also pp.224–225, 224.

Kew Gardens, official name for Royal Botanic Gardens, collection of plants and trees in SW London. Founded in 1760 by George III's mother, they were given to the nation by Queen Victoria in 1840. Much plant research is carried out there. The gardens include three plant museums, a herbarium and some of the world's largest plant houses, particularly the Palm House (1844–48) and Temperate House (1862, 1899 and 1925). There is also a Chinese pagoda 50m (165ft) high, built in 1761.

Key, Ellen Karoline Sofia (1849–1926), Swedish writer and feminist. Although an

Key, Francis Scott

Khachaturian's music entered the British hit parade as theme to the Onedin Line TV series.

advocate of political equality and education for women, she criticized those feminists who insisted that men and women were emotionally and physically equal, emphasizing the importance of motherhood and the home.

Key, Francis Scott (1779-1843), US poet who wrote the US national anthem, *The Star Spangled Banner*, while watching the shelling of Ft McHenry in 1814. The anthem, which was nationally adopted in 1931, first appeared anonymously as a poem, *In Defence of Fort M'Henry*.

Key, in music, term used to indicate tonality in composition, based on one of the major or minor scales. The concept implies relationships between the notes of the scale and the chords built on them. The key of a piece of music is indicated by the key signature at the left hand end of the staff. The key of a passage may, however, change by the addition of accidentals before prescribed notes, which may then define a MODULATION.

Keyboard instruments, large and varied group of musical instruments played by pressing keys on a keyboard. Notes are sounded either by hitting or plucking a string (as in the PIANO or HARPSICHORD), passing air through a pipe or reed (as in the ORGAN or ACCORDION), or electronically (as in the moog synthesizer).

Keyes, Frances Parkinson (1885-1970), US biographer and novelist. She is chiefly famous for her novels, which include *Queen Anne's Lace* (1930), *Dinner at Antoine's* (1948) and *Roses in December* (1960), but she also wrote two biographies: *St Teresa of Lisieux* (1950) and *The Sublime Shepherdess* (1940), a study of Bernadette of Lourdes.

Keyes, Sir Roger John Brownlow, 1st Baron (1872-1945), British admiral who was in charge of submarines at the start of WWI, and subsequently leader of the daring raid on Zeebrugge that crippled the German U-boat campaign in 1918. In 1940 he was given the task of training the first British COMMANDO units.

Keyes, Sidney (1922-43), British poet whose major volumes are *The Iron Laurel* (1942) and *The Cruel Solstice* (1943). His subjects, war, pain, death and guilt, are sensitively conveyed in the poems *The Foreign Gate* and *The Wilderness*.

Keynes, John Maynard (1883-1946), British economist who came to prominence with his book *Economic Consequences of the Peace* (1919), which criticized the economic provisions of the Treaty of Versailles. *The General Theory of Employment, Interest, and Money* (1935) was profoundly influenced by the DEPRESSION. In it Keynes established the foundation of modern MACRO-ECONOMICS. He advocated governmental economic planning and the active intervention of government in the economy to stimulate employment and prosperity. His views had great influence on the BRETON WOODS CONFERENCE of 1944. See also p.1864.

Keyser, de, name of a family of Dutch artists. Hendrick (1565-1621) was a sculptor and architect to the city of Amsterdam, where he designed the Zuiderkerk and Westerkerk and the Erasmus monument. Three of his sons, Pieter (1595-1676), Willem (1603-c.1674) and Hendrick (1613-65), were sculptors. His son Thomas (c.1596-1667) was a portrait painter and his *Constantin Huygens* (1627, National Gallery, London), anticipates the conversation pieces of the 18th century. His work, always lively and expressive in style also includes the distinguished *Seated Lady* (1676).

Keyserling, Baron Hermann Alexander (1880-1946), German philosopher whose travels throughout the world formed the basis of his best-known work, *The Travel Diary of a Philosopher* (1919). His ideas centred on spiritual themes and the spiritual wisdom of non-European cultures. His works enjoyed considerable popularity after WWI.

Keystone Film Company, US production company established in 1912 which specialized in one-reel comedies, most often directed by Mack SENNETT. The infamous Keystone Kops were developed during the first year of production and typified

the unit's comedy formula: irreverent slapstick, zany situations and strong contributions from ex-music hall stars such as Charlie CHAPLIN, Fatty ARBUCKLE and Buster KEATON, culminating in an inevitable accelerated chase sequence and all consolidated by impeccable pace and timing and the editing skills Sennett had learned from D.W. GRIFFITH. In 1917 Sennett sold his interest in Keystone and took most of his stars with him to PARAMOUNT. See also p.1683.

KGB, Soviet secret police known as the Committee for State Security (Komitet Gosudarstvennoye Bezopaznosti). It was first established in 1917 as CHEKA to hunt out political subversives and enemy agents. Later reorganized into the GPU (1923-34) and the NKVD (1934-46), it was instrumental in the purges of the 1930s. From 1946 until 1953 it became the MGB and during WWII began the operation known as SMERSH (death to spies), with the objective of eliminating Soviet enemies. It was also responsible for the political supervision of the army. After STALIN's death in 1953 it was reformed into the KGB. It is supervised by and responsible to the USSR Council of Ministers. Its operations are essentially political in nature, but are less concerned with internal security than were those of its predecessors.

Khachaturian, Aram Ilyich (1903-78), Armenian composer whose graduation from Moscow Conservatory in 1934 coincided with the performance of his first symphony which, like much of his music, makes use of folk themes. He wrote a piano concerto in 1936 and a violin concerto in 1940. His best known works are probably the music for the ballets *Gayane* (1942), which includes his famous *Sabre Dance*, and *Spartacus* (1953).

Khadjah (554-619), first wife of MOHAMMED, the founder of Islam, and the first to believe in his mission. A wealthy widow with three children when she married him, she bore him six children and was his confidante and support for 25 years. Only their daughter, FATIMA, survived Mohammed.

Khaire, also known as Khafra, in Greek Chephren or Souphis, pharaoh of Egypt (late 2500s BC). A member of the 4th Dynasty, he was responsible for the building of the second pyramid at GIZA.

Khaire, Great Sphinx of, monumental statue of the SPHINX, situated at GIZA, Egypt. Its name derives from the pharaoh KHAIRE who commissioned the work, and whose portrait is said to be represented by the sphinx's face.

Khaki, normal colour of 20th-century military uniforms, from the Hindu word for dust. Khaki uniforms were first used in battle in the late 19th century by British troops in India, and their camouflage effect became essential because of the increasing accuracy and range of rifles.

Khalid (1913-), King of Saudi Arabia. While still young he was sent as IBN SAUD's representative to the desert tribes. He also represented Saudi Arabia at various international conferences, and from 1962-75 was vice-president of the Council of Ministers. His interests clearly lay with the BEDOUIN people and their problems. Khalid became crown prince in 1965 and king in 1975 after the assassination of his half-brother King FAISAL.

Khalid (d.642), Arab leader. Initially he opposed MOHAMMED and ISLAM. Defeated by Mohammed at Badr in 624 in Islam's first military victory, he won in 625 at Uhud. He was converted to Islam himself in 629 and became, in Mohammed's words, "The Sword of Allah", conquering Syria, Egypt, Iraq and Persia.

Khalifa, The, or Abdullah el Taaisha (1846-99), the ruler of what was Egyptian Sudan from 1885. He was nominated by the MAHDI as his successor in the same year. In 1898 his army was destroyed by Anglo-Egyptian forces at the Battle of Omdurman, although he maintained resistance until the following year.

Khalkhas, ancient nomadic pastoral people who formed the majority of the Mongol nation which invaded Russia and Europe under GENGHIS KHAN. Today they comprise about 75% of the Mongolian

People's Republic. They speak the Khalkha language. Their indigenous religion was Shamanism, a spirit-worshipping pantheism, but many of them adopted Tibetan BUDDHISM in the 17th century and after.

Khama, Sir Seretse (1921-80), President of Botswana (1966-80). After studying in England, he returned to Botswana (then Bechuanaland) but was banished in 1950 after a dispute with the British government over his succession to the chieftaincy of the Bamangwato tribe. He renounced (1956) his claim and became President when Botswana achieved independence in 1966.

Khamsin, hot, dry southerly wind that blows across N Africa from the Sahara during spring and summer. The name means "fifty" in Arabic, the number of days during which the wind is supposed to blow.

Khan, Ayub (1907-74), Pakistani general and politician. In 1951 he became Commander-in-Chief of the army, and proclaimed himself President in 1958. He encouraged agrarian reform and foreign investment and fought a short war against India in 1965. In 1969 he resigned after widespread rioting.

Khania (Canea), port on the Gulf of Khania, NW Crete, Greece; capital of Khania prefecture. One of the oldest Cretan cities, it was held in turn by the Romans, Arabs, Byzantines, Venetians and Ottomans. The Cretan capital since 1841, the port's principal industry is the shipping of olives, citrus fruits and wine. Pop. (1971) 40,452.

Kharkov (Char'kov), city in the Ukraine Republic (Ukrainskaja SSR), USSR, at the confluence of the Kharkov, Lopan and Udy rivers; capital of Kharkov oblast. In the 17th century the city served as the stronghold of the Ukrainian Cossacks in defending Russia's border, and served as the capital of Ukraine from 1765. It has a university dating from 1805. Industries: food processing, ball-bearings, chemicals, electrical goods. Pop. (1975) 1,357,000.

Khartoum (Al-Khartum), capital of Sudan, at the junction of the Blue Nile and White Nile rivers; capital of Khartoum province. The city was founded in the 1820s by Mohammed Ali. It was besieged by the Mahdists in 1885, and occupied and rebuilt by Gen. Horatio KITCHENER in 1898. It became the seat of government in 1956 when Sudan gained its independence. The city has the Kitchener School of Medicine (1924) and a university (1956). Industries: cement, gum arabic, chemicals, cotton textiles. Pop. (1972 est.) 300,000.

Khachaturian, Aram Ilyich. See KHA-CHATURIAN, ARAM ILYICH.

Khayyam, Omar. See OMAR KHAYYAM.

Khazars, Turkic people who first appeared in the lower Volga region c.2nd century AD. They allied themselves with the BYZANTINE EMPIRE in fighting the Persians (AD 610-41). Between the 8th and 10th centuries their empire, situated astride important trade routes, was prosperous and extended from N of the Black Sea to the River Volga and from W of the Caspian Sea to the River Dnieper. They conquered the Volga Bulgars, taxed the eastern Slavs and fought the Arabs, Russians and Pechenegs. In the 8th century, their ruling class was converted to JUDAISM, and maintained close relations with Constantinople. Their empire was destroyed in 965 by the army of Sviatoslav, Duke of Kiev. Some scholars believe that they are the ancestors of many Eastern European Jews.

Khedive, unofficial title used by the viceroys of Egypt after the 1820s to stress their autonomy and to indicate superiority over other Ottoman governors. The Ottoman Sultan Abdulaziz conferred the title on Ismail in 1867, having granted the right of hereditary succession in 1866.

Khephren. See KHAIRE.

Khepri, or Khepera, in ancient Egyptian mythology, the aspect of RE as the self-created and continuously reborn morning sun, who is also a creator of gods, notably SHU, the air god, and Tefnut, god of rain. Khepri is depicted as a scarab (dung

The Great Sphinx of Khafre stands 20m (66ft) high, and is 73m (240ft) long.

King Khaled with the Saudi Arabian ambassador, while visiting London.

Nikita Khrushchev listens to his interpreter at the opening of the Aswan Dam (1964).

beetle) – a symbol of resurrection – or as a man with a scarab.

Kheraskov, Mikhail Mateyevich (1733–1807), Russian poet. A versatile and prolific writer, he was director of Moscow University from 1763.

Khīrbet Qumrān. See **QUMRĀN**.

Khlebnikov, Viktor (1885–1922), Russian poet and student of mathematics and linguistics who, with the poet Vladimir MAYAKOVSKI, founded the Russian Futurist literary movement. They rejected the art of the past and strongly supported the Bolshevik Revolution of 1917. Khlebnikov, in such poems as *Zaklyatie Sme-khom* (1910) and *Poet* (1919), sought to free words of conventional meanings.

Khmer, language of up to 85% of the inhabitants of Cambodia. It belongs to a group of the Mon-Khmer languages and has given its name to the people who speak it. A Khmer empire was set up between the 9th and 15th centuries AD, and the name was adopted by the Khmer Republic, established in 1970, which fell to the KHMER ROUGE in April 1975. See also pp.1360, 1361, 1779.

Khmer Rouge. See **CAMBODIA**.

Khmer Rouge, ruling power in Kampuchea, also called the Communist National United Front. After the overthrow of the neutralist Sihanouk government in 1970, the Khmer Rouge turned successfully to armed conflict, taking the capital Phnom Penh in April 1975. Khieu Samphan was named chief of state and Pol Pot premier (April 1976). See also pp.1778–1779.

Khoisan, group of African languages of South Africa. Hottentots (Khoi, in their tongue) and Bushman (San) are the two largest groups of native speakers. Sandawe and Hadza of Tanzania are also Khoisan.

Khomeini, Ayatollah, Iranian religious leader (age uncertified) who was exiled by the late Shah of Iran in 1964. After the Shah's overthrow in 1979 the Ayatollah returned to act first as unofficial head of state and then, under the new constitution, as National Leader, appointing the revolutionary councils who became the new Islamic government of Iran.

Khomaykov, Aleksei Stepanovich (1804–60), Russian poet and philosopher. A noble, he retired from the Russian Army in 1829 to devote himself to writing and the management of his estates. His poetry demonstrates his commitment to the Slavophiles and is among the finest Russian political verse.

Khorana, Har Gobind (1922–), US biochemist who shared the 1968 Nobel prize in physiology and medicine with Robert W. Holley and Marshall W. Nirenberg for discoveries about the way in which genes determine cell function. They established that most codons, combinations of three of the four different bases found in DNA and RNA, eventually cause the inclusion of a specific AMINO ACID into the cell proteins.

Khorāsān, province in NE Iran; Mashhad is the capital. A mountainous region, its products include farm produce, carpets, turquoise and hides. Area: 313,339sq km (120,980sq miles). Pop. (1971 est.) 2,823,272.

Khorsabad, archaeological site in Iraq, NE of Mosul. Excavations begun in 1843 by the Frenchman Paul-Émile Botta, who unearthed a palace and a temple, have revealed an ancient city thought to be Dur Sharrukin, founded in the 8th century BC by Sargon (Sharrukin) II of ASSYRIA. In 1932, cuneiform tablets in the Elamite language and a list of Assyrian kings from 1700 BC to the mid-11th century were discovered there. See also p.1511.

Khoshrū, name of two kings of Persia. Khoshrū I (d. AD579) extended his empire, rebuilt cities and expanded commerce. His grandson, Khoshrū II (d. 628), was overthrown by Bahram, the Usurper, but regained the throne. He seized Syria, Palestine and Egypt but lost them to the Emperor HERACLIUS. He was executed after a household revolution and his son, Sherōe, succeeded him to the throne.

Khrushchev, Nikita Sergeyevich (1894–1971), Soviet Politician who was First Secretary of the Communist Party from 1953 to 1964 and premier of the USSR from

1958 to 1964. He joined the party in 1918 and was elected to the central committee in 1934. Noted for economic success and ruthless suppression of opposition in the Ukraine, where he was a party secretary, he was elected to the POLITBURO in 1939. After Stalin died he made a speech denouncing him to the Twentieth Party Congress (1956), and expelled his staunch backers from the central committee. Favouring détente with the West, he yielded to US President John F. KENNEDY in the CUBAN MISSILE CRISIS in 1962. This development, economic setbacks and trouble with China led to his downfall in favour of Leonid BREZHNEV and Alexei KOSYGIN in 1964. See also p.1722.

Khufu. See **CHEOPS**.

Khyber Pass, major mountain pass in the Safid Koh range, connecting the Kabul river valley in Afghanistan (w) with Peshawar in Pakistan (E). A strategic route used for centuries by invaders, merchants and migrating peoples, it was the scene of bitter fighting during the Afghan Wars (1838–42 and 1878–80). Two British outposts, Ali Masjid and Landi Kotal, were situated there. Elevation: 1,073m (3,520ft). Length: 50km (30 miles).

Kiang, also called the Tibetan wild ass, wild Asian ass found in the mountains of Tibet and Sikkim up to 5,486m (18,000ft). The most numerous of all wild asses, it is red and white in summer and dun-coloured in winter. Height: 1.5m (5ft) at the shoulder. Family Equidae; species *Equus hemionus kiang*. See also p.320.

Kiangsi (Jiangxi), province in SE China; the capital is Nanchang. It has a mountainous terrain and fertile areas drained by the Kan River. Originally known as Kan under the Chou dynasty (770–435 BC), the region was ruled by the dynasties of western Ch'in, southern Sung and T'ang, until it came under the Ch'ing dynasty (1644–1911). Products: rice, wheat, beans, sweet potatoes, citrus fruits, tobacco, sugar cane, cotton, peanuts. Industries: timber, fishing, porcelain, mining of tungsten, coal, tin. Area: 164,865sq km (63,654sq miles). Pop. 22,000,000.

Kiangsu (Jiangsu), province in E China, the capital is Nanking (Nanjing). One of China's smallest and most densely populated provinces, it is an extremely fertile region that includes the Yangtze (Chang-jiang) River delta. It is a highly industrialized region, Shanghai being the chief manufacturing centre of China. Under the rule of the Ming dynasty from 1368 to 1644, it became a separate province in the 18th century. Taken by Japan in 1937, the province was freed by the Chinese Nationalists in 1945 but fell to the Chinese Communists in 1949. Products: rice, cotton, wheat, barley, soy beans, peanuts, tea. Industries: silk, oil refining, textiles, food processing, cement. Area: 102,240sq km (39,474sq miles). Pop. 47,000,000.

Kibbutz, collective settlement in Israel which is owned by its members. The idea developed from the pioneering settlements established by the Jewish settlers in Palestine before it became Israel in 1948. The first kibbutz was set up on the bank of the River Jordan near the Sea of Galilee in 1910. There are now many such settlements, and they have become strategically important in the defence of Israel.

Kibla, or Kiblah, direction of the KAABA in the Great Mosque in Mecca, towards which Muslims face when praying. Inside a mosque this direction is indicated by a niche in the wall called the *mihrab*. See also pp.1278–1279, 1279.

Kid, Thomas. See **KYD, THOMAS**.

Kidd, Michael (1919–), US dancer and choreographer. After dancing with the Ballet Caravan (1937–40) and the AMERICAN BALLET THEATRE (1942–7), he won Tony awards for his choreography of *Finian's Rainbow* (1947), *Guys and Dolls* (1951) and *Can Can* (1953). Later, he choreographed *The Rothschilds* (1972) and the film version of *Hello Dolly* (1969).

Kidd, William (c. 1645–1701), sea captain and pirate, commonly known as Captain Kidd. After 1689 he was a privateer for the British against the French and pirates

in the West Indies. Later, on commission in Madagascar, he turned pirate himself, prompted in part by the lack of booty. He was denounced and went to New England to seek exoneration, but was sent to England. There he was tried for murder and piracy, and hanged in 1701.

Kiddush, Jewish prayer recited before a meal on the eve of the Sabbath or of a festival. Emphasizing the sanctity of the day that is beginning, the head of the household says the prayer over a cup of wine, which is then passed round to each member to sip.

Kidnapped (1886), novel by Robert Louis STEVENSON. Set in Scotland during the aftermath of the Jacobite Rebellion, which was crushed at Culloden, the novel describes David Balfour's adventures at sea and as a fugitive until he regains his inheritance. He is aided by a volatile Jacobite, Alan Breck.

Kidney, excretory organ that filters waste and waste material from the blood, conveying them along the URETER, to the BLADDER as urine. There are two kidneys, one on each side of the body in the small of the back. The human kidneys are made up of about one million highly specialized tubules, each of which contains numerous capillaries that filter the blood entering from tiny branches of the renal artery. See also pp.160–161, 161.

Kidney bean. See **BEAN**.

Kidney machine, or artificial kidney, machine for extracting waste matter from blood during kidney failure. Generally it is used once or twice a week for 14–15 hours. The patient is connected to the machine by tubes from his arms or legs through which his blood is pumped. Blood is separated from the waste matter in the machine and returned to the patient.

Kidney stones, small, hard, pebble-like masses formed in the KIDNEY from an accumulation of mineral substances; known medically as calculi. Passage of a stone through the ureter (tube from the kidney to the bladder) causes the excruciating pain of renal colic. They can be removed by surgery or, if the stones are small, they can be passed out in the urine after treatment, which includes drinking large amounts of water.

Kidron, brook or field in biblical times, the present-day Qidron (JORDAN) between Jerusalem and the Mount of Olives. The vale of Kidron has been traditionally identified as the Valley of Jehoshaphat, referred to in JOEL 3 as a place of judgment.

Kiel, seaport city in West Germany, 64km (40 miles) NW of Lübeck, at the head of the Kiel Canal linking the North Sea and the Baltic Sea. The city was ceded to Denmark in 1773, to Prussia in 1866 and was the scene of the mutiny that began the German revolution of 1918. The canal was deepened prior to WWI and given international status in 1919 because of its commercial and military importance. This status was repudiated by HITLER in 1936. Today Kiel is a shipping and industrial city manufacturing textiles, processed food and printed matter. Pop. (1974) 265,587.

Kiel, Treaty of (14 Jan. 1814) dissolved the union of Norway and Denmark that had been established in 1380. After Napoleon's defeat at Leipzig, Swedish Crown Prince Charles (Bernadotte) defeated Denmark (which had sided with France in the Napoleonic Wars). Under the treaty, Frederick VI of Denmark ceded Norway to Sweden but kept Greenland and other Norwegian colonies. Sweden gave up Western Pomerania and Rügen to Denmark.

Kjelland, Alexander (1849–1906), Norwegian novelist, dramatist and short story writer. Influenced by Søren KIERKEGAARD, he attacked the church in novels such as *Snow* (1886) and *St John's Festival* (1887). Other works include the novels *Garman and Worse* (1880) and *Jacob* (1891).

Kiely, Benedict (1919–), Irish novelist and historian. His works include *Counties of Contention* (1945), a study of Irish partition, *Modern Irish Fiction: a Critique* (1950) and *Dogs Enjoy the Morning* (1968).

Kierkegaard, Søren Aaby (1813–55), Danish philosopher and theologian. Regarded as the forerunner of modern EXISTENTIALISTS, he believed that the individual must make deliberate decisions about the direction of his life. Critical of HEGEL's speculative philosophy, he also opposed organized Christianity. His books include *Either/Or* (1843) and *Philosophical Fragments* (1844).

Kiernan, Tom (1939–), Irish rugby union player. He played 54 times for Ireland (1960–73), the most international appearances by any fullback, and was captain from 1963. He toured South Africa with the British Lions in 1962 and, as captain, again in 1968. An accurate goal-kicker, he scored more than 100 points in internationals.

Kiesinger, Kurt Georg (1904–), West German political leader who was elected to the BUNDESTAG as a Christian Democrat in 1949. In 1958 he became Minister-President of Baden-Württemberg. He was elected federal Chancellor in October 1966 and headed a coalition government with the Social Democrats until 1969, when he resigned, to be replaced by Willy BRANDT.

Kiev, port and capital city of the Ukraine (Ukrainskaja SSR), USSR, on the River Dnieper; capital of Kiev oblast, and third largest city in the USSR. The city belonged to Lithuania in the 14th century, Poland in the 16th century and was taken by Russia in 1686. It served as the capital of the independent Ukrainian Republic from 1917 to 1919. The BOLSHEVIKS took the city in 1920. It is the site of the cathedral of St Sophia, built in 1037 and the oldest church in the USSR, and a university (1834). Industries: shipbuilding, machine tools, food processing, footwear, furniture. Pop. 2,013,000.

Kiffin, William (1616–1701), English merchant and baptist minister who joined a separatist congregation in 1634 and became a baptist in 1638. In 1643 he began a wool business, becoming rich as a result. In 1664 he was arrested and briefly imprisoned on suspicion of plotting against Charles II. He became an alderman of London in 1687.

Kigali, capital of Rwanda, E of Lake Kivu. The chief administrative and commercial centre of the country, its major industries are tin mining, cotton, textiles and coffee. Pop. 60,000.

Kikimora, in Slavic mythology, a female domestic spirit who performed household tasks to assist busy wives. She could be propitiated by washing the kitchen utensils with a brew made from ferns.

Kikuyu, Bantu-speaking people of the fertile highlands of Kenya, E Africa. In pre-colonial times they practised an intensive form of agriculture, in contrast with neighbouring pastoralists such as the Masai. British conquest put severe strains on their political and agricultural system; the result was an outbreak of terrorism during the 1950s known as MAU MAU. After Kenya gained independence they were the country's most important tribe, forming 20% of the population. The first president of the new nation, Jomo Kenyatta, was a Kikuyu.

Kilauea, volcanic crater on central Hawaii Island, Hawaii. It last erupted in 1968 and is the largest active crater in the world. Height: 1,247m (4,090ft). Depth: 152m (500ft).

Kildare, Thomas Fitzgerald, 10th Earl of (1513–37), Deputy-Governor of Ireland in 1534. In that year rumours that his father had been executed in London caused him to renounce his allegiance to King HENRY VIII. He rebelled against the crown, seizing Dublin and murdering Archbishop John Allen. When the rebellion was put down by Sir William Skeffington, he surrendered to Lord Leonard Grey in 1535 and was later executed.

Kildare, county in E central Republic of Ireland. A low-lying region in the central plain of Ireland, it includes the Bog of Allan, and the chief rivers are the Liffey, Boyne and Barrow. Primarily agricultural, Kildare is noted for its breeding of racehorses. Area: 1,694sq km (654sq miles). Pop. (1971) 71,522.

Kiley, Richard Paul

Killdeer, named after its sharp cry, has the scientific name *Charadrius vociferus*.

Kilt: the origin of the word is probably the Danish "kilte", which means to tuck up.

Kiley, Richard Paul (1922–), US stage, film and television actor. After touring with the company of *A Streetcar Named Desire* (1950), he appeared on stage in both dramatic and musical roles. He received Tony awards, in 1959 for *Red-head* and in 1966 for *Man of La Mancha*. His later films include *Blackboard Jungle* (1955) and *Spanish Affair* (1958).

Kilimanjaro, mountain in NE Tanzania, near the border with Kenya. The highest peak in Africa, it is an extinct volcano with twin peaks joined by a broad saddle. Coffee is grown on the intensely cultivated southern slopes. Height: Kibo 5,895m (19,340ft); Mawenzi 5,150m (16,896ft).

Kilkenny, county in SE Republic of Ireland, in Leinster province. Part of the central plain of Ireland, it is drained by the Suir, Barrow and Nore rivers. Farmers grow cereal crops and vegetables, and cattle are reared. The chief industries are food processing, brewing and coal mining. The county town is Kilkenny. Area: 2,062sq km (796sq miles). Pop. (1971) 61,800.

Kilkenny, Statute of (1366), body of laws in Norman French passed in the Irish Parliament called by Lionel, Duke of Clarence, to strengthen English authority in Ireland. It attempted to restrict relations between the Irish and the English – forbidding, for example, intermarriage – and upheld the use of English rather than Brehon law.

Killain, Baron Michael (1914–), Irish author, film producer and sportsman who in 1972 became president of the International Olympic Committee.

Killdeer, noisy, plover-like shore bird of North American meadows known for its alarm call and distraction displays. Its plumage is white with a double black breast ring and chestnut rump and tail. Family Charadriidae; species *Charadrius vociferus*.

Killer whale, toothed whale that lives in all the world's oceans, especially those in colder regions. A fierce predator of large animals, it is black above and white below, and distinguished by a white patch above each eye and a long, erect, dorsal fin. Length: 9m (30ft). Species: *Orcinus orca*. See also pp.101, 322.

Killiecrankie, Battle of (27 July 1689), JACOBITE victory over the forces of WILLIAM III. On a plain at the top of the pass of Killiecrankie in Perthshire, Scotland, some 3,000 Jacobites under Viscount Dundee fought the troops of Gen. Hugh Mackay, who lost nearly half his force of 4,000 men. Dundee, however, was mortally wounded; near the spot where he died stands Urrard House.

Killigrew, Thomas (1612–83), English playwright who was a page to Charles I and a friend of Charles II, with whom he went into exile in 1647. His plays include *The Prisoners* (1641), *Clarailla* (1641) and *The Parson's Wedding* (1664). In 1663 he built the Theatre Royal in Drury Lane, London. His son, Thomas Killigrew (1657–1719), was also a playwright.

Killy, Jean-Claude (1943–), French skier who won the giant slalom, downhill and slalom races in the 1968 Winter Olympic Games at Grenoble, France. He retired from competitive skiing in 1968.

Kilmer, Alfred Joyce (1886–1918), US poet and critic, who is remembered chiefly for his poem, *Trees* (1913), which is a combination of simple philosophy and sentiment. He was killed in action in WWI, just as his work was beginning to show a greater maturity.

Kilmuir, David Patrick Maxwell Fyfe, 1st Earl. See FYFE, DAVID PATRICK MAXWELL.

Kiln, in ceramics, an oven for firing ware. Early kilns were holes in the ground into which the ware was placed and covered by a large fire. Later, special wood- or coal-fired oven-type kilns were built; today most kilns use gas or electricity. See also pp.546–547, 596.

Kilpi, Volter (1874–1939), Finnish novelist notable for his use of modern experimental techniques. His works include the long STREAM-OF-CONSCIOUSNESS novel *Alastalon salissa* ("In the Lounge at Alastalo") (1933).

Kilt, knee-length pleated skirt, part of the

traditional costume of men from the Highlands of Scotland and also worn in Ireland. Scottish kilts are usually made of fine-spun woollen TARTAN, while the traditional Irish kilt is plain.

Kim (1901), adventure novel by Rudyard KIPLING, regarded by critics as one of his best. It is about Kimball O'Hara, orphaned son of an Irish sergeant in the British army in India. After a vagrant childhood and adoption by his father's old regiment, he joins the secret service.

Kimberley, city in South Africa, 138km (86 miles) WNW of Bloemfontein. It was founded in 1871 after the discovery of diamonds nearby. The diamond fields were taken over by Cecil Rhodes in 1888 for the De Beers company, and it remains one of the world's largest diamond centres. Industries include the mining, cutting and polishing of diamonds, also the processing of gypsum, iron and manganese. Pop. (1970) 103,800.

Kimberlite, ultrabasic rock found in diamond-bearing pipes, mainly in South Africa. It is a mica PERIDOTITE consisting chiefly of olivine and phlogopite, and it weathers to the yellow and blue grounds of diamond mines. See also p.258.

Kimhi (contraction of Kimchi), family of Jewish grammarians and biblical interpreters whose members were responsible for introducing Hebrew studies to Europe in the Middle Ages. They included Joseph (c.1105–c.1170) and his sons Moses (d.c.1190), author of the important Hebrew grammar *Mahalak Shevile ha-da'at* (Way of the Paths of Knowledge), and David (c.1160–c.1235), whose greatest work was the *Sefer Mikol* (Book of Completeness).

Kim Il-sung, Marshal (1912–), chief of state of the Democratic People's Republic of Korea (North Korea) and chairman of the Korean Workers' Party from 1948; b. Kim Sung Chu. He joined the Korean Communist Party in 1931 and led guerrilla fighting against the occupying Japanese in the 1930s and a Korean unit in the Soviet army during WWII. In 1950 he led a North Korean invasion of South Korea that precipitated the KOREAN WAR (1950–53).

Kimono, the traditional formal dress of Japanese men and women. It is a single piece of material (usually silk) which is wrapped tightly around the waist, forming loose arms and a flowing skirt. Although still worn it is increasingly being replaced by western styles of dress.

Kinaesthetic sense, also called proprioception, internal sense that conveys information from the muscles and tendons of the body. Specialized receptors connect to a tract of the nervous system which provides information about the contraction and expansion of muscles. It is the position sense, because it allows human beings to know the positions of their limbs without visual confirmation. See also CEREBELLUM.

Kincardine (shire), former county in E Scotland; since 1975 it has been part of Grampian Region. The Grampian Mts slope down to a fertile coastal plain in the E. Sheep and dairy and beef cattle are reared, and oats, barley and potatoes are the chief crops. Industries include fishing, woollens, leather goods and whisky distilling. The county town was Stonehaven. Area: 982sq km (379sq miles). Pop. 25,050.

Kinck, Hans Ernst (1865–1926), Norwegian novelist, dramatist and short-story writer. He explored the psychological differences between urban and rural cultures in the short stories collected in *From Sea to Mountain* (1897) and in the trilogy *The Avalanche Broke* (1918–19).

Kindergarten. See NURSERY SCHOOL.

Kinetic art, term used to describe art, especially sculpture, in which an element of motion is – or appears to be – present. Examples of kinetic art may be seen in the work of DUCHAMP, CALDER and GABO, and in MOHOLY-NAGY's light modulators. Kinetic art may be mechanical, eg works by Gabo, or non-mechanical, eg *Mobile* (1958) by Calder. Kineticism evolved in response to an increasingly technological modern culture. In painting, OP ART may be regarded as a form of Kineticism. See also p.1762.

Kinetic energy, in physics, energy that a body possesses because it is in motion. It is the energy (K) given to a body to set it in motion; it depends on the mass (m) of the body and its velocity (v), according to the equation $K = \frac{1}{2}mv^2$. On impact, it is converted into other forms of energy, such as heat and sound. See also POTENTIAL ENERGY, pp.820–821, 824, 826–827.

Kinetics. See DYNAMICS.

Kinetic theory, theory in physics dealing with matter in terms of the forces between particles and the energies they possess. There are five principles to the kinetic theory: matter is composed of tiny particles; these are in constant motion; they do not lose energy in collision with each other or the walls of their container; there are no attractive forces between the particles or their container; and at any time the particles in a sample may not all have the same energy. See also p.836.

Kinetograph and Kinetoscope, camera and peephole viewer invented by Thomas EDISON and William Dickson and patented in 1891. They were early forerunners of the cine camera and projector. They were superseded by the cinematograph. See also CINEMATOGRAPHY, p.632.

King, Billie Jean, née Moffitt (1943–), US tennis player. In 1979 she achieved the record of holding 20 Wimbledon titles. She has also won all the major international tennis titles on all four types of playing surface. An outspoken advocate of women's liberation, she heightened interest in women's tennis with her 1973 victory over Bobby Riggs.

King, Carole (1942–), US singer and songwriter, real name Carole Klein. Between 1959 and 1967 she and her husband Gerry Goffin wrote many successful songs, including *Up On the Roof* and *It Might as Well Rain Until September* (1962). Her record *Tapestry* (1971) sold more than 10 million copies.

King, Ernest Joseph (1878–1956), US naval officer. He served as assistant chief of the Bureau of Aeronautics in 1929, was promoted to rear-admiral in 1933 and to vice-admiral in 1938. He was commander-in-chief of the US fleet in 1941 and became chief of US naval operations in 1942. In 1944 he became admiral of the fleet and retired at the end of WWII. He also served as presidential adviser to the ATLANTIC CHARTER Conference in 1941.

King, Francis Henry (1923–), British writer. His first novel was *To the Dark Tower*. His collection of short stories, *The Japanese Umbrella* (1964), won the Katherine Mansfield Prize in 1965.

King, Henry (1592–1669), English poet. Bishop of Chichester (1642–69), he took refuge in Buckinghamshire from CROMWELL's forces (1643–60). His poetry, printed in 1657, includes a magnificent elegy on his wife, *The Exeguy* (c.1625).

King, Martin Luther, Jr (1929–68), US clergyman and civil-rights leader. Pastor of a Baptist church in Montgomery, Alabama, he led the Black boycott of Montgomery's segregated transport system in 1956, and subsequently attracted national attention for the passive-resistance protests he advocated. Thereafter he founded and worked through the Southern Christian Leadership Conference to further the cause of national desegregation. He organized the march on Washington in 1963, opposed the VIETNAM WAR and had begun a national campaign against poverty when he was assassinated in Memphis, Tennessee, on 4 April 1968. In 1964 he was awarded the Nobel Peace Prize. See also pp.1749, 1749.

King, Sir Truby (1858–1938), doctor who founded the Royal New Zealand Society for the Health of Women and Children in 1907, to combat infant mortality. See also KARITANE SYSTEM.

King, William Lyon Mackenzie (1874–1950), Prime Minister of Canada (1921–30 and 1935–48). A lawyer and social worker, he was a successful labour mediator before entering politics. His career was marked by the drive for national unity, concessions to the progressives, and support for the acquisition of French-Canadian rights. Trained by Sir Wilfred Laurier, King led the Liberals

Billie Jean King beat Evonne Goolagong in the 1973 Wimbledon final.

Martin Luther King, with other garlanded leaders in the Selma March, 1965.

between 1919 and 1948. He was more interested in foreign policy than social legislation and was a firm supporter of free enterprise.

King and I, The, musical play by Richard RODGERS and Oscar HAMMERSTEIN II, first performed on Broadway in 1951. Based on the story of Margaret Landon, it tells of an English schoolteacher in 19th century Siam who instructs the king's children. Among its songs are *Hello, Young Lovers* and *Getting to Know You*.

King Arthur, legendary British king who was said to rule the Knights of the Round Table. Two medieval chroniclers – Gildas and Nennius – tell of Arthur's fighting against the invading West Saxons and his final defeat of them at Mount Badon (possibly Badbury Hill, Dorset) in the early 6th century. However, these sources are considered by some to be suspect and a modern view is that Arthur was a professional soldier in service to the British kings after the Roman occupation. Geoffrey of Monmouth's *Historia regum Britanniae*, based on Nennius and Welsh folk-lore and written in the 12th century, gave the Arthurian legend – with the Round Table, Camelot, Lancelot, Guinevere and the Holy Grail – the form in which it was transmitted through the Middle Ages. MALLOREY's *Morte D'Arthur* (1470) was based on the version by Geoffrey of Monmouth.

King Cobra. See COBRA.

King Country, name given to 10,000 square miles of central North Island, New Zealand in 1857 by adherents of the Maori king who declared the land closed to Europeans.

King crab, or **horseshoe crab**, marine animal superficially resembling a crab but related to spiders and scorpions. It has a hard, domed shell from which protrudes a sharp tail. See also ARACHNIDS, p.34.

Kingfish, name applied loosely to several varieties of fish valued for food or sport. Species called kingfish include *Seniola grandis*; *Scorpaenopsis cavalla*, a type of large mackerel; *Menticirrhus saxatilis*, a member of the drum family, also known as a whiting; and *Lampris regius*, also known as the opah or moonfish. See also p.62.

Kingfisher, compact, brightly coloured bird with a straight, sharp bill, which dives for fish along rivers, streams and lakes. It swallows the fish head first when back on its perch. It nests in a deep, horizontal hole in an earth bank, laying white eggs in a nest surrounded by food-scrapes. Length: 12.7–43.2cm (5–17in). Family Alcedinidae; there are several species. See also pp.76, 312, 328, 330.

King George's War, hostilities between France and Britain in North America during the War of the AUSTRIAN SUCCESSION (1744–48). Following an attack by the French on Nova Scotia, troops led by William Pepperell laid siege to Louisbourg, which capitulated in June 1745. The fighting elsewhere consisted mainly of skirmishes on the New England–New York border. The Peace of Aix-la-Chapelle (1748) restored Louisbourg to the French in return for Madras in India.

King Horn, hero of a late 13th-century English verse romance, *The Geste of Kyng Horne*. It is the story of the Prince of Sudenhe (Isle of Man), who is expelled from his lands by invaders. Eventually he regains them and wins the princess he loves. There is also a French version dating from the 14th century.

King James Bible. See AUTHORIZED VERSION.

King John (c.1598), five-act tragedy by William Shakespeare, based on an older drama from Raphael HOLINSHED's *Chronicles*. John, having seized the throne from Prince Arthur is later suspected of murdering him. The lords turn against him and John is poisoned by monks.

King Kong, (1933), US film. This classic thriller about a giant ape who was taken from his natural home to New York was directed by Merian C. Cooper and Ernest Schoedsack with splendid photographic effects and animation by Willis H. O'Brien. It starred Robert Armstrong, with Fay Wray as "beauty" to the "beast".

Despite a whole series of imitations, it still remains one of the finest films of its type.

Kinglake, Alexander William (1809–91), British historian. He travelled in the East in 1835 and published *Eothen, or Traces of Travel Brought Home from the East* in 1844. His most famous work, written at Lady Raglan's suggestion, was the 8-volume *Invasion of the Crimea* (1863–87).

King Lear (c.1605), five-act tragedy by William SHAKESPEARE, based on an older anonymous play, *King Leir*, and Raphael HOLINSHED's *Chronicles*. Lear, King of Britain, divides his realm between his flatterer daughters Goneril and Regan, leaving his youngest and silently sincere daughter, Cordelia, with nothing. The rest of the play describes the consequences of this misguided action through Lear's mental deterioration, belated political success and death in grief and madness.

Kinglet, fearless, active songbird that breeds in cool areas of North America and Eurasia. It has a small crest that reveals a brightly coloured spot when expanded, a short, straight bill and down-like plumage. It feeds on insects. Length: 7.6–10cm (3–4in). Genus *Regulus*.

King Movement, attempted unification by New Zealand Maoris in reaction to European settlement. In 1858 Maori chiefs elected a king, Potatau I. The MAORI WARS followed British refusal to recognize the King Movement.

Kingo, Thomas (1634–1703), Danish poet and cleric. His early poetry, such as *Chrysilis*, depicts rural scenes and village life. He is best remembered for his religious poetry and hymns, which were collected in *Spiritual Chorus* (1674–81).

King Philip's War (1675–76), war between Indians and English settlers in North America. The Wampanoags, under the chief Philip (Metacombet), were originally friendly to the Massachusetts settlers but threatened by increasing colonization feared for their survival. The colonists became suspicious of Philip's intentions, and war was sparked off by the murder of an Indian informer and the execution of three Wampanoags by the English colonists. In the course of the war, the Indians destroyed 12 Massachusetts towns. Philip was killed on Rhode Island (1676) by troops of the New England Confederacy, who had decimated the Narragansett tribe (1675) and defeated the Nipmuck (1676).

Kings I and II, books in the OLD TESTAMENT, called Third and Fourth Kingdoms in the Greek SEPTUAGINT. These books recount the histories of Judah and Israel from the beginning of Solomon's reign (970 BC) to the fall of Judah and destruction of Jerusalem (586 BC). The unknown author interprets events as a revelation of God's presence in the history of Israel.

King's Bench, Court of. See QUEEN'S BENCH COURT OF.

King's Counsel. See QUEEN'S COUNSEL.

King's Cup (tennis), trophy presented by King Gustav V of Sweden for an annual international indoor championship for men's teams. Inaugurated in 1936, it was contested on a knockout basis until 1976, when a home-and-away league system was introduced with one point awarded for every tie won.

King's Cup Air Race, annual flying event for British-registered aircraft entered and flown by people of British nationality. Raced for on a handicap basis, the Cup was presented by King George V in 1922.

King's Evil, colloquialism for scrofula, ulcerous formations on the skin caused by mineral deficiency. The condition was once thought to be curable at the touch of the sovereign's hand.

Kingsford-Smith, Sir Charles Edward (1897–1935), Australian pilot. In 1928 he made the first flight from the USA to Australia, in a Fokker aircraft. In 1933 he made a record-breaking solo flight from England to Australia of 7 days 4 hours and 43 minutes.

Kingsley, family of British writers. Charles (1819–75) was ordained an Anglican clergyman in 1842 and his Christian Socialist ideas found expression in his influential novels *Alton Locke* (1850) and *Yeast* (1851). He was one of

the first clergy openly to support Charles DARWIN, whose ideas he partly incorporated into *The Water Babies* (1863). Other immensely popular novels were *Westward Ho!* (1855) and *Hereward the Wake* (1866), both of which provoked John Henry NEWMAN with their anti-Catholic bias. Both Kingsley's brothers, George Henry (1827–92) and Henry (1830–76), were also writers. The former merely described his extensive travels; the latter wrote powerful fiction about Australian colonial life in novels such as *Geoffrey Hamlyn* (1859) and *Ravenshoe* (1861). Kingsley's daughter, Mary St Leger Kingsley (1852–1931), was also a novelist and wrote intense works such as *The Wages of Sin* (1890), using the pseudonym Lucas Malet.

Kingsley, Mary Henrietta (1862–1900). British writer. Widely travelled, she recorded her experiences in *Travels in West Africa* (1897) and *West African Studies* (1899). She died of fever while nursing prisoners in a South African hospital during the SOUTH AFRICAN (BOER) WARS.

Kingsley, Sidney (1906–), US playwright. His *Men in White* (1933) and *Dead End* (1935) are powerful examples of social realism. After *The Patriots* (1942) and *Detective Story* (1949), Kingsley dramatized Arthur Koestler's novel *Darkness at Noon* (1951) and thereby won the New York Drama Critics' Circle award for his characterization of a disillusioned "old Bolshevik".

King's Medal, award first made in 1945 to foreign civilians who assisted Britain during WWII. There are two different citations: for courage or for service in the cause of freedom.

King's Men. See CHAMBERLAIN'S MEN.

King snake, non-poisonous shiny SNAKE that lives in the USA. It is generally black with white or yellow markings and feeds on other snakes, including poisonous species. Length: to 1.3m (4.2ft). Family Colubridae, genus *Lampropeltis*.

King Solomon's Mines (1885), popular novel by H. Rider HAGGARD, which brought him immediate fame and enabled him to give up his career as a lawyer for that of authorship. Set in Africa, the book relates the adventures of Allan Quartermain and Sir Henry Curtis during their search for Sir Henry's brother and King Solomon's treasure.

King's Peace (AD 386), treaty ending the Corinthian War, negotiated by Artaxerxes II of Persia with the Spartan Antalcidas and imposed upon the other Greek cities. By the terms of the treaty, Sparta became predominant in Greece, and Persia took possession of the Greek cities in Asia and on the islands, except Lemnos, Imbus and Scyros, which remained Athenian dependencies.

King's Proctor. See QUEEN'S PROCTOR.

Kingston, capital and largest city of Jamaica. Founded in 1692, it became the seat of government in 1872. It is one of the finest ports in the West Indies, and its exports include sugar, rum, molasses and bananas. The city is famous for its music, and is the seat of the University College of the West Indies (1946). Industries: tourism, food processing, oil refining. Pop. 550,100.

Kingston-upon-Hull (city). See HULL.

Kingston upon Hull, county district in E central Humberside, England; created in 1974 under the Local Government Act (1972). Area: 71sq km (27sq miles). Pop. (1974 est.) 278,800.

Kingston-upon-Thames, borough of SW Greater London, England, s of the River Thames. Several Saxon kings were crowned there, and the coronation stone is preserved in the market place. A residential area, it has light engineering industries. Pop. (1971) 146,615.

Kingstown. See DÚN LAOGHAIRE OR ST VINCENT.

Kingu, in Babylonian mythology, god of the powers of darkness, son and consort of the ancient sea goddess Tiamat and leader of her armies of monsters against the forces of EA, led by MARDUK. After the defeat of Kingu – also called Tammuz – EA used his blood and bone to form man. A lamb, representing Kingu, was sacrificed as

a New Year's ritual by Babylonian kings.

King William's War (1689–97), also known as the first of the FRENCH and INDIAN WARS, North American part of the war between England and France. In 1690 FRONTENAC, the French Governor of Canada, sent expeditions against the British frontier colonies in New York and what are now New Hampshire and Maine. The English, under Sir William Phips, sailed up the St Lawrence River to take Quebec, but failed. Each side had the support of American Indian allies. Port Royal, Acadia (later Nova Scotia), was captured and restored to the French by the Treaty of Ryswick (1697).

Kinkajou, nocturnal foraging mammal of the RACCOON family that lives in forests of Central and South America. Slender-bodied, it has a small round head and a long tongue. Primarily a fruit and insect eater, it lives almost entirely in trees, aided by a long prehensile tail. Length: to 57.5cm (22.7in); weight: to 2.7kg (6lb). Family Procyonidae; species *Potos flavus*. See also pp.98, 99.

Kinorhynch, one of a group of microscopic, spiny, worm-like marine animals believed to be closely related to the ROTIFERS. They have tubular bodies of about 13 segments, with a mouth at one end and an anus at the other. They live mainly in the mud of the sea bed. See also p.53.

Kinross (shire), former county in E Scotland; in 1975 it became part of Tayside Region. Hills in the E and the NW border a central plain. Farmers raise beef and dairy cattle and grow oats and barley. Wool and linen weaving are the principal industries. The county town was Kinross. Area: 212sq km (82sq miles). Pop. (1971) 6,422.

Kinsella, Thomas (1928–), Irish poet. Introspective and tightly-controlled, his poetry includes *The Starlit Eye* (1952), *Downstream* (1962), *Nightwalker* (1967) and *One* (1974). He also translated some early Irish poetry.

Kinsey, Alfred Charles (1894–1956), US zoologist, noted for his studies on human sexual behaviour. He was a professor of zoology and later director of the Institute for Sex Research, Indiana University. He is best known for *Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1953).

Kinshasa, capital and largest city of Zaire, on the border of Zaire and the Republic of Congo. Formerly known as Leopoldville, it replaced Boma as the capital of the Belgian Congo in 1923, and when Zaire gained independence in 1960 it continued as the capital of the new country. Its name was changed in 1966. A major communications and commercial centre, its industries include food processing, tanning, chemicals and textiles. Pop. 1,633,760.

Kinship, relationship by blood or marriage, sometimes extended to cover relations of affinity. It also refers to a complex of rules in society governing descent, succession, inheritance, residence, marriage and sexual relations. See also CLAN; ENDOGAMY; EXOGAMY; FAMILY; INCEST, pp.1828–1829, 1832–1833.

Kipling, Joseph Rudyard (1865–1936), British author, b. India. He achieved recognition with his stories about India, including *Plain Tales from the Hills* (1888), and with his only novel *The Light That Failed* (1891). His *Barrack Room Ballads and Other Verses* (1892), including the poem *If*, underlined his imperialist views. He wrote many children's adventures and animal stories, including *The Jungle Book* (1894), *Captains Courageous* (1897), *Kim* (1901) and *Stalky and Co.* (1899). His post-WWI stories, such as *Debits and Credits* (1926), show a more profound artistry. See also pp.1610–1611.

Kipnis, Igor (1930–), US harpsichordist, b. Germany. He made his debut in 1959, and since 1967 has performed throughout Europe, South America and the Middle East. He has published several editions of harpsichord music and in 1971 became associate professor of music in Connecticut, USA.

Kippenberger, Sir Howard (1897–1957), New Zealand soldier. In WWII he served as

an officer in Greece, Crete, North Africa and Italy until seriously wounded in 1944. He later edited New Zealand's official war histories.

Kipps (1905), novel by H. G. Wells which focuses on the social problems of a young, inarticulate draper's assistant who is suddenly elevated in rank by a legacy. Wells is cynical in his condemnation of the superficiality and opportunism of the society Kipps moves into and the novel argues for friendship and love that is not affected by financial considerations.

Kipp's apparatus, chemical apparatus for generating a stream of any gas that can be made by reacting a liquid with a solid, eg hydrogen sulphide gas from hydrochloric acid and ferrous sulphide or carbon dioxide from hydrochloric acid and calcium carbonate (marble chips). When the outlet tap is turned off, internal gas pressure separates the liquid and solid so that the reaction, and gas generation, ceases.

Kirchner, Ernst Ludwig (1880-1938), German painter and printmaker and a leader of the Expressionist artists known as Die BRÜCKE. His most famous works are two versions of *Street, Berlin* (1907, 1913). See also p.1654.

Kirchoff, Gustav Robert (1824-87), German physicist, professor at Heidelberg University and in Berlin. He worked with Robert BUNSEN, and developed the spectroscopic, with which he discovered the elements caesium (Cs) and rubidium (Rb) in 1860. He also examined the solar spectrum, worked on BLACK BODY radiation, and enunciated several laws (KIRCHHOFF'S LAWS) relating to electrical circuits. See also pp.973, 973, 976, 978, 978, 1637.

Kirchoff's laws, two rules based on the laws of the conservation of charge and energy, that apply to multiple-loop electric circuits. Essentially they state that (1) charge does not accumulate at one point and thin out at another, and (2) around each loop the sum of the ELECTROMOTIVE FORCES equals the sum of the potential differences (voltages) across each of the resistances.

Kirgiz, Turko-Mongolian people who inhabit Kirgizia (Kirgiz SSR) in central Asian USSR. Of the Muslim faith, they are Turkic-speaking nomadic pastoralists who began to settle in the Tien Shan region of Kirgizia in the 7th century after a long history as one of the chief nomadic groups in Central Asia. They were colonized by the Russians during the 19th century. Having fought against the BOLSHEVIKS in the civil war from 1917 to 1921, many Kirgiz perished from famine that followed.

Kirgizia (Kirgizskaja SSR), constituent republic in central Asian USSR, bordered by China in the SE. The capital is Frunze. Russia annexed this area in 1864. The region resisted BOLSHEVIK control between 1917 and 1921. In 1924 it became an autonomous oblast within the Russian Republic (Rossijskaja SFSR) and a constituent republic in 1936. It is a largely mountainous area, and sugar-beet, cotton, tobacco, fruit cereal crops and poppies are grown by means of irrigation. Sheep, cattle, goats and horses are raised. The chief mineral deposits are coal, lead, uranium, mercury, oil and natural gas. Industries: farm machinery, textiles, sugar refining, agricultural processing. Area: 198,500sq km (76,640sq miles). Pop. (1976) 3,372,000.

Kirin (Jilin), province in NE China, on the Chinese-Soviet border; the capital is Changchun. The region is drained by the Sungari River, which flows across the fertile Manchurian plain. Soybeans, wheat, rice and sweet potatoes are grown. It has some of the best woodland in China, and mineral deposits include iron ore, coal, gold and lead. Area: 187,070sq km (72,228sq miles). Pop. 1,200,000.

Kirk, Scots name for a church building, also often applied to the Presbyterian Church of Scotland, which was recognized as the state church in 1689.

Kirk, Sir John (1832-1922), British physician and naturalist who is best-known for accompanying David LIVINGSTONE during the latter's second expedition into central

Africa (1858-63). He was knighted in 1881.

Kirk, Norman Eric (1923-74), New Zealand politician; Prime Minister (1972-74). With vigour and imagination he led the Labour Party to a landslide victory in 1972. Before the end of his term of office, he laid fresh emphasis on New Zealand's role in the Pacific, recognized Communist China and banned national sports contacts with South Africa. See also p.1734.

Kirkcaldy of Grange, Sir William (c.1520-73), Scottish Protestant leader. Mary, Queen of Scots' marriage to Lord DARNLEY in 1565 provoked him to armed opposition. He received Mary's surrender at Carberry Hill in 1567 and joined her supporters on her promise to divorce her third husband, the Earl of BOTHWELL. James VI's supporters hanged him after the siege of Edinburgh Castle.

Kirkcaldy (shire), former county in Scotland, now part of the Strathclyde Region. It is a mountainous area, and stock raising and cattle farming are the main occupations. Pop. (1971) 27,450.

Kirke, Sir David (c.1597-c.1656), English merchant adventurer who, with his brothers, captured a fleet of French ships off Quebec and forced Samuel de CHAMPLAIN to surrender the city in 1629. The territory was later restored to France, but Kirke was knighted nonetheless.

Kirke, Col. Percy (c.1646-91), English soldier who was involved in alleged atrocities at the Battle of SEDGEMOOR in 1685. He later fought in Ireland on the side of WILLIAM III, commanding the forces which relieved Londonderry in 1689.

Kirkpatrick, Ian (1946-), New Zealand rugby union player who, as a dynamic, world-class loose-forward, played 39 times for the All Blacks (1967-77), scoring 16 tries. He was New Zealand's captain from 1972 to 1973 and played for Canterbury and Poverty Bay.

Kirkpatrick, Ralph (1911-), US harpsichordist and musicologist. He studied at Harvard University and with Wanda LANDOWSKA and Nadia BOULANGER in Paris.

Kirkuk, city in NE Iraq. It is the centre of the country's oil industry, and has a pipeline connection with ports on the Mediterranean Sea. It is also the market town for the region. Products include cereals, fruit and livestock. Pop. (1970 est.) 207,900.

Kirkwall, administrative, trade, and shipping centre for the ORKNEY ISLANDS, on Mainland island. St Magnus' Cathedral was built in 1137, and there are many other ancient ruins. Industries: fishing and tourism. Pop. (1971) 4,618.

Kirov, Sergei Mironovich (1888-1934), Soviet political figure. He was a popular and effective speaker and was elected to the Communist Party Politburo in 1930. His murder, probably on Stalin's orders, served as a pretext for the Stalin purges (1934-38). See also p.1759.

Kirov Ballet and Opera Company, founded as a dancing company in 1735 in St Petersburg (Leningrad). Under Marius PETIP the Kirov Ballet was the world's top company, with dancers such as Anna PAVLOVA and Vaslav NIJINSKY. The Opera, too, has made a distinguished contribution to Soviet culture. Among the works it has premiered are Modest Mussorgsky's *Boris Godunov* (1874) and Alexander Borodin's *Prince Igor* (1890). See also p.1759.

Kirshon, Vladimir Mihailovich (1902-38), Soviet dramatist. A Bolshevik, he often wrote propagandist plays, including *Rzhavchina* or *Konstantin Terekhin* (1926; tr. *Red Dust*, 1930) and *Khleb* (1930; tr. *Bread*, 1934). He was a leader of the Association of Proletarian Writers in Moscow, was arrested in 1937 during the Stalin purges and was shot in prison.

Kirton. See CREDITON.

Kisangani, city and port in central Zaire, on the River Congo. Formerly known as Stanleyville, it was a stronghold of Patrice LUMUMBA until his assassination in 1961. It has since been the site of several revolts against the central government. Industries include metal goods and textiles. Pop. (1974) 310,705.

Kisfaludy, Károly (1788-1830), Hun-

garian playwright, the founder of modern Hungarian drama. A pioneer of Magyar comedy, as well as of national drama, his works include *The Tartars in Hungary* (1819) and *The Suitors* (1819). With his brother, Sándor (1772-1844), a poet, he was a major force in the Hungarian Romantic movement.

Kisfaludy, Sándor (1772-1844), Hungarian poet, dramatist and novelist. His best-known writings, using a highly elaborate verse form, are the cycles *Plaintive Love* (1801) and *Happy Love* (1807).

Kish, ancient city of Mesopotamia. It was located in the Euphrates river valley E of Babylon. In the fourth millennium BC it was a strong Sumerian city. Excavations since 1922 have revealed that SARGON, King of AKKADIA, built a palace c.2600 BC and NEBUCHADNEZZAR II and NABONIDUS, kings of BABYLON, erected temples in the 6th century BC.

Kishar, in Sumerian mythology, the personification of the earth at the time of the creation. Anshar the sky and Kishar the earth were born to a pair of serpents who came from the primordial sea. From Anshar and Kishar issued the divinities who filled the sky, the earth and the underworld.

Kismet, Turkish-Arabic word meaning "destiny" or "fate" and the title of an Oriental melodrama by Edward Knoblock (1874-1945), first produced in 1911. In 1953, with additional songs and music arranged from the works of Alexander BORODIN, the work became a hit on Broadway and in London.

Kissing bug, or conenose, brown to black bug found in South and Central America, Mexico and Texas. It bites human beings and rodents, usually about the mouth, and is a carrier of CHAGAS' DISEASE. Length: 25-33mm (1-1.3in). Family Reduviidae; genera *Triatoma* and *Rhodnius*.

Kissinger, Henry Alfred (1923-), US political leader, b. Germany. While a professor at Harvard University, he wrote several books on political science and served as adviser to various government agencies. He became President Richard NIXON's assistant for National Security in 1969 and became the chief adviser on foreign policy. President Nixon named him Secretary of State in 1973 and he continued in that post under President Gerald Ford. In 1973 he shared the Nobel Peace Prize with Le Duc Tho for his part in negotiating a ceasefire in the Vietnam War, even though fighting continued until 1975. He worked for détente between East and West during the Nixon presidency and acted as mediator in the Middle East crisis of 1973-74. He is now University Professor of Diplomacy at Georgetown University. See also pp.1738, 1739, 1793.

Kissing Gourami. See GOURAMI.

Kiss Me Kate (1948), musical by Cole PORTER based on the play by Samuel and Bella Spewack, which in turn was based on Shakespeare's *The Taming of the Shrew*. It was first performed in New York. In 1953 it was made into a 3-D film starring Howard Keele, Kathryn Grayson and Ann Miller.

Kiswah, cloth covering of the KAABA. Renewed each year, the Kiswah is made in Egypt and transported to MECCA by a ceremonial pilgrim caravan. The cloth is black brocade with the Muslim profession of faith woven in gold. The old Kiswah is cut into pieces which are sold to pilgrims. See also pp.1278-1279, 1279.

Kitaj, Ronald, B. (1932-), US painter who studied and worked in England during the 1950s and 1960s, returning to the USA in 1967. R.B. Kitaj was a leader in Britain of the movement away from the abstraction of the 1950s towards a more figurative kind of painting which attempted to fuse the styles of CUBISM and MATISSE.

Kitakyushu, industrial city port on N Kyushu, s Japan. It was formed in 1963 by the union of the cities of Yawata, Tobata, Wakamatsu, Kokura and Moji, and is now one of the country's most important manufacturing regions. Industries: shipping, shipbuilding, iron and steel, and textiles. Pop. (1975) 1,060,000.

Kitasato, Shibasaburo (1852-1931), Japanese bacteriologist who isolated the bacilli that cause the diseases tetanus, anthrax (1889) and dysentery (1898). In 1890 he prepared a diphtheria antitoxin. He also discovered, independently of Alexandre YERSIN, the infectious organism that causes bubonic plague. He trained under Robert KOCH in Germany. See also pp.190-191.

Kit-cat Club, English literary and political club founded c.1700 in London by Whig politicians and leading writers, some of whom were Joseph Addison, William Congreve, Sir Richard Steele and Sir Robert Walpole. The members met in a public house run by Christopher Cat, whose most popular dish was a mutton pie known locally as a kit-cat. The name kit-cat was also applied to portraits - measuring 91x71cm (36x28in) - of the members.

Kitchener, Horatio Herbert, Earl (1850-1916), British soldier involved in the defeat of the MAHDI in the Sudan. As a major in the Egyptian Cavalry, he took part in the relief of Khartoum (1883-85). In 1892 he became a major-general in the Egyptian army and achieved the pacification of the Sudan in 1898 with the victories at Atbara and Omdurman. After service in the South African War, and then in India and Egypt, he was appointed Secretary of State for War in 1914. He was later lost at sea when the cruiser in which he was travelling to Russia sank after hitting a mine.

Kitchener, city in s Ontario, Canada, in the Grand River Valley. Originally known as Berlin, it was renamed in 1916 in honour of Lord Kitchener. It manufactures textiles and rubber products. Pop. (1974) 111,805.

Kitchen midden, also called shell-mound, in archaeology a refuse heap, usually of discarded remains of edible shellfish mixed with human artefacts. It can provide an archaeologist with valuable clues to the nature of a past culture. Most known middens were established in Europe and N Africa after the disappearance of large game animals. See also p.759.

Kitchen sink drama, realistic presentation of true-to-life situations. Beginning in the 1950s, this style of treatment has been applied to plays, films, books and art.

Kite, common name for several diurnal birds of prey, especially the red kite, *Milvus milvus*, which frequents hilly country and wooded slopes in Europe. It has a hooked bill, long wings and a long forked tail. Like the HAWK, it is commonly seen circling, soaring and gliding. Length: 60cm (24in). Family Accipitridae.

Kithara. See CITTERN.

Kitimat, district municipality developed around the site of one of the world's largest aluminium smelters completed in 1954. It is at the head of the Douglas Channel to the SE of Prince Rupert, British Columbia, Canada. Bauxite from Jamaica is used to produce aluminium, the process being powered by the Kemano hydroelectric scheme. Pop. (1971) 11,824. See also p.400.

Kitksan, tribe of North American Indians, occupying an area along the Skeena River in NW British Columbia. Kitksan are closely related to the Niska and Tsimshian peoples and speak the Tsimshian tongue. They are noted for their sculpture.

Kitt, Eartha (1928-), US singer and actress, the seductive singer of many hit songs, including *C'est Si Bon* and *Monotonous* (a showstopper from the New York show *New Faces of 1952*, which brought her fame). She has also starred in films, notably *Accused* (1957), and has appeared internationally on television and in cabaret. She has written an autobiography, *Thursday's Child* (1956).

Kittiwake, Arctic GULL with a greenish-yellow bill, black wing-tips and short dark legs. It flies low over open seas, hunting for fish. The female lays one to three spotted pale eggs in a cup-shaped nest in cliffs. Length: to 41cm (16in); wingspan 91cm (36in). Family Laridae; species *Rissa tridactyla*.

Kittredge, George Lyman (1860-1941),

us scholar and critic. He was a professor of English at Harvard University (1894–1936) and a leading writer on the English language. His works include *Chaucer and his Poetry* (1915) and a single-volume edition of *The Complete Works of Shakespeare* (1936).

Kitwe, city in central Zambia, 290km (180 miles) N of Lusaka. Founded in 1937, it is the main trade and industrial centre of the copperbelt. Pop. (1972) 331,000.

Kiushio. See KYOSHIO.

Kiva, underground ceremonial chamber of PUEBLO INDIANS. Each Pueblo Indian religious society has its own kiva, and many of its rites are performed there. Kivas are traditionally circular and are highly decorated.

Kivi, Aleksis (1834–72), pen-name of Aleksis Stenvall, a Finnish writer and dramatist. He wrote *The Seven Brothers* (1870), the first novel to be published in Finnish. His tragedy *Kullervo*, derived from Finland's national epic the *Kalevala*, won a drama competition in 1860. He also wrote a comedy, *The Shoemakers of the Heath* (1864).

Kiwi, any of three species of flightless, mainly nocturnal, fast-running, forest and scrubland bird of New Zealand; especially the common brown kiwi, *Apteryx australis*. It has hair-like feathers and a long, flexible bill with which it probes for food in the ground. The eggs, which are incubated by the male, are laid in a leaf-lined scrape or burrow. Family Apterygidae. See also pp.72, 85, 309.

Kiwis, the name given to New Zealand's national rugby league team, although the original New Zealand tourists to Britain in 1907 were dubbed the "All Blacks" as a comparison with the famous, and amateur, rugby union team, the All Blacks. Although rugby league does not have the same following as rugby union in New Zealand, the Kiwis have enjoyed some international success: they won the Courtney Trophy for the best record in test matches 1960–65.

Kiyonaga, Torii (1752–1815), Japanese ukiyo-e (colour) printmaker. He worked during the great period of Japanese printmaking. He is noted for his woodcuts of beautiful women and warriors, and is ranked as the most brilliant representative of this style.

Kizil. See KYZYL-KUM DESERT.

Kjeldahl method, rapid method for measuring the proportion of nitrogen in an organic compound, named after Johan G. C. T. Kjeldahl, the Danish chemist. Nitrogen in the sample is converted into ammonium sulphate by heating it and a catalyst in concentrated sulphuric acid. Sodium hydroxide is added and the whole is boiled, liberating ammonia. This is dissolved in acid and the quantity of ammonia, and therefore the nitrogen, is determined by titration.

Klagenfurt, city in Austria, N of the Karawagen Mts near the Yugoslavian border. It holds an annual wood trade fair and is also a popular sports centre. Industries include woodworking plants, leather and clothing. Pop. (1969 est.) 73,200.

Klaproth, Martin Heinrich (1743–1817), German chemist who began as an apothecary's apprentice. He became the first professor of chemistry at Berlin University. He was a pioneer in analytical techniques, recognizing and naming a number of elements, including uranium (1789). He also recognized and named titanium (1795), tellurium (1798) and cerium (1803), some of which had already been isolated, although left unnamed, by other scientists.

Klaus, Josef (1910–). Austrian lawyer and politician after WWII. He was Governor of Salzburg (1949–61), Minister of Finance (1961–63), and Chancellor of Austria (1964–70).

Klausenburg. See CLUJ.

Klavier. See CLAVIER.

Kléber, Jean Baptiste (1753–1800), French general. He was an architect, but in 1789, after the outbreak of the Revolution, he joined the National Guard and fought with distinction in the Revolutionary Wars. In 1793 he put down a royalist

rebellion in the Vendée. He commanded one of Napoleon's divisions in Egypt (1798–1800); defeated the Turks twice; and recaptured Cairo. He was assassinated by an Egyptian.

Klebs, Edwin (1834–1913), German physician and pathologist known for his work in bacteriology. In 1884 he and Friedrich LÖFFLER discovered the diphtheria bacillus. He held professorships, both in Europe and in the USA. His research included original observations on tuberculosis, syphilis and malaria.

Klee, Paul (1879–1940), Swiss painter who was also a trained musician. He began as a graphic artist and later was influenced in the development of his own pictorial language by CUBISM, hieroglyphs, primitive art and children's drawings. Combining these elements with a sensitive feel for colour, he produced clever, inspirational works of subtle simplicity. He studied in Munich and by the end of WWI was established as a master. He taught at the BAUHAUS (1920–31) and at Düsseldorf Academy (1931–33) but returned to Switzerland in 1933 after the Nazis had condemned his work as degenerate. Characteristic works include *Graduated Shades of Red-Green* (1921) and *A Young Lady's Adventure* (1922). *Around the Fish* (1926) and *Revolutions of the Viaducts* (1937). In his *Pedagogical Sketchbooks* (1925), Klee defined the principles of his art. See also p.1655.

Kleiber, Erich (1890–1956), Austrian conductor. He conducted in German opera houses and served as music director of the Berlin Opera (1923–35). During this period he introduced many new works, including Alban BERG's opera *Wozzeck* in 1925. From 1936–49 he conducted German opera in Buenos Aires, and returned (1955) for a brief time as conductor of the Berlin Opera.

Klein, Abraham (1909–72), Canadian poet. His work, full of humour and erudition, often reflects his Jewish heritage. *Hath not a Jew* (1940), draws brilliantly on the richness of Jewish culture; *The Hitleriad* (1944) is a savage attack on anti-Semitism; and his novel *The Second Scroll* vividly recreates the ZIONIST pilgrimage. **Klein, Melanie** (1882–1960), British psychoanalyst, b. Austria, who developed therapy for young children. In *The Psychoanalysis of Children* (1932) she presented her methods and ideas of child analysis; she believed play was a symbolic way of controlling anxiety and analysed it to gain insight into the psychological processes of early life. Basically Freudian in approach, she emphasized such concepts as the ego, superego and the Oedipus complex in the mental development of children.

Klein, Yves (1928–62), French painter. In his collages of paint and assorted objects he attempted to destroy the concept of paintings as paint on canvas. His work was disliked during his lifetime but his ideas have been much copied since.

Kleist, Bernd Heinrich Wilhelm von (1777–1811), German dramatist. He left the Prussian Army as a young officer to write what are considered to be some of Germany's best dramas: *Amphitryon* (1807) and *Der zerbrochene Krug* (1808). In *Prinz Friedrich von Homburg* (1810) he praised Prussia. *The Marquis of O.* and *Other Stories* is a collection of short pieces. He shot himself at the age of 34.

Kleist, Ewald Christian von (1715–59), German poet, chiefly remembered for his long poem *Der Frühlings* (1749). He also wrote *Ode an die Preussische Armee* (1757), in praise of Frederick the Great's Prussia. He served as an officer and was fatally wounded at Kunersdorf. Other works include *Seneca* and *Cissides und Paches* (1759).

Kleitman, Nathaniel (1895–), US physiologist, b. Russia. His pioneering researches into the study of sleep led him, with his colleague, Eugene Aserinsky, to the discovery in 1952 that rapid eye movements occur in sleep only when a person is dreaming. See also pp.130, 131.

Klemperer, Otto (1885–1973), German conductor. He was celebrated for his interpretations of Beethoven, Brahms and

Mahler. In 1933, with the rise of Nazism in Germany, he went to the USA and became conductor of the Los Angeles Philharmonic. In 1946 he returned to Europe as director of the Budapest Opera (1947–50). In 1970 in London, aged 85, he conducted the New Philharmonia Orchestra in Mahler's *Das Lied von der Erde*.

Kleptomania, compulsive, pathological desire to steal. Often the stolen objects are of little value to the thief and so seem to have a symbolic value. The causes of kleptomania are unknown; some psychologists believe it is the result of a deprived childhood whereas others see the thefts as aggressive acts. The methods of treatment vary from psychoanalysis to aversion therapy, but most have so far been unsuccessful.

Kleve. See CLÈVES.

Klimt, Gustav (1862–1918), Austrian painter and designer, a founder member of the VIENNA SECESSION group and the foremost ART NOUVEAU painter in Vienna. His style, which owed something to Japanese art, was highly decorative and erotic; it considerably influenced the decorative arts in Austria and the work of the painters Egon SCHIELE and Oskar KOKOSCHKA. Klimt devoted much of his time to architectural decoration, eg *The Kiss* (1908), and murals for Stoclet House, Brussels, designed by Josef HOFFMANN.

Kline, Franz (1910–62), US painter, an important figure in the ABSTRACT EXPRESSIONIST movement. From the 1950s he began to paint large, stark, grid-like compositions, generally in black and white and often reminiscent of Chinese calligraphy. He re-introduced colour in his later works.

Klinger, Friedrich Maximilian von (1752–1831), German playwright. A friend of GOETHE, his drama *Der Wurm*, or *Sturm und Drang* (1776) gave its name to the STURM UND DRANG (meaning storm and stress) drama movement. His other works include the play *The Twins* (1776) and the novel *Faust's Life, Deeds, and Journey to Hell* (1791).

Klipspringer, small antelope, native to rocky areas of Africa S of the Sahara Desert. Usually only the male carries short, spiked horns. The klipspringer has a thick coat of grizzled, bristly hair. Height: to 60cm (23.6in) at the shoulder; weight: to 16kg (35lb). Family Bovidae; species *Oreotragus oreotragus*.

Klondike, region of Yukon Territory in NW Canada, E of the Alaskan border around the Klondike River. It is remembered in connection with the KLONDIKE GOLD RUSH. Some gold is still mined in the region. Area: approx. 2,000sq km (775sq miles).

Klondike Gold Rush (1896–1904), the stampede of prospectors to the Klondike region, following the discovery of gold in the Yukon Territory of NW Canada. George Carmack was the first to find large quantities of gold, in the gravel of Bonanza Creek. Word quickly spread to the USA and by 1898 the mining town of Dawson had grown to 25,000 people. During that year's harsh winter the community was threatened with famine, and all food was commandeered and rationed. About 100 million dollars worth of gold was extracted before the easily accessible lodes were exhausted. Access to the Yukon during this time aggravated a long-standing dispute between Canada and the USA over the Alaska Panhandle boundary.

Kloos, Willem Johan Theodoor (1859–1938), Dutch Romantic poet and critic. In 1885 he founded *The New Guide*, a literary journal, in which he expressed his personal distaste for the effete and excessively rhetorical literature of his day.

Klopstock, Friedrich Gottlieb (1724–1803), German poet. He anticipated the STURM UND DRANG literary movement and influenced other poets such as Goethe, Rilke and Hölderlin. While still a student he began writing *Der Messias* (1748; tr. *The Messiah*, 1826), an epic in 20 cantos. His *Odes* (1747–80) were set to music by GLUCK and SCHUBERT, and others, including MAHLER, set his lyrics to music.

Kloster-Zeven, Convention of (1757), agreement signed by the Duke of Cumberland, commander of the British army early in the SEVEN YEARS WAR, at Zeven, Germany, after his defeat by the French. He agreed to allow the French to occupy Hanover. The British government learned about the document and dismissed Cumberland.

Kluck, Alexander von (1846–1934), German general. In August 1914 he led the German advance in France to within 48km (30 miles) of Paris, but was defeated by British and French forces at the first battle of the MARNE. See also pp.1688, 1670.

Klystron, ELECTRON TUBE that makes use of a stream of electrons moving at controlled speeds. Klystrons are used in ultra-high-frequency (UHF) circuits, such as radar transmitters, where they operate at frequencies up to 400,000MHz. See also RADAR.

Knapweed, flowering plant of the COMPOSITAE family, with deep blue-purple, rayed florets resembling those of THISTLES. Knapweed commonly grows wild in meadows and on path verges, although some species are cultivated. Genus *Centaurea*.

Knave, originally the son of the house (cf the German *Knabe*, "boy") and thus a squire or knight's attendant. In this sense it became the name of the lowest court card of any card suit (also called the Jack). By the 16th century the term described any attendant or servant, and pejoratively, a knowing rogue – which is what it means today.

Kneller, Sir Godfrey (c.1646–1723), German-born painter who settled in London (1674), where he became the foremost portrait painter. His best-known works include 42 portraits known as the *Kit Cat series* (National Portrait Gallery, London). He founded the first English Academy of Painting (1711). Knighted in 1692, he was the first painter to be created an English baronet (1715).

Knickerbocker School, group of writers associated with New York City in the first half of the 19th century (Knickerbocker was an affectionate term given to the elite resident families of New York). Members of the School published individually, and their work also appeared in New York newspapers and in *Knickerbocker* magazine. Among the writers were William Cullen Bryant, Lydia M. Child, James Fenimore Cooper, Joseph R. Drake, Fitz-Greene Halleck, Washington Irving, Clement Moore, James K. Paulding, Nathaniel Willis and Samuel Woodworth. See also p.1688.

Knievel, Evel (1949–), US motorcycle stunt rider. His flair for publicity led him to undertake daring stunts, the most famous of which was an (unsuccessful) attempt to leap across Snake River Canyon, Idaho, in 1974.

Knight, Dame Laura (1877–1970), British artist. Remembered for her many studies of ballet, circus and gypsy life painted in a lively style. In 1936 she became the third woman ever to be elected to the Royal Academy.

Knight, Sarah Kemble (1666–1727), colonial American author who became known as an astute businesswoman. In 1704 she travelled by horse from Boston to New York; *The Journal of Mme. Knight*, her humorous diary of the trip and an interesting record of contemporary life, was published in 1825.

Knight, originally a term for a military attendant or close follower of a battle leader. By the 12th century, under the literary ideal of courtly love, the knight had become a romantic figure, the epitome of virtuous manhood. Before the 14th century, however, he was a fully equipped mounted warrior, with a metal helmet and chain mail; and by the 15th century he had a complete suit of steel armour. Under the feudal system, the knight was the retainer of the sovereign, to whom he was bound as a vassal, and whom he was obliged to provide with military service, hospitality or funds. During the 20th century the title has lost much of its glory. Although the dubbing ceremony

Knights Hospitallers

Knossos, whose excavation revealed the splendours of the Minoan civilization.

Knots and their applications are still essential knowledge for all sailors on board ship.

Jan Kochanowski; title page of the *Psalterz Dawidow* (Psalter of David).

Zoltán Kodály; his study of Hungarian folk music is evident in many of his works.

has changed little for centuries – the sovereign lightly taps each shoulder of the new knight with the ceremonial sword – military knighthoods are now far less common than those given for political or social services on the various Honours Lists announced during each year. Some of the ancient orders of knighthood still remain, however, including the Order of the Garter (or of St George), the order of the Bath (so called because formerly the knight was ceremonially bathed on the eve of his knighthood), and Knight Bachelor (the most ancient title, and that of lowest rank). See also pp.555, 555.

Knights Hospitallers, or Knights of St John of Jerusalem, military religious order established early in the 11th century. The knights cared for Christian pilgrims who fell ill in Jerusalem, where they had a hospital and hostel. During the CRUSADES the Hospitallers policed routes to Jerusalem, together with their bitter rivals, the KNIGHTS TEMPLAR. After the end of the crusader states (1291), the Hospitallers fortified Christian strongholds first in Cyprus and then in Rhodes, until 1522. Today there remain two charitable orders in Jerusalem that still maintain a hospital there (one Anglican, the other Roman Catholic). See also pp.1310-1311.

Knights Templar, military religious order established in 1118, with headquarters in the supposed Temple of SOLOMON in Jerusalem. With the KNIGHTS HOSPITALERS, the Templars protected routes to Jerusalem for Christians during the CRUSADES and amassed a great fortune for their order; fighting between the two orders contributed to the failure of the Crusades. The possessions of the Templars in France attracted King Philip IV, who urged Pope Clement V to abolish the order in 1312. Their property was confiscated and many members of the order were tortured and executed. See also pp.1310-1311.

Knipper, Lev Constantinovich (1898–), Russian composer who studied in Berlin under Philipp JARNACH. His early work shows the influence of Igor STRAVINSKY and he has written many symphonies, several operas and chamber music. In 1932 he was appointed music instructor to the Russian army and navy.

Knitting, construction of a fabric by joining loops of yarn with needles. Although it is allied in origin to weaving it was apparently unknown in Europe before the 15th century when it began to be practised in Spain and Italy. It probably came to Europe from the Arab world. Two needles with heads are required for flat work and three or more, pointed at both ends for tubular work. There are two basic stitches, the weft (including the styles known as plain, purl and rib) and warp (which can only be produced on machines). The first knitting machine was invented in England in 1589 by William Lee, but the principle was not applied to a power-driven machine until 1864. See also pp.592-593, 593.

Knockout, blow that renders a person unconscious; in boxing, it is also the stunning of a man so that he is unable to rise from the canvas before the count of ten. A technical knockout also ends a boxing match. It is ruled when an injured boxer cannot properly defend himself or does not come out at the start of a round.

Knossos, ancient city on the NW coast of Crete, 6.4km (4 miles) SE of modern Candia. In 1900 Sir Arthur EVANS began excavations which revealed that Knossos had been inhabited before 3000 BC. His main discovery was of a palace (built c.2000 BC and rebuilt c.1700), whose existence had hitherto been thought a legend. Planned on a large scale, the palace included a great throne room, a theatre, a central court and many small compartments. Its complexity may well have given rise to the Greek legend of the Labyrinth. Close to the palace were the houses of Cretan nobles. The whole complex also contains many frescoes which are informative about Cretan life. Knossos dominated Crete c.1500 BC but the palace was occupied (c.1400) by Mycenaean invaders from the mainland, who used a form of LINEAR SCRIPT known as Linear B.

The city, however, stayed an important centre until the 4th century AD.

Knot, interlacement of ropes used to bind objects together. There are many types. A sheep-shank, for example, shortens a rope, while a splice knot joins two ropes at the ends.

Knot, unit of measurement equal to one nautical mile per hour – 1 knot equals 1.852km/h (1.15mph). The speeds of ships and aircraft are generally expressed in knots, as are those of winds and currents.

Knot, SANDPIPER that nests in the N tundra and winters in temperate coastal areas. It is usually chestnut and brown with black markings. It feeds on small animals. Length: 25.4cm (10in). Species *Calidris canutus*. See also p.325.

Knot, Alan (1946–), British cricketer who has played for Kent and England. In 1977 he signed for the Kerry Packer cricket circus. Knott became holder of the world record for wicket-keeping dismissals in 1976, when he passed Godfrey Evans' total. In 89 Test matches from 1967–77, Knott claimed 252 victims: 233 caught and 19 stumped.

Knowles, James Sheridan (1784–1862), Irish dramatist. He lived most of his life in London, and became a Baptist in 1844. His plays include *Caius Gracchus* (1815), *William Tell* (1825), *The Hunchback* (1832) and *The Love Chase* (1837).

Knowles, John (1926–), US author. A writer of short stories and travel articles, his first novel, *A Separate Peace*, was published in 1960. Other works include *Indian Summer* (1966) and *Spreading Fires* (1974).

Knox, Henry (1750–1806), US general and America's first secretary of war 1785–94. He took part in every major battle of the American War of Independence and was a close adviser to George WASHINGTON, becoming a brigadier-general in 1776. He founded the Society of the Cincinnati (1783), an organization formed by officers of the Continental Army for patriotic purposes.

Knox, John (c.1514–72), leader of the Protestant Reformation in Scotland. Ordained a Catholic priest, he nevertheless took up the cause of the Reformation. Having been imprisoned in France (1547), he lived in exile in England as a Reformed preacher. When the Catholic Mary I came to the throne in 1553 he fled to Switzerland where, in Geneva, he was influenced by CALVIN. In 1559 Knox returned to Scotland, where he continued to promote the Protestant cause through preaching and pamphlets advocating rebellion against tyrannical rulers. In 1560, with military help from England and while the young and Catholic MARY, QUEEN OF SCOTS was away in France, the Scottish Parliament, under Knox's leadership, made Presbyterianism the state religion. See also PRESBYTERIANISM; CHURCHES, pp.1432, 1432.

Knox, Ronald Arbuthnot Hilary (1888–1957), British priest and writer who translated the Bible from the Vulgate (1939–49). The son of the Bishop of Manchester, he was appointed chaplain of Trinity College, Oxford, in 1912, where he gained a reputation as a religious controversialist. He was received into the Roman Catholic Church in 1917 and ordained two years later.

Knudsen, William Signius (1879–1948), US industrialist and public official, b. Denmark. He emigrated to the USA in 1899, joined the Ford Motor Company in 1902 and became its production manager in 1914. He moved to General Motors in 1921, becoming president of the corporation in 1937. From 1940 until the end of WWII he co-ordinated US military supplies for the National Defense Research Committee. Later, he was appointed director of the Office of Production Management.

Knum-Ra, or Khnemu, in Egyptian mythology, the creator of the universe, the gods and man; husband of the sisters Sati and Anuket. The ram-headed Knum-Ra was supposed to have shaped the gods and man on his potter's wheel using the mud of the River Nile as his clay.

Knur and spell, ancient game played in

the north of England in which a small ball (knur), weighing 14g (0.5oz), is struck with a bat or stick, the distance hit determining the winner. The ball can be set up for hitting by releasing it from a spring trap (spell), by suspension in a gallows frame, or throwing it up by hand.

Koa, Hawaiian tree valued for its wood, used in cabinet making. It has clustered flowers and 15cm (6in) pods. Height: to 21m (70ft). Family Leguminosae: species *Acacia koa*.

Koala, small MARSUPIAL that lives in eucalyptus trees of Australia, eating their leaves. Regarded as the traditional "teddy bear", it is not actually related to bears. A single young is born at a rudimentary stage of development, is then nurtured in its mother's pouch until fully formed, and is finally carried on her back for a further six months. Length: 85cm (33in). Species *Phascolarctos cinereus*. See also pp.91, 303, 308.

Koan, in ZEN Buddhism, a question or statement used to train novices through meditation on problems which cannot be resolved analytically. Of perhaps 1,700 examples, one of the best-known is: What is the sound of one hand clapping?

Kobe, city port on SW Honshu, Japan, on the N shore of Osaka Bay. In 1878 Hyogo, an important fishing port for over 1,000 years, became part of Kobe which since then has become a major port of Japan. Largely rebuilt after suffering bomb damage in WWII, the city is now also an industrial centre. Industries include shipbuilding, iron and steel and chemicals. Pop.(1970) 1,288,937.

København. See COPENHAGEN.

Koch, Ludwig (1881–1974), German naturalist who was formerly a singer (1905–14). He was the first to record directly the songs and cries of birds and wild animals, and is the originator of "sound books". From 1936 he lived in Britain. His works include *Songs of Wild Birds* (with E.M. Nicholson; 1936–37), *Animal Language* (with J. Huxley; 1938) and *Memoirs of a Birdman* (1955).

Koch, Robert (1843–1910), German bacteriologist. He was awarded the 1905 Nobel Prize in physiology and medicine for his discovery of the bacillus that causes TUBERCULOSIS. This work laid the foundation for methods of determining the causative agent of a disease.

Kochanowski, Jan (1530–84), major poet of the Polish Renaissance. He was mainly a writer of didactic verse and classical drama. Kochanowski's lyrics, his version of the psalms, *Psalterz Dawidow* (1579), and the laments on the death of his daughter in *Treny* (1580) represent his main achievements.

Köchel, Ludwig von (1800–77), Austrian musicographer. He was the first to catalogue the complete works of MOZART in his *Chronological-Thematic Index* (1862). His numbering system, although considerably revised by Alfred Einstein (1937), is the basis of present-day identification of Mozart's works, each number being preceded by the letter K.

Kocher, Emil Theodor (1841–1917), Swiss surgeon who was awarded the 1909 Nobel Prize in physiology and medicine for his work on the physiology, pathology and surgery of the thyroid gland. He was the first to remove the thyroid gland in goitre cases. See also pp.1076, 1076.

Kocsis, Sándor (1929–), Hungarian footballer who in 66 matches for his country (1949–56) scored 75 goals from the inside-forward position. Known as the "Golden Head" for his heading ability, he was top scorer in the 1954 World Cup. Having played for Ferencváros and Honvéd, he went to Barcelona after the 1956 Hungarian uprising.

Kodak, word invented as a trademark for the cameras manufactured by George EASTMAN and later by Eastman Kodak, the company he founded in 1892. Introduced in 1888, the simplicity of the first Kodak camera did much to promote the growth of amateur photography, and established the name as a household word.

Kodály, Zoltán (1882–1967), Hungarian composer. With BARTÓK he collected and systematized Hungarian folk-music,

which was the principal influence in his work. His music uses established forms with great originality and feeling. Among his best-known compositions are the *Psalmus Hungaricus* (1923), the *Concerto for Orchestra* (1939), the comic opera *Hary Janos* (1927) and the *Missa Brevis* (1945). See also pp.1754, 1754.

Kodes, Jan (1946–), Czechoslovakian tennis player. He won the French (1970–71) and British (1973) singles championships.

Kodiak bear, Alaskan brown bear native to Kodiak Island off the s coast of Alaska. The biggest bear in the world and the largest meat-eating animal that lives on land, it can grow up to 2.8m (9.2ft) in length and weigh more than 780kg (1,720lb). Species: *Ursus arctos middendorffi*.

Kodiak Island, island in the Gulf of Alaska, SE of the Alaska Peninsula. A large area is given over to a national wild life park, the island having two native animals, the KODIAK BEAR and the king crab. The main occupation of the islanders is salmon fishing. Area: 13,890sq km (5,363sq miles). Pop. (1970) 6,357.

Koechlin, Charles (1867–1950), French composer. He entered the Paris Conservatory in 1890 and studied under MASSENET and then FAURÉ. His numerous innovative compositions, in all the standard musical forms, are sensitive and distinguished, and above all individually suited to the idiom and without sensationalism.

Koestler, Arthur (1905–), British novelist and philosopher, b. Hungary. After living in many European capitals in the 1920s and 1930s, he went to Spain to report the SPANISH CIVIL WAR. He was a Communist until the mid-1930s, and his novels, such as *Darkness at Noon* (1940), are often concerned with political themes. His works in English include *The Act of Creation* (1964) and two volumes of autobiography, *Scum of the Earth* (1941) and *Arrow in the Blue* (1952).

Koetsu, Honnami (1558–1637), Japanese painter, calligrapher, potter and art patron. He helped further the national style of his time and is noted for the calligraphy he executed on scrolls.

Koffka, Kurt (1886–1941), US psychologist, b. Germany. With Wolfgang KÖHLER and MAX WERTHEIMER, he was a founder of GESTALT PSYCHOLOGY. He did important work in perception and became spokesman for the Gestalt movement. He wrote *Growth of the Mind* (1921) and *Principles of Gestalt Psychology*. (1935). See also pp.134–135.

Kogan, Leonid (1924–), Soviet violinist. He studied at the Moscow Conservatory with Abram Yampolsky and won the International Competition in Brussels in 1951. He has been a professor at the Moscow Conservatory since 1952, played many concerts and won the Lenin Prize in 1965.

Koh-i-noor, Indian diamond which has the longest known history; its name is Hindi for Mountain of Light. It is reputed to have been stolen from the Rajah of Malwa in 1304, having been in his family for several generations. After changing hands many times, it was bought by the British Crown in 1849, recut to 109 carats in 1852, and set in the crown of Queen Elizabeth, the consort of George VI, for the coronation of 1937.

Kohlberg, Lawrence (1927–), US psychologist. Studying the moral development of reasoning in children, he has conducted a series of tests among children of different age groups and societies, asking them to respond to a number of moral dilemmas. He has classified three progressive stages in the thinking behind their answers. See also pp.171, 1132, 1132.

Köhler, Wolfgang (1887–1967), US psychologist, b. Estonia. He emigrated to the USA in the 1930s. With Kurt KOFFKA and MAX WERTHEIMER, he was a key figure in GESTALT PSYCHOLOGY. His work on animal learning and problem solving, is summarized in *The Mentality of Apes* (1917). See also pp.134–135.

Kohlrabi, edible crop vegetable with lobed leaves and a greenish-white or pur-

ple, turnip-like stem. It is unusual in that both the stem and leaves may be eaten. Family Cruciferae; species *Brassica caulorapa*. See also p.684.

Kohoutek, long-period comet that last appeared in 1973 but was much less spectacular than expected. It will not return to perihelion for 75,000 years. See also pp.969, 969.

Koiso, Kuniaki (1880–1950), Japanese Prime Minister (1944–45). After the fall of the rojo government in July 1944, he attempted to forestall military defeat. Heavy bombings and US landings on Okinawa led to his defeat in April 1945, leaving Admiral Suzuki Kantaro to find honourable grounds for surrender. Koiso was sentenced to life imprisonment as a war criminal in 1948.

Kojiki, with NIHON-SHAKI, chronicles describing the legendary and historical origins of Japan. The texts date from the early 8th century and were mostly written in Chinese ideographs as Japan lacked a literary tradition. Kojiki, the sacred book of SHINTO, deals with traditional mythology; the Nihon-shaki relates historical events.

Kokoschka, Oskar (1886–1980), Austrian painter. He was influenced by the elegance of KLIMT but later developed his own EXPRESSIONIST style, characterized by forceful, energetic draughtsmanship and restless brushwork. The same tension that permeates his early portraits is also present in his later, panoramic landscapes. He taught at Dresden Academy (1919–24) and then travelled extensively before moving to London in 1938. He became a British subject in 1947 and a CBE in 1959.

Kolanut, or colanut, fruit of an African tree that bears the same name, from which is extracted the main ingredient of cola soft drinks. The nuts contain CAFFEINE. Species *Cola acuminata*. See also COCA-COLA.

Kolar Gold Fields, area in s India, 233km (145 miles) w of Madras. Founded in the late 19th century and now the centre of India's gold-mining industry, it produces 95% of the country's gold. Pop. (1971) 76,112.

Kolbe, Adolf Wilhelm Hermann (1818–84), German chemist. In c. 1843 he converted carbon disulphide to acetic acid, one of the first syntheses of an organic compound from inorganic chemicals. He also developed a theory of radicals and predicted the existence of secondary and tertiary alcohols.

Kolchak, Alexander Vasilievich (1874–1920), Russian admiral. He commanded the Baltic and Black Sea fleets during WWI. After the Bolsheviks took power he led White forces in Siberia, and was, at one stage, proclaimed supreme ruler of Russia. He was captured and shot in 1920.

Kölcsey, Ferenc (1790–1838), Hungarian poet, critic and political figure. He used his political position to support the linguistic reforms of Ferenc KAZINCZY and, through his poetry and criticism, helped to develop aesthetics in Hungary. He wrote the Hungarian national anthem, *Himnusz* (1823). His collected works appeared in 1886–87.

Koldewey, Robert (1855–1925), German archaeologist. Excavating at Babylon between 1899 and 1917, he used a technique of stratification, whereby different layers corresponding to different periods of occupation are excavated; this had considerable influence on later archaeological work. Some of the results of his excavations were published in *The Excavations at Babylon* (1914).

Kolehmainen, Hannes (1889–1966), Finnish middle- and long-distance runner who won four Olympic gold medals (1912: 5,000m, 10,000m, cross-country; 1920: marathon), set six world records from 3,000m to 30,000m and began the tradition of Finnish distance running.

Kolkhoz, Russian term for a collective farm. Since 1929 the majority of Soviet farm workers have worked on such collective farms, some of which were converted to *sovkhozy*, or state farms, in the 1950s. A kolkhoz is technically autonomous; its members have a share in its produce in

that although since 1961 their produce has been bought by the state at predetermined prices, any surplus is shared between the workers. See also pp.1638, 2156.

Kollár, Jan (1793–1852), Slovak poet, an important contributor to Czech cultural revival. He became an evangelical pastor in Pest and in 1849 was appointed professor of Slavonic archaeology in Vienna. His works, written in Czech and often promoting the cause of Slavonic cultural unity, include the sonnet cycle *The Daughter of Slava* (1824).

Kölliker, Rudolph Albert von (1817–1905), Swiss embryologist and histologist. His contributions to medicine include the application of cell theory to tissue structure and embryonic development.

Kollwitz, Käthe (1867–1945), German graphic artist and sculptor. Her best-known works depict suffering, especially of women and children. They include six cycles of etchings, lithographs and woodcuts such as *War* (1922–23) and *Death* (1934–35).

Köln. See COLOGNE.

Kolokotronis, Theodoros (1770–1843), Greek patriot and general in the Greek war for independence from Turkey. His heroism is recorded in a number of Greek folk-songs. In 1825 he invited Sir Richard CHURCH to offer British protection to Greece.

Kolozwar. See CLUJ.

Kölreuter, Josef Gottlieb (1733–1806), German botanist known for his breeding experiments with plants. He was the first to demonstrate the importance of insects and of wind in the cross-fertilization of plants.

Kolyma, river in the far eastern USSR. It rises at several headstreams in the Kolyma and Cherskogo (Cherskogo) ranges, and flows N to the East Siberian Sea. Its lower course is navigable between June and October. Length: approx. 1,780km (1,110 miles).

Komisarjevsky, Theodore (1882–1954), British theatre director, b. Russia. His highly stylized productions, especially of Shakespeare's plays such as *Macbeth* (1933) at Stratford-upon-Avon, made him a controversial figure.

Komodo dragon, giant monitor lizard that lives on four islands to the E of Java, Indonesia; it is the largest lizard in the world. Its survival is threatened as the deer and wild pigs on which it feeds are reduced in number by hunting. Of the 2,000–5,000 that exist, only 400 are mature females. Length: 3m (10ft). Family Varanidae; species *Varanus komodoensis*. See also pp.69, 346.

Komondor, Hungarian guard dog for livestock. It has a short, wide head with a straight, broad muzzle, and triangular, pendulous ears. The powerful body is set on muscular legs and the feet are large. The unusual coat is long and white and is comprised of matted, felt-like cords. Height: at least 60cm (24in) at the shoulder; weight: at least 34kg (75lb).

Komorowski, Tadeusz (1895–1966), Polish general. He led the Polish underground forces during the 62-day Warsaw uprising of 1944. The Germans demolished the city in suppressing the revolt. Komorowski had hoped to link up with the advancing Soviet army but it had halted on the outskirts of the city during the uprising.

Komsomol, derived from the Russian for "Communist League of Youth"; organization in Russia for students aged from 14 to 28. Supervised by the Communist Party, the Komsomol helps to spread Communist teachings among young people and to gain members for the Party. It is associated with the organizations known as the Pioneers, and the Little Octobrists, which are for younger children.

Kongo, Negroid people of w Africa, living in the Congo Republic, Zaire and Angola. The Kongo kingdom (14th–17th centuries) had extensive influence. Today the Kongo practise sedentary agriculture raising such staple crops as sweet potatoes and manioc; coffee is a cash crop. Their culture is rich in ORAL LITERATURE, music and sculpture. Ancestor worship and fetish

Kohlrabi, *Brassica oleracea*, is a bulbous vegetable closely related to the cabbage.

Jan Kollár was a leading Czech poet in the 19th century; an illustration from his diary.

Käthe Kollwitz' carving *Lament for Barbach*; she was noted for her depiction of suffering.

Komodo dragon, the world's largest lizard, has rows of fierce looking saw-edged teeth.

Koniev, Ivan Stepanovich

Kookaburras, which eat a variety of small creatures nest in holes in trees.

Philips de Koninck; a detail from one of his typical Dutch landscapes.

Korean War; a Chinese Communist soldier being searched by US troops.

Arthur Kornberg artificially produced a self-reproducing nucleic acid.

cults continue to dominate their religion. **Koniev, Ivan Stepanovich** (1897–1973), Soviet general. He was outstanding as a military leader in WWII; his troops recaptured the Ukraine from the Germans in 1944, and were among the first to enter Berlin in 1945. He became a marshal in 1944 and commander-in-chief of the Soviet army in 1946.

König, Friedrich (1774–1833), German printer. He invented the first steam printing press and was co-founder of the König and Bauer Company, manufacturers of steam printing presses, established at Würzburg in 1817.

König Rother, German epic poem, written c.1145. It tells of the adventures of King Anthari in his attempts to marry an Eastern princess.

Königsberg. See KALININGRAD.

Koninck, Philips de (1619–88), Dutch painter of genre, historical and landscape themes, especially famous for his panoramic views of low-lying country beneath expansive skies. His drawings have been confused with those of REMBRANDT, whose student he may have been.

Konoye, Fumimaro (1891–1946), Japanese statesman. A member of the ancient FUJIWARA family, he was president of the House of Peers (1933–34). He became Prime Minister in 1937 and served three terms. As Foreign Minister in 1938 he was responsible for much of Japanese policy in the early part of the SINO-JAPANESE WAR (1937–45).

Konrads, John (1942–), and his sister **Ilse** (1944–), Australian swimmers, b. Latvia, who dominated middle-distance freestyle events from 1958 to 1960. John set 26 individual world records and won one Olympic (1960) and three Commonwealth (1958) gold medals. Ilse set 12 individual world records and won a Commonwealth gold medal in 1958.

Konrad von Soest (fl. early 15th century), principal Westphalian painter, active in Dortmund and Soest. A signed polyptych, in Niederwildungen parish church, executed in the SOFT STYLE, is his major work.

Konrad von Würzburg. See WÜRZBURG, KONRAD VON.

Konstanz. See CONSTANCE, LAKE.

Kon-Tiki Expedition, undertaking by the scientist Thor HEYERDAHL in which he tested his theory that Polynesia could have been colonized by an ancient South American people. With five companions he built a balsa-wood raft and sailed from the W coast of South America in 1947. They reached a group of islands near Tahiti after a voyage of three and a half months during which they travelled about 8,000km (5,000 miles), thus proving that such a migration is possible.

Konya, city in S central Turkey, 233km (145 miles) S of Ankara. The capital of the SELJUK sultanate of RÖM from 1099, it was annexed by the OTTOMAN sultan in 1472. It is a religious centre of the Whirling DERVISHES, an order founded in the 13th century. Manufactures include cotton and leather goods. Pop. (1973) 227,887.

Koo, Vi Kyuin Wellington (1887–), also called Ku Wei-chün, Chinese Nationalist diplomat. He served as China's representative to the Paris Peace Conference in 1919 and then as ambassador to France (1936–41), Britain (1941–46) and the USA (1946–56). He also represented China at the conference that established the UN (1945), and is a justice at the International Court.

Kookaburra, also called laughing jackass, large KINGFISHER of Australia known for its call resembling fiendish laughter. Groups often scream in unison at dawn, mid-day and dusk. They feed on rodents, lizards and other land animals. Species *Dacelo gigas*. See also pp.73, 303.

Kooning, Willem de (1904–), US painter, b. Holland. He trained in Europe and was at first influenced by de STIJL, but after moving to the USA in 1926 he turned to abstract painting. After WWII he became a leading action painter. The series *Woman I-IV* (1952–53) and *Woman Acabonic* (1966) are representative of his work.

Koopmans, Tjalling Charles (1910–), US economist b. The Netherlands. He was

attached to the financial division of the League of Nations (1938–40) and on the staff of the University of Chicago (1945–55). From 1955 he was professor of economics at Yale University. In 1975 he shared the Nobel Prize in economics with the Soviet economist Leonid KANTOROVICH for their contributions towards a theory of optimum allocation of resources.

Kootenay, river in W Canada. It rises in the Rocky Mts of SE British Columbia, flows S into Montana, USA, NW through N Idaho, then N and back into Canada. It flows through Kootenay Lake to join the Columbia River at Castlegar. Length: 655km (407 miles).

Kooyong Stadium, complex of tennis courts in Melbourne, Australia. Built in 1927, it is one of the venues of the Australian tennis championships, and its 12,000-capacity centre court has also been used for Davis Cup challenge rounds and world championship boxing.

Kopernik, Nikolai. See COPERNICUS, NICOLAUS.

Köppen, Wladimir Peter (1846–1940), German meteorologist and climatologist, b. Russia, who introduced a climate classification still used today. In 1884 he produced a world map of temperature belts. In 1900 he introduced his system of climate classification which divided climate into five major categories according to temperature and rainfall. See also p.254.

Köprülü, Turkish family prominent in the late 17th century. Seven of its members served as Grand Vizier (Chief Minister). Köprülü Pasha (c.1586–1661); r.1656–61, b. Albania, consolidated power under the Turkish sultan, Mohammed IV, and expelled the Venetian fleet from the Dardanelles. Later Köprülü viziers were involved in wars with Venice, Austria and Poland which resulted in the extensive loss of territory.

Kops, Bernard (1926–), British dramatist who left school at age 13. Many of his works concern rebellious Jewish youth coming to terms with life, based on his own working-class background in London's East End. His plays include *The Hamlet of Steppen Green* (1958) and *Enter Solly Gold* (1962).

Koran or Qur'an, sacred scriptures of ISLAM. The canonical text was established AD 651–52 or the year 30 in the Muslim calendar, which dates from the HEGIRA. It was collected under the Caliph OTHMAN who is believed to have destroyed all other existing copies to ensure its uniformity. According to Muslim belief, the Koran contains the actual word of God (Allah) as revealed to the Prophet Mohammed in the 7th century. Its 114 chapters or suras are the source of Islamic belief and a guide for the whole life of the community. See also pp.1278–1279.

Korbut, Olga (1955–), Soviet gymnast whose charm entranced worldwide audiences as she won three gold medals (beam, floor exercises, team) and a silver medal at the 1972 Olympic Games. In 1976 she won a team gold and a silver.

Korda, Sir Alexander (1893–1956), British film director, b. Hungary. He received the first knighthood ever bestowed on a film-maker (1942) for his contributions to the British film industry. He was noted for his lavish productions and somewhat flamboyant business methods. His films of the 1930s and 1940s received international acclaim. Among them were *The Private Life of Henry VIII* (1933), *The Scarlet Pimpernel* (1935), *Lady Hamilton* (1941) and *Anna Karenina* (1948). See also p.1403.

Kore, term derived from the Greek word for "maiden" and generally applied to draped, free-standing statues of females in archaic Greek art (c.500 BC). A statue of a male from the same period is called a *kouros*.

Korea, peninsula in Asia now made up of North Korea and South Korea. See MW p.115; KOREA, NORTH; KOREA, SOUTH.

Korea, North (Chosŏn Minjujuŭi In'min Konghwaguk), independent nation of NE Asia, occupying the N part of the Korean Peninsula. The country has extreme

seasonal temperatures and only a small percentage of the land can be farmed. Its mineral resources, however, are highly developed and tungsten, graphite and magnesite are produced. The capital is P'yŏngyang. Area: 120,538sq km (46,540sq miles). Pop. (1975 est.) 16,000,000.

Korea, South (Taehan-Min'guk), independent nation of NE Asia, occupying the S part of the Korean Peninsula. It is a mountainous country with few natural resources and only 20% of the land area can be cultivated. Economic growth, slow since the Korean War, was adversely affected by the 1974–75 oil price increases. The capital is Seoul. Area: 98,484sq km (38,025sq miles). Pop. (1978 est.) 37,019,000. See p.2088.

Korean, national language of South and North Korea, spoken by a total of 50 million people. It may be related to Japanese but this remains to be proved. The Korean alphabet was developed in the 15th century.

Korean War (1950–53), conflict between Communist (North Korea and People's Republic of China) and non-Communist (South Korea, US and UN) forces. On 25 June 1950, North Korea invaded South Korea. The UN Security Council demanded a halt, in which it called upon the help of member nations. US President Harry TRUMAN, without recourse to Congress, ordered land, sea and air forces to aid South Korea. Token forces from 16 UN countries supported the South Korean and US armies and Gen. Douglas MACARTHUR was appointed commander. British and Commonwealth forces acquitted themselves well; four Victoria Crosses were won, two of them in the heavy fighting on the Imjin River (April 1951), where the 1st Bn The Gloucestershire Regiment were cut off from the brigade. The war tested the air strength of both sides, and marked the appearance of the Soviet MiG-15 fighter. Although the conflict ended inconclusively in a truce (27 July 1953) at the cost of about 4 million casualties, its containment may have prevented worldwide nuclear war. See also pp.2087–2088.

Korfbal, basketball game of Dutch origin for teams of both sexes, six men and six women per side. It is played over two 45-minute periods on a grass court divided into three zones, goalposts with a cylindrical basket being centred inside the end zones. The aim is to score goals through the basket. Players must pass the ball within a zone or into an adjacent zone. Running with, kicking, punching, or bouncing the ball is illegal, as is bodily contact. After two goals, players move to a different zone.

Korinthos. See CORINTH.

Kornberg, Arthur (1918–), US biochemist. He was medical director of the US Public Health Service (1951) and chairman of the department of biochemistry at Stanford University. In 1959 he shared the Nobel Prize in physiology and medicine with Severo OCHOA for their work on the synthesis of RNA and DNA, an important contribution to the study of genetics. See also pp.176–177.

Kornbluth, Cyril M. (1923–58), US science-fiction writer. His stories, set in the future, often show the effects of domination by big business on social and political life. He wrote his most famous work, *The Space Merchants* (1953), in collaboration with Frederik POHL.

Korneichuk, Alexander Yevdokimovich (1905–72), Ukrainian dramatist. His *Wreck of the Squadron* (1934) was produced by the Red Army Theatre. Other works include *Truth* (1937), *In the Steppes of the Ukraine* (1941), a controversial play *Wings* (1953) and a comedy, *Why do the Stars Smile?* (1956).

Kornilov, Lavr Georgievich (1870–1918), Russian general. Appointed supreme military commander by KERENSKY in Aug. 1917, he rebelled unsuccessfully against the provisional government a month later. After the Bolshevik Revolution in Nov. 1917, he led White Russian forces in the Civil War (1918–20) and was killed while attacking Krasnodar which at

that time was known as Ekaterinodar.
Korolev, Sergei Pavlovich (1906–66), Soviet engineer. He was chief designer at the Scientific Research Institute near Moscow and directed the design and manufacture of the Vostok and Soyuz manned spacecraft, including VOSTOK I, in which Yuri GAGARIN made the first manned space flight in 1961.

Korutürk, Fahri S. (1903–), Turkish naval officer and politician. Made Commander-in-Chief of the Navy in 1957, he later served as ambassador to the USSR and Spain. He was President of Turkey 1973–80.

Koryaks, MONGOLOID people who live on the Kamchatka peninsula of NE Siberia in the USSR. Their way of life is similar to that of the ESKIMOS: subsistence by hunting, fishing and breeding reindeer. They speak a language of the Palaesiberian family and practise rituals connected with their hunting activities.

Korzeniowski, Josef Konrad. See CONRAD, JOSEPH.

Korzybski, Alfred Habdank Skarbek (1879–1950), us scientist, b. Poland. He created an influential SEMANTIC system of linguistic philosophy that distinguishes between a word and the object it describes. He wrote *Science and Sanity: An Introduction to Non-Aristotelian Systems and General Semantics* (1933).

Kós, island in SE Greece, in the Aegean Sea; second-largest of the Dodecanese, near the Turkish coast. Kós is the main town. Fishing, sponge diving and livestock raising are important, and grain, tobacco and grapes are cultivated. In ancient times Kós was ruled by Athenians, Macedonians, Syrians and Egyptians. It was a cultural centre and HIPPOCRATES founded a school of medicine there in the 5th century BC. Area: 287sq km (111sq miles). Pop. (1971) 16,650.

Kosciusko, Thaddeus (1746–1817), Polish patriot and soldier. Championing the ideals of liberal philosophy, he went to America in 1776 to fight with the revolutionary army. He returned to Poland in 1784 and after the second partition of the country in 1793 led a revolutionary movement to regain Polish independence. Initially successful, the invading armies of Russia and Prussia proved too strong and Kosciusko was imprisoned (1794–96) and then exiled.

Kosciusko, Mount, highest peak in Australia and situated in the Australian Alps, SE New South Wales; it is a popular skiing resort. Height: 2,230m (7,316ft).

Kosher, Hebrew word that means ritually correct. It is applied by Orthodox Jews to food that conforms to Jewish dietary laws and customs, many of them based on health considerations. The rituals for the killing and preparation of kosher food are specified in the TALMUD.

Košice, city in E Czechoslovakia on the Hradná River, 217km (135 miles) NE of Budapest. Formerly in Hungary, it was incorporated into Czechoslovakia under the Treaty of Trianon in 1918. Its ancient buildings include a Gothic cathedral and a 14th-century Franciscan monastery. Industries: iron and steel, brewing, textiles. Pop. (1974) 166,240.

Kosinski, Jerzy (1933–), us novelist, b. Poland. Two of his works, *The Painted Bird* (1965) and *Steps* (1968; National Book Award 1969), involve a series of incidents of grotesque violence. *Cockpit* was published in 1975. He has also written under the name Joseph Novak.

Kossel, Albrecht (1853–1927), German biochemist who was awarded the 1910 Nobel Prize in physiology and medicine for contributions to the understanding of cell chemistry. He showed that the nucleoprotein of the cell nucleus is made up of a protein and a nitrogen-containing nucleic acid, which in the 1950s was discovered to be the basic hereditary material. See also pp.176–177.

Kossuth, Louis (Lajos) (1802–94), Hungarian leader. He entered the National Diet in 1830 but was imprisoned (1837–40) for his part in the attempt to achieve a separate constitution for Hungary from that of Austria. He became finance minister and virtual dictator in 1848, and

took the title of governor in 1849. Defeated by the Russian and Austrian armies, he fled to Turkey and subsequently travelled to the USA, from whence he went to England and Italy. He refused amnesty in his own country but when he died his body was returned to Budapest where it was buried in state. See also p.1587.

Kostelanetz, André (1901–80), Russian-born conductor, who emigrated to the USA in 1922 and became a conductor for the Columbia Broadcasting System in 1930. He also conducted his own orchestra and was best known for his arrangements of light music. In 1938 he married the coloratura soprano Lily PONS.

Kostrowitzky, Wilhelm. See APOLLINAIRE, GUILLAUME.

Kosygin, Aleksei Nikolayevich (1904–), Soviet politician elected to the Communist Party Central Committee in 1939 and the POLITBURO in 1948. He was removed in 1953 but regained his seat in 1960. After KHRUSHCHEV's fall in 1964, he became Chairman of the Council of Ministers, and was regarded as second to Leonid BREZHNEV. See also p.1723.

Köthen, town in central East Germany, 19km (12 miles) SW of Dessau. From 1603 until 1847 Köthen was the residence of the dukes of Anhalt-Köthen, of whose court Johann Sebastian BACH was appointed musical director from 1717 until 1723. Industries: machinery, lignite mining, sugar refining, chemicals, textiles. Pop. (1970 est.) 36,600.

Koto, large 13-stringed ZITHER with moveable bridges used in Japanese music from the earliest times. The thumb and first two fingers of the right hand pluck the strings, while the left hand presses the strings to control pitch.

Kotzebue, August Friedrich Ferdinand von (1761–1819), German diplomat and dramatist, whose murder by a student led to the suppression of German student organizations. A prolific and popular playwright, he wrote over 200 dramatic works, many of them sentimental melodramas. They include *Menschenhass und Reue* (1789; tr. *The Stranger*, 1798) and *Die Indianer in England* (1790; tr. *The Indian Exiles*, 1801).

Koumiss, or kumiss, slightly alcoholic drink made from mares' and camels' milk by central Asian nomads. The milk is fermented by a YEAST and a BACTERIUM. A new batch is started by the addition to a small quantity of milk of a previous batch.

Kountché, Lieutenant-Colonel Seyni (1931–), army officer and head of state, NIGER, W Africa. As Chief of Staff of the armed forces in 1974, he led the *coup* that overthrew the government of Hamani Diori and became President.

Koussevitzky, Sergei Aleksandrovich (1874–1951), Russian musician. A virtuoso double-bass player, he became even more famous as conductor of the Boston Symphony Orchestra (1924–49).

Kowloon, suburb of Hong Kong, on the Kowloon Peninsula of China, connected to Hong Kong Island by a road tunnel and a ferry. It was ceded to Britain by the Chinese in 1860. Shipbuilding is an important industry. Pop. (1971) 715,400.

Kraal, old-fashioned name for the household of the rural Bantu people of South Africa, consisting of a mud thatched hut surrounded by a stockade forming an enclosure for the domestic animals (Dutch *kraal*; cf. English *corral*). Based on a family unit, a kraal was often one of a circle under the authority of a chief, himself under the tribal chief who deferred to the paramount chief.

Kraepelin, Emil (1856–1926), German psychiatrist and pioneer in the classification of mental illness. By studying the symptoms from many case-histories he distinguished two broad classes of psychosis: DEMENTIA PRAECOX (now called SCHIZOPHRENIA) and MANIC-DEPRESSION.

Krafft-Ebing, Richard von, Baron (1840–1902), German psychiatrist. His *Psychopathia Sexualis* (1886) described sexual pathologies and did much to promote open discussion of the sex drive. He also was one of the first to conclude that general PARESIS was caused by syphilis.

Kraft, Adam (c.1455–1509), German Gothic stone-sculptor. Most of his work is in Nuremberg, including his masterpiece, the great tabernacle in St Lorenz Church (1493–96) and the Schreyer monument in St Sebald's Church.

Krait, highly venomous snake of the *Bungarus* genus. Found in the open country of E Asia, Kraits are usually nocturnal and generally attack only other snakes. Their skins are shiny and distinctively marked.

Krakatoa, volcanic island in W Indonesia 6km (4 miles) in diameter, in the Sunda Strait between Java and Sumatra. In 1883 one of the largest volcanic eruptions of recent times occurred, destroying most of the island. The resulting TSUNAMI caused great destruction on nearby coasts, and volcanic debris was scattered across the Indian Ocean. Height: (of volcano) 813m (2,667ft). See also p.205.

Kraken, mythical beast thought to appear at times in the sea off Norway. First described in the 1750s by Bishop Pontopidan, it is said to have a huge back and long arms which drag down ships.

Kraków, city in S Poland, 251km (156 miles) SSW of Warsaw. Taken by BOLESŁAV I of Poland in 999, it was made a residence of the Polish kings in the 12th century and ceded to Austria in 1795 in the Third Partition of Poland. It was made part of the grand duchy of Warsaw in 1809, became a republic in 1815 and was restored to Austria in 1946. It became part of Poland after WWI. Today it is a manufacturing centre which produces chemicals, metals and machinery. Pop. 668,300.

Kramer, John Albert ("Jack") (1921–), us tennis player and us singles (1946–47) and British singles (1947) champion. He also won the us doubles (1940–41, 1943 and 1947) and British doubles (1946–47) titles. He turned professional in 1947 and later became a successful promoter.

Kramér, Karel (1860–1937), Czech nationalist and statesman. He was a leader of the liberal Young Czech movement and during WWI was tried for treason by the Austrian authorities. He became the first Prime Minister of Czechoslovakia (1918–19).

Kramer, Stanley (1913–), us independent film producer. He is noted for his excellent low-budget films. His major works include *Champion* (1949), *The Men* (1950), *Death of a Salesman* (1951), *High Noon* (1952), *The Caine Mutiny* (1954) and *Ship of Fools* (1965).

Kraszewski, Józef I. (1812–87), Polish journalist and novelist. His works mark the transition between the Romantic and Realist periods in Polish literature, and wrote many historical novels. Those translated into English include *Jermola* (1857), *The Countess Cosel* (1901) and *Count Brühl* (1902).

Kraus, Karl (1874–1936), Austrian satirist and poet. He was founder of *The Torch* and of the Theatre of Poetry, where he gave readings from SHAKESPEARE's works. He produced many essays and dramas, eg *Mankind's Last Day* (1919), which exposed the degeneration of culture, morals and language.

Kraus, Lili (1908–), Hungarian pianist who settled in England. She studied at the Royal Academy in Budapest and also with Béla BARTÓK, Zoltán KODÁLY and Artur SCHNABEL. In 1928 she became a professor at the Vienna Conservatory and toured widely as a concert artist, becoming well known as an interpreter of MOZART.

Krause, Karl Christian Friedrich (1781–1832), German philosopher, whose ideas greatly influenced Spanish education in the late 19th century. He also attempted to reconcile THEISM and PAN-THEISM in his notion of "pantheism" in his *System of Morality* (1810), and *Lectures on the System of Philosophy* (1828).

Krebs, Sir Hans Adolf (1900–), British biochemist, b. Germany. He shared with F.A. LIPMANN the 1953 Nobel Prize in physiology and medicine for his discovery of the CITRIC ACID CYCLE, the process that results in the production of energy in living organisms.

Krebs, Cycle. See CITRIC ACID CYCLE.
Krefeld, city in W West Germany, on the

Louis Kossuth, the Hungarian leader and revolutionary who became dictator in 1848.

Emil Kraepelin's studies in mental illness are regarded as the foundations of psychiatry.

Krakatoa in eruption; when this island exploded in 1883, 36,000 people were killed.

Kraków: a view of the main market square and the 18th century Cloth Hall.

Kreisky, Bruno

River Rhine, 31km (19 miles) wsw of Essen. An important linen-weaving town centre until it passed to Prussia in 1702, it developed into a centre of the silk industry when given a monopoly by Frederick II. Industries include textiles, steel and dyes. Pop. (1974) 221,240.

Kreisky, Bruno (1911–), Austrian political figure. A social democrat, he lived in Sweden during the Nazi occupation and in 1946 joined the Austrian foreign service. He helped to negotiate the 1955 treaty that guaranteed Austria's independence and neutrality, was elected to Parliament in 1956 and was foreign minister (1959–66). In 1967 he became chairman of the Socialist Party of Austria and was made Chancellor of Austria in 1970.

Kreisl, Fritz (1875–1962), US violinist and composer, b. Austria. He studied at the Vienna and Paris conservatories and made his debut in the USA in 1889. He was a world-famous violin virtuoso and also composed numerous short violin pieces.

Kremlin, The, historic centre of Moscow. It is a roughly triangular fortress covering approximately 36.5 hectares (90 acres) and is bounded by the River Moscow and Kremlin Quay (s), Red Square and Lenin's tomb (e) and Moscow Historical Museum and St Basil's Cathedral (w). The name "Kremlin" derives from the medieval Russian for "citadel" and was also applied to the central sections of other towns. Moscow's Kremlin walls were first built of timber in the 12th century and its first stone walls were built in 1367. The present stone enclosure has 20 towers and five gates. Within these walls several cathedrals face on to a central square and the largest secular building, the Great Kremlin Palace (1838–49), was the tsar's Moscow residence until the Revolution. In March 1918 the Supreme Soviet established the Kremlin complex as the location of all government offices and its name became synonymous with the government of the USSR. Entry was strictly forbidden to the public, but after Stalin's death (1953) the Kremlin and its buildings were declared a national museum and the Supreme Soviet (parliament) of the USSR and Communist Party conventions continue to be held in the former Great Kremlin Palace.

Krenek, Ernst (1900–), US composer, b. Austria, who emigrated to the USA in 1938. From 1920 in Berlin, he experimented with atonal music and after 1930 in Vienna, adopted Schoenberg's twelve tone technique. He created a sensation with a jazz opera, *Jonny Spielt Auf* (1925–26), and subsequently wrote for all standard forms of composition.

Kreutzer, Rodolphe (1766–1831), French violinist and composer of studies, sonatas and concertos for the violin, as well as operas. BEETHOVEN dedicated to him his *Sonata in A major* for violin and piano (The "Kreutzer", opus 47).

Krill, collective term for the large variety of marine crustaceans found in all oceans, and in vast quantities in the Antarctic seas, strained and used as a highly nutritious food by the baleen whales. With the extinction of the blue whale threatened, krill trawling has been suggested as a substitute and experiments in krill processing carried out. See also pp. 339, 739.

Krips, Josef (1902–74), Austrian conductor. He made his debut with the Vienna Volksoper in 1921 and was conductor of the Vienna State Opera (1933–38). Later he became first conductor of the London Symphony Orchestra (1950–54) and music director of the San Francisco Symphony Orchestra (1963–70). He is a leading interpreter of the operas of Mozart and Wagner.

Krishna, most celebrated hero of Hindu mythology. He was the 8th incarnation of VISHNU and primarily a god of joyfulness and fertility. His amorous adventures with the *gopis*, wives and daughters of cowherds, are well recorded. As a result of a curse uttered by a peevish sage, Krishna was killed by a hunter who mistook him for a deer.

Krishna Menon, Vengali Krishnan (1897–1974), Indian diplomat and politi-

cal figure. He lived in England between 1924–47 where he joined the Labour Party and served as a secretary of the Indian League (1929–47) which advocated independence. Between 1947–52 he was High Commissioner for India in Britain and served as India's UN delegate (1952–62) when he was sharply critical of US foreign policy. He served in the national legislature (1953–67, 1969–74) and as Minister of Defence (1957–62), but was dismissed after India's poor showing in its border war with China.

Kuan-yin, in Chinese BUDDHISM the goddess of mercy. A Bodhisattva (a person who is potentially a BUDDHA), she intercedes to relieve suffering. She is worshipped in Japan as Kannon and is called *Bodhisattva Avalokitesvara* in Tibet.

Krishnamurti, Jiddu (1895–), Hindu religious leader. He founded the World Order of Star with Annie BESANT, the theosophist leader, and in 1969 founded and became director of the Krishnamurti Foundation in Ojai, California. His works include *Commentaries on Living* (three volumes, 1956–60) and *The Beginnings of Learning* (1975).

Krivoi Rog, site of rich iron mines worked by the Scythians from c. 700 BC, now a modern industrial city in the Ukraine. The area had trading links with Greece and the Near East.

Kroeber, Alfred Louis (1876–1960), one of the most important cultural anthropologists of the first half of the 20th century. He helped to advance the study of North American Indian ethnology, linguistics and folklore. His numerous works include the text *Anthropology* (1923).

Krogh, Schack August Steenberg (1874–1949), Danish physiologist. He was professor of animal physiology at Copenhagen University (1916–45) and concentrated on the study of respiration and blood circulation. He was awarded the 1920 Nobel Prize in physiology and medicine for his discovery of the motor-regulating mechanism of capillaries. His writings include *The Anatomy and Physiology of Capillaries* (1922).

Kronstadt, naval base near Leningrad, w USSR. It was the scene of a revolt in Feb. 1921 which was quelled by TROTSKY. In revealing the depths of popular discontent, the rising caused LENIN to introduce new policies, notably the New Economic Policy (1921).

Kroo, or Kru, tribe of w African people who live along the coast of LIBERIA. They work as fishermen and are noted as seamen on cargo ships. There are about 20 subtribes, each traditionally inhabiting an autonomous town with well-developed political and social organizations.

Kropotkin, Peter Alexeievich (1842–1921), Russian anarchist who was jailed for seditious propaganda in 1874; he escaped dramatically into exile in 1876. He was also jailed in France from 1883 to 1886 for anarchist activities, went to London and returned to Russia after the March 1917 revolution. Supporting Alexander KERENSKY and the war against Germany, he denounced Bolshevik centralism and the forcible suppression of opposition.

Krudener, Barbara Juliane, Baroness von (1764–1824), Russian mystic and novelist who married Baron von Krudener, a Russian diplomat, in 1782. Her supposedly autobiographical novel *Valerie* (1804) was a literary sensation. She was then converted to the Moravian Church, and preached throughout Europe.

Kruger, Stephanus Johannes Paulus (1825–1904), Boer political figure who helped to settle the Transvaal. After its annexation by the British in 1877 he worked for independence and served as President from 1883 to 1902, organizing continued resistance to British rule. In 1895 he defeated the JAMESON RAID, which was designed to capture the Transvaal. During the Boer War (1899–1902) he represented the Boers in Europe, where he died. See also p. 1607.

Kruger National Park, large game reserve in Transvaal province, NE South Africa. One of the largest wildlife reserves in the world, it includes most species of animals

in southern Africa. Founded in 1898 by S.J.P. KRUGER as the Sabi Game Reserve, it was enlarged and became a national park in 1926. Area: approx. 20,720sq km (8,000sq miles).

Kruger Telegram, on 3 Jan. 1896 message sent to Paul Kruger, President of the Transvaal, by Kaiser WILHELM II of Germany, congratulating the Boers on repelling the JAMESON RAID. The telegram led the Boers to expect direct aid from Germany and stimulated anti-German feeling in Britain.

Krum (d. 814), Khan of the Bulgars who successfully engaged Byzantium in warfare (807–13), nearly capturing Constantinople in 813. After killing the Byzantine Emperor NICEPHORUS I in 811, he made his skull into a drinking cup. During his short reign progress was made towards establishing the absolute power of the khan, to the detriment of the Bulgar aristocracy.

Krug Thep. See BANGKOK.

Krupa, Gene (1909–73), US jazz drummer and bandleader. He played in the Benny GOODMAN Orchestra until 1938, when he formed his own big band with Roy Eldridge (trumpet) and Anita O'Day (vocalist). In the 1950s he generally led his own jazz combos. He was the first jazz drummer to achieve an international reputation. Krupa appeared in many films and recorded the music for his film biography *The Gene Krupa Story* (1959).

Krupp family, German industrial family who were the world's largest manufacturers of munitions; they had the monopoly for the manufacture of arms in Germany in ww. Alfred Krupp (1812–87) expanded his father's small iron foundry into a giant industry. He was the first steel-maker to install the BESSEMER process and was one of the leaders in the industrial development of the Ruhr valley. His son Friedrich Alfred Krupp (1854–1902) expanded into shipbuilding and the manufacture of chrome and nickel steel alloys and armour plate. One of their best-known products was Big Bertha, a monstrous but inaccurate gun that shelled the Paris area from a distance of 132km (82 miles). Under Friedrich's son-in-law, Gustav von Bohlen und Halbach, the Krupp works were a mainstay in the NAZI war effort. His son Alfred Krupp (1907–67) was imprisoned for his war activities and was required to sell a portion of his Krupp interests. Alfred's son Arndt decided not to enter the business, and it passed from family control and became a corporation in 1967.

Krylenko, Nikolai Vasilievich (1885–1938), Soviet official who was commander-in-chief of BOLSHEVIK troops in 1917 and became head of the Commissariat of Justice in 1936. He was arrested in 1937 and presumably executed, a victim of STALIN's purges.

Krylov, Ivan Andreyevich (1769–1844), Russian writer who satirized contemporary life by representing social types as various animals. His translations of the fables of LA FONTAINE and AEsOP led him to invent his own stories in a similar style. He so captured the Russian character in his own *Fables* (1809; tr. 1869) that his works have become classics.

Kryolite. See CRYOLITE.

Krypton, gaseous nonmetallic element (Kr) of the noble gas group, discovered in 1898. Krypton is present in the Earth's atmosphere (0.000115% by volume) and is obtained by the fractional distillation of liquid air. It is used in FLUORESCENT LAMPS. Chemically it is extremely inert but it does have a well-defined difluoride. The standard linear metre is defined by the wavelength of an emission line in the krypton spectrum. Properties: at.no. 36; at.wt. 83.80; density 3.733gm/litre; m.p. –156.6°C; (–249.88°F); b.p. –152.3°C; (–242.14°F); most common isotope Kr⁸⁴ (56.9%).

Kuala Lumpur, largest city and capital of Malaysia, in Selangor state, 322km (200 miles) NW of Singapore. It was made the capital of the Federated Malay States in 1895, of the Federation of Malaya in 1957 and of Malaysia in 1963. Today it is a commercial centre whose industries include

tin and rubber. Pop. (1975 est.) 557,000. **Kuang-hsi** (1871–1908), Chinese emperor from 1875 to his death. He was appointed by his aunt, the Empress Dowager Tz'u Hsi. He began his personal rule in 1889, but after the "hundred days of reform" of 1898, his aunt imprisoned him and ruled China herself.

Kubelik, name of two Czech musicians. Jan (1880–1940), was a violinist and composer, and was highly regarded for his technical mastery. He made numerous appearances throughout the world and after the outbreak of wwI he devoted himself to composition. Rafael (1914–), his son, was an eminent conductor as well as a gifted composer. As a conductor he was known especially for his interpretations of Czech composers such as Anton DVORAK and LÉOS JANÁČEK. From 1973 to 1974 he was musical director of the Metropolitan Opera in New York.

Kubik, Gail Thompson (1914–), US violinist and composer. He studied at the Eastman School of Music, New York. His compositions include orchestral, choral and chamber music as well as *Mirror for the Sky* (1947), a folk opera on the life of John AUBURN. He has also worked on many film scores, especially in association with the work of William WYLER.

Kubin, Alfred (1877–1959), Austrian draughtsman and illustrator, associated with the BLAUE REITER group. After 1909 he concentrated on book illustration, eg on works by POE and DOSTOEVSKY, and also made thousands of drawings.

Kubitschek, de Oliveira Juscelino (1902–76), President of Brazil from 1956–60. He trained as a doctor; his political career began in the 1930s.

Kublai Khan (1215–94), Mongol emperor (1260–94) who was the grandson of GENGHIS KHAN. In 1279 he completed the conquest of China, deposing the Sung dynasty and founding the Yuan dynasty, which ruled until 1368. Marco POLO visited his court at Peking. See also pp. 1261, 1261, 1358, 1359.

Kubla Khan, (1816), incomplete poem by Samuel Taylor COLERIDGE which, according to the author, was inspired by an opium dream.

Kubrick, Stanley (1928–), US film director. His first successful film, *The Killing* (1956), was followed by the stringent *Paths of Glory* (1957), which starred Kirk Douglas. He also directed *Dr Strangelove* (1963), a darkly humorous satire on power politics; *2001: A Space Odyssey* (1968), with a mystical conclusion; *A Clockwork Orange* (1971); and *Barry Lyndon* (1975).

Kuchuk Kainarji, Treaty of (1774), diplomatic agreement ending the Russo-Turkish War of 1768–74. It gave Russia a foothold on the Black Sea. Turkey agreed to Crimean independence, ceded important ports and territories to Russia and guaranteed free passage to Russian ships on the Black Sea.

Kudu, large African ANTELOPE found s of the Sahara. The body is grey-brown with vertical white stripes and the male bears long, spiral horns. There are two species, the greater and the lesser Kudu. Genus *Tragelaphus*. See also p. 299.

Kuhn, Richard (1900–67), German chemist who shared the 1938 Nobel Prize in chemistry with Paul KARRER. They researched CAROTENOIDS and the isolation of vitamin B₂. He was forced by the NAZIS to refuse the award and did not receive it until the end of wwII.

Kuibyshev (Kuibyshev), city and river port in the Russian Republic (Rossijskaja SFSR), USSR, on the River Volga at the mouth of the River Samara; capital of Kuibyshev oblast. It was the scene of Pugachev's rebellion against CATHERINE II (1773–74), a provincial seat and a focus of trade. During wwII, when Moscow was threatened by the German army, Kuibyshev became the temporary capital. It has eight higher education institutions. Industries: motor vehicles, aircraft, ballbearings, flour milling, oil refining. Pop. (1975) 1,164,000.

Kuiper, Gerard Peter (1905–73), US astronomer who emigrated from The Netherlands to the USA in 1933. One of the

most influential authorities on the solar system, he made important discoveries about the outer planets and advanced the condensation theory concerning the formation of the planets. See also pp.957, 963, 966.

Kuibyshev. See KUIBYSHEV.

Kukai (774-845), real name Kobo Daishi, founder of the SHINGON school of Japanese Buddhism. He renounced CONFUCIANISM, studied in China, and in the *Ten Stages of Consciousness* (830) showed a systematic grasp of major oriental religions. His monastery at Mt Koya is the base for Shingon sects, whose total number of adherents was estimated in the mid-1970s to be approx. 8 million.

Ku Klux Klan. US secret society advocating white supremacy over black people. It was founded (1866) in Pulaski, Tenn., by six confederate veterans after the AMERICAN CIVIL WAR, to prevent newly-enfranchised southern Blacks from voting, and generally to hinder the reconstruction programme. Members dressed up in white sheets and hooded masks, riding at midnight to terrorize and murder their victims. The Klan was formally disbanded in 1869. The Force Acts (1870-71) and the Ku Klux Klan Act (1871) were passed to aid enforcement of the new voting laws. The Klan was revived in 1915, extending its persecutions to immigrants, Catholics and Jews and, this time, was active in the Midwest as well as in the South. By the 1920s membership had reached about five million but it declined to fewer than 9,000 in the 1930s. Membership rose again in the 1960s during the CIVIL RIGHTS activities, but by the mid-1970s the group had little national importance.

Kulak, prosperous Russian peasant. The Kulaks were the dominant force in the countryside and often hired labour. Although they were considered middle-class by the BOLSHEVIKS, their interests were promoted by Lenin's New Economic Policy of 1921. They suffered from the COLLECTIVIZATION of the late 1920s and 1930s, and many were killed or forced into exile. See also pp.1648, 1678.

Kulikovo, Battle of (1380), battle between Russians and Mongols. It was fought near the present-day Kurkimo on the upper River Don. Prince Dmitri's victory was the first and only Russian victory over the Golden Horde, but it effectively dispelled the myth of Mongol invincibility. **Kulturkampf,** name given to Otto von Bismarck's attempt to subordinate the Roman Catholic Church to the German state (1871-87). The restrictive laws passed were openly resisted, and the Catholic-dominated Zentrumspartei (Centre Party) grew steadily. From 1879 the laws were gradually repealed.

Kumamoto, city in w central Kyushu, Japan. An important fortified town in the 17th century, it later became an agricultural centre. It also produces ceramics and cotton textiles. Pop. (1970) 440,020.

Kumara, species of SWEET POTATO taken by the Maoris from Polynesia to New Zealand. It became a staple crop and is still widely eaten. Species *Impomoea batatas*.

Kumasi, city in central Ghana, approx. 185km (115 miles) NW of Accra; capital of Ashanti region; second largest city in Ghana. The city flourished as the capital of the Ashanti kingdom after the 18th century. It was occupied by the British in 1874 and 1896, and finally in 1901. Industrial development was spurred by the construction of a railway (c. 1903) to major ports on the Gulf of Guinea. Industries: food processing, handicrafts, timber. Pop. (1970) 260,286.

Kumiss. See KOUMISS.

Kumquat, hardy evergreen tree or shrub of the RUE family. Growing up to 3.7m (12ft) high, kumquats yield a small citrus fruit, which is orange when ripe. The shrubs are often grown for ornament, and the fruit is used to make jelly or marmalade. Genus *Fortunella*.

Kun, Bela (1886-1937). Hungarian Communist political leader, associate of Lenin, and a Bolshevik. In 1919 he replaced Mihály Károlyi as premier of the newly-

formed republic and introduced radical and unpopular changes in the political system of the country, which then became the Hungarian Soviet Republic under his control. Deposed by his countrymen with the aid of the Romanians, he fled to Vienna and finally to the USSR in 1920.

Kung-fu, ancient Chinese martial art that is concerned with the prevention of violence. Literally, it can mean "man who works with art", and its many techniques are based on leg, arm, and trunk exercises derived from the defensive movements of animals. In modern times it has been popularized by the films of Bruce Lee.

K'ung Fu-tzu. See CONFUCIUS.

Kung-Sun Lung (c. 320-c. 250 BC), Chinese DIALECTICIAN and representative of the School of Names. Through such arguments as his famous *Discussion on Two White Horses*, he hoped to align names with their actualities and thereby transform the whole world.

Kuniyoshi, Utogawa (1797-1861) Japanese ukiyo-e (colour) printmaker. He is noted for his prints of historical subjects, warriors, actors of the Kabuki theatre and European-influenced landscapes.

Kuniyoshi, Yasuo (1893-1953), US painter, b. Japan. His work, which has been described as Oriental in spirit but Western in technique, includes *Child* (1923), *Landscape* (1924), and *Upside Down Table and Mask* (1940).

Kunming, city in s China, 610km (380 miles) SW of Chungking, on the N shore of Lake Tien, on the Burma road; it is the capital of Yunnan province. A strategic area during WWII, it was used as a US base and Chinese military headquarters. Industries: iron and copper, textiles, chemicals, engineering, food processing. Pop. (1970 est.) 1,700,000.

Kuomintang, or Nationalist Party, the ruling political force in China (1928-49) and subsequently in Taiwan. Initially a foreign-based revolutionary alliance against Manchu rule, it became an open political party (1912) and was reorganized with a Leninist structure and discipline by SUN YAT-SEN with the aid of Soviet advisers. Sun provided it with the programme and doctrine that in large part remain fundamental tenets of the Nationalists in Taiwan. Sun was succeeded by CHIANG KAI-SHEK as head of the organization (1925).

Kupe, legendary Maori discoverer of New Zealand. He is supposed to have arrived by canoe from the Maori homeland in Polynesia (possibly in the Society Islands) c. AD 925. On returning to Polynesia he gave his people directions for sailing to New Zealand.

Kupka, František (1871-1957), Czech painter, etcher and illustrator. He inspired the ORPHISM movement, and was among the first painters to develop purely abstract geometric painting. His works include *Fugue in Red and Blue* (1912).

Kuprin, Aleksander Ivanovich (1870-1938), Russian novelist and short story writer. His novel *The Duel* (1905) is about the emptiness of army life; it reflects his service as an officer in the Russian army (1890-94). His best-known work is *The Pit* (1910).

Kurdish language, language of West Iranian origin, spoken by about 7 million inhabitants of Kurdistan. It comprises several dialects. After Persian, it is the second-largest language in the Iranian group. It is written in a modified Cyrillic ALPHABET.

Kurdistan, extensive mountainous region in SW Asia, including parts of E Turkey, NE Iraq, NW Iran and smaller sections of NE Syria and Soviet Armenia. The region lies astride the Zagros Mts and an E extension of the Taurus Mts. It is inhabited by the KURDS. In the 7th century Kurdistan was conquered by the Arabs and converted to Islam. It was ruled by the Mongols from the 13th to the 15th centuries and then by the Ottoman Turks. Since WWI the Kurds have striven for autonomy within Turkey, Iran and Iraq, and this has led to violent clashes on a number of occasions. Area: approx. 191,660sq km (74,000sq miles).

Kurds, semi-nomadic people who live in KURDISTAN, with an estimated total

population of about 7 million. Traditionally herdsmen, they are Sunnite Muslims and are linguistically close to the Iranians although their ethnic origins are uncertain. Throughout their history the Kurds have resisted domination by other nations. In the 20th century they have striven for autonomy for Kurdistan, and this has led to violence on several occasions.

Kure, city on SW Honshu, Japan 19km (12 miles) SE of Hiroshima, on Hiroshima Bay. It has an excellent natural harbour, being a major Japanese port and an important naval base. During WWII the city was heavily bombed. Industries: shipbuilding, steel, machine tools. Pop. (1974) 241,931.

Kuril (Kuril'skiye) Islands, chain of 30 large and many smaller islands, extending 1,200km (750 miles) from s Kamchatka Peninsula, USSR, to NE Hokkaido, Japan, separating the Sea of Okhotsk from the Pacific Ocean. Of volcanic origin, the islands were discovered by the Dutch navigator de Vries in 1634. The islands were settled by Russians, the islands by Japanese. After 1945 the islands formerly Japanese were ceded to the USSR, and the population is now entirely Russian. The chief activities are whaling and vegetable growing. Area: 15,600sq km (6,023sq miles). Pop. approx. 15,000.

Kurosawa, Akira (1910-), Japanese film director. In *Rashomon* (1950) he introduced the savage, bloodthirsty world of the SAMURAI warriors to Western audiences. The popularity of this genre was confirmed with *The Seven Samurai* (1954), later remade by John STURGES as *The Magnificent Seven*. He also made films in a modern idiom, notably *Living* (1952). *Dodesakaden* (1970) was his first colour film.

Kurusu, Saburo (1888-1954). Japanese diplomat who was ambassador to Germany from 1939 to 1941. He signed the Berlin Pact (1940), which allied Japan with the AXIS POWERS. He was a special envoy in Washington, USA, when the Japanese attacked PEARL HARBOR. He was interned in the USA until June 1942, when he returned to Japan.

Kusch, Polykarp (1911-), US physicist, b. Germany. He shared the 1955 Nobel Prize in physics with Willis LAMB for his precise measurement of the magnetic movement of the ELECTRON, which he discovered had a higher value than was predicted. This led to important developments in nuclear theory.

Kush, kingdom and former state in Nubia. Lasting roughly from 1000 BC to AD 350, it conquered Egypt in the 7th-8th centuries BC. It was thereafter defeated by the Assyrians and moved its capital to Meroë in the Sudan. After Roman and Arab attacks in the north, Meroë was captured by the Axumites around AD 350. The Kushites are thought to have fled west, possibly to the Lake Chad area. See also pp.1182-1183.

Kushan dynasty, rulers over much of N India, Afghanistan, and parts of Central Asia from c. AD 50 to c. 400. Descended from nomads who ruled over Bactria, they were wealthy and important traders. The decline of their rule followed the rise of the SASSANIDS in Iran.

Kutch, Rann of, area of barren salt and mud flats in N Kutch district, in Gujarat state, W India, on the border with Pakistan. In 1965 it was the scene of fighting between Indian and Pakistani troops during a boundary dispute. Area: 18,000sq km (6,950sq miles).

Kutchuk, Fazil (1906-), Turkish Cypriot doctor and politician. He became involved in politics in the 1940s, leading a party which changed its name to "Cyprus is Turkish" after agitation for ENOSIS grew more violent in the early 1950s. Kutchuk favoured the partition of Cyprus, which became a Republic in 1960 with himself as Vice-President. He was succeeded by Rauf Denktaş in 1973.

Kutno, town in central Poland 56km (35 miles) NNW of Łódź. It was the scene of the German defeat of the Polish army on 15 Sept. 1939. Industries: food processing and textiles. Pop. (1970) 30,300.

Kuts, Vladimir (1927-75), Soviet middle-distance runner whose punishing front-running tactics won him the coveted 5,000m and 10,000m double at the 1956 Olympic Games. He won the 1954 European 5,000 and set eight world records at 3 miles, 5,000 and 10,000m.

Kuttner, Henry (1915-58), US science-fiction writer, who used the pseudonym Lewis Padgett. He wrote some stories in collaboration with his wife, Catherine L. Moore. His first short story, *The Graveyard Rats* (1936), became a classic in the horror genre.

Kutusov, Mikhail Ilarionovich (1745-1813), Russian general and supreme commander against NAPOLEON. He made the French pay dearly for victory at BORODINO in 1812, then, after abandoning Moscow, he forced the French to retreat in winter through desolate territory, harrying them by guerrilla warfare.

Kuvaz, dog used for guarding and herding livestock. It has an elongated head with a straight muzzle and triangular ears; the broad-backed body is set on medium-length legs and the long tail is carried low. Height: about 66cm (26in) at the shoulder; weight: about 32kg (70lb).

Kuwait, independent Arab nation in the NE Arabian Peninsula, N of the Persian Gulf. Most of Kuwait is desert but huge oil reserves have made it one of the richest countries in the world. Its financial resources have been used to create a comprehensive welfare system and also in loans to other Arab nations. The capital is Kuwait. Area: 17,000sq km (6,560sq miles). Pop. (1979) 1,270,000. See p.2088.

Kuzbas. See KUZNETSK BASIN.

Kuznets, Simon (1901-), US economist, b. Russia. He developed the national income accounting system in the 1930s and became known for the study of business cycles. He received the 1971 Nobel Prize in economics for his research into economic growth.

Kuznetsk (Juzneck) Basin, basin in W Siberia, USSR, often called the Kuzbas, between the Kuznetsk Ala-Tau range and the Salair Ridge. Rich coal and iron ore deposits discovered in the 17th and 18th centuries have made it a major industrial region. Area: 25,900sq km (10,000sq miles).

Kuznetsov, Anatoly (1931-79), Soviet novelist and short story writer, who changed his name to A. Anatoli after defecting to England in 1969 in protest against Soviet censorship. His works include the novels *Sequel of a Legend* (1957) and *Babiy Yar* (1966), several volumes of short stories and some film scenarios.

Kvass, Russian beer made from a mixture of rye, barley, wheat and other cereals with the addition of sugar or fruit.

Kwajalein, coral atoll, largest island in the Ralik chain, Marshall Islands, in the W Pacific Ocean, formed by 97 islets. Captured by the Americans from the Japanese in WWII, it is now the site of an anti-missile installation. Area: 16sq km (6sq miles).

Kwakiutl, tribe of American Indians on the NW coast speaking the Wakashan tongue, and closely related to the BELLA BELLA. They number approx. 2,000 and occupy northern Vancouver Island in British Columbia, Canada. They are famous for their wooden sculptures, TOTEM POLES and POTLATCH ceremonies.

Kwa languages, branch of the Niger-Kordofan family of African languages. Speakers occupy a large area bordered by the Gulf of Guinea on the south. Most are tonal languages. Important members are Yoruba and Ibo of s Nigeria; Akan of Ivory Coast and Ghana; Ga of Accra city; and Bini of Benin in Nigeria.

Kwangchow. See CANTON.

Kwantung (Guang-dong), southernmost province in China, on the South China Sea. Canton is the capital. After 222 BC, Kwantung came under Chinese suzerainty and was an important centre of China's early foreign trade. The province was the scene of great unrest in the decade before the NATIONALIST Revolution in 1911, staged by the KUOMINTANG (Nationalist People's Party), which Kwantung

Kwangsi-Chuang

supported in the Second Revolution of 1913. CHIANG KAI-SHEK initiated his movement for Chinese unification there during the 1920s. The province fell to the Chinese Communists in 1949. Products: rice, tea, sugar, tobacco, silk, fruit, bamboo. Area: 231,480sq km (89,374sq miles). Pop. 40,000,000.

Kwangsi-Chuang (Guangxi Zhuang Zizhiqu), autonomous region in s China, on the border with North Vietnam; Nanning is the capital. Cultivation is limited by the mountainous terrain, but sugar cane, rice, grain, vegetables, fruits, peanuts and tobacco are grown. Mineral deposits include manganese, zinc, tin, tungsten and antimony. The region was created in 1958 from Kwangsi province, and it has a large non-Chinese minority. Industries: oil refining, fertilizers, dyestuffs, bamboo. Area: 220,495sq km (85,133sq miles). Pop. (1970 est.) 21,000,000.

Kwashiorkor, disease of infants and young children. It occurs primarily in the tropics or subtropics and is caused by a lack of high-quality protein and calories in the diet. The victim's stomach swells and muscles become wasted. There is evidence of retarded growth, mental apathy, anaemia, fatty liver and digestive disorders. Skin pigmentation may change and thick patches form; these may become pinkish and virtually raw.

Kweichow (Guizhou), province in s China. The capital is Kweichow. In the rural area the population includes mostly Miao aboriginal tribesmen, who were cast out of other provinces because of their unwillingness to accept Chinese customs. Kweichow came under Chinese suzerainty in the 10th century and became a province under the Ming dynasty. During WWII it served as a military base for the Chinese and Allied forces but was taken by the Chinese Communists in 1950. Crops: rice, corn, wheat, beans, potatoes. Industries: mercury, timber. Area: 174,060sq km (67,204sq miles). Pop. 17,000,000.

Kyd, Thomas (1558-94), English dramatist who achieved popular success with *The Spanish Tragedy* (c.1589), a play which has been seen as a forerunner of *Hamlet* because of its theme of revenge and its use of the supernatural. Kyd was a member of the literary circles of the day, which included MARLOWE. In 1593 Kyd was arrested for atheism and blasphemy.

Kyle, Jackie (1926-), Irish rugby union player, h. Belfast. A fly-half of instinctive genius, he made a world-record 46 international appearances for Ireland (1947-58) and toured Australia and New Zealand with the 1950 British Lions.

Kyoto, city on w central Honshu, Japan, approx. 42km (26 miles) NE of Osaka; capital of Kyoto prefecture. It was the site of the imperial residence for more than 1,000 years and there are many palaces and shrines. Kyoto University dates from 1897. An early centre of the silk industry, its modern industries include porcelain, lacquerware, precision tools and food processing. Pop. 1,461,050.

Kyphosis. See HUNCHBACK.

Kyrie eleison, Greek "Lord, have mercy", first words of a three-fold petition for the mercy of God and of Christ, said or sung in Greek or in the vernacular during services in most Christian Churches. The prayer first appeared in the 4th century.

Kyushu, island in s Japan; third largest and southernmost of the four principal Japanese islands. The terrain is mountainous, and the irregular coastline provides many natural harbours. It is the most densely populated of the Japanese islands, and its main industrial cities include Kitakyushu, Kumamoto, Kurume, soya beans. Industries: mining, textiles, porcelain, metals, machinery. Area: approx. 41,971sq km (16,205sq miles). Pop. (1970) 12,072,179.

Kyzyl-Kum Desert, desert in the UZBEK and KAZAKH republics of the USSR between the Amudarya and Syrdarya rivers. Cotton and rice are grown in the irrigated river valleys and KARAKUL sheep are raised by tribespeople. Area: 230,000sq km (89,000sq miles).

L

L, twelfth letter of the alphabet. It can be traced to the Semitic letter *lamedh*, which passed into Greek as *lambda*. It became slightly modified in the Roman alphabet and in this form has passed into English. It is nearly always pronounced as in *love*, although it is silent in such words as *could* and *calf*. See also pp.608-609.

Laas, Ernest (Ernst) (1837-85), German philosopher. He studied at Berlin and was a professor of philosophy at Strasbourg. In *Idealism and Positivism* (1879-84) he contrasted TRANSCENDENTALISM and POSITIVISM.

Laban, in the Bible, brother of REBECCA and father of Leah and RACHEL. He was instrumental in arranging Rebecca's marriage to ISAAC. He also tricked JACOB into marrying Leah before he could marry Rachel.

Laban, Rudolph von (1879-1958), German modern dance theorist. With Mary WIGMAN and Kurt JOOSS, he was the inspiration behind the German school of modern dance. He invented Labanotation, a system of symbols for the written notation of dance.

Labé, Louise (c.1524-66), French poet. Her elegies and sonnets in *Oeuvres* (1555) are passionate expressions of the joy and pain of love. She was nicknamed "La belle Cordière" because of her marriage to a rich rope-merchant.

Labiatae, the MINT family, a group of plants that includes up to 3,500 species, many of which are familiar herbs, found throughout the world. Most have square, non-woody stems and simple leaves. They include DEAD NETTLE, THYME, SAGE, BASIL, MARJORAM, ROSEMARY, LAVENDER, BETONY, and CATMINT.

Labiche, Eugene Marin (1815-88), French playwright who wrote more than 100 light comedies and farces, sometimes in collaboration with other writers such as Marc Michel. His most famous work is *Un Chapeau de Paille d'Italie* (1851; *An Italian Straw Hat*,) (1851) which has been frequently revived.

Labium, in anatomy, term meaning a lip or lip-shaped organ. In arthropods it refers to the lower lip, which may be modified in insects to form sucking mouthparts. In human anatomy it denotes the labia majora and labia minora, skin folds of the female genitals. In botany it refers to the lower lip of plants of the Labiatae family.

La Bohème. See BOHEME, LA.

Labour Day, public holiday observed in the USA and Canada on the first Monday in September. It was first celebrated by the Knights of Labor in New York City in 1882. Its counterpart in some other countries is generally held on 1 May.

Labouchère, Henry Du Pre (1831-1912), British publicist and politician. Before rising to fame with dispatches to the *Daily News* from Paris about the Franco-Prussian War (1870-71), he joined the British diplomatic corps (1854-64) and was a Liberal MP (1865; 1867-68). As a Radical MP (1880-1906) he proposed the abolition of the House of Lords. He founded (1877) a periodical, *Truth*, dedicated to the exposure of frauds.

Labour, in childbirth, stages in the delivery of the foetus at the end of pregnancy. The first stage is measured from the onset of contractions that occur at about 20-minute intervals. See also pp.168-169.

Labourers, Statute of (1351), act to control wages in England. It was passed because of fears that the labour shortage caused by the Black Death of 1348-49 would send wages soaring. Wages were pegged at pre-plague levels and landless labourers were compelled to remain with their existing masters for as long as they were wanted.

Labour Exchanges, later called Employment Exchanges, centres established by the British Parliament in 1909 to advise

employers of available labour and workers of available jobs. The act was the work of Winston CHURCHILL, then President of the Board of Trade in ASQUITH's Liberal government. When NATIONAL INSURANCE for the unemployed was introduced in 1911, the exchanges became the centres for the register of the unemployed and for the payment to them of their benefits.

Labour Party, social democratic political party, traditionally closely linked with the trade union movement. There are Labour parties in many countries, such as Australia (where it is known as the Labor Party), Britain and New Zealand. The first British socialist parties, founded in the 1880s, united in the Independent Labour Party (ILP) in 1893, whose president was Keir HARDIE - the first socialist Member of Parliament. The ILP created the Labour Representation Committee in 1900, which was renamed the Labour Party in 1906. It won 40 seats in the 1910 elections, mostly in the mining and industrial areas. Arthur HENDERSON, then leader of the Party served in LLOYD GEORGE's coalition government of WWI, and in 1922 the Party became the second largest in Parliament. Labour formed a brief minority government in 1924 under Ramsay MACDONALD and again in 1929-31, but following a coalition with the Liberals (1931) the Party was split and defeated at the polls. Labour joined the wartime coalition of WWII and, after a landslide electoral victory in 1945, introduced a series of reforms under Clement ATTLEE and Ernest BEVIN, which included nationalization of some major industries, establishment of a national health service and improved social security benefits. The Party lost the election of 1951 but became readjusted to post-war prosperity under Hugh GAITSKELL. In 1963 Harold WILSON defeated George BROWN and James CALLAGHAN in the leadership election. Labour won the General Election of 1964 and continued in power until 1970, when it lost to the CONSERVATIVE PARTY. Labour was re-elected in March 1974 and, in the elections of October 1974, were again elected but with a reduced majority. Wilson resigned in March 1976 and Callaghan was elected party leader. In March 1977, following erosion of the Labour majority, the LIBERAL PARTY (led by David STEEL) formally agreed to support Labour bills in Parliament - an arrangement known as the "Lib-Lab Pact." During 1980 various members of the party became increasingly critical of its constitution and policies. Led by Shirley Williams, David Owen and William Rodgers, they broke away to form a new party, the SDP, and were later joined by Roy Jenkins. Supporting moderate left policies, it soon showed convincing popular support in by-elections. See also pp.1692, 1706, 1718, 1720, 1732, 1734.

Labrador, region in NEWFOUNDLAND, E Canada; bordered by NE Quebec (W and S) and the Atlantic Ocean (E). The coastal region is indented with fjords, the mountains becoming increasingly higher toward the N. The inland plateau is heavily forested, with innumerable lakes and rivers, notably the Churchill River, which drains into Lake Melville. The coast was known to the Norsemen c.950, and was visited by John CABOT in 1498 and CORTE-REAL in 1500. It passed to Britain by the Treaty of Paris in 1763 although the boundaries between Newfoundland and Quebec were under dispute (1809-1927). It became part of Canada in 1949. Industries: timber, fishing, mining. Area (Labrador proper): 292,220sq km (112,826sq miles).

Labrador retriever, strongly built hunting dog, originally used for retrieving and developed in Newfoundland in the 19th century. It has a wide head, long, powerful jaws and a wide muzzle; the ears are low-set and pendulous. The short, wide body is set on medium-length legs and the distinctive tail is thick at the base, tapering to a point. The hard, dense coat is short and may be black, yellow or chocolate. Height: to 62cm (24.5in) at the shoulder; weight: 34kg (75lb).

La Bretonne, Restif de. See RESTIF NICOLAS EDMÉ.

La Bruyère, Jean de (1645-96), French satirist. He ridiculed the injustice and hypocrisy in French life, particularly in his best-known work, *The Characters of Theophrastus, Translated from the Greek, with the Characters and Mores of This Age* (1699). In 1693 he was admitted to the Académie Française.

Labuan, island off the NW coast of Borneo, Indonesia. It was made a British Crown colony in 1848. In 1946 it was incorporated into North Borneo which, in 1963, became part of Malaysia. The most important town is Victoria. Industries include rice, rubber and fruits. Area: 98sq km (38sq miles). Pop. (1970 est.) 7,200.

Laburnum, any of several Eurasian shrubs and small trees, especially the common Laburnum, *Laburnum anagyroides*, which is commonly cultivated for its large drooping clusters of bright yellow flowers. It bears pods, each of which contains round, black, poisonous seeds. The wood is valued in cabinet-making for its green or red colour. Family Leguminosae.

Labyrinth, in architecture, an intricate structure of chambers and passages, generally constructed with the object of confusing anyone within it. Like a maze, it may be covered or uncovered, or composed of tall hedges. In Greek mythology MINOS had a labyrinth which DAEDALUS built to confine the monstrous MINOTAUR. In Egypt Amenemhet III built a multifunctional building in the form of a labyrinth near Lake Moeris.

Lac, name of an insect and the sticky substance it secretes and deposits on the twigs of trees; the deposit is harvested in Asia for use in SHELLAC and red lac dye. As many as 90,000 insects are required to produce 450g (1lb) of shellac. Species *Laccifer lacca*.

Lacaille, Nicolas-Louis de (1713-62), French astronomer noted for mapping the constellations which can be seen from the Southern Hemisphere, and for naming many of them. In 1750 he led an expedition to the Cape of Good Hope where, over a period of two years, he mapped the positions of 10,000 stars.

Laccolith, dome of intrusive IGNEOUS ROCK formed over the strata which it has penetrated. The base is typically horizontal while the upper surface is convex. They are generally less than 16km (10 miles) in diameter with thicknesses of 30-914m (100-3,000ft), and contain more acidic than basic rocks. See also pp.204, 209.

Lacemaking, manufacture of lace, a patterned openwork fabric for ornamental use made from fine thread of linen, cotton or silk. The two chief styles are known as needlepoint lace and bobbin- or pillow-lace, the names of which describe the techniques by which it is made. Machine lacemaking imitates these two techniques. Needlepoint lacemaking developed from embroidery in the European Renaissance, and employs a single thread and embroidery stitches to create the pattern attached to a ground material by foundation stitches (which are cut when the work is completed). The best examples are found in Italian, especially Venetian, 16th-century work, which was later copied and developed as pins became readily available and cheap. It uses many threads, pinned to a pillow, with bobbins attached to each loose end so that the threads can be crossed, braided, twisted or woven to create the pattern. In the 17th century Flemish bobbin-lace developed to compete with and, by the 18th century, to surpass the needlepoint designs. The first factory for machine-lace was established in Nottingham in 1846, and the city is still the principal centre for lace-making in Britain.

Lacewing, any of numerous species of NEUROPTERAN insects, especially members of the families Chrysopidae and Hemerobiidae, which are distributed throughout the world. Common green lacewings have long slender antennae, a slender greenish body and two pairs of delicate, lacy, veined wings. Brown lacewings are generally smaller. The larvae of some species drain body fluids from aphids. Length: to 7cm (2.8in). See also pp.36-37, 37, 326.

Lafayette, Marie Joseph Paul Yves Roch Gilbert du Motier, Marquis de

Lachish, ancient city of Palestine, in modern Israel. It was in existence from 3200 BC, but, inhabited by the Amorites, was destroyed by Joshua. Lachish was besieged by the Assyrians in 701 BC, and destroyed in 589 BC. The site was excavated in the 1930s. See also p.1188.

Lachmann, Karl Konrad Friedrich Wilhelm (1793–1851), German philologist, the founder of modern textual criticism. He was a classicist and published editions of *Lucretius' De Rerum Natura* (1850) and of the New Testament (1831, 1842–50). His best work, however, is perhaps his editions of medieval German texts, particularly the *Nibelungenlied*.

Lachrymal gland, organ in the eye that produces tears. It is located in the orbital cavity in a slight depression, and is controlled by autonomic nerves; it produces slightly germicidal tears that flow through ducts to the surface of the eye to lubricate it. See also pp.136–137.

Lados, Pierre Ambroise François Choderlos de (1741–1803), French novelist and general. His one important work, *Les Liaisons Dangereuses* (1782), a cynical and savage attack on the corruption of aristocratic society, caused a sensation and was only belatedly recognized as a great work of 18th-century epistolary fiction. See also p.1479.

La Condamine, Charles Marie de (1701–74), French explorer and geographer. In 1735 he went to Peru and made the first scientific exploration of the Amazon, bringing back curare and information about rubber. He published his findings in 1751.

La Coruña, Battle of (1809), British victory over the French in the PENINSULAR WAR which allowed the British to embark from Spain. The French, under Marshal SOULT, suffered a loss of 2,000; the British losses were 800, including the commander, Sir John Moore.

Lacquer, paint that forms a film by loss of solvent through evaporation. The film is usually composed of a cellulose derivative (such as nitrocellulose) in combination with an alkyl resin; the solvent may be a ketone (such as methylbutyl ketone), an alcohol, or some other cellulose solvent. It is also the varnish used in lacquerware.

Lacrosse, ball game that originated among the Iroquois Indians of Canada and the USA, played on a field 100m by 64m (110yd × 70yd), by teams of 10 or 12 players. They carry sticks with an adjustable meshwork head (once thought to resemble a bishop's crozier, or *crose*). The ball may be carried, passed, hit or kicked, but only the goalkeepers, defending goals 1.8m (6ft) square, are allowed to handle it. Players can be sent off the field for up to three minutes for infractions of the rules, which were compiled in 1860 in Canada. Lacrosse became Canada's national game in 1867. Today it is becoming increasingly popular in the NE USA and is also played in Britain, mostly by women.

Lactantius Firmianus (c. 240–c. 320), early Christian writer, b. N. Africa. He taught rhetoric at Nicomedia in Asia Minor, was converted to Christianity and later became tutor to the son of Emperor Constantine the Great. He wrote *The Divine Precepts*, a strong defence of Christian doctrine.

Lactation, secretion of milk to feed the young. In women, after hormonal-induced breast enlargement during pregnancy, prolactin (a pituitary hormone) stimulates breast cells to begin secreting milk. The milk "comes in" the breast immediately after the birth of the baby. Its flow is stimulated by suckling which, in turn, triggers neural and hormonal changes that control and maintain lactation. See also pp.166–167.

Lactic acid, colourless syrupy liquid (CH₃CHOHCOOH) formed from LACTOSE in milk by the action of bacteria. It is used in foods and beverages, in tanning, dyeing, and adhesive manufacture. Properties: s.g. 1.2; m.p. 18°C (64.4°F); b.p. 122°C (251.6°F).

Lactose, or milk sugar, DISACCHARIDE of particular importance during cheesemaking, when lactic bacteria turn it into LACTIC

ACID, so souring the milk selectively in the production of cheese curd. The lactose molecule is made up of a molecule of GLUCOSE linked to a molecule of galactose.

Lacy family, Anglo-Irish family. Hugh de Lacy, 1st Lord of Meath (d. 1186) led the conquest of Ireland under HENRY II and was governor of the province (1177–81, 1185–86). His son died Hugh (died c. 1242) was the first Anglo-Saxon peer in Ireland, created 1st Earl of Ulster in 1205. Henry de Lacy, 3rd Earl of Lincoln (c. 1249–1311), was a counsellor of EDWARD I and EDWARD II. He commanded the army in France (1296–98) and ruled England in Edward II's absence in 1310. **Lada**, in ancient Slavic religion and mythology, the goddess of beauty.

Ladd, Alan (1913–64), US film star. His first film appearance was in 1932, but he was offered no major roles before the 1940s, perhaps because he was considered too short to be a male star. He became popular playing in thrillers such as the *Blue Dahlia* (1946), and his part in the western *Shane* (1953) attracted considerable critical acclaim.

Ladino, language spoken by Sephardic Jews, mostly in the Middle East. It is a combination of medieval Castilian, Hebrew, Greek and Turkish. Also known as Judeo-Spanish, it is spoken today by about 150,000 people.

Ladislas (Ladislav), name of six kings of Hungary. Among the most notable were: Ladislav I (c. 1040–95), who became king in 1077 and is known as St Ladislav. He re-established order in Hungary after the barbarian invasions, created a popular code of laws and subjugated Bosnia, Croatia and part of Transylvania. Ladislav IV (1262–90) became king as an infant. He was a pagan, and defeated the Bohemians in 1278 with Hapsburg help, but was himself defeated by the Cumans and Tatars. Ladislav V (1440–57), who came to the throne in 1444, was brought up in Austria. János Hunyadi served as his regent.

Ladislav, name of four kings of Poland. Ladislav I Lokietek (1260–1333) became Duke of Poland as Ladislav IV in 1296, and after a series of wars to unite Greater and Little Poland (1305–14), he was crowned king in 1320. Ladislav II Jagello (c. 1350–1434) was Grand Duke of Lithuania (1377–86) and was elected King of Poland in 1386. He was converted to Roman Catholicism, and defeated the TEUTONIC KNIGHTS at Tannenberg in 1410. Ladislav III (1424–44) became King of Poland in 1434 and of Hungary in 1440. He led a crusade against the Turks in 1444, but was killed at the Battle of Varna. Ladislav IV (1595–1648) became king in 1632. He fought the Russians, Turks and Swedes successfully, but part of the Ukraine was lost to Russia after the 1648 Cossack revolt.

Ladoga, Lake (Ladozskoje Ozero), lake in NW European USSR, drained by the Neva River. Formerly divided between Finland and the USSR, it has been entirely within the border of the USSR since 1940. During WWII, its frozen surface was the "road" over which supplies were taken to Leningrad in the winter months. Area: 17,702sq km (6,835sq miles).

Ladrones. See MARIANAS ISLANDS.

Lady, in British nobility, a general title used to indicate rank. It may be formally applied to the wife of a KNIGHT, BARON or BARONET. It may be used semi-formally for a marchioness, countess or viscountess or for a baroness in her own right. As a title of courtesy, it may apply to the daughter of a DUKE, MARQUESS or EARL, or to the wife of a younger son of a duke or marquess.

Ladybird, any of a large number of small, brightly-coloured beetles; most common species are red with conspicuous black spots and a black and white head. Ladybirds are regarded as useful because their diet consists primarily of APHIDS. If attacked or disturbed, they may exhibit reflex discharge from their leg joints as a deterrent to predators. Family Coccinellidae. See also pp.43, 44, 188.

Lady Chatterley's Lover (written 1926–27) first published in Paris in 1929, novel by D. H. LAWRENCE. The impotence of Sir

Clifford Chatterley, confined to a wheelchair, symbolizes the sterility of modern life which his wife, Connie, overcomes through her affair with the gamekeeper Mellors. The explicit language used to describe this affair led to the suppression of the unexpurgated text, which was not published in Britain until 1960 after a celebrated court case.

Lady Day, in the Christian calendar, the day of the archangel's Annunciation to the Virgin MARY, traditionally celebrated on 25 March.

Ladyfern, feathery fern that grows in temperate areas of the world in moist, shady places. The 75cm (30in) leaves are 25cm (10in) wide and grow in circular clusters. Height: to 91cm (36in). Family Aspidaceae; species *Athyrium filix-femina*.

Lady of Shalott, The (1833), poem by Alfred, Lord TENNYSON describing the legend of the Lady of Shalott who, tempted by passion, leaves her world of artifice, invoking the curse of CAMELOT.

Lady of the Lake, The (1810), poem in six cantos by Sir Walter SCOTT. Set in 16th-century Scotland, it tells of Ellen, who secures the king's pardon for her outlawed father.

Lady's-eardrop. See FUCHSIA.

Ladysmith, Siege of (1899–1900), episode in the SOUTH AFRICAN (BOER) WAR. Sir George White's British force was hemmed in by the Boers at Ladysmith from 30 October to 28 February, when it was relieved by an expeditionary force led by General BULLER.

Lady's smock, also called cuckooflower, erect Eurasian perennial flowering plant, commonly found in moist meadows. It has a stout stem, fine leaves and clusters of pink flowers. Species *Cardamine pratensis*. See also p.46.

Lady's Not for Burning, The (1948), three-act blank verse comedy by Christopher FRY. In a small English market town c. 1450, Thomas Mendip demands to be hanged for no apparent crime – until he falls in love with a girl accused of being a witch. It is the first of a series of seasonal plays representing springtime; others in the series represent autumn and winter.

Lady Windermere's Fan (1892), four-act play by Oscar WILDE. In the tradition of Restoration comedy it portrays the domestic situation of Lord and Lady Windermere. The play was ahead of its time in its sympathetic picture of the fallen woman, the mysterious Mrs Erlynne.

Lae, town in Papua New Guinea, on w New Guinea Island, on the Huon Gulf approx. 322km (200 miles) N of Port Moresby. It was founded in 1927 to serve the gold-fields in the interior. Pop. (1970 est.) 24,300.

Laemmle, Carl (1867–1939), US film pioneer, b. Germany. The founder of UNIVERSAL PICTURES (1912), he fought successfully to win patents for independent production companies. His major films included *Foolish Wives* (1921) and *All Quiet on the Western Front* (1930).

LaFarge, Oliver (1901–63), US writer and anthropologist. He used his archaeological and ethnological expeditions to Arizona, Guatemala and Mexico as the inspiration for his stories and novels. Among his works are *Laughing Boy* (1929), a perceptive study of Navaho life which won a Pulitzer Prize, and *Sparks Fly Upward* (1931).

Lafayette, Marie Joseph Paul Yves Roch Gilbert du Motier, Marquis de (1757–1834), French general, statesman and hero of the American cause, who arrived in Philadelphia in 1777 and was commissioned a major-general. In 1781 he distinguished himself in the Yorktown campaign that led to CORNWALLIS's surrender. He returned to France in 1781, where he later became first a member of the States-General then of the National Assembly. After the Fall of the Bastille (1789) he was appointed commander of the National Guard but lost all popular support when in 1791 he ordered his troops to fire on a crowd petitioning for the abolition of the monarchy. He was given military commands in 1792, but deserted to the Austrians in August. He lived in retirement under NAPOLEON, but at

Labour exchange official noting details of unemployed workers during the 1930s.

Labour party Prime Minister James Callaghan (1976–79) studies an EEC document.

Labradors are used for hunting in hills and near lakes and marshes.

Lace is made by the winding together of single threads of cotton or silk.

LaFayette, Marie Madeleine de La Vergne, Comtesse de

the Restoration (1814) became a member of the Chamber of Deputies. He made a triumphant visit to the USA (1824-25) and in France in 1830 he played a major role in the July Revolution, his prestige being largely responsible for the installation of Louis Philippe as king of the French. See also p.1550.

LaFayette, Marie Madeleine de La Vergne, Comtesse de (1634-93), French novelist. After an unhappy marriage, she went to Paris and later formed a literary circle with La Roche-Foucauld. Her short novel *The Princess of Cleves* (1678) is a melancholy study of suffering and self-analysis. See also pp.1450, 1451.

Lafitte, Jean (c.1780-c.1826), pirate and smuggler. The leader of a large pirate band on the Gulf of Mexico, he preyed on Spanish commerce, which he disposed of through his brother in New Orleans. He received a pardon from James Madison, the US President, for leading his men against the British in the latter part of the war of 1812. After the war, he and his pirates lived on an island that is present-day Galveston. He was unmolested until some members of his colony raided American property in 1820. The US Government despatched a naval force against him; Lafitte and his closest associates escaped and were not heard of again.

Lafontaine, Henri-Marie (1854-1943), Belgian lawyer who was awarded the Nobel Peace Prize in 1913. As president of the International Peace Bureau (1907-43) he was influential in its attempts to bring about the Hague peace conference of 1907. He was also a member of the Belgian delegation to the League of Nations Assembly (1920-21). Continually working for world peace, he founded the Centre Intellectuel Mondial, and proposed a world parliament and an international court of justice. His many works on law and peace include *The Great Solution* (1916).

La Fontaine, Jean de (1621-95), French poet noted for his fables, which are considered among the greatest masterpieces of French literature. His *Fables choisies, mises en vers* (1668-94), consist of 12 books featuring some 240 fables. He wrote other poems and dramatic pieces but, apart from *Les Amours de Psyché et de Cupidon* (1669), they do not compare in quality with the *Fables*.

Lafontaine, Sir Louis Hippolyte (1807-64), joint Prime Minister of Canada (1842-43 and 1848-51). He was a lawyer and French-Canadian nationalist, and was cool toward the rebellion of 1837. He led the moderate wing of French reformers in the legislature (1841-51) and formed two administrations with Robert Baldwin (1842-43 and 1848-51). He was chief justice of Lower Canada (1853-64).

Laforgue, Jules (1860-87), French poet and literary critic, b. Uruguay. Obsessed with the desire to be original, and one of the first French poets to use free verse, he brought poetry back to the rhythms of everyday speech in volumes such as *Les Complaintes* (1885) and *L'Imitation de Notre Dame de la Lune* (1886). He influenced the early poetry of T.S. Eliot and Ezra Pound.

Lagash, city of ancient Sumeria. The site was first settled in the Ubaid Period (c.5200-3500 BC) and by 3000 BC Lagash had grown into a flourishing city. Its authority reached its height under King Urukagina (c.2300 BC). After the fall of Akkad in c.2230 BC, Gudea, King of Lagash, restored the prosperity of Sumeria, leaving many inscriptions of the religious and daily life of his times. Lagash was excavated from AD 1877. See also p.1162.

Lagerkvist, Pär Fabian (1891-1974), Swedish writer whose characteristic tone was of radical pessimism at man's inhumanity to man and the impotence of man in the face of death. Major works include *Anguish* (1916), *The Eternal Smile* (1920) and *The Hangman* (1933). International recognition came with *The Dwarf* (1944) and *Barabbas* (1950), for which he was awarded the 1957 Nobel Prize in literature.

Lagerlöf, Selma (1858-1940), Swedish novelist and pacifist. Much of her writing was inspired by legends, sagas and traditional tales of her homeland in Sweden. Her *Story of Gösta Berling* (1891), although not at first a success, became immensely popular. Her greatest novel, *Jerusalem* (2 vols, 1901, 1902), was inspired by a visit to Palestine. She also wrote short stories and children's books and was awarded the 1909 Nobel Prize in literature.

Lagomorpha, order of terrestrial mammals that includes rabbits and hares, two of which have long ears, a short tail and hindlimbs developed for bounding locomotion. Also included are pikas, which, in contrast, have shorter ears, no tail and hindlimbs developed for scampering locomotion.

Lagoon, shallow stretch of sea-water protected from waves and tides by a strip of land or coral. See also p.234.

Lagos, capital city of Nigeria, in the SW of the country, on the Atlantic coast approx. 121km (75 miles) SW of Ibadan. The city grew as a Yoruba settlement from the 17th to the 19th centuries, coming under British control in 1861 after years of Portuguese exploitation through the slave trade. It became the capital of independent Nigeria in 1960. Industries include brewing, ship repairing and textiles. Pop. (1975 est.) 1,060,850.

Lagrange, Joseph Louis (1736-1813), French mathematician. He was educated at Turin University, and became professor of mathematics there (1756-66) before his appointment as head of the Berlin Academy. He created the calculus of variations, devised a mathematical analysis of perturbations in gravity, and made contributions in many other areas, including the mathematics of sound and mechanics. He wrote *Analytical Mechanics* (1788).

Lagrangian points, positions in space where a small celestial body, influenced by the gravitational attraction of two larger ones, tends to remain at rest relative to the other two. In such a system, the most stable positions are the two points where the small body occupies one vertex of an equilateral triangle with the larger bodies at the other two, a theory originally postulated by J. L. Lagrange in 1772.

La Guardia, Fiorello Henry (1882-1947), US lawyer and political leader. As mayor of New York City (1934-45) he executed a vast programme of reform, reduced political corruption and introduced slum clearance projects.

La Habana. See HAVANA.

La Harpe, Frédéric César de (1754-1838), Swiss politician who won the independence of the Vaud district of Switzerland from Bern. He represented Vaud at the Congress of Vienna.

La Hogue, Battle of (May-June 1692), naval battle between a combined Anglo-Dutch fleet, led by Admiral Edward Russell, and the French fleet, led by Admiral Tourville, off the Normandy coast. After five days, the French fleet was almost destroyed and lost all hope of invading England and restoring the exiled James II to the throne.

Lahore, city in E Pakistan, on the River Ravi near the Indian border. An important city during the Ghazni and Ghuri sultanates, it increased in importance as part of the Sikh kingdom in 1767 and passed to the British in 1849. It is an industrial centre and its products include iron, steel, textiles and rubber, gold and silver jewellery. Pop. 1,985,000.

Lahr, Bert (1895-1967) US comic actor. He appeared in music-hall, burlesque, plays and films and is especially remembered for his portrayal of the Cowardly Lion in *The Wizard of Oz* (1939), Estragon in *Waiting for Godot* (1956) and for his work in *Burlesque* (1947) and *Two on the Aisle* (1951).

Laibach, Congress of (1821), meeting of European powers that established Austria's right to intervene in Italian political affairs, notably rebellions in Piedmont and Naples. The congress was dominated by the Holy Alliance (Russia, Prussia and Austria).

Laine, Cleo (1927-), real name Clementina Dinah Dankworth, British jazz singer. She joined the Dankworth Orchestra in 1953, and married John Dankworth in 1960. She has won many awards for her singing, and appeared with many symphony orchestras. She has appeared at Sadler's Wells Opera in London.

Laing, Ronald David (1927-), Scottish psychiatrist. He holds that the mentally ill are not necessarily abnormal, and that a psychosis may be a reasonable reaction to the stresses of the world. His books include *The Divided Self* (1960), *Politics of the Family* (1971) and *Do You Love Me?* (1976).

Laing's Nek, Battle of (1881), Boer victory over the British in the first of the South African Wars. The British, under General Colley, tried to force the low pass called Laing's Nek at Majuba Hill on the Natal-Transvaal border. They were repulsed by the Transvaal force under General Joubert and lost 200 men.

Laird, John (1805-74), British shipbuilder and politician. He was a partner in his father's shipbuilding firm at Birkenhead, Merseyside, and was one of the early builders of iron ships.

Lairesse, Gerard de (1641-1711), Flemish painter of historical and mythological scenes. He was the author of the influential *Het Groot Schilderboek* (1707; tr. *The Art of Painting*, 1738), which contained many of his etchings and his ideas on art. **Laissez-faire**, 19th-century economic doctrine. In reaction to mercantilism, the proponents of laissez-faire adopted Adam Smith's argument that trade and industry would best serve the interests of all by reducing government interference to a minimum and allowing market forces to determine production, prices and wages. Major advocates of laissez-faire included Richard Cobden and John Bright.

Laity, members of a Christian Church who are not part of the clergy. The distinction has greater significance in the Anglican, Roman Catholic and Orthodox Churches, because of their belief in the doctrine of apostolic succession, than in Protestant Churches.

Lakas Bahas, Demetrio Basilio (1925-), Panamanian politician. He became President of the provisional government in 1969, and President of Panama in 1972.

Lake, Gerard, Viscount (1744-1808), British general. He served in the Seven Years War and the American War of Independence and in 1798 played a prominent role in suppressing the Irish Rebellion. In 1800 he was made Commander-in-Chief in India, where he defeated the Marhattas (1801-06).

Lake, Veronica (1919-73), US film actress, real name Constance Keane. A fashionable leading lady of the early 1940s, she is chiefly remembered for her hairstyles - long and blonde, hanging over one eye. Her films include *I Wanted Wings* (1941), *Sullivan's Travels* (1941) and *I Married a Witch* (1942).

Lake, inland body of water, generally of considerable size and too deep to have rooted vegetation completely covering the surface, occupying a hollow in the Earth's surface. The expanded part of a river and a reservoir behind a dam are also termed lakes. See also pp.220-221, 760-761.

Lake District, region of NW England, in Cumbria, containing the principal English lakes. Its spectacular mountain and lake-land scenery and its associations with the poets William Wordsworth and Samuel Coleridge make it a major tourist attraction. Among its 15 lakes are Derwentwater, Grasmere, Buttermere and Windermere. The highest point is Scafell Pike, 978m (3,210ft). The Lake District National Park was established in 1951. Area: 2,243sq km (866sq miles). See also p.223.

Lake dwellings, prehistoric settlements built on piles within the margins of lakes. A network of tree trunks across the piles formed a platform on which clay-floored huts were built. Cattle and sheep were also reared on the platform. Lake dwellings in Europe have been found in Germany, Switzerland and Italy. They also occurred in Ireland (where they were known as

CRANNOGS) and in Britain, as at Glastonbury. Some lake dwellings date back to Neolithic times, but most are of the Bronze Age.

Lake Erie, Battle of (1813), battle in the war of 1812 in which the US fleet under Oliver Perry defeated the British fleet under Robert Barclay, near Put-In-Bay, Ohio. The victory gave the USA control of Lake Erie, cutting off supplies to British troops in the area.

Lakeland terrier, hunting dog bred in England's Lake District. Its narrow build is suited to its original purpose - squirming through dens after foxes. It has a rectangular head and V-shaped folded ears. It has a wiry coat which is weather-resistant and may be tan, blue-black, red or beige, and the tail is commonly docked. It is less than 37cm (14.5in) in height.

Lake Poets, name given to three English poets who lived in the Lake District c.1800: William Wordsworth (1770-1850), Samuel Taylor Coleridge (1772-1834) and Robert Southey (1774-1843). Their poetry in itself does not have enough in common to justify calling them a school, but they shared close friendship and experienced a common political development.

Laker, James Charles ('Jim') (1922-), British cricketer, an off-spin bowler who played for Surrey, England and later Essex. He took 193 wickets at an average of 21.23 during a Test career which lasted from 1947 to 1959. This included a record 19 wickets for 90 runs against the Australians at Old Trafford in 1956.

Lakshadweep, Union Territory of, island group off the SW coast of India, in the Arabian Sea; administered by India since 1956. There are 20 islands of which ten are inhabited. Minicoy is the largest, with a predominantly Muslim population. Kavaratti is the capital. Area: 32sq km (12sq miles). Pop. 31,810.

Lakshmi, also known as Padma or Sita, in Hindu mythology, the lotus goddess, wife of Vishnu, who existed at the beginning of creation rising from the ocean borne by a lotus. Lakshmi, whose various forms related to Vishnu's successive incarnations, was the goddess of beauty and youth, and was also worshipped as goddess of wealth and good fortune. She is often depicted sitting or standing on the lotus, holding a lotus, or symbolically as the lotus.

Lalande, St Jean (d.1646), French Jesuit missionary. In 1644 he went to Canada and two years later accompanied Father Isaac Jogues on a mission to the Mohawks. Both men were murdered and in 1830 were canonized by Pope Pius XI.

Lalande, Joseph Jérôme Le Français de (1732-1807), French astronomer who determined the parallax of the Moon. He became professor of astronomy at the Collège de France in 1762, a post he held for 46 years. He was made director of the Paris Observatory in 1768. His works included a catalogue of more than 47,000 stars. In 1802 he established the Lalande Prize for outstanding achievement in astronomy.

Lalemant, name of three French missionaries who worked in Canada. Charles Lalemant (1587-1674), a Jesuit, arrived in Quebec in 1625; later he returned to France, where he acted as forwarding agent for the Canadian missions. Gabriel Lalemant (1610-49), nephew of Charles, worked with the Hurons of Georgian Bay. He was tortured to death by the Iroquois at St Ignace and was canonized in 1930. Jérôme Lalemant (1593-73), brother of Charles and uncle of Gabriel, was director (1645-50, 1659-73) of all Jesuit missions in Canada.

La Linea, city in SW Spain, on the Bay of Gibraltar. It is on the Spanish border N of the neutral zone that separates the city from the British colony. Strategically important, it is a fortified town. La Linea is a processing centre for fruit and vegetables. Pop. (1970) 52,127.

Lalique, René (1860-1945), French jewellery designer whose work significantly contributed to the Art Nouveau movement. He founded his own firm in Paris in 1885 and was responsible for

many technical innovations, introducing new materials (such as horn) and emphasizing contrasts of texture and colour. In 1920 he acquired a glass factory and began to produce Lalique glass, which was immediately in great demand. One of the chief patrons of his jewellery designs was the actress Sarah BERNHARDT.

Lally, Thomas-Arthur, Comte de (1702-66), French general. In 1756 he was made Commander-in-Chief of the French East Indies and from 1758 fought against the British in India. He was defeated at WANDIASH in 1760 and surrendered in 1761. He returned to France, where he was tried for treason and executed.

Lalo, Victor-Antoine-Édouard (1823-92), French composer. His earliest compositions date from 1845 and are memorable for their individual orchestration. He was of Spanish descent and one of his most popular works is the *Symphonie Espagnole* (1873) for violin and orchestra. The opera *Le Roi d'Ys* (1888) has remained in the repertoire of French opera houses.

Lama, superior monk in Tibetan LAMAISM. The two principal lamas are the DALAI LAMA and the PANCHEN LAMA. Lamas have played an important part in Tibetan religion and society since the 8th century.

Lamaism, Western term for the religion of Tibet. It is a mixture of MAHAYANA BUDDHISM and Tibet's pre-Buddhist Bonism. King Srong-tsan-gampo (b.617 or 629) sought to bring Buddhist teachers from China and India. The Bon priests opposed the new Buddhist ways, and Buddhism was not thoroughly introduced into Tibet until the 8th century when the Indian scholar Padmasambhava was a major influence. There are now two Tibetan Buddhist sects, the Red and the Yellow monks. The Dalai Lama, a member of the latter, became revered as the "Living Buddha" and the spiritual and temporal ruler of Tibet. Each new Dalai Lama is believed to be a reincarnation of his predecessor. The Panchen Lama heads the Red monks. After the failure of the Tibetan revolt against the Chinese in 1958-59, the 14th Dalai Lama fled to India.

Lamarck, Jean-Baptiste Pierre Antoine de Monet, Chevalier de (1744-1829), French biologist. His theories of biological transformation, according to which acquired characteristics are inheritable, influenced evolutionary thought throughout most of the 19th century. He proposed in *Philosophie zoologique* (1809) that new biological needs of an organism promote a change in habits from which develop new physical structures. These are then transmitted to offspring as permanent characteristics. See also pp.186-187.

Lamartine, Alphonse-Marie Louis de (1790-1869), French Romantic poet. His *Méditations Poétiques* (1820), nostalgic for his serenely happy childhood, won him immediate fame, while later poems, collected in *Récueillements Poétiques* (1839), echoed his liberal political position. See also p.1576.

Lamas, Carlos Saavedra. See SAAVEDRA LAMAS, CARLOS.

Lamashtu, in Mesopotamian religion, the daughter of the god ANU and the most vile demoness. Believed to slay children and to devour men, she has been portrayed with a lion's or bird's head and mounted on an ass. She was also thought to be the cause of disease, pestilence and nightmares.

Lamassu, or Shedu, in Babylonian mythology, protective genii. They were portrayed as winged bulls with human heads and accompanied the individual at all times.

Lamb, Charles (1775-1834), British essayist and poet. He published some poetry in the 1790s, during a close friendship with COLERIDGE, but his main interest came to centre on his essays, of which various collections were published. He was also known for his children's books, such as *Tales from Shakespeare* (1807). Lamb's personal life was not very happy; from 1796 he had to care for his insane sister, who had stabbed their mother to death.

Lamb, Henry (1883-1960), British painter and official war artist in WWII. He

was strongly influenced by the work of Augustus JOHN, and his portrait of Lytton STRACHEY (1914) first brought him to public notice. He was a founder member of the CAMDEN TOWN GROUP in 1911.

Lamb, Mary Ann (1764-1847), British poet and writer. The sister of Charles LAMB, she was subject to fits of madness, during one of which she stabbed her mother (1796). Her works include a poem *Helen* (1802) and two works on which she collaborated with her brother: *Mrs Leicester's School* (1809) and *Tales from Shakespeare* (1807).

Lamb, William. See MELBOURNE, VISCOUNT.

Lamb, Willis Eugene Jr (1913-), US physicist who applied new techniques to measure the dark lines of the hydrogen spectrum. These consist of many lines close together; he found that their actual positions varied slightly from their predicted positions. For this research he was awarded the 1955 Nobel Prize in physics with Polykarp KUSCH. Lamb also developed microwave techniques for examining the helium spectrum.

Lambert, Constant (1905-51), British conductor and composer, known primarily as a conductor of ballets. His best known composition was *The Rio Grande* for piano, chorus and orchestra (1927). He wrote the ballet *Romeo and Juliet* (1925-6) for the BALLETUS RUSSES.

Lambert, John (1619-84), English general and PARLIAMENTARIAN. In 1648 he was made commander of the northern army and with Oliver CROMWELL defeated Scottish ROYALISTS at PRESTON in 1648. In 1653 he helped to establish Cromwell as Lord Protector but opposed proposals to make him king in 1657. He opposed the RESTORATION and was a powerful figure in England until defeated by Gen. MONCK in 1659. See also p.1775.

Lambeth Conferences, assemblies of bishops of the worldwide Anglican Communion. They have usually been held every ten years since 1867 at Lambeth Palace, the London residence of the Archbishop of Canterbury, who convenes and presides over them. The Lambeth Conferences have only a consultative status. Their resolutions are not binding on the member Churches of the Anglican Communion, but they carry great moral weight.

Lambeth Palace, London residence of the Archbishop of Canterbury since 1197, on the S bank of the Thames opposite Westminster. The buildings are largely medieval. The Water Tower, usually called the Lollards Tower, was built in 1435, the Gatehouse c. 1495 and the Great Hall between 1660 and 1663. It was enlarged between 1829 and 1833.

Lamburn, Richmal Crompton. See CROMPTON, RICHMAL.

Lamellibranchia. See BIVALVES.

Lamennais, Félicité Robert de (1782-1854), French priest and social critic. His *Essay on Religious Indifference* (1817) denounced toleration and rationalism but his views gradually became more liberal. His periodical, *L'Avenir* (founded in 1830), advocated a form of Christian socialism, leading to his excommunication in 1834.

Lamentations, in the Old Testament of the Bible, a book bewailing the destruction of the Temple in Jerusalem; it is commonly attributed to the author of JEREMIAH. In the Hebrew Bible, Lamentations, Ruth, the Song of Solomon, Ecclesiastes and Esther comprise a group of five scrolls that are read on significant days in the Jewish calendar.

La Mettrie, Julien Offroy de (1709-51), French physician and philosopher. His radically materialist views forced him to take refuge in Prussia with Frederick II. In *Man, A Machine* (1747) he claimed that all human functions could be fully explained on a mechanistic basis.

Laminar flow, or streamline flow, orderly flow of fluid (liquid or gas) without turbulence. The fluid flows in layers which slide past each other. As the velocity of the layers increases, or as the viscosity of the fluid decreases, a point is reached when laminar flow breaks up into turbulent

flow. For a given fluid this point occurs at a certain value of the REYNOLDS NUMBER.

Lamizana, Sangoulé (1916-), African politician. He became chief of staff of Upper Volta in 1961 and toppled Maurice Yameogo in a military coup to become president in 1966.

Lammas, in the Christian calendar, an archaic term for the celebration of the EUCHARIST nearest 1 Aug. Primarily a harvest thanksgiving service, it marked the time for the consecration of the first loaves made with the new grain: Lammas is a corruption of "loaf mass". In the Roman Catholic Church it is also the festival of St Peter's deliverance from prison. **Lammermuir Hills**, range of hills in Lothian and Borders regions, SE Scotland. Sheep are grazed throughout the area. The highest point is Meikle Says Law, rising to 533m (1,732ft).

Lamming, George (1927-), West Indian novelist and poet whose native Barbados is the background to his autobiographical *In The Castle of My Skin* (1953). *The Emigrants* (1954) is a story of West Indians living in England and the problems they encounter.

Lamp, form of artificial lighting. Before gas and electricity, lamps burnt fuels such as tallow, wax and oil but the advent of coal gas in the early 19th century brought the first powerful lamps. Most modern lamps use electric power and they may be divided into three types: incandescent, fluorescent and discharge. An incandescent lamp consists of a sealed and evacuated glass envelope surrounding a tungsten filament. Resistance to the current through it causes the filament to glow. A FLUORESCENT LAMP has a sealed glass tube filled with low pressure mercury vapour and a filament at either end. The inside of the tube is coated with a fluorescent phosphor coating. A high voltage between the two filaments causes the vapour to ionize and emit ultra-violet light, which in turn excites the phosphor coating to give off visible light. DISCHARGE TUBES function similarly, except that the ionizing gas - sodium, neon or argon - emits coloured light in the visible spectrum when it is excited. See also INCANDESCENCE.

Lampedusa, Giuseppe Tomasi, Principe de, (1896-1957), Sicilian prince whose novel *Il gattopardo* (1958; tr. *The Leopard*, 1960) portrayed the microcosmic and isolated life of Sicily with such force that it brought him widespread, although posthumous, acclaim.

Lamprey, eel-like, jawless vertebrate found in marine and fresh waters on both sides of the Atlantic and in the Great Lakes of North America. The adult usually leads a parasitic life then spawns in fresh water before dying. It feeds by attaching its mouth to other fish and sucking their blood. Length: to 91cm (3ft). Family Petromyzontidae. See also p.55.

Lampshell. See BRACHIOPODA.

Lanarkshire (or Clydesdale), former county in Scotland, now part of the Strathclyde region. It has intensively cultivated arable lowlands, with sheep farming on the uplands. The region is the most heavily industrialized in Scotland, having the shipyards and engineering works of Glasgow to the N and the steel plants of Motherwell and Wishaw. Area: 2,323sq km (897sq miles). Pop. (1971) 1,524,848.

Lancashire, county in NW England, bordered by the Irish Sea (W), Cumbria (N), North and West Yorkshire (E) and Greater Manchester and Merseyside (S). It is drained by the rivers Lune and Ribbles. Lancaster is the administrative centre, although Preston and Blackburn are two of the major towns. It lost much of its area and population with the county reorganization in 1974. Area: 3,040sq km (1,174sq miles). Pop. 1,375,000.

Lancaster, Burt, (1913-), US film actor and producer. A former circus acrobat, he made his first film, *The Killers*, in 1946. He has played a wide range of roles. Films which exploit his powerful personality include *The Rose Tattoo* (1955), *Elmer Gantry* (1960), *Bird Man of Alcatraz* (1962) and *The Leopard* (1963). With Harold Hecht and James Hill he formed

the company Hecht-Hill-Lancaster which produced a number of his films, including *Airport* (1969).

Lancaster, Duchy of, lands given by HENRY III of England to his son, Edmund, in 1265. Edmund became the 1st Earl of Lancaster in 1267. The revenues from the Duchy passed into the coffers of the Crown when Henry IV became king in 1399. They still go directly into the monarch's privy purse. The Chancellor of the Duchy of Lancaster is a Minister of the Crown, not always given cabinet rank.

Lancaster, Duke of. See JOHN OF GAUNT. **Lancaster, House of**, English royal line. The dynasty was founded by Edmund "Crouchback", Earl of Lancaster (1245-96), the second son of HENRY III. On the death of Edmund's son Henry, 1st Duke of Lancaster, in 1361, the Lancastrian title and lands passed to his daughter Blanche and her husband, JOHN OF GAUNT. Their son, Henry Bolingbroke, became HENRY IV in 1399 on deposing RICHARD II. He was the first of England's three Lancastrian kings. Bolingbroke's son, HENRY V, died in 1422 leaving his child, HENRY VI, as heir. Dissensions during the regency (1422-42) and Henry VI's feebleness as king weakened the Lancastrians, encouraging Yorkist claims to the throne and leading to the Wars of the ROSES. See also pp.1376, 1377.

Lancaster, Sir James (c.1554-1618), English merchant and navigator. He served under Sir Francis DRAKE against the Spanish ARMADA in 1588 and went on the first expedition to reach the East Indies in 1591-94, and the first trading expedition of the EAST INDIA COMPANY (1601).

Lancaster, Sir Osbert (1908-), British cartoonist, writer and stage designer who is best known for his cartoons, which appeared from 1939 in the *Daily Express*, satirizing the British upper class and its lack of social awareness. He has written works on architecture, such as *Here, of All Places* (1959), reissued as *A Cartoon History of Architecture* (1976), and personal memoirs such as *With an Eye to the Future* (1967).

Lancaster, county town of Lancashire situated on the River Lune estuary. It was important in Roman times, and although attempts during the Middle Ages to establish a textile industry there failed, the town was raised to city status in 1937. Industries: linoleum manufacture, engineering, dyeing and cloth printing. Pop. (1971) 49,525.

Lancastrians. See LANCASTER, HOUSE OF. **Lance**, weapon used by medieval knights for both warfare and the sport of jousting. The jousting lance was a spear normally up to 4.5m (15ft) long, broadening to a hand-guard located 1.2cm (4ft) from the butt. See also pp.555, 555.

Lancelet. See AMPHIOXUS.

Lancelot of the Lake, in Arthurian legend, the father of GALAHAD and one of the most famous knights; he is usually portrayed as the lover of Guinevere, wife of KING ARTHUR, but remains a model of chivalry. According to Chrétien DE TROYES' *Le Chevalier de la charrette* (12th century), he was brought up by a fairy in a lake. *Lancelot* (13th century) shows how he was borne away by the enchantress Vivien, the Lady of the Lake. In Sir Thomas MALORY'S *Morte d'Arthur* (15th century) the theme of Lancelot's devotion to Guinevere and the conflict created by his loyalty to Arthur is strongly portrayed.

Lance, long, narrow window tapering to a point found in GOTHIC ARCHITECTURE. Lances are sometimes grouped in threes, as in the W façade of Salisbury Cathedral in England.

Lance, thermic. See THERMIC LANCE.

Lanchester, Frederick William (1868-1946), British car manufacturer who built the first British motor-car. He set up his own firm and in 1896 produced his first car, a one-cylinder 5-hp model. He also did important work on the theory of AERONAUTICS.

Lanchow (Lanzhou), city in NW China, on the Huanghe (Yellow) River, near the Great Wall; capital of Kansu (Gansu) province. An old walled city, Lanchow is a major transport centre and a developing

Lancret, Nicolas

Landscape painting or etching before 1800 often depicted the ideal world of Arcadia.

Land's End, Cornwall, is a spectacular rocky headland which attracts many tourists.

Fritz Lang; the robot design for his allegorical film *Metropolis*.

Irving Langmuir the US chemist seen here holding a discharge lamp.

industrial city. It was the scene of a successful Chinese Communist revolt in 1936. It has a university (1946) and several technical colleges. Industries include oil refining, food processing, textiles, cement and leather goods. Pop. (1970 est.) 1,500,000.

Lancret, Nicolas (1690–1743), French painter of *FÊTES GALANTES*. His works – marked by a vivacious gaiety and liveliness – are sometimes indistinguishable from those of *WATTEAU*, whom he imitated. They include *The Seasons* and *Déjeuner de Jambon*.

Land, Edwin Herbert (1909–), US physicist, inventor of the *POLAROID* camera. He did important work with light polarization and by 1936 had developed a Polaroid material later used in sunglasses. In 1947 he developed a camera which produced a finished print within one minute. See also pp.628–629, 629.

Land Acts, Irish, acts reforming the Irish landholding system passed by the British Parliament in 1870, 1881, 1885, 1891 and 1903. The 1881 Act gave to the Irish farmers the three "Fs" which the nationalists demanded: fixity of tenure, fair rents and free sale of the tenant's interest. The 1903 Land Purchase Act effected a massive transfer of land in southern Ireland from English to Irish ownership. See also p.1642.

Landau, Lev Davidovich (1908–68), Soviet physicist. His many contributions included the basic theories describing ferromagnetism and liquid helium. In 1927 he proposed a concept for energy called the density matrix which was later extensively used in quantum mechanics. In the 1930s he originated the theory that underlies the superfluid behaviour of liquid helium. He received the Nobel Prize in physics in 1962.

Land bridge, temporary connection between continents that can allow animal migration. One existed across the Bering Strait until comparatively recently, and a modern example is the isthmus of Panama. Before the theory of continental drift such bridges were proposed as a possible major influence on fossil distribution.

Land crab, CRUSTACEAN found in tropical America, w Africa and Indo-Pacific regions. It has gills in cavities in its shell and breathes air. A forest-floor and swamp scavenger, it migrates to water to breed. Width across back: 11 to 30cm (4–12in). Family Gecarcinidae.

Lander, Richard Lemon (1804–34), British explorer. While still a young man, he travelled to the West Indies and in 1827 went to Africa and explored the Niger River. Accompanied by his brother, John, he made a further expedition (1830–31) to determine the course of the lower Niger and discovered that the river emptied into the Bight of Benin. He was killed on a subsequent trading expedition (1832–34) to that area.

Landlord, person who lets land or accommodation for residential or commercial purposes to another person, known as a *TENANT*. The relationship between a landlord and tenant is usually formalized into a *LEASE* or tenancy agreement. The present system of tenancy derives from medieval times when all land became the possession of the Crown, other persons merely enjoying rights of tenure. The term "landlord" can also be applied to the keeper of an inn.

Landolfi, Tommaso (1908–), Italian writer and translator. His works include *Il mar delle blatte e altre storie* (1939) and *Racconti impossibili* (1966). He has also translated works by Gogol, Merimée and Pushkin.

Landor, Walter Savage (1775–1864), British poet and writer. After being rusticated from Oxford and quarrelling with his wife and friends, he lived in Italy, and died in Florence. His works include *Gebir; a Poem in Seven Books* (1798), *Imaginary Conversations of literary Men and Statesmen* (1824–29) and *Heroic Idylls* (1863).

Landowska, Wanda (1877–1959), Polish harpsichordist and pianist who lived in Paris from 1919 and in the USA from 1941. An authority on early music, she founded the *École de Musique Ancienne* (1925) and in her teaching and performances

she did much to promote interest in the harpsichord. Manuel de FALLA wrote his harpsichord concerto for her.

Land reclamation, transformation of land that, for one reason or another, is unusable for building or cultivation. Although the term generally refers to reclamation of land that has been beneath the sea (ie with artificial islands or merely by extending the shore-line), it also applies to the beautifying of derelict industrial sites (with canals and recreation areas) and techniques of irrigation and fertilization. See also p.752.

Landscape gardening, arranging gardens to produce certain effects. Broadly, there are two main traditions: the Sino-English, with its retention of the informality of nature, and the Franco-Italian, with its geometric patterns in which nature is trimmed to art. The second tradition arose in Italy during the *RENAISSANCE*. It is best exemplified in the parterres of *VERSAILLES*, designed by André *LENÔTRE*. In England the naturalist style developed in the 18th century, with the work of William *KENT*, Humphrey *REPTON* and "Capability" Brown. English influence spread in Europe in the early 19th century as part of the change in sensibilities from *CLASSICISM* to *ROMANTICISM*.

Landscape painting, branch of painting which has natural scenery for its subject. In the ancient world and pre-modern Europe landscape was usually only a background to classical or religious themes, although in the East it was a polished art by the 8th century. The *RENAISSANCE* interest in perspective encouraged landscape art and in the early 16th century *ALTDORFER* devoted canvases entirely to it. The greatest early landscape painter was Pieter *BREUGHEL*. In the 17th century, landscapes became highly idealized, as in the paintings of *CLAUDE LORRAIN* and *POUSSIN*. The Dutch tendency, as in the work of *REMBRANDT*, was towards a greater realism. In Britain the great age of landscape painting went from *Gainsborough* to *TURNER* and *CONSTABLE*. No major 20th-century painter has devoted himself to landscape.

Landseer, Sir Edwin Henry (1802–73), British painter and sculptor. He achieved immense popularity with his sentimental paintings of animals, eg of the stag in *Monarch of the Glen* (1851) and of dogs in *Dignity and Impudence* (1839). His best-known sculptures are the lions in *Trafalgar Square*.

Land's End, headland in Cornwall, sw England, which forms the westernmost part of the English mainland. The coastline is composed of granite cliffs, with rocky islands and reefs offshore.

Landslide, noticeable slip or fall of a mass of earth or rock, frequently the result of road or dam construction. See also *AVANCHÉ*.

Landsteiner, Karl (1868–1943), US pathologist, b. Vienna. He discovered the four different blood groups (A, B, AB and O) and demonstrated that certain blood groups are incompatible with others; clots form if blood of such groups are mixed. His findings explained why some blood transfusions in the past had been beneficial, whereas others had been fatal. He won the 1930 Nobel Prize in physiology and medicine. In 1940 he identified the Rh (rhesus) factor in collaboration with A.S. Wiener. See also pp.122, 123, 152, 166, 1063.

Land yachting, sport in which three- or four-wheeled hulls made of fibreglass or tubular metal are equipped with a single sail to provide propulsion over flat surfaces such as concrete, firm sand or tarmac. It is popular in Europe (where two- and three-man craft are also sailed), the USA and Australia.

Landy, John Michael (1930–), Australian athlete. He won international prominence in 1954 when he broke Roger *BANNISTER*'s record in the mile run with a time of 3 min. 58 sec. They met later in the year in a race which was called the "Mile of the Century". Landy finished in 3 min. 59.6 sec. to Bannister's 3 min. 58.8 sec. **Lane, Sir Allen** (1902–70), British publisher. In 1935 he founded the firm of

Penguin Books, producing the first modern novels published in paperback. **Lane, Edward William** (1801–76), British scholar who spent many years in Egypt. His work includes *Manners and Customs of the Modern Egyptians* (1836), the first accurate annotated translation of *A Thousand and one Nights* (1838–40), *Selections from the Kur-an* (1843) and his great life's work, an Arabic thesaurus (5 vols, 1863–74).

Lane, Dame Elizabeth Kathleen (1905–), British lawyer, the first woman to become a High Court Judge (1965). She was called to the Bar in 1940 and worked in Birmingham (1953–61), Derby and Manchester (1961–62) before serving as a County Court judge (1962–65).

Lane, Sir Ralph (c.1530–1603), English pioneer. He left England in April 1585 with about 100 settlers and established the first English colony in North America, on Roanoke Island, off North Carolina. The colonists returned to England the following summer with Sir Francis *DRAKE*.

Lane-Poole, Stanley (1854–1931), British archaeologist and historian. He was keeper of the coin department at the British Museum (1874–92) and led archaeological expeditions to Egypt (1883) and Russia (1886). His works include a *History of the Moors in Spain* (1887).

Lanfranc (c.1005–89), Italian-born churchman, Archbishop of Canterbury. He was a *BENEDICTINE*, whose priory at Bec was (after 1045) a centre for European scholars. A counsellor of William of Normandy, he was brought to England after the Conquest to become Archbishop (1070–89). His reform of the Church included replacing Anglo-Saxon bishops and abbots with Normans, subjecting York to the authority of Canterbury, building many churches and establishing ecclesiastical courts.

Lang, Andrew (1844–1912), British anthropologist, historian and writer. His anthropological work is perhaps the most influential and includes such books as *Custom and Myth* (1884) and *Myth, Ritual and Religion* (1887–99), in which he discusses the sociology of religion and folklore as the basis of religion and literary culture. In this field he was also an early critic of the ideas proposed by *FRAZER* in *The Golden Bough*. As an historian, he is best known for *History of Scotland* (1900–07), although he also wrote many biographies, including *J.G. Lockhart* (1896). Much of his poetry, which includes *Grass of Parnassus* (1888), was written in the old French form of ballade and virelai. He also wrote *The Lilac Fairy Book* (1910).

Lang, Cosmo Gordon (1864–1945), British churchman who became Archbishop of Canterbury (1928–42). When he was suffragan bishop of Stepney (1901–08), his efforts to improve slum conditions attracted wide attention. He was closely involved with the revision of the Book of Common Prayer (1928) and, together with Stanley *BALDWIN*, was instrumental in securing the abdication of *EDWARD VIII*.

Lang, Fritz (1890–1976), German film director and writer whose films have been widely acclaimed for their dramatic composition and exciting detail. His first film as a director was *Halbblut* (1919). His best-known works include *Mabuse the Gambler* (1922) and *M* (1931), an exploration of compulsive murder. He later filmed in America, directing *Fury* (1936), his most highly praised US film. Perhaps the most famous of all is the intense and dramatic silent work, *Metropolis* (1927) a stylized and fantastic vision of the future of society.

Lange, Christian Louis (1869–1938), Norwegian diplomat. He worked for the Nobel Committee (1900–09) and the International Parliamentary Union (1909–33) and represented Norway in the LEAGUE OF NATIONS. He was an advocate of disarmament and received the Nobel Peace Prize in 1921 (with Karl *Hjalmar Branting*).

Lange, Dorothea (1895–1965), US photographer. Her portraits and studies of the Depression years among the urban poor and migrant labourers of California, and

her images of rural America taken for the Farm Security Administration (1935-42), have an eloquence and strength that make them classics of documentary photography.

Lange, Friedrich Albert (1828-75), German philosopher and socialist. He was professor of philosophy at Zürich University in 1870 and in 1872 held the chair of philosophy at Marburg University. He established a tradition of Neo-Kantian philosophy at Marburg University and was well-known for his contribution to theories of materialism. He wrote the *History of Materialism* (1866).

Langevin, André (1927-), French-Canadian writer and producer who worked for Radio-Canada. His novels, often tragic and violent, include *Évadé de la Nuit* (1951), *Dust over the City* (1953) and *L'Élan d'Amérique* (1972).

Langevin, Paul (1872-1946), French physicist who in 1905 was the first to interpret paramagnetism and diamagnetism in terms of the behaviour of electrons in atoms. During WWI he built the first submarine detector based on ultrasonic waves; it was later developed into the modern SONAR.

Langlade, Charles Michel de (1729-1800), US pioneer, soldier and explorer. The son of an Ottawa Indian woman and a Green Bay Wisconsin fur trader, he led the Indian force that defeated the British at Fort Duquesne in 1755. He was active in the American War of Independence on the British side. He became known as the father of Wisconsin.

Langland, William (c.1331-99), English poet who wrote *Piers Plowman*. Little is known of Langland's life, although it has been claimed that he was the son of an Oxfordshire landowner. The poem *Piers Plowman* is considered one of the most important works of medieval literature, and is remarkable for its use of alliteration and a sustained allegorical style, based on a profoundly Christian approach.

Langlauf. See SKIING.

Langley, Edmund of, 1st Duke of York (1343-1402), fifth son of EDWARD III of England. He led the English army in campaigns in France and Spain (1359, 1367, 1375 and 1381) and in Scotland (1385). He was regent three times in RICHARD II's absence in the 1390s. In 1399 his claim to the throne was put forward too weakly to prevent the accession of HENRY IV.

Langley, Samuel Pierpont (1834-1906), US astronomer who showed that mechanical flight was possible. He did this by building large steam-powered model aircraft in 1896 which achieved the most successful flights up to that time. In 1880 he developed the bolometer which could accurately measure infra-red emissions.

Langmuir, Irving (1881-1957), US chemist who greatly improved the incandescent LAMP. He showed that the shortness of its life was due to the evaporation of the filament, and that this could be reduced by introducing nitrogen into the bulb instead of a high vacuum. His work on electrical discharges in low pressure gases led to the discovery of the space-charge effect. His researches in surface chemistry led to the general theory that chemical reactions occurred between adjacent absorbed substances on a given surface. For this he received the Nobel Prize in chemistry in 1932.

Langside, Battle of (1568), battle between supporters of MARY, QUEEN OF SCOTS and those supporting her son JAMES VI (later JAMES I of England). It ended in Mary's defeat and her flight to England.

Langton, Stephen (d.1228), English cardinal and scholar. Appointed Archbishop of Canterbury (1207) by Pope INNOCENT III, he was prevented from occupying his see until 1213 by King JOHN's opposition. He supported the barons over the issue of MAGNA CARTA (1215) and although suspended as archbishop, was restored after the accession of Henry III. A prolific writer, it was probably he who was responsible for the present chapter divisions of the Scriptures. See also p.1329.

Langtry, Lillie Emilie Charlotte (1853-1929), British actress, noted for her great

beauty. One of the first English women of high social rank to appear on the stage, she made her debut at the Haymarket Theatre, London, in 1881. She toured the USA in the early 1900s.

Language, generally accepted system of communication; the term is usually used to refer to human vocal communication but there are many other types of language such as body language, used by humans and other animals. Human language is a universal phenomenon, and although there are more than 4,000 different languages, they have many characteristics in common. Almost every human language uses a fundamentally similar grammatical structure, or syntax, even though the languages may not be linked in vocabulary or origin; this fact has led some linguists to argue that language structures are genetically conditioned, and that although it is necessary to teach children vocabulary and the relation of the words to the outside world, their manipulation of grammar is innate. Families of languages have been constructed, such as the INDO-EUROPEAN family, the most common in the world, but their composition and origins are the subject of continuing controversy. Historical studies of language come under the field of ETYMOLOGY, the origins of words, and PHILOLOGY, the study of words and languages for their own sake. LINGUISTICS as a discipline usually addresses itself to contemporary language, although some historical studies are carried out. See also pp.1126-1127, 1876-1879.

Language, Truth and Logic (1936), the first major philosophical work by Alfred J. AYER; it was the book that introduced logical positivism to Britain. In it Ayer rejects metaphysics, ethics and theology on the basis that the statements these topics contain are not verifiable, either logically or empirically.

Langur monkey, any of about 15 species of medium to large MONKEYS of South-East Asia and the East Indies. They feed mainly on leaves, are slender and have long hands and tails. Gregarious tree-dwellers, they are active by day and are found from sea-level to snowy Himalayan slopes at an elevation of 4,000m (13,000ft). Length: 43-78cm (17-31in). Family Cercopithecidae; genus *Presbytis*. See also pp.86, 103, 312, 313, 333.

Langier, Sidney (1842-81), US poet, whose verse reflects Southern social change. His first novel, *Tiger Lilies*, was published in 1867. Publication in 1875 of the poems *Corn and Symphony* brought him national recognition.

Lankester, Sir Edwin Ray (1847-1929), British zoologist. He was noted for his studies of the anatomy, embryology and morphology of invertebrates. He pioneered the science of parasitology and popularized various aspects of science.

Lanner, Josef (1801-43), Austrian composer. He was appointed director of the imperial court balls in Vienna in 1829. He was a prolific composer of dance music and a creator of the modern Viennese WALTZ.

Lanolin, purified fat-like substance derived from sheep's wool and used with water as a base for ointments and cosmetics.

La Noue, François de (1531-91), HUGUENOT captain during the French Wars of Religion (1562-98). He was called *Bras-de-fer*, after his iron artificial arm. He fought for the French and Dutch Protestant cause in several campaigns, and was imprisoned by the Spaniards in the 1580s. He later fought under Henry IV of France, and died at the siege of Lamballe.

Lansbury, Angela (1925-) US actress, b. Britain. She made her film debut in *Gaslight* (1944), for which she received an Academy Award nomination. She appeared in *The Picture of Dorian Grey* (1945) and *The Manchurian Candidate* (1962). In 1966 she was awarded the Antoinette Perry (Tony) Award for her role in the musical *Mame*. She appeared in *Hamlet* at the National Theatre, London (1975-76).

Lansdowne, Henry Charles Keith Petty Fitzmaurice, 5th Marquess of (1845-

1927), British statesman who served as Governor-General of Canada (1883-88) and Viceroy of India (1888-94). As foreign secretary (1900-05) he concluded an alliance with Japan (1902) and the Anglo-French ENTENTE (1904). He served in the WWI coalition cabinet and in 1917 published in the *Daily Telegraph* a letter setting forth proposals for peace. It was repudiated by the government.

Lansdowne Road, rugby union ground in Dublin, used for Ireland's home internationals. It is the home ground of the Lansdowne and Wanderers clubs.

Langston, Tolbert, (1844-1913), US inventor of the Monotype typesetting machine in 1885. This made possible for the first time the mechanical casting and setting of type in lines, the entire process being controlled by coded tape. It helped to revolutionize the printing industry.

Lantern, in architecture, open or glassed-in structure on top of a tower, roof or dome to provide light and/or air for the interior.

Lantern fish, any of numerous species of marine fish found in Atlantic and Mediterranean waters; especially *Diaphus rafinesquiei*. It is identified by light organs along the sides, and is found in deep water during the day and near the surface at night. Length: 7.5cm (3in). Family Myctophidae. See also p.340.

Lantern fly, tropical and subtropical South American plant hopper of the order HOMOPTERA. It is brightly coloured and has a long, inflated prolongation of the head; this was once thought to emit light. Wingspan: to 15cm (6in). Family Fulgoroidea.

Lanthanide series, also called the lanthanide elements, or rare earths, series of rare metallic elements with atomic numbers between 57 and 71. They are: lanthanum, cerium, praseodymium, neodymium, promethium, samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, and lutetium. Their properties are similar and resemble those of lanthanum, from which the series takes its name. They occur in monazite and other rare minerals and are placed in group IIIB of the periodic table. All form trivalent compounds (having valency three); some also form divalent and quadrivalent compounds. See also pp.888, 890.

Lanthanum, metallic element (symbol La) of the Lanthanide series, first identified in 1839. Its chief ores are monazite (a phosphate) and bastnasite (a fluorocarbonate). Compounds of the metal are used in the manufacture of glass for high-quality lenses. Properties: at. no. 57; at. wt 138.9055; s.g. 6.17 (25°C); m.p. 920°C (1,688°F); b.p. 3,454°C (6,249°F); most common isotope La¹³⁹ (99.91%). See also pp.888-890.

Lan 'ien man, human remains found in the Lan 'ien district of Shensi, China, believed to be up to 600,000 years old. Lan 'ien man was an early example of *Homo erectus*, and was discovered in 1963-64. See also pp.112, 1176.

Langue, soft downy hair that covers the human fetus and those of other mammals during development in the womb. It is shed, and virtually disappears, at birth.

Laos, the official language of Laos, spoken by about 94% of the country's population. It is one of the Tai group of languages and is closely related to Thai.

Laocoon, priest of Apollo during the TROJAN WAR, described in Virgil's *Aeneid*. Referring to the wooden Trojan Horse, he exhorted the Trojans to fear the Greeks even when they offered gifts. For giving this warning and because of his marriage, he and his sons were strangled by two sea-serpents sent by Apollo. The statuary group *Laocoon and his Sons* in the Vatican is one of the masterpieces of the Greek Hellenic period.

Laoighis (Laois), county in central Republic of Ireland, in Leinster province. Part of the central plain of Ireland, Laoighis is generally low-lying and is drained by the rivers Barrow and Nore. Most of the people work on farms; oats, barley, potatoes and turnips are grown, and dairy cattle are reared. Area: 1,720sq km (664sq miles). Pop. (1971) 45,349.

Laos, independent nation in South-East Asia. It is a mountainous country with no access to the sea. Most of the people work in subsistence agriculture and natural resources remain unexploited. Exports include tin, timber and coffee. The capital is Vientiane. A Peoples' Democratic Republic was claimed in 1975 after the Pathet Lao had taken over the country. Area: 236,800sq km (91,428sq miles). Pop. (1975 est.) 3,303,000. See p.2089.

Lao-tze, or Lao-tzu (c.604-c.531 BC), Chinese philosopher. According to Chinese legend he founded TAOISM, a religion which became a mystical reaction to the moral-political concerns of CONFUCIANISM. Although there is uncertainty about his identity, he is believed to have been the author of *Tao Te Ching*, the sacred book of Taoism; *tao* is the "way"; *te* is its "virtue". It has greatly influenced Chinese culture. See also pp.1258-1259.

La Paz, largest city and administrative capital of Bolivia, South America. Built on the site of an INCA village, it was one of the centres of revolt in the War of Independence (1809-24). Today its industries include flour-milling, brewing and distilling. Pop. (1976) 654,713.

La Pérouse, Jean François de Galaup, Comte de (1741-c.88), French navigator. He distinguished himself against the British (1778-83) and in 1785 led a French exploration of the Pacific Ocean, partly in search of a north-west passage. The trip took him to many parts of the South Pacific as well as to the coasts of North America and Asia.

Lapidary, craftsman skilled in cutting, polishing and engraving gemstones. The commonest faceted forms are brilliant cut, rose cut and trap cut. See also pp.260-261.

Lapis lazuli, or lazurite, glassy, deep blue semi-precious gemstone, a silicate mineral found in metamorphosed limestones. It occurs rarely as crystals in the cubic system, but more often as granular masses. Hardness 5-5.5; s.g. 2.4. See also pp.260-261.

Laplace, Pierre-Simon, Marquis de (1749-1827), French astronomer and mathematician. Laplace used probability theory successfully to apply Newton's gravitational theory to the entire solar system; this work was summarized in his book *Celestial Mechanics* (1798-1827). He also did fundamental work in the study of heat, magnetism and electricity. See also pp.775, 924.

Lapland, extensive area in N Europe, almost entirely within the Arctic Circle, including N and NE Norway, the northernmost parts of Sweden and Finland, and the Kola Peninsula of the USSR. The land is mountainous in Norway and Sweden, and tundra predominates in the NE. There are extensive forests and many lakes, and the climate is harsh throughout the area. Rich mineral deposits include iron ore, copper and nickel. Large reindeer herds tended by LAPPS are of great importance to the economy and fishing is a major industry. Tourism is becoming increasingly important. Area: approx. 388,500sq km (150,000sq miles).

La Plata, city in E Argentina, 56km (35 miles) ESE of Buenos Aires. The city is laid out in a 5km (3-mile) square modelled on Washington, DC, and is the site of a cathedral. It is the oil refining centre of the country and steady industrial growth has bolstered the economy. Oil, cereals and frozen meat are exported. Pop. (1970) 506,287.

La Plata, Rio de. See PLATA, RIVER.

Lapps, people inhabiting LAPLAND. The mountain Lapps are nomadic herders of reindeer, while those of the forest and coast are semi-nomadic and live by hunting, trapping and fishing. Their racial origins are uncertain, although their language (Saami) is Finno-Ugric. There are about 31,500 Lapps.

Laptev Sea, part of the Arctic Ocean, off the coast of the Russian Republic (Rossijskaja SFSR), between Severnaya Zemlya and the New Siberian islands. It is ice-bound most of the year. Area: 714,840sq km (276,000sq miles).

Lapwing, or peewit

Lapwings, members of the plover family, are common inland waders in Europe.

Larches are used for reforestation in Europe and North America.

Larva of the tortoiseshell butterfly, a stage in its remarkable metamorphosis.

Larynx and vocal chords in men are larger than in women, hence the deeper male voice.

Lapwing or peewit, any of several species of birds, especially the Eurasian lapwing, *Vanellus vanellus*, a brown, green-black and white wading bird with a conspicuous crest. It commonly nests in open agricultural land and defends its young by luring predators away, feigning a broken wing. Length: 30cm (12in). Family Charadriidae. See also pp.77, 78.

Larbaud, Valéry-Nicolas (1881-1957), French poet, novelist and critic. He travelled widely and enjoyed a close friendship with James Joyce. His best-known works were the *Poems of a Rich Amateur* (1908) and *A.O. Barnabooth* (1913), accounts of a wealthy young South American who travels through Europe seeking fulfilment.

Larceny. See THEFT.

Larch, any of several species of conifer trees native to cool and temperate regions of the Northern Hemisphere. They bear cones and needle-like leaves which, unusually for a conifer, are shed annually. The timber is rot-resistant and is used for telegraph poles. Family Pinaceae. See also pp.366-367.

Lard, melted-down pigs' fat, packaged and sold for use in cooking. Chemically, lard is composed of triglyceride fats.

Lardner, Ringgold Wilmer (Ring) (1885-1933), US short story writer and humorist. He spent 15 years as a reporter for Chicago newspapers and for a time edited a baseball weekly. In 1916 he published *You Know Me, Al*, a collection of racy short stories about baseball players. His great talent lay in re-creating the language of ordinary people and in his satirical presentation of their characters. Among his best-known stories are *Haircut*, *Champion* and *The Love Nest*.

Lares, Roman gods of cultivated land, worshipped by each household at cross-roads where field boundaries met. Probably originally a reverence for ancestral property, the worship of the Lares (which were stylized as figurines) moved into the houses to join that of the Penates, the gods of the threshold.

Largillière, Nicolas de (1656-1746), French painter. He is best known for his glamorous portraits, which include *Louis XIV and the Royal Family* (1708) and *La Belle Strasbourgeoise* (1703).

Largo Caballero, Francisco (1869-1946), Spanish political leader. He rose to power through Spanish trade unions and served in the cabinet (1931-33). His radical propaganda early in 1936 is considered one of the chief factors in precipitating the SPANISH CIVIL WAR (1936-39). He fled to France in 1939, suffered three years of imprisonment under the Germans during WWII, and died in Paris.

Largs, Battle of (2 Oct. 1263), defeat of Norse invaders of Scotland. The Norse fleet of about 150 ships was driven by storms on to the shore near Largs on the Firth of Clyde and many of the ships were wrecked. The Norse leader, Haakon IV, landed a force, but it was routed by the Scots under Alexander III.

Larionov, Mikhail (1881-1964), Russian abstract painter. He invented RAYONISM, a Russian offshoot of CUBISM, and thus laid the foundations of abstract art in Russia. After 1914 he left Russia for Paris to work as a designer for DIAGHILEV'S BALLETS RUSSES.

Lark, any of several small birds that live in open areas, known for their melodious songs. Most common in Europe are the woodlark (*Lullula arborea*), skylark (*Alauda arvensis*) and shrewlark (*Eremophila alpestris*). All are mottled brown, some with spotted markings on the breast. Depending on where they live, they feed on insects, larvae, crustaceans or berries. Length: to 18cm (7in). Family Alaudidae. See also pp.297, 319.

Larkin, Philip Arthur (1922-), distinguished British poet. His first book *The North Ship* (1945) and later volumes, *Less Deceived* (1955), *The Whitens Wedding* (1964), and *High Windows* (1974), show a reaction against SYMBOLIST and ROMANTICIST poetry and a deeply felt interest in the importance of the unspectacular. Larkin edited the *Oxford Book of Twentieth Century Verse* (1973).

Larkspur. See DELPHINIUM.

La Rochefoucauld, François, Duc de (1613-80), French writer, renowned for his literary maxims and epigrams. In 1635 he was involved in an intrigue against Cardinal RICHELIEU and took part in the FRONDE revolts (1648-53). His best-known work is his *Réflexions ou Sentences et Maximes Morales* which ran into five editions (1665-78). See also pp.1450-1451.

La Rochelle, port on the French Atlantic coast. It developed in the 12th century and was fiercely contested in the HUNDRED YEARS WAR (1337-1453). It became a Huguenot stronghold in the 16th century, until taken by government forces directed by Cardinal RICHELIEU in 1628. La Rochelle's trade declined in the 18th century when the French lost Canada. Its industries include shipbuilding, oil-refining and fish-canning. Pop. 72,075.

La Rochelle Expeditions, three unsuccessful attempts by the English government to relieve the Huguenots besieged by the French government at La Rochelle. The first, in June 1627, was commanded by the Duke of Buckingham and returned with heavy losses after landing on the Isle of Ré. The second, under the Earl of Denbigh, returned without having landed. In August 1628 the Duke of Buckingham was assassinated while preparing the third expedition, which never set out.

La Ronde (1950), French film based on a light romantic comedy by Arthur Schnitzler. Directed by Max Ophüls and starring Jean-Louis Barrault, Simone Signoret, and Gérard Philipe it achieved international success. Roger Vadim made a less successful version in 1964.

Larousse, Pierre (1817-75), French lexicographer. He founded the publishing firm of Larousse, which produced *The Great Universal Dictionary of the 19th Century* (1866-76) as the first of the famous Larousse series of dictionaries and encyclopaedias.

Larreta, Enrique Rodriguez (1875-1961), Argentine novelist who lived abroad for many years. His best-known work is *La Gloria de don Ramiro* (1908), an historical novel of Spain under Philip II, and a classic of the modernist genre. Other works include *Zogobi* (1926), a GAUCHO story, and *En La pampa* (1955).

Larocha, Alicia de (1923-), Spanish pianist. She studied in Spain with Frank Marshall and succeeded him as director of the Marshall Academy, Barcelona, in 1959. By the late 1940s she had been acclaimed internationally for her fine performances of works by Spanish Romantic composers such as Granados and Albéniz. She made her debut in the USA in 1954 and after European and world tours returned there in 1965.

Larsa, ancient city of Mesopotamia. It achieved predominance in Mesopotamia after the fall of UR (c. 1950 BC) by defeating its chief rival Isin shortly after 1900 BC. Larsa was eventually destroyed by the BABYLONIANS under HAMMURABI in 1763 BC. See also p.1164.

Larsson, Lars-Erik (1908-), Swedish composer. His many varied works include an opera, *The Princess of Cyprus* (1930-36), *Serenade for Strings* (1934) and the *Gustavian Suite* (1943) for flute, harp, string and strings. From 1937 and 1954 Larsson was chief conductor of the Swedish State Radio orchestra.

Lartigue, Jacques Henri (1896-), French photographer. His first photographs date from 1906 and, although an amateur, for 70 years he recorded the lavish lifestyles of his relatives and friends and the society life of Parisian boulevards. Much of his work was published in *Diary of a Century* (1970).

La Rue, Pierre de (c. 1460-1519), Flemish composer in the service of Maximilian, Philip of Burgundy and Margaret of Austria. He wrote chiefly masses and MOTETS, but also a series of *chansons*.

Larva, developmental stage in the life-cycle of most invertebrates and some other animals. A common cycle, typified by the BUTTERFLY, is egg, larva, PUPA, adult. In different organisms the larval stage may be called a NYMPH, MAGGOT,

CATERPILLAR, TADPOLE or GRUB. It has a well-developed alimentary system and often stores food until it pupates to become an adult. The duration of this stage depends on the organism; some creatures (such as the AXOLOTL) retain larval features throughout their lives.

Larwood, Harold (1904-), British cricketer who played for Nottinghamshire and England. He took 78 wickets at an average of 28.41 in 21 Test matches between 1926 and 1933. He was the spearhead of the English attack during the tour of Australia in 1932-33, when he took 33 wickets, 16 clean bowled.

Laryngitis, inflammation of the LARYNX (voice box), usually occurring during a respiratory-tract infection and accompanied by dryness, soreness and hoarseness.

Larynx, the voice box, triangular-shaped cavity located between the trachea and the root of the tongue. Folds in the lining of the larynx form the vocal chords. These are thin bands of elastic tissue that vibrate when outgoing air passes over them, setting up resonant sound waves that are changed into sound by the action of throat muscles, the shape of the mouth and the tongue.

La Salle, René-Robert Cavalier, Sieur de (1643-87), French explorer and fur trader in North America. In 1666 he sailed for Canada to make his fortune. He explored the Great Lakes area and was seigneur of Fort-Frontenac on Lake Ontario (1675). His greatest achievement was exploring the Mississippi River to its mouth (1682) and claiming it for the King of France. He named the adjacent lands LOUISIANA after Louis XIV.

La Scala (Teatro alla Scala), Milan, one of the world's great opera houses. Designed by Giuseppe PIERMARINI, it opened in 1776 and has been the scene of many famous premières, among them Bellini's *Norma*, Verdi's *Otello* and Puccini's *Madame Butterfly*. Arturo TOSCANINI was its artistic director from 1898-1907 and 1921-31, periods considered to be the most brilliant in the theatre's history.

Lascaris, BYZANTINE ruling family of the empire of Nicaea, which was founded by Theodore I Lascaris in 1208. Heirs to the Byzantine Empire, which had been conquered by CRUSADERS, the Lascaris family maintained its small empire until John IV was toppled in 1261.

Las Casas, Bartolomé de (1474-1566), Spanish Dominican friar whose campaign against the use of Indian labour earned him the title "Protector of the Indians". Las Casas succeeded in persuading the Crown to promulgate the New Laws (1542), modifying the ENCOMENDA system. See also pp.1371, 1616.

Las Cases, Emmanuel, Comte de (1766-1842), French historian. He accompanied NAPOLEON into exile to St. Helena, and recorded their conversations. His *Mémorial de St Hélène* is a primary source for Napoleon's last years but is not always reliable.

Lascaux caves, complex of caves in the French Pyrenees, discovered in 1940. They contain examples of 13 different styles, presumably ages, of PALAEO-LITHIC wall paintings. The caves, some of which may have been used for ritual offices, are now closed in order to halt the deterioration of the paintings.

Lasdun, Sir Denys Louis (1914-), British architect of versatility. His works include the Peter Robinson store in the Strand (now New South Wales House) and the Royal College of Physicians, both in London, part of the University of Leicester and the complete development of the new University of East Anglia. In 1963 he was appointed chief architect for the NATIONAL THEATRE.

Laser (optical MASER), source of a narrow beam of intense coherent light or ultra-violet or infra-red radiation, first developed in 1960 by Theodore H. MAIMAN. (The name is an acronym from light amplification by stimulated emission of radiation.) The source can be a solid, liquid or gas. A large number of its atoms are excited to a higher energy state. One photon of radiation emitted from an excited atom can stimulate the emission of

another photon, of the same frequency and direction of travel, which in turn stimulates the emission of more photons. The photon number multiplies rapidly to produce the narrow monochromatic laser beam of very high energy content. It has applications in medicine, scientific research, engineering, telecommunications, holography and other fields. See also p.862.

Lashley, Karl Spenser (1890–1958), us psychologist who did important work on discrimination, learning and kinaesthesia, and on the structures and functions of parts of the brain. He wrote *Brain Mechanisms and Intelligence* (1929).

Laski, Harold Joseph (1893–1950), British political scientist and economist, professor of political science at the London School of Economics (1926–50). Laski was a member of the executive committee of the FABIAN SOCIETY (1921–36) and, active in the Labour Party, served on the National Executive (1937–49) and as Party chairman (1945–46). His works include *Democracy in Crisis* (1933) and *The American Democracy: A Commentary and Interpretation* (1948).

Laski, Marghanita (1915–), British novelist, critic and journalist. Her first novel *Love on the Supertax* (1944) was followed by *To Bed with Grand Music* (1946). Her later works include a novel, *The Victorian Chaise Longue* (1953) and a play, *The Offshore Island* (1959).

Lasky, Jesse (1880–1958), us film producer. In 1913, with Samuel GOLDWYN and Cecil B. DE MILLE, he formed the Jesse Lasky Feature Play Company and had two major successes with *The Squaw Man* (1913) and *The Virginian* (1914). His company expanded and by 1927 he had gained control of the PARAMOUNT PICTURES CORPORATION.

Lassini, Rina (1915–), Canadian writer of poetry and plays, often with religious themes. Her work includes the verse collections *Images et proses* (1941), *Le chant de la Montée* (1947) and the play *Le jeu de la voyagère* (1950).

Las Palmas, full name Las Palmas de Gran Canaria, city on Grand Canary Island, Spain; capital of Las Palmas province. Its port, Puerto de la Luz, is the chief port in the Canary Islands, and one of the busiest in Spain. The city was founded in 1478. It is a popular tourist resort and has fish and fish processing industries. Pop. (1970) 287,038.

Lassa fever, little-understood viral infection, first recognized as a disease in Africa in 1969. The infection can produce wide-ranging symptoms, including high fever, mouth ulcers, heart damage, muscle aches and kidney failure, and can affect almost any part of the body. The disease occurs sporadically and is often fatal.

Lassell, William (1799–1880), British amateur astronomer. He discovered Hyperion, a satellite of Saturn (at the same time as us astronomer George P. Bond); Ariel and Umbriel, satellites of Uranus; and Triton, a satellite of Neptune. See also p.967.

Lasso, Orlando di (c. 1532–94), Flemish composer of madrigals, masses and motets. In the employ of Albert V of Bavaria after 1556, he became famous throughout Europe and is ranked with PALESTRINA as one of the greatest composers of the late 16th century. He composed more than 2,000 works in German, Italian and French.

Last Days of Pompeii, The (1834), novel by Edward Bulwer LYTTON about the love of Glaucus and Ione, contrasting the brutality of the barbarians with the piety of the Christians.

Lastman, Pieter Pieterszoon (1583–1633), Dutch painter of historical and mythological subjects, who worked in Amsterdam. He went to Italy, c.1604, where he was influenced by CARAVAGGIO's use of CHIAOSCURO, and was back in Amsterdam by 1607. He was also an important and influential teacher, whose students included REMBRANDT (1624–25).

Last of the Mohicans, The (1826), novel by James Fenimore COOPER portraying adventures of white Americans and Indians in 1757 during the war between

the French and the Indians. See also p.1772.

Last Supper, in the New Testament, Christ's final meal with His Apostles in Jerusalem just before the Passover. During the meal He instituted the memorial of Himself that is the Christian EUCHARIST, warned the disciples of His imminent betrayal, and gave cryptic indications of His foreknowledge of His own death and resurrection.

Last Supper, The (1495–98), mural oil painting by LEONARDO DA VINCI for the refectory of the monastery of Sta Maria delle Grazie, Milan. A masterly rendering of form and psychological insight, it gives the viewer the sensation of looking into an extension of the refectory where Christ sits among His Apostles.

Last Tycoon, The (1941), unfinished novel by F. SCOTT FITZGERALD. It is the story of a Hollywood film producer, reputedly based on Irving THALBERG, and was itself filmed in 1976.

Lasus of Hermione (6th century BC), Greek choral poet. Known as an instructor of PINDAR, he is credited as one of the developers of the DITHYRAMB form. He was a literary rival of SIMONIDES, but his works have not survived.

Las Vegas, largest city in Nevada, USA. A world-famous gambling and entertainment centre, comprising luxurious casinos, night-clubs and hotels, it derives considerable income from tourists. Las Vegas became prosperous in the 1930s with the construction of the nearby HOOVER DAM. The city is also the commercial centre of a mining and cattle ranching region. Pop. (1973) 144,333.

Lateen rig, sailing rig thought to have been used as early as the 2nd century in the E Mediterranean, employing a short hooked mast with a longer angled cross-piece supporting the sail. The lateen rig is still used on fishing vessels of the Near East and Africa.

La Tène culture, second phase of CELTIC culture, from c. 500 BC to c. 50 BC. Its name comes from La Tène, in Switzerland, an archaeological site discovered in the 19th century. The origin of the culture, which replaced the previous HALSTATT culture, was contact with Greek and Etruscan influences south of the Alps. From them came the characteristic traits of La Tène art – spirals, s-shapes and regular patterns. It was a highly warlike culture, hierarchically organized with kings, a priestly class (the DRUIDS), warriors (especially the gaestatae or spear-carriers), farmers and slaves. La Tène weaponry was late IRON AGE – long swords, heavy knives and lance spears. The La Tène Celts conquered central Europe in the fourth and third centuries, but by 50 BC had themselves submitted to the domination of German invaders from the north and Roman from the south. The La Tène period is generally acknowledged as that of the greatest Celtic attainments. See also pp.1220–1221.

Latent heat, heat absorbed by a substance as it changes its phase – ie goes from the solid state to a liquid or from a liquid to a gas. When ice melts, its temperature remains the same until it has been completely transformed into water; the heat necessary to do this is called the latent heat of fusion. Similarly the heat necessary to transform water into steam at constant temperature is called the latent heat of vaporization. See also p.838.

Lateran, church of St John, the pope's church in Rome, the first-ranking church of the Roman Catholic faith. It was named after a monastery once standing nearby, built on land owned by the Laterani. Part of the Basilica was built possibly before 311 and much of the decoration dates from the Middle Ages.

Lateran Councils, five ECUMENICAL COUNCILS of the Western Church, held in the Lateran Palace in Rome. The first, held in 1123, confirmed the Concordat of Worms of 1122. The second, in 1139, promulgated 30 decrees which among other things, condemned simony and the marriage of the clergy. The third, in 1179, decreed that the pope was to be elected by a two-thirds majority of the College of Cardinals. The fourth council, in 1215,

which was the most important of the Lateran Councils, gave a definition of the doctrine of the EUCHARIST, officially using the term "TRANSUBSTANTIATION" for the first time. The fifth, in 1512–17, introduced some minor reforms in the wake of the Protestant REFORMATION, but left its main causes untouched. The work of this council was carried further by the Council of TRENT. See also pp.1320–1321.

Lateran Treaty (1929), concordat between Italy and the VATICAN. By its terms (confirmed by the Italian constitution of 1948), Italy recognized the Vatican as an independent sovereign state with the pope as its temporal head. Roman Catholicism was affirmed as Italy's official state religion, and the Vatican recognized Italy's claims to the Papal States and Rome.

Laterite, reddish soil found in humid tropical regions. It is produced by the subaerial decay of rocks in leaching and oxidizing conditions. It contains either or both iron oxide and aluminium hydroxide, and may be used as an ore of either metal if the concentrations are sufficiently high.

Latex, milky fluid produced by certain plants, the most important being that produced by the RUBBER tree. Rubber latex is a combination of gum resins and fats in a watery medium. It is used in paints, special papers and adhesives, and to make sponge rubbers. Synthetic rubber latexes are also produced. See also p.588.

Lathe, machine tool that turns a work-piece (either wood or metal) against a cutting tool in order to shape it. See also p.409.

Lathrop, Rose Hawthorne (1851–1926), us philanthropist and writer. She founded St Rose's Free Home for Incurable Cancer in New York City and the Rosary Hill Home in Hawthorne, N.Y., a town named in her honour. After her husband's death in 1898 she became a nun taking the name Mother Alphonsa. She wrote *Along the Shore* (1888) and *Memories of Hawthorne* (1897).

Latimer, Hugh (c. 1485–1555), English clergyman and Protestant martyr. He first became prominent by defending Henry VIII's divorce from Catherine of Aragon and in 1535 was made Bishop of Worcester. A man of strong Protestant convictions, he strongly disapproved of the temporary reaction in favour of Catholicism, and resigned his see in 1539. With the accession of Edward VI (1547) he resumed preaching against the abuses of Church and clergy. When the Roman Catholic Mary came to the throne (1553) he was charged with heresy and, refusing to recant, was burned at the stake.

Latin America, those parts of North, Central and South America (excluding French-speaking Canada) where the official or chief language is a ROMANCE LANGUAGE.

Latin cross, in architecture, a building, usually a church, in the form of a cross with three short arms and a long arm.

Latin Empire of the East, name used to describe the BYZANTINE EMPIRE during the period 1204–61. In 1204 Constantinople fell to the soldiers of the fourth crusade, and their leaders maintained a precarious hold on the city until 1261, when Michael VIII Palaeologus regained it.

Latin language, Indo-European language originally spoken by the inhabitants along the lower River Tiber, central Italy. Its earliest written record dates back to the 6th century BC. It was spoken by the inhabitants of Rome, whose domination of Italy made Latin the chief language of that country by the 3rd century BC. By the 1st century BC a literary version of Latin had developed, more complex than the spoken language, which from the 3rd century AD is known as Vulgar Latin. Literary Latin was at its richest 70 BC–AD 18. With such works as the translation of the Bible into Vulgar Latin by St Jerome at the turn of the 4th century, that form too assumed a literary aspect, increasingly divorced from the spoken language. Latin was spoken throughout the Roman Empire, and despite the barbarian invasions of the 5th and 6th centuries it formed the basis of the languages spoken in much of the Empire N of the Mediterranean. These

ROMANCE LANGUAGES became distinct from Latin by the 9th century. Latin remained the language of the Church, and therefore of education and most written transactions in Europe throughout the Middle Ages, and was used in some scholarly and diplomatic circles until the 19th century. Roman Catholic Church services were conducted in Latin until the 1960s. See also p.1879.

Latin literature, literature of ancient Rome. The earliest works of Latin literature were imitations of Greek plays and epic poetry by LIVIUS ANDRONICUS and NAEVIUS in the 3rd century BC. One of Rome's greatest dramatists, PLAUTUS, wrote in a similar style in the early 2nd century BC. Latin literature reached its peak in terms of style in the 1st century BC, with CICERO's rhetoric, CAESAR's histories, and CATULLUS's lyric poetry. VIRGIL's epic poem the *Aeneid* secured the mythology of the origins of Rome, and LIVY produced a full history of the republic. This Golden Age of Latin literature ended soon after the death of AUGUSTUS in AD 14. In the following century SENECA the Elder wrote concise philosophy, TACITUS' contemporary history was incisive and accurate, and PETRONIUS satirized contemporary life. Others, such as PLINY the Elder, described life and natural phenomena with detachment. After c. AD 100, Latin literature began to decline, until it was taken up again by the Christian authors such as St AUGUSTINE.

Latitude and longitude, imaginary lines on the Earth's surface; they form a system of co-ordinates that define the position of any point on Earth, measured in degrees. Lines of latitude, parallel with the equator, measure the distance N or S of the equator, one degree of latitude being equal to approx. 110km (70 miles). Lines of longitude measure the distance along the equator E or W from the prime meridian or 0°, which passes through Greenwich, England. Latitude and longitude are also used in celestial co-ordinate systems. See also pp.242, 242.

Latium, historic district in central Italy, inhabited by the Latini. It was bordered by Etruria (NW), Campania (SE) and the Tyrrhenian Sea (W). Augustus made Latium and Campania the first of the 11 administrative divisions of Italy, and the latter name prevailed after AD 292.

Latosol, type of soil, reddish in colour occurring widely in tropical countries. It shows little differentiation into soil horizons and has poor fertility. See also pp.660–661, 661.

La Tour, Georges de (1593–1652), French painter of religious and genre scenes. His early style was influenced by MANNERISM; examples include *St Jerome*. Later he was influenced by CARAVAGGIO; his later works include *Christ and St Joseph in the Carpenter's Shop* (c. 1645) and the *Lamentation over St Sebastian* (1645). *Job and his Wife* is an early example of his nocturnal scenes, in which forms are dramatically lit by a candle or another concealed source of lighting.

La Tour, Maurice Quentin de (1704–88), French painter, who was popular as a pastel portraitist. His works include a portrait of *Mme de Pompadour* (1756).

Latrobe, Benjamin Henry (1766–1820), British architect who emigrated to the USA in 1796. His chief work is Baltimore Cathedral (1806–18). He also designed part of the Capitol, Washington, DC.

Latver-day Saints. See MORMONS.

Latvia (Latvijasķaja SSR), constituent republic of the USSR bordered by the Estonian (N) and Lithuanian (S) republics; the capital is Riga. It is a fertile, low-lying region in NE Europe drained by the River Dvina and largely composed of forests and lakes. The main occupation is farming on a collective basis. The area was conquered by the Germans and Swedes and passed to Russia in the 18th century. It was occupied by the Germans in WWII and was retaken by Soviet troops in 1944. Area: 63,700sq km (24,595sq miles). Pop. (1976) 2,499,000.

Latvian, or Lettish, language spoken principally in the Latvian SSR of the USSR. Together with Lithuanian it forms the

Laud, William

If they had ruled still, where had we been?
William Laud was attacked in woodcuts for his quasi-Catholic practices.

Niki Lauda receiving an award for valour in sport at the Mansion House, London.

Max von Laue studied crystal structures by the measurement of X-ray diffraction.

Laurel and Hardy in a scene from their period film *The Devil's Brother* (1933).

East Baltic subgroup – the oldest western form of the Indo-European language family. There are approximately 1.5 million speakers.

Laud, William (1573–1645), Archbishop of Canterbury (1633–45). Laud considered the Church of England to be a branch of the universal church, claimed apostolic succession for bishops and believed that the Anglican ritual should be followed strictly in all churches. Working closely with Charles I, he sought to remove PURITANS from important positions in the Church. Laud was impeached (1640) by the LONG PARLIAMENT. The House of Lords found him innocent of treason but the Commons condemned him to death under a bill of attainder. *See also* p.1421.

Lauda, Niki (1949–), Austrian motor racing driver who, driving for Ferrari, won the world drivers' championship in 1975 and 1977. In 1976, when he was second, he suffered near-fatal burns and injuries in an accident at the German Grand Prix, yet was racing again 42 days later.

Laudanum, alcoholic tincture of OPIUM, prepared from granulated opium and formerly used to treat diarrhoea. In the 19th century, opium addicts such as DE QUINCEY frequently used laudanum. The name was originally given by PARACELSUS in the 16th century to a preparation made of gold and pearls mixed with opium.

Lauder, Sir Harry MacLennan (1870–1950), Scottish singer. His dress usually included a kilt and tam-o'-shanter, and he sang original ballads and comic songs, such as *Roamin' in the Gloamin'* and *I Love a Lassie*. The highest paid music-hall star of his day, he entertained in the British Isles, Australia and the USA. He was knighted in 1919.

Lauderdale, John Maitland, 1st Duke of (1616–82), Scottish political figure. A royalist, he was captured at the Battle of Worcester (1651) and imprisoned until 1660. He became chief administrator in Scotland (1660–80) at the restoration of CHARLES II. An able but dissolute man, his harsh rule in Scotland made him one of the most unpopular statesmen of the period.

Laudians, Church party in the reign of CHARLES I of England, followers of William LAUD, Archbishop of Canterbury. By supporting Laud's attempt to enforce uniformity of worship in an Anglo-Catholic direction, they helped to increase the opposition to Charles I.

Laudon, Gideon Ernst Freiherr von (1717–90), Austrian general. In the SEVEN YEARS WAR he defeated the Prussians at Kunersdorf (1759), Landshut (1760) and Schweidnitz (1761). He later fought in the War of the Bavarian Succession.

Laudonniere, René Goulaine de (fl. 1562–82), French colonist. In 1564 he established a French colony at the mouth of the St Johns River in Florida, which was named Fort Caroline. By 1565 the colony was in ruinous disorder due to the enmity of the Indians without and mutiny within, and he narrowly escaped when most of the colony was murdered by the Spaniards.

Laue, Max Theodor Felix von (1879–1960), German physicist. He became professor at Zurich and later director of the Institute for Theoretical Physics in Berlin. Using IONS in a crystal as a grating, he produced X-RAY interference patterns, thus elucidating the nature of X-rays and providing a method of investigating crystal structure. This research won for him the 1914 Nobel Prize in physics. His work indicated that X-rays are ELECTROMAGNETIC RADIATIONS.

Laughing Cavalier, The, portrait by the Dutch painter Franz HALS. It was painted in 1624 and is now in the Wallace Collection in London. The subject's eyes look straight forward from the painting, although his body is turned obliquely. This creates the illusion that his gaze follows the viewer round the room.

Laughing gas. *See* NITROUS OXIDE.

Laughton, Charles (1899–1962), British stage and film actor. His stage debut was in 1926 and his film career began a year later. His voice control and intellectual gifts made him a great character actor, and he was the first British actor to appear at

the Comédie Française. His films include *Mutiny on the Bounty* (1935) and *The Hunchback of Notre Dame* (1939). Later he directed the film *The Night of the Hunter* (1955).

Launch pad, complex of buildings and equipment used to launch a rocket or space vehicle and comprising a block-house, storage tanks, gantry, or service tower, umbilical lines and exhaust deflector. *See also* p.1022.

Lauraceae, large family of flowering plants, mostly evergreen shrubs and trees, including BAY and CHERRY LAUREL; it is represented in warm and temperate regions throughout the world. The leaves are often thick and leathery; the flowers are generally green and are followed by berries. The laurel family also includes CINNAMON and CAMPHOR.

Laurana, Luciano (c.1420–79), Dalmatian architect who became chief architect at the humanist court of Federico da Montefeltro, Duke of Urbino, an enlightened patron of the arts. Together they set about transforming the Ducal Palace at Urbino into the most beautiful of Renaissance palaces, creating a building of Classical purity and completeness. Laurana's masterpiece was the great courtyard of the palace – precise in proportion and detail. Its impression of lightness is obtained by the arcading supported on its slender CORINTHIAN columns.

Laurasia, the ancient northern continent containing North America and Eurasia that formed when a rift, the Tethyan trench, split PANGAEA (the Earth's single original land mass) from east to west along a line slightly north of the Equator. The name is a combination of Laurentian, a geological period in North America, and Eurasia. *See also* pp.198–201.

Laurel. *See* BAY; CHERRY LAUREL.

Laurel and Hardy, US comedy team who starred in more than 200 films. Stan Laurel (1890–1965) (real name Arthur Stanley Jefferson), a British-born gag inventor and director, was the thin, bumbling oaf. The American Oliver Hardy (1892–1957) was the fat, pompous lady-chaser. Their best films, made before 1941, include *Leave 'em Laughing* (1928), *The Music Box* (1932) and *Way Out West* (1937).

Laurence, Margaret (1926–), Canadian author of penetrating emotional novels. Although she has lived in Africa and England, many of her novels are set in the Canadian West. Her books include *The Stone Angel* (1964) and *A Bird in the House* (1970).

Laurencin, Marie (1885–1956), French painter, designer and illustrator. Her paintings, typically of women and girls, are marked by serenity and gentleness. They include *Portrait* (1913) and *La Femme au Chien* (1938).

Laurier, Sir Wilfrid (1841–1919), Prime Minister of Canada (1896–1911) and the first French Canadian to lead a federal party – the Liberals (1887–1919). Laurier opposed "clerical" politics and was an exponent of trade tariffs. He campaigned for clemency towards the RIEL rebels and supported Canada's involvement in WWI. *See also* p.1615.

Lauri-Volpi, Giacomo (1894–1979), Italian tenor. He studied in Rome and made his debut in 1920 in Massenet's opera *Manon*. He sang at the Metropolitan Opera in New York (1923–34) and appeared in more than 233 performances in 26 roles.

Lausanne, city in W Switzerland on Lake Geneva; capital of Vaud canton. Originally a Celtic settlement, it became an episcopal see in the 6th century and was ruled by the prince-bishops until 1536, when it was conquered by Bern and accepted the Reformation. At one time the home of VOLTAIRE and ROUSSEAU, it has a notable Gothic cathedral (1275) and a university (1891). Industries: leather, brewing, chemicals, woodworking. Pop. (1979) 131,000.

Lausanne, Treaty of (1923), agreement signed at Lausanne, Switzerland, which abrogated the harsh Treaty of SEVRES (1920) imposed on the collapsing OTTOMAN EMPIRE and ended the war between

Greece and Turkey. Turkey was granted full sovereignty over mainland Turkey and renounced claims to Greek islands in the Aegean Sea. Britain obtained Cyprus, and Italy obtained Rhodes and the Dodecanese Islands.

Lautaro (c.1530–57), Indian who led the Araucanian Indians in their almost successful attempt to regain a central Chile from the Spanish. In 1553, Lautaro totally destroyed an army under Pedro de VALDIVIA, but in 1557, he was killed at the battle of Peteron.

Lautrec, Henri Toulouse. *See* TOULOUSE-LAUTREC, HENRI.

Lava, molten rock or magma that reaches the Earth's surface and flows out through a volcanic vent in streams or sheets. There are three main types of lava: vesicular, like pumice; glassy, like obsidian; and even-grained. Chemically, lavas range from acidic to ultrabasic, although the majority of all lavas are basic. Basic lavas have a low viscosity and flow easily, covering large areas. Acid lavas are highly viscous and rarely spread far. *See also* pp.204–205, 204–205.

Laval, Carl Gustaf Patrik de (1845–1913), Swedish inventor whose inventive talent extended over various disciplines including aerodynamics, electric lighting and metallurgy. His most notable inventions were a high-speed cream separator and its steam-powered turbine, and a milking machine.

Laval, Pierre (1883–1945), French political figure. At first a socialist, he moved steadily to the right as he progressed through ministerial appointments to become Prime minister (1931–32, 1935–36). In 1940 he entered the government of Marshal PÉTAIN at Vichy and became its head in 1942. His capitulation to German demands earned him bitter hostility from some sections in France. He was executed for treason when WWII ended.

Laval, city in s Quebec province, Canada, on the Île-Jésus at the confluence of the Ottawa and St Lawrence rivers. Laval was created in 1965, when 14 small communities on the islands were combined. Mainly a residential suburb of Montreal, which lies across the river to the se, Laval has iron and steel, paper products, machinery and pharmaceutical industries. Pop. (1976) 200,037.

Laval de Montmorency. *See* MONTMORENCY-LAVAL.

Lavalleja, Juan Antonio (1784–1853), Uruguayan revolutionary. Commander-in-Chief of Uruguayan forces during the conflict with Brazil (1825–28), he emerged as a dominant political figure after the war, helping Manuel Oribe lead the faction known as the Blancos (Whites) against Fructuoso RIVERA's Colorados (Reds) during the Civil War (1839–1851). These rival groups have dominated Uruguayan politics to the present day.

La Vallière, Louise Françoise de la Baume le Blanc, Duchesse de (1644–1710), French mistress of LOUIS XIV for whom she had four children. She was supplanted by Madame de MONTESPAN and in 1674 retired to a Carmelite nunnery.

Lavender, any of several aromatic herbs or small shrubs of the genus *Lavandula* of the mint family Labiata. *L. spica* (or *L. officinalis* or *L. vera*) is a Mediterranean woody perennial grown as an ornamental. When dried, its fragrant flowers are used to perfume linens and clothing; both flowers and leaves are used in making lavender water. *See also* pp.372, 586.

Lavengro (1851), largely autobiographical novel by George BORROW which describes the youth and later wanderings of a scholarly man who is interested in languages and foreign lands. He meets and travels with a family of gypsies. This book, like its sequel *The Romany Rye* (1857), draws strength from Borrow's intimate knowledge of gypsies and his evocations of life in the wilder places of Europe.

Laver, Rodney George ("Rod") (1938–), Australian tennis player. He won the US (1962, 1969), British (1961, 1962; 1968, 1969), Australian (1960, 1962, 1969) and French (1962, 1969) singles championships, becoming the first

man to win the "Grand Slam" twice (1962, 1969). Laver turned professional in 1963, and in 1970 became the first professional tennis player to achieve the two-million-dollar mark in total earnings.

Laver, any of several edible maroon gelatinous seaweeds especially the Asian *Porphyra umbilicus*, which is pressed and dried for use in cooking. In Europe, red laver (*P. vulgaris*) may be stewed or pickled. See also RED ALGAE; p.359.

Laveran, Charles Louis Alphonse (1845–1922), French physician. He contributed greatly to tropical medicine and was awarded the 1907 Nobel Prize in physiology and medicine for his work on the role played by PROTOZOA in causing diseases. Laveran discovered the parasite responsible for MALARIA.

Lavigerie, Charles Martial Allemande (1825–92), French Roman Catholic cardinal. After serving the Church in France he was appointed Archbishop of Algiers in 1867. He was noted for his anti-slavery campaign and missionary work among the Muslims. In 1868 he established the WHITE FATHERS, a Society of Missionaries of Africa, in his quest for the Christian conversion of the continent.

Lavinia, in Roman mythology, daughter of Latinus, King of the people of LATIUM. She married AENEAS, who built the city of Lavinium in her honour. Her jealousy caused the suicide of Anna, Dido's sister, who had sought refuge with Aeneas.

Lavoisier, Antoine Laurent (1743–94), French chemist. His careful experiments enabled him to demolish the PHLOGISTON theory by demonstrating the function of oxygen in combination. He named both oxygen and hydrogen and showed how they combined to form water. In collaboration with BERTHOLLET and others he published *Methods of Chemical Nomenclature* (1787), which laid down the modern method of naming substances. His *Elementary Treatise on Chemistry* (1789) established the basis of modern chemistry. He was guillotined during the Revolution. See also pp.775, 888.

Law, Andrew Bonar. See BONAR LAW, ANDREW.

Law, Denis (1940–), British footballer who played for Huddersfield Town, Manchester City, Torino (Italy), Manchester United and then Manchester City again. He also played many times for Scotland, scoring a record 30 goals. During the 1960s Law was one of the most effective forwards in the world.

Law, John (1671–1729), Scottish economist, who went to France after his monetarist theories were rejected in Britain in 1700. He inaugurated the "Mississippi Scheme" for American colonization. He founded a bank in 1716 which became the Banque Royale in 1718, and he became French controller-general of Finance (1720). Speculation in the shares of his Mississippi Company, however, brought about his ruin in 1719–20, and he lived in Venice until his death.

Law, William (1686–1761), British clergyman and writer. One of the NONJURORS, Law was deprived of his fellowship in Emmanuel College, Cambridge, and lost all hope of advancement in the Church. In consequence, he retired to a life of private devotion, writing on controversial theological issues of current interest. In the field of devotional writing, his *Serious Call to a Devout and Holy Life* (1728) ranks high and influenced John WESLEY.

Law, system of rules governing human society, enforced by punishments specified by society itself. The major systems of law operating in the world are common law, Roman law and equity. See also p.1870.

Law, civil. See CIVIL LAW.

Law, constitutional. See CONSTITUTIONAL LAW.

Law, criminal. See CRIMINAL LAW.

Law, international. See INTERNATIONAL LAW.

Law Courts, since 1925 officially called the Royal Courts of Justice, in the Strand, London. The business of the superior courts of England is transacted there. In 1858 a parliamentary commission recommended that buildings be erected to bring

together in one place all the superior courts of law and equity, the probate and divorce courts and the court of admiralty. The scheme was adopted in 1865. In a public competition the design of George Edmund Street, in the Gothic revival manner, was chosen for the new buildings. They were officially opened in 1882.

Law enforcement. See POLICE FORCES.

Lawes, Henry (1596–1662), English composer who became a Gentleman of the Chapel Royal in 1626 and who fought as a ROYALIST in the Civil War, in which his brother William (also a musician) was killed. In 1634 he arranged the music for John MILTON's masque *Comus*; he also set many of the poems of Robert HERRICK to music. He composed many songs and anthems, including *Zadok the Priest* (1662) for the coronation of Charles II.

Lawes, Sir John Bennett (1814–1900), English agriculturist who pioneered the manufacture of artificial fertilizers. He set up a factory for the production of superphosphates in 1842. His researches helped to establish agriculture as a science, and Lawes founded the Rothamsted Experimental Station in 1843.

Lawler, Ray (1921–), Australian playwright and actor who played the leading role, Barney Ibbot, in his *Summer of the Seventeenth Doll* (1956). Other works include *The Piccadilly Bushman* (1959) and *A Breach in the Wall* (1970).

Lawless, Emily (1845–1913), Irish novelist. Her writings include the novels *Hurricane* (1886) and *Grania* (1892) and the verse collection *With the Wild Geese* (1902).

Law Lords, group of peers in Britain. They comprise the Lord CHANCELLOR, Lords of Appeal in Ordinary (life barons of judicial experience appointed to assist the House of Lords in the hearing of appeals), ex-Lord Chancellors and other peers who have held high judicial office. The Law Lords constitute the House of Lords when it sits as a court of appeal.

Lawn tennis, ball game played by either two (singles) or four (doubles) players. It is played with a cloth-covered rubber ball about 6.55–6.8cm (2.58–2.67in) in diameter. Each player wields a racket for which there are no official specifications. Generally however, it has an oval-shaped top, about 25cm (10in) in diameter, strung with gut, and a handle about 41cm (16in) long. It is commonly made of wood, although steel and graphite rackets were introduced in the mid-1960s. The game is played on a court 23.8m (78ft) by 8.2m (27ft) for singles. For doubles play the court is widened to 11m (36ft). It is bisected by a net 0.9m (3ft) high at the centre and 1.1m (3.5ft) at the sideposts which hold it. On each side of the net there are two service areas marked by rectangular lines 6.4m (21ft) long from the net and 4.1m (13.5ft) wide from the centre. The ball is put into play by the server, who is allowed two attempts to hit it into the opposite service court. The first service of each game is delivered from the right-hand court of the server into his opponent's right-hand service area. Thereafter, the service alternates from left to right. One player serves for a complete game. If the opponent returns the ball safely, play continues until one player fails to hit the ball, hits it into the net or hits it outside the confines of the court; his opponent then wins the point. A minimum of four points are required to win a game, which must be won by two clear points. A minimum of six games must be won to win a set, which must be won by two clear games (although recently tie-break games have been introduced at six games all or eight games all). In leading championships, men's matches are won by the best of five sets, women's matches by the best of three. Modern lawn tennis evolved from REAL TENNIS in England in the 1860s. The first lawn tennis club was formed at Leamington Spa in 1872. The first WIMBLEDON championships were held in 1877.

Lawrence, Charles (1709–60), British soldier and governor of Nova Scotia (1756–60). He founded the town of Lunenburg, (1753), ordered the

deportation of the ACADIAN French (1755) and commanded a brigade at the siege of Louisbourg (1758).

Lawrence, David Herbert (1885–1930), British writer, whose views on sex and the dehumanizing effects of industrialized Western culture made him a controversial figure. A coal-miner's son, he escaped the pits by continuing his education and began his career as a teacher. His first poems were published in the *English Review* (1909), followed in 1911 by his first novel, *The White Peacock*. In 1912 he eloped with Mrs Frieda Weekly (née von Richthofen), a German noblewoman, and later married her. During WWI they were suspected of being spies. Lawrence was tubercular for most of his life but continued to write and to travel. His novels include *Sons and Lovers* (1913), *The Rainbow* (1915), *Women in Love* (1920), and *Lady Chatterley's Lover* (1928), at one time banned in Britain and the USA for its explicit sexual descriptions. He also wrote short stories, including *St Mawr*, *Sun and The Woman who Rode Away*.

Lawrence, Ernest Orlando (1901–58), US physicist. He became professor at the University of California where he built the first CYCLOTRON, a sub-atomic particle accelerator. His invention earned him the 1939 Nobel Prize in physics. The element LAWRENCIUM was named after him. See also p.819.

Lawrence, Gertrude (1898–1952), British actress, comedienne, singer and dancer. A spirited and much loved figure of the US and English stages, she made her New York debut in *Charlot's Revue* (1924), with Beatrice LILLIE, and appeared with Noël COWARD in *Private Lives* (1930) and *Tonight at 8.30* (1934–36). She starred on Broadway in Rodgers and Hammerstein's prizewinning production *The King and I* (1951). In 1945 she wrote her autobiography, *A Star Danced*.

Lawrence, James (1781–1813), US naval hero. During the War of 1812, while a commander of the *Chesapeake*, he was mortally wounded by fire from the British frigate *Shannon* in Boston Harbour and uttered the slogan "Don't give up the ship", which became a popular battle cry.

Lawrence, John Laird Mair Lawrence, 1st Baron (1811–79), British colonial official. He entered the administration of India in 1830 and aided British expansion during the SIKH WARS. He also kept the Punjab out of the INDIAN MUTINY. He became Viceroy and Governor-General of India in 1864.

Lawrence, Sir Thomas (1769–1830), British painter, mainly of portraits. The high quality of his artistic style shows the influence of Joshua Reynolds, as in *Miss Farren*, painted when Lawrence was 20. In 1972 he succeeded Reynolds as painter to the king. Well-known portraits by him include *Queen Charlotte* (c.1789) and *J.P. Kemble as Hamlet* (1801).

Lawrence of Arabia. See LAWRENCE, THOMAS EDWARD.

Lawrence, Thomas Edward (1888–1935), British archaeologist, soldier and author known as Lawrence of Arabia. He worked on the excavation of a Hittite settlement in the Euphrates valley from 1911 until 1914, when he became an intelligence officer in Cairo. He joined the Arab revolt against the Turks in 1916, and proved himself an extremely successful guerrilla fighter, leading Arab forces first into Aqaba (1917) and then into Damascus in October 1918. Disillusioned by the repeated failure of his plans for an independent Arab state, and disturbed by his war experiences, he finally sought obscurity in the ranks of the RAF as T.E. Shaw. In 1926 he published his memoirs of the Arab revolt as *The Seven Pillars of Wisdom*. He also translated the *Odyssey* (1932). He died of injuries sustained in a motorcycle accident.

Lawrencium, radioactive metallic element (symbol Lr) of the ACTINIDE group, first made in 1961 by bombarding CALIFORNIUM with boron nuclei. The element has been made in only trace amounts but has been identified chemically. Properties: at. no. 103; most stable isotope Lr²⁵⁶ (half-life 8 sec.).

Lavender; blue and white flowers of the species *Limnium*, known as statice.

Antoine Lavoisier was a chemist who devised many chemical symbols.

Law courts; the main entrance to the Royal Courts of Justice, opened in 1882.

Lawn tennis championships at Wimbledon were played for the first time in 1877.

Lawrie, Lee

Lawrie, Lee (1877–1963), US sculptor. He attended Yale University where he also taught. He sculpted many large figures for public buildings, churches and office buildings, including the gigantic figure of Atlas that stands in front of the Rockefeller Center's International Building in New York City.

Laws of Motion. See MOTION, LAWS OF.

Lawson, Henry Archibald (1867–1922), Australian writer regarded by his fellow-countrymen as the most representative of the period of Australia's emergence into nationhood. His short stories represent his finest work, although his popular verse made him the laureate of the Australian concept of "mateship".

Lawson, John (d. 1711), English pioneer in North America. He made extensive explorations of North Carolina and helped to establish the settlements of Bath and New Bern. Appointed surveyor-general in 1708, he was captured and killed during the Tuscarora Indian uprising.

Lawson, Sir John (d. 1665), English naval commander who fought against the Barbary pirates. Imprisoned briefly by Oliver Cromwell for plotting against him, Lawson became Commander-in-Chief of the English fleet after the fall of Richard Cromwell (1659).

Lawson, John Howard (1895–), US dramatist. He viewed the theatre as a means of changing society. In the 1920s he wrote experimental plays such as *Processional* (1925), and co-founded the Workers' Drama League (1926) and the New Playwrights (1927). His Hollywood screenplays include *Blockade* (1938), *Sahara* (1943) and *Counterattack* (1945). He wrote *Theory and Technique of Playwriting* (1936, revised 1949).

Law terms, known since 1813 as sittings, division of legal year into sittings of the courts. They are the Hilary sitting (Jan.-March), The Easter sitting (April-May), the Trinity sitting (June-July) and the Michaelmas sitting (Oct.-Dec.).

Lawton, Thomas ("Tommy") (1919–), British footballer who played for Everton, Chelsea, Notts County, Brentford, Arsenal and England. From 1938 to 1948 he played in 23 internationals. One of the most popular forwards of his day, he was a strong player: he had a powerful shot and was also a good header of the ball.

Laxness, Halldór Kiljan (1902–), Icelandic novelist. He was awarded the 1955 Nobel Prize in literature for his novels about the poor and underprivileged of the fishing villages and farms of Iceland. He became a socialist and after 1930 his works, written in the traditional style of the epics, aroused controversy. His novels include *The Great Weaver of Kashmir* (1927), *Salka Valka* (1931–32), *Independent People* (1935), *The Atom Station* (1948) and *Paradise Reclaimed* (1962).

Layamon (fl.c.1200), MIDDLE ENGLISH poet. He was a priest attached to the church at Ernelley, in Worcestershire, England. His most famous work, *Brut*, is a chronicle in verse of the history of Britain and is a major source for the Arthurian legend.

Layard, Austen Henry (1817–94), British archaeologist, b. France, whose work in excavating Mesopotamian areas, especially the site of Nineveh, helped to further knowledge of Babylonian and Assyrian cultures. Many of his discoveries are in the British Museum. After 1852 he served as a diplomat and politician.

Laye, Evelyn (1900–), British actress and singer who established her reputation in light musical comedy in a season of *The Merry Widow* in 1923 and whose popularity was at its peak in the 1920s and 1930s. After WWII, she remained popular, and continued to play regularly on the West End stage in *Charlie Girl* (1969) and in situation comedies such as *No Sex Please—We're British* (1971–73).

Laying, method of plant propagation that induces or encourages root formation on a stem or branch while it is still attached to the parent plant; BLACKBERRIES and LOGANBERRIES multiply naturally in this way. See also pp.674, 674, 716.

Lay of the Last Minstrel, The (1805), poem by Sir Walter Scott, a ROMANTIC narrative poem, set in the Scottish borders.

Lay Reader, modern term for the Anglican Reader, who performs certain duties for the regular clergy ranging from lesson-reading, preaching and reading of morning and evening prayers (except the Absolution) to administration of the chalice at Holy Communion. This office was regulated by Convocation in England in 1905, and is reviewed frequently.

Lays of Ancient Rome, volume of poetry published by Thomas Babington Macaulay in 1842. They are long epic poems, written in a heavy rhetorical style. The most famous of them is *Horatius*.

Layton, Irving (1912–), Canadian poet. He was born in Romania, and moved to Montreal as an infant. His poetry, which covers a variety of topics and moods, includes *The Improved Binoculars* (1956) and *Balls for a One-Armed Juggler* (1963).

Lázár, György (1924–), Hungarian politician and economist. He became Minister of Labour (1970–73) and Deputy Prime Minister (1973–75), and was appointed Prime Minister (1975–).

Lazarillo de Tormes (1554), novel doubtfully attributed to Diego Hurtado de Mendoza. One of the first picaresque novels, its success established the genre. Its depiction of the clergy caused the unexpurgated edition to be banned.

Lazarists, name given to members of the Congregations of the Mission, a Roman Catholic religious order. It was founded by St Vincent de Paul in Paris in 1625, and later moved to the priory of St Lazarus.

Lazarfeld, Paul Felix (1901–), US sociologist. He is important for his contributions to social research techniques, and is well-known for his study of the behaviour of voters, *The People's Choice* (1944). Among his other books is *Qualitative Analysis* (1972).

Lazarus, name of two men in the New Testament. In John 11:1–44, Lazarus is the brother of Mary and Martha of Bethany. Jesus miraculously restored him to life four days after his death. In Luke 16:19–31 Lazarus is the poor man in Christ's parable about a beggar and a rich man.

Lazio. See LATIUM.

L-dopa, also known as levodopa, drug used to alleviate some of the symptoms of PARKINSON'S DISEASE. It sometimes suppresses trembling, ataxia and the slow movement which characterize the condition. Parkinsonism is believed to result from a depletion of dopamine in the brain, but treatment with dopamine is ineffective as it will not cross the physiological barrier between the blood and the brain. L-dopa does cross this barrier, however, and is converted to dopamine in the brain. The side-effects of L-dopa may be serious and include cardiac irregularities and nausea.

Lea, Charles Henry (1825–1909), US historian. His *History of the Inquisition in the Middle Ages* (3 vols, 1888) is still considered the standard work on the subject.

Leach, Bernard (1887–1979), one of the most influential English artist potters of the 20th century. He studied (1909–20) in Japan, where he gained a high reputation. In 1920 he established a pottery at St Ives, Cornwall, which became the most important centre of English art pottery. Leach rediscovered many traditional techniques of English pottery and his designs, simple and beautifully proportioned, are a mixture of English and Japanese influences. His son David (1911–) worked with Bernard Leach until 1955, when he started his own pottery at Bovey Tracey, Devon.

Leach, Sir Edmund Ronald (1910–), British social anthropologist. He studied and wrote on Burmese and Ceylonese (Sri Lankan) political and social systems and is well known for his books *Rethinking Anthropology* (1961) and *Genesis as Myth* (1970).

Leach, Johnny (1922–), British table-tennis player who won the world singles title in 1949 and 1951, and helped the England team to win the Swaythling Cup

in 1953. He never won the English Open singles but won two doubles titles (1951, 1953) and four mixed doubles (1950, 1952, 1954, 1956).

Leaching, in geology, removal from solid of soluble and other minerals by the prolonged action of drainage water. This generally decreases soil fertility, but saline soils can be reclaimed for agriculture by deliberately leaching out salts.

Leacock, Stephen Butler (1869–1944), Canadian man of letters, b. Britain. He is best known as a humorist and his *Literary Lapses* (1910) are delightful for their gentle satire and love of the absurd. He also wrote *Sunshine Sketches of a Little Town* (1912) and an incomplete autobiography *The Boy I Left Behind Me* (1946). He taught economics and political science at McGill University, Montreal, and also wrote critical studies of Mark Twain (1932) and Charles Dickens (1933). See also p.800.

Lead, metallic element (symbol Pb) of group IVA of the periodic system, known from ancient times. Its chief ore is GALENA (lead sulphide), from which lead is obtained by roasting. It is used in plumbing, batteries, cable sheaths and alloys such as solder and type metal. The element is used in making the petrol additive TETRAETHYL LEAD. It is also used as a shield for X-rays and other radiation. Chemically, it is unreactive and resists corrosion. Properties: at.no. 82; at.wt. 207.19; s.g. 11.3; m.p. 327.5°C (621.5°F); b.p. 1,750°C (3,182°F); most common isotope Pb^{208} (52.3%).

Leadbelly (1888–1949), US composer and blues singer, real name Huddie Ledbetter. Folklorist John A. Lomax discovered him in prison where he was serving a sentence for attempted murder, and used his songs for a book *Negro Folk Songs as Sung by Lead Belly* (1936). He is best known as the composer of many classic blues songs including *Goodnight Irene*, *The Midnight Special* and *Rock Island Line*. See also p.1756.

Lead poisoning, condition caused by absorption of lead by the digestive tract, lungs or skin. It occurs among children who eat flakes of paint containing lead among workers in industries using lead and in areas near busy motorways, where the lead comes from TETRAETHYL LEAD, an anti-knock additive in most petrol. Its first symptoms, such as constipation, anaemia and irritability, often go unnoticed until serious effects such as convulsions occur. If untreated it can be fatal.

Lead sulphide, compound of LEAD, formula PbS, occurring naturally as the mineral GALENA. It is a toxic, black powder, insoluble in water, used as a semiconductor and in ceramics.

Leadwort, popular name for a family of herbs and shrubs (Plumaginaceae) found in the dry regions of the Mediterranean and Central Asia. They include thrift, sea lavender and plumbago, each of which has a flimsy, spherical flower.

Leaf, part of a plant, an organ that contains the green pigment CHLOROPHYLL and is involved in PHOTOSYNTHESIS and TRANSPIRATION. It consists of a blade and a stalk (petiole), which attaches it to a stem or twig. Most leaves are simple; some are compound, and divided into leaflets. Modifications include succulent types with fleshy tissue for water storage, tendrils that coil around supports, and needles, common in conifers. See also pp.356–357.

Leaf beetle, small, oval BEETLE that feeds on leaves. Many, including the COLORADO BEETLE (*Leptinotarsa decemlineata*), are yellow with black markings. This beetle does great damage to potato crops and in many countries the government must be informed of infestation. See also p.43.

Leaf hopper, any of numerous species of small, slender insects of the family Cicadellidae. A leaf hopper feeds by sucking the sap of plants and may, in large numbers, do great damage. Many species are brightly coloured. See also p.314.

Leaf insect, any of several species of flat, green insects which bear a resemblance to leaves. Leaf insects are found throughout

tropical Asia. The female has large leathery fore-wings with markings resembling a pattern of leaf veins. The eggs of these insects often resemble the seeds of various plants. Order Phasmoda; family Phyllidae. See also STICK INSECT; pp.36–37, 312–313.

Leaf-nosed bat, any of a number of species of small insectivorous BATS that live in tropical and sub-tropical regions. It has fleshy leaf-like organs on the end of its snout that may aid its ECHO LOCATION mechanism. Families: Hipposideridae and Phyllostomatidae. See also p.93.

League of Nations, international organization (1920–46), forerunner of the UNITED NATIONS. Created as part of the Treaty of Versailles ending WWI, it required that members respect the territorial independence of all other members and recognize the need for disarmament. The refusal of the USA to participate impaired the League's efficiency although during the first few years of its existence it was instrumental in preventing war in the Balkans and in settling several inner-European disputes. Despite extending financial and administrative aid to poorer countries and furthering co-operation in the field of international relations, the problems of imposing League decisions on the great powers was never solved. The threats to world peace from Germany, Spain and Japan caused the League to collapse in 1939. It was dissolved in 1946. See also pp.1672–1673, 1700, 1708–1709.

Leakey, name of three British anthropologists and archaeologists whose researches in East Africa contributed important new information concerning the origins of man. Louis Leakey (1903–72), and his wife Mary (1913–), worked together. In 1959 at Olduvai Gorge, Tanzania, they unearthed a hominid fossil named as *Zinjanthropus* or *Australopithecus*, with remains of *Homo habilis*, thought to be 1,750,000 years old and a direct ancestor of modern man. Louis Leakey was born in Kabete, Kenya, the son of English missionary parents. He grew up there among the Kikuyu people. He was curator of the Coryndon Museum of Nairobi from 1945 to 1961. He taught in Britain, the USA and Africa. Mary Leakey is director of the Olduvai Gorge Excavations. Their son, Richard (1944–), is director of the National Museums of Kenya.

Lean, David (1908–), British film director, producer and scriptwriter. A gifted film editor, his early films include *In Which We Serve* (1942) and *Brief Encounter* (1945). His later works, such as *The Bridge on the River Kwai* (1957), *Lawrence of Arabia* (1962), *Dr. Zhivago* (1965) and *Ryan's Daughter* (1970) have been lavish productions with historical backgrounds.

Leard, Edward (1812–88), British poet and artist. In his nonsense verse, including *The Book of Nonsense* (1846) and *Laughable Lyrics* (1877), he found escape from the mannered idealism of Victorian life; he illustrated his books with witty, expressive line drawings and was noted for his water-colour landscapes. The 'Pobble who has no toes' was one of his creations.

Learning, acquisition of skills and concepts by a variety of processes. There is little agreement on what constitutes the basis of learning, but two schools of thought may be distinguished: one which holds it to be an associative process and one which believes it is the understanding of Gestalts (ordered perceptual units) rather than separate ideas. ARISTOTLE gave three forms of association: similarity, contrast and temporal and spatial contiguity, and these form the basis of many of the types of learning studied by psychologists. Gestalt psychologists deal with such learning potentials as problem solving and the formation of principles, but there is much overlapping in the two approaches. Recently it has become obvious that the processes of memory and learning are inextricably linked, and a clear theory of one requires an explanation of the other. See also p.132, 1124.

Lease, document of legal transaction conferring all rights in property, except that of ownership, from one party (the lessor) to

another (the lessee) for a specified period. It may apply to lands, buildings, rights of common and rents. Leases for life (now usually for 99 years) give security for capital expenditure without diminution of the lessor's estate.

Leasehold, possession of an estate for a limited period. Property held in leasehold may carry with it prohibitions (on subletting, use as business premises) and obligations (to keep it in good repair) stated in the lease. *See also* FREEHOLD.

Leather, animal hides cured by TANNING to prevent decay and increase flexibility; often finished by glazing, enamelling, or lacquering and coloured by staining or dyeing. Suede is produced by raising a nap on the flesh side by buffing with emery. Leather has been used since earliest times as a strong, supple material for clothing.

Leatherback turtle, omnivorous marine turtle found in tropical waters and the largest of all living turtles. It has a smooth, black, leathery skin with seven ridges running lengthwise, and no external plates. Its forelegs are modified into large flippers. Length: to 2.1m (7ft); weight: approx. 540kg (1,200lb). Family Dermochelyidae; species *Dermochelys coriacea*. *See also* p.69.

Leather-Stocking Tales, the five novels by James Fenimore COOPER. The novels, *The Pioneers* (1823), *The Last of the Mohicans* (1826), *The Prairie* (1827), *The Pathfinder* (1840) and *The Deerslayer* (1841), are all set in the French and Indian wars and in post-revolutionary USA. *See* p.1772.

Leaves of Grass (1855), collection of autobiographical poems by Walt WHITMAN, revised and augmented until 1892. The crucial edition is the third (1860), which contains many new poems including *Out of the Cradle Endlessly Rocking* and regroupings of previous ones. *See also* pp.1772, 1772.

Leavis, Frank Raymond (1895-1978), British literary critic. He was editor of the influential literary quarterly *Scrutiny* (1932-53) and his works of criticism, combining close textual analysis with moral principles of evaluation, include *The Great Tradition* (1948) and *D. H. Lawrence, Novelist* (1955). His views on society and education are expounded in such works as *Mass Civilization and Minority Culture* (1930) and *Education and the University* (1943).

Leavitt, Henrietta Swan (1868-1921), US astronomer noted for her work on CEPHEID VARIABLE stars and stellar magnitudes. She discovered that the periods of Cepheids are related to their true brightness. The cepheid period-luminosity law has since been used to determine the distances of stars. *See also* pp.990, 990.

Lebanon, independent nation in the Middle East, bordering Syria (N and E) and Israel (S). It has a Mediterranean climate although more than half of the land is desert. Its economy has been based on trade, which yields two-thirds of the national income, and tourism, but these were adversely affected by the civil war which, despite a cease-fire in 1979, flared up again in the early 1980s with Israeli and Syrian forces giving heavier backing than previously to the conflicting Moslem and Christian groups. There are oil pipeline terminals from Saudi Arabia and Iraq on the coast. The capital is Beirut, the Middle East's foreign exchange centre. Area: 10,400sq km (4,015sq miles). Pop. (1975 est.) 2,869,000. *See* p.2089.

Lebedev, Peter Nikolaevich (1866-1911), Russian physicist noted for demonstrating that light exerts minute pressure on solid bodies.

Lebedev, Sergei Vasilyevich (1874-1934), Russian chemist. He developed a method of producing a synthetic rubber by POLYMERIZATION of butadiene obtained from ethanol. His process was widely used by the Russians and the Germans in WWII.

Le Bel, Joseph-Achille (1847-1930), French chemist who correctly attributed the OPTICAL ACTIVITY of some organic molecules to their three-dimensional molecular structure. *See also* p.893.

Lebensraum, term used by Adolf HITLER to justify German territorial expansion. It

originated with Friedrich Ratzel (1844-1904), but the Nazi distortion of Ratzel's concept derived from Rudolf Kjellen (1864-1922) who saw the state as a life-form and coined the term geopolitics. Lebensraum means "room in which to live".

Leblanc, Nicolas (1742-1806), French chemist. He was physician to Louis Philippe, duc d'Orléans, who helped him to establish a factory for producing sodium carbonate (washing soda) from salt.

Lebon, Philippe (1767-1804), French inventor who pioneered the development of gas-fuelled lamps which he called "thermolampes". He devised a method of obtaining gas from sawdust.

Le Brocq, Louis (1916-) Irish painter and teacher of textile design; largely self-taught. Many of his paintings depict symbolic figure groups. More recently, since about 1974, he has been working on a series of some 150 portraits of British novelists.

Lebrun, Albert (1871-1950), last President of France's Third Republic (1932-40). In 1940 the establishment of the VICHY GOVERNMENT deprived him of all authority and in 1944 he recognized DE GAULLE as provisional President.

Lebrun, Charles (1619-90), French painter, a student under VOUEZ, and influenced by POUSSIN. He painted religious, mythological, and historical subjects, as well as portraits in a decorative Classical style. Chief painter to LOUIS XIV from 1662, he designed much of the decoration at Versailles, including the Galerie des Glaces (1679-84), and controlled the arts in France for some 20 years; he was also director of the Gobelins tapestry factory from 1633. *See also* p.1443.

Le Carré, John, pen-name of David John Moore Cornwell (1931-), British writer. His first novel was *Call for the Dead* (1961). His best-known books are *The Spy Who Came in from the Cold* (1963), *A Small Town in Germany* (1968), and *Tinker, Tailor, Soldier, Spy* (1974, televised 1979).

Le Châtelier's principle, principle announced by the French chemist Henry-Louis Le Châtelier (1850-1936) in 1888. It states that if a system in a state of equilibrium is disturbed, the system tends to neutralize the disturbance and restore the equilibrium.

Leclair, Jean-Marie, the Elder (1697-1764), French BAROQUE composer and violinist. His 49 violin sonatas are counted among the foundation works of the violin repertoire. He also composed violin concertos and an opera, and was a master in both the serious and the lighter styles of his time.

Leclanché cell, electric cell invented by Georges Leclanché, c.1865. Its ANODE was a zinc rod and its CATHODE a carbon plate surrounded by packed manganese dioxide. These electrodes were dipped into a solution of ammonium and zinc chlorides. It is the basis of the DRY CELL.

Leclerc, Jean (1657-1736), Swiss scholar. He became Protestant pastor in 1675 and was a teacher in Amsterdam. He edited the *Universal and Historical Library* (1686-93) and advocated liberal theology in numerous tracts.

Le Clezio, Jean-Marie Gustave (1940-), French novelist. An exponent of the NOUVEAU ROMAN, he achieved recognition with *The Interrogation* (1963), followed by *Fever* (1965), a collection of short stories, and *The Flood* (1966).

Lecocq, Alexandre Charles (1832-1918), French composer of operettas. These number more than 40, and are remarkable for their wit and charm. His first major success was *Fleur de thé* (1868). *La Fille de Madame Angot* (1872) played for more than a year in Paris.

Lecote de Lisle, Charles-Marie-René (1818-94), French poet. He was leader of the PARNASSIAN school and his work which includes *Poèmes antiques* (1852), *Poèmes et poésies* (1855) and *Poèmes barbares* (1862), is disciplined and pessimistic. He was elected to the Académie Française in 1866.

Le Corbusier, (1887-1963), Swiss-born French architect, real name Charles-

Édouard Jeanneret, among the most influential of the 20th century. His early work, mostly housing, exploited the qualities of reinforced concrete with cube-like forms and incorporated principles which are summarized in his famous *Five Points of a New Architecture* (1925): pilotis (columns) to lift the building off the ground; the flat roof with a garden; the free plan; long windows; and the free facade, with floors and walls extending beyond their supporting columns. All of these were embodied in the Villa Savoy at Poissy (1929-31), one of his most influential buildings. Le Corbusier's extension of these ideas was illustrated in his Unité d'Habitation, Marseilles (1946-52), designed on pilotis as one unit of a new-type city and scaled to his MODULOR. Its design was widely adopted for modern mass housing. Later Le Corbusier evolved a less strictly rational, more poetic, style, of which the highly sculptural chapel of Notre-Dame-du-Haut at Ronchamp (1955) is the finest example. In the 1950s he also laid out the town of Chandigarh, the new capital of the Punjab, and built its majestic supreme courts and secretariat. He designed Tokyo's Museum of Western Art (1957) and the Cistercian Monastery of La Tourette (1960) in central France, a concrete block of immense force. His last major work was the Visual Arts Center at Harvard (1963). *See also* pp.1659, 1688-1689, 1820.

Lecouvreur, Adrienne (1692-1730), French actress. She made her debut at the Comédie-Française in 1717 and her naturalistic acting style soon superseded the pedantic diction of her contemporaries. Her tragic roles included Racine's *Phèdre* and Corneille's *Bérénice*. Her many lovers included VOLTAIRE, who attacked the French Church ferociously after it denied her a Christian burial because she was an actress.

Lectisternium, rite in ancient Greece and Rome in which images of gods and goddesses were displayed on couches and offered food. In Christian times the term described a feast in memory of the dead.

Leda, in Greek mythology, Queen of Sparta and the mother, either by her husband Tyndareus or by ZEUS, of CASTOR and POLLUX and HELEN. Zeus appeared to her in the form of a swan and both Pollux and Helen were believed to have hatched from eggs.

Lederberg, Joshua (1925-), US geneticist. In 1958 he shared with G. W. BEADLE and E. L. TATUM the Nobel Prize in physiology and medicine for work that initiated the study of bacterial genetics. He discovered that sexual recombination of genetic materials occurs in bacteria and that genetic materials are linked in groups in bacteria as well as in other organisms.

Ledoux, Claude-Nicolas (1736-1806), French architect. His projects for buildings based upon geometrical solids gained him a reputation as one of the most imaginative of 18th-century designers. He built 45 toll houses around Paris and planned an ideal city, "Chaux", which was never built. *See also* p.1487.

Le Duan (1907-), politician, theorist and military organizer of North Vietnam. He was a founder of the Indo-Chinese Communist Party in 1930, joined the Viet-Minh in 1945 and helped to organize the NLF (National Liberation Front) of South Vietnam in 1960. He later became First Secretary of the Vietnam Workers' Party, and in the early 1970s was considered one of the most influential men in the country.

Ledum, genus of small, evergreen shrubs that grow in damp, acid soils of cold northern climates. They have small, white flowers. Family Ericaceae.

Ledwidge, Francis (1891-1917), Irish poet. During WWI he served in the GALLI-POLI CAMPAIGN of 1915 and was killed in Belgium. His verse includes *Songs of the Field* (1915), *Songs of Peace* (1916) and *Last Songs* (1918).

Ledyard, John (1751-89), US explorer. He sailed with Capt. James COOK in search of the North-west Passage (1776-79) and published *A Journal of Captain Cook's Last Voyage to the Pacific Ocean* (1783).

Le Corbusier transformed space with the use of reinforced concrete.

Leda intertwined with Zeus in the form of a swan; by Michaelangelo.

Joshua Lederberg taught at Wisconsin University until 1959.

Gypsy Rose Lee generally regarded as the first striptease artist.

Led Zeppelin

With the approval of Thomas JEFFERSON, he planned an expedition from Russia to Virginia by way of Siberia and the Bering Strait. He died in Africa preparing an expedition to its interior.

Led Zeppelin, British rock group formed in 1968. Since 1970 they have attracted record crowds in the USA. Their best-selling record, *Physical Graffiti*, was released in 1975.

Lee, Ann (1736–84), British mystic, member of the United Society of Believers in Christ's Second Appearing, popularly called the SHAKERS. The sect was persecuted in Britain, and in 1774 she and eight others fled to the USA. She founded a colony near Albany, N.Y., in 1776 and gained many converts.

Lee, Arthur Hamilton, Lord Lee of Fareham. See CHEQUERS.

Lee, Bruce (1940–73), Chinese-American film actor. He won little recognition until he starred in a number of Hong Kong Kung Fu films, such as *Fist of Fury* (1973) and *Enter the Dragon* (1973). His karate skills and ferocious snarl made him a cult hero.

Lee, Gypsy Rose (1914–70), real name Rose Louise Hovick; US performer, reputedly the inventor of the "strip-tease". She first appeared as Gypsy Rose in the 1936 Ziegfeld Follies. The musical *Gypsy*, staged in 1959 and filmed in 1962, is based on her memoirs.

Lee, Laurie (1914–), British writer. His poetry, eg *The Sun My Monument* (1944), *The Bloom of Candles* (1947) and *My Many-Coated Man* (1955), is attractively simple. His best-selling autobiography *Cider with Rosie* describes with immense charm his childhood in a remote Cotswold village. He is the author of *As I Walked Out One Midsummer Morning* (1969) and *A Rose for Winter* (1955), accounts of his travels in Spain and Cyprus, and of a verse play *The Voyage of Magellan* (1948).

Lee, Nathaniel (c.1653–92), English RESTORATION dramatist, whose elaborate verse tragedies about historical events and figures such as *Nero* (1674), *Oedipus* (1679), *Lucius Junius Brutus* (1680) and *The Massacre of Paris* (1689) were extremely popular.

Lee, Peggy (1920–), US singer and songwriter, real name Norma Eggstrom, who made her debut singing with the Benny Goodman Orchestra in 1938. She wrote and recorded many popular songs such as *Fever*, *Mañana* and *Johnny Guitar* and collaborated on the musical score of Walt DISNEY's film *The Lady and The Tramp* (1956), in which she also sang.

Lee, Robert Edward (1807–70), commander of Confederate forces in the American Civil War. Although Lee regarded slavery as evil and saw advantages in the Union, his loyalty to his native Virginia was paramount. Declining LINCOLN's offer of the field command of Union troops, he became military adviser to Jefferson DAVIS, the Confederate president, and in 1862 was appointed commander of the Confederate forces. In that year he successfully defended Richmond and won the second battle of BULL RUN. He was defeated at ANTIETAM (1862) but inflicted on the Union its worst defeats at Fredericksburg (1862) and Chancellorsville (1863), although in the latter Lee lost his most able lieutenant, Thomas "Stonewall" JACKSON. Lee's attempt to penetrate the North ended in his defeat at Gettysburg in July 1863. He surrendered to Ulysses S. GRANT at Appomattox Court House on 9 April 1865. See also p.1285.

Lee, Tsung-Dao (1926–), US physicist, b. China. He showed that among subatomic particles, the law of conservation of parity (that nature, in effect, makes no distinction between right- and left-handedness) does not always hold. Working with Chen-Ning YANG, Lee suggested that in certain types of subatomic reactions, parity is not conserved, and this was subsequently verified by experiment. They were awarded the 1957 Nobel Prize in physics.

Leech, John (1817–64), British illustrator and caricaturist who worked for *Punch* to which he was a consistently prolific contributor from 1841. His cartoons were occasionally of a political nature, but he was much more at home with more subtle and gentle characterizations. Leech illustrated Charles Dickens's *A Christmas Carol* (1844), several sporting novels of his friend Robert Surtees, and did much work for *The Illustrated London News*.

Leech, any of numerous species of freshwater, marine and terrestrial ANNELIDS found in tropical and temperate regions. Its tapered, ringed body is equipped with a sucking disc at each end. Many species live on the blood of animals. Length: 13–51mm (0.5–2in). Class Hirudinea. See also pp.19, 19, 328, 1059.

Leeds, city and county district in West Yorkshire, N England. The city of Leeds, on the River Aire, is part of one of England's major industrial regions and is a communications centre. The city's woolen industry dates back to the 14th century; Leeds is the centre of England's wholesale clothing trade. Other industries include metal goods such as aircraft components, machinery, engineering, paper and printing and chemicals. Area: (county district) 562sq km (217sq miles). Pop. (county district, 1974 est) 748,300; (city, 1971) 494,971.

Leek, biennial plant related to the onion, of the family Liliaceae; it originated in the Mediterranean region and is cultivated widely for culinary purposes. Species *Allium porrum*. See also p.684.

Lee Kuan Yew (1923–), Singapore politician. He was a founder of the Socialist People's Action Party. He was first elected to the Singapore assembly in 1955 and became Prime Minister of Singapore in 1959.

Lee of Asheridge, Janet Bevan (Jennie Lee), Baroness (1904–), British politician, wife of Aneurin BEVAN. She was a Labour MP in 1929–31 and 1945–70. She was Under-Secretary at the Ministry of Education (1965–67) and Minister for the Arts (1967–70).

Leeuwenhoek, Antonie van (1632–1723), Dutch scientist. He was a scientific amateur who built simple microscopes with a single lens, made so accurately that they had better magnifying powers than the compound microscopes of his day. He investigated many micro-organisms and their life histories, and described various microscopic structures such as spermatozoa. He was made a Fellow of the British Royal Society in 1680.

Leeward Islands, n group of the Lesser Antilles in the E West Indies, extending sw between Puerto Rico and the Windward Islands. The group includes the Virgin Islands (US), Guadalupe (French), the Netherlands Antilles (St Maarten, Saba and St Eustatius), the British Leeward Islands (Antigua, St Kitts-Nevis, Montserrat), the British Virgin Islands and Anguilla. First settled by the British in the 17th century, possession was contested by France and Britain for two centuries. The islands are a popular winter resort area. Products: limes, coconuts, tobacco, dairy produce, vegetables.

Le Fanu, Joseph Sheridan (1814–73), Irish novelist and short story writer. His works are chilling and mysterious. They include the novels *The House by the Churchyard* (1863) and *Uncle Silas* (1864), and a collection of stories, *In a Glass Darkly* (1872).

Lefebvre, Pierre François, Duc de Danzig (1755–1820), French military commander. During the French Revolution he rose from sergeant to general, and later distinguished himself under NAPOLEON, becoming a marshal in 1804. While governor of Paris he supported the coup in 1799 by means of which Napoleon became first consul. After voting for the Emperor's abdication in 1814 he rejoined Napoleon during the HUNDRED DAYS.

Lefebvre, Georges (1874–1959), French historian, an authority on the French Revolution. His research for a doctorate on the peasantry of N France brought a new depth to the study of the Revolution and his general interpretation, in such books as *The French Revolution from its Origins to 1793* (1951), dominated the subject after WWII.

Left wing, in politics, term which has come to mean radical or revolutionary. It originated in France after the French Revolution, and comes from the seating arrangement of the National Assembly in 1789, where the nobles sat on the president's right and the commons on his left. This arrangement has persisted in most European parliaments.

Legal tender, money which is valid in payment of a debt or discharge of a business obligation. In Britain, bank notes are legal tender in any amount. Bank cheques, postal orders and promissory notes are not legal tender. Bronze coins are legal tender to 20 pence; silver or cupro-nickel are legal tender to £5 with the exception of the 50p piece which is legal tender to £10.

Legal aid, in Britain, system by which those below a certain income can receive free or subsidized legal representation or advice. In criminal cases it is paid for mainly from public funds; in civil cases its cost may be partly met from the costs awarded by the court. Legal aid was introduced in 1949, its provisions now being covered by the Legal Aid and Advice Act, 1974. The qualifying income level is a matter of some controversy.

Le Gallienne, Eva (1899–), British-born US actress, director and translator. She made her London acting debut in 1915 and went to New York in that year. Her first success there was in Ferenc Molnár's *Liliom* (1921). She founded and directed the Civic Repertory Company in New York (1926), the first such company in the USA. Among her translations are *Six Plays by Henrik Ibsen* (1958) and *Seven Tales by Hans Christian Andersen* (1959).

Legate. See PAPAL LEGATE.

Legazpi, Miguel López de. See LÓPEZ DE LEGAZPI, MIGUEL.

Legendre, Adrien Marie (1752–c.1833), French mathematician. He studied the theory of NUMBERS and elliptic integrals, and through his work on quadratic residues discovered the law of reciprocity used by K. F. GAUSS. He introduced the method of least squares, to calculate the paths of comets. His most influential work was *Elements of Geometry* (1794).

Léger, Alexis St-Léger (1887–), French poet, b. the West Indies, real name St-John Perse. He emigrated to the USA in 1940, after a decade as a powerful anti-apartheid in the Foreign Office. His first volume of poetry, *Eulogies*, came out in 1911; his complete works were published in 1972. He won the 1960 Nobel Prize in literature.

Léger, Fernand (1881–1955), French painter who, by 1911 was a leader of the CUBIST movement. Greatly influential, he was admired by MONDRIAN, MALEVICH and many others. His major works are of contemporary subjects – especially the working man and machinery – which he endows with monumental stature, conveyed in bold colour areas and flat black outlines.

Léger, Jules (1913–), Canadian politician and diplomat. An historian and associate editor of *Le Droit* (1938–39), Léger was Assistant Under-Secretary of State for External Affairs (1952–53), and ambassador to Italy (1962–64), France (1964–68) and Belgium and Luxembourg (1973). In 1974 he was appointed Governor-General of Canada.

Leghorn, any of about 12 varieties of lightweight chickens; it was originally bred in the Mediterranean region, especially for egg production.

Legion, basic organizational unit of the Roman army from the early Republic to the fall of the empire in the West in the 5th century AD. The legion had its origins in the Roman citizen army. During the great period of Rome's expansion, a legion was about 6,000 men strong, consisting mainly of heavy infantrymen (legionaries), with some light troops and cavalry in support. The legion was subdivided into cohorts (420 men each), maniples (120 men each) and centuries (100 men each). The success of this organization over a period of almost 800 years was due to its flexible fighting formation (which consisted of three mutually supporting lines) and to the quality of its non-commissioned officers, especially the CENTURIONS.

Legion of Honour (Légion d'Honneur), French award, created by NAPOLEON in 1802 to reward civil and military service. The award can be in one of the various classes, the highest of which is the great cross (*grand-croix*). The most common level at which it is awarded is that of Knight of the Legion (*Chevalier de la Légion*), which is marked by a distinctive red ribbon.

Legislation. See LAW.

Legislative Assembly, legislative body of France from Oct. 1791 to Sept. 1792, one of the most critical periods of the FRENCH REVOLUTION. Political conflicts intensified, not only between the proponents and opponents of change, but also among politicians and classes previously united in the pursuit of reform (as between the JACOBINS and Feuillants). The threatening attitude of European powers led to the declaration of war against Austria in April 1792. Early defeats provoked a crisis in the summer which was partly resolved when the King (LOUIS XIV) was deposed by the rising of 10 Aug. 1792. In Sept. the National CONVENTION met and proclaimed a republic. See also p.1550.

Legitimacy, term denoting the legal status of a child born to parents in wedlock. A child born out of wedlock is said to be illegitimate. In Britain, the Legitimacy Acts of 1926 and 1959 removed the stigma of illegitimacy by giving a child legitimate status if the parents subsequently marry. In some countries, such as New Zealand, there is now no legal distinction between a legitimate and illegitimate child.

Legitimate theatre, term that arose in the 18th century to refer to plays entirely dependent on acting, with little or no singing, dancing or spectacle.

Legitimists, those people in France who, after the JULY REVOLUTION (1830) had forced the last BOURBON king, CHARLES X, off the throne, continued to support the Bourbon cause.

Legnano, Battle of (1176), defeat of FREDERICK Barbarossa and the Holy Roman Empire forces by the LOMBARD LEAGUE (aided by Venice and the pope). In a foretaste of the rise in importance of foot soldiers, the Lombard League's infantry repelled the invasion of Italy by Frederick's mounted knights.

Legnica, Battles of. See LIEGNITZ, BATTLES OF.

Legouvé, Gabriel-Marie-Jean-Baptiste (1764–1812), French dramatist. He wrote *La Mort d'Abel* (1792), *Épicharis* (1793), *Étécle et Polydice* (1799) and *La Mort de Henri IV* (1806).

Legros, Alphonse (1837–1911), British painter, b. France; a printmaker and sculptor who is best known for his drawings of sinister and fantasy subjects. A fine draughtsman, he was associated with Gustave COURBET, James WHISTLER and Edouard MANET.

Leguminosae, pea family of flowering plants, including many trees, shrubs, vines and herbs whose roots contain nitrogen-fixing bacteria. Woody species occur mainly in tropical regions; herbaceous species mainly in temperate regions. The fruit is typically a pod (legume) containing a row of seeds. Important food species include the PEA, runner bean, SOYA BEAN, LENTIL, broad bean, kidney bean and haricot bean. Familiar decorative species – some of which are poisonous – include LABURNUM, BROOM, WISTERIA and SWEET PEA. See also pp.680–681.

Lehár, Franz (1870–1948), Hungarian-born composer of operettas. He studied music in Prague and from 1890 travelled as a bandmaster in Austria. His first operetta (*Kukuschka*) was written in 1896. He composed more than 30 operettas of which *The Merry Widow* (1905) is the most popular today.

Le Havre, commercial seaport in N France, at the mouth of the River Seine on the English Channel. Primarily a fishing and naval port until 1815, the city is now the principal export point for Paris and a transatlantic passenger port. During WWII it was almost completely destroyed, but was subsequently rebuilt. It was the base of the Belgian government after the fall of Antwerp and Ostend. Industries:

chemicals, fertilizers, timber, food processing, oil-refining, shipbuilding. Pop. (1968) 199,509.

Lehmann, Beatrix (1903-79), British actress whose first London stage appearance was in 1924 and who appeared regularly in the West End as well as at the Old Vic, Chichester and Stratford-on-Avon, where she played the nurse in *Romeo and Juliet* in 1973. She has also acted in films and on television.

Lehmann, John (1907-), British critic, poet and publisher. He was general manager of Virginia and Leonard Woolf's Hogarth Press (1938-46). He is perhaps best remembered as the editor of *New Writing* and *Penguin New Writing*. His works include an autobiography (3 vols., 1955-62) and a study, *A Nest of Tigers: Edith, Osbert and Sacheverell Sitwell in Their Times* (1968).

Lehmann, Lotte (1888-1976), German-born soprano. Making her debut in Hamburg in 1909, she was the most illustrious singer of operatic roles and lieder of her time. Richard Strauss created the title role of *Arabella* for her in 1933. She sang with the Vienna State Opera (1914-38) and the Metropolitan Opera, New York, from 1934 until her retirement in 1961.

Lehmann, Rosamund Nina (1903-), British author. Her first novel *Dusty Answer* (1927) concerns a young girl's progress to maturity through childhood and adolescence. Her later work includes *Invitation to the Waltz* (1932), *The Echoing Grove* (1953), a play *No More Music* (1939) and short stories.

Lehmann, Wilhelm (1882-1968), German poet, critic and novelist. His collections *The Green God* (1942) and *Enchanted Dust* (1946) started a new wave of nature poetry.

Lehmbruck, Wilhelm (1881-1919), German sculptor. He was a disciple of Rodin and Maillol, and his masterpiece *Knelling Woman* (1911) exemplifies the elongated forms and Gothic elegance characteristic of his work.

Leiber, Fritz, Jr (1910-), US science fiction writer and actor. From 1934 he toured for two years with his father's troupe before becoming a writer. A favourite theme in his books is the world after a nuclear war. He is best known for the Grey Mouser series, stories which combine fantasy and superstition.

Leibl, Wilhelm (1844-1900), German painter of realistic portraits and genre scenes. His works include *Three Women in Church* (1878) and *In the Kitchen* (1898).

Leibniz, Gottfried Wilhelm (1646-1716), German philosopher and mathematician. He never took an academic position, but served as a courtier and diplomat (in Paris, 1672-76), and corresponded with most of the leading thinkers of his day. He made many practical inventions, including a calculating machine (1671), and published his discovery of differential calculus in 1684. He created a rationalist metaphysics, according to which the universe comprises a multitude of interrelated and organized units, called "monads", within a divine harmony. This belief led him to argue that evil is divinely motivated, and that this is the best of all possible worlds. He wrote voluminously, although few of his works were published during his lifetime. His major works include *New Essays Concerning Human Understanding* (1765) and *Monadology* (1898). See also pp. 792-793, 1436.

Leibowitz, René (1913-), French-Polish conductor and composer. A student of Arnold Schoenberg, he used 12-tone music in his compositions and performed the works of other 12-tone composers. See also p. 1755.

Leicester, Robert Dudley, Earl of (c. 1532-88), English nobleman, favourite of Queen Elizabeth I. The mysterious death in 1560 of his wife, Amy Robsart, apparently cleared the way for Leicester to marry Elizabeth. The Queen, however, knew that the match would be politically unwise and instead offered his hand to Mary, Queen of Scots. Leicester, however, remained influential, despite his feud with William Cecil, Lord Burghley.

In 1585 he was placed in command of an expedition to help The Netherlands against the occupying Spanish, but his military efforts were undistinguished. See also pp. 1760, 1761.

Leicester, city in central England, 145 km (90 miles) NW of London; county town of Leicestershire. Founded by the Romans as *Ratae Coritanorum*, it was conquered by the Danes in the 9th century. It has a 14th-century church, a 15th-century guild-hall and many Roman remains. The University of Leicester was founded in 1957. The knitting frame was first installed there in 1680, and hosiery has been an important industry ever since. Other industries include footwear, textiles, and textile and woodworking machinery. Pop. (1971) 283,549.

Leicestershire, county in central England. The uplands of the E are devoted to farming; the W has much industry. The area is drained chiefly by the Soar and Wreake rivers. Wheat, barley, sheep and dairy cattle are important, and the region is famous for its Stilton cheese and Melton Mowbray pies. Leicester, the county town, is the centre of England's footwear industry. Oil is extracted at Plungar. Area: 2,553 sq km (986 sq miles). Pop. 837,900.

Leichhardt, Friedrich Wilhelm Ludwig (1813-48), German explorer. He traversed Australia from Moreton Bay (Queensland) to Port Essington (Northern Territory) in 1844-45. This exploit made him an immediate hero in Australia and donations were made in abundance for a further expedition to cross the continent from east to west. Leichhardt, however, was wholly unqualified for the task and he and his entire team disappeared. No trace has ever been found of the party. See also p. 1603.

Leiden (Leyden), city in The Netherlands, on the River Oude Rijn, 15 km (9 miles) NE of The Hague. Leiden is famous for its university (1575), the oldest in the country. The city was the birthplace of Rembrandt and Lucas van Leyden, whose works are displayed in the municipal museum. Industries: textiles, printing, food processing, metalworking. Pop. (1970 est.) 101,220.

Leif Eriksson. See ERIKSSON, LEIF.

Leigh, Vivien (1913-67), British film and stage actress, b. India, real name Vivien Hartley. Her early film career reached its peak with her performance of Scarlett O'Hara in *Gone With The Wind* (1939) for which she received an Academy Award. She also received an Academy Award for her moving portrayal of Blanche du Bois in *A Streetcar Named Desire* (1951). She was married to Laurence Olivier from 1937 to 1960.

Leigh-Mallory, Sir Trafford (1892-1944), British officer who helped to organize air defence during the Battle of Britain. In 1942 he became Air Marshal in RAF Fighter Command and in 1944 was made head of the Allied air offensive in Europe. He died in an air crash.

Leighton, Clare (1899-) British print-maker, illustrator and author who is best known for her engravings and woodcuts. She has illustrated the 1929 publication of *The Return of the Native*, by Thomas Hardy, and the 1931 edition of *Wuthering Heights*, by Emily Brontë. Her own writings include *How to do Wood-engraving and Woodcuts* (1932).

Leighton, Lord Frederick (1830-96), British painter, sculptor and illustrator. He first received acclaim for *Cimabue's Madonna Carried in Procession* (1855), which was exhibited at the Royal Academy and bought by Queen Victoria. With Edward Poynter, he opposed the romance and realism of the Pre-Raphaelite Brotherhood by refining a form of Hellenistic Classicism.

Leighton, Margaret (1922-76), British actress. She made her London debut at the Old Vic in 1944-45. Among her most famous roles were Celia in *The Cocktail Party* (1950), Orintha in *The Apple Cart* (1953), Lucasta in *The Confidential Clerk* (1953) and Mrs Shanklin and Miss Railton-Bell in *Separate Tables* (1954). She was awarded an Oscar for her role in *The Go-Between* (1971).

Leighton, Robert (1611-84), Scottish minister and scholar. After the Restoration, Charles II appointed him Bishop of Dunblane (1661) and then Archbishop of Glasgow (1670) with the task of reconciling the Presbyterians to the episcopal method of Church government imposed on the Scots in 1660.

Leijster, Judith Jansdochter (1609-60), Dutch painter, whose portraits, still lifes and genre scenes anticipated those of Vermeer. Her work includes *The Rejected Offer* (1631).

Leinsdorf, Erich (1912-), Austrian-born US conductor. He was assistant conductor at the Salzburg Festival (1934-38) and was conductor at the Metropolitan Opera, New York (1937-43, 1957-62). He held a succession of conducting posts in the USA.

Leinster, Murray (1896-1975), real name William Fitzgerald Jenkins, US science fiction writer. Most of his stories deal with the conflict of man and nature. Three of his novels are collected in *A Murray Leinster Omnibus* (1968) and his previous works include *Gateway to Elsewhere* and *The Black Galaxy* (both 1954).

Leinster, province in E Republic of Ireland, made up of the counties of Carlow, Dublin, Kildare, Kilkenny, Laois, Longford, Louth, Meath, Offaly, Westmeath, Wexford and Wicklow. It is the most populous of Ireland's four provinces, and includes the most fertile farmland in the country. The major city is Dublin, Ireland's capital. Area: 19,635 sq km (7,581 sq miles). Pop. (1971) 2,989,088.

Leipzig, city in central East Germany, at the confluence of the Pleisse, White Elster, and Parthe rivers. Founded as a Slavic settlement in the 10th century, it became a commercial centre at the intersection of important trade routes. It was the scene of the Battle of Nations in 1813, which ended the power of Napoleon in Germany. The birthplace of Richard Wagner, it has the Karl Marx University (founded in 1409 as the University of Leipzig) and a 17th-century stock exchange. The printing industry, founded in 1480, is still of great importance. Other industries include textiles, machinery and chemicals. Pop. (1978) 564,489.

Leipzig, Battle of, also called Battle of the Nations (16-19 Oct 1813). The Prussians, Austrians, Russians and Swedes inflicted a crushing defeat on Napoleon's outnumbered *Grande Armée*, which resulted in the final retreat of the French from Germany.

Leishmaniasis, widespread tropical disease that causes great suffering to the victim. It is spread by sandflies that are infested with small flagellate protozoans (*Leishmania donovani*). These are endoparasites in the human liver, spleen, skin or lymph nodes. In the bloodstream each is ingested by a white blood cell, changes shape from elongate to ovate and loses its flagellum. In Central and South America the disease is caused by *L. brasiliensis* and typically affects the membranes of the mouth and nose often eroding the nasal cartilage. See also pp. 1082, 1082.

Leith Hill, highest point on the North Downs, in Surrey, SE England. On clear days both London and the Channel are visible from the summit. Height: 294 m (965 ft).

Leitmotiv, German word for a guiding theme in musical compositions. It is a theme which recurs throughout a work, usually an opera or a piece of programme music, evocative on each occasion of an idea or a character. It is a device associated especially with Wagner and Richard Strauss, both of whom used it consistently in their operas.

Leitrim, county in the N Republic of Ireland in Connacht province, bounded on the NW by Donegal Bay. It is hilly in the N, undulating in the S and is drained by the River Shannon and its tributaries. Although farming is the main occupation, the soil is not highly productive. Area: 1,525 sq km (589 sq miles). Pop. (1971) 28,313.

Leix. See LAOIS.

Leland, John (c. 1506-52), English antiquarian. King Henry VIII's librarian from

Lotte Lehmann was a famous soprano who also wrote a novel and an autobiography.

Wilhelm Leibl's *Three Women in Church* (1878) - a masterpiece of German realism.

Vivien Leigh making a broadcast from the stage of the Drury Lane Theatre in 1941.

Leipzig was a major European cultural centre during the 17th and 18th centuries.

Sir Peter Lely painted these Two Ladies of the Lake Family.

1530, he was appointed king's antiquarian in 1533. He travelled throughout England, collecting historical and geographical data which were compiled into books of itineraries. His researches have been invaluable to later scholars.

Leloir, Luis Federico (1906–), Argentinian chemist, b. France. He was awarded the 1970 Nobel Prize in chemistry for his research into the biochemical processes which break down the complex sugars into simpler carbohydrates. In 1947 he helped to establish the Institute of Biochemical Research in Buenos Aires, where he began work on the production of LACTOSE. This research eventually led to the discovery of sugar nucleotides, fundamental factors in the natural process of carbohydrate synthesis. He also synthesized GLYCOCEN and demonstrated the necessity of certain liver enzymes (catalysts) for its manufacture.

Lely, Sir Peter van der Faes (1618–80), Dutch-trained painter who settled in London (c. 1643), where he became the leading portrait painter after the death of VAN DYCK. At the Restoration he became principal painter to CHARLES II. Lely's paintings include *The Children of Charles I*, *The Windsor Beauties*, *Duchess of Cleveland* and the famous *Admirals*.

Lemaître, Abbé Georges Édouard, (1894–1966), Belgian astrophysicist and mathematician who first formulated the BIG BANG theory for the origin of the universe. He saw the universe as originally analogous to a radioactive atom, with all the energy and matter concentrated into a kernel which Lemaître called the "primeval atom". His book *The Primeval Atom: An Essay on Cosmogony* (1950) describes his theory. See also p.1004.

Le Mans, motor racing circuit in France, world-famous as the venue of the classic Le Mans 24-hour race for sports cars. The result is determined by an Index of Thermal Efficiency based on average speed, weight, and fuel consumption over the 24 hours. Two drivers share a car. A feature of the race was the "Le Mans start", in which drivers ran across the track to their cars, but this was discontinued after 1969. In 1955, more than 80 spectators were killed there in motor racing's worst accident.

Lemercier, Jacques (c. 1585–1654), French architect, the designer (1631) of the town of Richelieu, built for Cardinal RICHELIEU. Lemercier, who was influenced by the Italian MANNERIST style, became one of the founders of French Classicism and was architect to King Louis XIII. In Paris he built the Pavillon de L'Horloge at the Louvre, the Sorbonne and the dome of the Val-de-Grâce Church.

Lemesos. See LIMASSOL.

Lemming, any of several species of herbivorous RODENTS that live in cool and temperate regions. A lemming has long, brownish fur, small ears and a short tail. Lemmings characteristically migrate in large numbers. Species in Norway have been known to do so and to suffer great losses by drowning or rushing headlong over precipices. Family Cricetidae. See also pp.296, 304, 325.

Lemmon, Jack (1925–), us film actor. Usually appearing in comedy roles, often as a diffident and awkward suitor, Lemmon is probably at his best in the films of Billy Wilder. These include *Some Like It Hot* (1959), *The Apartment* (1960), *The Fortune Cookie* (1966) and *The Front Page* (1975).

Lemon, evergreen tree and its familiar, sour, yellow citrus fruit. The flesh of the fruit is formed from hairs radiating from the seeds. Grown primarily in the USA and in subtropical regions, especially Italy, it is rarely eaten raw, but is used in cooking and in making marmalade. Height of tree: to 6m (20ft). See also pp.688, 688.

Lemonnier, Antoine Louis Camille (1844–1913), Belgian novelist and art critic, who led the 19th-century Belgian literary revival. His works, written in naturalistic style similar to that of Émile ZOLA, include *Un mâle* (1881), *Madame Lupar* (1888), *The End of the Bourgeois* (1893) and *The Secret Life* (1898).

Lemoine, Jean-Baptiste (1704–78),

French sculptor at the court of Louis XV. He is remembered especially for his portrait busts which include *Réaumur* (1751), *Montesquieu* (1760), *Hélène d'Égmont* (1767) and several actresses from the Comédie Française. His decorative treatment of form mirrored the elegance of the French court and he was among the last French artists to work in the decorative tradition.

Le Moyne, Canadian family of administrators and soldiers. Charles (1625–85), Sieur de LONGUEUIL and of other seigneuries near Montreal, fathered 11 sons who included Charles, Baron de Longueuil, governor of Montreal (1724–29); the explorers Pierre Le Moyne Iberville and Jacques Le Moyne de Sainte-Hélène; Jean Baptiste Le Moyne Bienville, governor of Louisiana (1701–12, 1718–26, 1733–43); and Paul Le Moyne Maricourt, a soldier. The family dominated political and military life in Quebec for much of the 18th century.

Lemprière, John (c. 1765–1824), British lexicographer. He was headmaster of Abingdon and Exeter grammar schools and then a vicar in Devon. His *Classical Dictionary*, published in 1788, was a standard text for many years.

Lemur, any of several primitive, mainly arboreal and nocturnal herbivorous PRIMATES that live in Madagascar. It resembles a squirrel, but has grasping monkey-like hands with which it climbs easily. Lemurs have changed little in 50 million years, closely resembling the ancestors of man and other primates. Family Lemnidae. See also pp.102, 106, 313.

Le Nain, name of three French painters, the brothers Antoine (c. 1588–1648), Louis (c. 1593–1648) and Mathieu (c. 1607–77), whose works are indistinguishable. They were rediscovered in the 19th century and details of their lives are still vague, although it is thought that Louis was the most important. His *Family of Country People* (Louvre), a formal composition painted with a realism influenced by Velázquez, typifies his style. Antoine worked on a more modest scale and Mathieu painted portraits of cavaliers and religious pictures.

Lenard, Philipp Eduard Anton (1862–1947) Hungarian physicist who taught in Germany. He won the Nobel Prize in physics in 1905 for his discoveries of the properties of CATHODE RAYS. His work was important in the development of electronics and nuclear physics.

Lenart, Jozef (1925–), Czechoslovak politician. He took part in the resistance movement defying the Nazis in WWII, and was Prime Minister (1963–68).

Lençois, Ninon de (1620–1705), French courtesan. Her salon attracted philosophers, men of letters and politicians, including MOLIÈRE and Voltaire's father. She was known for anti-religious views that caused her to be confined briefly to a convent. In her will she left money for books for the young VOLTAIRE.

Lend-lease, us programme of war relief, originally for Britain but later extended to most of the Allies of the USA in WWII, including China and the USSR. The programme was begun in 1941 and terminated in 1945. More than \$50,000,000,000 worth of supplies were sent under the programme, on lenient terms of repayment; of these more than \$30,000,000,000 was sent to Britain and the Commonwealth.

Leglen, Suzanne (1899–1938), French tennis player. She dominated women's singles 1914–26, winning the women's singles and doubles at Wimbledon 1919–23 and 1925; French singles 1920–23, 1925–26; French doubles 1925–26. In 1926 she became one of the first women players to turn professional.

Lenin, Vladimir Ilyich (1870–1924), Russian politician, originally named Vladimir Ilyich Ulyanov. He was attracted to revolutionary politics while at school, particularly after his brother was executed for his part in an anti-tsarist plot (1887). He studied law at Khazan University (1887–89), and practised as a lawyer (1893–95). He was exiled to Siberia (1897–1900) for his connections with

PLEKHANOV's Marxist group, and in Munich he wrote *What is to be Done?* (1902). At the second congress of the Marxist Social Democratic Party in London (1903), he argued for an active, disciplined party to lead the workers on to revolution. This split the party into the BOLSHEVIKS (led by Lenin) and the MENSHEVIKS. He returned to Russia in Nov. 1905, and refused any alliance with the liberals. He returned to Europe (1907–17), and settled in Switzerland on the outbreak of WWI, analysing the causes of war in *Imperialism: the Last Stage of Capitalism* (1917). He returned to Russia with German assistance in April 1917, and refused to recognize KERENSKY's government, supporting the SOVIET MOVEMENT. He justified this policy in *The State and Revolution* (1917), and with TROTSKY organized the successful November coup. He became chairman of the Council of People's Commissars, negotiated the Treaty of BREST-LITOVSK with Germany, and in 1918 dissolved the freely elected Constituent Assembly. He organized the defence of the Bolshevik Revolution in the civil war (1918–20), declaring the independence of the separate nationalities of Russia, and formed the COMMUNIST INTERNATIONAL (1919) to promote the Russian Revolution abroad. He put forward a programme of economic reconstruction in 1921 (the New Economic Policy), but became ill in 1922 and died in Jan. 1924. See also pp.1677–1679, 1857, 2158.

Leningrad, second-largest city in the USSR, in NW Russian Republic (Rossijskaja SFSR); a major Baltic seaport at the end of the Gulf of Finland, on the delta of the River Neva. Founded in 1703 as St Petersburg by PETER I The Great, it was the scene of the DECEMBERIST revolt of 1825 and the Red Sunday incident in the RUSSIAN REVOLUTION of 1905. The workers of Leningrad (then Petrograd) were the spearhead of the RUSSIAN REVOLUTION of 1917. The city was renamed Leningrad in 1924. It suffered extensive damage in WWII and has been rebuilt since 1945. A major cultural centre, Leningrad has the A. A. Zhdanov University (1819) and numerous libraries and educational institutions. Industries: shipbuilding, heavy engineering, brewing, printing and publishing, food processing, electronics, chemicals. Pop. 4,372,000. See also pp.1676, 1676.

Leningrad, Siege of (autumn 1941–early 1944), military struggle of WWII. Invading Germans cut off and besieged the Soviet city for 900 days, causing widespread famine and the death of almost one million of its three million inhabitants.

Lenni-Lenape. See DELAWARE INDIANS.
Lennon, John Ono (1941–1981), British rock singer, a member of the BEATLES. He appeared in the Beatles' films and in *How I Won the War* (1967). He published *In His Own Write* (1964) and *A Spaniard in the Works* (1965). His murder, without motive, by a mentally deranged American in 1981 shocked and disillusioned people worldwide. See also p.1757.

Lennox, Matthew Stuart (or Stewart), 4th Earl of (1516–71), Scottish nobleman. In 1544 he married Lady Margaret Douglas, HENRY VIII's niece, to advance his claim to the Scottish throne. He was murdered by supporters of MARY, QUEEN OF SCOTS, after being appointed regent of Scotland in 1570.

Le Notre, André (1613–1700), French landscape gardener. He established the French garden as the leading European style in succession to the Italian and before the ascendancy of the English style in the 18th century. Le Notre's formal gardens were a perfect setting for such stately French châteaux as Vaux-le-Vicomte and Chantilly and of royal palaces such as the Tuileries (Paris), Versailles and the Trianon.

Lens, piece of transparent glass, plastic, quartz etc, bounded by two surfaces, usually both spherical, that changes the direction of a light beam by REFRACTION and hence can produce a projected image. A converging lens is convex in form (bulging at the centre) and bends light rays

Lemmings often panic when over crowded; many migrate recklessly.

Lemons, which probably originated in India, are rich in vitamin C and citric acid.

Lenin's image has dominated the USSR since the Russian Revolution in 1917.

towards the lens axis. A diverging lens is concave (thinnest at the centre) and bends rays away from the axis. The image may be right-way-up or inverted, real or virtual, depending on the relative positions of object and focal point of the lens; it may also be magnified or reduced in size. Lens images suffer from various **ABERRATIONS** so that they may be blurred and have false colours. These characteristics also apply to the lens of the **EYE**. See also **SIGHT**; pp.136-137, 136-137, 852.

Lenski, Gerhard Emmanuel (1924-), US sociologist whose work covers social stratification, religion and evolution. His books include *The Religious Factor* (1961) and *Human Societies* (1970).

Lent, in the Christian liturgical year, the period before Easter. In the Western Churches it begins on Ash Wednesday and is 40 days long; in the Eastern Church it lasts 80 days. (The Sundays during the period are not reckoned as part of Lent.) It is a period of fasting, abstinence and penitence in preparation for the remembrance of the crucifixion and resurrection of Jesus Christ.

Lenthall, William (1591-1662), English political figure and parliamentarian. He was Speaker of the House of Commons from 1640 to 1653 and in 1642 refused to give up five members of the House to **CHARLES I**. He was Speaker again in 1654 and 1659, and in 1660 supported the **RESTORATION**.

Lenticular galaxy, type of elliptical **GALAXY**, resembling a convex lens in cross-sections.

Lentil, annual plant of the pea family that grows in the Mediterranean region, sw Asia and N Africa. It has feather-like leaves and is cultivated for its nutritious seeds, used as food, forage and a source of flour. Height: to 51cm (20in). Family Leguminosae; species *Lens culinaris*. See also p.681.

Lenya, Lotte (1900-81), Austrian singer and actress. She became famous in two notable **BRECHT** plays with musical scores by her husband **Kurt Weill**, namely *The Threepenny Opera* (Berlin, 1928) and *The Rise and Fall of the City of Mahagonny* (Leipzig, 1930). She emigrated to the USA in 1935.

Lenz's law, electromagnetic law deduced in 1834 by the Russian physicist Heinrich F. E. Lenz. It states that an induced electric current flows in the direction that tends to oppose the change producing it.

Leo, or the Lion, northern constellation lying on the ecliptic between Cancer and Virgo; the fifth sign of the Zodiac. The brightest stars are Alpha Leonis or Regulus, of the first magnitude, and Beta Leonis or Denebola, in the lion's tail, of the second magnitude. See also pp.1006, 1011, 1011, 1018, 1019, 1020, 1021, 1894-1895.

Leo, name of 13 popes. **Leo I** (Saint Leo the Great) (440-461) was a vigorous campaigner against the **MANICHEANS** and **MONOPHYTISM**; his celebrated *Tome of Leo*, defining the two natures and one person of Christ, condemned the principles of **EUTYCHES**. **Leo III**, Saint (r.795-816), fled from Rome in 799 when physically attacked by the family of **ADRIAN I**, and sought the protection of Charlemagne. Returning in 800, he crowned Charlemagne emperor. This event traditionally marks the beginning of the **HOLY ROMAN EMPIRE**. See also pp.1286, 1287, 1294. **Leo IV**, Saint (r.847-55), stressed the papacy's role in state affairs. Restoring Rome after the Saracen attack of 846, he fortified the city and formed an alliance with other cities against invaders. **Leo IX**, Saint (r.1049-54), was born in Alsace and elected pope in the court of Emperor Henry III of Worms, but insisted on approval by the clergy and people of Rome. He formed the Sacred College of Cardinals, and travelled widely in support of Cluniac reform. See also pp.1269, 1269. **Leo X** (r. 1513-21), the son of Lorenzo de' Medici, was made a cardinal at the age of 13 and was head of his family before he was 30. A patron of learning and art, he made Rome the centre of the **RENAISSANCE**. His practice of selling indulgences to finance the

rebuilding of St Peter's provoked the theses of Martin LUTHER and led to the **REFORMATION**. See also pp.1388-1402. **Leo XIII** (r.1878-1903) influenced Roman Catholic attitudes appropriate to living in the modern world. A devoted scholar, he opened the Vatican secret archives to the public and stressed truth in all things. He sponsored several universities, and advanced the philosophy of **THOMISM** to meet the intellectual attack on Christianity.

Leo, name of six eastern Roman emperors. **Leo I** (c.400-74; r.457-74) prevented barbarian domination of the Roman army by enlisting the help of the Isaurians, an Anatolian mountain tribe. **Leo II** (d.474; r.474), grandson of Leo I and named successor in 473, had an uneventful reign. **Leo III** (c.680-741; r.717-41), born in Syria, rose to power in the service of Justinian II. He became emperor after a revolt against Theodosius III and thereby established the Syrian dynasty. He successfully defended Constantinople against an Arab siege (717-18) and later expelled the Muslims from Asia Minor. Leo published the legal work *Ecloga* in 726 and caused the long-standing iconoclastic controversy by opposing the veneration of icons. **Leo IV** (749-80; r.775-80) was latterly an iconoclast, but until 780 his policies on religious matters were moderate. **Leo V** (d.820; r.813-20) was, like Leo IV, an iconoclast, and held a synod in 815 that ordered the destruction of the icons. **Leo VI** "The Wise" (886-912; r.886-912) was responsible for the *Basilica*, a revision of Justinian's law, and a legislative code reflecting conditions in Byzantium.

Leon, Luis Ponce de (1527-91), Spanish poet, scholar and Augustinian monk, who was denounced to the Inquisition and imprisoned (1572-76). His prose works include *De Los nombres de Cristo* and *La perfecta casada* (1583). His poems combine Greek purity and Hebrew passion. **León**, full name León de los Aldamas, city in Guanajuato state, central Mexico, at an altitude of 1,884m (6,182ft). It is an agricultural market and a mining centre. Mineral deposits include gold, copper, silver, lead and tin. Other industries are the manufacture of leather goods and textiles. Pop. (1975) 496,598.

León, city in w Nicaragua, South America, near the Pacific coast nw of Managua. It was founded in 1524 by Fernández de Córdoba, and was moved to its present site after an earthquake in 1610. Industries: cigars, cotton gins and leather goods. Pop. (1970) 90,897.

León, Kingdom of, Spanish kingdom that occupied the region made up of what are now the provinces of León, Salamanca and Zamora. It was established in the 10th century by García I and maintained its hegemony in Christian Spain for more than 100 years, but was unable to prevent the rise of Navarre and Castile. The kingdoms of Castile and León were twice united temporarily in 1037-65 and 1072-1157 before Ferdinand III accomplished a permanent union in 1230.

Leonardo da Vinci (1452-1519), Florentine painter, sculptor, architect, engineer and scientist. He was apprenticed to Andrea del Verrocchio at whose studio he remained probably until 1476. He was the founder of the Classic style of painting of the High Renaissance and was among the first to use the **CHiaroscuro** technique. His early works include the unfinished *Sr Jerome* (c.1480) and a portrait, *Ginevra de' Benci*. In about 1482 he became civil and military engineer to Duke Lodovico Sforza in Milan, where he executed *Madonna of the Rocks*, *Portrait of a Musician* and numerous other works, including the *Last Supper* (1495-98). While in Milan he made many architectural drawings and designed and directed court festivals; he also began his scientific work and wrote the notes for what was to become his *Treatise on Painting*. In 1500 he returned to Florence where he executed the *Mona Lisa* and began *Virgin and Child with St Anne*. One of his last known paintings is *St John the Baptist* (c.1515). In 1517 he became chief painter, architect

and engineer to Francis I at Amboise, France, where he died. See also pp.1380, 1389.

Leonardo Fibonacci. See **FIBONACCI**, **LEONARDO**.

Leoncavallo, Ruggiero (1858-1919), Italian composer, mainly of operas. In 1876 he left the Naples Conservatory. The production of his first opera *Chatterton* (1878) was thwarted by a dishonest impresario. Leoncavallo then travelled all over Europe working as an accompanist and composer of music-hall songs. Although he was an industrious composer of operas, *I Pagliacci* (1892) alone has withstood the test of time.

Leone, Giovanni (1908-), one of the leaders of the Italian Christian Democratic Party and an elected delegate to the Constituent Assembly in 1946. He was Prime Minister in 1963 and 1968, and became President of Italy in 1971.

Leonidas (d.480 BC), King of SPARTA whose small force of Greeks met the vast Persian army, under XERXES, at **THERMOPYLAE**. They were overwhelmed after two days, but their heroic defence became a legend.

Leonids, meteor shower observable from about 14 to 18 Nov., associated with the 1866 comet. A spectacular display of this shower occurs every 33 or 34 years, the period of the comet. The last major Leonid shower was in 1966 when it was estimated that there were 300,000 meteors per hour.

Leonov, Leonid Maksimovich (1899-), Soviet novelist and dramatist. His first novel, *Barsuki* (*The Badgers*), was published in 1924. Other works include the novel *Russki les* (1953; "Russian Forest") and *Nashestviye* (*Invasion*), first performed in 1942, his best-known play. He won the Stalin Prize in 1943 and the Lenin Prize in 1957.

Leontief, Wassily (1906-), US economist, b. Russia. He developed the input-output table, which relates empirical data of general equilibrium and clearly illustrates the inter-industry relationships of an economy, or subcomponents of an economy. Such a table is an essential tool in the development of rational governmental planning. Leontief was awarded the 1973 Nobel Prize in economics.

Leopard, solitary spotted big CAT found throughout Africa and s Asia, sometimes called a panther. It has a round head with a short nose, and long, thin tail. The coat may be yellow and white with dark spots, or almost completely black, as in the black panther. A good climber and swimmer, it feeds on birds, monkeys, antelopes and cattle. The gestation period is three months and two to four young are born. Length: to 2.45m (8ft) including the tail; weight: to 90.6kg (200lb). Family Felidae; species *Panthera pardus*. See also pp.98, 313.

Leopard, snow, long-haired CAT of the family Felidae, in which it is grouped with the lion and other big cats; it lives in the mountains of central Asia. It has deep insulating underfur and a thick yellow-grey outer coat with dark rosettes. It hunts at night, preying on ibex, domestic livestock and wild sheep. Length: 2.1m (6.8ft), including the tail. Species *Panthera uncia*. See also p.320.

Leopard cat, small long-legged spotted CAT that lives in wooded hilly regions of SE Asia. It preys on a wide variety of birds and small mammals. Length: to 1m (39in) including the tail. Family Felidae; species *Felis bengalensis*.

Leopardi, Count Giacomo (1798-1837), Italian poet. Although basically a pessimist, his works create the illusion of happiness, as in *I Canti* (1831) and *La Ginestra* (1836).

Leopold, name of two Holy Roman emperors. **Leopold I** (1640-1705; r.1658-1705), King of Hungary (r.1658-87) and King of Bohemia (r.1656-1705), was in almost constant conflict with either the Ottoman Turks or the French under Louis XIV. In 1697 he defeated the Turks at Zenta and gained most of Hungary. His armies fought against France in the Third Dutch War (1672-74) and in 1686 he formed the

League of AUGSBURG against France. In response Louis invaded the Palatinate in 1688, thus beginning the War of the Grand Alliance. The War of the SPANISH SUCCESSION broke out in 1701 but Leopold died before it ended. **Leopold II** (1747-92; r.1790-92), Grand Duke of Tuscany (1765-90), succeeded his brother Joseph II as head of a troubled empire and rapidly and fairly settled external disputes and internal rebellions. He encouraged the political ambitions of the lower and middle classes to forestall a revolution.

Leopold, name of three kings of Belgium. **Leopold I** (1790-1865), first king of independent Belgium (r.1831-65), served with the Allies against NAPOLEON. In 1816 he married Princess Charlotte, daughter of the future George IV of England. His powers were limited under the new constitution but he maintained the independence and unity of the nation. **Leopold II** (1835-1909; r.1865-1909) initiated a period of colonial and commercial expansion. He persuaded the delegates at a Berlin conference (1884-85) to give him sovereignty over the Congo Free State but he was forced to relinquish control to the Belgian government in 1908. **Leopold III** (1901- ; r.1934-51) succeeded his father Albert I. During the German invasion in 1940, Leopold led his forces in a spirited defence but was forced to surrender. His decision to become a German captive led to some opposition to his reinstatement after the war, and he abdicated in 1951. See also p.1621.

Leopold, Jan Hendrik (1865-1925), Dutch poet. His first poems were published in 1893 in *De Nieuwe Gids* ("The New Guide"). He was one of the most famous of the school of poets associated with that review.

Leopoldville. See **KINSHASA**.

Lepanto, Battle of (1571), naval engagement in the Gulf of Patras off the coast of Lepanto, Greece, between forces of the OTTOMAN EMPIRE and various Christian powers. When the Ottoman Turks attempted to take Cyprus from Venice in 1571, Greece, Austria, Spain, Venice and the papacy stopped them in this battle. See also p.1355.

Lepenski Vir, archaeological site in Yugoslavia, dating to 5000-4600 BC. The site is typical of Mesolithic Danube Basin settlements. See also p.117.

Lepidoptera, order of insects which includes **MOTHS** and **BUTTERFLIES** found in every continent except Antarctica. Wingspan: 4-300mm (0.16-12in). See also pp.36-37, 46-47.

Lepidus, name of a distinguished Roman family. Marcus Aemilius Lepidus (d.152 BC) was in turn consul, censor, pontifex maximus and princeps senatus. He built several roads. Marcus Aemilius Lepidus (d.12 BC) served as consul with Julius CAESAR, then as triumvir with MARK ANTONY and OCTAVIAN (AUGUSTUS), and again as consul, governing Rome during the **PHILIPPI** campaign. He then governed Africa and tried to incite a revolt in Sicily. Octavian forced him from his offices, except that of pontifex maximus. See also p.1231.

Le Play, Pierre-Guillaume Frédéric (1806-82), French mining engineer and sociologist. He examined the connections between family types and the general state of society. An early study of the relationships between workers, their employers and the environment was published in *European Workers* (1855). He also wrote *The Organization of Labour* (1872).

Lepontine Alps, section of the central Alps in Switzerland, along the Italian-Swiss border, lying mostly in the Ticino and Graubünden cantons. They extend from the Pennine Alps at the Simplon Pass, sw to the Rhaetian Alps at the Splügen Pass. They are bound by the upper Rhône and Vorderrhein valleys. The highest peak is Monte Leone 3,552m (11,654ft).

Leprechaun, in Irish folklore, a small, mischievous elf. He is thought of as a cobbler who also possesses much buried treasure. If caught he can be made to tell his secrets and grant wishes but will vanish as soon as his captor stops looking, even for a moment, at him.

Leprosy

Leprosy, also known as Hansen's disease, communicable disease caused by the micro-organism *Mycobacterium leprae*, in which granular nodules develop on the skin, mucous membranes and peripheral nerves. The spread and enlargement of the skin nodules together with progressive degeneration of the tissues and destruction of peripheral nerves produces loss of sensation and results in deformity if the disease is not treated. In tuberculoid leprosy, one of the two main types, damage to the nerves occurs early in the disease, so that the skin nodules may not be felt. In this form the nodules contain very few micro-organisms. In lepromatous leprosy, the nodules contain many *Mycobacterium leprae* organisms and thus are a source of spread of the infection to others. The disease can be arrested by the administration of drugs, but nerve damage is irreversible. See also pp.1083, 1083.

Lepsius, Karl Richard (1810–84), German archaeologist and Egyptologist. He rejected the tomb-robbing methods of Giovanni Belzoni and others and made extensive surveys of his discoveries on his expedition between 1842 and 1845. He published his findings in the 12-volume *Monuments of Egypt and Ethiopia* (1849–59).

Lepton, one of a class of subatomic particles which includes the ELECTRON, the MUON and the NEUTRINOS, together with their antiparticles (antileptons). Leptons are governed by the force of weak interaction, which is the force involved in radioactive decay. They are the lightest subatomic particles and are thought to have no QUARK substructure. See also HADRON; pp.818–819.

Leptospirosis, also called Weil's disease, infection with the spirochete *Leptospira*. It is passed to man by contact with infected rodents. Symptoms include fever, tendency to jaundice, haemorrhage and muscular pain. In its early stages, the infection may be controlled with antibiotics. Kidney failure may be one result of infection, and an artificial kidney machine may be used in its treatment.

Le Puy, town in central France, capital of the Haute-Loire département. It is notable for a number of abrupt volcanic peaks, up to 79m (260ft) high. One peak is topped by an 11th-century church and monastery, another by a statue to *Notre Dame de France* (1860). Le Puy was an important pilgrimage centre in the Middle Ages. Pop. (1973) 29,550.

Lerma, Francisco Gómez de Sandoval y Rojas, Duque de (1553–1625), chief minister to PHILIP III of Spain from 1598. He was forced to make peace with JAMES I of England and a truce with the Netherlands. He drove the Moriscos from the country in 1609 and became a cardinal in 1618, but was deposed by his son.

Lermontov, Mikhail Yurevich (1814–41), Russian poet and novelist. In his poem *On the Death of the Poet* (1837) he criticized the court for failing to prevent the duel in which PUSHKIN was mortally wounded. The novel *A Hero of Our Time* (1840) and the final version of *The Demon* (1841) were written in exile. See also pp. 1575–1576.

Lerner, Alan Jay (1918–), US musical comedy librettist. He collaborated with Frederick LOEWE in the stage productions of *Brigadoon* (1947), *Paint Your Wagon* (1951), *My Fair Lady* (1956), *Camelot* (1960) and *Coco* (1969). Lerner also wrote the screenplays for *An American in Paris* (1951) and *Gigi* (1958).

Le Sage, Alain-René (1668–1747), French novelist and dramatist. His lack of characterization is balanced by cheerful and vivid vignettes. His best-known works include the play *Crispin, rival of his Master* (1707) and *Histoire de Gil Blas de Santillane* (1715–35). See also p.1478.

Lesage, Jean (1912–), Canadian politician, Premier of Quebec (1960–66). He was a federal MP from 1945 to 1958, when he resigned his seat to become leader of the Quebec Liberal Party. He attempted to reform Quebec in his "Quiet Revolution" in order to forestall the separatist movement. He resigned the Liberal leadership in 1970.

Lesbianism, female HOMOSEXUALITY. **Lesbos** (Lésvos), island in E Greece, off the NW coast of Turkey in the Aegean Sea. Mitilini is the capital. Settled by the AEOLIAN c.1000 BC, it was an important cultural centre in the 7th and 6th centuries BC, and the home of SAPHO, ALCAEUS, ARISTOTLE and EPICURUS. It was held by Macedonia, Rome and Byzantium; the Ottoman Turks occupied the island from 1462 to 1913, when it passed to Greece. Products include olives, wheat, grapes and citrus fruits. The chief industries are tourism and fishing. Area: approx. 1,630sq km (630sq miles). Pop. (1961) 117,371.

Leschetizky, Theodor (1830–1915), Polish pianist and teacher. He was a student of KARL CZERNY and played before the Russian court in 1852. Ignacy PADEREWSKI and Ossip GABRILOVICH became his students after he settled in Vienna in 1878.

Lescot, Pierre (c.1515–78), French architect whose fame rests on his part in redesigning half of one side of the LOUVRE – the west wing of the Cour Carrée (1546–56) – the oldest part in existence. A pioneer of the Renaissance in France (although he never visited Italy), his style combines Italian features, such as Classical pilasters and relief sculpture, with French elements such as a high roof and arches over windows.

Leshy, forest spirit in Slavic mythology. It was seldom seen but was often heard laughing, whistling and singing while it went about playing tricks on men. It was depicted as a man as tall as the trees or as short as the grass, without eyebrows or eyelashes and with a pointed head.

Lesion, abnormality in a tissue. Examples are wounds of any kind and sores which occur anywhere, whether internal or external. Blisters, ulcers and tumours are examples of lesions.

Leskov, Nikolai Semyonovich (1831–95), Russian novelist and short-story writer, with a great gift for narrative. His works – bizarre and full of satire – include the novels *Nekuda* (1864) and *Cathedral Folk* (1872), and the story *Lady Macbeth of the Mtsensk District* (1865), of which SHOSTAKOVICH's opera is based.

Leslie, Alexander, Earl of Leven. See LEVEN, ALEXANDER LESLIE, 1ST EARL OF.

Leslie, David (1601–82), Scottish military commander. He served in the Swedish army during the Thirty Years War and at MARSTON MOOR in 1644 on the side of the ROUNDHEADS. He later became a ROYALIST and commanded the Scottish army at the Battle of WORCESTER. He was created a baron in 1661.

Leslie, Sir John Randolph Shane (1885–1971), Irish journalist and writer. He published several volumes of verse including *Songs of Oriel* (1908), *Verses in Peace and War* (1922) and *Oppidan* (1922). His other works include *American Wonderland* (1936) and *The Life of Mrs Fitzherbert* (1939).

Lésmian, Bolesław (1879–1937), Polish poet. He published three volumes of original verse: *Sad rozstajny* (Orchard, 1912), *Laka* (The Meadow, 1920) and *Napój ciemny* (The Shadowy Drink, 1936). He was a SYMBOLIST and his poems depict extremes of horror and ecstasy.

Lesotho, nation in S Africa, surrounded by South Africa and the Transkei, known as Basutoland until 1966. The country depends for its economic survival on South Africa, the employer of many Sotho mine workers. Much of the land is infertile, although beans and cereals are produced in the w. The capital is MASERU. Area: 30,355sq km (11,720sq miles). Pop. (1980 est.) 1,200,000. See p.2090.

Lespinasse, Julie-Jeanne-Éléonore de (1732–76), companion and protégée of Madame DEFFAND from 1754 to 1764. She later established her own salon in Paris which was frequented by the ENCYCLOPÉDISTES. Her love-letters to the Comte de Guibert, written between 1773 and 1776, were published in 1809.

Lesseps, Ferdinand-Marie, Vicomte de (1805–94), French diplomat who in 1832 conceived the idea of a canal linking the Red Sea with the Mediterranean Sea.

Digging was begun, by Egyptian labourers, in 1859 but it was necessary to import mechanical equipment from Europe to complete the work. The Suez Canal, as it became known, was opened by the Empress EUGÉNIE in November 1869. See also p.1609.

Lesser Antilles, one of three major island groups in the West Indies archipelago, between the Atlantic Ocean (E) and the Caribbean Sea, stretching in an arc from Puerto Rico (N) to the N coast of Venezuela, South America. The group includes the LEEWARD ISLANDS and the WINDWARD ISLANDS.

Lessing, Doris May (1919–), Rhodesian novelist and playwright. Her books are strongly autobiographical, reflecting her membership of the Communist Party, her two failed marriages and her southern African background. This is especially so of the *Martha Quest* series – *Martha Quest* (1952), *A Proper Marriage* (1954), *A Ripple from the Storm* (1958) *Landlocked* (1965), and *The Four Gated City* (1969). *The Golden Notebook* (1962) is widely considered her finest work.

Lessing, Gotthold Ephraim (1729–81), German philosopher and writer responsible for the so-called native German drama. He portrayed his commitment to the German enlightenment in *Nathan the Wise* (1779). Other works include *Minna von Barnhelm* (1767) and *Hamburg Dramaturgy* (1767–68). See also pp.1466–1467, 1549.

Les Six. See SIX, LES.

Lester, Richard (1932–), US film director who has done most of his work in Britain. His first film was the successful short comedy *The Running Jumping and Standing Still Film* (1959). His later films include *A Hard Day's Night* (1964) and *Help!* – which starred the BEATLES – *The Knack* (1965), *The Bed Sitting Room* (1969), *The Three Musketeers* (1974) and *Robin and Marian* (1976).

L'Estrange, Sir Roger (1616–1704), English pamphleteer and ROYALIST. In 1644 he was captured by PARLIAMENTARIANS during an unsuccessful attack on Lynn, in Norfolk, and imprisoned. After the RESTORATION he was made surveyor of the imprimery (1663–88) and issued various journals, including the *Intelligencer*, the *News* and the *Observer*.

Le Sueur, Eustache (1616–55), French painter of religious subjects. He enjoyed great prestige in 18th-century France. His works include *Presentation of the Virgin* (1640–45).

Leszek I, "the White", King of Poland (1194–1227). His reign was marked by feudal anarchy, with the nobility and clergy firmly in control. Leszek fought numerous wars, first with Mieszko III, who was trying to regain his throne, and later with Mieszko's son.

Le Tellier, Michel (1630–85), French minister made war secretary (1643–77) during LOUIS XIV's regency. He enlarged the army and centralized it under the Crown, thus making it possible for Louis to dominate Europe.

Lethaby, William Richard (1857–1931), British architect and writer. He built little, but wrote many influential works, especially *Form in Civilisation* (1922).

Lethe, also called Oblivion, in Greek mythology, the river of forgetfulness which the dead crossed as they entered HADES. All who crossed it lost their memories of past lives. Lethe, when personified, was considered to be the daughter of ERIS (Strife).

Letterpress printing, method of printing in which type is assembled and laid into a large frame called a chase by a compositor then placed either on a flat-bed press (which prints one sheet at a time) or processed into a curved plate and placed on a rotary press, which is capable of higher speeds. See also HALF TONE PROCESS; LINTYPE; LITHOGRAPHY; pp.612–615.

Letters, branch of literature comprising both letters intended for publication and often addressed to the public and also private correspondence. The public epistle was much used in classical times, especially by CICERO and HORACE. Their letters were the models for the epistles of ST PAUL.

The first great modern writer of letters was the French lady, Madame de SÉVIGNÉ, whose witty, acute and elegantly written letters were published in the 17th century. In Britain the great age of letters, which began with DRYDEN in the late 17th century, was the 18th century. Alexander POPE perfected the verse letter in his *Epistle to Dr Arbuthnot*. Lord CHESTERFIELD's *Letters to His Son* remains a classic. Letter writing became so highly polished and so popular that RICHARDSON wrote the first serious epistolary novels in the language in the 1740s, *Pamela* and *Clarissa*. **Letters patent**, letters issued by the Crown in England, affixed with, but not closed by (the Latin *patens* meaning open), the GREAT SEAL. They confer upon the receiver, or patentee, some dignity, emolument, office, monopoly or FRANCHISE which otherwise he may not enjoy. They are used, for instance, to incorporate bodies by charter. They are left open so that anyone may inspect them and are recorded in the patent rolls. (Writs of right close, sealed by the Great Seal, are not open to public inspection and are recorded in the close rolls.)

Lettow-Vorbeck, Paul von (1870–1964), German commander of the German East African army in WWI. He managed to immobilize large numbers of British and Portuguese troops by the use of guerrilla tactics. He surrendered on 25 Nov. 1918 only after he had been given proof of the armistice. See also p.1671.

Lettre de cachet, French document of the 17th and 18th centuries sent by the king, which could order imprisonment or exile without trial. They helped to inspire hatred of the ANCIEN RÉGIME.

Lettuce, edible annual plant that is widely cultivated for use in salads. Most varieties of *Lactuca sativa* are cool-weather crops; hot weather causes them to go to seed prematurely. The large leaves form a compact head or loose rosette. Wild species include the compass plant (*Lactuca scariola*), a prickly lettuce-like plant believed to be the ancestor of cultivated forms. See also pp.667, 684, 684, 686, 686.

Leucippus of Miletus (fl.500 BC), Greek philosopher credited with having originated the theory of ATOMISM. Although only fragments of his work remain, he is believed to have written *The Great World System*. In this book it is proposed that all matter is homogeneous and consists of an infinite number of small, indivisible particles – atoms.

Leucite, grey or white felspar mineral which occurs uncommonly in lava flows and volcanic plugs. Chemically it is a potassium aluminium silicate. Its formula is KAl(SiO₃)₂.

Leucocyte, white blood cell, a colourless, amoeba-like structure containing a nucleus and CYTOPLASM. Leucocytes are either granular (granulocytes) or non-granular (agranulocytes), depending on the presence or absence of granules in the cytoplasm. Granulocytes are subdivided into neutrophils, eosinophils and basophils; agranulocytes are either lymphocytes or monocytes. Normal blood contains 5,000 to 10,000 leucocytes per cu mm of blood. Excessive numbers of leucocytes, or immature forms called lymphoblasts, are seen in such diseases as leukaemia. Leucocytes multiply, help in ANTIBODY formation and destroy harmful cells when the body is infected. See also p.153.

Leucotomy, or pre-frontal lobotomy, surgical operation on the brain. It was first performed in the 1930s to treat psychiatric disorders by severing tracts of nerve fibres leading to the frontal lobes. It may cause irreversible deterioration of personality. Drugs have almost entirely replaced this operation. See also BRAIN DAMAGE.

Leukaemia, acute or chronic malignant disorder characterized by abnormal numbers of types of white blood cells (LEUCOCYTES) in the blood, bone marrow and other tissues. Besides its division into acute and chronic forms, it is also classified by the type of leucocyte involved. The acute lymphoblastic form is the most common malignant disease of childhood; present treatment produces two-year

survival in about half of affected children. In chronic leukaemia, a more slowly progressing form, survival as long as 10 to 15 years has occurred. Treatment of leukaemia is mainly by irradiation and drugs. The cause has not yet been determined. See also RADIOTHERAPY; p.1067.

Leuven. See LOUVAIN.

Levalloisian culture, archaeological term for culture producing a particular type of sharpened flint flakes, used for skinning animals. Such flints have been found in both Europe and Africa, and date 100,000–70,000 years ago, in the Third Interglacial Period. See also p.119.

Levant Company, London merchants' company formed in 1591 by the amalgamation of the Turkey Company and the Venice Company. It was a joint-stock enterprise which traded in the Mediterranean and the Levant. In the 18th century it suffered from the competition of the EAST INDIA COMPANY and eventually gave up its charter in 1825.

Le Vau, Louis (1612–70), French architect who, although he designed part of the old Palace of Versailles, was predominantly an architect to the new bourgeoisie, not the court. Le Vau is famous chiefly for Vaux-le-Vicomte, the sumptuous BAROQUE chateau he designed for Nicolas Fouquet, Finance Minister to Louis XIV, in gardens laid out by LE NOTRE.

Levee, broad low ridge of fine sediment deposited along the sides of rivers during floods. A levee may also be built artificially along the bank of a river or an arm of the sea to protect the land from flooding. See also p.220.

Levellers (fl.1645–49), Puritan political and religious movement in England. The name alludes derisively to their ideals of equality. Their leader was John LILBURN, and their campaign, which found extensive support in Oliver CROMWELL's army, demanded complete constitutional reform, with abolition of the monarchy and corporate privilege, and the creation of one supreme representative legislature elected biennially by adult male suffrage, the extent of which was not firmly defined. Cromwell finally crushed the movement.

Leven, Alexander Leslie, 1st Earl of (c.1580–1661), Scottish military commander. He fought for Gustavus Adolphus of Sweden in the THIRTY YEARS WAR, being present at LÜTZEN in 1632 and Brandenburg in 1634. Joining the COVENANTERS in Scotland, he fought for Parliament in the English Civil War but joined the Royalists at Dunbar in 1650.

Lever, Charles James (1806–72), Irish novelist. He wrote many novels, most of them about Irish rural and sporting life; the first, *The Confessions of Henry Lorrequer*, was published in 1837.

Lever, simple machine used to multiply the force applied to an object by virtue of the PRINCIPLE OF MOMENTS. A lever consists of a rod and a fulcrum, or point about which the rod rotates. In a crowbar, for example, the applied force and the body to be moved are on opposite sides of the fulcrum, with the point of application farther from it. This lever multiplies the force applied by the ratio of the two distances. See also p.446.

Leverhulme, William Hesketh Lever, 1st Viscount (c.1851–c.1925), British industrialist and philanthropist. Beginning as an assistant in his father's grocery business, he bought a soapworks in 1884 and started the manufacture of a soap named "Sunlight", from vegetable oils instead of tallow. He founded the model industrial town of PORT SUNLIGHT on garden city principles to eliminate the effects of overcrowding. See also p.1573.

Leverrier, Urbain-Jean-Joseph (1811–77), French astronomer, discoverer of the planet NEPTUNE. Leverrier realized that unexpected variations in the orbit of URANUS could be due only to the gravitational influence of a hitherto undiscovered outer planet. A search was at once made and in Sept. 1846 Johann G. GALLE at Berlin located the planet, which was named Neptune. Leverrier was not the only astronomer to make this deduction: in England John Couch Adams reached the same conclusion in 1845.

Levertin, Oscar Ivar (1862–1906), Swedish poet, critic and teacher. A leading Neo-Romantic, he published four volumes of verse, all sombre in tone, including *King Solomon and Morolf* (1905).

Levertov, Denise (1923–), US poet, b. Britain. Her poems are simple and sparse, hinting at a natural order behind the seeming chaos of contemporary life. Her works include *The Double Image* (1946), *Here and Now* (1957), *Jacob's Ladder* (1961), *The Sorrow Dance* (1967) and *Relearning the Alphabet* (1970).

Levi, Carlo (1902–75), Italian writer and painter. Because of his anti-Fascist political activities, he was exiled (1935–36) in Lucania, the setting of his novel *Christ stopped at Eboli* (1945). His later novels include *Words are Stones* (1955) and *The Linden Trees* (1959). He served in Italy's senate (1963–72).

Leviathan (1651), essay in political theory by the Englishman Thomas HOBBS. It is an entirely secular interpretation of the source and justification of political power. Its gist is that in order to create a civil society out of a natural chaos, men must unreservedly, and without power of recall, entrust power to an absolute ruler. Thus, although it finds no place for the DIVINE RIGHT OF KINGS, it is a cardinal document in the development of European ABSOLUTISM.

Levi Ben Gershom (1288–1344), also known as Gersonides, Jewish scholar, b. France. He had a wide range of interests, including mathematics, philosophy and religion. In addition to the scientific works, he published commentaries on the Bible, as well as philosophical studies of Aristotle and Averroës.

Levi-Civita, Tullio (1873–1941), Italian mathematician. With his one-time teacher Curvastro Ricci, he developed tensor calculus, which has many applications in relativity and general unified field theory.

Levin, Meyer (1905–), US author, who began his career as a journalist. His first novel, *Reporter*, appeared in 1929. Other novels include *The Old Bunch* (1937), *My Father's House* (1946), *Compulsion* (1956), *The Fanatic* (1964) and *The Settlers* (1972).

Levine, Albert Norman (1924–), Canadian poet and novelist. He published the volume of verse, *The Tightrope Walker*, in 1950. His novels include *The Angled Road* (1952) and *From a Seaside Town* (1970).

Levinsohn, Isaac Baer (1788–1860), Hebrew writer, b. Russia; a founder of the Haskalah, or ENLIGHTENMENT, in Russia. A rabbi, his writing was generally polemical and propagandist, and included *Testimony in Israel* (1823), *House of Judah* (1838) and the Yiddish play *The World of Chaos*, published in 1878.

Lévis, François-Gaston, Duc de (1720–87), commander of French troops in Canada (1759–60). Lévis defeated the British at Ste Foy in 1760 but abandoned the siege of Quebec when the British fleet arrived. Later that year he was forced to surrender Montreal.

Lévi-Strauss, Claude (1908–), Belgian-born French anthropologist and founder of structural anthropology. Structuralism, the attempt to find basic patterns for a scientific study of man, contends that history was shaped into a collective, fragmented structure comparable to preliterate mythology. Lévi-Strauss became professor of anthropology at the College of France in 1959 and was elected to the French Academy in 1973. His books include *The Elementary Structures of Kinship* (1949; tr. 1962) and *Structural Anthropology* (1958).

Levi Strauss and Company, US clothing manufacturers who design, manufacture and distribute blue jeans, denim and casual clothing. The company was founded in the mid-19th century in the USA by Levi Strauss, who supplied riveted canvas trousers to cowboys and prospectors.

Levitism, paranormal raising of a person or object without any visible means of support; it is associated with mediums, Indian fakirs and, more recently, PSYCHO-

KINESIS. This phenomenon has long been a focus for charlatanry and theatrical trickery and is the object of much scepticism. Debates over whether levitation is fact or illusion have persisted since witches were supposed to levitate or to "fly". See also pp.1891–1892.

Levites, according to the Bible, originally one of the 12 tribes of Israel, but later, after the Babylonian captivity, a priestly caste found in all tribes. By the time of Christ, the Levites ran the entire organization of the TEMPLE (including gatekeepers, musicians, scribes, money-changers and the Temple police) with the sole exception of the actual priesthood, still drawn from any tribe. The Levite tradition is still handed down: a Levite is called to read the TORAH after a kohen (priest) in the synagogue service.

Leviticus, biblical book, third book of the PENTATEUCH. Primarily a manual for the instruction of priests on ritual technicalities, it also exhorts reverent use of the proper rituals in worshipping God. Many of the laws in Leviticus, traditionally ascribed to MOSES, are repeated in DEUTERONOMY in less detailed form.

Levkas, island in W Greece. One of the IONIAN ISLANDS, it constitutes a department of Greece. The chief town is Levkas. Industries: olive oil, tobacco, currants and wine. Area: approx. 323sq km (125sq miles). Pop. (1971) 24,599.

Levkosia. See NICOSIA.

Lévy-Bruhl, Lucien (1857–1939), French philosopher. He researched the psychology of primitive societies and propounded his view that primitive thought was "pre-logical", differing in nature from that of civilized societies. From Émile DURKHEIM he took the concept of group ideas, which led him to emphasize the formative influence of tradition and the psychology of the society as a whole rather than the individual. His works include *How Natives Think* (1910), *Primitive Mentality* (1922) and *Primitives and the Supernatural* (1931).

Lewes, George Henry (1817–78), British journalist and critic. He wrote dramatic criticism as well as philosophical works, which include *Biographical History of Philosophy* (4 vols, 1845–46) and the hugely successful *Life and works of Goethe* (2 vols, 1855). Separated from his wife, he lived from 1854 until his death with George ELIOT (Mary Ann Evans), whose work he encouraged and influenced.

Lewes, Battle of (1264), military engagement at Lewes, Sussex, between the baronial force of Simon de MONTFORT and the troops of HENRY III. Simon's victory put him and two other "electors" in charge of England for over a year and led to the calling of his famous parliaments of 1264 and 1265.

Lewin, Kurt (1890–1947), US psychologist, b. Germany. He was professor (1935–45) of child psychology at the University of Iowa and director (from 1945) of the research centre for group dynamics at the Massachusetts Institute of Technology, where he pioneered work in human motivation and group dynamics. His books include *A Dynamic Theory of Personality* (1935) and *Resolving Social Conflicts* (1947).

Lewis, Alun (1915–44), Welsh poet and short story writer. His short stories about army life are collected in *The Last Inspection* (1942) and *In the Green Tree* (1948). His reactions to WWII find expression in his volumes of poetry, *Raiders Dawn* (1942) and *Ha, Ha Among The Trumpets* (1945).

Lewis, Cecil Day- See DAY-LEWIS, CECIL.

Lewis, Clive Staples (1898–1963), British scholar, critic and author. He was best known for his books on religious and moral themes, particularly *The Screwtape Letters* (1942), although he also wrote children's books and critical works. He was professor of Medieval and Renaissance English at Cambridge University (1954–63).

Lewis, Dominic Bevan Wyndham (1894–), British essayist, biographer and humorist. After working as Beachcomber in the *Daily Express* (1919–24), he continued as a humorist on the *Daily Mail* and the *News Chronicle*. His other

works include *Villon* (1928) and *The Stuffed Owl, an Anthology of Bad Verse* (1930).

Lewis, Gilbert Newton (1875–1946), US chemist. Working first in thermodynamics, he wrote a standard textbook on the subject. Later he worked out a theory of valency for non-ionic compounds based on shared electrons (co-valency), and extended the concept of acids and bases. Lewis was the first to prepare a sample of heavy water, since used as a moderator in nuclear reactors.

Lewis, Harry Sinclair (1885–1951), US author. After graduating from Yale University he held a variety of newspaper and editorial positions. He began writing short stories, and his first novel, *Our Mr Wrenn*, appeared in 1914. It was not until the publication of the novel *Main Street* in 1920, however, that he gained acclaim. A satirist, he ridiculed American middle-class life. Among his targets were conformity and hypocrisy in business, medicine and religion. His early work, in particular *Babbalanja* (1922) and *Arrowsmith* (1925), is generally considered his best. He was the first American author to be awarded the Nobel Prize for literature (1930). See also p.1772.

Lewis, Jerry (1926–), US film comedian and director. He partnered the singer Dean Martin in a series of films (1949–56) before becoming an independent actor-director of such offbeat comedies as *The Bellboy* (1960), *The Nutty Professor* (1963), *Ladies' Man* (1961) and *The Patsy* (1964).

Lewis, Jerry Lee (1935–), US ROCK AND ROLL pianist. He made his name in 1957 with *Whole Lotta Shakin' Going On* and *Great Balls of Fire*, both of which became rock and roll classics. He retired from the pop world in 1958 but returned in 1961 to make further recordings.

Lewis, John Aaron (1920–), US jazz pianist, composer and arranger. In the 1940s he played and arranged in the bands of Dizzy GILLESPIE and Miles DAVIS. From 1952 to 1977 he led the Modern Jazz Quartet.

Lewis, John Saunders (1893–), Welsh author and critic, president of PLAID CYMRU (Welsh Nationalist Party) from 1925 to 1938. He is best known for his varied dramatic work which includes *Buchedd Garmon* (1937), *Blodeuwedd* (1948), *Dwy Gomed* (1952) and *Brad* (1958). His other writing includes a collection of political essays *Canlyn Arthur* (1938) and a novel *Monica* (1930).

Lewis, Matthew Gregory ("Monk") (1775–1818), British novelist and dramatist. He is chiefly remembered for his Gothic novel *The Monk* (1796) and for his *Romantic Tales* (1808).

Lewis, Meriwether (1774–1809), US explorer who was one of the leaders of the LEWIS AND CLARK EXPEDITION. A US army captain, Lewis was selected by Thomas JEFFERSON to investigate a land route to the Pacific coast and explore the land acquired by the USA in the LOUISIANA PURCHASE of 1803. Lewis's documentation and observations of the journey paved the way for westward expansion. He became governor of the Louisiana Territory in 1808, but died mysteriously a year later.

Lewis, Percy Wyndham (1884–1957), British painter, critic and novelist. Lewis emerged as one of the leaders of the VORTICIST movement immediately before WWI, and contributed to the Vorticist periodical *Blast* (1914–15). In his paintings and designs of this period he was greatly influenced by FUTURISM. After WWI he produced a series of novels and essays, such as *The Apes of God* (1930) and the literary criticism *Men Without Art* (1934).

Lewis, Richard (1914–), British tenor who made his debut at Glyndebourne in 1947. He created the role of Troilus in Sir William Walton's *Troilus and Cressida* (1954) and similarly sang in the first performances of Sir Michael Tippett's *The Midsummer Marriage* (1955) and *King Priam* (1962).

Lewis, Sinclair. See LEWIS, HARRY SINCLAIR.

Lewis, larger part of the double island Lewis and HARRIS, northernmost of the Outer Hebrides, Western Isles, NW of

Lewis and Clark Expedition

Battle of Lexington; a small American force faces the well-drilled British redcoats.

Leyden Battery.

Leyden jars, connected to groups, form a battery holding a powerful electric charge.

Lhasa apsos were traditional gifts from the Dalai Lama to dignitaries visiting Tibet.

Liberace and his equally famous "mom" - one of the great women behind every great man.

Scotland. Most of the island is peat moor and hills; most settlements are on the coast. Crofting, fishing and the production of Harris tweeds are the main occupations. Stone circles and Viking remains are ensuring the increase of tourism, especially to the chief town and only communications centre Stornoway. Pop. (1971) 15,460.

Lewis and Clark Expedition (1804-06), exploration of the LOUISIANA PURCHASE territory and the country beyond as far as the Pacific Ocean by two army officers, Meriwether LEWIS and William Clark. The purpose of the expedition, which was initiated by President JEFFERSON and Congress in 1803, was to find a land route to the Pacific, strengthen US claims to the Oregon Territory and gather information about the Indians.

Lewis Carroll. See CARROLL, LEWIS.

LeWitt, Sol (1928-), US sculptor. He gained notice in the 1960s, along with Don Judd, for his exhibitions of "object sculpture", simple constructions of prefabricated industrial materials. His work is open-framed, whereas Judd's is made of solid slabs.

Lexington, Battle of (19 April 1775), first battle of the American War of Independence. Paul REVERE and William Dawes gave warning that 700 British troops under Francis Smith were marching from Boston to CONCORD to seize militia stores, and 70 MINUTE MEN, led by John Parker, met them at Lexington Green. A skirmish followed in which eight Americans were killed.

Leyden. See LEIDEN.

Leyden, Lucas van. See LUCAS VAN LEYDEN.

Leyden jar, earliest and simplest device for storing static electricity and the original electrical condenser (capacitor), developed in Leyden, Holland, in 1745. It consists of a foil-lined glass jar partly filled with water and closed with a cork through which protrudes a knobbed brass rod which is wired to the foil. To charge the jar, friction is applied to the tip of the rod.

Ley farming, system of agriculture, based on a return to the pre-modern system of crop rotation. Cereal crops are alternated with grass or green manure crops in order to restore nitrogen to the soil without recourse to chemical fertilizers. During pasture years the soil is manured by grazing livestock. The name comes from a corruption of the word "lea", for land under grass. See also pp.668-669.

Ley lines, straight lines linking standing stones, Church sites and other places of traditional sanctity in the British Isles. The idea of ley lines was first proposed by Alfred Watkins in 1920. He later wrote *The Old Straight Track* (1925) to explain and offer proof of his theory that such lines have archaeological significance.

Leyte Gulf, Battle of (October 1944), a series of WWII air and naval engagements between Japan and the USA in the Philippines area. The battle, marking the start of General Douglas MACARTHUR's invasion of the Philippines, ended in a resounding US victory over the Japanese navy.

Lezama Lima, José (1912-), Cuban novelist and poet. His chief work is the novel *Paradiso* (1966). His verse was published in two volumes, *Enemigo rumor* (1941) and *Aventuras sigilosas* (1945).

LH, luteinizing hormone, is made by the anterior (front) lobe of the PITUITARY GLAND, just below the brain. In women it stimulates OVULATION by the development of the corpus luteum and secretion of progesterone. In men it promotes the secretion of TESTOSTERONE.

Lhasa, capital city of Tibet (Xizang Zizhiqu) Autonomous Region, SW China, on the River Lasa. A religious centre, it has been called the Forbidden City because of the Tibetan clergy's hostility to foreigners. After the Tibetan revolt against the Chinese (1959-60), many temples and monasteries were closed. Today it is an important trading centre, and also manufactures chemicals and processes gold and copper. Pop. (1970) 175,000.

Lhasa apso, Tibetan dog used to guard lamaseries. It has a narrow head with a

medium-long muzzle, large nose and pendulous ears. The body is set on short legs and the tail is carried in a coil over the back. The heavy, long, straight coat is usually a golden brown. Height: 28cm (11in) at the shoulder; weight: to 7kg (15lb).

Lhote, André (1885-1962), French painter and critic. His writings on art, *Traité du Paysage* (1939) and *Traité de la Figure* (1950), have become classics.

Lhotse, two peaks in the Himalayas on the border of Nepal and Tibet. Height: (Lhotse Peak I) 8,511m (27,923ft); (Lhotse Peak II) 8,400m (27,560ft).

Liadov, Anatol Konstantinovich (1855-1914), Russian composer. His best work was written for the piano - preludes, studies and dances which show the influence of CHOPIN as well as elements of Russian folk music. Other compositions include orchestral and choral works such as *Chorus in praise of Vladimir Stassov* (1894) and the symphonic poem *The Enchanted Lake*.

Liaisons Dangereuses, Les (1782), novel by Choderlos de LACLOS. A story of cynical seduction written in the form of letters, it exposes the corruption of aristocratic society. See also p.1479.

Liana, any ground-rooting woody vine that twines and creeps extensively over other plants for support; it is common in tropical forests.

Liang Ch'i-ch'ao (1873-1929), Chinese critic, editor and scholar. He participated in the "hundred days' reform", a movement for constitutional change (1898), and after its failure fled to Japan. After the revolution he returned to China in 1912 and led the Progressive Party in parliament. He wrote several works on Chinese intellectual and political history and encouraged a Western prose style.

Liaoning, province on the NE coast of China; Shenyang (Mukden) is the capital; part of Manchuria, it includes the Liaotung Peninsula. Corn, kaoliang and soy beans are the principal crops; others include cotton, wheat, rice, silk and fruits. Liaoning is China's most industrialized province. Coal is mined and there are large deposits of iron ore. Chemicals, iron and steel, heavy engineering and textiles are the principal industries. Area: 151,055sq km (58,322sq miles). Pop. 29,000,000.

Liapchev, Andrei (1866-1933), Bulgarian economist and Premier. He was an advocate of the unification of Rumelia and Bulgaria, and as Premier (1926-31) his foreign policy was one of conciliation.

Libby, Willard Frank (1908-), US chemist. From 1941 to 1945 he worked in the war research division at Columbia University, New York, on the separation of isotopes for the atom bomb. This led to his interest in nuclear physics and Libby's development of radioactive CARBON-14 dating, for which he was awarded the 1960 Nobel Prize in chemistry.

Libel, permanent, false statement to a third person containing an untrue imputation against the reputation of another. In contrast with SLANDER, libel is usually written although publications of any defamatory matter in permanent form (such as a picture or film) and, since 1952, broadcast statements for general reception are treated as libel. Although usually a civil offence, libel may also be a criminal one in certain circumstances.

Liberace, Wladziu Valentino (1919-), US pianist and entertainer. He has been described as television's first matinée idol, and in 1953 was the largest solo attraction in US concert halls. He is chiefly famous for his extravagant style of dress and sparkling stage performances.

Liberalism, political and intellectual belief which advocates the right of the individual to make decisions, usually political or religious, according to the dictates of conscience. Its modern origins lie in the AGE OF REASON and the ENLIGHTENMENT. In intellectual matters it upholds the desirability of the free play of ideas upon stock notions. In politics it opposes arbitrary power and discrimination against minorities. In British history its greatest influence was exercised in the 19th century,

with effect particularly in the abolition of slavery, constitutional reform, free trade and religious toleration. See also LIBERAL PARTY; pp.1851, 1855.

Liberal Party, British political party. It grew out of the early 19th-century WHIG PARTY. The name Liberal was adopted by some MPs in the 1820s. The first official use of the name is the National Liberal Federation, in Birmingham, founded by Joseph CHAMBERLAIN in 1877. The 19th-century party drew its strength from religious dissent and the urban electorate. Its predominant interests were free trade, religious liberty, financial retrenchment, individual liberty and constitutional reform. Its greatest leader was William GLADSTONE, who led four governments (1868-74, 1880-85, 1885-86 and 1892-94). Its greatest electoral triumph was the landslide victory of 1906. The 1906 government legalized trade unions, reformed the House of Lords and introduced progressive social security measures. It remained in office until 1916 (from 1908 under Herbert ASQUITH), when LLOYD GEORGE formed a coalition government with the Conservatives. Since the fall of that government, it has never formed a government, its place as one of the two major parties having been taken by the LABOUR PARTY. Although it has never returned more than 15 MPs to Westminster since 1945, it has nevertheless been instrumental in keeping the Labour Party in office during two periods of minority government; in the mid-1920s by tacit support and in 1977 by a formal arrangement to support Labour bills in Parliament. This 'Lab-Lab Pact' ended following the poor Liberal results in the general election of 1978. Subsequently, in 1981, the Liberals formed an alliance with the newly formed Social Democratic Party. See also pp.1590-1591, 1610-1611.

Liberal Unionists, members of the LIBERAL PARTY in Britain who voted against GLADSTONE'S IRISH HOME RULE BILL in 1886 and subsequently gave their support to the CONSERVATIVE PARTY. They were led by the Whig Marquess of Hartington and the Radical Joseph CHAMBERLAIN. At the 1895 elections they returned 71 MPs to the House of Commons. It was the Liberal Unionists who sustained the Conservatives in office for most of the 20 years between 1886 and 1905.

Liberia, republic in W Africa on the Atlantic coast. Created by the American Colonization Society in the 19th century as a home for freed slaves, the country retains close links with the USA. The main food crops are cassava and rice. Rubber was formerly the mainstay of the economy, but it has now been superseded by iron ore, which accounts for 72% of all exports. The capital is Monrovia. Area: 111,370sq km (43,000sq miles). Pop. (1976 est.) 1,750,000. See p.2090.

Liberius (d.366), pope (352-66), best known as the builder of the Basilica Liberiana on the Esquiline Hill. At the beginning of his pontificate the status of ST ATHANASIUS was still disputed in the Church and Liberius requested the Emperor Constantine II to call a council to rule on the matter. The ruling went against Athanasius, but Liberius refused to be coerced into outrightly condemning him and was himself banished. In 358 he signed a vaguely worded repudiation of Athanasius couched in terms of the arian heresy, and returned to Rome. After the death of the emperor he reavowed his orthodox position.

Liberties, exemptions from royal jurisdiction given in medieval England by royal grant (sometimes assumed by right of conquest) to lords of manors and holders of lands palatine. The Earl of Chester, the Bishop of Durham and the Duke of LANCASTER were all lords palatine, holding almost sovereign power over their domains. Perhaps the most significant liberty was their right to exercise justice in their own courts, which gave rise to the contemporary aphorism "The king's writ stops at the manor gate".

Liberty Bell, historic US monument housed in Independence Hall, Philadelphia. It was first hung in 1753 with the

biblical inscription, "Proclaim Liberty throughout all the Land unto all the Inhabitants Thereof". According to legend it was rung in July 1776 to celebrate the signing of the American Declaration of Independence. The bell was removed to Allentown while the British occupied Philadelphia (1777-78), and was returned in 1781. It was cracked in 1835 and again in 1846.

Liberty Loan Act (1917), US legislation passed by Congress providing for four public loans to the government to finance the country's war effort in WWI and for loans to the Allies for the purchase of food and war supplies. Five fund-raising campaigns were held between 1917 and 1919, raising more than 20,000 million dollars.

Liberty ships, cargo vessels built during WWI as part of the US war effort, also known as EC-2 ships. They were part of a project which began in 1941 and produced 2,610 ships, some taking only two weeks to complete. Their standard dimensions included a length of 134m (441ft) and a displacement of 10,490 tonnes. Fast production was made possible by the development of arc welding, although this technique was at the time believed to have made some of the ships unsafe.

Libido, in PSYCHOANALYSIS, term used by Sigmund Freud to describe instinctive sexual energy. C. G. Jung enlarged its meaning to include all instinctive energy. Its influence on the development of PERSONALITY is probably less than the influence of social forces.

Libitina, Roman goddess of funerals and death. Perhaps originally an earth goddess, she was sometimes associated with Proserpina (called PERSEPHONE in Greek mythology). When someone died, money was offered to Libitina in a sacred grove, which also contained the register of deaths and offices of undertakers.

Libra, or the Scales, southern constellation situated on the ecliptic between Virgo and Scorpius; the seventh sign of the ZODIAC. It formerly contained the First Point of Libra, the intersection of the ecliptic and the equator marking the autumnal equinox. Because of precession this point has shifted westward into Virgo. The brightest star, Beta Librae, is of magnitude 2.7. See also pp.1006, 1015, 1894.

Library, collection of books; room or building containing books for reading or reference. The earliest known library, a collection of clay tablets in Babylon, existed before 2000 BC.

Library, British, national reference library in Bloomsbury, London, until 1973 known as the British Museum Library. Its enormous collection of more than 8 million volumes was first begun in 1757. Its impressive circular reading room was designed by Sir Anthony Panizzi and opened in 1857. Every book published in Britain must be deposited with the Library under the 1911 Copyright Act.

Library of Congress, US national library in Washington, DC. Founded in 1800 as a research facility for members of Congress, its responsibilities now include copyright, inter-library loans and the publication of catalogues. It houses more than 60 million items and is supported mainly by congressional appropriations. See also p.627.

Libration, slight oscillatory motion of the Moon during which a thin crescent of its far side becomes temporarily visible from Earth. See also pp.928, 934, 934.

Libretto, text of an OPERA or operetta. From 1597, libretti were printed to commemorate performances; by the mid-18th century, public audiences used them to follow the opera's story. Libretti have often resulted from close collaboration between librettist and composer, such as da Ponte and Mozart, and Gilbert and Sullivan. A number of composers wrote their own libretti, the notably Wagner.

Libreville, capital city of Gabon, W Africa, at the mouth of the River Gabon on the Gulf of Guinea. It was founded by French traders in 1843 and named Libreville ("Freetown") in 1849. Formerly Gabon's leading port, the city is now an administrative centre. Timber is the most valuable local commodity. Pop. (1975 est.) 169,200.

Libya, independent nation in N Africa; 95% of the country is desert, but there is a coastal strip of 1,760km (1,100 miles) on the Mediterranean Sea. There are no permanent rivers and cultivation is only possible in a few places. The country's main product is oil, which accounts for 99% of all exports. The capital is Tripoli. Area: 1,759,540sq km (679,358sq miles). Pop. (1975 est.) 2,444,000. See p.2091.

Lice. See LOUSE.

Licensing Acts, acts defining regulations concerning public houses and restaurants serving alcoholic drink in Britain. The Act of 1872 established the licensing authority's power to restrict the number of pubs and their opening hours, gave the police rights of entry and prohibited adulteration of drinks. The Act of 1904 provided for compensation for the loss of a licence as a result of policy rather than misconduct, to be paid out of a fund raised by the brewing trade itself. In 1915, during WWI, hours of drinking were reduced, and afternoon closing was introduced.

Lichee. See LYCHEE.

Lichen, plant consisting of a FUNGUS in which microscopic (usually single-celled) ALGAE are embedded. The fungus and its algae form a symbiotic association in which the fungus contributes support, water and minerals, while the algae contribute food produced by PHOTOSYNTHESIS. See also pp.360-361.

Li Chai, 12th-century Chinese architect of the Sung Dynasty, noted for his popular manual of architectural procedure, the *Ying-tsoo Fa Shih*.

Lichine, David (1910-72), Russian ballet dancer and choreographer. He studied under Bronislava Nijinska and danced in several companies, most notably PAVLOVA's in 1930 and BALLETS RUSSES de Monte Carlo (1932-41). His famous works of choreography include *Francesca da Rimini* (1937) and *Graduation Ball* (1940).

Li Ch'ing-chao (1081-c.1150), one of China's greatest poetesses. As a writer of *tz'u*, lyric poems written to music which were most popular in the Sung dynasty (960-1279), her eloquence made the commonplace seem special; she often used objects from nature to symbolize a sense of loneliness and loss. As a critic, her comments on her contemporaries were perceptive.

Lichtenstein, Roy (1923-), US painter, first in ABSTRACT EXPRESSIONISM and after 1960 in POP ART. Particularly interested in cartoons or magazine subjects and in the lack of sensitivity of mass-produced images, he often extracted these from context, as in *Good Morning, Darling* (1964), and re-presented them, greatly increased in size. The resulting effect - with prominent half-tone "dots" - often gave new insight into what began as commonplace. See also pp.1762-1763.

Liddell Hart, Sir Basil Henry (1895-1970), British author and military strategist. He was an early advocate of air power and mechanization in warfare - views that had a profound effect upon the German high command before WWI. Among his many works on strategy and military history are *A History of the World War, 1914-1918* (1934) and *The Tanks* (1959). He also edited *The Rommel Papers* (1953).

Lidice, village in Czechoslovakia, 16km (10 miles) NW of Prague. It was totally destroyed on 10 June 1942 by the Nazis in retaliation for the Czech assassination of Reinhard Heydrich, protector of Bohemia and Moravia and deputy head of the GESTAPO. All men over age 16 were killed and all women were deported; the area is now a national park and memorial.

Lidman, Sara (1923-), Swedish novelist and dramatist. Her novels, such as *Tjardalen* (1953; *The Tar Still*) *Hjortlandet* (1955; *Cloudberry Land*) and *Regnspiran* (1958; tr. *The Rain Bird*, 1963), treat rural life in N Sweden with warmth and freshness. Among her plays are *Aina* (1956) and *Marta, Marta* (1970).

Lie, Jonas Lauritz (1833-1908), Norwegian novelist, poet and playwright. His

writings deal with middle-class family life, *The Pilot and his Wife* (1874) being the first Norwegian novel to treat marriage realistically. *The Commodore's Daughter* (1886) exposes the social and educational restrictions on women of the upper classes at that time.

Lie, Trygve Halvdan (1896-1968), Norwegian politician and Secretary-General of the UN. He was legal adviser to the Norwegian Labour Party from 1922 to 1935. He was Minister of Justice (1935-39) and minister for Foreign Affairs (1942-45). In 1946 he became the first Secretary-General of the UN and held the office until 1952.

Liebermann, Max (1847-1935), German painter and printmaker who was influenced by the French IMPRESSIONISTS after 1890, and became leader of the movement in Germany. He is best known for his studies of the everyday life and work of ordinary people. His first exhibited picture, *Women Plucking Geese* (1872), contrasted markedly with the fashionable romantic idealism that influenced most of his contemporaries.

Liebig, Justus von, Baron (1803-73), German chemist. He was the first to realize that animals get their energy from the combustion of food although he incorrectly thought that muscular power is a result of protein oxidation. Liebig also showed that plants derive their minerals from the soil, and introduced synthetic fertilizers into agriculture. See also pp.750, 1636.

Liebknecht, Karl (1871-1919), German Communist and revolutionary leader. He entered the Reichstag in 1912 and vigorously opposed Germany's entry into WWI, for which he was imprisoned in 1916. After his release he became leader of the Communist group known as the SPARTACISTS. In 1919 he led an abortive putsch and was killed by police on his way to prison. See also pp.1694, 1695.

Liechtenstein, small independent state on the E bank of the River Rhine between NE Switzerland and W Austria. A mountainous country, the chief agricultural products are cereals, grapes, vegetables, fruit and dairy produce. Industry has developed greatly since WWI and includes food processing, machinery, textiles, pharmaceuticals and tourism. The capital is Vaduz. Area: 157sq km (61sq miles). Pop. (1980 est.) 25,215. See p.2091.

Lied, German word meaning "song", but with a more specific connotation in current usage as the art song of German Romantic composers - especially SCHUBERT, WOLF, BRAHMS and SCHUMANN. Such songs (eg Schubert's *An die Musik*) aimed to express the mood and feeling of the words in both the voice and accompanying piano parts.

Lie detector, also known as a polygraph, electronic device that may be capable of detecting lies when used by a trained examiner. The polygraph monitors such factors as heart rate, breathing rate and perspiration, all of which may be affected when a person lies.

Liege, city in E Belgium, 89km (55 miles) ESE of Brussels, called Luik in Flemish. Settled in AD 558, it became a famous educational centre during the Middle Ages. It passed to France during the Revolutionary Wars, but was given to The Netherlands at the Congress of VIENNA in 1815. It was occupied by the Germans in both world wars and was severely bombed in 1944-45. It is now a commercial centre whose industries include machinery, armaments and mining. Pop. (1978 est.) 618,565.

Liegnitz, Battles of (1241 and 1260). The first was the rout of European forces, led by Henry II of Silesia, by MONGOL invaders, led by Kaidu, grandson of GENGHIS KHAN. The Mongol horse archers then crossed the Carpathians into Hungary. The second was a SEVEN YEARS WAR battle at which FREDERICK THE GREAT's army of 30,000 gained a decisive victory over the Austrians.

Liepaya, second largest city of Latvia (Latvijas SSR) USSR on the Baltic Sea, 193km (120 miles) WSW of Riga. It was founded by the Teutonic knights in 1263

Lichens can reproduce when fused Soredia of algae and fungus are carried by the wind.

Justus von Liebig was the first to establish a chemistry laboratory for teaching purposes.

Karl Liebknecht tried to start a Russian-style revolution in Germany in 1918.

Liege in the 18th century was an arms manufacturing town of the Holy Roman Empire.

Lievens, Jan

Lifeboat designers today recognize the need for fast, well-found rescue craft.

Ligaments join together bones and cartilage, enabling full movement of joints.

Lighthouse beacons use lenses and reflectors to produce a powerful beam of light.

The Light of the World by Holman Hunt, a member of the Pre-Raphaelite brotherhood.

and passed to Russia in 1795. Occupied by the Germans in both world wars as a naval base, it has since become an important Russian ice-free port. Industries include machinery, metallurgy, shipbuilding and food processing. Pop. (1969 est.) 88,000.

Lievens, or Lievensz, Jan (1607-74), Dutch painter of landscapes, portraits and genre and historical scenes. He worked for a time (c. 1625-31) with REMBRANDT, and a similar style. His *Raising of Lazarus* (1631) is a fine example of his work.

Lifar, Sergei (1905-), Russian ballet dancer and choreographer. He studied under Bronislava NIJINSKA and Cecchetti, then joined DIAGHILEV'S BALLETS RUSSES in 1923, where he became premier danseur. In 1929 he became ballet master at the Paris Opéra Ballet and was founder-director of the Institut Chorégraphique (1947-58). He is best known for his ballets *Lucifer* (1948), *Phèdre* (1950) and Prokofiev's *Romeo and Juliet* (1955).

Life, the collective properties and abilities of organisms which allow them to obtain energy from the Sun and from food, to use this for growth, movement and reproduction, and to adapt to changing environmental conditions. The current theory on life's beginnings is that giant molecules, similar to proteins and nucleic acids, reacted together in the watery environment of the young Earth that is now commonly called the primeval soup. In this "soup" the giant molecules multiplied at the expense of smaller molecules which they consumed.

Despite much research the evolution and development of cellular life from molecular pre-life is a controversial subject and has yet to be explained fully. See also pp.180-181, 906-907.

Lifebelt, emergency floating device, usually a circular "tyre" made of cork, carried on the outer rails of ships, piers and embankments, and thrown to people in distress in the water. Lifebelts are attached to a lifeline, unlike lifejackets (inflatable garments strapped to people in time of danger). See also MAE WEST.

Lifeboat, craft designed to be used for saving lives at sea. Large vessels may carry a number of lifeboats which may be powered by oarsman, sail, or engine. Shore-based lifeboats are usually engine-driven craft built to remain afloat in even the roughest seas. They are broad beamed, between 12 and 16m (40-52ft) long, and the most recent are self-righting and remain buoyant even when holed. The first lifeboat was probably built at Newcastle upon Tyne, England, c.1790.

Life expectancy, average life-span, which varies greatly throughout the world, being as low as 40 years in some African countries and as high as 75 years in some developed ones. It has increased considerably in Britain during the last century, because of improved nutrition and public hygiene. The development of the medical services have also contributed greatly to average life expectancy.

Life of Johnson (1791), biography of the lexicographer and critic Dr Samuel JOHNSON, written by his friend, James BOSWELL. It was published in two volumes and is regarded as one of the best biographies in English. Johnson was a very witty conversationalist; as he spoke Boswell took notes that became the basis of the book.

Life-span. See LIFE EXPECTANCY.

Life-support system, in aerospace technology, system that supplies food, water and oxygen to astronauts. For each person 3 litres (5.25 pints) of water and 500 litres (110 gallons) of oxygen must be recycled each day. See also p.1024.

Lift, or elevator, machine for raising and lowering passengers and freight from one level to another inside or outside buildings. Early lifts were driven by steam or hydraulic power; the first electric lift was installed in a New York building in 1889. See also pp.456, 457.

Lifting magnet, powerful ELECTROMAGNET used for lifting and transferring heavy metal. Such a magnet is suspended from the jib of a crane. See also p.873.

Ligaments, bands of tough fibrous connective tissue that join bone to bone in

proper articulation at the joints. In the wrist and ankle joints, for example, they surround the bones like firm inelastic bandages. Ligaments, which contain a tough inorganic substance known as COLLAGEN, form part of the supporting tissues of the body. See also p.146.

Ligand, ion, molecule or group of atoms linked to a metal atom or ion by co-ordinate chemical bonds in a metal complex. Thus chloride ions act as ligands in the ion $[\text{CuCl}_4]^{2-}$, and carbon monoxide molecules are ligands in such compounds as nickel carbonyl, $\text{Ni}(\text{CO})_4$. Some molecules, such as ethylene diamine, $\text{H}_2\text{NCH}_2\text{CH}_2\text{NH}_2$, can co-ordinate at two points in the molecule.

Ligature, tying, binding or connecting. In surgery, thread, wire or cord may be used to tie and seal an artery or other body tube. In musical notation, a ligature is a curved line used to combine notes, indicating that they are to be played or sung without a break. In calligraphy and typography, a ligature is a tie joining letters in cursive script or, when casting some printer's type, for uniting commonly paired consonants such as *ff* and *fi*.

Ligeti, György (1923-), Hungarian composer whose avant-garde works involve shifting patterns of tone colours and sound. Since about 1956, Ligeti's work on electronic sound has influenced the textural forms in compositions such as *Atmosphères* (1961) for large orchestra, and *Lux Aeterna* (1966) for 16-part chorus. After 1966, most of his work has been purely instrumental, including *Melodien* (1971) for orchestra and *Horizon* (1971) for recorder.

Light, that part of the total ELECTROMAGNETIC SPECTRUM that can be detected by the EYE. Visible light lies in the wavelength range of 6.5×10^{-7} m (red light) to 4×10^{-7} m (violet) and travels at a speed of 299,792.5 km/sec in a vacuum. It exhibits phenomena typical of transverse wave motion, such as REFLECTION, REFRACTION, DIFFRACTION, LIGHT POLARIZATION and INTERFERENCE. The properties of light were first investigated in the 17th century by Sir Isaac NEWTON who was the first to split white light into its component colours with a prism. Newton firmly believed in a corpuscular or particle theory of light, but, by the beginning of the 19th century, with the work of Thomas YOUNG and Augustin-Jean FRESNEL on the diffraction and interference of light, the wave theory was well substantiated. Then, at the end of the century, experiments on the PHOTO-ELECTRIC EFFECT and in the work of Max PLANCK the theory that light had a corpuscular nature was also revived. This dilemma was resolved by the QUANTUM THEORY, according to which light consists of elementary particles of zero rest mass called PHOTONS. When light interacts with matter, as in the photo-electric effect, energy is exchanged in the form of photons and so light appears corpuscular. Otherwise, light behaves as a wave. The quantum theory also explains how all electromagnetic radiations result from energy changes in atoms. See also ETHER; HOLOGRAPHY; LASER; pp.850-863.

Light adaptation, shift in functional dominance from rod cells to cone cells within the retina of the EYE as overall illumination increases. Unlike DARK ADAPTATION, adaptation to light is swift but usually uncomfortable. Human beings discern colour and form soon after emerging from prolonged darkness. See also p.136.

Light bulb, device consisting of a metal filament which emits light when heated by electricity. The filament is enclosed by a glass envelope in a VACUUM which contains an inert gas (eg argon), and is usually made of TUNGSTEN because of its high tensile strength, low evaporation and high efficiency in converting electrical energy into light. See also pp.821, 821, 869.

Lighthouse, building, often tall, which provides guidance to ships or aircraft by visual or audible means, or by radio. A light beacon or, in fog, a siren, relays a coded sequence ("character") which allows the lighthouse to be identified. Lighthouses date back to ancient Egypt; for over 1,000 years the lighthouse at

Pharos (one of the Seven Wonders of the Ancient World) guided ships into the River Nile.

Lighting, artificial means of illumination. The earliest was fire, followed by the oil-wick lamp, later developed into the candle. Coal gas was first used in the late 18th century, and the first electric light was produced by the carbon arc lamp (1801). The first fluorescent lamp was made in 1867 and marketed in 1938.

Lightning, visible flash of light accompanying an electrical discharge between clouds or between clouds and the earth, most commonly produced in a THUNDERSTORM. A typical discharge consists of several lightning strokes, initiated by leaders that follow an irregular path of least resistance, the lightning channel. Intense heating by the discharge expands the channel rapidly up to a diameter of 13 to 25cm (5-10in) creating the sound waves of thunder. See also pp.866, 866.

Light of the World, The (1854), painting by William Holman HUNT depicting Christ holding a lantern, knocking at a door (of a sinner's heart) choked with weeds. Hunt had explored religious themes for some time and took his idea for this work from a text in the biblical Book of Revelation: "Behold I stand at the door and knock". The work now hangs in Keble College Chapel, Oxford.

Light polarization, in the vibration of light waves, reduction of the infinite number of vibrational directions to effectively one in a plane, circle or ellipse. Reflected light is always plane polarized. A polarized beam can be stopped if it strikes a second polarizer whose polarizing plane is perpendicular to that of the first. See also p.855.

Lightship, small, steel ship equipped with a bright lamp, fog signals and radio beacons, used for navigation and warning in areas where a LIGHTHOUSE is impractical. The modern trend is away from lightships towards less expensive buoys or radio beacons.

Light-year, unit of astronomical distance equal to the distance travelled in free space by light in one year. One light-year is equal to 9.46×10^{12} km (5.88×10^{12} miles) or 0.307 parsecs. See also pp.810-811.

Lignin, complex non-carbohydrate substance that occurs in the woody tissues of plants, often in combination with cellulose. To obtain pure cellulose for the paper and rayon industries, the lignin has to be removed from wood. It produces dimethyl sulphoxide, $(\text{CH}_3)_2\text{SO}$, which has industrial uses in organic synthesis such as a solvent in the textile industry and in the production of some pharmaceuticals. Lignin is also a major source of vanillin. See also p.374.

Lignite, soft coal, brown-black in colour, with a carbon content higher than that of PEAT but lower than those of other coals. Shape of its original woody structures is visible. See also p.414.

Lignum vitae, tropical evergreen tree; the source of a hard, dense wood used to make bearings and pulleys. A short-trunked tree, its flowers are blue or purple. Height: 9m (30ft). Family Zygophyllaceae; species *Guaiaecum officinale*.

Liguria, region in NW Italy, on the Ligurian Sea, made up of the provinces of Genoa, Imperia, La Spezia and Savona; Genoa (Genova) is the regional capital. A mountainous region, it has a narrow coastal strip which is the famous resort area of the Italian Riviera. The region was ruled by Genoa from the 16th century until 1815, when it was annexed to Piedmont. Products: vegetables, flowers, olives, fruits, grapes. Industries: shipbuilding, tourism, chemicals, timber, textiles, fishing. Area: 5,413sq km (2,080sq miles). Pop. (1971) 1,868,630.

Li Ho (791-817), Chinese poet. His rhythmic verse used rich imagery and covered many subjects. Writing during the T'ANG DYNASTY (618-907), China's golden age of literature, he was a follower of HAN YU. Contemporary admirers called him a man of "devilish talent" because of his practice of composing poems from a series of single lines collected separately in a

black bag.

Likasi, city in Shaba region, se Zaire. Formerly called Jadotville, it is one of the country's major industrial and communication centres. Copper and cobalt are mined and refined, and other industries include chemicals and the manufacture of beverages. Pop. (1970) 146,394.

Li Kung-Lin (1049–1106), Chinese painter. Considered the greatest painter of his day, he was primarily concerned with CONFUCIANIST themes. He is, however, best known for his paintings of horses.

Li Kung-tso (fl. c.813), one of China's first real fiction writers. The plots and characterizations of his short stories, called *ch'uan chi'i* (narration of strange things), represented an advance in complexity over fables. They dealt with love and chivalry and included criminal and ghost stories.

Lilac, any of 13 species of evergreen ornamental shrubs that bear panicles (pointed clusters) of tiny fragrant white to purple flowers. Height: to 6m (20ft). Family Oleaceae; genus *Syringa*.

Lilburn, Douglas (1915–), New Zealand composer. His works include chamber music, film scores and symphonies. He became professor of music at Victoria University, Wellington, in 1963.

Lilburne, John (c.1614–57), English political figure, leader of the LEVELLERS. After imprisonment (1638–40) for anti-episcopal pamphlets, he fought for the PARLIAMENTARIANS during the Civil War (1642–45). He resigned from the army, however, because he refused to sign the SOLEMN LEAGUE AND COVENANT required for admission to the NEW MODEL ARMY. His pamphleteering against the army leaders led to his arrest (1649) for treason, but he was acquitted. In his later years he became a QUAKER. See also p.1423.

Liliaceae, the lily family, 250 genera of erect or climbing flowering plants, and 3,700 species of herbs and shrubs. Most have a RHIZOME, BULB, CORM or TUBER and grow in temperate or subtropical regions. Included are the LILY, ONION, GARLIC, LEEK, ASPIDISTRA, YUCCA, HYACINTH, TULIP and LILY OF THE VALLEY. There are 80 species of true lily (genus *Lilium*).

Lilienthal, Otto (1849–96), German aeronautical pioneer who experimented with flying machines which he built after studying bird flight. He made short flights only, before suffering a fatal crash.

Lilith, in Semitic mythology, a malicious female spirit that haunts desolate places and attacks children. In Hebrew folklore, Lilith sometimes represents the first woman, who preceded Eve as wife to Adam, or the woman who bore demonic offspring to him after Eve had left him.

Lille, city in N France, 209km (130 miles) NNE of Paris; capital of Nord département. During the 15th century the dukes of Burgundy had their official residence there. After 1668 it served as the capital of French Flanders. It has a 17th-century stock exchange, a large citadel and the University of Douai. In France's major manufacturing belt, its chief industries are textiles and machinery. Pop. (1968) 190,546.

Lillee, Denis (1949–), Australian cricketer who played for Western Australia and Australia. In 32 Test matches between 1970 and 1977 he took 171 wickets at an average of 23.49. Lillee was one of the finest fast bowlers of the 1970s, and formed a partnership with Jeff Thomson that was the most effective since the West Indian pairing of Hall and Griffiths in the 1960s.

Lillie, Beatrice (1898–), British actress and comedienne, b. Canada, who made her stage debut in London (1914) and in the USA in 1924. She won an international reputation for vivacity and sophisticated wit in revues, television, films and her one-woman shows, in which she toured throughout the USA. Her films include *Around the World in Eighty Days* (1956) and *Thoroughly Modern Millie* (1967).

Lillie, Frank Rattray (1870–1947), us zoologist and embryologist, b. Canada. Noted for his discoveries in the field of

fertilization and the role of hormones in sex determination, he spent much time helping to develop the Marine Biological Laboratory and the Oceanographic Institution at Woods Hole, Massachusetts. His book *The Development of the Chick* (1908) is a leading work in embryology.

Lilly, John Cunningham (1915–), us neurophysiologist and physician, known particularly for his work with dolphins and for his theories on the human mind based on analogies with the computer. His publications include *The Mind of the Dolphin* (1967) and a study *Programming and Metaprogramming the Human Biocomputer* (1972). This served as a preface to his theoretical work *The Centre of The Cyclone* (1972), in which he attempted to schematize the varieties of mental experience. See also p.130.

Lilongwe, city in w Malawi, se Africa, approx. 80km (50 miles) w of Lake Nyasa (Lake Malawi). Originally an agricultural trade centre for a fertile farming region, it became the capital of Malawi in 1975. It has the Bunda College of Agriculture. Pop. 87,000.

Lily, any of numerous species of perennial, bulbous plants grown in temperate and subtropical regions. They have erect stems and various leaf arrangements. The showy flowers are large and solitary or clustered and may be white, red, orange, yellow, green, purple or pink. Most lilies thrive best in well-drained, moist soil and a sunny location. Family Liliaceae; genus *Lilium*.

Lily of the valley, perennial plant native to Europe, Asia and E USA. It has broad, elongated leaves and bears stalks of tiny, white, bell-shaped fragrant flowers. Family Liliaceae; species *Convallaria majalis*.

Lily trotter. See JACANA.

Lima, capital of Peru, on the Pacific coast. Founded in 1535 by Francisco Pizarro, it was the seat of the Spanish viceroyalty. Chilean forces occupied the city from 1881 to 1883 during the War of the Pacific. The commercial and cultural centre of Peru, it has the University of San Marcos (1551), a 16th-century cathedral, and a National Library (1821). Industries: textiles, leather goods, oil-refining, furniture, food processing, iron foundries, cement pharmaceuticals. Pop. (1978) 3,595,000.

Lima, Jorge de (1893–1953), Brazilian poet. A mystic, he wrote verse that was hopeful and reverent but not naive. He was a convert to Catholicism and used simple language to express his spiritual feelings; himself a mulatto, he often celebrated the personality of the black. His volumes include the collection *Poetic Works* (1950).

Lima bean. See BEAN.

Limassol (Lemosós), port in s Cyprus, on Arkrotíri Bay; capital of Limassol district. A resort town and administrative centre, it exports wine and farm produce. Tourism is an important industry. Pop. (1970 est.) 51,500.

Limax, genus of grey, black or brown pulmonate SLUGS of temperate areas. The various species have slimy bodies and are restricted to moist habitats, where they eat fungi and plant foliage. The largest European species, *L. maximus*, may grow to 9cm (3.5in) long. Family Limacidae. See also p.20.

Limb, in astronomy, apparent edge of any celestial body presenting an observable disc, such as the Moon, the Sun or a planet.

Limb, articulated extension of the vertebrate body, used for locomotion and manipulation of the physical environment. The human forelimb (arm) is particularly specialized in the latter function. The form of the limbs is regarded as a criterion of evolutionary development.

Limb, artificial. See ARTIFICIAL LIMBS.

Limbic system, collection of structures in the middle of the brain. Looped round the HYPOTHALAMUS, the limbic system is thought to be involved in emotional responses such as fear and aggression and to produce mood changes. See also pp.129, 129, 132.

Limbo, in Roman Catholic theology, the abode of souls excluded from HEAVEN but not condemned to any other punishment. According to this concept, which never became doctrine, unbaptized infants go to Limbo after death, as did those prophets and holy-men who died before Christ came to redeem the world.

Limbourg, name of three Netherlandish brothers, Paul (Pol), Herman, and John (Jehanequin) (fl. before 1399–1416), all of whom were famous illuminators. They worked mainly for Jean, Duc de Berry, a patron of the arts. Paul, the greatest, was largely responsible for *Les Très Riches Heures du Duc de Berry*. Begun in 1413, this medieval illuminated book of hours, among the earliest examples of the true GENRE PAINTING in N Europe, is a masterpiece of the INTERNATIONAL GOTHIC style. See also pp.1384, 1396.

Lime, calcium oxide (quicklime) or calcium hydroxide (slaked lime). Calcium oxide, CaO, consists of whitish lumps obtained by roasting limestone (calcium carbonate) until all the carbon dioxide has been driven off. It is used as a refractory, a flux, and in glass making, water treatment, food processing and as a cheap alkali. Calcium hydroxide, Ca(OH)₂, a white crystalline powder obtained by the action of water on calcium oxide, is used in mortar, plaster, cements and in water softening and in agriculture. See also p.719.

Lime, small tropical tree (*Citrus auranti-folia*) of the rue family (Rutaceae); it has its origins in the East. The trees grow to 2.4–4.6m (8–15ft) and yield small green acid fruits. The juice was a valuable commodity in the 18th and 19th centuries for consumption on long sea voyages; the vitamin C helped to ward off scurvy. See also pp.688, 688.

Lime, name for the deciduous linden tree in Britain; several species grow throughout the north temperate zone. It has serrated, heart-shaped leaves with small, fragrant, yellowish flowers that are borne in clusters. The common British linden, *Tilia vulgaris*, is one of the three British species. Linden wood is particularly suited to carving; it is firm, but workable. Family Tiliaceae; genus *Tilia*.

Limelight, in theatrical lighting, device invented in 1816 in which a cylinder of lime was heated to incandescence, the gas producing an intense white light.

Limerick, port in the sw Republic of Ireland, at the head of the Shannon Estuary. It is remembered as James II's last stronghold in the country after the GLORIOUS REVOLUTION. Industries include flour milling, salmon fishing and brewing. Pop. (1971) 57,137.

Limerick, five-line light verse with an *a b b a b* rhyme scheme and often of a bawdy or scurrilous nature. The nominal association with Limerick in Ireland has never been adequately explained. The fad for such verses was accelerated by those of Edward LEAR, but there are poems in similar verse forms dating from the 14th century.

Limestone, SEDIMENTARY ROCK composed primarily of calcium carbonate, CaCO₃. Generally formed from deposits of the skeletons of marine invertebrates, it is used to make cement, as a source of commercial LIME and as a building material. See also pp.210, 211, 216–217, 411–412.

Limfjord, waterway across N Jutland, Denmark, linking the North Sea with the KATtegat. Its middle course widens into a lagoon, 21km (13 miles) wide, known as Løgstør. The chief port is Ålborg. Length: 177km (110 miles).

Limit, in mathematics, the value approached by a mathematical function as the independent variable approaches some specified value. For example, the function $1/(x^2+1)$ has values $\frac{1}{2}, \frac{1}{5}, \frac{1}{10}$ etc, as x is 1, 2, 3, etc. As x increases indefinitely the value of the function approaches zero: in technical terms the function tends to zero as x approaches infinity. The limit of a sequence is the value approached by the terms as the number of terms increases. Similarly the limit of a series is the value approached by the sum as more and more terms are included. The concept of limits

Lille is an ancient cultural centre whose industries expanded greatly in the 1960s.

Beatrice Lillie is one of the truly great performers of Broadway musical comedy.

Lilies-of-the-valley were once used in the treatment of heart complaints.

Lima; professional scribes write letters for the largely illiterate population.

Limiting, Statute of

is fundamental to differential and integral calculus.

Limitation, Statutes of, under English law, Acts of Parliament that limit the time within which action may be taken to obtain certain rights or claims. Action begun after such a period has expired is barred.

Limited liability, legal condition under which the owners of a company (including shareholders) need not risk their personal wealth in the business – their losses can be equal only to their investment.

Limits, territorial and fishing, areas within which some nations have exclusive rights over the extraction or gathering of natural resources. By legislation of 1964, British territorial waters extend for 19km (12 miles) out to sea from the coast, the inner 6 miles being prohibited to foreign fishing boats, for example.

Limoges, city of w central France, on the River Vienne; the capital of Haute-Vienne département. The city was originally known for its enamel industry especially in the 16th century under Leonard Limousin, but this declined when Limoges was devastated during the Wars of Religion. It now produces chinaware; the china industry was begun by Turgot in the mid-18th century, using the local clay and china stone. The city has an art gallery which includes many works by Renoir, who was born there. The manufacture of footwear is also important.

Limonite, also called brown iron or bog ore, one of the most important sources of iron. Its chemical formula is $\text{FeO}(\text{OH}) \cdot n\text{H}_2\text{O}$. Limonite may appear lustrous black, brown to yellow and is streaky, porous and often mixed with sand or clay.

Limosin, Léonard (c. 1505–77), French painter; the most prominent member of a family of enamel artists from Limoges. His best-known work is a series of 46 plaques portraying scenes from the life of Christ which is in the Louvre, Paris.

Limpet, primitive gastropod mollusc commonly found fixed to rocks along marine shores. It has a cap-like, rather than coiled, shell and a large muscular foot. Length: to 13cm (5in). Families: Patellacea, Acmaeidae and Fissurellidae. See also p.20.

Limpkin, also called a couran, grey-brown, long-legged marsh bird of s America and the southern USA. In the evolutionary chain it comes between the crane and the rail. It feeds on snails and other molluscs.

Limpopo (Crocodile), river in s Africa. It rises in the Transvaal, South Africa, then flows N, forming part of the border between South Africa and Botswana, then E, forming the border between South Africa and Zimbabwe (Rhodesia). It flows across Mozambique to enter the Indian Ocean. Length: approx. 1,770km (1,100 miles).

Linacre, Thomas (c. 1460–1524), English physician and scholar. In 1500, after travelling extensively in Italy, he was appointed tutor to Prince Arthur, son of HENRY VII. He founded and was the first president of the Royal College of Physicians of London in 1518, which was empowered to license and examine physicians in England. In 1520 he was ordained and left medical practice.

Linar, in astronomy, point sources which emit high energy at wavelengths characteristic of certain chemical compounds. They were discovered in 1970 and are of potential use as navigational aids.

Lincoln, Abraham (1809–65), 16th President of the USA. He was born into a poor frontier family and had little formal education. The family settled in New Salem, Illinois, in 1831, where Lincoln worked in a shop and began reading law. In 1834 he was elected to the Illinois legislature as a whig and in 1836 was admitted to the bar and began to practise. In 1841 he was elected to the US House of Representatives.

Lincoln, by then a Republican, ran for the Senate in 1858. He was defeated but his oratory won him national fame. As a result, he became a leading candidate for the 1860 REPUBLICAN nomination, which

he won on the third ballot. He defeated the DEMOCRATIC candidate and was inaugurated as President on 4 March 1861. The Southern states had already seceded and on 12 April Fort Sumter was fired on, the first action in the AMERICAN CIVIL WAR. Lincoln conducted the war with vigour and efficiency: he called up the militia, blockaded southern ports and increased executive powers. With his appointment of Ulysses S. GRANT as his commander-in-chief he ensured that the war would be relentlessly pursued.

On 22 Sept. 1863 Lincoln issued the Emancipation Proclamation, freeing the slaves, and on 19 Nov. 1863 delivered one of the noblest public speeches ever made, the GETTYSBURG ADDRESS. Lincoln was re-elected in 1864 and saw the war brought to a successful conclusion, but on 14 Sept. 1865, while attending a performance at Ford's Theatre, New York, he was shot by John Wilkes BIRTH, a disaffected Southerner. He died the following day. See also pp.1628–1629, 1629.

Lincoln, county town of Lincolnshire, founded as the town of Lindum. It has many Roman remains, and the Fosse Way and Ermine Street are in its vicinity. The Lincoln Handicap is held at its racecourse. Industries include the manufacture of excavators, pumps, castings, agricultural machinery and motor-car parts. Pop. (1971) 74,207. See also pp.1235–1236, 1238, 1334, 1334, 1350.

Lincoln Center for the Performing Arts, New York, complex of buildings housing the Metropolitan Opera House, New York State Theater, Juilliard School of Music, Vivian Beaumont Theater and the Library and Museum of the Performing Arts. Incorporated in 1956 as a non-profit-making organization, it was built between 1959 and 1969.

Lincolnshire, county in E Central England; bordered by the counties of Humberside (N), Nottinghamshire (W), Leicestershire (SW), Cambridgeshire and Norfolk (S), and by the North Sea (E). The region is very flat, and drainage by the Witham and Trent rivers has been aided by dikes and canals since Roman times. Agriculture is the mainstay of the economy, and industry is closely allied to it. The administrative centre is Lincoln. Area: 5,886sq km (2,273sq miles). Pop. (1976) 524,500.

Lind, James (1716–94), Scottish physician who eradicated scurvy from the British navy with his recommendation that fresh citrus fruit and lemon juice should be part of the daily diet of seamen. Prior to his intervention, more British sailors died from scurvy than from combat.

Lind, Johanna Maria ("Jenny") (1820–87), Sweden's most famous operatic soprano. Known as the "Swedish nightingale", she made her debut in 1838, and after world success in coloratura roles she settled in London (c. 1852), where she sang in oratorio and taught at the Royal College of Music.

Lindbergh, Anne Morrow (1907–), US writer. Married in 1929 to the aviator Charles LINDBERGH, she accompanied him on many flights. *North to the Orient* (1935) and *Listen, The Wind* (1938) record her experiences.

Lindbergh, Charles Augustus (1902–74), US aviator. He became an international hero when, in his plane *The Spirit of St Louis*, he made the first non-stop transatlantic solo flight (1927). In 1932 his two-year-old son was kidnapped and murdered. The resulting publicity forced the Lindberghs to leave the USA and settle in Britain (1935–39). An isolationist, he was active in the America First Committee and was accused of pro-Nazi sentiments. He was awarded the Pulitzer Prize for literature for his book *The Spirit of St Louis* (1953).

Lindgren, Erik Johan (1910–68), Swedish poet. He was noted for the originality of his verse and the grimness of his images, especially in *The Man Without a Way* (1942). In 1947 he edited an influential anthology of contemporary poetry.

Lindemann, Frederick Alexander, 1st Viscount Cherwell (1886–1957), British physicist, b. Germany. Involved in aircraft

research (1914–18), he discovered how to regain control of an aircraft in an uncontrolled spin. During WWII he was Winston Churchill's scientific adviser. He developed the Clarendon Laboratory of Oxford University into a major research facility.

Linden tree. See LIME.

Lindisfarne, (Holy Island) island connected to the Northumbrian coast (NE England) by a causeway. It was a religious and missionary centre from AD 635, when St Aidan arrived there from Iona. The monastery he founded disseminated the Celtic Christian culture from Edinburgh to the Humber. The Danes pillaged Lindisfarne in 793 and 875, but the monks returned in 1082 and the monastery continued its existence until the 16th century. **Lindisfarne Gospels**, manuscript illuminated in the Hiberno-Saxon style in the late 7th or 8th century. It may have been executed for Eadfrith, Bishop of Lindisfarne (698–721). It incorporates Classical, Irish and Byzantine styles of illumination and is attributed to the Northumbrian School.

Lindley, John (1799–1865), British botanist, known for his classification of plants in a natural system in which all characteristics of a plant are considered. Among Lindley's best-known books are *Theory and Practice of Horticulture* (1842) and *The Vegetable Kingdom* (1846), which included his new classification of plants.

Lindrum, Walter (1899–1960), Australian billiards player who beat Joe Davis for the world championship in 1933 and 1934, then devoted himself to exhibitions and charity work. He amassed numerous records including a highest break of 4,137 in 1932.

Lindsay, or Lyndsay, Sir David (c. 1490–1555), Scottish writer. He sat in the Scottish Parliament (1540–46) and represented the Crown on important missions. His poetry was a series of richly allegorical and satirical attacks on Scottish politics. His most famous work was the morality play, *An Satyre of the Thrie Estaitis*, published in 1540.

Lindsay, Howard (1889–1968), US actor, producer and playwright. His comedies and musicals include *Life with Father* (1939), *Arsenic and Old Lace* (1941) and *State of the Union* (1945). His dramatization, with Russell Crouse of *Life with Father* ran for seven years. They collaborated with Rodgers and Hammerstein on the book of *The Sound of Music* (1959).

Lindsey, in post-Roman Britain, kingdom of the ANGLES, settled in the 5th and 6th centuries. It was under either Mercian or Northumbrian control until the late 7th century, when it was finally absorbed by Mercia. It occupied what is now northern Lincolnshire.

Lindwall, Raymond Russell ("Ray") (1921–), Australian cricketer who played for New South Wales, Queensland and Australia. In 61 Test matches from 1946 to 1959 he took 228 wickets at an average of 23.05. The greatest fast bowler of his day, he formed a notable partnership with Keith MILLER.

Linear accelerator, particle accelerator in which charged particles travel through a straight vacuum chamber. Electrostatic accelerators are simple examples. In other types energy is gained in regions of high-frequency electric field, produced between cylindrical electrodes. Higher energies can be achieved by carrying the particles along a waveguide with a microwave field. Final energies depend on the length of the chamber, and can reach several GeV. See also p.819.

Linear function, mathematical function the value of which is given by a polynomial involving no powers of its variables, as in $f(x) = 7x + 3$. The graph in two dimensions of a linear function is a straight line.

Linear script, early form of writing, found on clay tablets in Crete and Greece. Linear A was in extensive use during the middle period of the MINOAN CIVILIZATION (c. 2000 BC–c. 1450 BC). Linear B was an adaptation of Linear A, used by the Mycenaeans of mainland Greece to write their early form of Greek, a language pro-

bably distinct from that used by the Minoans. Linear B was used from c. 1450 BC to the end of the Mycenaean age, c. 1150 BC. Linear A tablets have only been found in Crete, whereas Linear B inscriptions have been discovered in both Greece and Crete; there is uncertainty as to whether the two scripts overlapped at all. In 1952 Michael Ventris deciphered Linear B; Linear A still defies effective analysis.

Linens, yarn and fabric made from the soft, bast fibres of the flax plant (*Linum usitatissimum*); one of the oldest textile fibres. Flexible bast fibres come from the inner tissues beneath the bark. They are released from the substance that binds them by soaking (retting) the long stems in water; these are beaten and passed through rollers to separate the fibres. After sorting, spinning and bleaching they are woven into fabrics which are generally strong and fine, such as table linen. See also JUTE; pp.712, 712.

Lines of force, lines in an electric or magnetic field whose direction at every point is that of the field. See also ELECTRICITY; MAGNETISM; pp.870, 872.

Ling, any of many varieties of *Calluna vulgaris*, a small heather plant common to high open meadows and moorlands throughout w Europe. Family Ericaceae.

Ling, food fish related to the cod, found in the Atlantic Ocean. It is brown and silver and has long dorsal and ventral fins. Length: to 2m (7ft); weight: 3.6kg (8lb). Family Gadidae; species *Molva molva*. See also p.63.

Lingam, stylized phallus worshipped as a symbol of the Hindu god SHIVA. The yoni, which is the symbol for the female sexual organ, is the symbol of the consort of Shiva, SHAKTI; it often forms the base of the lingam as an indication of the inseparable nature of male and female principles.

Lingua franca, any language that serves as a medium of communication between people who otherwise do not speak the same language. A lingua franca may be a highly simplified form of the language of the dominant power, such as the PIGIN ENGLISH used by hundreds of Melanesian tribes, or it may be a hybrid such as Swahili, which is composed of words of both Arabic and Bantu origins and spoken in many parts of central and e Africa.

Linguistics, the study of language. The study can be divided into PHONETICS (the study of sounds and sound systems), SYNTAX (the study of grammar) and SEMANTICS which relates to meaning. In the 19th century linguistics was purely descriptive, concentrating on the reconstruction of language families, eg INDO-EUROPEAN, and on the classification of individual types of language. Since the 1950s the subject has been invigorated by CHOMSKY's controversial theories of language acquisition which emphasize the universal characteristics of language skills rather than the particular aspects of the individual language. See also pp.1126–1127, 1876–1879.

Linkage groups, group of inherited characteristics or genes that occur on the same chromosome and that remain connected in such a way that they are usually inherited together through successive generations. See also pp.176–179.

Linklater, Eric (1899–1974), British novelist. He published his first novel, *White-ma's Saga*, in 1929. The first of his famous picaresque novels, *Juan in America*, was published in 1931. He wrote three volumes of autobiography, *The Man on My Back* (1941), *A Year of Space* (1953) and *Fanfare for a Tin Hat* (1970).

Linköping, city in SE Sweden. A bishopric since 1120, the city prospered in the Middle Ages as a religious and intellectual centre. It has a 13th-century castle, library, university, and a fine 12th-century Romanesque cathedral. Industries: motor vehicles, aircraft, food processing, tobacco. Pop. (1970 est.) 80,800.

Linthgow, John Adrian Louis Hope, 1st Marquis of (1860–1908), British Conservative politician and colonial governor. He was Paymaster-General (1895–98) and Lord Chamberlain in SALISBURY's third government, and the first Governor-General of the Commonwealth of Australia (1901–02).

Linna, Väinö (1920–), Finnish writer. One of the most important authors in postwar Finland, he has used the novel's traditional narrative style in such works as *The Unknown Soldier* (1954) and the trilogy *Taiva Pohjentyöhen Alla* (Here Under the Pole Star) (1959–62).

Linnaeus, Carl (Carolus) (1707–78), Swedish botanist and explorer, also known as Carl von Linné. He was the first scientist to define the differences between species, giving Latin names for the genus and species to each organism, making consistent use of specific names and including all known organisms in a single classification. His *Systema Naturae*, published in 1735, laid the foundation of the modern science of TAXONOMY. See also pp.186, 1476, 1476.

Linnankoski, Johannes (1869–1913), Finnish novelist, real name Vihtori Peltonen, and a supporter of the nationalist drive for independence from Russia. Of humble birth and largely self-educated, his novels often depict peasant life. They include *Pakolaiset* (The Fugitives) (1908) and *The Song of the Blood-red Flower* (1905).

Linnean Society, biological society founded in 1788; it received its first Royal Charter in 1802. It has had such prominent men as Sir Joseph Banks, Charles Darwin and Thomas H. Huxley among its members. Its aims remain the same today as at the time of its founding – to promote biology in all its aspects.

Linnell, John (1792–1882), British painter, the father-in-law of Samuel Palmer and benefactor of William Blake. His portraits and landscapes were typically romantic, delicate and of a small scale. They include *Woodcutting in Windsor Forest* (1835), and *Kensington Gravel Pit* (1812).

Linnet, small songbird of the family Carduelidae. *Carduelis cannabina* of Europe inhabits hedgerows and thickets, moving to open country in colder seasons. Both sexes are brown and grey, but the male has a red breast and crown in the summer. Length: to 13cm (5.1in).

Linoleum, floor covering manufactured from oxidized oils, gums, resins and pigments formed into a sheet by pressing between rollers and usually applied to a jute backing.

Linotype, method of setting type for printing, by the Linotype machine, invented by Ottmar Mergenthaler at Baltimore in 1884. It was first used by the New York *Herald Tribune* in 1886. It is operated by a keyboard like that of a typewriter. It sets cast letters as one complete line of type, called a slug. See also p.613.

Lin Piao (1907–71), Chinese Communist general and political leader. He won fame as commander of the Fourth Field Army, which was instrumental in defeating NATIONALIST forces in 1949. Lin was designated MAO TSE-TUNG's heir apparent while helping to lead the 1965–69 CULTURAL REVOLUTION in China. He was later accused of plotting a revolt and was said to have been accidentally killed when his plane crashed.

Linsang, slender, graceful member of the Mongoose family, which also includes civets and genets. It is found in areas of SE Asia. There are two species: the banded linsang (*Prionodon linsang*) whose tawny fur is banded with black; and the spotted linsang (*P. pardicolor*), pale brown with black spots. Length: up to 79cm (31in); weight: 0.7kg (1.5lb). The so-called African linsang (*Poiana richardsoni*) resembles a genet. Family Viverridae. See also pp.311, 312.

Linseed. See FLAX.

Linton, Ralph (1893–1953), US anthropologist who contributed to the development of cultural anthropology. His studies in Madagascar and E Africa led to *The Tanala, A Hill Tribe of Madagascar* (1933), an important ethnological work. He is best known for his contribution to cultural anthropological theory, notably in *The Study of Man* (1936) and *The Cultural Background of Personality* (1945).

Linton, William James (1812–97), British wood engraver and writer. After 1866 he lived in the USA. He made engravings of

Frank Leslie's *Illustrated News* and LONG-FELLOW's *Building of the Ship*. He was a CHARTIST and his writings were chiefly political. They include *A Life of Paine* (1839), *To the Future* (1848) and *The Plaint of Freedom* (1852).

Linz, city and major river port in N central Austria, on the River Danube; it is the capital of Upper Austria. The city was a Roman settlement, named Lentia. In the late 15th century it became a provincial capital of the HOLY ROMAN EMPIRE. Landmarks include the 8th-century Church of St Martin. Industries: iron and steel, machinery, textiles. Pop. (1971) 202,900.

Lion, large CAT that lives on African savannahs south of the Sahara and in SW Asia. It is golden yellow to buff with light spots under the eyes. The male is instantly recognizable by its deep neck mane that darkens with age. The female does most of the hunting and preys on antelopes, zebras and bush pigs. Lions, as symbols of ferocity, courage and loyalty have figured in myths and legends throughout the world. The male is traditionally heralded as the king of beasts. Length: to 2.5m (8.2ft) overall. Family Felidae; species *Panthera leo*. See also p.299.

Lionel, Duke of Clarence (1338–68), third son of Edward III and patron of Geoffrey CHAUCER. Lionel served as Lieutenant of Ireland during which time he enacted (1361) the infamous Statutes of Kilkenny which effectively outlawed all those who adopted "the manners, fashion and language of the Irish enemies". See also pp.1315, 1348.

Lionfish, also called zebra or dragon fish, marine tropical fish found in shallow waters of the Indian Ocean and W Pacific. A rust-red and white striped fish with numerous long spines and rays, it carries venomous spines in its dorsal fin that can inflict painful wounds. Length: 5cm (2in). Family Scorpaenidae; species *Pterios volitans*.

Lipari Islands (Isole Eolie), group of small volcanic islands off the N coast of Sicily, Italy, in the Tyrrhenian Sea. The group includes the islands of Stromboli, which has the 926m (3,033ft) volcano of the same name, Vulcano, Salina and Lipari. Exports: wine, raisins, fish, pumice. The chief industries are fishing and tourism. The islands are also noted for archaeological remains dating from NEOLITHIC times. Area: 114sq km (44sq miles). Pop. 13,774.

Lipchitz, Jacques (1891–1973), US sculptor who was one of the finest of the early CUBIST sculptors. His early works include *Sailor with a Guitar* (1914). *Harpist* (1928) was an early example of his "transparent", bronzes expressing incessant movement. Subsequent works, including *Prayer* (1943), became larger and more imaginative, stressing spirituality, sensuality and sheer volume.

Lipid, one of a large group of organic compounds in living organisms that are insoluble in water but soluble in alcohol and ether. They include animal fats, vegetable oils and natural waxes. Lipids are a major energy source for animals. They form an important food store and energy source of plant and animal cells and are structural components of cell membranes. Storage fat is composed chiefly of triglycerides, which consist of three molecules of a fatty acid linked to glycerol. See also pp.906–907, 906.

Lipinsky, Edward, (1888–), Polish economist who became professor at the Central School of Economics at Warsaw in 1929. His many books include *The Workers' Movement in Poland* (1916), *History of Economic Thought* (1955) and *Karl Marx and the Problems of our Times* (1969).

Lipmann, Fritz Albert (1899–), US biochemist, b. Germany. He shared with H.A. KREBS the 1953 Nobel Prize in physiology and medicine for his discovery of COENZYME A and its importance for intermediary metabolism. See also p.909.

Li Po. See LE T'AI-PO.

Lipoma, TUMOUR formed of fatty tissue. It is non-malignant. The tumour forms a mass just beneath the skin, unsightly but seldom dangerous. They are usually

removed surgically. See also p.1063.

Lippershey, Hans (c.1570–c.1619), German spectacle maker who invented the telescope. In 1608 he offered his invention to the Estates of Holland for use in warfare. Its potential for astronomy was recognized by Jacques Bovedere of Paris, who reported it to GALILEO who then built his own.

Lippi, Filippino (c.1457–1504), Italian painter. The son of Fra Filippo Lippi, he followed the style of BOTTICELLI in his early work; his mature style, of which *Vision of St Bernard* (c.1486) is an example, influenced the Florentine MANNERISTS in the 16th century.

Lippi, Fra Filippo (c.1406–69), major Florentine painter. He was influenced by MASACCIO and Fra ANGELICO and in turn influenced BOTTICELLI and others. His works include the *Barbadori altarpiece* (c.1437), *Coronation of the Virgin* (c.1445), *Annunciation* (c.1437–40) and *Adoration of the Child* (c.1455).

Lippizaner, breed of horse, originally from Lipizza, in the former Austro-Hungarian empire. The horse is small in stature with a long back and a thick neck. These characteristics are suitable for performing intricate and delicate movements.

Lippmann, Walter (1889–1974), US journalist and author. Lippmann was an influential columnist on the New York *Herald Tribune*, combining a realistic view of politics with a strong moral sense. His books include *A Preface to Morals* (1929) and *The Public Philosophy* (1955).

Lipscomb, William Nunn, Jr (1919–), US chemist who made fundamental discoveries about the bonding of molecules, for which he was awarded the 1976 Nobel Prize in chemistry. See also p.894.

Lipstick, waxy cosmetic used to colour the lips. It contains a fatty base that is firm and solid and yet spreads readily when applied; the colour is provided by pigments or stains, usually red. Eosin and fluorescein derivatives are often used but these dyes are only slightly soluble in the fatty base and require an additional solvent. See also pp.586–587.

Liquefaction of air, achieved by cooling air to its critical temperature of -147°C (-232.6°F), at or below which it can be liquefied by pressure. The method involves repeated compression, followed by rapid ADIABATIC expansion, which results in progressive drops in temperature due to the Joule-Thomson Effects. See also p.840.

Liquefied petroleum gas (LPG), liquefied gas of light HYDROCARBONS (compounds of carbon and hydrogen), principally propane and butane, produced in the distillation of crude oil and the refining of NATURAL GAS. It is used as a fuel and raw material in chemical industries, as bottled gas for powering motor vehicles and for home heating and cooking.

Liqueur, flavoured distilled liquor, with an alcohol content of 48 to 120 proof (24–60%), made by combining fruits or herbs with a base spirit and a sweetener. Liqueurs were first produced by monks and ALCHEMISTS and have been called balms, elixirs and oils.

Liquid, state of matter intermediate between a gas and a solid. A liquid substance has a relatively fixed volume but flows to take the shape of its container. Liquids have higher viscosity than gases, and their viscosity decreases with temperature. The state that a substance assumes depends on the temperature and the pressure at which it is kept; a substance that is liquid (eg water) at room temperature can be changed into a vapour (its gaseous state, steam) by heating, or into a solid (ice) by cooling. Unlike the molecules in gases, those in a liquid are bonded (weakly) and liquids (like solids) are compressed only slightly by pressure. See also pp.836–841.

Liquid assets, in economics, assets either in the form of money or in forms which can be readily converted into money, eg stocks and shares.

Liquid crystal, substance that flows like a liquid yet has the kind of ordered molecular structure characteristic of crystals.

Carl Linnaeus introduced systems of classification for both plants and animals.

Linnets, are named after their taste for the seeds of flax plant (Linum).

Linz, on the railway between the Baltic and Adriatic, is an important trade centre.

Lions, unlike other members of the cat family, live in prides of up to 20.

Liquid oxygen

There are many organic crystalline substances that can be brought to a liquid crystal state when heated. They have unique properties that have been applied in optical displays, eg calculator numerals, and temperature variation detection systems.

Liquid oxygen, unnatural state of the gaseous element OXYGEN (O₂); at one atmosphere pressure, oxygen liquefies at -183°C. It is widely used in rocket engines as an oxidizer with various liquid fuels to produce high-velocity gases.

Liquorice, perennial plant of the pea family, native to the Mediterranean region and cultivated in temperate and subtropical areas. It bears spikes of blue flowers. The dried roots are used to flavour confectionery, tobacco, beverages and medicines. Height: to 90cm (3ft). Family Leguminosae; species *Glycyrrhiza glabra*.

Lisa, Manuel (1772-1820), us fur trader. In 1812 he built Fort Lisa, near present day Omaha. From 1813 to 1822 it was the busiest port on the Missouri River.

Lisboa. See LISBON.

Lisbon (Lisboa), port and capital city of Portugal, at the mouth of the Tagus River on the Atlantic Ocean. An ancient settlement, the city was occupied by the Phoenicians and the Carthaginians. It was conquered by the Moors in 716. Retaken by the Portuguese in 1147, it became, after the 14th century, a leading European port and the heart of the Portuguese empire. It declined under Spanish occupation from 1580 to 1640 and suffered a major earthquake in 1755. It has a fine harbour, and is once again a major port, handling most of Portugal's international trade. There is a Moorish mosque, and the University of Lisbon (1911) in the city. Industries: shipbuilding, oil- and sugar-refining, steel, chemicals, textiles. Pop (1974) 1,707,500. See also p.1369, 1375.

Li Shang-yin (813-58), Chinese poet of the late period of the T'ANG DYNASTY (618-906). His verse often showed lively and graceful imagery but its frequent artificiality hinted at the coming poetic decadence. His poems are similar to those of WEN T'ING-YÜN (fl. mid-9th century).

Lispector, Clarice (1925-), Brazilian novelist and short-story writer. Regarded as one of her nation's greatest 20th-century authors, she is concerned with basic human themes rather than specific Brazilian conditions. Her works often deal with her characters' inability to cope with crises beyond their understanding. *Beside the Savage Heart* (1944), her first novel, and *The Apple in the Dark* (1961) were highly praised.

Liss, or Lys, Johann (c. 1595-1629), German BAROQUE painter of genre and religious scenes, one of the few German artists of his day to enjoy international fame. He settled in Venice, where he helped to bring new vigour to early 17th-century Venetian painting. His works include *The Banquet*, *Toilet of Venus* and *The Vision of St Jerome*.

Lissitzky, Eliezer (El) Markovich (1890-1941), Russian painter and architect. He was a pioneer of modern typographical design, of which his *Story of Two Squares* (1920) is sometimes considered the first important example.

List, Georg Friedrich (1789-1846), us economist, b. Germany, who advocated tariff protection for new industries. An adherent of Adam SMITH and David RICARDO, his programme for German economic development included protectionism, the expansion of railway building and the formation of a customs union. His best-known work is *The National System of Political Economy* (1841).

Lister, Joseph, 1st Baron (1827-1912), British surgeon who introduced the principle of antiseptics, which complemented PASTEUR's theory that bacteria cause infection. Using carbolic acid (phenol) as the antiseptic agent, and employing it in conjunction with his heat sterilization of instruments, he brought about a dramatic decrease in post-operative fatalities. See also pp.1645, 1645.

Liszt, Franz (1811-86), Hungarian composer and pianist. Beginning from his first solo recital at the age of nine, he startled

his contemporaries with his virtuosity and showmanship. He was patron and friend to many great artists of his day, such as CHOPIN and GRIEG, and his music influenced subsequent composers including WAGNER, Richard STRAUSS and RAVEL. Among his compositions are two popular piano concertos and his Hungarian rhapsodies and études. He also created the symphonic (or tone) poem. See also pp. 1582-1583, 1583, 1598.

Li Tai-po, or Li Po, (701-62), Chinese poet of the T'ANG DYNASTY, generally regarded as one of the two greatest poets in an age of remarkable literary achievement. Unlike his contemporary and rival, TU FU, who was Confucian, Li Po was a Taoist and the influence of Taoism can be seen in the sensual and spiritual aspects of his work as well as in the many anecdotes about his unconventional and often irreverent behaviour; he is said to have drowned while drunk. His poetry is characterized by its vivid imagery, spontaneity and rich emotion. See also p.1260.

Litany, form of prayer in Christian churches, originally used in processions. A member of the clergy intones or says a series of petitions, to each of which the congregation replies with a single, repeated, petitionary response. It is also used in private devotions.

Litchi. See LYCHEE.

Literary criticism, assessment of works of literature. The literary critic performs two roles: he distinguishes contemporary works in which some lasting value may be found; and he presents, by interpretation and commentary, the works of the past which he judges worthy of transmission.

ARISTOTLE'S *Poetics* began literary criticism; in it is an attempt to systematize poetry and drama and Aristotle uses such concepts as mimesis, or imitation, and catharsis. By means of the latter, tragedy arouses within the spectator feelings of pity and terror and then succeeds in purging them. The emphasis of most subsequent criticism, however, has been the postulation of a hierarchical list, a kind of apostolic succession of writers and works, in the manner of Samuel JOHNSON, Matthew ARNOLD, T. S. ELIOT and I. A. RICHARDS.

Literature, collections of writings, usually grouped according to language, period and country of origin. Examples include classical Greek Literature, modern Russian literature, Elizabethan literature, and others. Within these groupings the literature may be further divided into forms, such as poetry and prose, and within these again into verse drama, non-fiction prose, novels, epic poems, tragedies, satires and so on. A piece of writing becomes literature in a series of selective processes; those which are most surely literature are those sanctified both by their age and the subsequent weight of critical acclaim. Antique works, however, separated from the contexts which produced them, require much scholarship for present-day appreciation. In the processes of selection LITERARY CRITICISM plays an important part.

Lithium, common metallic element (symbol Li) of the alkali-metal group, first isolated in 1817. Ores include lepidolite and spodumene. The element, which is the lightest of all metals, is used in alloys and as a heat-transfer medium. Chemically it is similar to sodium, although it does have some resemblance to the alkaline-earth metals. Properties at no. 3; at wt. 6.941; s.g. 0.534; m.p. 180.5°C (357.0°F); b.p. 1,347°C (2,456.6°F); most stable isotope Li⁷ (92.58%). See also ALKALI ELEMENTS; pp.888-891.

Lithography, in art, planographic method of printmaking and printing developed in the 18th century and based on the immiscibility of grease and water. A design is made on a prepared plate or stone with a greasy lithographic pencil, a crayon or ink. When ink is rolled across, it is picked up by the design but the rest of the plate is protected by a thin film of water. See also OFFSET PRINTING; pp.613, 614-615.

Lithosphere, outer rocky shell of the Earth, extending down about 700km (430 miles). It is composed of the CRUST and upper mantle, and overlies the astheno-

sphere on which it may drift sideways. It does not include the hydrosphere, biosphere or atmosphere. See also pp.194, 198.

Lithuania (Litovskaja SSR), constituent republic of the USSR, bounded by Poland (s) and the Baltic Sea (w); the capital is Vilnius. A low-lying area, it is drained chiefly by the Neman River. Cattle are raised throughout the region and grain, sugar-beet, flax and vegetables are grown. Since 1940 industry has developed considerably and includes food processing, textiles, chemicals, machine tools and electrical equipment. Lithuania was conquered by the TEUTONIC KNIGHTS in the 13th century. It later became one of the most powerful states in medieval Europe. In 1569 the state merged with Poland. With the 18th-century partitions of Poland, Lithuania passed to Russia. An independent republic was proclaimed in 1918, but the region was retaken by the Soviets in 1940. Area: 65,201sq km (25,174sq miles). Pop. (1976) 3,317,000.

Lithuanian, language spoken principally in Lithuania SSR, USSR. Together with LATVIAN it forms the Baltic subgroup of the INDO-EUROPEAN language family.

Litmus, purplish dye in neutral aqueous solutions, red in acid solutions and blue in alkaline solutions. It is most familiar in the form of litmus paper which is used as an acid-base indicator. The dye is extracted from lichens.

Litotes, form of understatement in which an idea is expressed by denying its opposite. For example, "not bad" is said when "quite good" is meant. Often the litotes carries an intentional sense of irony, by implicitly denying what it affirms.

Litre, (l), metric unit equal to a cubic decimetre, ie one thousandth of a cubic metre. Another definition, used from 1901-68, was that the volume of 1kg of pure water at 4°C equalled 1 litre. It is equivalent to 0.22 imperial gallons or 0.2642 us gallons.

Little America, region in Antarctica, s of the Bay of Whales, on the outer edge of the Ross Ice Shelf. It was explored from 1928 to 1930 by Admiral R. E. BYRD, and used as the headquarters for his second expedition (1933-35). It was also the base for the us Antarctic Service Expedition (1939-41) and the us Naval Operation High Jump expedition (1946-47).

Little Bear, or Ursa Minor, northern circumpolar constellation, resembling a faint, distorted version of the GREAT BEAR. It contains two second magnitude stars: the POLE STAR (Polaris) and Beta Ursae Minoris (Kocab), nicknamed Guardian of the Pole. See also pp.1010-1011.

Little Bighorn, Battle of (25 June 1876), between Indians, under Sioux chiefs Sitting Bull and Crazy Horse and the 7th us Cavalry detachment led by General George CUSTER. Custer attempted a surprise attack but the 2,500 Indians wiped out his 264 officers and men near the Little Bighorn River in the Dakota Territory. See also p.1627.

Little Dorrit (1855-57), novel by Charles DICKENS. One of Dickens's more sentimental works, it deals (as does *Our Mutual Friend*) with true human worth and sincerity in the context of worldly commercialism.

Little Entente (1920-38), alliance contracted between Romania, Yugoslavia and Czechoslovakia after WWI to maintain post-war boundaries. Through political and economic unity and the support of France and Poland, the alliance helped to prevent ANSCHLUSS (the uniting of Germany and Austria) until 1938.

Little Lord Fauntleroy (1866), popular Victorian novel by Frances Hodgson BURNETT relating the tale of an American boy, Cedric, who inherits an English earldom. The book inaugurated a vogue for long curly hair and velvet suits for young boys.

Little Red Book, popular name in the West for a small volume of the thoughts of the Chairman of the Chinese Communist Party, MAO TSE TUNG. It was first issued during the CULTURAL REVOLUTION in 1966 and became the "bible" of the Red Guards. Since Mao's death in 1976 his

successors have discouraged the widespread view that his ideology is sacred. See also p.1727.

Little Rock, state capital of Arkansas, USA, on the Arkansas River. A strong anti-Union centre at the outbreak of the AMERICAN CIVIL WAR, Little Rock attracted world attention in 1957, when federal troops were used to enforce a Supreme Court ruling (1954) against segregation in schools.

Little Van Dyck. See COQUES, GONZALES.

Little Women (1868-69), novel in two parts written by Louisa May ALCOTT. It is the story of a family, the Marches, in a small New England town in the mid-19th century. It concentrates on the adolescence of the four daughters, Jo, Meg, Amy and Beth. *Little Women* was immensely popular as a children's book and sold 60,000 copies within the first year of publication.

Littlewood, Joan Maud (1914-), British theatre director and actress who founded THEATRE WORKSHOP in 1945 which toured Britain until 1953, when it found a permanent base at the Theatre Royal, Stratford, London, until it disbanded in 1973. Her most successful productions, which ultimately transferred to the West End, included Brendan Behan's *The Hostage* (1958), Lionel Bart's *Fings Ain't Wot They Used T'Be* (1959) and *Oh What a Lovely War* (1963) - a viciously critical musical revue about WWI.

Littoral zone, beach area between high and low tides. It also refers to the benthic division - between high tide and a depth of 200m (656ft). The larger zone is divided into the eulittoral - from high tide to a 50m (164ft) depth - and the sublittoral - from 50m to 200m (164-656ft). The lower edge of the eulittoral is the lowest limit at which abundant attached plants can grow. See also pp.334-335, 338-339.

Littre, Maximilien-Paul-Émile (1801-81), French linguist, philosopher and lexicographer. Fluent in several Classical languages, he translated HIPPOCRATES (1862). His most noted work is his four-volume *Dictionary of the French Language* (1863-73).

Liturgy, in public worship, the ritual or form of religious ceremonies for specific days, such as Good Friday, or for particular sacraments, such as BAPTISM or the EUCHARIST. It may also refer to the whole ritualistic structure of one religion to distinguish it from another.

Liu Chih-chi (661-721), Chinese historian. His *Shih t'ung* ("Understanding of History") is generally considered to be the first exposition on historical method.

Liu Hsieh (late 5th, early-6th centuries AD), Chinese literary critic. Noted for *The Carved Dragon of the Literary Mind*, a 50-chapter analysis of writing. The first 25 chapters explore literary types, including the Confucian classics. In the second 25 chapters he discusses criteria for excellence.

Liu Shao-ch'i (1898-1974), Chinese Communist leader. Trained in Moscow (1920-22), he became one of the chief theorists of the Chinese Communist Party and second in rank from 1954 until purged by MAO TSE-TUNG during the CULTURAL REVOLUTION of 1966-69 for allegedly "revisionist" views. Rumours of his death were confirmed in 1974. See also pp.1726, 1727.

Liutprand (d. 744), king of the Lombards from 712 to 744. Under his rule Lombardy reached its zenith; he unified and expanded the kingdom, and his reforms of the penal code anticipated those of CHARLEMAGNE. His conquest of Roman lands was halted only by personal appeals to his Catholic conscience by the reigning popes. See also pp.1269, 1286, 1294.

Live-Forever, also called stonecrop or orpine, a succulent perennial plant native to Europe. It has smooth oval, grey-green leaves and clusters of tiny reddish-purple flowers. Height: 60cm (2ft). Family Crassulaceae; species *Sedum telephium*.

Liver, large glandular organ. It is soft and reddish-brown and lies mostly in the upper right quadrant of the abdominal region. It has many functions, including

formation of **BILE**, storage of carbohydrate, regulation in part of carbohydrate metabolism, breakdown of **HORMONES**, detoxification of drugs and other substances, destruction of worn-out red blood cells, and an important role in fat metabolism. It produces and secretes bile which is stored in the **GALL BLADDER**. Bile passes into the small intestine, where it is primarily concerned with fat metabolism, acting to emulsify fats (make them water-soluble) and to activate other digestive **ENZYMES**. See also pp.160, 161, 1069, 1081, 1081.

Liver fluke. See **SHEEP LIVER FLUKE**.

Liverpool, city in Merseyside, NW England on the Mersey estuary. It was chartered in 1207 and has been a leading port since the mid-18th century. Although it suffered severe bomb damage in WWII, Liverpool has become one of the country's major cities and has an important export trade. Once famous for its pottery and cotton industries, Liverpool now produces electrical equipment, chemicals and rubber and has extensive dockyards. Pop. (1981) 537,000.

Liverwort, any of about 8,000 species of tiny, simple, non-flowering green plants which, like the related **MOSES**, lack specialized tissues for transporting water, food and minerals within the plant body. Liverworts make up two classes, *Hepatidae* and *Anthocerotidae*, of the plant division *Bryophyta*. See also pp.350, 362, 362, 363.

Livery companies, urban trade organizations which flourished in London in the 15th and 16th centuries, so called because of the costume of their members which distinguished them from the yeomen. Originally oligarchies within the craft guilds, the "Great Twelve" included the fishmongers, goldsmiths, mercers and other merchants rather than manufacturers. They controlled municipal politics and lent to the monarchy their great strength in the urban middle classes.

Lives of the English Poets, critical and biographical essays on 52 poets by Samuel Johnson, from the poet Abraham Cowley to those of his own time. Originally the articles appeared as prefaces to works of the poets (1779-81), but they were subsequently issued independently.

Living, cost of. See **COST OF LIVING**.

Living, Henry (1929-), British actor and playwright whose works, such as *Big Soft Nellie* (1961) and *Eh?* (1964), established him as an important comic dramatist in their explorations of the role of the "little man" in a northern industrial society. In the 1970s more of his plays were performed on television than on the stage.

Livingston, Robert (1746-1813), US politician; member of the **CONTINENTAL CONGRESS** (1775-76, 1779-81, 1784-85) and one of the five men who drafted the Declaration of Independence. He was the first Secretary of the Department of Foreign Affairs (1781-83).

Livingstone, David (1813-73), British missionary and explorer. Coming from a poor background, he first worked in a cotton mill near Glasgow but saved enough to take a medical degree at the age of 27. Sent to Bechuanaland (now Botswana) by the London Missionary Society, he made strenuous efforts to combat disease and slavery. From 1858 to 1864 he explored the eastern Zambezi, and then set off to find the source of the Nile in 1866. He was cut off from all contact with Europe until 1871, when he was found by H. M. STANLEY near Lake Tanganyika. Admired by all the peoples with whom he came into contact and a fierce opponent of slavery, Livingstone died at Ilala, in modern Zambia. See also pp.1617, 1621.

Living Theatre, avant-garde US collective theatre company founded in New York in 1947. It specialized in improvised presentations based on the theories of ARTAUD and its most famous productions in this vein were *The Connection* (1959) and *The Brig* (1963). It was the most influential group in both the USA and Europe in the 1960s.

Livius Andronicus, Lucius (c.284-204 BC), regarded as founder of Roman

drama. A Greek slave, he wrote tragedies and comedies based on Greek originals and produced the first dramatic presentation ever given in Rome. His principal work is the *Odyssia*, a translation of Homer's *Odyssey*.

Livonian Order of Brothers of the Sword, group of knights who brought what is now Latvia and Estonia to Christianity by violent conquest. Founded with the pope's sanction in 1202, the knights carried out several brutal campaigns and were finally crushed themselves by Lithuanian forces in 1236.

Livy (59 BC-AD 17), Roman historian, full name Titus Livius. With **TACITUS** and **SALUSTIUS** he is regarded as one of the greatest Roman historians. In about 28 BC he began his *History of Rome*, an account of the Romans from the legendary, Aeneas' arrival in Italy (753 BC) to 9 BC. Livy used the best sources available at the time. His descriptions are vivid and he frequently draws moral conclusions. Thirty-five of the original 142 books are intact and there are fragments of the rest. See also pp.1224, 1224.

Li Yuan-hung (1864-1928), Chinese military and political leader. A brigade commander under the CH'ING DYNASTY, Li was compelled by army rebels to become military governor of Hopei province during the republican revolution of 1911. He became the first Vice-President of the Republic of China (1912-16) and later served two brief terms as President (1916-17, 1922-23).

Lizard, reptile found on every continent; there are 20 families, comprised of approximately 3,000 species. It has scales, paired copulatory organs and a flexible skull. A typical lizard has a cylindrical body with four legs, a long tail and moveable eyelids. Most lizards are terrestrial, and many live in deserts. There are also semi-aquatic and arboreal forms, including the **FLYING DRAGON**. Burrowing species frequently have shortened limbs or are legless. Length: 5cm-3m (2in-10ft). Order *Squamata*; suborder *Sauria*. See also pp.3, 66-71, 313.

Lizard fish, any of 36 species of carnivorous fish that live in shallow waters of the Atlantic and Pacific oceans. It uses its pectoral fins to prop itself up on the sandy bottom. Length: 50cm (20in). Family *Synodontidae*; genus *Synodus*.

Lizard Point (Lizard Head), the most southerly point on the mainland of the British Isles, on the Lizard Peninsula, Cornwall, SW England. The area is known for its rugged coastal scenery.

Ljubljana, city in NW Yugoslavia, on the River Sava; the capital of Slovenia. It was held by the HAPSBURGs after 1277 and by the French during the NAPOLEONIC WARS; it passed to Yugoslavia in 1918. Ljubljana was the centre of the Slovene national movement during the 19th century and site of the Congress of LAIBACH in 1821. The city is the seat of the Slovene Academy of Arts and Sciences and a university (1596). Industries: machinery, optical instruments, textiles, chemicals. Pop. (1971) 173,853.

Llama, South American even-toed, ruminant mammal related to the **CAMEL**. The related **GUANACO** is found in the wild, whereas the llama and the alpaca are known only in domesticated form. The llama has been used as a beast of burden by South American Indians for more than 1,000 years. It has a long, woolly coat and slender limbs and neck. The smaller alpaca is bred for its superb wool. Family *Camelidae*; genus *Lama*. See also p.94.

Llanberis, town in Gwynedd, N Wales, NW of Snowdon, the highest peak in Wales. Llanberis is the terminus of the railway to the summit of the mountain. Pop. (1971) 2,049.

Llanfair P.G., small town in N Wales. Its full name, once borne on a famous railway sign (which is now in a railway museum in Bangor), is *Llanfairpwllgwyngyllgogerychwyrdbrowllantysiliogogoch*. This, the longest place-name in Britain, means "The church of St Mary in the hollow of white hazel, by the rapid whirlpool, of St Tysilio's Church by the red cave".

Llanos, vast prairie regions of N South America, in SW Venezuela and E Colombia. Once composed entirely of savanna, some areas have now been irrigated to form fertile land. Area: Venezuela approx. 323,750sq km (125,000sq miles); Colombia approx. 259,000sq km (100,000sq miles).

Llangollen, town in Clwyd, NE Wales, on the River Dee in the Vale of Llangollen. Llangollen is famous for its eisteddfod (Welsh festival of arts), which was first held in 1946 and is now a yearly event. In the town is the 13th-century castle of Dinas Bran, a 12th-century abbey and a 14th-century bridge spanning the Dee. Tourism is the major industry. Pop. (1971) 3,108.

Llanquihue, province in central Chile, on the Golfo de Ancud; the capital is Puerto Montt. Industries: tourism, timber, food processing, seafood canning. Area: 18,205sq km (7,029sq miles). Pop. (1970) 197,986.

Llewellyn, Richard (1907-), Welsh author, real name Richard Llewellyn Lloyd. He gained popular success with *How Green Was My Valley* (1939), a novel about a Welsh mining family in the late 19th century. His later works include *None But the Lonely Heart* (1943), *Bride of Israel*, *My Love* (1973) and *Green, Green My Valley Now* (1975).

Llewellyn ap Gruffydd (d.1282), Welsh prince. He became ruler of Wales in 1246 and the following year did homage to HENRY III, surrendering to him much of his territory. In 1256, however, he rebelled and soon gained control of much of Wales. EDWARD I, Henry III's successor, invaded Wales, defeated Llewellyn and deprived him of almost all of his lands by the Treaty of Conway. See also pp.1318, 1318.

Llewellyn ap Iorwerth (1173-1240), Welsh leader, called Llewellyn the Great. He had great diplomatic and military skill, which he used to maintain Welsh independence from the English kings JOHN and HENRY III. He also patronized the arts and the Church.

Lloyd, Clive (1944-), West Indian cricketer who has played for Guyana, Lancashire and the West Indies. He played in 63 Test matches between 1966 and 1977, 28 times as captain (4,466 runs, average 43.35). Lloyd gained renown as a powerful left-handed batsman, capable of standing up to the best attacking bowling.

Lloyd, Harold (1893-1971) US film comic whose screen character established his career which spanned the silent and sound eras. An expert stuntman, Lloyd is remembered for the cliff-hanging escapades of his films. His early work included *Grandma's Boy* (1922) and *The Freshman* (1925).

Lloyd, Marie (1870-1922), British music hall star, real name Matilda Wood, who specialized in cheeky, cockney songs such as *Oh! Mr Porter, My Old Man Said Follow The Van* and *A Little of What You Fancy Does You Good*.

Lloyd George, David (1863-1945), British politician. He was a Liberal MP for Caernarvon Boroughs from 1890 to 1945, when he was created Earl Lloyd-George of Dwyfor. As Chancellor of the Exchequer (1908-15) he greatly increased taxation, above all in the "People's Budget" of 1909, to lay the foundation of the **WELFARE STATE**. It was he who was chiefly responsible for introducing old-age pensions. In 1915 he was Minister of Munitions and Secretary of State for War. In 1916 he replaced ASQUITH as Prime Minister and formed a coalition government which lasted until 1922. As Prime Minister he won fame as a forceful war leader and handled the negotiations which led to the founding of the Irish Free State (1921). He remained leader of the **LIBERAL PARTY** until 1931, but never again held office. See also pp.1647, 1672, 1675.

Lloyd's, insurance market in London, dealing especially in marine insurance. Lloyd's began in the 17th century as a coffee house kept by Edward Lloyd, where businessmen willing to insure shipping were known to gather. Its premises were originally in Tower Street but moved to

Lombard Street in 1691, and to Lime Street in 1957. Lloyd's as an institution does not insure anything; it is merely the market where the individual underwriters, who accept the insurance on their own account and who bear all the financial risk, can meet. Each underwriter has to prove he has access to considerable capital before he can join Lloyd's. Lloyd's list dates from 1734.

Lloyd's Register of Shipping, annual publication produced by LLOYD'S of London, listing details of merchant ships of all nations, port facilities and so on. It was first published in 1760.

Llywelyn. See **LLEWELYN**.

Loach, Kenneth (1936-), British film and television director who worked mainly on location and whose radical approach to social conditions and situations was expressed in such television drama-documentaries as *Cathy Come Home* (1966), *Days of Hope* (1975) and *The Price of Coal* (1977), and his feature films *Poor Cow* (1968) and *Kes* (1970). *Family Life* (1972) explored schizophrenia in terms of the theories of R. D. LAING.

Loach, small freshwater fish that lives in mountain streams of central and S Asia and Europe. Loaches have small scales and some are virtually scaleless; there are more than 200 species. British loaches are the stone loach (*Nemachilus barbatula*) and the spined loach (*Cobitis taenia*).

Lobachevski, Nikolai Ivanovich, (1792-1856), Russian mathematician. He was educated at Kazan University and appointed professor there in 1816. His outstanding achievement (announced in 1826) was the creation of one of the first comprehensive systems of non-Euclidean geometry, which refutes EUCLID's axiom of parallels.

Lobelia, trailing or bedding plant found throughout the world. The flowers may be red, white or blue and irregularly shaped, and the leaves are simple. Species include the blue-flowered annual *Lobelia erinus*. Family *Lobeliaceae*.

Lobengula (c.1836-94), Ndebele (or Matabele) king from 1870 in what is now part of Rhodesia (Zimbabwe). The initial instability of his rule caused him to invite British support in return for certain land and mineral concessions. Cecil RHODES formed the British South Africa Company to exploit this in 1889. In 1893, when refused more concessions, the company sent an expedition which destroyed Lobengula's kingdom.

Lobito, city in W central Angola on the Atlantic Ocean; one of the finest ports on the W African coast. Founded in 1843 for Portuguese colonists, the city became a commercial and communications centre with the completion (1828) of the trans-African railway from Benguela. Lobito's exports include coffee, sisal and sugar, and minerals from Zaire. Industries: shipbuilding, cement, building materials, castor-oil processing. Pop. 74,000.

Lobotomy. See **LEUCOTOMY**.

Lobster, large, long-tailed, marine decapod crustacean. Some species, notably the Norway lobster, *Nephrops norvegicus*, and the common lobster, *Homarus vulgaris*, are the most prized edible shellfish. They are caught in wooden or metal cages. True lobsters possess enlarged bulbous chelae (claws) and a segmented body; the segments are obvious only in the abdomen. See also pp.2, 31, 746, 746.

Local Defence Volunteers. See **HOME GUARD**.

Local government, system of regional administration differing in each country. In England and Wales the present structure derives from legislation which came into force on 1 April 1974. Local government is run by elected councils which carry out certain functions within statutory limits. There are now six metropolitan counties, 36 metropolitan districts, 39 non-metropolitan counties and 296 non-metropolitan districts. This structure excludes the Greater London Council (GLC). Metropolitan counties are responsible for large-scale planning, roads, traffic and safety, police and fire services. Metro-

Local group of galaxies

Lobsters in Europe weigh up to 6.8kg (15lb), and up to 13.6kg (30lb) in N America.

Locomotive; Stephenson's *Rocket*, built in 1829, reached a speed of 50 km/h (30mph).

Locusts migrate up to 5,000km (3,000 miles) to their next breeding grounds.

Oliver Lodge (left) in his laboratory; he investigated electromagnetic waves.

politan districts are responsible for education, rent and rate rebates, social services, libraries, local planning, housing, slum clearance, youth employment and environmental health. Non-metropolitan counties and districts are responsible for the same functions as their metropolitan counterparts with the exception that non-metropolitan counties are responsible for education, social services, youth employment and libraries.

In Scotland local government is divided into nine regions within which are three island councils and 53 district councils. The regions are responsible for education, police, fire services, social services, water, roads and public transport; the districts being responsible for housing, local planning and environmental health. See also GREATER LONDON COUNCIL; pp.1858 - 1859.

Local group of galaxies, small cluster of galaxies to which the Milky Way belongs. The local group contains about 18 members, including the Andromeda Spiral (M31), the Triangulum Spiral and the Clouds of Magellan. See also pp.998 - 999.

Lacarno Pact (1925), agreements made between Belgium, Italy, Britain, Poland, France and Germany that demonstrated a resumption of normal European international relations after WWI and strengthened the member nations' commitment to the Treaty of Versailles. The pact was intended to encourage European peace, but it was violated by the German remilitarization of the Rhineland in 1936.

Locatelli, Pietro (1695-1764), Italian violinist and composer. He studied with Arcangelo Corelli and settled in Amsterdam. One of the great violinists of his day, he also composed sonatas, concerti grossi, studies and caprices for the instrument.

Lochaber, Treaty of (1770), agreement negotiated in America between the colonial superintendent of the Southern Indians, and the Cherokee Indians, expanding Virginia's western border beyond the natural watershed line of the Proclamation of 1763 to the mouth of the Kanawha River.

Loch Katrine, lake in Central Region, Scotland. In 1859 it was enlarged to become the main source of water for Glasgow. The lake was made famous in Sir Walter Scott's *Lady of the Lake*. Area: approx. 21sq km (8sq miles).

Loch Lomond, lake in Strathclyde and Central regions, Scotland; the largest and one of the most famous Scottish lochs. It is drained by the River Leven into the Firth of Clyde. It contains numerous wooded islands and is dominated at the N end by Ben Lomond. Height: 973m (3192ft).

Lochner, Stefan (c.1410-51), German painter. He was a leading artist of Cologne, where he painted his most famous work, the cathedral altarpiece *Altar of the Patron Saints*, in which he combines the decorative with a monumental realism influenced by Flemish art.

Loch Ness Monster, unexplained phenomenon living in the waters of Loch Ness, Scotland. Possibly a vast amphibian, it is often said by those claiming to have seen it to resemble a PLESIOSAUR or a large aquatic mammal, or a number of such creatures. The loch is fed by eight rivers and many streams, all of which carry peat from the surrounding soil, darkening the already murky water. Countless tourists and bodies of scientific observers have visited the loch to try and discover its secret. Best known amongst these was the US expedition led by Dr R. Rines which published, in 1975, some shadowy photographs taken by automatic cameras underwater. Following these Sir Peter Scott devised the scientific name of *Nes-tieras Rhombopteryx* for the creature. Nevertheless, no real evidence has emerged, even though stories of the "beast" of the water date back at least as far as the 6th century.

Lock, Graham Anthony Richard ("Tony") (1929-), British cricketer who played for Surrey, Leicestershire, Western Australia and England. He was an excellent left-arm slow bowler and

took 170 Test wickets at an average of 24.94 runs between 1952 and 1963.

Locke, mechanism fitted to a door to prevent entry to people other than those with a coded key. See also p.598.

Lock, structure built into a stretch of inland waterway to raise or lower water levels to correspond with the surrounding countryside. Each lock consists of two sets of lock gates. A vessel enters the lock, the gates are closed, and sluices are opened to admit or release enough water to bring the vessel on the same level as the water beyond the second pair of gates. See also p.538.

Locke, Arthur D'Arcy ("Bobby") (1917-), South African golfer whose 43 major tournament wins between 1935 and 1957 included the British Open Championships of 1949, 1950, 1952 and 1957. Distinctive in a white cap and plus-fours, he built his game around self-composure, a looping swing, and a consistent putting style.

Locke, John (1632-1704), English EMPIRICIST philosopher whose political theories of social contract, the right to freedom of conscience and the right to property greatly influenced emerging democracies of his day. Suspected of radicalism, he went into exile in Holland (1683-89) and returned to England after the Glorious Revolution, when his *An Essay Concerning Human Understanding* (1690) appeared. In the same year he published *Two Treatises on Civil Government*. He advocated limited sovereignty and held that revolution was not only a right but an obligation if liberty were threatened. See also pp.1466 - 1467, 1883.

Locke, Matthew (c.1630-77), English composer who composed brass music for a procession of CHARLES II on the day before his coronation, as well as contributing to early musical plays such as SHADWELL'S *Psyche* (1673) which, together with incidental music to other plays, was published as *The English Opera* (1673). Considered to be avant-garde by his contemporaries, he was the most important composer of stage music before PURCELL.

Lockhart, John Gibson (1794-1854), Scottish journalist and writer. He was a leading contributor to BLACKWOOD'S MAGAZINE and editor of the *Quarterly Review* (1825-53). He published a biography of Robert Burns in 1828 and a monumental biography, now a classic, of Sir Walter Scott, his father-in-law, in 1837-38.

Lockheed Aircraft Corporation, US aircraft and aerospace company. In the mid-1970s technological problems with the Rolls-Royce RB2-11 turbine engines ordered for Lockheed's L-1011 Tri-Star contributed to the financial difficulties of both companies. The company's admission in 1975 that it had offered financial inducements to overseas government officials (in return for recommendations for contracts) resulted in the resignations of some of the people involved.

Lockjaw. See TETANUS.

Lockout, employer's refusal to allow workers to enter the place of employment. It is the employer's counterpart of a strike; it may be used as a means of bringing pressure on employees (or their trade union) to accept the employer's conditions regarding work.

Lockspeiser, Sir Ben (1891-), British scientist and administrator who became Director-General of the Scientific Research (Air) Ministry of Supply in 1946. From 1955 to 1957 Lockspeiser was president of the European Organization for Nuclear Research.

Lock Up Your Daughters (1959), British musical adapted by Bernard Miles from the play *Rape Upon Rape* (1730) by Henry Fielding. The lyrics were by Lionel Bart with music by Laurie Johnson and a filmed version, without songs, appeared in 1969.

Lockwood, Margaret (1916-), British stage and film actress, more noted for her film roles, especially in *The Lady Vanishes* (1938), *Night Train to Munich* (1940), *The Wicked Lady* (1945) and *Cast a Dark Shadow* (1957).

Lockyer, Sir Joseph Norman (1836-1920), British astronomer who discovered the element HELIUM. He was a pioneer in the study of the Sun's spectrum. In 1868 he developed a technique for examining prominences at the edge of the Sun and attributed lines in the solar spectrum, to a new element, which he named helium - 40 years before it was discovered on earth.

Locomotive, engine that moves under its own power but, most often, an engine that moves on rails. The first successful steam locomotive was George STEPHENSON'S *Rocket*, built in 1829. This and its many successors pulled passengers and freight for more than a century before they were replaced, in developed countries, by diesel-electric and electric locomotives. Gas-turbine engines have also been used with generators to drive locomotives. See also pp.422, 506-507.

Locoweed, any of several plants native to the North American plains. It has bluish-purple flowers and is poisonous to livestock. Woolly locoweed may grow up to 1.8m (6ft) tall. Family Leguminosae; species *Astragalus mollissimus*.

Locus, in geometry, the path traced by a specified point when it moves to satisfy certain conditions. For example, a circle is the locus of a point in a plane moving in such a way that its distance from a fixed point (the centre) is constant.

Locust, insect (a type of large GRASSHOPPER) that is known for migrating in huge swarms. Locusts swarm in marginal regions where bodies of water or large humid areas meet dry ones. When a large population develops in such circumstances, the nymphs (immature insects) move in vast numbers on foot. As they feed they develop into flying adults.

Swarms may contain up to 40,000 million insects and cover an area of approximately 1,000sq km (386sq miles). About 70% of damage is caused by the immature and maturing insects. Length: 12.5-100mm (0.5-4in). Order Orthoptera; species *Schistocerca gregaria*. See also pp.8, 8, 40-41, 317.

Locust tree, deciduous tree or shrub of the pea family. It has oblong feather-like leaves and the fragrant flower clusters are white, pink or yellowish-green. Family Leguminosae; genus *Robinia*.

Lod (Lydda), town in central Israel, 18km (11 miles) SE of Tel Aviv. Of Hebrew origins, Lod was destroyed by Celestius Gallus in AD 66 and again by Vespasian in AD 68, but was later rebuilt by HADRIAN. It was made an episcopal see in the 5th century. Destroyed by SALADIN in 1191, it was rebuilt by RICHARD I of England. It was the scene of a mass Arab evacuation during the ARAB-ISRAELI WAR of 1948, and the population was largely replaced by Jewish immigrants in 1950. There is a 13th-century Church of St George, who is reputed to have been born and buried in Lod. Pop. (1972) 30,500.

Lode, ore formation consisting of a closely spaced series of veins, usually in stratified layers. The veins are in tabular deposits in fissures and cracks of a body of rock which is different in composition. They are the result of the gradual precipitation of minerals carried by underground water or gases after the formation of the embedding rock (country rock). See also pp.410-411.

Lodestone, mineral MAGNETITE, also called magnetic iron ore (Fe₃O₄), plentiful in parts of Scandinavia, northern USA and Russia. The observation that a lodestone or piece of iron touched by one will align itself north and south was crucial to the development of navigation.

Lodge, Sir Oliver Joseph (1851-1940), British physicist, author, professor at Liverpool and later principal of Birmingham University. He investigated electromagnetic waves and lightning, and perfected and named the coherer, the radio wave detector used in the early days of wireless telegraphy. He was a proponent of the belief that the Sun might be a source of radio waves. He wrote several books on physical research and spiritualism. See also p.638.

Lodge, Thomas (1558-1625), English writer. His works include the pamphlet *A*

Defence of Plays (1580), the prose romance *Rosalynde, Euphues Golden Legacy* (1590) and *Phillis* (1593), a collection of love sonnets. Apart from his literary efforts, he also practised medicine and travelled to South America.

Łódź, second largest city in Poland, approx. 120km (75 miles) sw of Warsaw. A small market town prior to the 19th century, Łódź grew after 1870 to become the centre of the Polish textile industry. Taken by the Russians in 1815, the town was returned to Poland in 1918. There is a university (1945). Industries: machinery, electrical equipment, food processing. Pop. 787,000.

Loeb, Jacques (1859–1924), us biologist, b. Germany. He studied the chemical processes of living organisms, and stressed the importance of physical and chemical laws on understanding life phenomena in both animals and plants. He achieved popular notoriety for experiments on artificial PARthenogenesis in animals.

Loess, buff-coloured deposit of fine silt or clay, generally unstratified and sometimes exposed in bluffs. The loess in the Mississippi River Valley is believed to be of glacial origin, whereas that in the Mongolian desert seems to have been formed by the wind. See also p.229.

Loewe, Frederick (1901–), us composer, b. Austria. He has chiefly composed Broadway musicals, several of them with the librettist Alan Lerner. His first musical was *Salute to Spring* (1937). His most successful were *Brigadoon* (1947), *Paint Your Wagon* (1951), *My Fair Lady* (1956) and *Camelot* (1960).

Loewi, Otto (1873–1961), German pharmacologist and medical researcher. He shared the 1936 Nobel Prize in physiology and medicine with Sir Henry Hallett Dale for discovering that a chemical substance (later shown by Dale to be acetylcholine) mediated the transmission of impulses from one nerve fibre to another.

Löffler, Friedrich August Johannes (1852–1915), German bacteriologist, best known for his discovery (in association with Edwin Klebs) of the organism that causes DIPHTHERIA, *Corynebacterium diphtheriae* (Klebs-Löffler bacillus). He also made several discoveries in veterinary medicine, such as the cause of SWINE FEVER and plague, the causative organism of GLANDERS (with Wilhelm Schütz), and the fact that FOOT-AND-MOUTH DISEASE is caused by a virus (with Paul Frosch).

Lofoten Islands, Norwegian islands off the coast of NW Norway in the Norwegian Sea. They are separated from the Vesterålen by a narrow water, the Raftsund. They are important chiefly for the cod (Feb. to April) and herring (Aug. to Nov.) fishing.

Lofting, Hugh (1886–1947), British creator of the ten Dr Dolittle books. He settled in the USA in 1912 and, in letters to amuse his children during WWI, wrote stories for them of an extraordinary country doctor who learnt the language of animals. In their published form, they include *The Story of Dr Dolittle* (1920), *The Voyages of Dr Dolittle* (1922) and *Dr Dolittle and the Secret Lake* (1948) – all illustrated by himself.

Log, nautical instrument for the measurement of the speed of a vessel in knots. In most modern ships, it takes the form of a tube projecting through the bottom of a vessel. The term also applies to the log-book, the daily account of a ship's or aircraft's business written up by the navigator as required by MARITIME LAW.

Logan, Joshua (1908–), us stage and film director. He was director, producer and co-author of the stage production of *South Pacific* (1949), and his successful films have included *Picnic* (1956), *Bus Stop* (1956), *Sayonara* (1957), *South Pacific* (1958), *Fanny* (1961), *Camelot* (1967) and *Paint Your Wagon* (1969).

Loganberry, biennial hybrid bramble developed in California in 1881, named after Judge J. H. Logan. A cross between the blackberry (*Rubus fruticosus*) and raspberry (*Rubus idaeus*), it is disease prone and is grown only in sheltered areas. The canes produce large, red berries which may be eaten raw or preserved. Family Rosaceae; species *Rubus wisninus*

loganobaccus. See also pp.674, 674, 710, 710.

Logarithm, aid to calculation devised by John NAPIER in 1614 and developed by the English mathematician Henry Briggs. A number's logarithm is the power to which a base must be raised to equal the number, ie if $b^n = x$, then $\log_b x = n$, where n is the number, b the base and x the logarithm. Common logarithms have base 10, and so-called natural logarithms have base e (2.71828...). A logarithm is written as the sum of an integer (the characteristic) and a decimal fraction (the mantissa). The characteristic indicates the location of the decimal point in the number, being positive for numbers greater than one and negative for those less than one. The mantissa is the logarithm of the digits in the number, regardless of decimal place. See also p.788.

Loggerhead turtle, carnivorous marine turtle of the Atlantic and Pacific oceans. Characterized by a large head, it has oar-like flippers and is red-brown. Length: 0.7–2.1m (2.3–6.8ft). Family Cheloniidae; species *Caretta caretta*.

Logic, classical, branch of philosophy that deals with the way we think – a systematic study of the structure of propositions and the criteria of valid inference. In abstracting from the content of propositions in order to examine their logical form, logic evaluates soundness of validity rather than truth per se. The history of logic began with ARISTOTLE, who proposed three laws that he held as basic to valid thought: the identity (A is A), the contradiction (A is not A) and the exclusive (A is A or not A). Logic then proceeded through Arabian and European logic in the Middle Ages and various post-Renaissance scholars, and resulted in the symbolic, or mathematical, logic first outlined in the 19th century by George BOOLE and Augustus DE MORGAN. See also pp.1216, 1322, 1880, 1882–1883, 1886, 1886.

Logic, mathematical, also called symbolic logic, analytical branch of logic that attempts to give the inferences of classical logic a more precise mathematical basis. It is concerned with statements, which may be true or false, and with the relationships between statements and the operations that can be made on them, including conjunction, disjunction, and negation. The statements and their relationships and operations are reduced to a symbolic notation and are manipulated according to prescribed mathematical rules. Thus inferences can be analysed and validity checked. See also pp.790–791.

Logical positivism, school of philosophy which began in the VIENNA CIRCLE at the beginning of the 20th century. Its roots were the logic of FREGE and RUSSELL, the positivism of MASH and, above all, the claim of WITTGENSTEIN that philosophy was the clarification of thought. Logical positivists, in Britain RYLE and AYER especially, rejected metaphysical speculation as meaningless, moral statements as emotive and mathematical and formal logic as tautological. They therefore narrowed philosophy to the analysis of language.

Logic circuits, network of conductors linking modules (eg amplifiers and multivibrators) and components (eg transistors, diodes, resistors and capacitors), used to route and process electronic signals (eg voltages) according to the rules of symbolic logic and Boolean algebra. In computers, two numbers are added by an "adder" composed largely of logic GATES. Such a circuit converts decimal inputs into the BINARY SYSTEM, performs the addition, converts the binary result back to decimal and energizes the required display. See also BOOLE, George; pp.466–469, 790–791.

Logos, in philosophy, intellect or reason; in a larger sense the rational principle that orders the universe. The STOICS thought of it as the soul of the world. As used in the New Testament Gospel of St John, the Greek word *logos* was in the Authorized Version translated as Word: "In the beginning was the Word, and the Word was with God, and the Word was God". The Word can be either the intention of

God (His rational principle) or the outward expression of that intention – both describing JESUS CHRIST.

Lohengrin (1850), opera in three acts by Richard WAGNER, German libretto by the composer. It was first performed at Weimar, conducted by Franz LISZT. It is, like most of Wagner's operas, based on a medieval Teutonic legend. A work of monumental proportions, it was an early attempt by Wagner to incorporate the dramatic action within a continuous broad symphonic framework.

Loire, longest river in France. It rises in the Cévennes in SE France, flows N through central and W France to the Bay of Biscay at Saint-Nazaire. The river is connected by canals to the Rhône and Seine rivers. Length 1,020km (634 miles).

Loisy, Alfred Firmin (1857–1940), French theologian and biblical scholar. His application of modern historical criticism to the Gospels, in such works as *L'Évangile et l'Église* (1902; "The Gospel and the Church,"), led to his condemnation by Pope Pius X as a modernist, and he was excommunicated from the Roman Catholic Church.

Loki, in Norse mythology, the malicious companion of ODIN and THOR, a shrewd and resourceful trickster, perhaps representing the unpleasant side of the other gods. Although sometimes depicted as a powerful ally of Odin, he was more usually an unwanted guest and trouble-maker.

Lolita (1955), novel by Vladimir NABOKOV. A satirical work, it deals with the passion of a middle-aged European professor for a 12-year-old American girl.

Lollards, followers of the 14th-century English religious reformer John WYCLIFFE. They challenged many doctrines and practices of the medieval Church, including TRANSUBSTANTIATION, indulgences, pilgrimages and clerical celibacy. They rejected the authority of the POPE, and they denounced the wealth of the Church and Church involvement in civil affairs. Lollards went out as "poor preachers", teaching that the Bible was the sole authority in religion. They won support from some nobles as well as many common people and helped to pave the way for the Protestant REFORMATION.

Lomax, Alan (1915–), us folksinger and collector of folksongs, particularly us Negro blues. He helped his father, John Lomax (1867–1948), compile *American Ballads and Folk Songs* (1934) and *Negro Folk Songs as Sung by Lead Belly* (1936), which helped to establish Huddie Ledbetter (LEADBELLY) as one of the best-known exponents of folk blues. In association with Woody Guthrie, Pete and Peggy Seeger, and others he was prominent in the revival of us folk music in the 1960s.

Lombard, Peter. See PETER LOMBARD.

Lombard League, alliance of the cities of Lombardy in northern Italy (including Milan, Venice, Brescia, Bergamo, Mantua and Verona). It was founded in 1167 to resist the Holy Roman Emperor FREDERICK I Barbarossa. By the Peace of Constance in 1183 the League acknowledged fealty to Frederick, but the cities were granted local liberties and jurisdiction. The League became active again in 1226 against FREDERICK II and ended with his death in 1250.

Lombardo, Italian family of sculptors and architects, leaders in the architectural RENAISSANCE in Venice. Pietro (1435–1515), who came from Lombardy to Venice c.1470, ran the chief sculpture workshop, assisted by his sons Tullio (c.1455–1532) and Antonio (c.1458–1515). Their great combined works included the Church of Santa Maria dei Miracoli, which Pietro built (1481–89) and his sons sculpted. Pietro designed many churches and palaces and worked on the façade of the Doge's Palace from 1498. He also worked at Treviso, at Ravenna, where he built Dante's tomb.

Lombardo, Tullio (c.1455–1532), Venetian sculptor, son of Pietro LOMBARDO. He was one of the greatest marble sculptors of his day. His works include most of the figure sculptures on the Vendramin monument, Venice.

Logarithms are the basis of calculations carried out using a slide rule.

Loggerheads are the only turtles that breed on the Atlantic coast of northern America.

Loire makes a westward turn at Orleans and flows along the Loire valley.

Tullio Lombardo's best-known work is this tomb of Guidarello, Ravenna (1525).

Lombards

Михайло Ломоносовъ
ОТЪМУЩЕНЫЯ СЛОВА

Михайло Ломоносовъ, великий русский поэт, просветитель, государственный деятель, основатель русского стихотворного языка, автор знаменитых стихотворений, трагедий, од, посланий, прозаических сочинений, в том числе знаменитой «Гроза».

Mikhail Lomonosov: a manuscript of the scientist who was also a poet.

London: St Paul's Cathedral escaped serious damage during the Blitz of the 1940s.

London; traffic moving around Trafalgar Square, along Whitehall towards Big Ben.

Londonderry's closely packed houses and fine cathedrals surround a major port.

Lombards, or Langobards, Germanic peoples thought to have migrated from Gotland, Sweden. They inhabited the area E of the lower River Elbe until driven W by the Romans in AD 9. They had close links with ARMINIUS at this time. In 568 they invaded N Italy under Alboin and conquered much of the country from their centre, Pavia, adopting Catholicism and Latin customs. The Lombard kingdom reached its peak under LIUTPRAND (d.744). It went into decline after defeat by the Franks under CHARLEMAGNE in 774-75.

Lombardy (Lombardia), region in N Italy made up of the provinces of Bergamo, Brescia, Como, Cremona, Mantova, Milano, Pavia, Sondrio and Varese; Milan is the regional capital. It is a region of mountains and lakes. It was the centre of the powerful LOMBARD kingdom from 569 until 774-75, when it was defeated by CHARLEMAGNE. Products: cereals, sugar-beet, vegetables, fruit, olives. Industries: motor vehicles, steel, chemicals, textiles. Area: 23,834sq km (9,202sq miles). Pop. (1971) 8,504,061.

Lombroso, Cesare (1835-1909), Italian criminologist and physician who is credited with beginning the scientific study of the criminal as opposed to the legalistic study of crime. He developed a theory of the born criminal, which is no longer considered valid. His most famous work is *The Criminal Man* (1876).

Lomé, capital of the Republic of Togo, W Africa, on the Gulf of Guinea. The administrative centre and chief port of the country, it is connected by rail to the farmlands of the interior. The city is the seat of the University of Benin (1965). Exports: coffee, cocoa, palm nuts, copra. Pop. 148,443.

Lomonosov, Mikhail Vasilievich (1711-65), Russian scientist and poet. He helped to found the University of Moscow (1755) and was one of the first Russian scientists to anticipate the law of conservation of mass, atomic theory and a kinetic theory of heat. He formulated Russian classical literary theory in his *Letter on the Rules of Russian Versification* (1739). His poetry includes the odes *Evening Meditations* (1748) and *Morning Meditations* (1751).

Lomonosov Ridge, submarine ridge extending from the Asian continental shelf, past the North Pole to the edge of the North American continental shelf near Ellsmere Island.

London, Jack (1876-1916), US novelist and short story writer, real name John Griffiths. His early years were spent on the San Francisco waterfront, which he described in his autobiographical novels *Martin Eden* (1909) and *John Barleycorn* (1913). He spent three years as a sailor and travelled widely. *Call of the Wild* (1903), the story of a tame dog which ultimately leads a wolf pack, is his most popular work.

London, capital of the United Kingdom and principal city of the COMMONWEALTH OF NATIONS, located in SE England on the River THAMES 65km (40 miles) from its mouth in the North Sea; seventh-largest city in the world. Since 1965 it has been officially called GREATER LONDON, which is made up of the City of London and 32 boroughs, covering an area of 1,580sq km (610sq miles). Little is known of London before the Romans arrived in Britain. Known as Londinium, it was the most important town in Roman Britain and developed as a port and commercial centre. By the 3rd century AD the population numbered approx. 40,000 and the town covered an area of some 120 hectares (300 acres). After the Romans left Britain, London declined until the 9th century when ALFRED the Great repaired defences, encouraged the development of trade and made the city the seat of government. WILLIAM THE CONQUEROR built the White Tower in the TOWER OF LONDON to the E of the city walls, to protect the city from river attack. The settlement of Westminster to the W of the city walls grew in the 10th century. EDWARD THE CONFESSOR built WESTMINSTER ABBEY and later a palace, and made Westminster his capital

in 1042. The NORMANS and the PLANTAGENETS retained Westminster as the seat of government, finalizing the distinction between the mercantile city in the E and Westminster which, by the 13th century, had law courts, the Court and Parliament.

The prosperity of England during the Tudor period firmly established London's wealth and importance, and trade greatly increased. In the reign of ELIZABETH I the population increased from less than 100,000 to almost 250,000. The plague in 1665-66 killed 75,000 Londoners and the Great FIRE OF LONDON in 1666 destroyed many buildings, but the city was rebuilt to a similar general plan. Sir Christopher WREN played an important role in the rebuilding of the city; he designed many churches, including ST PAUL'S CATHEDRAL. During the 17th century the area between Westminster and the City was built up. Inigo JONES designed COVENT GARDEN as a residential area for the rich, and other fashionable squares were built in SOHO, MAYFAIR and Bloomsbury. London Bridge, first built in the 10th century, was the only bridge across the Thames until 1750, when Westminster Bridge was constructed.

During the 19th century the population reached 4½ million and transport services were improved. Euston station was built in 1838, with other main-line stations soon afterwards. The first underground railway, which used steam locomotives, was opened in 1863. By the end of the 19th century London extended as far N as Hampstead and other suburbs were being developed. Further growth between the wars was accompanied by extensions to the transport system. The GREEN BELT Act of 1938 restricted building, so that today many of the people who work in London commute from towns more than 65km (40 miles) away.

London is one of the world's most important financial, commercial and industrial cities. It is a major port and cultural centre, and attracts millions of tourists each year. Places of interest include BUCKINGHAM PALACE, the Houses of PARLIAMENT, Trafalgar Square, Piccadilly Circus, HAMPTON COURT PALACE, GREENWICH, the Post Office Tower, Madam Tussaud's and the MONUMENT. Art galleries and museums include the NATIONAL GALLERY, NATURAL HISTORY MUSEUM, TATE GALLERY, VICTORIA and ALBERT MUSEUM, BRITISH MUSEUM, NATURAL HISTORY MUSEUM, Science Museum and the IMPERIAL WAR MUSEUM. London University, founded in 1836, is the largest in the country and includes 24 institutes of advanced study. London's major industries are engineering, paper, clothing, printing and publishing, chemicals, food processing, brewing, motor vehicles, metal goods, furniture, tobacco, precision instruments and entertainments. Pop. (1981 est.) 6,696,000. See also pp.217,506,508,530,532,533,757,1234-1235,1238,1326-1329,1428-1429,1566,1567,1582,1592,1593,1639,1674,1714,2026.

London, city in SE Ontario, Canada, on the Thames River. It was settled in 1826, and its streets and bridges are named after those in England's capital. London is the seat of the University of Western Ontario (1878). A commercial and financial centre, the city has paper, textiles and locomotive industries. Pop. (1974) 223,225.

London, Tower of. See TOWER OF LONDON.

London, University of, university founded in 1836, originally comprising King's College and University College. More than 80 colleges and hospitals have been added since that time; the headquarters of the university are at Senate House, Malet St, London.

London Company, corporation founded in England in 1606 to colonize Virginia. It was responsible for the Jamestown Colony, and Thomas West, Baron De La Warr, was its first governor. The company was dissolved in 1624.

Londonderry (Derry), county in NW Northern Ireland. Much of the region is mountainous and the main occupations are hill farming and stock rearing in the Sperrin Mts and the fertile plain along

Lough Foyle. The most important industries are distilling and textiles. The county town is Londonderry. Long-standing political and religious differences resulted in rioting and bombings in the city in 1969, after which British troops were sent to Ulster. Since then, the town and county have been a frequent focus for sectarian violence. Area: (county) 2,082sq km (804sq miles). Pop. (1971) county, 130,556; town, (1980 est.) 91,200.

London Gazette, twice-weekly periodical, originally known as the *Oxford Gazette* and first published in 1665 as an official publication. Today it publishes details only of public appointments and announcements.

London Group, society of English artists formed in 1913, amalgamating the CAMDEN TOWN GROUP with several smaller ones; in its early stages it favoured POST-IMPRESSIONISM. It held its first exhibition at Brighton in 1913, and its first London exhibition was in 1914. Later members included C.R.W. NEVINSON, Edward Wadsworth, John and Paul NASH, Eric GILL and Jacob EPSTEIN. The group was revived after WWII.

London Zoo, one of the world's great zoos, situated centrally in Regent's Park, London. Although small it holds one of the greatest varieties of animals of any zoo in the world. London Zoo also houses the Zoological Society of London which has scientific members from all over the world, and is responsible also for WHIPPSNADE ZOO in Bedfordshire, 5km (3 miles) W of Dunstable.

Long, Crawford Williamson (1815-78), US physician. In 1842 he began using ether as an anaesthetic but did not publish or publicize his work until 1849, after William MORTON and others had been credited with the discovery. See also p.264.

Long, Huey Pierce (1893-1935), US political leader. Elected Governor of Louisiana in 1928, he was impeached for bribery and gross misconduct in the following year but was not convicted and continued to serve as Governor until 1932. He built up a powerful political organization through which he controlled politics in Louisiana. He served in the US Senate (1932-35) and, running a campaign for legislation against the extremely rich, planned to be nominated as a candidate for the presidency, but was assassinated in 1935.

Long, Marguerite (1874-1966), French pianist. She studied at the Paris Conservatoire and became a piano virtuoso and teacher. She was especially known for her interpretations of the works of FAURÉ, DEBUSSY and RAVEL. She was the first to play Ravel's *Piano Concerto in G* (1932), which the composer dedicated to her.

Long bones, in human anatomy, limb bones characterized by a long shaft terminating at both ends in swellings (epiphyses) which articulate with other bones. The RADIUS and ULNA are in the forearm, the HUMERUS in the upper arm, the FEMUR in the thigh and the TIBIA and FIBULA in the lower leg.

Longchamp, French racecourse in the Bois de Boulogne, Paris. At the heart of French racing for more than 100 years, it is the scene of the Prix de l'Arc de Triomphe (Europe's richest race), the Grand Prix de Paris, and other French classics.

Long Day's Journey into Night (1939-41), tragedy in four acts by Eugene O'NEILL. It was withheld from publication for 15 years after its completion because of its personal nature and was not produced until 1956, after O'Neill's death. It won a Pulitzer Prize in 1957 for its intense portrayal of family relationships.

Longfellow, Henry Wadsworth (1808-82), US poet remembered for his narrative poems dramatizing North American history and legend. These include *Evangeline* (1847), *The Song of Hiawatha* (1855), *The Courtship of Miles Standish* (1858) and *Paul Revere's Ride* (1861). His first book of poetry, *Voices of the Night*, appeared in 1839. *Ballads and Other Poems* (1842) contain two of his most popular shorter poems, *The Wreck of the Hesperus* and *The Village Blacksmith*. See also p.1772.

Longford, county in N central Republic of Ireland, in Leinster province. Part of the central plain of Ireland, it is largely low-lying and is drained by the Rivers Shannon, Erne and Inny and Loughs Gowna and Ree. Most of the people work on farms; beef cattle are reared and oats and potatoes are grown. Longford is the county town. Area: 1,044sq km (403sq miles). Pop. (1971) 28,250.

Longhena, Baldassare (1598–1682), Italian architect. He was the leading exponent of BAROQUE architecture in Venice, where his most famous work, the church of Sta Maria della Salute dominates the Grand Canal. He also designed the palaces Ca' Pesaro and Ca' Rezzonico in Venice.

Longhi, Alessandro (1733–1813), Italian painter, a leading society portraitist. His works include *Teres Barbarigo* (1788), *Members of the Pisano Family* (c.1760) and *Niccolò Erizzo* (c.1766). He is best known for his *Compendio delle Vite di Pittori Veneziani Storici* (1762), an account of contemporary Venetian painters.

Longhi, Pietro (1702–85), Italian painter. He devoted himself chiefly to small-scale genre pictures, especially scenes of the domestic manners of the Venetian middle classes, such as *The Exhibition of a Rhinoceros at Venice*.

Longhorn beetle, any of numerous species of wood-boring beetle found throughout the world, especially in the tropics. It has long antennae, long legs, and a cylindrical black or brown body. Length: 2–152mm (0.12–6in). Family Cerambycidae.

Longhouse, type of communal dwelling used by the DAYAK people of Borneo to house entire extended families. The term is also used to apply to meeting-halls built by American Indian tribes, particularly the IROQUOIS.

Longinus, Cassius (213–273), Greek rhetorician and philosopher, mistakenly credited with the authorship of the treatise *On the Sublime* (now believed to have been written by another Greek called Longinus who lived in the 1st century AD). He was a counsellor to Queen Zenobia of Palmyra and was finally executed as a traitor by the Romans.

Long Island, fourth-largest island in the USA, in SE New York State, separated from Manhattan by the East River, from Connecticut by Long Island Sound and bounded on the S by the Atlantic Ocean. The W end of the island includes the New York City boroughs of Queens and Brooklyn. Originally inhabited by the Delaware Indians, Long Island was settled by the Massachusetts Bay Colony and the Dutch West India Company in the 17th century. It is a sporting and recreational area and there is some commercial fishing. Area: 4,463sq km (1,723sq miles). Pop. (1970) 7,141,515.

Long Island, Battle of (27 August 1776), engagement in the American War of Independence. George WASHINGTON's army, divided by the East River, was defeated on Long Island by the British army under Gen. William HOWE. Driven back to Brooklyn, the colonial army retreated to Manhattan the following week under the cover of night and fog, thus avoiding capture.

Longitude. See LATITUDE AND LONGITUDE. **Long jump**, standard field event in athletics. After a running start, the jumper tries to leap as far as possible from a fixed board. The length of the jump is measured from the forward edge of the board to the rear imprint the jumper leaves in a sand pit. The earliest accurately recorded jump was 7.05m (23.13ft) by Chionis of Sparta in 656 BC. Modern long jumping involves a carefully measured run-up and a skilled technique of lifting the trailing leg to join the take-off leg in a running stride through the air. In the 1968 Olympic Games the US athlete Bob Beamon set a record of 8.9m (29.25ft).

Longleat, estate of the Marquess of Bath, Wiltshire, England, and site of an Elizabethan manor house built 1567–80 to the design of Sir John Thynne, its owner. Today it houses an animal reserve.

Long march, The, journey undertaken by Chinese Communist forces after breaking through the NATIONALIST army of CHIANG

KAI-SHEK in 1934. Under the leadership of CHU TEH and MAO TSE-TUNG some 100,000 men and women travelled 8,000km (5,000 miles) to reach Shensi Province in 1935. Those who survived the journey settled around Yenan where a new Communist headquarters was established. See also p.1697.

Long Parliament, English parliament summoned by CHARLES I in Nov. 1640 to raise taxes to pay for his army. It was the Long Parliament's quarrels with Charles which led to the ENGLISH CIVIL WAR. It executed Charles's minister STRAFFORD and the Archbishop of Canterbury LAUD. In 1648 it abolished the House of Lords and the monarchy. After PRIDE'S PURGE of 1648 it was known as the RUMP PARLIAMENT and consisted only of supporters of CROMWELL. It was forcibly ejected in 1653 but continued as the BAREBONES PARLIAMENT until 1660. See also pp.1421–1422, 1432–1433.

Long-playing record, disc, introduced in 1948, with a continuous groove on each side. This groove is cut as a spiral into vinyl plastic and in stereo records the walls of the groove are at right angles to each other. Each wall is a series of undulations which cause the stylus to vibrate. The vibrations are converted into two separate components of sound. Before the 33 1/3 rpm discs, records were manufactured of shellac and made to revolve at 78 rpm. The long-playing record (LP) was so named because each side took up to half an hour to play as opposed to a 78's time of only about 5 minutes. See also p.642.

Longship, clinker-built wooden vessel that was driven by a single square sail and oars. Like its ancestor the dugout, it was a double-ended craft until the introduction of a stern rudder in about 1200. It is commonly associated with the VIKINGS, but was used over European waters from as early as 300 BC. Length: to 23m (75ft).

Longshore drift, movement of sand and pebbles along a sea coast. The material is carried along the beach by the waves hitting the coast obliquely (swash) but is swept back at right-angles to the beach by the backwash. If the carrying power of the waves decreases the material may be deposited to form a SPIT. See also pp.230, 1931.

Long sight, or hypermetropia, defect of vision which causes nearby objects to be seen more hazily than distant ones. In a longsighted person, the focusing distance of the eyeball from front to back is too short and, as a result, light rays entering the EYE strike the RETINA before they can be properly focused. Long sight is corrected by convex lenses. See also MYOPIA, p.137.

Longueuil, Charles le Moine, Sieur de (1626–85), French colonial leader in Canada. He emigrated to Canada in 1641 and worked for the JESUITS among the Huron Indians and as a trader, soldier and interpreter at Trois Rivières. He had 11 sons, all of whom distinguished themselves in the service of France. See also LE MOYNE.

Long wave. See RADIO. **Loniceria**. See HONEY-SUCKLE.

Lönnrot, Elias (1802–84), Finnish folklorist and philologist at a time when there was no written Finnish tradition. After training as a physician, he spent much of his life travelling throughout Finland, Lapland and NW Russia collecting the legends, traditional ballads and lyric poems which now make up the KALEVALA, Finland's national epic. He published more lyric poems separately in *Kanteletar*.

Lonsborough, Anita (1941–), British swimmer. She won a gold medal in the 200m breaststroke at the Olympic Games of 1960, held in Rome, and subsequently went on to win the European title (1962) and to retain the Commonwealth title which she had won in 1958. In the 1962 Commonwealth Games she also won the 110 and 220 yards breaststroke event as well as the 440 yards medley.

Lonsdale, Frederick (1881–1954), British playwright known for his witty and urbane society comedies. Among these are *The Last of Mrs Cheyney* (1925), *On Approval*

(1927) and *Canaries Sometimes Sing* (1929). Lonsdale also collaborated in the writing of operettas, one of which is *Maid of the Mountains* (1916).

Lonsdale Belt, award made by the National Sporting Club to a boxer winning the British championship in any division. The award is named after Lord Lonsdale (1857–1944) and was first made in 1909. Any boxer winning three championship fights in his division may keep the belt.

Loofah, tropical, annual, climbing herb whose dense, fibrous fruit is dried and used as a bath sponge. Family Cucurbitaceae; genus *Luffa*.

Look Back in Anger (1956), play by John OSBORNE. It surveys the aspirations of the British post-war generation and established using a realistic style (pejoratively called KITCHEN SINK DRAMA) to portray general dissatisfaction with the British class structure, and has had great influence on subsequent British theatre. The play was first produced by the English Stage Company at the Royal Court Theatre with a cast including Mary Ure, Alan Bates and Kenneth Haigh.

Loom, device used in weaving to hold the warp threads so that the weft can pass between them. Its simplest form is a vertical or horizontal frame, and there is evidence that such handlooms have been used since Neolithic times. Handlooms grew more sophisticated until the development of the machine loom, notably Edmund Cartwright's invention of 1785, which heralded the beginning of the INDUSTRIAL REVOLUTION in England. The basic design of the loom requires the warp to be threaded through heddles (rods with eye-holes by means of which individual threads are raised and lowered) and the weft to be wound on a shuttle which passes between the warp threads. The heddles alter the arrangement of the warp before the shuttle returns to provide the next row of the weft. Variations include foot mechanisms (treadles) to move the heddles, punched-card "programmes", invented by Joseph JACQUARD in 1804, to vary the groupings of warp threads for patterns to be introduced into the weave, and many mechanical improvements to speed and automate the process. See also pp.592–593, 626.

Loon, also called diver, diving bird of the Northern Hemisphere known for its harsh call; it has black, white and grey plumage. An excellent swimmer, it often stays submerged while fishing. The female lays up to three olive eggs in a grass-and-reed nest near water. Length: 88cm (35in). Family Gaviidae.

Loos, Anita (1893–), US novelist. She wrote many novels, but is famous only for her first, the international best-seller, *Gentlemen Prefer Blondes* (1925), a satire on sex and money. It was followed by *But Gentlemen Marry Brunettes* (1928).

Loos, Battle of (1915), battle between the combined French and British armies and the German army around Loos, in France, in WWI. It lasted from 25 Sept. to 13 Oct. and ended inconclusively in trench warfare, although the Allied losses were almost three times as great as the German. At Loos the Allies used chlorine gas for the first time.

Loosestrife, perennial plant that grows in tropical to temperate zones throughout the world. Loose spikes of flowers are borne above dark green, willow-like leaves. The wild purple loose strife, *Lythrum salicaria*, grows to 1.8m (6ft); there are also several cultivated varieties. Family Lythraceae.

Lope de Vega. See VEGA CARPIO, LOPE FELIX DE.

López, Vicente Fidel (1815–1903), Argentine educator, politician and writer. An outstanding intellectual, López helped organize the educational systems of Argentina, Chile and Brazil. Best known as a historian, he also wrote extensively on archaeology, philology and law.

López Arellano, Osvaldo (1921–), President of Honduras (1966–71, 1972–75). As head of the armed forces, López led the coup against the Villeda administration (1963). He withdrew Honduras from the Central American Common Market.

López de Legazpi, Miguel (d.1572), Spanish navigator. In 1545 he went to Mexico and while there was chosen by the viceroy to lead an expedition for the conquest of the Philippines. He sailed in 1564, reaching the Philippines the following year. Relying on tact and subtlety rather than violence, he took possession of the islands in the name of Spain.

Lop-Nor (Lo-pu po), salt basin in SE Sinkiang-Uigur autonomous region, China. It was once a salt-water lake which has now mostly dried up except for the streams of the Tarim River. The area has been used for nuclear tests by the Chinese government. In 1928, when last explored, the lake at its broadest was 40km (25 miles) and 97km (60 miles) long.

Lopolith, type of rock body formed by the cooling of molten rock, or MAGMA, in which the final shape is saucer-like, concave upwards. See also pp.209, 209.

Loquat, evergreen shrub or small tree and its edible fruit native to Japan and cultivated in subtropical climates. The tree has white flowers and bears yellow, plum-like fruits prized as a dessert or flavouring. Height: to 9m (30ft). Family Rosaceae; species *Eriobotrya japonica*. See also p.691.

Loran, navigational aid used to guide ships and aircraft. It stands for LONG-RANGE-NAVIGATION and consists of two ground stations that emit radio pulses, which the ships and planes can use to guide their course. The stations have a day range of 1,300km (800 miles) and a night range of 2,500km (1,600 miles), and are accurate to within 1.6km (1 mile) of their location.

Lorca, Federico García. See GARCÍA LORCA, FEDERICO.

Lord, originally the feudal superior, the nominal owner of the daily bread his tenants ate (the word is a corruption of the Anglo-Saxon for "loaf ward"). Now, as a title the term is applied to members of the House of Lords, and used to address those who have become lords by heredity or by creation, including lords temporal and spiritual (ie high-court judges and bishops). See also pp.1343, 1641.

Lord Dunmore's War (1774), war between colonial settlers in America and Indians. Virginia's governor, the Earl of Dunmore, took control of W Pennsylvania; settlers then moved into Kentucky. These encroachments upon lands the Indians considered theirs provoked the Shawnee tribes into war. The Indians were defeated at the Battle of Point Pleasant and by the Treaty of Camp Charlotte relinquished their hunting rights in Kentucky.

Lord of the Rings (1954–55), epic trilogy by the British scholar and philologist J. R. R. TOLKIEN. The three works *The Fellowship of the Ring*, *The Two Towers*, and *The Return of the King* detail an intense and intricate journey and a battle between good and evil forces in an imaginary world called Middle Earth. The author has been highly commended for the interwoven mythologies and the Elvish language that he created to add realism to the tale.

Lordosis. See CURVATURE OF THE SPINE.

Lords-and-ladies. See CUCKOO PINT.

Lords, House of. See HOUSE OF LORDS.

Lord's Cricket Ground, London, the world's premier CRICKET ground. Founded by Thomas Lord in 1787, it has been at its present location in St John's Wood since 1814. It is the home of the MCC and the Middlesex County Cricket Club. Its playing area is about five acres; its spectator capacity about 34,000. The first TEST MATCH played there took place in 1884, since when every test series in England has included a match at Lord's.

Lord's Prayer, the prayer JESUS CHRIST taught his disciples, saying "After this manner therefore pray ye" (Matthew 6:9–13). A slightly different version is found in Luke 11:2–4. The prayer is also called "Our Father" or *Pater Noster* from its opening words.

Lord's Supper. See EUCHARIST. **Lorelei**, large rock in the River Rhine near Sankt Goarshausen, W Germany. In the novel *Godwi* (1800–02), Clemens BRENTANO created the outline of a legend

Loren, Sophia

surrounding it. A beautiful maiden called the Lorelei was said to have drowned herself in despair, only to rise as a siren to lure fishermen to their doom on the rock.

Loren, Sophia (1934–), Italian film actress. Her most famous films are *Marriage Italian Style*; *Yesterday, Today and Tomorrow*; *The Black Orchid* and *Two Women*, for which she won the Best Actress award at the Cannes film festival (1961). She is also well known to film audiences for performances in such epics as *El Cid*.

Lorentz, Hendrik Antoon (1853–1928), Dutch physicist and professor at Leiden. His early work was concerned with James CLERK MAXWELL's theory of electromagnetic radiation. This led him to the LORENTZ TRANSFORMATION and the prediction of the Lorentz-Fitzgerald contraction, both of which were essential steps in Albert EINSTEIN's development of the special theory of RELATIVITY. Some of his work was concerned with thermodynamics and the ZEEMAN EFFECT, for which he and Pieter ZEEMAN were awarded the 1902 Nobel Prize in physics.

Lorentz transformation, relation developed by H. A. LORENTZ, connecting the space and time co-ordinates of an event as observed from two frames of reference, especially at relativistic velocities. It was shown by Albert EINSTEIN in 1905 to be a consequence of RELATIVITY.

Lorenz, Konrad (1903–), Austrian pioneer ETHOLOGIST. Unlike psychologists, who studied animal behaviour in laboratories, Lorenz studied animals in their natural habitats. He observed that instinct played a major role in animal behaviour – in for example IMPRINTING, by which an animal may learn to identify its parents. Some of his views are expressed in his book *On Aggression* (1966). In 1973 he shared, with N. TINBERGEN and K. von FRISCH, the Nobel Prize in physiology and medicine.

Lorenzetti, name of two brothers who were accomplished painters of the SIENNESE SCHOOL. It is believed that Ambrogio (fl. 1319–48) was the younger. Only six of his works, spanning 13 years, have survived, including the signed and dated panels of *The Presentation of Christ in the Temple* (1342). Pietro (fl. 1320–48) executed a number of frescoes, possibly from 1330–40. These clear and monumental works are in the Lower Church of S. Francesco, Assisi. His last major work, *The Birth of the Virgin* (1342), displays a well-developed understanding of the theory of perspective.

Lorenzini, Carlo (1826–90), Italian author, real name Carlo Collodi. He was the creator of PINOCCHIO. *The Adventures of Pinocchio* first appeared as a book of 1883 and soon became a widely translated children's classic. Walt DISNEY made a film of the story in 1940.

Lorenzo, Monaco (Lorenzo the Monk) (c.1370–1425), Italian painter and miniaturist. He entered the monastery of Sta Maria degli Angeli, Florence, a celebrated centre for manuscript illumination. His *Coronation of the Virgin* (versions in National Gallery, London, and Uffizi, Florence) show his debt to Giotto. His *Adoration of the Magi* (Uffizi) is among the earliest Florentine examples of the INTERNATIONAL GOTHIC style.

Loreto, small town in Ancona province, central Italy, an important pilgrimage centre of the Middle Ages. According to legend, the house of the Virgin Mary was miraculously transported there from Nazareth in 124. Our Lady of Loreto is a patron saint of aviators.

Lorikeet, small, brightly coloured PARROT found in the East Indies, Polynesia and E. Australia. The rainbow lorikeet (*Trichoglossus haematodus*) is coloured green, brown, red and yellow. Lorikeets feed on nectar, which they obtain by lapping the juices of crushed flowers. Length: 15–38cm (6–15in). Subfamily Lorinae; family Psittacidae. See also p.303.

Loris, any of several species of primitive tail-less, tree-dwelling nocturnal PRIMATES of S. Asia and the East Indies. They have soft, thick fur and large eyes, and feed mainly on insects. Length: 18–38cm (7–

15 in). Family Lorisidae; genera *Loris* and *Nocticebus*. See also pp.102–103.

Lorna Doone (1869), historical romance by R. D. BLACKMORE. Set in 17th-century Exmoor, England, it tells of a feud between the Doones, an outlawed clan, and the Ridds, a farming family.

Lorrain, Claude. See CLAUDE LORRAINE.

Lorraine. See ALSACE-LORRAINE.

Lorraine, Cross of, also known as the patriarchal, a cross which has two transverse bars, the higher one shorter than the lower. During WWII the Cross of Lorraine was the symbol of the FREE FRENCH.

Lorre, Peter (1904–64), Hungarian actor, famous for playing sinister characters in British and US films. His films include *The Face Behind the Mask* (1941), *The Maltese Falcon* (1941), *The Beast with Five Fingers* (1946) and *The Raven* (1963).

Lory, brightly coloured PARROT, native to Australia, with a brush-tipped tongue for feeding on nectar and fruit. The yellow-backed lory (*Domicella garrula*) is crimson and yellow. Its wings are green and its beak orange. Lories and LORIKEETS belong to the same subfamily (Lorinae), but lories are distinguished by their shorter tails. See also p.303.

Los Alamos, town in New Mexico, USA, site of a large scientific laboratory. During WWII the laboratory and its work was known by the code-name of MANHATTAN PROJECT, which produced the atomic (fission) bomb, later dropped on Hiroshima and Nagasaki. After the war the laboratory developed the H-bomb. See also p.574.

Los Angeles, Victoria de. See ANGELES, VICTORIA DE LOS.

Los Angeles, city in SW California, USA, on the Pacific coast; largest city in the state and third largest in the country. The area of Los Angeles County approx. 10,574sq km (4,083sq miles) includes the cities of Beverly Hills, Santa Monica and San Fernando. Founded in 1781 as a cattle farming centre, Los Angeles was acquired by the USA from Mexico in 1846. The city grew with the completion of the Southern Pacific (1876) and Santa Fé (1885) railways. The discovery of oil (1894), improvements to the harbour facilities (1912), and the development of the film industry in HOLLYWOOD in the early 20th century all attracted people to the city, the growth of which The city's growth has created major problems, including water shortage – which is overcome by a 480km (300 mile) pipeline from the Colorado River – and air POLLUTION. As well as museums and an art gallery, Los Angeles has three universities. Industries: aircraft, oil refining, food processing, printing and publishing, plastics, electronic equipment, tourism, entertainment, heavy machinery, textiles, chemicals. City pop. 7,477,657. See also pp.756, 757.

Losey, Joseph (1909–), US film director. A refugee from MCCARTHYISM, he went to Britain and worked on many small productions, including *The Damned* (1961), a remarkable science-fiction film. Critical success came with *The Servant* (1963) and, after making *Accident* (1967), he became generally recognized as a great stylist. His other films include *The Go-Between* (1971) and *Mr Klein* (1976).

Losinga, Herbert de (c.1054–1119), English churchman. He became Bishop of Thetford in 1090, and of Norwich in 1094. He began to build Norwich Cathedral in 1096.

Losonczy, Pál (1919–), Hungarian politician. He became a Member of Parliament in 1953, Minister of Agriculture (1960–67) and was appointed Hungarian Head of State in 1967.

Lost wax. See CIRE PERDU.

Lot, biblical figure, son of Haran and nephew of ABRAHAM. Lot travelled in Abraham's company before settling in Sodom, where his hospitality towards the two angels investigating the iniquities of Sodom earned the safety of his family when the city was destroyed. Lot's wife, however, disobeyed instructions and looked back at the destruction of the city; for this she was turned into a pillar of salt.

Lothair I (c.795–855), Holy Roman Emperor of the West with his father,

Louis I, from 817 and heir over his younger brothers, Louis the German, Pepin and later Charles the Bald. After Louis I died (840), the two remaining brothers (Pepin had died in 838) defeated Lothair at Fontenoy in 841 and divided the empire into three by the Treaty of VERDUN in 843. In 844, Lothair granted Italy to his eldest son, LOUIS II; in 855 he abdicated. See also pp.1287, 1287.

Lothair II, (c.835–869), King of LOTHARINGIA (855–69); a son of LOTHAIR I, Emperor of the West.

Lotharingia, part of CHARLEMAGNE's empire inherited by his descendant LOTHAIR II (r.855–69), after whom it is named. The Treaty of VERDUN (843) divided the Carolingian Empire among Charlemagne's three grandsons, the middle part going to Lothair I. Another split in 855 gave the northern part of Lothair's kingdom to his son Lothair II. Roughly, Lotharingia included modern Lorraine (whose name is itself a corruption of Lotharingia), Alsace, NW Germany, Luxembourg, Belgium and The Netherlands. See also pp.1286–1287.

Lothian, The, historical district of Scotland, between the Tweed and Forth rivers, including Edinburgh and the se coastal areas. The Votadini lived there in the 3rd and 4th centuries; the region became part of Northumbria in 635 and passed to KENNETH II, king of the Scots c.973.

Loti, Pierre (1850–1923), pseudonym of Louis Marie Julien Viaud, French novelist. Naval service provided the exotic settings for his popular, melancholy romances, such as *Ramuncho* (1897). His best works, however, deal with Breton life, as in *An Iceland Fisherman* (1886).

Lottery, form of gambling in which prizes are given to people holding purchased tickets bearing winning numbers drawn from a pool. Lotteries have been subject to governmental regulation in Britain since 1698, and were often used to finance building programmes. There has been no state lottery in Britain since 1826; the PREMIUM SAVINGS BONDS system differs from a normal lottery in that it is possible at any time to recover one's stake. In Australia and New Zealand there is widespread interest in lotteries which are organized both privately (eg by TATTERSALL'S) and officially, by state governments.

Lotto, Lorenzo (c.1480–1556), Italian painter, trained by the VIVARINI FAMILY, worked mainly in Treviso, Rome and towns outside Venice. *The Madonna and St Peter Martyr* is an early work. His mature work includes *Madonna Enthroned with Four Saints* (c.1540) and *Presentation in the Temple* (unfinished).

Lotus, common name for any WATER-LILIES of the genus *Nelumbo* and several tropical species of the genus *Nymphaea*. The circular leaves and flowers of some species may be 60cm (2ft) across. *Nymphaea* is sacred to the Chinese, Egyptians and Indians. The genus *Lotus* belongs to the unrelated Leguminosae family. See also p.687.

Lotus-eaters, according to Homer's *Odyssey*, the companions of Ulysses who, having eaten the fruit of the lotus, were overcome by dreamy forgetfulness and lost their desire to return home. The theme was the subject of Alfred, Lord TENNYSON's poem *The Lotus-Eaters* (1833).

Lotze, Rudolf Hermann (1817–81), German philosopher who developed a form of personalistic and teleological idealism. According to his philosophy, which is expounded in his book *Metaphysik* (1841), all entities ultimately find unity in the "world ground", a synthesis of physical and evolutionary processes involving an infinite spirit, or God. At the time it was widely accepted by theologians and theistic philosophers, but fell into disrepute shortly after Lotze's death, although his influence on certain later 19th- and early 20th-century idealist philosophers was significant.

Loudspeaker, device for converting oscillating electric currents into sound. The most common type has a moving coil attached to a stiff paper cone (often elliptical) suspended in a strong magnetic field. The oscillating currents in the coil cause

the cone to vibrate (by ELECTROMAGNETIC INDUCTION) at the frequency of the currents, thus creating sound waves. Many modern loudspeakers give faithful sound reproduction between 80 and 10,000 HERTZ. See also p.820.

Lough Neagh, lake in central Northern Ireland; the largest freshwater lake in the British Isles. It is fed chiefly by the Upper Bann and Blackwater rivers and drained by the Lower Bann. Fishing is important, particularly for trout and eels. Area: 388sq km (150sq miles).

Louis of Bavaria. See LUDWIG.

Louis, name of 18 kings of France. Louis I (778–840) was son of CHARLEMAGNE and co-emperor of the West from 813. He was deeply religious, and was called the Pious. His reign was troubled by rebellious sons and their territorial disputes; he was twice deposed by them but restored in 830 and 834. Louis II (846–79), called the Stammerer, reigned from 877 to 879. On his death, his kingdom was divided between his sons Carloman and Louis III (c.863–82). Louis III was troubled during his reign (879–82) by Norman invasions in N France. Louis IV (c.921–54) attempted during his reign (936–54) to re-establish a claim to Lorraine but was thwarted by vassals. Louis V (c.967–87) was overshadowed during his reign (986–87) by Hugh CAPE, Duke of the Franks, who succeeded Louis on the throne. Louis VI, called the Fat (1081–1137), ruled France from 1108 to 1137. With the help of Abbot SUGER of St Denis he increased the power of the Crown over the nobles. Louis VII (c.1120–80) ruled France from 1137 to 1180 and greatly extended his power by marrying Eleanor of Aquitaine. He divorced her, however, and she subsequently married HENRY II of England, who thereupon gained control of Aquitaine. Louis VIII (1187–1226), King of France from 1223 to 1226, invaded England in 1216 at the invitation of barons opposing King JOHN, but was defeated at sea in 1217. (See also p.1336. Louis IX, or St Louis (1214–70), ruled France from 1226 to 1270; he was canonized in 1297. He recovered from malaria and was prompted to go on the Sixth Crusade (1248–54). He was captured, and it was nine years before he was ransomed. In 1270 he undertook another crusade but died of fever at Tunis. The principal object of his policies was to secure peace among Christian nations. (See also p.1336. Louis X (1289–1316) spent much of his short reign (1314–16) raising money for a proposed campaign in Flanders by selling charters of privileges to the clergy and nobility. (See also p.1336). Louis XI (1423–83) devoted much of his reign (1461–83) to struggles against CHARLES THE BOLD of Burgundy. In 1482 he defeated Charles' daughter, Mary of Burgundy, and the Treaty of Arras gave Burgundy to France. Louis XII (1462–1515) ruled France from 1498 to 1515. He had his first marriage annulled so that he could marry (1499) Anne of Brittany (his predecessor's widow) and thereby keep Brittany a part of France. Louis XIII (1601–43) relied for much of his reign (1610–43) on his adviser, Cardinal de RICHELIEU. Both Louis and Richelieu favoured strong royal authority, opposition to the Spanish and Austrian HAPSBURGs, and strategic alliances with Protestant opponents of the Spanish. See also LOUIS XIV; LOUIS XV; LOUIS XVI; LOUIS XVII; LOUIS XVIII.

Louis XIV (1638–1715), son of Louis XIII and King of France (1643–1715). His personal rule began with the death of the regent, Cardinal MAZARIN, in 1661. For the next 50 years Louis was the most powerful monarch in Europe, presiding over a France at the height of its intellectual, economic and military powers. The great figures of French classicism were patronized by him and the palace at VERSAILLES built for him. There the elaborate courtly ritual of the "Sun King", including the famous *levée*, was acted out. In economics Louis was served by Colbert, who, working on foundations laid by his predecessors, made France the most centralized mercantilist state in Europe.

Louis destroyed the power of the nobility in the provinces: this was the basis of his absolutism. Abroad, he sought to dominate western Europe. Yet in the War of Devolution (1667-68), the third Dutch war (1672-78), (ended by the Treaty of Nijmegen), the War of the League of Augsburg (1688-97) and the War of the Spanish Succession (1702-13) he depleted the French treasury and was limited to minor gains. The rigidity of the system he imposed upon the country led to France's decline in the 18th century. See also pp.1448-1449.

Louis XV (1710-74), grandson of Louis XIV; King of France (1715-74). Under his rule, the French monarchy was fatally weakened. He ran an extravagant court, and his personal weakness left him prey to favourites such as Madame de Pompadour. His wars were expensive and ended in defeat in the Seven Years War and the loss of most of the French Empire. He was unable to reform the outdated tax system or prevent the approach of national insolvency.

Louis XVI (1754-93), grandson of Louis XV; King of France (1774-92). He attempted to restore the power of the French monarchy, but the aristocracy prevented his ministers Turgot and Necker from implementing their economic reforms. He convened the Assembly of Notables in 1787 and, in desperation, the Estates General in 1789; the French Revolution quickly followed. Although Louis outwardly accepted the Revolution, he was suspected of intriguing with foreign powers, was deposed in 1792 and beheaded on 21 Jan. 1793. See also pp.1550-1551.

Louis XVII (1785-95), second son of Louis XVI. He became Dauphin when his elder brother died in 1789. He was imprisoned by the French Republic from 1792 until his death, and never actually reigned.

Louis XVIII (1755-1824), King of France (1814-24). The brother of Louis XVI he fled from the Revolution to England and was recognized by the *émigrés* as King from 1795. He was restored to the throne by the allies in 1814, but was forced to flee again during the Hundred Days. In 1815 he returned after the Battle of Waterloo.

Louis (1729-65), Dauphin of France, the son of Louis XV and father of Louis XVI, Louis XVIII and Charles X, all of whom were later French kings.

Louis, name of four German kings. Louis I the Pious was Holy Roman Emperor. Louis II (c.804-76), called the German (r.843-76), was one of the rebellious sons of Emperor Louis I. Lothair I, brother of Louis II, became joint emperor in 817 and on their father's death Louis and another brother, Charles, forced him to divide the empire in three. He received the lands extending from the Rhine to the eastern frontier of the empire. During the reign of Louis III (893-911), called the Child (r.899-911), the Archbishop of Mainz ruled as regent. Louis the Child was the last of the German Carolingians. Louis IV (c.1283-1347), called the Bavarian, was Duke of Bavaria (1294-1347), King of Germany (1314-47) and Holy Roman Emperor (1328-47). He was denied confirmation of his kingship by the papacy and was excommunicated by John XXII in 1324.

Louis, name of two kings of Hungary. Louis I (1326-82; r.1342-82) and King of Poland (1370-82), called "the Great". He encouraged commerce and science, and controlled the Adriatic Sea coast making Hungary one of the mightiest Balkan states. Louis II (1506-26; r.1516-26), son and successor to Ladislas II. He died at the Battle of Mohács.

Louis, name of two kings of Italy. For Louis I see Louis I, the Pious. Louis II (c.822-75), Emperor of the West (r.855-75), King of Lorraine (r.872-875) succeeded his father, Emperor Lothair I. He enlarged his possessions considerably at the expense of his two brothers, Lothair II and Charles of Provence.

Louis, (1682-1712), Dauphin of France, grandson of Louis XIV, father of Louis XV. Louis XIV outlived his son and grandson; the Crown therefore passed to Louis

XIV's only surviving direct descendant, the third son of the Duc de Bourgogne, who became Louis XV.

Louis II, de Bourbon, Prince de Condé (1621-1686), French nobleman and general. He was a leader of the Fronde revolt (1651-52) and defected to Spain but was later restored to his French rights and titles.

Louis, Joe (1914-), US boxer, real name Joseph Louis Barrow. He won the world heavyweight title from James J. Braddock in Chicago in 1937 and retired undefeated in 1949. He returned to the ring and lost to Ezzard Charles in 1950. Louis held the title longer than any other heavyweight. He served in the US Army (1942-45) and was elected to the Boxing Hall of Fame in 1954.

Louis, Morris (1912-62), US painter, linked with Abstract Expressionism. He was noted for a technique of staining his canvases in stripes of soft but brilliant colour to produce a highly lyrical effect, as in *Iris* (1954). See also pp.1762-1763.

Louisburg, Fort, Battle of (1748), capture of the French fortress in Acadia by the British in the Seven Years War. The British army was led by Wolfe and Amherst. The British thus gained control of the sea-route to the St Lawrence River, a decisive step towards the eventual conquest of French Canada.

Louisiana, state in central southern USA, on the Gulf of Mexico. The state is made up of the Gulf coastal plain and the alluvial plain of the Mississippi River. Other major waterways are the Red and Ouachita rivers. Inland there are low rolling hills and prairie country. The rich alluvial soils make Louisiana the leading producer of sweet potatoes, rice and sugar cane. Other farm produce includes soya beans, cotton, cattle and dairy produce. Major industries include fishing, oil refining, petrochemicals, metal foundries, paper and tourism. The chief cities are Baton Rouge (the state capital), New Orleans (the largest city and the second busiest port in the USA), Shreveport, Lake Charles and Lafayette. The area was first settled by the French in the late 17th century.

France sold it to the USA in the Louisiana Purchase of 1803. The Territory of Orleans was established the following year. It was admitted to the Union as Louisiana in 1812. The state joined the Confederacy in 1861. Union troops took New Orleans in 1862 and controlled the Mississippi a year later. The American Civil War wrecked the state economy and reconstruction proceeded more slowly than elsewhere in the south. Area: 125,674sq km (48,523sq miles). Pop. (1977 est.) 3,928,000. See also pp.1626, 2161.

Louisiana Purchase (1803), purchase of French territory in the New World by the USA. The 2,136,000sq km (825,000sq miles) of territory, from the Mississippi River to the Rocky Mts was bought for \$15 million. See also pp.1626, 1627.

Louis Napoleon. See Napoleon III.

Louis of Nassau (1538-74), Count of Nassau-Dietz, Dutch leader. He was the brother of William the Silent and led the revolt against Spanish rule. When the Duke of Alva arrived in 1567, Louis and William left The Netherlands to raise a fighting force, returning in 1568. Louis was killed at Mook, after being defeated in several battles with the Spaniards.

Louis Philippe (1773-1850), King of France (1830-48). The revolution that brought him to power (1830) was a bourgeois reaction to the reactionary rule of the Bourbons, Louis XVIII and Charles X. For much of his reign he was a liberal, supporting constitutional restraint on the monarchy and becoming known as the "Citizen King" but, satisfying neither the legitimists (who supported the senior Bourbon line), nor the Bonapartists and elements of the left, he fell from power in the February revolution of 1848, following which a republic was proclaimed. See also p.1586.

Louis XIV style, name for the classical style in the visual arts in France prevailing in the age of Louis XIV (r.1643-1715). In painting the most influential style was that

of Poussin, famous for landscapes done in a classical manner. The Académie Royale de Peinture (1648) set down rules which gave to two generations of French painting a strict classical mould. In furniture the national style spread from the productions of the Gobelins firm, who specialized in the ornate use of gilding and inlay. In architecture the two chief monuments were the Louvre and the king's palace at Versailles, both massive buildings of formal, symmetrical grandeur. See also pp.1442-1443.

Louis XV style, high period of French rococo style in furniture and interior design. Rooms had walls set with mirrors in panels, replacing the large painted canvases and murals of the previous century. Decorative motifs included garlands and clusters of flowers and shells, often decorated with gold and silver. Furniture became twisted and ornate. Frequently, Chinese motifs were used.

Louis XVI style, final period of the French rococo style, lasting from about 1760 to the Revolution. A reaction against the ornate Louis XV style, it emphasized the antique Classical style. In furniture and interior design, straight lines replaced curved ones. The favourite colour scheme was white and gold. In architecture, the return to Classicism was marked by a preference for Doric columns.

Lourdes, town in Hautes-Pyrénées département in sw France; in contemporary times it has become a centre of religious pilgrimage. In 1858, a 14-year-old girl, Bernadette Soubirous, had numerous visions of the Blessed Virgin Mary in the nearby grotto of Massabielle, where there is an underground spring. In 1862 the Roman Catholic Church declared the visions to be authentic, authorizing the cult of Our Lady of Lourdes. The waters of the spring, believed to have healing powers, are the focus of the pilgrimages. In 1958 an immense underground church was built with seating for 20,000.

Laurence Marques. See Maputo.

Louse, common name for various small, wingless insects, parasitic on birds and mammals. There are two main groups, classified in different sub-orders of Phthiraptera. The chewing lice (Mallophaga) feed mainly on the feathers of birds. The biting or sucking lice (Anoplura) feed only on the blood of mammals. Both kinds of lice are small, pale and flattened, with leathery or hairy skins. See also pp.37, 41.

Lousonczai, Pál. See Losonczai, Pál.

Louth, county in the NE Republic of Ireland in Leinster province, bordered on the E by the Irish Sea. It is a low-lying region except in the hilly NW and the mountainous N. The county is drained by the rivers Fane, Dee and Castletown. Industry is more important than agriculture, the main products being textiles and processed food. Area: 821sq km (317sq miles). Pop. (1971) 74,899.

Loutherbourg, Jacques Philippe de. See de Loutherbourg, Jacques Philippe.

Louvain, or Leuven, city in central Belgium. It was founded by the 9th century, and was an important cloth centre of the Middle Ages until 1383 when many of its weavers emigrated. The university was founded in 1425. Pop. (1971 est.) 32,200.

Louvre, French art museum in Paris. France's enormous national collection contains art from most ages and countries and is housed in the Louvre Palace, which was built as a 16th-century chateau for Francis I. The earliest parts of the building were commissioned from Pierre Lescot in 1546 and were built on the site of the original Louvre, a 13th-century fortress palace. Under Louis XIV, several important art collections, especially Italian works, were acquired. In the present collection there are about 6,000 paintings and 100,000 drawings.

Lovage, stout-branched herb native to S Europe. The stalk, foliage and seeds may be used as a flavouring. The leaves may be infused to make a kind of tea. Family Umbelliferae; species *Levisticum officinale*.

Lovat, Simon Fraser, 11th Baron (c.1667-1747), Scottish nobleman, the

last peer to be executed for high treason. After being involved in Jacobite intrigues in France he returned to Scotland, where he raised his clan to support George I in 1715. In 1745, however, he supported the Jacobites, and was executed in 1747.

Lovebird, any of nine species of small parrots that live mainly in Africa and Madagascar. Both sexes are brightly coloured and are often kept as cage birds. The largest species is the rosy-faced lovebird (*Agapornis roseicollis*) of South Africa.

Love for Love (1695), Restoration comedy by William Congreve which was produced by and starred Thomas Betterton as Valentine. It established Congreve's reputation as the leading dramatist of his day.

Love-in-a-mist, popular annual garden plant native to S Europe. A member of the Buttercup family, it has divided leaves and solitary bluish flowers. Its numerous black seeds have been used medicinally. Species *Nigella damascena*.

Love in a Cold Climate, novel by the British author Nancy Mitford, published in 1949. It is a satire on the English upper classes. It owes much, on the author's own testimony, to her own childhood experience.

Lovelace, Richard (1618-57), English Cavalier poet. An ardent royalist, he was imprisoned in 1642 and again in 1648. He is remembered principally for two extremely graceful and melodic lyrics, *To Althea, from Prison* and *To Lucasta, Going to the Wars*. He also wrote a tragedy, *The Soldier*, which is now lost. See also pp.1416-1417.

Loveless, George, (1797-1874), British worker and leader of the Tolpuddle Martyrs. In 1834 Loveless and five comrades of Tolpuddle, Dorset formed a trade union to improve the pay and conditions of farm workers. They were arrested, tried and sentenced to transportation. The anger and militancy of the working class forced the reactionary Whig government to pardon and release them in 1863. Loveless later emigrated to Canada.

Love-lies-bleeding, popular name for a species of ornamental garden plant of the Amaranth family. It bears attractive, long, drooping clusters of densely packed, small, crimson flowers. Species *Amaranthus caudatus*.

Lovell, Sir Alfred Charles Bernard (1913-), British astronomer. His research in radar during WWII earned him the OBE in 1946. In 1951 he became professor of radio astronomy at the University of Manchester. There he established the Jodrell Bank Experimental Station, which in 1957 was equipped with what was for several years the world's largest steerable radio telescope. His books include *Radio Astronomy* (1952), *The Story of Jodrell Bank* (1968) and *In the Centre of Immensities* (1978). See also p.922.

Lovell, James Arthur, Jr (1928-), US astronaut. His first space flight was in Gemini 7, (1965), which made the first successful space rendezvous (with Gemini 6). He was a member of the crew of Apollo 8 (1968), the first manned mission around the Moon, and commander of the unsuccessful Apollo 13 mission (1970). See also pp.1026, 1026.

Love on the Dole (1933), the first and best-known novel of Walter Greenwood. Based on the author's experiences, it portrays the life of the unemployed during the Great Depression in an industrial town in N England. In 1941 the novel was filmed.

Lover, Samuel (1797-1868), Irish writer who started as a miniature portrait painter in Dublin. In 1835 he took London society by storm by singing his own compositions. He is remembered for his humorous novel *Rory O'More* (1836), which developed from his songs of that title (1826).

Love's Labour's Lost (c.1595), five-act comedy by William Shakespeare, one of his earliest works. Set at the court of Ferdinand, King of Navarre, it satirizes literary affectations and is one of Shakespeare's most complex comedies, much of the wit relying on contemporary allusion.

Lovett, William (1800-77), British CHAR

Low, or depression

David Low was a master of caricature, as in his well-remembered "Colonel Blimp".

L. S. Lowry is best known for his stark portrayal of life in industrial towns.

Heinrich Lübke was for ten years President of the Federal Republic of Germany.

Lucia di Lammermoor, by Donizetti; part of the 1863 stage design is shown here.

tist leader. A disciple of Robert OWEN, he was one of the early founders of co-operative shops, main drafter of the People's Charter and a persistent advocate of popular education as the means to improve the life of the workers. In 1839 he was sentenced to a year's imprisonment for the publication of a seditious manifesto in Birmingham.

Low, or depression, in meteorology, area of low pressure. In the Northern Hemisphere, depressions are atmospheric circulations that spiral inwards in an anti-clockwise direction; they rotate inwards clockwise in the Southern Hemisphere. See also HIGH, pp.248-253.

Low, Sir David Alexander Cecil (1891-1963), New Zealand political cartoonist and caricaturist, who began work in England for the *Daily News* in 1919, and joined the *Evening Standard* in 1927. His cartoons were at their best before and during WWII, dealing with political issues such as Fascism and oppression. After leaving the *Evening Standard* in 1950, he worked for a short time for the *Daily Herald* before joining the staff of the *Manchester Guardian* (1953).

Low Church, party in the Church of England, arising in the 18th century, which in general put the teachings of Scripture before Church organization, and personal devotion before priestly mediation. Wesleyanism, in the 18th century, and EVANGELICALISM, in the 19th, waxed strong in the Low Church.

Low Countries, area of NW Europe made up of The Netherlands, Belgium and the Grand Duchy of Luxembourg. It is a political rather than a geographical label (only N Netherlands and N Belgium are low-lying). In medieval times, as today, the region was one of the most prosperous in Europe. See also pp.1987,2092,2102.

Lowell, Amy (1874-1925), US poet and critic. She originated POLYPHONIC PROSE and joined the IMAGIST movement. Her ability to recreate physical perception in her poems was probably her outstanding quality. Her works include *Men, Women, and Ghosts* (1916) and *What's O'Clock?* (1925) for which she received a Pulitzer Prize (1926).

Lowell, James Russell (1819-91), US poet, author and editor who became involved in the abolitionist movement. He gained acclaim for *Poems* (1844), *A Fable for Critics* (1848), the first series of *Biglow Papers* (1848) and *The Vision of Sir Launfal* (1848). He was the first editor of *Atlantic Monthly* (1857-61).

Lowell, Percival (1855-1916), US astronomer and traveller, famous for his prediction of the existence of the planet Pluto and his initiation of the search that ended in its discovery 14 years after his death. His works include *Occult Japan* (1895), *Mars and Its Canals* (1906) and *The Genesis of the Planets* (1916).

Lowell, Robert (1917-77), US poet. His work includes *Land of Unlikeness* (1944), *Lord Weary's Castle* (1946; Pulitzer Prize, 1947), *The Mills of the Kavanaughs* (1951), *For the Union Dead* (1964) and *Notebook 1967-68* (1969). *Life Studies* (1959) won a National Book Award.

Lower Canada, name for the French part of British North America from the Constitutional Act of 1791 until the union with UPPER CANADA (Ontario) in 1840. It entered the Confederation of Canada in 1867 as the province of Quebec.

Lower Hutt, urban area adjacent to the city of Wellington, in s North Island, New Zealand, at the mouth of the River Hutt. It has several scientific research centres. Industries: motor vehicle assembly, railway repair. Pop. (1971) 122,000.

Lowestoft, Battle of (1665), naval battle of the 2nd Anglo-Dutch War, in the North Sea off Lowestoft. The English fleet of 150 ships, under the Duke of York (later JAMES II) defeated the Dutch fleet of about the same size, sinking the Dutch flagship and killing its commander, Admiral Opdam.

Lowry, Lawrence Stanley (1887-1976), British painter best known for the highly personal way in which he portrayed, almost primitively, industrial landscapes of Salford (Manchester), with naively

drawn buildings, factories and crowds of dark simple figures. Although his early work received some attention, his first one-man exhibition in London was not until 1939. He was regarded as an eccentric of 20th-century painting, although his work recalls the complex crowd scenes of Peter BRUEGEL.

Loyola, Saint Ignatius of. See IGNATIUS OF LOYOLA, SAINT.

LPG. See LIQUEFIED PETROLEUM GAS.

LSD (lysergic acid diethylamide), drug known for the changes in mental state that it produces. Effects include sensory anomalies (in which forms fuse and colours intensify), produced by the drug blocking the action of SEROTONIN in the brain. See also pp.1080-1081.

Luanda (São Paulo de), capital and seaport city in NW Angola on the Baja da Bengo. Founded in 1576, its economy was based on a slave trade with the New World, until the abolition of slavery in the 19th century. Industries: metal working, building materials and oil products. Pop. (1970) 475,328.

Luang Prabang, port in N Laos, on the River Mekong; capital of Luang Prabang province. The city is the royal capital of Laos, and a distribution centre for teak, fish, rubber and rice. Pop. (1975 est.) 25,000.

Lübeck, seaport city in NE West Germany, on the River Trave near its mouth on the Baltic Sea. Lübeck possesses some of the best examples of Gothic architecture in N Europe which have been restored since heavy bombing in WWII. Industries include steel foundries, shipbuilding and textiles. Pop. (1980) 220,600.

Lubitsch, Ernst (1892-1947), US film director, b. Germany. He became Paramount Studios' foremost film-maker in the 1920s and 1930s and is noted for his sophisticated satires such as *Forbidden Paradise* (1924), *Design for Living* (1933), *Bluebeard's Eighth Wife* (1938) and *Cluny Brown* (1946).

Lübke, Heinrich (1894-1972), German political figure. He was Minister of Food and Agriculture in the post-WWII cabinet of Konrad ADENAUER. He became the first President of West Germany in 1959 and served until 1969, when he was succeeded by Gustav Heinemann.

Lublin, city in SE Poland, approx. 152km (95 miles) SE of Warsaw. The city was founded in the early 11th century. It later developed as a trade centre along the SE route to the Ukraine. Today it is a transport and industrial centre, producing heavy machinery, textiles and electrical goods. Pop. (1974 est.) 259,000.

Lubricant, oil, grease, graphite or other substances introduced between moving parts to reduce friction and dissipate heat. Most lubricants are now derived from petroleum. Solid lubricants are usually graphite or molybdenum disulphide; synthetic silicones are used where high temperatures are involved. See also p.460.

Lubumbashi, city in SE Zaire, near the Zambia border, formerly known as Elisabethville. The second largest city in Zaire, it was the capital of the independent state of Katanga (now the region of Shaba) 1960-63, and the scene of bitter fighting between UN and Shaban troops. Industries: copper smelting, textiles and food products. Pop. (1970) 357,369.

Lucan (Marcus Annaeus Lucanus) (AD 39-65), Roman poet. A nephew of the younger Seneca, he was born in Spain. His *Bellum Civile* or *Pharsalia* is an epic admired more for its rhetoric than its poetry. He killed himself after implication in a plot against NERO.

Lucas, Edward Verrall (1868-1938), British writer who was a frequent contributor to the satirical magazine *Punch* of which he became assistant editor. Lucas published over 100 books including *Over Bemerton's* (1908) and in *Adventures and Misgivings* (1938).

Lucas van Leyden (c.1494-1533), real name Lucas Hugenst, Dutch painter and celebrated engraver. His engravings, which are regarded as second only to those of DÜRER (whom he met in 1521 and who may have influenced his technique),

include *Ecco Homo* and *Dance of the Magdalene* (1519). Among his paintings are *Moses Sinking Water from the Rock* (1527), *Chess Players* (c.1508) and *Last Judgement* (1526).

Lucayan, prehistoric tribe of American Indians who originally peopled the Bahamas. An Arawak Taino-speaking group with a simple culture, numbering at most 40,000, they were exterminated by the Spanish before 1600.

Luce, Clare Boothe (1903-), US author. She wrote the plays *The Women* (1936) and *Kiss the Boys Goodbye* (1938), and the novel *Stuffed Shirts* (1931). She served as a Republican in the House of Representatives (1943-47) and was Ambassador to Italy (1953-56). She resigned after her appointment as Ambassador to Brazil in 1959. See also p.1752.

Luce, Henry Robinson (1898-1967), US publisher, b. China. In 1923, he founded *Time* with Briton Hadden and later founded other magazines including *Fortune* (1930), *Life* (1936) and *Sports Illustrated* (1954). He was considered an important influence on US politics.

Lucerne, or alfalfa, leguminous, perennial plant with spiral pods and purple, clover-like flowers. Like other legumes, it has the ability to enrich the soil with nitrogen from the air, and for this reason it is often grown by farmers and then ploughed in. It is also a valuable fodder plant. Height: 0.5-1.2m (1.5-4ft). Species *Medicago sativa*. See also LEGUMINOSAE.

Lucerne (Luzern), city in central Switzerland, 40km (25 miles) ssw of Zurich on the Lake of Lucerne. It joined the Swiss Confederation in 1332, gained its freedom in 1386 and became the capital of the Helvetic Republic in 1803. Lucerne is an important Swiss summer resort and also has a variety of industries, including metal goods, chemicals, printing and the manufacture of textiles. Pop. (1979) 157,800.

Lucerne Festival, annual summer music festival held in Lucerne, Switzerland. It was established in 1938 by Adolf BUSCH.

Lu Chih (1495-1576), Chinese landscape and flower painter of the MING period. The delicate and poetic style of *Autumn Colours at Hsün-yang* (1554) is typical of his landscapes.

Lucia di Lammermoor, opera by DONIZETTI, with libretto by Salvatore Cammarano. It was first produced in 1835 at Naples and enjoyed immediate acclaim. Donizetti based it on Sir Walter SCOTT's novel, *THE BRIDE OF LAMMERMOOR*.

Lucian (c. AD 115-80), Greek satirist. He made use of the satiric dialogue in some 80 works. His writing was witty, and drew attention to the foibles of contemporary life and manners. Religion and philosophy were among Lucian's favourite subjects.

Lucian of Antioch, Saint (c.240-312), theologian and martyr. He founded a school in Antioch for the study of the scriptures and used his knowledge of Hebrew and Greek to promote a fuller understanding of the Bible. He also produced corrected texts of the GOSPELS. He was imprisoned at Nicomedia for nine years by the Emperor DIOCLETIAN and was either starved to death or put to the sword. Feast day: 7 Jan.

Lucifer, fallen angel who, because of his revolt against God, was cast out of HEAVEN with his minions, to become the Devil, known in Christianity as Satan, Lucifer or the Prince of Devils. His revolt was prompted by pride and in punishment God sent Lucifer to rule over HELL. In *Paradise Lost* John MILTON describes the revolt and portrays Lucifer's pride.

Luciferin, proteins, found in animal tissue, that produce light when oxidized in the presence of the enzyme luciferase. It is found in the light-generating organs of glow-worms and fire-flies.

Lucilius, Gaius (c.180-102 BC), earliest Latin satirist. He knew Scipio well and his works were formed into a posthumous collection in an edition comprising 30 books, but only fragments survive. See also SATIRE.

Lucite, trade name for a clear, hard plastic which is also called perspex and Plexiglass. It is made from an acrylic resin that con-

sists of polymerized methyl methacrylate, and is used for making costume jewellery, lenses, dentures, aquariums, containers and novelties. See also pp.588-589.

Lucius, name of three popes. Lucius I was pope 253-54. Lucius II succeeded to the papacy in 1144 and died the following year. Lucius III (r.1181-85) was born as Ubaldo Allucingoli. He refused to crown the son of the Holy Roman Emperor, and issued strong edicts against heresy.

Lucknow, city in N India, on the River Gomati; capital of Uttar Pradesh state. It was the capital of the kingdom of Oudh (1775-1856), then of Oudh province (1856-77) and of the United Provinces (1887). During the INDIAN MUTINY the British were forced to abandon their fortress and leave the city. It was retaken in 1858. Lucknow was a centre of the MUSLIM LEAGUE in its campaign for Pakistani independence (1942-47). Its industries include papermaking, metalworking, distilling and printing. Pop. (1971) 749,239.

Lucky Jim (1954), first and best-known novel by Kingsley AMIS. A farcical satire on English academic life, it tells how a young lecturer, Jim Dixon, rebels against the snobbish hypocrisy in his provincial university.

Lucretia, in Roman legend, the beautiful and pure wife of Lucius Tarquinius Collatinus. After being raped by Sextus Tarquinius, the son of the Etruscan king of Rome, she demanded that her father and husband should avenge her and then stabbed herself to death. Lucius Junius Brutus then led the populace in a rebellion that drove the Tarquins from Rome and the Roman Republic was established.

Lucretius (Titus Lucretius Carus) (c.95-55 BC), Latin poet and philosopher. Jerome states that Lucretius was driven mad by a potion and that he killed himself, but this is unverifiable. His poem *De rerum natura* (*On the Nature of Things*) concerns the atomic theory of EPICURUS. See also pp.1466.

Lucullus, Lucius Licinius (c.117-c.56 BC), Roman commander who became consul in 74 BC. He gained control of the Roman lands in Asia, where he fought and defeated Mithradates (74-70 BC) and took the capital of Armenia in 69 BC. His economic reforms in the territories in his charge harmed the interests of others and POMPEY replaced him in 66 BC.

Luddites, textile workers in England who in the early 19th century destroyed power looms and knitting-frames, which they believed to be the cause of unemployment in the cotton and woollen industries. They were named after a mythical "King Ludd", who signed public letters denouncing the new machines. The chief riots, starting in Nottinghamshire and spreading to Cheshire, Lancashire and Yorkshire, took place in 1811-12. See also p.1570.

Ludendorff, Erich (1865-1937), German general. Under von MOLTKE, he played a major part in revising the SCHLIEFFEN PLAN before WWI and in Aug. 1914, as HINDENBURG's chief of staff, he masterminded the victory over the Russians at Tannenberg. In Aug. 1916 he and Hindenburg were given supreme control of Germany's war effort. After WWI Ludendorff became a member of the Nazi Party.

Lüderitz, Franz Adolf (1834-86), German trader and colonist in Africa. He helped form the colony, Germany's first, of South West Africa (now Namibia) from land he bought from the Khoikhoi people. **Ludlow, Edmund** (c.1617-92), English parliamentarian and republican. He became an MP in 1646. He was one of the judges at the trial of CHARLES I and signed the king's death warrant. He was a member of the Council of State (1649-50). In 1653 he refused to recognize CROMWELL as Protector and retired to Essex. He was impeached in 1660, but fled to Switzerland.

Ludlow, Roger (1590-c.1664), English colonist in America. He helped found Dorchester, Massachusetts, and became deputy Governor of Massachusetts in 1634. He presided over the first Connecticut court at Windsor in 1636 and evolved the state's first codified laws, known as

Ludlow's Code. He returned to England in 1654.

Ludwig (Louis), name of three kings of Bavaria. The Wittelsbach family, of which they were a junior branch, had a history of insanity, which affected the reigns of all three kings. Ludwig I (r.1825-48) had a long love affair with the dancer Lola Montez, who was one of the main causes of revolt in 1848. Ludwig II (r.1864-86) spent his time building extravagant castles; his neglect of affairs of state was one of the reasons for Bavaria's political decline. In 1871 it was absorbed into the German Empire, its monarch losing all but the trappings of power. Ludwig III (r.1913-18) became regent in 1912 during the crisis caused by the madness of his cousin Otto, before succeeding to the throne himself. He was forced to abdicate in 1918.

Ludwig, Emil (1881-1948), German writer. He began as a playwright and poet, but devoted most of his life to writing biographies the first of which, on Goethe, was published in 1920. His subjects included Napoleon, Bismarck, Christ, Lincoln, Roosevelt, Cleopatra and Beethoven.

Ludwig, Karl Friedrich Wilhelm (1816-95), German physiologist who studied the cardiovascular system and invented the kymograph (1847) which records changes in arterial blood pressure. He also invented a device to measure arterial and venous blood flow, and investigated the functions of oxygen in the blood.

Luff, leading edge of a sail in a fore-and-aft rig. The word is also used when a vessel "comes about", ie "luffs", into the wind while traversing from one tack to another, to bring the wind on the alternate quarter while sailing in restricted waters.

Luftwaffe, air force of Nazi Germany (1933-45). In 1935 HITLER made public the existence of 1,888 planes and 20,000 trained personnel under Hermann GOERING, a force which had been secretly built up since the 1920s. The Luftwaffe had air superiority early in WWII, but could not counteract the larger allied air forces after 1942.

Lugano, Lake, narrow and irregularly-shaped lake, 50sq km (19sq miles) in area lying between Italy and Switzerland. The resort town of Lugano is on its N shore.

Lugones, Leopoldo (1874-1938), Argentine poet and prose writer. Among his best-known books of verse are *El libro de paisajes* (1917) and *Poemas solariegos* (1927). He also wrote short stories and scholarly historical and linguistic works.

Lugosi, Bela (1884-1956), US film actor who was famous for his role as Bram STOKER's vampire, Count DRACULA, in the classic horror film *Dracula* (1931). His performance and the mood of the film set a style for many later works in the genre. Appearing in such films as *The Black Cat* (1934) and *The Wolf Man* (1941), he became typecast as a solely macabre character and gradually lost favour.

Lugus, in Celtic mythology, a powerful god identified by Julius CAESAR as the equivalent of MERCURY. His name meant "light" and he appeared in both Welsh and Irish legends. The sole survivor of divine triplets, all called Lugus, he had the strength of three gods and was revered as the ideal leader, wise, gifted in poetry and formidable in war.

Lugworm, marine worm that lives in the sand of the sea-bed. It burrows, with the aid of bristles along its middle portion, a U-shaped tunnel in sand or mud, from which it rarely emerges. Lugworms feed by ingesting sand, extracting nutrients and ejecting the sand in coiled mounds at the end of their burrows. Length: up to 30cm (12in). Genus *Arenicola*. See also pp.18, 334.

Lu Hsiang-shan (1139-93), also known as Lu Chiu-Yüan, founder of the Neo-Confucian School of Mind. He insisted that the purpose of study was to clear the mind of things that blind it and allow the mind to return to its original purity. Lu's work served as a divergence from the School of Principle to the School of Mind, and was later elaborated upon by WANG YANG-MING.

Lu Hsün (1881-1936), Chinese writer,

real name Chou Shujen. He wrote during the period of literary modernizing before the Communists came to power and is best known for his charming short stories and his essays which urged a rapid modernizing of Chinese culture and politics.

Luik. See LIEGE.

Luini, Bernardino (c.1485-1532), Italian painter who was best known for his religious and mythological frescoes, in a popular sentimental style adapted from LEONARDO DA VINCI. His earliest surviving work is the fresco *Madonna and child* (1512), in the Cistercian monastery in Chiaravalle, near Milan.

Lukaes, György (1885-1971), Hungarian literary critic and philosopher. He joined the Communist Party in 1918, and was exiled after the abortive 1919 revolution. He took up political journalism and teaching in Vienna and Moscow. He returned to Budapest in 1945. His writings include *History and Class Consciousness* (1923), on the role of creativity in the class struggle, and *The Historical Novel* (1955).

Luke, Saint, traditionally the author of the gospel that bears his name and of the ACTS OF THE APOSTLES in the New Testament. Luke, a physician and a companion of the apostle PAUL, wrote about the life of Jesus from a gentile Hellenistic Christian viewpoint. His gospel stresses the human and divine natures of Jesus and the concept of Christianity as a universal brotherhood.

Luke, Saint, the Gospel according to, third book of the New Testament, written in Hellenistic style in the 1st century AD and traditionally attributed to Luke, the friend of St PAUL. One of its sources is the Gospel according to St MARK, but it is unique in its account of the birth and boyhood of Christ.

Luks, George Benjamin (1867-1933), US painter, a member of the EIGHT, best known for his paintings of New York City's East Side. They include *The Spiekers* (1905) and *The Wrestlers* (1905). A staff artist on the Philadelphia Bulletin, he also continued the comic strip *The Yellow Kid* (1895) begun by Outcault in the New York World. It was the first major successful comic strip.

Lull, Raimon (1235-1315), also known as Lully, Raymond, Catalan scholastic philosopher (in Catalan, Ramon Llull), known throughout Europe as the "Doctor Illuminatus", whose youthful exuberance was dramatically transformed into a life devoted to converting Muslims to Christianity. His most notable theological work, the *Ars Magna*, was the basis of his arguments against ISLAM. He wrote many mystical and scientific works, and his fame was such that numerous alchemical treatises are also, probably falsely, attributed to him.

Lully, Jean-Baptiste (1632-87), French composer, b. Italy; an early influence on the development of French opera. He joined the court musicians to LOUIS XIV in 1652 and soon acquired the king's favour. After a series of comedy-ballets (1658-64) came *Cadmus and Hermione* (1673), which has been termed the first French lyrical tragedy. He replaced the Italian *recitativo secco* with accompanied recitative and developed a style of declamation more suited to the French language. Other operas include *Alceste* (1674), *Proserpine* (1680) and *Acis et Galatée* (1686).

Luluabour. See KANAGA.

Lumbago, fibromuscular pain of the lower (lumbar) region of the back. Although widely complained of, particularly by older patients, and prescribed for by doctors, it remains an ill-defined condition which seems to have any one of a number of dissimilar causes, including strain, injury, slipped disc or gout. Other causes may be chronic constipation or displacement of internal organs. See also RHEUMATISM; p.1070.

Lumberjack, man who earns his living cutting trees and preparing and transporting logs for a sawmill or pulp mill. In the early days of logging in North America, lumberjacks lived for most of the year in remote logging camps.

Lumen, unit in the SI UNIT system, defined as the amount of light emitted per second in a unit SOLID ANGLE (one steradian) from

Lake Lugano in Italy, showing the Ponte Di Melide and Monte S Salvatore.

Bernardino Luini, about whose life little is known, painted this Christ on the Cross.

Jean-Baptiste Lully introduced lively dance and ballet music to the court of Louis XIV.

Lumberjacks in Nova Scotia photographed in the days before the use of chain saws.

Lumet, Sidney

Lüneburg Heath is a region of Saxony in Germany between the Elbe and Aller rivers.

Lungfish: *Protopterus*, a type which breathes only air, is mainly found in Africa.

Lupin seeds were eaten in ancient Egypt, where many varieties were grown.

Lusitania's sinking contributed to the USA's decision to enter WW1.

a source of unit intensity (one candela). **Lumet, Sidney** (1924–), us film director trained in television and especially noted for the fine acting he achieved with his casts in films such as *Twelve Angry Men* (1957), *The Pawnbroker* (1965), *The Group* (1966), *Serpico* (1973), *Murder on the Orient Express* (1974), *Network* (1976) and *Equus* (1977) in which Richard BURTON gave a strong performance.

Lumière, name of two brothers, Auguste (1862–1954) and Louis (1864–1948), who were pioneers of cinematography. They invented an early motion-picture camera and a projector called the Cinématographe (1894); the modern word "cinema" is derived from this name. Their film *Lunch Break at the Lumière Factory* (1895) is generally regarded as the first motion picture. Most of their films, of which there were so many, were largely about everyday French life. By 1895 they had made improvements in colour photography.

Luminescence. See PHOSPHORESCENCE.

Luminosity, astronomical ratio of a star's brightness to that of the Sun. It is a measure of a star's intrinsic brightness and is related to the absolute magnitude of the star. $Luminosity = 2.512^{4.8-M}$, where 2.512 is the brightness ratio for a difference of one magnitude, 4.8 is the Sun's absolute magnitude and M is the star's.

Lumpenproletariat, term coined by MARX for the lowest strata of the working class including the chronically unemployed, tramps etc. Because of their weak economic position, Marx saw them as a potentially reactionary rather than a revolutionary force. See also PROLETARIAT. **Lumpsucker, or lumpfish**, marine fish of the North Atlantic coasts, the pectoral fins of which join to form a strong, concave sucker, with which it attaches itself to rocks. Length: up to 61cm (2ft); weight 6kg (13lb). After the female spawns, the male takes over the job of guarding the eggs. Family Cyclopteridae.

Lumumba, Patrice Hemery (1925–61), Congolese statesman. He founded and led the Congolese National Movement and helped to form an independent Republic of the Congo (now ZAIRE) in 1960. He served as Minister of Defence and Prime Minister and was arrested during a power struggle with President Kasavubu and Colonel Mobutu. His execution, at their orders, led to international protest.

Luna, Pedro de (c. 1328–c. 1423), antipope as BENEDICT XIII at Avignon (r. 1394–1417). He was created cardinal by GREGORY XI in 1375, and supported the antipope CLEMENT VII. He was elected antipope upon Clement's death because he promised to end the schism with Rome; once elected, however, he refused to abdicate. He was deposed by the 1409 Council of Pisa and the 1417 Council of Constance.

Lunarcharskiy, Anatoly Vasilievich (1875–1933), Soviet politician, playwright and literary critic. He was an early member of the BOLSHEVIKS, and as Commissar for Education (1917–29), he established a system of progressive education.

Lunardi, Vincenzo (1759–1806), Italian balloonist. For much of his adult life he lived in London as the secretary to the Neapolitan ambassador. He made the first balloon flight in Britain in 1784 from Chelsea.

Lunar eclipse. See ECLIPSE.

Lunar module, part of the Saturn rocket-launched spacecraft, devised by NASA in the USA, and used in the APOLLO PROGRAMME that detached itself from the command/service module when in lunar orbit and landed, with its passengers, on the Moon's surface. This happened for the first time on 21 July 1969. The upper (ascent stage) of the lunar module later took off from the Moon using its thrust jet (with the descent stage acting as launch pad) and rejoined the command/service module. See also pp. 1024–1025.

Lunar probe, unmanned, rocket-launched space vehicle aimed at either reaching the Moon's surface or going into orbit around it. The first were launched by the USSR (1959) and USA (1964) and in 1966 both nations landed probes to explore the

Moon's surface. An early Russian probe was the first to send photographs back to the Earth of the dark side of the Moon.

Lunar roving vehicle (Lunar Rover), or Moon Buggy, an electrically-powered four-wheeled passenger vehicle first used by the astronauts in the APOLLO PROGRAMME in Aug. 1971, and subsequently in April and Dec. 1972, to explore local regions of the Moon and carry lunar rock samples back to the LUNAR MODULE for passage back to Earth.

Lund, Treaty of (1679), peace treaty signed between Sweden and Denmark. It marked the end of the war led by CHARLES XI of Sweden against the Danes, begun in 1675.

Lundy, island in the Bristol Channel off the coast of Devon, SW England. Settled in prehistoric times, it was a haven for smugglers and pirates from the Middle Ages until the 17th century. It is owned by the National Trust. Area: 5sq km (2sq miles). Pop. (1981) 20.

Lüneburg Heath, site of the official surrender of German field armies during WWII. On 3 May 1945 Field Marshal Keitel sent Admiral Friedeburg, General Kinzel and Rear-Admiral Wagner to Field Marshal Montgomery's headquarters to ask the British for terms of surrender. On 4 May, at 6pm, Keitel himself went to sign the document of unconditional surrender which Montgomery had drawn up.

Lunéville, Treaty of, peace terms between Austria and France, signed Feb. 1801. French predominance in Germany and Italy was confirmed.

Lungfish, elongate fish found in shallow fresh-water and swamps in Africa, South America and Australia. Lungfishes are descended from *Dipterus* which existed 300 million years ago, and resembled the CROSSOPTERYGIANS, from which the first AMPHIBIANS developed. It has primitive lungs, and during a dry season the various species can breathe air or survive total dehydration by burrowing into the mud and enveloping themselves in a mucous cocoon. Order Dipnoi. See also pp. 56, 56, 184, 330, 331.

Lungs, organs of the respiratory system in which the exchange of gases between air and blood takes place. They are located in the rib cage and are covered by a double-layer sheet of tissue called pleura. Between the layers is the fluid-containing pleural cavity that cushions the lungs and prevents friction. The lungs are filled with air sacs, called alveoli, which are one cell thick cavities containing networks of fine capillaries. Oxygen and carbon dioxide enter and leave the lungs via the blood-containing capillaries. See also pp. 158–159.

Lunokhod, name of two Russian scientific lunar surface craft. Luna 17, launched in October 1970, carried Lunokhod 1, which crawled over the surface of the Moon collecting scientific data. Lunokhod 2 was carried by Luna 21, launched in January 1973. See also pp. 930, 930.

Lunts, The, us husband and wife acting partnership. Alfred (1892–1977) married actress Lynn Fontanne (b. London, c. 1882–) in 1922. From 1924 the couple starred together in many plays, gaining a reputation for sophisticated dramas and comedies, such as Noël COWARD's *Design for Living* (1933). Their last stage appearance together was in DURRENMATT's *The Visit* (1960).

Lupercalia, ancient Roman festival, held on 15 Feb. Priests called Luperci organized the festival, which began with the sacrifice of goats and a dog. Its origins are obscure, but its nature as a fertility ritual is clear. It was celebrated until AD 494, when it became, under Pope GELASIVS I, the Feast of the Purification.

Lupescu, Magda (1902–53), mistress of the Romanian King CAROL II. Carol ceded his rights to the throne to his son Michael in 1925 in order to move to Paris with her. When Carol returned to Romania (1930–40), she exerted great influence on government policy. In 1947 she married Carol in exile and became known as Princess Elena.

Lupin, any of several species of annual

and perennial plants of the pea family. They have star-shaped compound leaves and tall showy clusters of flowers. The pods, which contain bean-like seeds, are poisonous but can be treated for use as an animal feed. Height: to 2.4m (8ft). Family Leguminosae. See also p. 681.

Luppis, Giovanni (1814–75), Austrian Navy officer who in 1861 conceived the idea of a self-propelled and self-detonating boat for use as a floating weapon against shipping. Robert WHITEHEAD developed the idea into the torpedo. See also p. 478.

Lupus erythematosus, inflammatory disease of unknown cause involving the skin, or generalized to the connective tissue of the body (systemic form). It produces skin lesions which are red patches covered with scales, often on the cheeks and nose and forming a butterfly pattern. The systemic form varies in severity, is four times more common in women than in men, and may involve one or more organs in addition to the skin. Symptoms depend on the organ involved, but arthritis, weight loss, fatigue, fever and anaemia are common.

Lurcat, Jean (1892–1966), French painter and important tapestry designer, who revived the art of tapestry in France and was associated with the AUBUSSON works. He designed more than 1,000 highly stylized, brightly coloured tapestries.

Luria, Alexander Romanovich (1902–77), Soviet psychologist, important contributor to neuropsychology and the analysis of neurological factors in language disorders. In 1932 he suggested that involuntary finger movements reflect emotional aspects of lying better than does word association.

Luria, Isaac ben Solomon (1534–72), KABBALIST, or Jewish mystic, known as "The Lion". As a young man he chose a secluded, island life in Egypt, and engaged in esoteric studies. He developed his own system of mysticism, and formed an academy among his disciples.

Luria, Salvador Edward (1912–), us biologist, b. Italy. He shared the 1969 Nobel Prize in physiology and medicine with Max DELBRÜCK and Alfred HERSEY for contributing to the knowledge of the growth, reproduction and mutation of bacterial viruses.

Lurie, Alison (1926–), us novelist. Her works explore the social mores of contemporary middle-class America and are particularly noted for their dialogue and strength of characterization. They include *Love and Friendship* (1962), *Imaginary Friends* (1967) *The War Between the Tates* (1974), and *Nowhere City* (1975).

Luristan (Lorestan), governorate in W Iran, in the region of the Zagros Mts. The capital is Khorramabad. It is noted for the Luristan bronzes, metal works found in the 1930s, comprising axes, swords, bridles and ritual objects, dating from the eighth century BC. Sheep are reared in the region today, and it is rich in oil deposits. Area: 31,380sq km (12,116sq miles). Pop. (1971 est.) 929,200.

Lusaka, capital of Zambia, in the s central part of the country at an altitude of 1,280m (4,200ft). Founded by Europeans in 1905, it replaced Livingstone as the capital of Zambia (formerly Northern Rhodesia) in 1935. A road and rail junction, Lusaka is an agricultural trade centre as well as a major financial and commercial city. It has the University of Zambia (1965). Industries: shoe manufacture, cement, food processing, brewing. Pop. (1980 est.) 641,000.

Lushun. See PORT ARTHUR.

Lusitania, Roman province on the Iberian peninsula, comprising modern Portugal and parts of western Spain. It took its name from the Lusitani, a warlike tribe that bitterly fought Roman conquest of their lands. Their great leader was Viriatus, who showed great military and diplomatic talents in opposing the Romans until he was assassinated, probably with Roman collusion, in 139 BC. Traditionally, the Portuguese have looked upon themselves as descendants of the Lusitani.

Lusitania, R.M.S., British liner (32,000 tons) of the Cunard line, torpedoed off

Ireland by the German submarine U20 on 7 May 1915. The ship sank in 45 minutes and 1,198 of the 1,959 passengers and crew perished, including 124 Americans.

Lustreware, pottery finished with a glaze containing silver and copper to make it appear iridescent. It became popular in Islamic countries in the 9th century. It was made in Britain by SPODE and WEDGWOOD in the 19th century.

Lüta (Lüda) autonomous municipality in Liaoning province, NE China, on the Liaotung peninsula; including the two cities of Lüshun (Port Arthur) and Ta-lien (Dairen), the principal commercial port of Manchuria. The city was developed in the late 19th century by the Russians as the terminus of the South Manchurian railway. Industries: shipbuilding, fishing, oil refining, chemicals, rolling-stock and electrical equipment. Pop. (1970 est.) 4,000,000.

Lute, plucked stringed instrument most popular in 16th- and 17th-century Europe. It has an almond-shaped body, fretted neck and originally 11 gut string. It was often played to accompany songs and stylized dances and has been revived in recent years as a concert instrument. Notable composers of lute music include Denys Gaultier (c.1600-72) and John DOWLAND. Julian BREAM is prominent among 20th-century lutenists.

Luteinizing hormone. See LH.
Lutetium, metallic element (symbol Lu) of the LANTHANIDE SERIES, first isolated in 1906 together with YTTERBIUM. Its chief ore is monazite (a phosphate). The element has no commercial uses. Properties: at.no. 71; at.wt. 174.97; s.g. 9.842 (25°C); m.p. 1,656°C (3,013°F); b.p. 3,315°C (5,999°F); most common isotope Lu¹⁷⁵ (97.41%). See also pp.888-889.

Luther, Martin (1483-1546), leader of the German REFORMATION. He studied philosophy at Erfurt University and became an AUGUSTINIAN monk in 1505. Two years later he was ordained and became a teacher of philosophy and theology at Wittenberg University. He was deeply concerned about the problem of salvation, finally deciding that it could not be attained by good works but was a free gift of God's grace. Luther's beliefs made him object to many practices of the medieval Church, particularly the sale of INDULGENCES. In 1517 he affixed his 95 Theses to the door of the Schlosskirche in Wittenberg. This led to a quarrel between Luther and Church leaders, including the pope. Luther decided that the Bible was the true source of authority and renounced obedience to Rome. He maintained his stand in debates with Johann ECK and at the Diet of Worms in 1521. As a result, he was excommunicated, but strong German princes came to his rescue, and he gained followers among churchmen as well as the laity. Luther married a former nun, Katherina von Bora, in 1525. See also LUTHERANISM, pp.1397-1403.

Lutheranism, the doctrines and the Church structure that grew out of the teaching of Martin LUTHER. The principal Lutheran doctrine is that of justification by faith alone (*sola fide*). Luther held that grace cannot be conferred by the Church but is the free gift of God's love. He objected to the Catholic doctrine of TRANSUBSTANTIATION - that, in the EUCHARIST, the substance of the bread and wine are transformed into the body and blood of Christ. Instead, Luther believed in the real presence of Christ "in, with, and under" the bread and wine (CONSUBSTANTIATION). These and other essentials of Lutheran doctrine were set down by Philipp MELANCTHON in 1530 in the AUGSBURG CONFESSION, which has been the basic document of the Lutherans ever since. The Lutheran Church has no central governing body, and Lutheran Churches in each country have developed their own traditions. In 1947 the Lutheran World Federation was formed as a co-ordinating body. See also pp.1402-1403.

Luthuli, Albert John Mvumbi (c.1898-1967), South African civil-rights leader. A Zulu chief and President of the African National Congress between 1952 and 1960, he was often harassed by the

government for his non-violent protests against APARTHEID. In recognition of this, he received the Nobel Peace Prize in 1960. Although forced to live and work in secret that same year, he continued pursuing his aims until his death. He wrote *Let My People Go* in 1962.

Lutine Bell, salvaged bell from the British frigate *Lutine*, which was wrecked off the Zuider Zee (The Netherlands) in 1799 while carrying gold bullion and pay for British troops in The Netherlands. The bell was salvaged in 1859 and hung in the insurance office of LLOYD'S in London. It is traditionally rung before ships are announced as overdue or lost.

Luton, county district in SE BEDFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 43sq km (17sq miles). Pop. (1974 est.) 165,900.

Lutoslawski, Witold (1913-), Polish composer. He gained international recognition with his *Concerto for Orchestra* (1954). His other works include *Funeral Music* (1958) and *Venetian Games* (1961).

Luttrell Psalter (c.1340), illuminated psalter made in England for Sir Geoffrey Luttrell. Its miniature representations of the daily life of the times provide important documentation for social historians.

Lutyens, Agnes Elisabeth (1906-), British composer, who composed mainly in the 12-tone system. Her works include various symphonies (for piano, woodwind, strings and percussion, all 1961) as well as *Quincunx for Orchestra* (1959-60), *Rape of the Moone* (1973) for wind octet, and vocal works, such as *The Linnet from the Leaf* (1972) and *Tyme Doth Fleete* (1968), and the operas *The Numbered* and *Isis and Osiris* (both 1973). She has also composed numerous film and radio scores.

Lutyens, Sir Edwin Landseer (1869-1944), British architect who planned the imperial capital of New Delhi (1913-30) and designed the Viceroy's house, now the President's residence. After WWI he became architect to the Imperial War Graves Commission and designed the CENOTAPH (1922) in Whitehall, London.

Lützen, Battle of (16 Nov. 1632), engagement between the Swedish army of Gustavus II Adolphus and the forces of the Holy Roman Emperor, under Wallenstein. The outcome was a Swedish victory, but Gustavus was accidentally shot dead by his own men on the misty battlefield.

Lux, unit of illumination in the SI system of units, equal to one LUMEN per sq metre.

Luxembourg, independent grand duchy in W Europe. Geographically it is divided into the forested Ardennes plateau and the fertile Bon Pays in the S. There are rich deposits of iron ore and Luxembourg is a major producer of iron and steel. Other industries include chemicals, textiles, tourism and banking. The capital is Luxembourg. Area: 2,586sq km (998sq miles). Pop. (1979 est.) 363,700. See pp.2092.

Luxembourg, Palais du, RENAISSANCE palace in Paris built for Marie de' MEDICI by Salomon de Brosse in 1615-24. The interior was decorated by POUSSIN, Philippe de CHAMPAIGNE and RUBENS. It now houses a large collection of paintings, especially by DELACROIX and contemporary artists.

Luxembourg, Rosa (1871-1919), German socialist leader, b. Poland. She became a German citizen through marriage and after 1898 was a leader of the Social Democratic Party. She founded the SPARTACIST (later Communist) Party during WWI with Karl LIEBKNECHT, and was arrested for her part in the Spartacist uprising in Berlin in Jan. 1919. She was murdered while being taken to prison. See also pp.1694, 1695.

Luxor, city in Upper Egypt on the River Nile. It is on the site of the ancient cities of Karnak and Thebes; the temple there was built by AMENHOTEP III in the 14th century BC, and beautified by RAMESSES II in the 12th century BC. The greatest surviving monument of ancient Egypt, the temple is 260m (853ft) long. The temple was later made into a Christian church and then a Muslim shrine; it was restored after 1885.

Pop. (1970 est.) 84,600. See also pp.1180, 1181.

Luzerne. See LUCERNE.

Luzon, largest island of the Philippines, occupying the N part of the group. The island has many natural harbours, and the principal land mass to the N has three mountain ranges, all running N to S. As well as being the most populous of the islands, it is the chief producer of agricultural and industrial products including rice, coconuts, sugar, coffee, chemicals, gold, copper and chromite. Area: 108,171sq km (41,765sq miles). Pop. (1970) 16,669,724.

Lvov, Prince Georgi Yevgenevich (1861-1925), Premier of the Russian provisional government (March-July 1917). A Constitutional Democrat, he was authorized by the DUMA to form a new government upon Czar NICHOLAS II's abdication. After concessions to the Left he lost support and resigned in 1918 in favour of KERENSKY.

Lvov, commercial city of the Russian Republic (Rossijskaja srsr) 185km (115 miles) SW of Luck, between the Roztoche and Gologory Mountains, on a tributary of the River Bug. Founded in 1256 by a Ukrainian prince, it was captured by Poland in 1340 and chartered in 1352; it became the capital of the independent Ukrainian Republic in 1918, reverted to Poland in the same year and was taken by the USSR in 1944. An industrial and commercial centre, its industries include heavy machinery, chemicals and oil refining. Pop. (1975 est.) 617,000.

Lwoff, André Michel (1902-), French micro-biologist. He shared the 1965 Nobel Prize in physiology and medicine with François JACOB and Jacques MONOD for work on the genetics of bacterial viruses. Lwoff studied the means by which these destroy the bacteria they infect.

Lycanthropy. See WEREWOLF.

Lyceum, school in Athens established by ARISTOTLE in a grove sacred to Apollo Lyceus in 335 BC. There Aristotle walked as he lectured, so that his students became known as the Peripatetics. After the death of Aristotle in 322 the school declined in importance.

Lyceum, theatre in Wellington Street, London (off the Strand). It opened in 1834 as the Royal Lyceum and English Opera House and was managed, from 1871-1902, by Sir Henry IRVING, at which time it was the most important theatre in London.

Lychee, small, round, reddish fruit of an evergreen tree of the soapberry (Sapindaceae) family, known in S China from ancient times. A papery but tough outer skin encloses the white flesh of the lychee, which is somewhat grape-like in flavour, and has one large seed. Species *Litchi chinensis*.

Lycia, region in SW Asia Minor inhabited in ancient times by the Lycians, who are thought to have migrated there from Crete via Miletus. They fought with PRIAM at Troy and are mentioned in the *Iliad*. Defeated by the Persians (546 BC) and then by ALEXANDER THE GREAT, they were subject to the PTOLEMIES until granted to the rulers of Rhodes by the Romans (189 BC). They were freed from Rhodian rule in 169 BC.

Lycurgus (fl. c.625 BC), semi-mythical lawgiver of Sparta. The existence of Lycurgus cannot be verified absolutely, but many scholars believe that such a single individual may have instituted reforms in Sparta after a slave revolt in the second half of the 7th century BC.

Lydda. See LOD.

Lydgate, John (c.1370-1452), English poet. He was a BENEDICTINE monk at Bury St Edmunds. His vast output of poetry ranged from long didactic works, such as *The Fall of Princes*, to brief lyrics.

Lydia, territory in W Asia Minor. Under the Mermnad dynasty (c.700-550 BC), it was a powerful kingdom until it fell to the Persians and became their stronghold in the West. It was later taken by ALEXANDER THE GREAT.

Lyell, Sir Charles (1797-1875), British geologist. He was influential in shaping 19th-century ideas about science and

Lutes often feature a carved "rose" in the round sound-hole of the instrument.

Martin Luther was an emotional man with an acute and terrifying sense of sin.

Rosa Luxemburg was the first woman to achieve political influence in Germany.

Luxor has these papyrus-flowered columns at the temple of Amun (12th century BC).

Lyly, John

wrote the popular three-volume *Principles of Geology* (1830–33), *Elements of Geology* (1838) and *The Geological Evidence of the Antiquity of Man* (1863). His ideas are based on the UNIFORMITARIAN theory. See also pp.1476,1477.

Lyly, John (c.1554–1606), English poet, dramatist and writer of prose romance. Comedies and pastoral romances include *Sappho and Phao* (1584) and *Midas* (1589). He is best known for his elaborate prose style evolved in the romance *Euphues* (1578, 1580).

Lympany, Moura (1916–), British pianist, who studied at the Royal Academy of Music, London and in Vienna and made her debut at the age of 12. She toured the British Commonwealth many times as a concert artist and is known through recitals and recordings for her interpretations of the music of Schumann, Grieg, and Rachmaninov.

Lymph, clear, slightly yellowish fluid derived from the blood and containing the white blood cells that combat infection and provide immunity. Swelling of lymph nodes, particularly those in the groin or armpit, may be a symptom of a disease. See also pp.153, 1064.

Lymph glands, another name for the nodes of the lymphatic system. They are filters and reservoirs which collect harmful material, notably bacteria and metastatic cancer cells, and so many become enlarged when the body is infected. Collections of lymph nodes are found in the throat and neck, in the armpits, and in the groin. See also pp.153,156,157,1064.

Lymphocyte, type of white blood cell found in vertebrates. Made continuously in lymphoid tissue, lymphocytes are roughly spherical in shape, contain few granules in their cytoplasm, and move using pseudopodia. In human beings they form about 25% of white blood cells and play an important role in combating disease by producing antibodies. See also pp.152, 156–157.

Lymphoma, abnormal growth (neoplasm) in lymphatic tissue, usually malignant. HODGKIN'S DISEASE is a lymphoma.

Lymphosarcoma, malignant tumour of lymphoid tissue. The term does not include HODGKIN'S DISEASE.

Lynch, Benny (1913–46), Scottish boxer who won the world, European and British flyweight titles in 1935, beating Jackie Brown in two rounds, but forfeited them in 1938 for failing to make the required weight.

Lynch, John ("Jack") (1917–), Irish politician, member of the Fianna Fáil Party. He entered the Dáil (Parliament) in 1948, was Minister of Education (1957–59) and for Industry (1959–65). He became Prime Minister of Ireland in 1966, and was re-elected in 1969, 1973 and 1977. See also p.1781.

Lynd, Robert, (1879–1949), Irish essayist who established himself as a journalist in London. At his urbane best in such pieces as *The Art of Letters* (1920) and *Dr Johnson and Company* (1928), his essays were collected under the title *Things One Hears* in 1945.

Lyndhurst, John Singleton Copley, Baron (1772–1863), British jurist, the son of American painter John Singleton Copley. Originally famed as a defender of radicals, he conducted the prosecution of Queen Caroline in 1820. He was three times Lord Chancellor (1827–30, 1834–35 and 1841–46).

Lynen, Feodor Felix Konrad (1911–), German biochemist who shared the 1964 Nobel Prize in physiology and medicine with Konrad Bloch for research into the metabolism of FATTY ACIDS and CHOLESTEROL. He helped to ascertain the mechanism of fatty acid break down and explain the pathway of the biosynthesis of several compounds, including natural rubber and cholesterol. He was also the first to isolate acetyl coenzyme A, the precursor of both fatty acids and cholesterol.

Lynn, Dame Vera (1917–), British popular singer. She gave her first public performance in 1924. She travelled extensively to sing to the troops during WWII and was nicknamed, "the Forces Sweetheart". Her most famous song was *The White*

Cliffs of Dover. She was made DBE in 1975.

Lynx, any of several small cats found in forests of central and N Europe, along the French-Spanish border, and in the USA. It may be yellow-grey or reddish-brown and can be spotted or unspotted. It has long legs, large feet, tufted ears, and characteristic beard-like hair on its cheeks. Length: to 116cm (46in). Family Felidae.

Lyon. See LYONS.

Lyonnesse, in English mythology, a lost land the name of which first appeared in Sir Thomas Malory's *Morte d'Arthur* in the late 15th century. It was believed to have connected Cornwall with the SCILLY ISLES. The name is now woven into Arthurian legend and Cornish folklore.

Lyons, Eric (1912–), British architect and industrial designer. He worked with GROPIUS before WWII. After the war he worked chiefly on housing projects, such as the World's End Chelsea Redevelopment Scheme of the 1970s. He has won 11 Ministry of Housing awards for good design.

Lyons, Sir Joseph (1848–1917), British businessman. In 1887, he was asked to help the tobacco firm Glubotien and Salmon to set up a catering enterprise; this later became J. Lyons and Co. Ltd., one of the largest catering businesses in Britain. He was knighted in 1911.

Lyons, Joseph Aloysius (1879–1939), Australian politician who helped to form the United Australia Party in 1931. He served as Postmaster General and Minister for Public Works and Railways, and as Prime Minister (1931–39) encouraged economic reform and development of the armed forces.

Lyons (Lyon), city in E central France, at the confluence of the Rhône and Saône rivers. It became part of the French crown lands in 1312, and had developed as a trade centre on the route to Italy by the 16th century, but was destroyed in 1793 by French Revolutionary troops. Lyons was the centre of the French resistance movement in WWII. It is where the best of French cuisine is found. Industries include chemicals, textiles and metal working. Pop. (1981) 462,841.

Lyons, Councils of, two ECUMENICAL COUNCILS held in LYONS. The first was convoked by Pope INNOCENT IV in 1245. It formally deposed the Holy Roman Emperor FREDERICK II, who had followed an anti-ecclesiastical policy. The second was convoked by Pope Gregory X in 1274. Its principal achievement, the reunion of the Eastern and Western Churches (see GREAT SCHISM) proved short-lived. The two Churches separated again in 1285.

Lyot, Bernard (1897–1952), French astronomer who invented the solar CORONAGRAPH in 1931. With the instrument he succeeded in photographing the inner CORONA and its spectrum in full sunlight. See also p.977.

Lyra, or the lyre, small northern constellation between Hercules and Cygnus. It contains the 1st magnitude Vega, and the PLANETARY NEBULA M57. See also pp.988–989, 989, 1013,1013.

Lyra, or Lira, name of two musical instruments dating from medieval times. One is a type of small HARMONIUM suitable for placing on a table or even in the lap; one hand played on the keyboard while the other cranked a wheel to operate the internal bellows. HAYDN wrote five concertos for this instrument. The other is a stringed instrument similar to a REBEC and played like a VIOL; it survives, for example, in Bulgaria where it is called a *gadulka*, and in Yugoslavia where it is called a *gusla*.

Lyre, ancient stringed musical instrument. Used originally by the Sumerians, it was introduced into Egypt and Assyria in the 2nd millennium BC. HOMER mentioned the instrument in his writings and in Classical Greek times it usually had seven strings supported by a wooden frame and attached to a sound box at the base. Most common types at this time were the *lyra* and *kithara*, and the strings were plucked using a bulky plectrum. Lyres which have survived in Europe since the Middle Ages

have more commonly been played with a bow. Today the lyre exists in various forms in E Africa and in Ethiopia.

Lyrebird, either of two shy Australian songbirds; the Superb lyrebird (*Menura superba*) and Albert's lyrebird (*M. alberti*). These large, perching birds have lyre-shaped tails displayed during courtship performances. The female builds a large, dome-shaped nest with a side entrance for the single greyish-purple egg.

Lyrical Ballads, volume of poetry by William Wordsworth and Samuel Taylor Coleridge. Coleridge contributed three poems to the first edition, including *The Ancient Mariner*. The second edition contained five of his poems. Wordsworth composed the majority of poems, including *Tintern Abbey* and *Michael*. The first edition was published in 1778, the second, with a preface by Wordsworth, in 1800.

Lysander (d.395 BC), Spartan general and politician. He was instrumental in the defeat of Athens during the PELOPONNESIAN WAR (429 BC–404 BC), defeating the Athenian fleet in 406 BC and 404 BC and obtaining Persian support for Sparta. His policy of establishing an oligarchy rather than a democracy in Athens was a failure.

Lysenko, Trofim Denisovich (1898–1977), Russian agronomist and geneticist. He expanded the theory of LAMARCK to include his own ideas of plant genetics. Lysenko promised the USSR government vast increases in crop yields through the application of his theories and enjoyed official sanction under Stalin, but in the late 1950s his influence waned.

Lysergic acid diethylamide. See LSD. Drug which can produce hallucinations and altered mental states in the user.

Lysias, (c.450–c.380 BC), Athenian orator who fled Athens in 404 when the thirty tyrants assumed power, but returned in 403 when democracy was restored. His style was simple yet eloquent. See also p.1209.

Lysippos (fl. late 4th century BC), official Greek sculptor of Alexander the Great. His work was masterly in its proportion and composition, and his style influenced much later Hellenistic sculpture. One of his best-known works is *Apoxomenos* (Youth Scrapping Himself) (c.310 BC) of which a Roman marble copy is in the Vatican Museum, Rome. See also pp.1212–1213, 1213.

Lysistrata, Greek comedy by ARISTOPHANES, first produced at Athens in 411 BC. In it Lysistrata, an Athenian woman, brings the Second PELOPONNESIAN WAR to an end by persuading all Greek women to deny their husbands sexual relations for as long as the war continues.

Lyte, Henry Francis (1793–1847), British Anglican clergyman and writer of hymns, including *Praise my soul, the King of Heaven* and *Abide with Me*.

Lyttelton, leading port of New Zealand's South Island. Located on the E coast, it is the main port for CHRISTCHURCH. Pop. (1972 est.) 3,230.

Lytton, Edward George Earle Lytton Bulwer, 1st Baron Lytton of Knebworth (1803–73), British novelist and politician. He was a Liberal MP (1831–41), and then an MP for the Conservative Party (1852–66) until he became a peer. His most famous novel is *The Last Days of Pompeii* (1834).

M

M, 13th letter of the alphabet, derived from the Semitic letter *mem* (meaning water). The corresponding Greek letter was *mu*, which went via the Etruscan alphabet to Latin as *m*. In English it always has the same pronunciation, but has the effect of silencing a following *b* that ends a word (as in *numb*). See also pp.608–609.

Maar, coneless volcanic crater that was formed by a single explosive eruption not accompanied by a flow of lava. A crater ring surrounds the hole.

Maas, Dutch and Flemish name given to

the River Meuse as it flows through Belgium and SE Netherlands and enters the North Sea through the Rhine delta S of Rotterdam. A branch of the river joins the River Waal to form the Merwede River.

Maastricht, city in SE Netherlands, near the Belgian border, on the River Meuse. The city was frequently besieged by the Spanish in the 14th–18th centuries, and occupied by the Germans during WWII. Industries: steel, glass, cement, grain milling. Pop. (1981 est.) 145,209.

Maazel, Lorin (1930–), US conductor, b. France. He toured worldwide and conducted extensively in the US and Europe before becoming chief conductor of the Berlin Radio Symphony Orchestra in 1965 and then music director of the Cleveland Orchestra in 1971.

Mab, considered to be Queen of the Fairies by most poets of the 16th and 17th centuries. Shakespeare's Mab, mentioned in *Romeo and Juliet*, is thought to be based on Mabb of Wales and Queen Maeve of Ireland.

Mabillon, Jean (1623–1707), French literary scholar who devised the first way of proving whether or not documents are authentic. A Benedictine monk, he described his method in *De re diplomatica* (1681; 1704).

Mabinogion, The, collection of early medieval Welsh tales containing much ancient mythological material and representing the result of centuries of folklore and oral story-telling. Their form is that of the hero-tale, in which the stories deal with the life and adventures of the hero, from birth to death.

Mabuse, (c.1478–c.1536), also called Jan Gossaert, Flemish painter. In his early work he was influenced by Gerard David and Albrecht Dürer, as may be seen by his magnificent *Adoration of the Magi* (c.1508). In 1508 he accompanied Philip of Burgundy to Rome, and became one of the leading "Italianate" Flemings, although mannered in his efforts to adopt an Italian outlook.

McAdam, John Loudon (1756–1836), Scottish engineer who invented the macadam road surface. He proposed that roads should be raised above the surrounding ground, with a base of large stones covered with smaller stones and bound together with fine gravel. He applied these ideas when he was appointed surveyor general of Bristol's roads in 1815. His views on road-making were adopted after a Parliamentary Inquiry in 1823 and in 1827 he was made surveyor general of roads in Britain. See also pp.522, 523.

Macadamia, genus of Australian trees of the family Proteaceae. Most species have stiff, oblong, lance-like leaves, although the leaves of *Macadamia ternifolia* have serrated margins and those of *M. integrifolia* have smooth margins. The edible seeds are round, hard-shelled nuts, covered by thick husks that split when ripe. Height: to 18m (60ft).

MacAlpin, Kenneth (d.858), King of Scotland. He was ruler of Galloway from AD 834 and had extended his rule to most of central Scotland by 844. He then gradually subdued much of the country N of the Forth and Clyde estuaries, and so finally broke the power of the Picts.

Macao (Macau), Portuguese overseas province in SE China, 64km (40 miles) W of HONG KONG. The colony consists of Macao Peninsula and two islands, Taipa and Coloane, in the South China Sea. The city of Macao, co-extensive with the Peninsula, was founded by the Portuguese in 1557. During the 18th and 19th centuries it enjoyed great prosperity as one of the two Chinese ports (with Canton) open to foreign trade. It was not recognized by China as Portuguese territory until 1887. Its industries include textiles and tourism. Pop. (1970 est.) 314,000.

Macapa, city in N Brazil on the River Amazon, capital of Amapá territory. It is a centre for products from the surrounding tropical forests, but its chief source of income is from mining of iron and manganese ores. Its growth dates from 1944, when it was made the capital. Pop. (1970) 86,307.

Macaque, diverse group of omnivorous medium-sized to large Old World monkeys found from NW Africa to Japan and Korea. Most are yellowish brown and are forest dwellers – agile on the ground and in trees – and good swimmers. Some have long tails, some have short tails and some have no visible tails at all. As a result, the latter are often confused with apes. Weight: to 13kg (29lb). Genus *Macaca*. See also BARBARY APE; RHESUS; pp.103, 312, 313, 332.

MacArthur, Douglas (1880–1964), US general, who participated in all the important US offensives during WWI. He retired from the army (1937) to work in the Philippines but was recalled to active duty when the USA entered WWII and appointed Commander of the US army forces in the Pacific. From Australia he directed the assault that led to Japanese defeat. MacArthur accepted the Japanese surrender on the USS *Missouri* on 2 Sept. 1945. He was appointed commander of UN troops during the Korean War but, following a policy dispute with President TRUMAN that MacArthur made public, he was relieved of his command. See also p.1697.

Macarthur, John (1767–1834), Australian free-settler who arrived in New South Wales from England in 1790, famous in colonial history as the pioneer of the wool industry and an influential public figure who came seriously into dispute with William BLIGH during the RUM REBELLION. In the 1790s he began to import Merino sheep from southern Africa and subsequently (1805) was granted 2,024 hectares (5,000 acres) of land (Camden Park) near Sydney by George III.

Macarthur, Mary Reid Anderson (1880–1921), British labour organizer. In 1903 she was appointed General Secretary to the Women's Trade Union League. She formed the National Federation of Women Workers in 1906 and represented Britain at the first League of Nations Labour conference in 1920.

Macassar. See MAKASAR.

Macau. See MACAO.

Macauley, Dame Rose (1881–1958), British novelist, poet and critic. She is remembered principally for her novels satirizing middle-class life and her concern with the role of women in a changing society. Her works include *Pottersm* (1920), *Told by an Idiot* (1923) and *The Towers of Trebizond* (1956).

Macauley, Thomas Babington (1800–1859), English historian, poet and statesman. After serving as a Liberal in the House of Commons, he was appointed a member of the Supreme Council of India where he lived from 1834–38. He returned to Parliament (1839–1847) and in 1847 began to write *The History of England from the Accession of James the Second* (5 vols, 1849–1861), which enjoyed great success. His poetical work, *Lays of Ancient Rome* (1842), celebrated the events of Roman history.

Mauley, James Philip (1917–76), Australian poet and scholar, professor of English at the University of Tasmania (1961–76). He founded the literary journal *Quadrant* in 1956 and his collected verse was published in 1971.

Macaw, any of several species of tropical American harsh-voiced parrots. All have sword-shaped tails and large powerful bills. Most species are brightly coloured, such as the scarlet macaw (*Ara macao*), which has a red tail and yellow wings with bright blue on its back and wings. Order Psittacidae. See also pp.73, 314–315.

McBain, Ed (1926–), name under which US novelist Evan Hunter has written more than 30 crime novels. Featuring a group of detectives, operating from the 87th precinct of an anonymous US city, they are noted for their meticulous attention to police routine and methods of investigation. They include *Cop Hater* (1956), *Fuzz* (1968), *Bread* (1974) and *So Long As You Both Shall Live* (1976).

Macbeth (d.1057), Scottish king (r.1040–57), subject of Shakespeare's tragedy named after him. In 1040 he killed DUNCAN I in battle and seized his throne but in 1054 was defeated by

Siward, who regained southern Scotland on behalf of Duncan's son, Malcolm Canmore. Malcolm (MALCOLM III Canmore) regained the rest of his kingdom by defeating and killing Macbeth in battle at Lumphanan. See also p.1316.

Macbeth (c.1606), five-act tragedy by William SHAKESPEARE, based on Raphael Holinshed's *Chronicles*. Most of the facts, as they appeared in the *Chronicles*, were rejected by Shakespeare who constructed his play on the theme of ambition.

Macbeth, George (1932–), Scottish poet. He often mixes violent subjects with fantasy and reality, as in *A Form of Words* (1954) and later volumes, such as *The Broken Places* (1963), *The Colour of Blood* (1967) and *In the Hours Waiting for the Blood to Come* (1975).

MacBride, Seán (1904–), Irish political figure, the son of the Irish patriots Maud Gonne and John MacBride. He served in the Irish Republican Army (IRA) and founded the Clann na Poblachta (Republican Political Party) in 1946. He was a Member of the Irish Parliament (1947–58), and represented Ireland at the COUNCIL OF EUROPE (1954–63). He served as UN commissioner for Namibia (1973–76). Active in the cause of international peace, he was awarded the Nobel Peace Prize in 1974.

McBride, William John ("Willie John") (1940–), British rugby union second-row forward who played for Ballymena, Ireland, and the British Lions. Between 1962 and 1975 he won a record 63 caps for Ireland and also took part in five tours by the British Lions, also a record number. He was captain of the unbeaten 1974 British Lions side which defeated South Africa in a series for the first time in 70 years.

McCabe, Stanley Joseph (1910–68), Australian cricketer, a batsman who played for New South Wales and Australia. He scored 2,748 runs at an average of 48.21 in 39 Test matches between 1930 and 1938.

Maccabees, prominent Jewish family that ruled JUDAEA from 164–63 BC. In 168 BC the SELEUCID ruler Antiochus IV invaded JERUSALEM and in the following year rededicated the TEMPLE to ZEUS and eradicated Jewish religious practices. Mattathias, a high priest, and his five sons fled to the mountains and organized a rebellion. After Mattathias' death in 166 BC his son Judas took command and recaptured Jerusalem in 164 BC. This event is celebrated annually as HANUKKAH, the Festival of Lights. Judas Maccabees was succeeded by his brother Jonathan (r.160–143). The family controlled Judaea until 63 BC, when POMPEY conquered it.

Maccabees, the Books of, four historical books, two of which are in the APOCRYPHA of the Authorized Version of the Bible. These two are modelled on the Old Testament books of CHRONICLES, and are therefore fairly accurate historically although prejudiced. The first (1 Maccabees) is concerned to praise the leaders of Judaism and the Temple opposing the Hellenizing influences of the times. Written in Hebrew about 100 BC, it describes the lives and careers of the three sons of Mattathias (Judas Maccabaeus, Jonathan and Simon), all of whom became leaders and rulers before violent deaths. The second (2 Maccabees) covers much the same ground, but from a slightly earlier beginning and a much more Hellenistic viewpoint, although it is addressed to the Jews at Alexandria and is a sermon pleading for unity in the established traditions of the Temple, couched in literary and eloquent style. The other two books of Maccabees are PSEUDEPIGRAPHA.

MacCaig, Norman (1910–), Scottish poet. His poetry is metaphysical, romantic and unmistakably "Scottish", although written in English. His publications include *The Sinai Sort* (1957), *Measures* (1965) and *Surroundings* (1967).

McCarthy, Joseph Raymond (1908–57), US senator who gained national attention in 1950 by claiming that the US State Department had been infiltrated by Communists. He was appointed chairman of the Senate's permanent Subcommittee on

Investigations in which office he wielded great power. See also MCCARTHYISM.

McCarthy, Mary (1912–), US writer and drama critic. She wrote several novels including *A Charmed Life* (1955) and *The Group* (1963), her most popular novel. Among her non-fiction is *Venice Observed* (1956) and *Memories of a Catholic Girlhood* (1957).

McCarthyism, era of a Communist "witch-hunt" in the USA, roughly from 1950 to 1954. It was a symptom of the COLD WAR and began with the accusation by the REPUBLICAN Senator, Joseph MCCARTHY, in February 1950 that he had the names of 205 Communists working in the STATE DEPARTMENT. He later made a similar accusation against the army. The army hearings of March–April 1954, at which McCarthy was the chief witness, were nationally televised. They destroyed McCarthy's reputation and he was condemned by the senate in December. In the meantime, however, he had ruined many careers (most notably that of J. Robert OPPENHEIMER) and the Communist Party had been outlawed.

McCartney, Paul (1942–), British pop singer. He was a member of the BEATLES for whom, with JOHN LENNON, he wrote many songs. He formed his own group, Wings, in 1971. Their record, *Band on the Run*, won two Grammy awards in 1975. He appeared in several films with the Beatles.

McClung, Clarence Erwin (1870–1946), US zoologist who discovered the mechanism of chromosomal SEX DETERMINATION. He postulated that CHROMOSOMES determine sex and that the X chromosome is the crucial element. This stimulated further research and by 1905 Edmund B. WILSON had developed the theory, now generally accepted, that both X and Y chromosomes form the basis of sex determination. See also pp.178–179.

McClure, Sir Robert John le Mesurier (1807–73), British Arctic explorer. He was the first after Sir John FRANKLIN to discover a north-west passage. Searching for Franklin's expedition in 1850, he sailed through the BERING STRAIT and discovered two routes to the Atlantic.

McClure Strait, part of the Beaufort Sea which runs between Banks and Melville islands, N Canada, and empties into the Arctic Ocean (W) and Viscount Melville Sound (E).

McCormack, John (1884–1945), Irish tenor. He studied in Ireland and Italy and made his debut in London in 1907. He went to the USA in 1909 and sang with the Boston and Chicago Opera Companies. After 1914, however, he specialized as a concert artist, becoming famous for his interpretation of German LIEDER.

McCormick, Cyrus Hall (1809–84), US inventor of the mechanical reaper in 1831. It was introduced into England in 1851. Large-scale manufacture of the reaper, and his invention of the twine binder and side-rake revolutionized the harvesting of cereal crops.

McCrae, Hugh Raymond (1876–1958), Australian poet and short story writer. His poetry is lyrical and descriptive and his short stories, usually humorous, show great literary dexterity. His first book of verse was *Satyr and Sunlight: Sylvarum Libri* (1909).

McCullers, Carson (1917–67), US author. In 1940 she published a remarkable first novel, *The Heart is a Lonely Hunter*. The hero is a deaf-mute to whom others insist on telling their stories. This was followed by *Reflections in a Golden Eye* (1941), a story of murder and neurosis in an army camp. Other works include *Member of the Wedding* (1946) and *The Ballad of the Sad Café* (1951).

MacDiarmid, Hugh (1892–1978), Scottish poet, real name Christopher Murray Grieve. A passionate nationalist, his has been the dominant poetic voice in Scotland since the early 1920s. His *Collected Poems* were published in 1967. See also pp.1769, 1769.

MacDonald, Alexander (c.1695–c.1770), British Gaelic poet. After publishing a Gaelic *Vocabulary* (1741) and serving in Prince Charles's army, he

MacDonald, Alexander

General MacArthur, US commander-in-chief, surveying battlefields in Korea in 1950.

Macaws have a characteristic piercing screech; they rarely mimic the human voice.

Macbeth listening to the second prophetic apparition conjured up by the witches.

Joseph McCarthy liked to wear uniform: this is that of the US Marine Corps.

Macdonald, Flora

wrote *Ais-eiridh* (1751), a collection of anti-Hanoverian poetry.

Macdonald, Flora (1722–90), Scottish heroine, famous for helping Prince Charles Edward Stuart, the Young Pretender, escape to Skye after his defeat at Culloden in 1746. For this she was imprisoned by the Hanoverian government until 1747.

Macdonald, George (1824–1905), Scottish novelist and poet. His works include novels of Scottish country life, poetry in dialect and stories for children. Among his novels are *David Elginbrod* (1863), *Alec Forbes* (1865), *Sir Gibbie* (1879) and *Lilith* (1895). *At the Back of the North Wind* (1871) is a well-known children's fantasy.

MacDonald, James Ramsay (1866–1937), British politician, illegitimate son of a servant, who became leader of the Independent Labour Party (later the Labour Party). A Member of Parliament (1906–18), his opposition to Britain's role in WWI aroused furious animosity and he was defeated in the 1918 elections. Returned to Parliament in 1922, he became Britain's first Labour Prime Minister in 1924. He was Prime Minister again (1929) but in 1931 was forced to head the National Government, heavily depending on Conservative support. He became increasingly distrusted by the Labour Party and lost power in 1935. See also pp.1641, 1691–1693, 1693, 1706.

Macdonald, Sir John Alexander (1815–91), first Prime Minister of the Dominion of Canada (1867–73); he also served a second term in office (1878–91) and was a power in Conservative politics from 1844 until his death. He encouraged western settlement, took over the Hudson's Bay Company lands (1870) and furthered railway interests before being implicated in the PACIFIC SCANDAL of 1873.

Macdonald, John Sandfield (1812–72), joint Premier with Louis Scotte of Canada (1862–64), during which time he presided over an uneasy coalition of moderate and radical reformers. Although he was loyal to Confederation after it was effected (1867), he had previously opposed it.

MacDonald, Malcolm (1901–), British politician and colonial administrator. The son of James Ramsay Macdonald, he entered Parliament in 1929. From 1935 to 1941 he was Secretary of State for the Colonies and Secretary of State for Dominion Affairs, and then became British High Commissioner to Canada from 1941 to 1946. In 1970 he was appointed Chancellor of the University of Durham.

Macdonald, Ross (1915–), US writer of detective fiction, real name Kenneth Miller. He created Lew Archer, a tough, moral private investigator. His books include *The Galton Case* (1959), *The Goodbye Look* (1969), *Sleeping Beauty* (1973) and *The Blue Hammer* (1976).

MacDowell, Edward Alexander (1861–1908), US composer. He is remembered chiefly for his piano works, including four sonatas, 12 studies, some lyrical suites and, above all, the highly romantic piano concerto.

Mace, iron or steel-headed club, which became a ceremonial symbol of authority. Medieval bishops, such as ODO of Bayeux, often carried maces into battle because churchmen were forbidden to shed blood and the impact of a rounded mace (even if spiked) was less likely to do so than the slash of a sword. The first purely ceremonial use of maces were probably at the courts of England and France, late in the 12th century. See also pp.554, 555.

Mace, spice made from a NUTMEG, which is the hard, aromatic seed of the fruit of *Myristica fragrans*, a tall evergreen tree, native to the Moluccan Islands and New Guinea. The spice is obtained from the kernel and shell of the nut. It is used mainly for baking, and in sauces and condiments. See also p.707.

Macedo, Joaquim Manuel de (1820–82), Brazilian novelist. *The Little Brunette* (1844), a sentimental love story, is regarded as Brazil's first real novel and its first best-seller. *The Blond Lad* (1845) is similar in style.

Macedonia, region in SE Europe, on the

Balkan Peninsula, now included in NE Greece, SE Yugoslavia and SW Bulgaria. The ancient Macedonian Empire (338–168 BC) was made a Roman province in 148 BC and was included in the Bulgarian and Serbian empires when they fell to the Ottoman Turks in the 14th century. Its independence from Turkey in 1912 and the claims to the region by other Balkan countries precipitated the BALKAN WARS (1912–13). Ownership of the area was again disputed after WWI, but from 1962 tension was eased following improvement in Yugoslav-Bulgarian relations. The region's products include tobacco, cotton, livestock, iron, copper and lead. Area: approx. 66,560 sq km (25,700 sq miles). See also pp.1664–1665.

McEwen, Sir John Blackwood (1868–1948), Scottish composer. He was principal of the Royal Academy of Music (1924–36), and wrote several works of musical theory. His compositions comprise orchestral and chamber music, including 17 string quartets; of his several symphonies the *Solway Symphony* (1911) was that most frequently performed.

Macgillcuddy's Reeks, mountain range in Kerry, SW of Killarney, in the SW Republic of Ireland. It extends 19 km (12 miles) W from the Lakes of Killarney. Carruntuohill, 1,040 m (3,414 ft), is its tallest peak, and is also Ireland's highest mountain.

McGonagall, William (1830–1902), Scottish versifier. With his first published collection of verse (1877) he began his life as an itinerant reciter, confident always of being acclaimed a great poet. To him, rhyme was the most important factor in verse, and the result was frequently pathetic. It has been said that McGonagall is the only truly memorable bad poet. A selection of his poetry, entitled *Poetic Gems*, was published in 1890.

McGrory, Jimmy (1904–), Scottish footballer who scored 410 goals in 408 league games between 1922 and 1938, averaging more than one a game. With Celtic all but one season, he scored 550 goals in all matches, won League and Cup honours, yet gained only seven international caps.

Mach, Ernst (1838–1916), Austrian physicist and philosopher. He believed that physical phenomena should be explained only by data perceived by the senses. In physics, his name is associated with the MACH NUMBER.

Mácha, Karel Hynek (1810–36), Czech Romantic poet. His writings reflect the national and linguistic revival of the early 19th century. His long poem *May* (1836) being one of the finest iambic lyrical works in the Czech language.

Machado y Ruiz, Antonio (1875–1939), Spanish poet, one of the most outstanding and influential in the first half of the 20th century. Few poets have expressed the national feeling of Castile as well as he did in *Campos de Castilla* (1912). He supported the Republic in the Spanish Civil War and, after its defeat, fled to France.

Machala, city in SW Ecuador, 121 km (5 miles) S of Guayaquil. Products: gold, cacao, coffee, hides. Pop. (1970 est.) 63,300.

Machault, Guillaume de (c. 1300–77), French court poet and musician. His work, of which the best known is *Le livre de Voir-dit*, anticipated fixed poetic forms such as the BALLAD or RONDEAU. He wrote the first polyphonic setting of the Mass, and the secular motet.

Machel, Samora Moisés (1933–), Mozambique politician. He received a military training in Algeria in 1963, took part in guerrilla activities against the Portuguese in Mozambique as a member of FRELIMO, of which he became president in 1970. Following the withdrawal of the Portuguese troops, Machel became president of Mozambique in June 1975. See also p.2101.

Machen Arthur Llewellyn (1863–1947), Welsh novelist, short story writer and essayist. He was at his best in subjects dealing with the supernatural. His novels include *The Great God Pan* (1894) and *The Hill of Dreams* (1907). He made many translations, including *Casanova's Memoirs* (12 vols, 1930).

Machiavelli, Niccolò (1469–1527), Florentine statesman and political theorist, an outstanding figure of the Italian Renaissance. He served from 1498 to 1512 as an official and diplomat of Piero Soderini's republican government of Florence, but lost his post when the MEDICI family returned to power. He devoted the remainder of his life to writing. His *Discourses on the First Ten Books of Livy* (1513–19) argued that the experience of the past could provide solutions for the present. His most famous work, *The Prince* (1513), propounded a ruler's need to preserve and enhance his own power and that of the state by whatever means necessary. See also pp.1374, 1380, 1381, 1851.

Machicolation, in architecture, term for the parapet, or gallery projecting from the outside of castle towers and walls, with holes in the floor through which defenders could drop missiles, molten lead or boiling oil upon their assailants.

Machine gun, weapon that loads and fires automatically and is capable of sustained rapid fire. The firing mechanism is operated by recoil (backward thrust) or by gas from fired ammunition. The gun may be water- or air-cooled. The ammunition is generally of 15.24 mm (0.60 in) calibre or less. The first widely used machine gun, the MAXIM GUN, was invented by the American Hiram Maxim in 1883. See also GATLING GUN, pp.558–559.

Machine tools, stationary, power-driven machines for cutting and shaping metal parts. Shaping is accomplished in several ways: by shearing, pressing, applying electricity or corrosive chemicals or by cutting away excess material as with lathes, shapers, planers, drills, mills, grinders or saws. Cold-forming of such items as cooking utensils and automobile bodies is performed on punch presses. Hot-forming is done on forging presses. All cutting tools have work-holding and tool-holding devices and some means of controlling the depth of cut. See also pp.408–409, 455.

Mach number, ratio of the speed of a moving body to the speed of sound in air, expressed as a decimal equivalent; below "1" being subsonic and over "1" supersonic. It takes its name from the Austrian investigator of supersonic speeds and shock waves, Ernst Mach (1838–1916).

Machu Picchu, Inca settlement in the Andes NW of Cuzco, Peru, situated on mountain 2,057 m (6,750 ft) high, and covering 13 sq km (5 sq miles). Forgotten after the Spanish conquest until its rediscovery in 1912 by Hiram Bingham, it is the best-preserved of the Inca cities and testifies to advanced water engineering and stonemasonry.

McIndoe, Sir Archibald Hector (1900–60), New Zealand plastic surgeon. One of the pioneers in this field, he founded a small hospital for plastic surgery in East Grinstead, Surrey, which later became internationally famous. As one of the foremost plastic surgeons of the time he was much in demand during WWI and was appointed consultant in plastic surgery to the ROYAL AIR FORCE.

MacInnes, Colin (1914–76), British novelist. His first critical success was *City of Spades* (1957), which explored the world of black immigrants in London. His later novels include *Absolute Beginners* (1959); *Mr Love and Justice* (1960) and *All Day Saturday* (1966). He was also a journalist.

Macintosh, Charles (1766–1843), Scottish chemist and inventor after whom the mackintosh is named. In 1823 he invented a method of making waterproof cloth by joining two pieces of fabrics using a solution of rubber in coal-tar naphtha. But it was not until 1839, with the advent of vulcanized rubber which withstood temperature changes, that the mackintosh became a practical garment.

MacIntyre, Duncan Bàn (1724–1812), Scottish poet, who wrote under the bardic name of Donnchadh Bàn. His poems were published in 1768; notably among them were his songs about the landscape of the Argyll-Perthshire border.

MacIver, Loren (1909–), US painter and illustrator who developed a unique and refined style although largely self-taught.

She has executed a number of both abstract and figurative works; *Hopscotch* (1940) and *Oil Splinters and Leaves* (1950) are indicative of her keen interest in depicting the ordinary and commonplace.

Mackay, David ("Dave") (1935–), British footballer who played for Hearts, Tottenham Hotspur, Derby County and Swindon. He played in 23 international matches for Scotland between 1956 and 1965, but it was in the English league that he gained renown as a hard-tackling wing-half.

McKay, Heather Pamela (1941–), Australian SQUASH RACQUETS player. She won the Australian championships, which are for amateurs only, every year from 1960 to 1973, when she turned professional. She also won the British Open championship, considered the world championship, every year from 1962 to 1977 and in 1976 won the first world championship, held in Australia. Only twice between 1960 and 1977 did she lose a match.

Mackay, Jessie, (1864–1938), New Zealand poet whose works, including *The Sitter on the Rail* (1891) and *The Bride of the Rivers* (1926), espoused many social causes such as PROHIBITION and women's rights.

Mackay, Mary, See CORELLI, MARIE.

Macke, August (1887–1914), German painter. A prominent member of the BLAUE-REITER group, the sense of colour and form in his sensitive watercolours influenced his friend Paul KLEE.

McKenna, Siobhán (1923–), Irish actress. From 1944 to 1947 she was at the ABBEY THEATRE, Dublin, and made her London debut in 1947. She played Pegeen Mike in *The Playboy of the Western World* at the Edinburgh Festival (1951) and again in London (1960). She won an Evening Standard award for her performance as St Joan (1955) and played in *Juno and the Paycock* at London's Mermaid Theatre in 1973, taking over the direction of the production on the death of Seán KENNY.

Mackenzie, Sir Alexander (1755–1850), Scottish-born Canadian fur trader and explorer. The MACKENZIE RIVER was named after him, and his journey to the Pacific in 1793 via the Peace and Fraser rivers was the first crossing of North America N of Mexico. His *Voyages ... to the Frozen and Pacific Oceans* (1801) won him wide recognition and a knighthood. See also p.1614.

Mackenzie, Alexander (1822–92), Prime Minister of Canada (1873–78), b. Scotland. Mackenzie edited the Reform newspaper *Lambton Shield* (1852–54) and in 1867 entered the first dominion House of Commons. He was Liberal Prime Minister from 1873 to 1878, during which time the courts and provincial governments were strengthened, trade expanded and immigration was encouraged.

Mackenzie, Sir Edward Montague Compton (1883–1972), British novelist. He achieved popularity and critical acclaim with *Sinister Street* (1913) a novel about life at Oxford and a conversion to Roman Catholicism. Later works, such as the six books collected as *The Four Winds of Love* (1937–45) and the comic novel *Whisky Galore* (1947), made into a film of the same name two years later, added to his popularity.

Mackenzie, Henry (1745–1831), Scottish novelist and leading figure in the literary circles of Edinburgh during the late 18th century. His novel *The Man of Feeling* was published in 1771. His work had considerable influence on Sir Walter Scott, who dedicated his "Waverley" novels to him.

Mackenzie, Stuart (1937–), powerfully built Australian oarsman who won the Diamond Sculls a record six times (1957–1962), was British Commonwealth (1958) and European (1957, 1958) singles champion, and a silver medalist at the 1956 Olympic Games.

Mackenzie, district in W Northwest Territories, Canada. It includes Canada's largest river, the Mackenzie, and two of the largest lakes, the Great Bear and the Great Slave. Rich in mineral deposits, the

district has uranium mines, large gold mines worked since 1934, and oilfields. Area: 1,366,200sq km (527,490sq miles). Pop. (1971) 23,665.

Mackenzie, river in w Mackenzie district, Northwest Territories, Canada; it flows from the Great Slave Lake NW into Mackenzie Bay in the Arctic Ocean; the largest river system in Canada and second-largest in North America. Discovered in 1789 by Alexander MACKENZIE, it is an important shipping route. Old fur-trading posts remain along its course. Length: 1,803km (1,120 miles).

Mackenzie Country, area in the s South Island, New Zealand. Named after a sheep-stealer of the 1850s, the region is now important for its sheep-farming.

Mackerel, fast-swimming, agile, marine food fish related to the TUNA and found in shoals in the N Atlantic, N Pacific and Indian oceans. The mackerel has a streamlined body and powerful tail. The body colour is silvery blue with dark side bars. It has a voracious appetite, lives on smaller fish and plankton, and is easily caught by trailing a spinner. Length: 61 cm (2 ft). Family Scombridae. See also p.745.

Mackerras, Alan Charles (1925-), Australian conductor, b. USA. He became conductor of the Hamburg State Opera in 1966 and musical director of the English National Opera (formerly Sadler's Wells Opera) in 1970. He arranged the music for John Cranko's ballets *Pineapple Poll* (1951), based on Sullivan, and *The Lady and the Fool* (Verdi, 1954).

McKie, Sir William Neil (1901-), Australian organist. Educated in Melbourne, he left for Britain in 1919 and was organist of Magdalen College, Oxford (1938-41), and of Westminster Abbey (1941-63). He was in charge of the music at the Coronation of Queen Elizabeth II (1953), and was knighted the same year.

McKinley, William (1843-1901), 25th President of the US (1897-1901) during whose first administration America became a colonial power. A conservative Republican, he supported high protective tariffs, adopted the monetary GOLD STANDARD and, urged on by such expansionists as publisher William Randolph HEARST and Assistant Secretary of the Navy Theodore ROOSEVELT, declared war on Spain (1898). At the end of the 113-days war the US annexed Guam, Puerto Rico, the Philippines, Hawaii and American Samoa. McKinley was assassinated during his second term of office by an anarchist, Leon Czolgosz.

McKinley, Mount, peak in s central Alaska, USA, in the Alaska Range; highest peak in North America. Permanent snowfields cover more than half of the mountain. Wildlife is abundant, in particular the caribou and white Alaskan mountain sheep. The mountain was first scaled in 1913 by Hudson and named after President McKinley. It is included in Mt McKinley National Park (1917). Height: 6,194m (20,311ft).

Mackintosh, Charles Rennie (1868-1928), Scottish architect, artist and designer; one of the most successful and gifted exponents in Britain of ART NOUVEAU. His buildings, such as the Glasgow School of Art (1898-1909), were notable for their simplicity of line and skilful use of materials, and displayed a close integration of internal and external features, derived in part from Scottish traditional elements.

Mackmurdo, Arthur (1851-1942), British architect, designer and a pioneer of the ARTS AND CRAFTS MOVEMENT. In architecture he is best known for his plans for the Savoy Hotel, London, although he also designed houses and projects for communal living. A friend of William MORRIS, he founded the Century Guild of artists (1882), based on the teachings of Morris, to improve the standard of furniture and decorative wares. He was a designer of metalwork, wallpapers and textiles, and his work of the 1880s, rich in sinuous plant forms, anticipated ART NOUVEAU.

McLaren, Bruce (1937-70), New Zealand racing driver and designer whose

early death was preceded by wins in the Monaco Grand Prix (1962), Le Mans (1966) and the Belgian Grand Prix (1968).

McLauchlan, Ian (1942-), British rugby union player, known as "Mighty Mouse", who played for Jordanhill (Scotland), and the British Lions. He appeared in 33 international matches for Scotland (18 times as captain) and toured with the Lions in 1971 and 1974. At 175cm (5ft 9in) tall, he was relatively short for his position as tight-head prop.

MacLeish, Archibald (1892-), US poet and playwright. His works include *Conquistador* (1932), an epic poem *Collected Poems 1917-1952* (1952), and *J.B.* (1958), a verse play.

MacLennan, John Hugh (1907-), Canadian novelist, principally concerned with Canadian subjects. His books include *Barometer Rising* (1941), *Two Solitudes* (1945), a study of the conflicts between English and French Canadians, *Each Man's Son* (1951), *The Watch that Ends the Night* (1959) and *Return of the Sphinx* (1967).

Macleod, John James Rickard (1876-1935), Scottish physiologist who shared the 1923 Nobel Prize in physiology and medicine with Sir Frederick Grant BANTING for the discovery of INSULIN and studies of its use in treating DIABETES. The actual discovery was made by Banting and Charles BEST working in Macleod's laboratory at the University of Toronto. Macleod later taught at the University of Aberdeen. His works include *Diabetes* (1913) and *Carbohydrate Metabolism and Insulin* (1926).

MacLiammoir, Michael (1899-1978), Irish actor, designer and playwright. In 1928 he opened the Galway Gaelic Theatre, and in the same year directed the Dublin Gate Theatre in collaboration with Hilton Edwards. In 1931 he was appointed director of the Dublin Gaelic Theatre. He is best known for his portrayal of Oscar Wilde in his own compilation *The Importance of Being Oscar* (1960). His plays include *Ill Met by Moonlight* (1946) and *Home for Christmas* (1950).

MacLise, Daniel (1806-70), Irish painter. Popularly known for his caricatures published in *Fraser's Magazine*, his most important works were the mural paintings in the House of Commons.

McLuhan, Herbert Marshall (1911-), Canadian academic and expert on communications. His view that the forms in which people receive information - such as television, radio and computers - are more important than the messages themselves was presented in his books *The Mechanical Bride: Folklore of Industrial Man* (1951), *Understanding Media* (1964) and *The Medium is the Message* (1967).

McMahon, William (1908-), Prime Minister of Australia (1971-72). He practised as a solicitor until 1939 and turned to politics after WWII. He was treasurer and deputy leader of the Liberal Party (1966-71) and Minister for Foreign Affairs (1969-71) before becoming leader of the Liberal Party from 1971 to 1972.

McMahon Line, border between Tibet and Assam negotiated by the Tibetan and British delegations (the latter led by Sir Henry McMahon) at the Simla conference (1913-14). A Chinese delegation refused to agree to the line, claiming that Tibet was not independent of China and could not sign treaties. China's consistent refusal to accept the line led to friction with India, especially in the 1960s.

McMillan, Edwin Mattison (1907-), US chemist and physicist. In 1951 he shared the Nobel Prize in chemistry with Glenn SEABORG for the discovery of several TRANSURANIC elements. While working on the CYCLOTRON with Ernest LAWRENCE at the University of California, McMillan developed the SYNCHROCYCLOTRON, for which he shared the 1973 Atoms for Peace prize with V. I. Veksler (1907-1966).

Macmillan, John (1670-1753), Scottish minister. Deposed from his Presbyterian

ministry in 1703 for attacking the corruption of Church government, he formed the Macmillanites, and with Thomas Nairn founded (1743) the Reformed Presbyterian Church.

MacMillan, Kenneth (1929-), British dancer and choreographer who succeeded Sir Frederick ASHTON as director of the ROYAL BALLET in 1970, resigning from that post in 1977 but retaining that of principal choreographer. His reputation was established with *Dances concertantes* (1955); other ballets include *Le Sacre du Printemps* (1962), *Romeo and Juliet* (1965), *Anastasia* (1971), *Elite Syncopations* (1974), *Rituals* (1975) and *Mayerling* (1978).

Macmillan, Kirkpatrick (1813-78), Scottish blacksmith who invented the first two-wheeled self-propelled bicycle in 1839. Movement was achieved by means of cranks connected to the rear axle, which were pushed round by the feet. His invention only became popular when it was resurrected by Pierre and Ernest MICHAUX in 1861.

Macmillan, Maurice Harold (1894-), British statesman. During the 1930s, Macmillan was one of a small band of Conservatives prepared to face political death for attacking their government's foreign policy, in particular the passive acceptance of MUSSOLINI's invasion of Abyssinia. In the 1950s he held a number of cabinet posts, including Minister of Housing and Local Government (1951-54), Minister of Defence (1954-55), and Chancellor of the Exchequer (1955-57). He succeeded Anthony Eden (later Lord AVON) as Prime Minister (1957-63), improving Anglo-American relations after the Suez crisis and trying unsuccessfully to obtain Britain's entry into the European Economic Community. He gave firm support to President KENNEDY over the CUBAN MISSILE CRISIS in 1962.

McMurdo Sound. See ROSS DEPENDENCY. **McMurrugh, Dermot** (1110-71), Irish King of LEINSTER in SE Ireland. Driven from Leinster in 1166 for abducting another king's wife, his request for English aid brought the Anglo-Normans to Ireland. He was responsible for compiling the *Book of Leinster*, a collection of Gaelic traditions. See also p.1314.

McNamara, Robert Strange (1916-), US Secretary of Defence from 1961 to 1968. Growing doubts about the VIETNAM WAR led to his resignation and he later became President of the World Bank. **MacNeice, Louis** (1907-63), British writer. An important poet of the 1930s, he was the author of several memorable verse plays for radio. Among his collected poems are *Autumn Journal* (1939) and *Solstices* (1961). He also translated Aeschylus's *Agamemnon* and Goethe's *Faust*.

McNeile, Cyril. See SAPPER. **Mâcon**, dry red or white wine from vineyards near the town of the same name in E France. The wine is produced in the départements of the Ain and the Saône-et-Loire, in the s of the Burgundy area. **Maconchy, Elizabeth** (1907-), British composer. She was a student of VAUGHAN WILLIAMS. Her most important works have been chamber music, including nine string quartets. She wrote many choral works including *The Jesse Tree* (1970) and *Prayer before Birth* (1971). (1963).

Macphail, Agnes Campbell (1890-1954), first woman Member of Parliament in Canada (1921-35). Active in promoting prison reform and social welfare programmes, she was the first Member of Parliament to write a weekly newsletter for her constituents.

McPhee, Colin (1901-64), Canadian composer. Attracted by Indonesian music, he lived for several years in Bali until 1939. The toccata for orchestra *Tabuh-Tabuhan* (1936) is one of his best-known compositions and is based on Balinese orchestral procedures. Other compositions include *Sea Shanty Suite* (1929) for male chorus, a concerto for piano and wind octet (1929) and film scores.

McPherson, Aimee Semple (1890-1944), US evangelist. In 1926 she founded the

William McMahon headed a coalition of the Australian Liberal and Country parties.

Harold Macmillan waves goodbye at London Airport, en route to New York, 1962.

Mâcon: this view shows the restored medieval bridge over the River Saône.

Macramé knots are clove-hitch and square knots, but some allow different ones.

Macpherson, James

International Church of the Foursquare Gospel. Claiming to be guided by God, she professed faith healing and the gift of tongues and her flamboyant methods were phenomenally successful. In May 1926 she disappeared while sea-bathing and reappeared a month later claiming to have been kidnapped. She was tried for fraud and, although acquitted, never regained her former influence.

Macpherson, James (1736–96), Scottish poet and historian. His use of Celtic lore in *The Works of Ossian* (1762) inspired the ROMANTIC MOVEMENT in European literature. See also pp.1475, 1548, 1549.

Macquarie, Lachlan (1761–1824), British colonial administrator. As governor of New South Wales (1809–21) he attempted reforms involving rights for the freed convicts and small farmers, but opposition from large landowners forced his recall to Britain.

Macquarie, river in central New South Wales, Australia. It rises in the BLUE MOUNTAINS and flows NNW to the River Darling. It drains an important wheat and sheep raising area. Length: 950km (590 miles).

Macquarie Island, uninhabited island in the S Pacific Ocean, 1,370km (850 miles) SE of Tasmania, formed from the exposed tip of a submerged volcano. Administered by Tasmania, it is the site of an Australian research station. Area: 230sq km (89sq miles).

Macramé, form of braiding made by knotting threads or cords in a geometrical pattern. Its ornate design has many practical applications, as well as being a minor art form.

Macready, William Charles (1793–1873), British actor and theatrical manager. Distinguished as a Shakespearean actor, he achieved fame in the name-part of *Richard III* in 1819. His productions were noted for meticulous attention to detail.

Macrocephaly, excessive size of the head. It is often caused by HYDROCEPHALUS and is associated with mental subnormality.

Macroeconomics, study of the economic system as a unit, rather than its individual components as in MICROECONOMICS. It involves the determination of items such as GROSS NATIONAL PRODUCT and personal income, the study of the banking system and international trade.

Macromolecule, molecule, generally with a diameter ranging from 10^{-4} to 10^{-1} mm (10^{-7} to 10^{-1} in) considerably larger than the molecules of most substances (usually under 10^{-6} mm (10^{-9} in)). Many proteins, nucleic acids, plastics, resins, rubbers and natural and synthetic fibres are made up of such giant units, each of which contains thousands of atoms. See also pp.910–911.

McTell, Blind Willie (1904–c.1960), US blues singer and guitarist. More of a showman than his contemporaries Robert JOHNSON and Sleepy John ESTES, he nevertheless wrote many songs of great poetic insight, mainly concerned with the darker, more violent aspects of the sexual relationship.

McWilliam, Frederick Edward (1909–), Irish sculptor who exhibited with the British Surrealists in 1936. He executed *The Four Seasons*, which was commissioned for the Festival of Britain.

Madaans, also called Ma'dan, or Marsh Arabs, semi-nomadic people inhabiting the marshlands of Iraq. Their dwellings are usually built of giant reeds. They use canoes when hunting; raising water buffalo is their major economic activity.

Madách, Imre (1823–64), Hungarian playwright who is best known for his poetic drama *Am ember tragédiája* (*The Tragedy of Man*, 1861). Sometimes compared to Goethe's *Faust*, it relates man's past and future through the characters of Adam, Eve and Lucifer. Originally it was not intended for the stage but has often been produced in Hungary.

Madagascar. See MALAGASY.

Madame Bovary (1857), naturalistic novel by Gustave FLAUBERT, who was prosecuted for its alleged immorality. Set in provincial Normandy, it tells the story of Emma Bovary, whose dreams of romance are realized neither by her dull

husband, a country doctor, nor her lovers. She falls into debt and eventually commits suicide.

Madame Butterfly (1904), three-act opera by Giacomo PUCCINI, with Italian libretto by Giuseppe GIACOSA and Luigi ILlica, after David BELASCO's play. First performed at La Scala, Milan, in two acts, it was a fiasco, primarily because of its romantically indulgent music, but it was successfully re-presented three months later at Brescia under Arturo TOSCANINI.

Madder, perennial vine native to S Europe and Asia, which bears greenish-yellow flowers. A red dye was once produced from the roots. Height: to 1.2m (4ft). Family Rubiaceae; species *Rubia tinctorum*. See also p.653.

Madeira, fortified wine from the island group of the same name. It is made by mixing the wine of the island with brandy, and keeping the blend at 48.9°C (120°F) for five months. Madeira is now drunk chiefly as an after dinner wine, and has always been especially popular in Britain.

Madeira Islands, group of islands in the Atlantic Ocean off the coast of Morocco, N of the Canary Islands; the capital is Funchal, on Madeira Island. The group consists of two inhabited islands, Madeira and Porto Santo, and two uninhabited groups, Desertas and the Selvagens. The islands are a year-round resort area. Products include sugar cane, Madeira wine and embroidery work. Area: 798sq km (308sq miles). Pop. (1978 est.) 265,600.

Madhya Bharat, former state of India, in central India. Its main princely states included Indore (the summer capital) and Gwalior (in Lashkar, the winter capital). Madhya Bharat was created in 1948 and 1950 as a union of 20 princely states, and was incorporated into the state of Madhya Pradesh in 1956.

Madhya Pradesh, state in central India; Bhopal is the capital. Previously ruled by the Gond and MAHARATTAS, it was ceded to the British in 1817–18. Berar was incorporated into the state in 1903 and its name was changed to the Central Provinces and Berar. In 1956, the former states of Madhya Bharat, Vindhya Pradesh, Bhopal and part of Rajasthan were incorporated into the new state. Its industries include cotton weaving and mining for manganese, iron ore and coal. Area: 442,841sq km (170,891sq miles). Pop. (1971) 41,449,729.

Madison, James (1751–1836), fourth President of the USA (1809–17). Earlier in his career, he had been one of the chief designers of the United States Constitution. In the important debate over states' rights versus strong federal government, he mediated between Thomas JEFFERSON and Alexander HAMILTON. When British harassment of US merchant ships became intolerable, Madison declared war (1812), which ended indecisively with the Treaty of GHENT (1815). After two terms in office, Madison retired to his Virginia plantation.

Madison, state capital of Wisconsin, USA, 121km (75 miles) W of Milwaukee. Established as the capital of the Territory of Wisconsin in 1836, it was named after President James Madison. It is the seat of the University of Wisconsin (1836). Industries: food processing, medical equipment, motor vehicle components. Pop. (1970) 172,007.

Madison Avenue, thoroughfare in Manhattan, New York City, USA, famous for its skyscraper office blocks and exclusive shops. Many of the principal US advertising agencies have headquarters on Madison Avenue, and the name has become synonymous with the advertising world.

Madison Square Garden, indoor stadium in Manhattan, New York City. Famous primarily for boxing contests, it also accommodates other sports and forms of entertainment. The present arena was opened in 1968.

"Mad Mullah". See MOHAMMED BEN ABDULLAH.

Madonna, representation in painting or sculpture of the Virgin Mary, usually with the infant Jesus. The early Christians painted the Madonna in their CATACOMBS and she was a notable feature of many out-

standing Byzantine icons. The advent of the Renaissance brought less stylized representations, and important portraits of her during that period were produced by almost every great painter and sculptor. More recently, artists such as Henry MOORE in his *Madonna* (1944) have been attracted to the subject.

Madonna lily. See LILY.

Mad Parliament, misnomer, no longer used, for the Oxford parliament of 1258, at which the barons forced the PROVISIONS OF OXFORD on HENRY III of England. The name came from a contemporary chronicle's reference to *illud insane parlamentum*, but it has been shown that *insane* was a later insertion.

Madras, port in SE India, on the Bay of Bengal; the capital of Tamil Nadu state. Founded in 1639, the city grew around a British post, Fort St George, and developed as a trading centre. It was besieged and occupied by the French in 1746, but returned to Britain by the Treaty of Aix-la-Chapelle in 1748. The harbour was constructed from 1862 to 1901; there is a university, founded in 1857. Nearby is Mt St Thomas, the legendary site of the martyrdom in the 1st century AD, of THOMAS the apostle who is believed to have been buried in Madras. Exports: hides, skins, oilseeds, cotton, chrome, magnesite. Industries: textiles, railway stock, bicycles, printing, motor vehicles, films. Pop. 2,469,449.

Madrid, capital city of Spain, and Madrid province, on the Manzanares River. Taken from the Arabs in 932 by Ramiro II of León, it was captured by Alfonso VI in 1083. In 1561 PHILIP II made Madrid his official residence and the capital of Spain. The French occupied the city during the PENINSULAR WAR (1808–14). Madrid remained loyal to the Republican government throughout the SPANISH CIVIL WAR, and suffered several air attacks. The city's surrender, in March 1939, ended the war. Places of interest include the Royal Palace (1739–64), now a museum, a national library, the University of Madrid (1499) and several other museums, notably the Museo del Prado. Industries: plastics, wine, brewing, publishing, film production, optical instruments, electrical appliances, radio and telephone equipment, jewellery, leather goods. Pop. (1976 est.) 3,751,000.

Madrigal, form of unaccompanied vocal music originating in Italy in the 14th century. Early madrigals feature two or three parts and a highly ornamented upper part. Later more contrapuntal forms in the 16th and early 17th centuries featured love lyrics, no set form, and four or five voices. The "classical" period (c.1540–80) was dominated by Italian masters (GABRIELI; PALESTRINA) and Flemish composers such as LASSO. The late period (c.1580–1620) was dominated by Italians such as Carlo Gesualdo and MONTEVERDI and English composers such as BYRD, GIBBONS, MORLEY and WHEELER.

Madroña, also called laurelwood, a broad-leaved, evergreen tree native to British Columbia, Canada, and N USA. It has small, white flowers and orange-red fruit. Height: 15–30m (50–100ft). Family Ericaceae; species *Arbutus menziesii*.

Madura, island in Indonesia, separated from the NE coast of Java by the Madura Strait; the capital is Pamekasan. Administered by Java from the 11th century, it came under Dutch influence in the 18th century and was made a Dutch residency in Java in 1885. It became part of the Republic of Indonesia in 1950. Its industries include salt mining, fishing and oil refining. Area: 5,473sq km (2,113sq miles). Pop. 1,858,200.

Madurai, city in S India, 435km (270 miles) SSW of Madras, on the River Vaigai. It served as the capital of the Pandya dynasty (5th century BC – 11th century AD), and the Nayak kingdom (c.1550–1736). The city passed to the British in 1801. It contains the massive Meenakshi Temple and has a university (1966). Industries, weaving, silk and muslin dyeing, brassware, wood carving, tourism. Pop. (1971) 549,144.

Maeander, old name of the Büyük Men-

deres River in W Turkey. It rises W of Afyonkarahisar and flows to the Aegean Sea. The word "meander" is derived from the river, which in its lower reaches has a twisting and looping course. Length: approx. 400km (250 miles).

Maccenas, Gaius (c.70 BC–8 BC), Roman politician, diplomat and art patron. He played a major role in the wars which established the Emperor Augustus and then became an important political figure. He is chiefly remembered for having used his great wealth to support artists and poets such as HORACE and VIRGIL.

Maekawa, Kunio (1905–), Japanese architect. He studied under LE CORBUSIER in Paris (1928–30), and was a pioneer of modern architecture in Japan, building Dairen Town Hall (1938) and the Metropolitan Festival Hall, Tokyo (1958–61). Kenzo TANGE worked in his studio prior to WWII.

Maelzel, Johann (1772–1838), German inventor, reputedly of the METRONOME and of other contrivances including an "automatic" chessplayer (which really contained a chess master, William Schlumberger).

Maes, Nicolaes (1634–93), Dutch genre and portrait painter, pupil of REMBRANDT at Amsterdam. His early works include *Girl at the Window* (1655) and *Old Woman Scraping Parsnips* (1655). After a period spent in Antwerp (1665–67) he turned to fashionable portraiture, with a marked change of style which showed more affinities with the work of VAN DYCK than of Rembrandt.

Maestricht. See MAASTRICHT.

Maeterlinck, Maurice (1862–1949), Belgian playwright. In a period when realism was becoming theatrically fashionable, he explored the symbolic and spiritual nature of drama and his ideas were later to influence the THEATRE OF SILENCE. His plays include *The Princess Maleine* (1889), *Pelleas and Melisande* (1892) – the source of DEBUSSY's opera of the same name – and *The Blue Bird* (1909), first produced in Moscow by STANISLAVSKY. Maeterlinck won the 1911 Nobel Prize in literature.

Maeve. See MAB.

Mae West, nickname for the inflatable life-jacket used by Allied airmen in WWII. It was named after the famous film star, Mae WEST.

Mafeking, Siege of, incident in the South African (Boer) War, in which the British forces under Robert BADEN-POWELL were besieged by the Boers from Oct. 1899 to May 1900, at the garrison of Mafeking on the River Molopo, in Cape Colony. News of the successful relief of Mafeking was greeted with popular jubilation in London.

Maffei, Francesco Scipione, marchese di (1675–1755), Venetian man of letters. He wrote a successful tragedy *Merope* (1713), and founded the *Giornale dei Letterati d'Italia* in 1710. He wrote many books of history and literary criticism.

Mafia, name given to organized groups of Sicilian bandits. Originating in feudal times, when such bandits were hired as bodyguards, the contemporary assumption was that the legal authorities were corrupt and that justice must be achieved directly, as in the VENDETTA. Through emigration the Mafia spread to the USA in the early 20th century where it later became involved in organized crime, especially during the era of PROHIBITION.

Magadha, kingdom in ancient India that comprised the present-day Gaya and Patna districts of Bihar. Between the 6th century BC and the 8th century AD it was the focus of larger empires or kingdoms. Strategically located in the Ganges valley, it had control of river trade and communications. Its capital was originally at Rajgir, but was later removed to Pataliputra. See also pp.1194, 1194.

Magdalene, Mary. See MARY MAGDALENE. **Magdalenian culture**, archaeologically the most recent culture of the PALAEOLITHIC AGE. Named after the cave of La Madeleine in the Dordogne region of France, where the first remains were found, the culture includes the great cave painters of Altamira and LASCAUX. Magdalenians also made fine tools, weapons

and artistic carvings in stone and bone. In Britain, Kent's cavern in Devon and Cresswell Crag in Derbyshire are among the few proved Magdalenian sites.

Magdalen (Madeleine) Islands, island group in the central Gulf of St Lawrence, E Quebec province, Canada. Fishing is the main industry. Area: 264sq km (102sq miles). Pop. (1970) 13,305.

Magdeburg, port in w East Germany, on the River Elbe, 132km (82 miles) wsw of Berlin; capital of Magdeburg district. In the 13th century the city was granted a charter by the archbishop of Magdeburg a prince of the HOLY ROMAN EMPIRE. The charter served as a model for hundreds of medieval towns in Germany. During the THIRTY YEARS WAR the city was burned and sacked and most of the population perished. Industries: steel, paper, textiles, chemicals, machinery. Pop. (1975) 276,580.

Magellan, Ferdinand (c.1480–1521), Portuguese explorer who commanded the first expedition to circumnavigate the globe; the expedition was completed after his death. Probably wounded while exploring the East Indies, he took part in the taking of Malacca which made possible the exploitation of the vast trade potential in the Spice Islands (or Moluccas). He fell from the King of Portugal's favour and moved to Spain, where he organized an expedition to reach the Spice Islands by sailing west. Leaving with five ships in 1519, he reached Brazil and sailed south, seeking a westward passage. In November 1520 he sailed through the straits which today bears his name and reached the Philippines in March 1521, where he was killed by natives. Two of his ships reached the Moluccas, but only one returned to Spain, thus establishing a new route between Europe and Asia. See also pp.1368, 1368.

Magellan, Strait of, channel at the s tip of South America, between Chile and Tierra del Fuego, connecting the s Atlantic Ocean with the s Pacific Ocean. It was charted in 1520 by Ferdinand MAGELLAN. It follows a tortuous course, and navigation is hampered by fog and wind, but it was an important shipping route before the completion of the Panama Canal (1914). Punta Arenas is the only large town on the strait. Length: approx. 560km (350 miles).

Magellanic Clouds, two small satellite galaxies of the MILKY WAY GALAXY, visible in skies around the south pole as misty stellar concentrations. The Small Cloud (Nubecula Minor), located in the constellation of Tucana, is irregular; the Large Cloud (Nubecula Major), mostly in the constellation of Dorado, is vaguely spiral. Their distance is about 150,000 light-years away. See also pp.998–999, 1017.

Magenta, also called fuchsine, reddish purple dyestuff, also the name of its colour, apparently so called after the Battle of Magenta, N Italy, in 1859.

Maggiore, Lake, lake in N Italy and s Switzerland bordered by the Swiss Alps. It is crossed N to S by the River Ticino and fed by the Maggia, Toce and Tresa rivers. The Borromeo Islands are off the w shore. Area: 212sq km (82sq miles).

Maggot, name commonly given to the legless LARVA of a fly. It is primarily used to describe those larvae that infest food and waste material; others are generally called grubs. See also DIPTERA.

Maghreb, Arabic term for NW Africa, generally applied to Morocco, Algeria and Tunisia but actually referring to the Mediterranean coastal strip. The Atlas Mts separate the Maghreb from the rest of the African continent and give it a Mediterranean climate and economy. It was united briefly under the MUSLIMS in the 8th and 12th centuries.

Magi, hereditary priestly class of ancient Persia, responsible for religious ceremonies. In ZOROASTRIANISM the magi were astrologers and practitioners of the occult. The "wise men from the East" of Matthew 2:1, 2 may have been Zoroastrian priests.

Magic, use or apparent use of natural or spirit forces to produce results that are logically impossible. Belief in magic, and

that certain actions influence supernatural or occult forces, is associated mainly with primitive societies, although traces can still be found (eg SUPERSTITIONS) in highly developed countries. There are several kinds of magic; black magic makes use of evil spirits and delights in supreme selfishness and in evil for evil's sake; contagious magic is belief in the lasting effect of association between a person and his possessions; and homeopathic or sympathetic magic is belief that models or likenesses of a person can influence or even control him. The term magic is also used of the work of the stage magician or conjurer, who by means of illusions produces results or effects that are apparently impossible. See also OCCULT; SORCERY; WITCHCRAFT; pp.1890–1891.

Magic eye, type of ELECTRON TUBE used in radio sets. Depending on its design it may be used either as a tuning indicator or to detect changes in voltage and current.

Magic Flute, The, opera by Wolfgang Amadeus MOZART, with German libretto by Emanuel Schikaneder based on a tale by Christoph WIELAND. Its Vienna première (1791) was conducted by Mozart. The intricate plot has several levels, the religious theme reflecting the controversial Masonic beliefs of both composer and librettist. See also p.1598.

Magnit Line, series of fortifications constructed by France on its NE border with Germany, to prevent a quick German attack on France's essential frontier industries. It was named after André Magnit (1877–1932) who, as French Minister of War (1929–31), directed its construction. It covered the French-German border, but not the French-Belgian border which the German army successfully attacked in 1940. It was still intact when France surrendered in 1940.

Magistrate, in general any one invested by the state with authority to administer the law. The name comes from the Roman public office, the *magistratus*. In Britain a magistrate is a judicial officer, inferior to a judge, who presides over a MAGISTRATE'S COURT. There are two kinds, the unpaid JUSTICE OF THE PEACE and, in large towns, the stipendiary magistrate. Unlike the lay justice of the peace, a stipendiary magistrate must be a barrister or solicitor of seven years' standing.

Magistrate's court, court presided over by a MAGISTRATE. It is the court of the first instance: every person charged with an offence appears first at a magistrate's court, and at a preliminary hearing the magistrate or JUSTICE OF THE PEACE decides whether his own jurisdiction is sufficient or whether to send the case on to a higher court, or whether there is insufficient evidence available to justify court proceedings at all. Generally, however, the court deals with minor civil and criminal charges, the most frequent being those arising from motoring offences, drunk and disorderly behaviour, and petty theft.

Maglemosian culture, in archaeology, Northern European culture of the middle MESOLITHIC AGE, named after a site in Denmark. In common with other mesolithic peoples, Maglemosians lived by fishing and food gathering. Their tools included bone harpoons, microliths (small flint tools) and stone axes for felling trees. Maglemosians are believed to have migrated from Denmark to Britain across what is now the southern North Sea but was then marshland.

Magma, molten material that produces all IGNEOUS ROCKS. The term refers to this material while it is still under the Earth's crust. In addition to its complex silicate composition, magma contains gases and water vapour. It is believed to exist in separate chambers beneath the Earth's surface. See also pp.208–209.

Magna Carta (1215), "Great Charter" of English constitutional history. It was issued by King JOHN, under compulsion from his barons, at Runnymede, on 15 June, 1215. John's financial exactions had united clergy and laity in demands for guarantees of their rights and privileges. The 63 clauses into which Magna Carta is traditionally divided protected the rights of the Church, the feudal lords, the lords'

subtenants and the merchants, and regulated royal privileges, the administration of justice, and the behaviour of royal officials. For subsequent generations Magna Carta became the basis and epitome of the subject's rights, protecting him and limiting his sovereign's prerogatives. See also pp.1312–1313.

Magna Graecia, area occupied by a group of ancient Greek cities along the coast of s Italy. An important centre of Greek civilization, the Pythagorean and Eleatic systems of philosophy originated there. The chief cities included Cumae (founded 750 bc) and Tarentum. The group declined in importance after 500 bc.

Magnani, Anna (1908–73), Italian film actress, b. Egypt. She worked as a nightclub entertainer and a repertory actress before starting her film career in *The Blind Woman of Sorrento* (1934). She was best known for her roles in Roberto Rossellini's *Open City* (1945), Jean Renoir's *The Gold Coach* (1952) and perhaps most especially for her first Hollywood film, Tennessee Williams' *The Rose Tattoo* (1955), for which she won an Oscar as the best actress.

Magnesia, magnesium oxide, MgO, white, neutral, stable powder formed when magnesium is burned in oxygen. It is used industrially in firebrick, and medicinally in stomach powders. Magnesium carbonate, found as the mineral magnesite and also used as an antacid, is also often called magnesia.

Magnesite, carbonate mineral, magnesium carbonate (MgCO₃). It is an alteration product of CALCITE or DOLOMITE in sedimentary rocks and is found in microcrystalline masses and crystals like Iceland spar. Magnesite is white, colourless or of light tint, with a glassy to dull lustre. Hardness 3.5–5; s.g. 3.1.

Magnesium, common metallic element (symbol Mg) of the ALKALINE-EARTH group, first isolated in 1808 by Sir Humphrey DAVY. Its chief sources are MAGNESITE, DOLOMITE and other minerals. Magnesium burns in air with an intense white flame and is used in flashbulbs, fireworks and incendiaries. Magnesium alloys are used in aircraft for their lightness. Chemically, the element is similar to CALCIUM. Properties: at no. 12; at wt. 24.312; s.g. 1.738; m.p. 648.8°C (1,200°F); b.p. 1,090°C (1,994°F); most common isotope Mg²⁴ (78.7%).

Magnesium processing, production of pure magnesium metal by the ELECTROLYSIS of molten magnesium chloride (MgCl₂), processed mainly from sea water, or by the direct reduction of its ores, usually MAGNESITE, with a suitable reducing agent such as ferrosilicon. See also pp.888, 889.

Magnet, object that generates a magnetic field in which other magnetizable objects experience a force. Among the first were lodestones. Later, strong magnetic materials were recognised as containing either iron, cobalt, nickel or their mixtures. A typical permanent magnet is a straight or horseshoe-shaped magnetized iron bar, the ends of which are described, respectively, as the north and south magnetic poles. The Earth is a giant magnet, its magnetic lines of force being detectable at all latitudes. Much stronger than permanent magnets are electromagnets, used for raising heavy steel weights and scrap. Strongest of all are superconducting magnets in which special alloys are cooled to very low temperatures. See also pp. 870–871.

Magnetic bottle, configuration of magnetic fields used to contain the PLASMA in a Fusion Reactor or experimental device. It applies particularly to a linear configuration in which the ends are stoppered with magnetic mirrors, where a very high magnetic field causes the plasma to be reflected.

Magnetic disturbance, change in the shape of the MAGNETOSPHERE. The most commonly observed phenomenon that results from this is the polar AURORA and the interference in radio and television communications.

Magnetic equator, that part of the Earth's magnetic field where a finely-balanced

Ferdinand Magellan discovered the strait that was later named after him.

Lake Maggiore: important cities on its shores include Locarno and Palanza.

Maggots, usually white, move by wriggling or flipping their bodies.

Magna Carta: part of the stone structure erected at Runnymede in commemoration.

Magnetic field

magnetic needle will remain absolutely horizontal. Because of the Earth's magnetic asymmetry, the magnetic equator does not coincide with the geographical equator.

Magnetic field, region surrounding a magnet or a conductor through which a current is flowing, in which magnetic effects, such as the deflection of a compass needle, can be detected. A magnetic field can be represented by a set of lines of force (flux lines) emanating from the poles of a magnet or running around a current-carrying conductor. These lines of force can be seen if iron filings are sprinkled on to a sheet of paper below which a magnet is placed. The filings align themselves with the lines of force, the density of the lines being greatest where the field is strongest. See also pp.196-197, 870-877.

Magnetic flux. See FLUX, MAGNETIC.

Magnetic induction. See INDUCTION.

Magnetic mine, form of non-contact mine usually laid on the sea-bed. It contains a delicate magnetic needle sufficiently sensitive to respond to the change in magnetic field when a ship passes overhead. This change causes an electrical contact to close and detonate an explosive charge.

Magnetic permeability, physical property of magnetic materials. It is the ratio of magnetic flux density in a material to the strength of the magnetic field that induces this flux. In physics, magnetic permeability is represented by the symbol μ .

Magnetic poles, two regions in which the magnetism of a magnet appears to be concentrated. If a bar magnet is suspended to swing freely in the horizontal plane one pole will point north; this is called the north-seeking or north pole. The other pole, the south-seeking or south pole, will point south. Unlike poles attract each other; like poles repel each other. See also pp.870-877.

Magnetic recording, formation of a record of sounds on a wire or tape by means of a pattern of magnetization. In a tape recorder, plastic tape impregnated with iron oxide is fed past an electromagnet, which is energized by the amplified currents produced by a microphone. By ELECTROMAGNETIC INDUCTION, variations in magnetization, representing the oscillating current produced by the sound, are induced in, and retained by, the particles of iron oxide on the tape. For playing back the tape is fed past a similar electromagnet, which converts the patterns into sound that is in turn fed to an AMPLIFIER and LOUDSPEAKER. See also pp.642-643, 874.

Magnetic resonance, absorption of radio and microwave frequencies by atoms placed in a magnetic field. Devices called electron-spin RESONANCE (ESR) spectrometers use microwaves in the investigation of atoms and molecules. Nuclear-magnetic resonance (NMR) spectrometers use radio frequencies for chemical analysis and research in nuclear physics. See also pp.904-905, 905.

Magnetic storm, or geomagnetic storm, disturbance in the Earth's magnetic field. Since the field encompasses all the Earth, the effects of such a storm are global: AURORAS are seen, both in areas where such displays are normal and in others as well; radio signals are disturbed. There is a regularly reappearing cycle of such magnetic storms as well as irregular ones.

Magnetism, properties of matter and of electric currents associated with a field of force (MAGNETIC FIELD) and with a north-south polarity (MAGNETIC POLES). All substances possess these properties to some degree as orbiting electrons in their atoms produce a magnetic field in the same way as an electric current produces a magnetic field; similarly, an external magnetic field will affect the electron orbits. All substances possess weak magnetic (diamagnetic) properties and will tend to align themselves with the field but in some cases this diamagnetism is masked by the stronger forms of magnetism: paramagnetism and ferromagnetism. Paramagnetism is caused by electron spin and occurs in substances having unpaired electrons in their atoms or molecules. The most important form of magnetism, ferromag-

netism, occurs in substances such as iron and nickel, which are capable of being magnetized by even a weak field due to the formation of tiny regions, called domains, that behave like miniature magnets and align themselves with an external field. These domains are formed as a result of strong interatomic forces caused by the spin of electrons in unfilled inner electron shells of the atoms. Permanent magnets, which retain their magnetization after the magnetizing field has been removed, are ferromagnetic. Electromagnets have a ferromagnetic core around which a conducting coil is wound. The passage of a current through the coil magnetizes the core. See also pp.196-197, 268, 870-877.

Magnetite, oxide mineral, ferrous and ferric iron oxide (FeFe_2O_4). The most magnetic mineral, it is a valuable iron ore, and is found in igneous and metamorphic rocks. It displays cubic system octahedral and dodecahedral crystals, and granular masses are also common. It is black, metallic and brittle. Hardness 6; s.g. 5.2. Permanently magnetized deposits are called LODESTONES.

Magnetochemistry, branch of chemistry concerned with investigating the magnetic properties of compounds. In particular, magnetic measurements made on transition-metal complexes, which are often paramagnetic due to unpaired electrons, give information on their structure and electron configuration.

Magnetohydrodynamics (MHD), the study of the motion of fluids, usually PLASMAS, under the influence of electric and magnetic fields. It is of great importance in the development of nuclear reactors, generators, particle accelerators, and in space technology. An MHD generator consists of a plasma fluid flowing in a magnetic field, thus generating an electric current. The fluid is seeded with easily ionized elements (such as potassium) to increase the power yield.

Magnetometer, instrument for measuring or comparing MAGNETIC FIELD strengths. It usually consists of a short bar magnet with a long nonmagnetic pointer attached to its centre so that it is at right-angles to the axis of the magnet. The magnet is pivoted, like a compass needle, at its centre and the pointer travels over a calibrated scale. Field strengths of magnets are compared by measuring the deflections of the pointer. See also p.197.

Magnetosphere, region in space in which the magnetic field of the Earth exerts a significant influence. It has two parts, or lobes; closer to the Sun is larger and blunt; the other lobe is an elongated tail extending several hundred times the radius of Earth into space. The shape of the magnetosphere is determined by the stress exerted on the magnetopause (outermost edge) by the SOLAR WIND. See also p.197.

Magnetron, vacuum tube containing an ANODE and a heated CATHODE. The flow of electrons from cathode to anode is controlled by an externally applied magnetic field. When incorporated in a resonant system, a magnetron can act as an OSCILLATOR. It can generate high frequencies and high power in short bursts, and is used in radar sets and microwave ovens.

Magnification, measure of the enlarging power of a telescope or microscope given as the size of the image of an object produced by the instrument, relative to the size of the object viewed with the unaided eye. In an astronomical telescope magnification is equal to the ratio of the FOCAL LENGTH of the objective to the focal length of the eyepiece. A very short focal length eyepiece increases the magnification but reduces the field of view and produces a diffuse and often distorted image. See also p.852.

Magnifying glass, convex lens that increases the apparent size of objects examined through it, usually between two and ten times. Maximum magnification is obtained when the object is situated just within the focal length of the lens. A magnifying glass generally has a handle attached to a circular clip holding the lens. **Magnitude**, in astronomy, numerical value expressing the brightness of a cele-

stial object on a logarithmic scale. Apparent magnitude is the magnitude as seen from earth, either determined by eye, photographically or photometrically, and it ranges from positive through zero to negative values, the brightness increasing rapidly as the magnitude decreases. First magnitude is exactly 100 times brighter than sixth magnitude (just visible to the naked eye). Absolute magnitude indicates intrinsic luminosity and is defined as the apparent magnitude of an object as a distance of 10 parsecs (32.6 light-years) from the object. See also p.992.

Magnolia, any of about 40 species of trees and shrubs native to North and Central America, India, China and Japan. Valued for their showy flowers of white, yellow, purple or pink, they are mostly deciduous. Some species are evergreen and can withstand cooler climates. Height: to 30m (100ft). Family Magnoliaceae.

Magnum, from the Latin meaning something great, a bottle containing about 145cl of wine or spirits, corresponding to about two average-sized bottles. Magnums are most commonly used in the bottling of champagne.

Magnus, kings of Norway. Magnus I (1024-47), called "the Good", was King of Norway (1035-47) and of Denmark (1042-47). He was the son of Olaf II. He made a treaty with Hardekanute of Denmark in which each named the other his heir. Magnus succeeded Hardekanute and claimed the throne of England as well, but he was too busy crushing a Danish revolt to press his claim. He shared the Norwegian kingdom with his uncle, Harald III, after 1045. Magnus II Haraldsson (1035-69) reigned jointly with his brother Olaf III from 1066-69, after which Olaf became sole ruler. Magnus III (1073-1103) was called "Barefoot" because he wore a kilt. He ruled from 1093-1103, continuing to extend the Norwegian empire. He was killed in an ambush in Ireland. Magnus IV (c.1115-39), called "the Blind", ruled jointly with Harald IV Gille (1130-35) until Harald IV imprisoned, maimed and blinded him in 1135. After his release from prison, he was killed in battle with Harald's sons. Magnus V Erlingsson (1156-84) reigned from 1163-84 as Norway's first crowned King. He fled to Denmark (1179) after his defeat by Sverre Sigurdsson who had claimed the throne. Magnus died in battle attempting to regain the throne. Magnus VI (1238-80), called "the Law Mender", succeeded his father, Haakon IV (1263-80). He made peace with the Scots by ceding the Hebrides and the Isle of Man (1266). He introduced a new legal code whereby a crime was an offence against the state rather than against the individual. He created a new governing class and fixed the law of succession. He also reached an agreement with the church delimiting the powers of church and state. Magnus VII Eriksson (1316-74) was king of Norway from 1319-43 and of Sweden, as Magnus II, from 1319-63. Educated in Sweden, he neglected the interests of Norway and his son, Haakon VI, became King of Norway in 1355. In Sweden, he was deposed (1356-59) by another son, Eric XII, and he lost Sweden to Denmark (1360). He was deposed finally in 1363. During his reign, codification of Swedish law was completed.

Magog. See GOG AND MAGOG.

Magpie, bird of the crow family, closely related to the JAY, found mostly in the Northern Hemisphere. The common magpie (*Pica pica*) has a chattering cry, a long greenish-black tail and short wings. It has a clearly defined white underside with black above. Length: 46cm (18in). Family Corvidae.

Maggie moth, or currant moth, slow-flying white, black, and yellow moth of the geometrid family, (Geometridae). Its larvae, yellow with black spots, feed on gooseberries, currants, sloes, plums and cherries. Wing span 4cm (1.6in). Species *Abraxas grossulariata*.

Magritte, René (1898-1967), Belgian painter. A leading Surrealist, he was at first influenced by ORPHISM and FUTURISM;

later, he evolved a realistic style. His early works include *Rough Crossing* (1926) and *Threatening Weather* (1928). His mature works, include *The Liberator* (1947) and *L'Empire des Lumières* (1954). See also p.1685.

Magyars, the people associated with the state of Hungary, descendants of Finno-Ugric and Turkic tribes who mingled with AVARS and SLAVS in the 9th century. They conquered large areas of Germany until defeated by Otto I in 955. Although incorporated into the AUSTRIAN EMPIRE from the 16th century, the fiercely independent Magyars demanded special minority rights to preserve their language and culture, achieving first the Dual Monarchy in 1867 and then independence in 1918.

Mahabharata, the "Great Epic of the Bharata Dynasty", a poem of almost 100,000 couplets, written c.400 BC-c. AD 200. It is considered one of India's two major epics, with the Ramayana. The verse is important both as literature and HINDU religious instruction. The plot revolves around a power struggle between two related families. It was compiled into its present form c. AD 400.

Mahadevi. See DEVI.

Mahagony, *The Rise and Fall of the City of*. See RISE AND FALL OF THE CITY OF MAHAGONY.

Maharaja, title given to native Indian princes who retained a certain autonomy under British rule. The title meant "great king" and distinguished the bearer from those who held the title "raja", who were native rulers or high ranking Hindus.

Maharashtra, state in W India, on the Arabian Sea coast; BOMBAY is the capital. It is India's third largest state, in both area and population. Founded in 1960 by the separation of Bombay State into the Marathi and Gujarati (now Gujarat state) linguistic areas, it is composed of five distinctive subregions: Konkan, Deccan, Khandesh, Marathwada and Vidarbha. Its products include cotton, textiles, chemicals and sugar. Area: 307,762sq km (118,827sq miles). Pop. (1971) 50,412,235.

Mahatma, person of special holiness. The term is used by Hindus; the original Sanskrit means "great soul" but has no specific place in organized Hindu religion. The most famous Mahatma of modern times was Mohandas GANDHI.

Mahayana Buddhism, one of the two main schools of Buddhism, the other being HINAYANA or Theravada. Mahayana ("greater vehicle") Buddhism was dominant in India from the 1st to the 12th century and is now prevalent in Tibet, China, Korea and Japan. Unlike the Hinayana ("smaller vehicle") school, it conceives of the Buddha as divine: a transcendental being, a supreme God above all gods who is the embodiment of the absolute and eternal truth. The Mahayana school stresses the importance of faith and devotion to the Buddha and compassion and charity to all creatures. See also p.1915.

Mahdi, messianic Islamic leader. The title is usually used to refer to Muhammad Ahmad (1844-85) of the Sudan, who declared himself to be the Mahdi in 1881 and led the attack on KHARTOUM (1885) during which Gen. GORDON was killed. His followers were eventually defeated at OMDURMAN (1898).

Mah Jongg, game that is believed to have originated in China several centuries BC. Players use 144 decorative rectangular tiles, made of wood, ivory or plastic. There are 108 suit tiles, 28 honour tiles and 8 flower or season tiles. There are three suits and the basic object is to accumulate winning combinations by exchanging and discharging tiles or drawing from a common bank. Although two to six players may participate, four is the usual number. **Mahler, Gustav** (1860-1911), Austrian composer and conductor. From the 1880s he was famous as an opera conductor. His compositions reflect the profound influence of WAGNER's music. Many of his works combine orchestral with vocal and choral parts and contain innovative instrumental effects requiring massive orchestras. Famous among his works are

the ten symphonies (the last left as a full-length sketch at his death), *Das Lied von der Erde* (1908) for orchestra with contralto and tenor solo, and the song cycle *Kindertotenlieder* (1902).

Mahogany, any of numerous species of tropical deciduous trees and their wood, which is valued for furniture making. It has composite leaves, large clusters of flowers, and winged seeds. Mahogany is native to the Americas. Height: to 18m (60ft). Family Meliaceae. See also pp.714, 715.

Mahonia, genus of evergreen shrubs found in Asia and parts of the USA; especially the Oregon grape, *M. aquifolium*. It bears yellow flowers and edible blue berries. Family Berberidaceae.

Mahrattas (Marathas), Hindu warriors of w central India who rose to power in the 17th century. They extended their rule throughout w India by defeating the MUGUL empire and establishing a Mahratta confederation of states. The Mahrattas successfully resisted British supremacy in India during the 18th century, but internal struggle weakened their power and they were defeated by the British in 1818.

Maiden Castle, site of one of the largest hillforts in Britain, 3km (2 miles) sw of Dorchester, Dorset. Excavated by Sir Mortimer WHEELER (1934-37), it was occupied and altered by various peoples from NEOLITHIC times, and at some point before 50 BC came under the control of the BELGAE. During the Roman conquest VESPASIAN's legions sacked the fort. The slain defenders were buried near its east gate, and the remaining population was moved to a site of Durnovaria (Dorchester). Maiden Castle lay abandoned until the 4th century, when a Romano-British temple was built there. See also pp.394, 395.

Maidenhair fern, dainty fern found in limestone areas in Europe and N America. The wedge-shaped leaves are borne on slender, shiny black stalks. Leaves of most species are pink as they unfold, then turn pea-green. Height: 25-50cm (10-20in). Family Adiantaceae; species *Adiantum capillus-veneris*.

Maidenhair tree. See GINKGO.

Maidstone, county district in central KENT, England, created in 1974 under the Local Government Act (1972). Area: 395sq km (152sq miles). Pop. (1974 est.) 124,700.

Maiduguri, city in NE Nigeria. Founded by the British in 1907 as a military post, it is now a transport centre for road, rail and air routes. The principal industry is the manufacture of leather goods from crocodile skins. Pop. (1975 est.) 189,000.

Mailer, Norman (1923-), US novelist. His first novel, *The Naked and the Dead* (1948), the story of a small group of infantrymen who survive the invasion of a Japanese-held Pacific island, is recognized as one of the most realistic of American WWII books. His other novels include *Barbary Shore* (1951), *The Deer Park* (1955), a savage satire on Hollywood, and *An American Dream* (1965).

Maillart, Robert (1872-1940), Swiss engineer noted for his reinforced-concrete bridges. Maillart's bridges have a slenderness based on integration of arch, roadway and stiffening girder into a single structure. Most famous is Schwandbach Bridge at Schwarzenburg.

Maillol, Aristide (1861-1944), French sculptor. Initially a painter and tapestry designer, he concentrated on sculpture after 1900 and his work was almost exclusively of the female nude. He turned away from the fluid forms and emotive Romanticism of RODIN and towards the ideals of Classical Greek sculpture. Typical of his work are *Mediterranean* (1901) and *Night* (1902) which are marked by subtlety and clear serene surfaces.

Mail order, shopping practice in which goods are selected, ordered, delivered and paid for by post without the purchaser having to go to a shop. The larger mail order houses sell as wide a range of goods as does any large department store. For them their greatest asset is their catalogue, illustrated with colour photographs of items on sale together with such information as sizes, colours, time for delivery,

prices and credit terms. Some manufacturers of single commodities, such as books and records, do most of their business through mail order. In many countries, methods of mail order selling are governed by rigid rules.

Maiman, Theodore Harold (1927-) US physicist who, following on the work of Sir Charles TOWNES on the MASER, successfully built the first optical maser, which he called the LASER, in 1960. See also p.862.

Maimonides, Moses, or Moses ben Maimon (1135-1204), Jewish philosopher, rabbi and Hebrew scholar, b. Spain. As a youth he was attracted to Aristotelian philosophy, which influenced his well-known *Guide of the Perplexed*. He emigrated to Egypt in 1159 after the capture of his native Córdoba by a tyrannical Muslim sect. In Cairo he became court physician to SALADIN and was the recognized leader of Egyptian Jewry. The *Mishneh Torah*, considered his greatest achievement, is a systematic compilation of Jewish oral law. He also wrote, in Arabic, *The Book of Precepts and Commentary on the Mishna, Illumination*.

Maine, state in extreme NE USA, largest of the NEW ENGLAND states, bounded by Canada and the Atlantic Ocean. The land is generally rolling country with mountains in the w and some 2,500 lakes throughout the state. The chief rivers are the St John, Penobscot, Kennebec and the St Croix. Economic development has been hampered by poor soil and a short growing season, geographic remoteness and a lack of coal and steel. Dairying, poultry raising and market gardening are the most important farming activities. Potatoes, hay, apples and oats are the chief crops. Manufacturing includes wood pulp and paper, leather goods, food products, textiles and transportation equipment. Other industries include fishing, timber (four-fifths of the state is afforested), printing and publishing. The chief cities are Augusta, the state capital, Portland, Lewiston and Bangor. Scattered English settlements were founded along the coast after 1600, when the name "Maine" was used to distinguish the mainland from the numerous rocky islands. In 1639 the province was granted a charter by Charles I. It later became part of the MASSACHUSETTS BAY COLONY and then of MASSACHUSETTS State until it was admitted to the Union in its own right in 1820. Area: 86,026sq km (33,215sq miles). Pop. (1977 est.) 1,084,000. See also p.2161.

Mainprise, pledge given in England in the Middle Ages by a third party that a person accused of a criminal act would appear in court. The accused was then not detained in prison. If the accused failed to present himself at court, the person giving the pledge, the mainpernor, was fined. Mainprise is thus the origin of the modern system of bail.

Main sequence, in astronomy, band on the HERTZSPRUNG-RUSSELL DIAGRAM. Most stars, including the Sun, are located in this band when their spectral class is plotted against their luminosity. The position of a star on the main sequence indicates that it is typical of its class. See also pp.978-980, 979.

Maintenon, Françoise d'Aubigné, Marquise de (1635-1719), mistress and second wife of LOUIS XIV of France. She was entrusted with the care of the king's illegitimate children by their mother, Mme DE MONTESPAN, whom she gradually replaced in the king's affections. She was a deeply religious woman and, after her secret marriage to the king, became a strong influence on court life.

Maisonneuve, Paul de Chomedey, Sieur de (1612-76), founder and first governor of MONTREAL. A soldier, he fought in European wars before being sent by the Société de Notre Dame de Montréal to take possession of their land in the New World. With a party of soldiers and settlers, he landed on Montreal Island, where he established the settlement of Ville-Marie, later Montreal.

Maitland, William (c.1528-73), Scottish statesman. Appointed MARY, QUEEN OF

SCOTS' Secretary of State in 1560, he tried to unite Scotland and England by ensuring Mary's right of succession to ELIZABETH I, and lent his support variously to whichever faction seemed likely to make this possible. He died in prison after holding Edinburgh Castle (1571-73) against JAMES I's supporters.

Maize, also called corn or sweet corn, cereal plant of the grass family Gramineae, and its edible grain. It is the key cereal in subtropical zones. Edible seeds grow in rows upon a cob, protected by a leafy sheath. Height: to 5m (16 ft). Species *Zea mays*. See also pp.652, 676-677, 684, 692, 713, 751, 754.

Majolica (Maiolica), tin-glazed earthenware produced from the 14th century, mainly in Italian centres such as Faenza, Florence and Savona; it is also referred to as FAIENCE and DELFT ware. Majolica is characterized by the use of cobalt blue, copper green, manganese purple, antimony yellow and iron red; the blue and purple glazes were used primarily for outlined designs. A white tin enamel was employed, either for overall white, or for highlights.

Major, one of two "modes" of the DIATONIC scale, the other being the MINOR. It is based on the 13th-century Ionian mode and, as part of the diatonic system, became established in European music at the end of the 15th century. The intervals between the notes of an ascending major scale are: two tones and a semitone, then three tones and a semitone (eg all the white notes on a piano between one C and the next C above).

Major Barbara (1905), a three-act comedy by George Bernard SHAW. The heroine joins the SALVATION ARMY to fight poverty and is chagrined to find that people like her father, a munitions manufacturer, are poverty's major supporters. See also p.1692.

Majorca (Mallorca), Spanish island, largest of the BALEARIC ISLANDS, in the w Mediterranean, approx. 233km (145 miles) off the Spanish coast; the capital is Palma. The island was taken by the MOORS in 797. It was made the kingdom of Majorca from 1213 to 1276, by James I, King of Aragon. The island served as a base for Italian forces opposing the LOYALISTS during the SPANISH CIVIL WAR. Products: olives, figs, oranges, lemons, almonds. Industries: tourism, fishing, lead, iron and coal mining, limestone and marble quarrying, wine, jewellery and handicrafts. Area: 3,639sq km (1,405sq miles). Pop. (1970) 460,030.

Majuba, Battle of (27 Feb. 1881), the decisive Boer victory over the British in the first Anglo-Boer War. The 600 British soldiers, under Gen. Colley, were exposed against the skyline of the hill where they were encamped and were overwhelmed by 150 Boers under Gen. JOUBERT. Two hundred British were killed or wounded, and only two Boers died. See also LAING'S NEK, BATTLE OF.

Makarios III (1913-77), Archbishop, b. Mikhail Khristodoulou Mouskos. Leader of the ENOSIS (union of Cyprus with Greece) movement, he was a suspected terrorist but was elected President of Cyprus (1959) when it became independent of Britain. In later years he became less extreme in his views but continued to put pressure on the island's Turkish population. In 1974 the Turks invaded Cyprus and occupied the northern half of the island.

Makassar, city and port in the sw of Celebes Island, E Indonesia. The island is separated from Borneo (w) by the Makassar Strait. Originally a Portuguese settlement, it was taken by the Dutch in 1667 and developed as a trading centre. It was made a free port in 1848 and became part of the Republic of Indonesia in 1949. Exports include copra, gum and resins, rubber, coffee and spices. Pop. (1961) 384,159.

Make-up, in drama and primitive ritual, the technique whereby the face, hands or body of a person may be coloured or given added hair or texture in accordance with the demands of a specific role, if a mask is not to be worn. In the theatre, since the

19th century, it has generally been used to strengthen the features and heighten their expressive power, particularly in a large auditorium where artificial lighting is used. Elizabethan actors, acting in daylight, seldom wore make-up, except to portray angels, ghosts, Negroes or Moors. In the 17th century artificial lighting rendered actors' features indistinct and powder make-up began to be used. David GARRICK and other actors experimented with adding lines to their face to create an impression of old age, while actresses emphasized their normal street make-up. Powder make-up was found to streak as the actors perspired from the heat of the new gas lighting introduced in 1817, and so a grease foundation, invented by Carl Baudin, was used. Ludwig Lechner introduced a tallow-based make-up in the 1870s. By the end of the century a basic range of numbered sticks of make-up of different tones had been evolved. Electrical lighting and the demands of film and television close-ups demanded greater expertise in the application of make-up, and most is done by specialists, rather than by the actors themselves.

Mäkinen, Timo (1938-), Finnish rally and speedboat driver. His successes have included the 1964 Tulip Rally, a hat-trick (1965-67) in his native Thousand Lakes Rally, and the 1965 Monte Carlo run, in which he finished first again in 1966, only for his Cooper S to be disqualified. In boats he won the 1968 Finnish off-shore championship and the 1969 Round Britain race.

Makkah. See MECCA.

Mako, also called sharp-nosed mackerel shark, either of two species of sharks: *Isurus glaucus* of the Indo-Pacific and *I. oxyrinchus* of the Atlantic. It is blue-grey and has a pointed snout, a slender body and a crescent-shaped tail. Length: to 4m (13ft). Family Isuridae. See also pp.62, 340.

Malabar Christians. See THOMAS CHRISTIANS.

Malabar Coast, sw coast of India, between the Western Ghats range (E) and the Arabian Sea (W). The chief ports are Cochin and Calicut. It is the traditional site of the apostle Thomas's first missionary work c.AD 52. Portuguese traders established posts there in 1498-1503, to be followed by the Dutch in 1656. By the late 18th century, the British had occupied the area. Its modern industries include fishing and the growing of rubber. Length: 725km (450 miles).

Malacca, state in Malaysia, on the Malay Peninsula, bounded by the Strait of Malacca (S and W), which connects the Indian Ocean and South China Sea. Malacca is the capital. It was made a British colony in 1824, became a state of Malaya in 1957 and of Malaysia in 1963. Its products include rice and rubber. Area: 1,658sq km (640sq miles). Pop. 404,000.

Malachi, last of the books of the 12 minor prophets and last book of all of the Old Testament in the Authorized Version. Probably written about 460 BC, it attempts to dissuade the people of Israel from foreign influences and associations, and ends with a prophecy of an imminent Day of Judgment.

Malachite, carbonate mineral, basic copper carbonate (Cu₂CO₃(OH)₂), found in weathered copper ore deposits. Malachite has a monoclinic system, and is green in colour; it is sometimes used as a gemstone. Hardness 3.5-4; s.g. 4.

Malaga, port in S Spain in Andalusia region, on the Mediterranean Sea; capital of Málaga province. Founded c.1100 BC by the Phoenicians, it was taken by the MOORS in 711, and remained under Moorish rule until 1487, when it was captured by FERDINAND II of Aragon and ISABELLA I of Castile. During the SPANISH CIVIL WAR (1936-39), the city was taken from the Loyalists by FRANCO. Industries: wine, olive oil, footwear, flour-milling, tourism. Pop. (1974) 402,978.

Malagasy, independent island republic approx. 400km (250 miles) E of the African mainland, formerly the French protectorate of Madagascar. Eighty per

Malamud, Bernard

Mallard: the bright colours of the male often shine the duller-coloured female.

Mallia: the ruins show the Minoans were building extensively by 2000 BC.

Mallow: like other members of its family, has a fibrous stem and tacky sap.

Malawi, Lake. See NYASA, LAKE.
Malaya, former federation of nine MALAY STATES and two of the STRAITS SETTLEMENTS (Malacca and Penang). It included a large part of British Malaya. Malaya was established as the Union of Malaya in 1946, and was then reorganized as the Federation of Malaya in 1948, and achieved independence nine years later. The region became part of the Federation of MALAYSIA in 1963. See also pp.1611, 1702, 1730.
Malay Archipelago, group of islands in SE Asia more commonly called EAST INDIES.
Malay Peninsula, promontory of SE Asia, between the Strait of Malacca and the South China Sea, comprising SW Thailand and West Malaysia. A mountain range, culminating in Mt Gunong Tahan, 2,190m (7,186ft), extends along its entire length and rain-forest covers half of the land. It is one of the world's richest tin and rubber areas; other products include timber and fruit. Area: 181,300sq km (70,000sq miles).
Malaysia, nation in SE Asia, occupying the S half of the Malay Peninsula and most of N

Borneo. It is composed of 13 states. Although most of the population is involved in farming, Malaysia is the world's leading tin producer and supplies about 33% of the world's rubber requirements. Other industries include the manufacture of machinery and chemicals. The capital is KUALA LUMPUR. Area: 329,740sq km (127,313sq miles). Pop. (1980 est.) 13,435,588. See p.2093.

Malay States, states of the MALAY PENINSULA, in particular those previously under British protection. Those states in the N and central part of the Peninsula are now in Thailand. The S states are part of Malaysia.

Malcolm, name of four kings of Scotland. Malcolm I (r.943-954) was the son of Donald, King of Alba. Malcolm II (953-1034; r.1005-34), secured the Anglo-Saxon district of Lothian permanently for Scotland by defeating the Northumbrians at Carham in c.1016. In the same year he gained control over Strathclyde, completing the political unification of northern Britain. Malcolm III (1031-93; r.1058-93), called Canmore (Gaelic *Ceann-mor*, "great chief"), was a child when his father, DUNCAN II, was murdered by MACBETH in 1040 but regained the throne when he himself killed Macbeth. His marriage to St MARGARET, an English princess, began two centuries of frequent royal marriages between Scotland and England. Three of their sons became kings, the youngest, DAVID I, in 1124. Malcolm IV (1142-65; r.1153-65), grandson of David I, was proclaimed heir to ensure a peaceful succession when David's only son died. He was forced to surrender Northumberland and Cumberland to HENRY II of England in 1157. See also pp.1316, 1317.

Malcolm III, called Canmore. See MALCOLM.
Malcolm, George John (1917-), British harpsichordist, pianist and conductor. He was Master of the Cathedral Music at Westminster Cathedral (1947-59), where he trained a boys' choir for which Benjamin BRITTEN wrote his *Missa Brevis*.
Malcolm X (1925-65), US militant black leader. While in prison he joined the BLACK MUSLIMS, and on his release in 1953 he became a Minister. He later disagreed with the leader Elijah Muhammad and formed a rival group, the Muslim Mosque, in 1964, in which year he also was converted to Orthodox ISLAM. He was assassinated in 1965.

Maldives, independent republic in the Indian Ocean approx. 645km (400 miles) W of Sri Lanka. It is composed of some 2,000 islands in 12 distinct groups. The main one and the seat of government is Male. Formerly a British colony, the islands' economy is based almost entirely on fishing. Tourism is being promoted as an additional source of income. Land area: 298sq km (115sq miles). Pop. (1975 est.) 119,000. See also p.2094.

Male, one of the Maldives Islands in the Indian Ocean, between the Kardiva and Veimandu channels. It consists of two groups of atolls, North Male and South Male, and is an inter-island trade centre. Area 251sq km (97sq miles). Pop. 13,610.
Malenkov, Georgi Maksimilianovich (1902-), Prime Minister of the USSR from the death of STALIN in March 1953 to his removal by KHRUSHCHEV in February 1955. He rose in the Communist Party as a trusted aide of Stalin. He was removed from the Politburo in 1957.

Malevich, Kasimir (1878-1935), Russian painter. He founded SUPREMATISM, a form of geometric abstractionism, in 1913. His manifesto of 1915 stated that a combination of geometric figures expressed "pure emotion". The epitome of the style is his *Suprematist Composition: White on White* (1919). See also pp.1686, 1686, 1762.
Malherbe, François de (1555-1628), French poet and critic who set the early 17th-century French literary style. In 1605 he went to Paris and became court writer. He criticized the emotional, decorative style of his contemporaries.

Mali, independent republic in W Africa. The River NIGER divides the country's northern desert area, which merges with the

SAHARA from the fertile southern region which produces sorghum, rice and cotton. There is a variety of light industries including canning, brick-making and textiles. Mali's large mineral resources remain unexploited. The capital is BAMAKO. Area: 1,240,000sq km (476,764sq miles). Pop. (1976 est.) 5,842,000. See p.2095.

Malic acid, organic chemical compound, formula HOOC.CHOH.CH₂.COOH, with several important roles in the body's metabolism, notably in the CITRIC ACID CYCLE which is concerned with the production of energy during respiration.

Malinowski, Bronislaw (1884-1942) Polish-English anthropologist, considered by many to be one of the pioneers of social anthropology. His work with the peoples of New Guinea and the Trobriand Islands helped him to formulate his functional theory which held that every aspect or norm of a society is vital to its existence.

Mallard, largest and commonest freshwater duck in Britain. The black, white, brown and grey male is easily recognized by its green head, whereas the female is mottled brown with blue wing markings. It dabbles or feeds from the surface. Length: 63cm (25in). Species *Anas platyrhynchos*. See also pp.75, 80, 328.

Mallarmé, Stéphane (1842-98), French poet. A leader of the SYMBOLIST movement, he was influenced by BAUDELAIRE and VERLAINE. His aim was to write "pure poetry" and he spent his life in agonized labour over a few poems, his best remembered compositions being *Hérodiade* (1869), *L'Après-Midi d'un faune* (1876) and *Un coup de dés jamais n'abolira le hasard* (1897). See also p.1576.

Malte, Louis (1932-), French film director, one of the NOUVELLE VAGUE of French film-makers. His films include *World of Silence* (1956), *The Lovers* (1958) and *Viva Maria!* (made in 1965 with Brigitte BARDOT and Jeanne MOREAU). An uncompromising director, his films often have unpopular or sensitive themes, eg *Lacombe Lucien* (1974) about a young collaborator in German-occupied France.

Mallee, scrubby Australian vegetation which consists mainly of trees and shrubs of the genus *Eucalyptus*. They have leathery leaves which conserve moisture during dry periods.

Mallee fowl, turkey-like bird that lives in the mallee scrub area of semi-desert in Australia. Eggs are laid in winter in pits scratched in the ground, and covered - the birds do not use their own body heat to hatch the eggs. When the young hatch, they dig their way out. Length: to 69cm (27in). Family Megapodidae; species *Leipoa ocellata*.

Mallia, town in Crete, 18km (15 miles) E of Heraklion. It is the site of a Minoan palace (1900-1450 BC), which had probably been subject to a serious earthquake c.1700 BC. The site was first excavated in the 1940s. See also pp.1170-1171.

Malloin, Felix (1932-), Chad army officer and politician. He served in the French army in Indochina (1953-55), and became commander-in-chief of the Chad army in 1972. He was arrested by President Tombalbaye in 1973, but after the coup of 1975 became head of state and Minister of Defence. In 1979 he was overthrown.

Mallow, annual and perennial plants occurring in tropical and temperate regions of the world. The flowers are pink and white. The mallow family includes more than 900 species of plants, of which cotton, okra, hollyhock and hibiscus are among the best known. Family Malvaceae; genus *Malva*.

Mallowan, Sir Max Edgar Lucien (1904-78), British archaeologist noted for his excavations at the sites of UR, an ancient Babylonian city (with Sir Leonard WOOLLEY) and of NINEVEH in Assyria (with R. Campbell Thompson). He was professor of Western Asiatic archaeology at the University of London (1947-62). He was the husband of Agatha CHRISTIE; his own autobiography, *Mallowan's Memoirs*, was published in 1977.

Malmö, port in SW Sweden on the Öresund opposite Copenhagen. It was a

Man Born To Be King, The

major trading and shipping centre during the period of the HANSEATIC LEAGUE. Originally mostly ruled by the Danes, the city was annexed by Sweden in 1658. It is now a major naval and commercial port. It is the site of Malmöhus castle (1434) and a 16th-century city hall. Industries: shipping, food processing, cement, textiles, shipbuilding, rolling stock. Pop. 243,600.

Malnutrition, inadequate dietary intake which is often the insufficiency of one or more of the necessary components in a healthy diet. This most frequently takes the form of protein deficiency, although there are many situations where malnutrition takes the form of either mineral or vitamin deficiency. Primary malnutrition results from an inadequate diet often due to such regional calamities as war, drought or overpopulation, and it may also arise from poor eating habits or the psychological condition ANOREXIA NERVOSA. Secondary malnutrition results either from the body's failure to absorb or utilize nutrients, from increased bodily needs, such as lactation, growth or fever, or from excessive excretion, as with DIARRHOEA. See also pp.163, 1083, 1084.

Malocclusion, in dentistry, misalignment of the row of teeth in the upper jaw with those in the lower jaw, resulting in improper contact between the biting surfaces of the teeth. If untreated, it can lead to deformities of the jaws or difficulties in chewing. Malocclusion may be either hereditary in origin or caused by the early loss of teeth due to decay. See also pp.1100-1101, 1101.

Malory, Sir Thomas (fl. 1469), English writer, author of *Le Morte d'Arthur*. His identity is obscure, but he was probably the Thomas Malory from Warwickshire who fought in the Wars of the Roses, became a Member of Parliament in 1445 and served several prison sentences between 1450 and 1470 for rape, robbery, attempted murder and perhaps for political reasons. See also pp.1154, 1526-1527.

Malpighi, Marcello (1628-94), Italian physiologist. He was the founder of microscopic anatomy, demonstrating how blood reaches the tissues through tiny vessels (capillaries). William HARVEY had inferred that there must be capillaries, but had never seen them. Malpighi was able to explain the network of tiny veins he could see on the surface of the lung. See also pp.152, 1096, 1436-1437.

Malplaquet, Battle of (1709), engagement between France and the allied English, Austrian and Dutch forces in the War of the SPANISH SUCCESSION. The slightly outnumbered French were finally forced into an orderly retreat, but the vast Allied losses (22,000 to the French 12,000) ultimately made the battle a French victory, preventing an Allied invasion of Paris.

Malraux, André (1901-76), French intellectual, novelist, politician and war hero. His novels, *The Conquerors* (1928), *Man's Estate* (1933) and *Days of Hope* (1937) which examine the heroism of individuals all engaged in social revolution, are based on his first-hand experiences in China (1925-27), the Spanish Civil War (1936-39) and in the French resistance during WWII.

Malt, germinated grain, usually BARLEY, used in beverages and foods. The grain is softened in water, allowed to germinate and then kiln-dried. This activates ENZYMES which convert the starch to malt sugar. Most malt is used in the manufacture of BEER.

Malta, Sovereign State of, independent Commonwealth republic in the Mediterranean Sea, 96km (60 miles) s of Sicily. It includes the islands of Malta, Gozo and Comino. The economy is based on agriculture (cereals and vegetables) and tourism. The capital and main port is VALLETTA, on the island of Malta. Area: 316sq km (122sq miles). Pop. (1978 est.) 316,850.

Malta, Knights of. See KNIGHTS HOSPITALERS.

Maltese, collectively, group of intestinal ENZYMES that break down complex sugars so that they can be absorbed during digestion.

Maltese, breed of toy dog, with a medium-length head, a fine, tapered muzzle and low-set ears. The compact body is set on fine-boned legs and the long tail curves over the back. The long, flat, silky coat hangs almost to the ground and is pure white. Average size: 12.5cm (5in) at the shoulder; weight: 3kg (6.6lb).

Maltese Falcon, The (1941), US film based on Dashiell Hammett's crime novel, and adapted and directed by John HUSTON. Humphrey BOGART starred as a tough, disillusioned private detective. The film's style influenced the mystery genre for many years.

Malthus, Thomas (1766-1834), British economist and minister famous for his *Essay on Population* (1798). According to Malthusian theory, population increases geometrically but the food supply can increase only arithmetically so that population must eventually overtake it, with famine, war and disease as consequences. Malthus objected to any interference in this process, and did not favour family planning. See also pp.1477, 1572, 1869.

Maltose, CARBOHYDRATE that contains two molecules of GLUCOSE, a simple sugar. It is produced by the breakdown of STARCHES and GLYCOGEN during digestion.

Malus, Etienne-Louis (1775-1812), French physicist who in 1809 announced his discovery of the polarization of light by reflection. In 1810 he also produced a theory of double REFRACTION of light in crystals. Earlier in his career, in 1798, he had taken part in the invasion of Egypt by Napoleon I as a member of the engineer corps.

Malvern Hills, range of hills in Worcester(shire) and Hereford(shire), w central England. The highest point is Worcester Beacon, rising to 425m (1,395ft). Hereford Beacon (340m; 1,114ft) was the site of an ancient camp. Length: approx. 13km (8 miles).

Maly Theatre, Moscow's oldest theatre. It opened in 1824 with a company that had been in existence since 1806. A theatre of tradition, it has been important in the development of Russian drama.

Mamba, any of several large, green or black, poisonous African tree snakes of the cobra family, Elapidae. The deadly black mamba (*Dendroaspis polylepis*) is the largest species. It is grey, greenish-brown or black and is notoriously aggressive; its bite is almost always fatal. Length: to 4.3m (14ft).

Mambo, dance of Afro-Cuban origin. It was introduced to the USA and then became popular throughout the world in the 1940s. Its basic 4/4 metre is highly syncopated. It was the basis of the cha cha of the 1950s.

Mamelukes, ruling dynasty of Egypt (1250-1517). Originally Turkish and CIRCASSIAN prisoners of GENGHIS KHAN, they were sold as slaves to the sultan of Egypt, who trained them as soldiers. They became strong enough to usurp the sultan's political authority and pursued an aggressive foreign policy, although domestic intrigue limited each Mameluke sultan's reign. They were the first to halt the MONGOL advance westwards and to defeat the ASSASSINS. The Mamelukes, in turn, were defeated by the Ottoman Sultan SELIM I in 1517, but remained a class and kept their lands. As the Ottoman Empire declined in the 18th century, the Mameluke governors of Egypt regained some autonomy; their power was not ended until 1811, when they were defeated by MUHAMMED ALI.

Mammal, class (Mammalia) of VERTEBRATE animals characterized by mammary glands in the female and full, partial or vestigial hair covering. Mammals are warm blooded having a constant body temperature, controlled by various mechanisms. These include skin glands through which they secrete fluid in hot conditions. In addition, they have a four-chambered heart with circulation to the lungs separate from the rest of the body. The pumping ability of mammalian lungs is increased by the action of the muscular abdominal diaphragm.

Mammals are found on all major land

masses and in the oceans. As a group, they are active, alert and intelligent. They usually bear fewer young than other animals and give them longer and better parental care. Most mammals before birth grow inside the mother's body and are nourished from her by means of a placenta. When born, some are blind and naked, others are fully furred with wide open eyes. All are fully developed but continue to feed on the milk from their mother's mammary glands.

There is a wide range of shapes and sizes among mammals resulting from different environments and ways of life and feeding. Teeth and limbs exhibit the greatest variation. The teeth of herbivores, for example, differ from those of insectivores, and carnivores have yet a different kind, as the teeth have evolved for eating plant food, chewing insects and tearing flesh, respectively. Similarly, the limbs of some marine mammals have developed into flippers, and the toes of fast running animals of the plains, such as horses and deer, have developed into hooves.

Mammals include 17 orders of placentals, one MARSUPIAL order - all live-bearing - and an order of egg-laying MONOTREMES. Mammals probably evolved about 180 million years ago from a group of warm-blooded reptiles. They became the dominant land animals after the extinction of the dinosaurs about 65 million years ago. Today, mammals range in size from shrews weighing a few grammes, to the blue whale, which can weigh up to 150 tonnes. See also PLACENTAL MAMMALS; pp.3, 86-107, 281, 283, 284-287, 342-343.

Mammary glands. See BREASTS.

Mammee apple, large tree with leathery leaves and edible fruit, grown in the USA and the West Indies. The yellow fruit has a bitter rind surrounding sweet flesh which is eaten raw or used for making preserves. The seeds and resin from the tree have been used medicinally and for perfume. Family Clusiaceae; species *Mammea americana*.

Mammography, examination of breast tissue by X-ray, commonly in order to detect the presence of a malignant tumour in an early stage of development.

Mammoth, extinct PLEISTOCENE ancestor of the elephant, which was approximately the size of modern elephants. Many were covered with long red or brown hair. The prominent tusks were long and directed downwards, sometimes crossing in adult males. The most prominent types of mammoths were the *Mammuthus meridionalis* of Europe and Asia, the imperial mammoth of the USA and the woolly mammoth of n Eurasia and the USA. In summer months the permafrost of Siberia has been known to yield whole specimens that have been frozen for as long as 30,000 years. Genus *Mammuthus*. See also pp.285, 287.

Mammoth cave, one of the largest cave systems in the world, located in w Kentucky, USA. It contains extensive passages, many still unexplored, and spectacular limestone formations of STALAGMITES and STALACTITES. The constant 12°C (54°F) temperature may have caused the mummification of a human body found there which is probably more than five hundred years old. See also pp.218, 219.

Man, primate mammal of the genus *Homo*, the only living species of which is *Homo sapiens*. When compared with his nearest relatives the CHIMPANZEE, GORILLA and ORANG-UTAN, man is immediately distinguishable by a number of features. He walks upright anatomically, his body is only patchily hairy; his big toes are not opposable to his other toes; his backbone is more S-shaped than straight; and his forehead is higher than that of any ape. Otherwise, the bones and glands of man are markedly similar to those of the great apes. Microscopically, man is clearly distinguishable from the great apes by the size, number and shape of his chromosomes. Intellectually, man far outstrips all his relatives. Evidence of this is his capacity for language: even the cleverest chimpanzee can recognise only a few hundred words (as signs or symbols). Socially, man

is rather similar to lesser primates preferring a family or other small group. Man has always actively made great changes in both his immediate environment and in ecosystems throughout the world. See also pp.108-115.

Man, prehistoric, any of the evolutionary stages of early man preceding recorded history. The term includes all the members of the family Hominidae, beginning with the Australopithecines, followed by the Pithecanthropines and, ultimately, *HOMO SAPIENS*, our own species. The Australopithecines may have been derived from *Ramapithecus* of about twelve to fourteen million years ago, while AUSTRALOPITHECUS itself existed from about four or five million years ago. The Pithecanthropines of from one to half a million years ago are all classified as *HOMO ERECTUS* and include JAVA MAN and PEKING MAN as well as European and African representatives. The earliest *Homo sapiens* fossils date from about 350,000 years ago. Material of a later date suggests that this man subsequently diverged in two directions. One of these led to NEANDERTHAL MAN and similar types in Asia and Africa, and the other to the modern races of man first represented in Europe by CRO-MAGNON man of 30,000 years ago. See also LEAKEY; pp.110-124.

Man, Isle of. See ISLE OF MAN.

Mana, charismatic spiritual power in some Melanesian cultures, particularly the Maori culture of New Zealand. It is used to explain personal status and authority. A person is believed to be born with mana, but can increase (or decrease) it by his way of life, for example through bravery and skill in war.

Managua, capital city of Nicaragua, in w central Nicaragua on the s shore of Lake Managua. It is the economic, industrial and commercial hub of Nicaragua. It suffered damage from an earthquake in 1931, after which much of the city was rebuilt: another, on 23 December 1962, killed over 10,000 people and necessitated further reconstruction. Pop. (1972) 400,000.

Manakin, small, stocky bird with a broad, hooked beak and short wings and tail that lives in damp tropical forests of Central and South America. Males are black splashed with red, yellow or blue, and sometimes have ornate tails and crests. Females are olive-green. The males perform acrobatic courtship dances. Family Pipridae. See also p.76.

Man and Superman (1903), four-act comedy by George Bernard SHAW, written in response to a critic's request for a play about DON JUAN. The "Don Juan in Hell" scene is usually performed separately, many producers feeling the complete play to be too long. It is Shaw's first major treatment of "creative evolution".

Manasseh, or Manasses, name of two biblical characters. As the son of JOSEPH, Manasseh gave his name to one of the 12 tribes of Israel. Another Manasseh was the son of HEZEKIAH.

Manatee, any of three species of large, plant-eating, sub-ungulate, aquatic mammals found primarily in shallow coastal waters of the Atlantic Ocean. It has a short, tapered body ending in a large rounded flipper; there are no hindlimbs. Length: to 4.5m (14.7ft); weight: 680kg (1,500lb). Family Trichechidae; genus *Trichechus*. See also p.94.

Manaus, city in nw Brazil, capital of Amazonas state, on the Rio Negro, 16km (10 miles) from its confluence with the Amazon. Founded in 1669, the city remained undeveloped until the late 19th-century rubber boom. Although more than 1600km (1000 miles) from the Atlantic, the port can accommodate ocean-going vessels. Oil from Peru is refined there. Products of the Amazon basin such as jute, timber, nuts and rubber are the major exports. Pop.(1970) 284,118.

Manawatu, river in sw North Island, New Zealand. It rises in the Ruahine Range and enters the Tasman Sea at Manawatu Heads. Length: 182km (113 miles).

Man Born To Be King, The (1942), series of weekly radio plays about the life of

Manche, La

Manchester terriers originated as a cross between whippets and rat-catching terriers.

Mandalay: the palace of Queen Sophia-Lat engraved in *Le Tour du Monde*, 1892.

Mandrill: the colours of the male become brighter when the animal is excited.

Edouard Manet painted the distinguished French writer Émile Zola at his desk.

Christ by Dorothy L. SAYERS. Commissioned by the BBC, the author's humanizing of the character of Jesus created a public furor when the plays were first transmitted.

Manche, La, French name for the English Channel. Variants of the word are found also in Gaelic; all mean either "channel" or "sleeve".

Manchester, city in Greater Manchester, NW England. A major British city in the country's most densely populated region, it serves as a distribution point for the surrounding mill towns. The building of the Manchester Ship Canal (1887-94) changed the city from a river port to a seaport. There are now oil refineries along the canal. Manchester's major industries are textiles, printing and publishing. Pop. (1976 est.) 488,518.

Manchester School, name given to British economists and politicians of the mid-19th century who believed in LAISSEZ-FAIRE economics. Free trade was their chief object and they got their name from the founding in Manchester of the ANTI-CORN LAW LEAGUE. They also tended towards pacifism and adopted radical positions on other issues. The most influential adherents of the "school" were Richard COWDEN and John BRIGHT.

Manchester terrier, sporting dog that was originally used for killing rats and coursing rabbits. It has a long head and pointed, erect or folded ears. The moderately short body is set on long legs and the tail is short and pointed. The smooth, short coat is black and tan. There are two varieties – the standard, height: 35–41cm (14–16in); and the toy, height: 15–18cm (6–7in).

Manchu dynasty, ruling house of China from 1644 to 1912. It is also called the Ch'ing, or "pure", dynasty. It was established by the Manchu leader Fu-lin. It ended with the abdication of the young emperor Pu Yi and the establishment of the Chinese republic. For almost two hundred years the Manchu emperors extended their influence until by 1800 they exercised suzerainty over an area stretching from Siam in the S to Tibet and Sinkiang in the W and Mongolia and Amur in the N. See also pp.1498, 1499.

Manchukuo, puppet state set up by the Japanese in Manchuria from 1932 to 1945. It was under the nominal rule of the pretender to the Manchu throne, Henry Pu Yi or Hsuan T'ung. The independence of the state was not acknowledged by most Western powers. It was dissolved in 1945 at the end of WWII. See also p.1696.

Manchuria, industrial region in NE China, bordered by the USSR (N and NE), Korea (SE), the Yellow Sea (S) and Inner Mongolia (W). Mukden is the chief city. The N, E and W borders are lined by the Khyngan highlands and Ch'ang-pai Mts; the central area is the alluvial Liao-Sungari lowland. Ruled by lesser Chinese dynasties until c.1125, the region was governed by the Nuchen (later known as Manchus) from 1125 to 1234, when they were dispersed by the Mongols. The Manchus reunited and by 1664 they had conquered all of China, ruling until 1912. Russian influence dominated the area from 1898 to 1904, when it was replaced by Japanese authority. Southern Manchuria and Port Arthur developed rapidly with the introduction of the South Manchurian Railroad. In 1949 the Nationalist regime was overthrown by the Communists. In 1954 Manchuria was divided into three provinces – Liaoning, Kirin, Heilungkiang – all under the control of Peking. Its industries include iron and steel, coalmining, chemicals, oil refining, timber, textiles. Area: 1,515,150sq km (585,000sq miles). See also pp.2012-2013.

Mandaeans, Gnostic sect also known as St John's Christians; it probably originated c.AD 100. The sect's 20th-century adherents are to be found in S Iraq and Khuzistan, still speaking an eastern Aramaic dialect. Their highly complex system of beliefs has incorporated many traditions during the last 18 centuries, including biblical elements, Babylonian astrology and Iranian dualism. Their rites centre on ritual ablutions and are presided over by bishops, priests and deacons.

Mandala, symbolic design sacred to BUDDHISTS and HINDUS, used to focus the concentration during meditation. Although the design may consist of virtually any symmetrical shape, many are based upon, and have the outline of, a circle. The circle, said to represent the macrocosm – the infinity of the universe and the territory of the gods – is commonly divided into four quarters, each of which may be allotted its own forces or deities. Other versions consist of concentric circles representing the cosmic processes through which the meditator mystically travels towards the centre of meaning. A mandala is a sort of visual MANTRA; both mandala and mantra may be combined in meditation.

Mandalay, city in N Burma, on the River Irrawaddy; capital of Mandalay division and second largest city in Burma. Founded in 1857 Mandalay was the last capital (1860–85) of the Burmese kingdom before it was annexed to British Burma. The city was occupied by the Japanese during WWII and severely damaged. A centre of Burmese Buddhism, Mandalay is noted for the Arakan Pagoda, and the sacred Seven Hundred and Thirty Pagodas. Industries: textiles, jade. Pop. (1973) 781,819.

Mandarin, European name for officials or civil servants of the Chinese Empire. Their entry to the bureaucracy was by examination, and rank was shown by their form of dress. As a matter of policy, mandarins never officiated in their home province but were posted to other areas for limited periods. See also p.1260.

Mandarin, major dialect of Chinese, the spoken language of about 70% of the population of China. It was the language of the imperial court and as spoken in Peking is the basis of modern Chinese.

Mandarin (mandarine), type of orange of Chinese origin whose flattish fruit is highly popular because of its sweet flavour. The fruit derives its name from its resemblance to the large button crowning the hats of Chinese officials known by Europeans under the same name. The tangerine is a flattish loose-skinned species of mandarin orange. Family Rutaceae; genus *Citrus*.

Mandarin, perching fresh-water DUCK native to China and Japan. It lives in forest trees and nests in tree hollows. The drake's plumage has vivid blue, green, purple, orange and chestnut feathers, with splashes of black and pure white. The female is a dull, speckled grey-brown. Species *Aix galericulata*.

Mandate, in English law, command by the sovereign to do anything in the despatch of justice. It can also be applied to a contract to have one's affairs managed by someone without pay. See also MANDATED TERRITORIES.

Mandated territories, German colonies and parts of the Turkish Empire which were given to the Allied countries at the 1919 peace conference. There were three kinds of mandate: "A" territories were to be given full independence; "B" ones were to be governed as colonies; "C" ones were to be incorporated into the structure of the mandatory country. Britain took Iraq and Palestine as "A" possessions, Tanganyika, Togoland and part of the Cameroons as "B" possessions and, with Australia and New Zealand, Nauru, Samoa and New Guinea as "C" possessions. Under the United Nations charter "B" and "C" territories were changed to trust territories in 1946.

Mandela, Nelson Rolihlala (1918–), Black South African lawyer who campaigned against the racialist policies of the South African government. As leader of the militant wing of the African National Congress, Mandela was sentenced to life imprisonment in 1964 for plotting to overthrow the government. His wife, Winnie, has continued the campaign.

Mandelstam, Osip (c.1891–c.1938), Soviet poet. He was the leader of the Acmeists, poets reacting against the mysticism of the Symbolists. His poetry, including the volumes *Kamen* (1913) and *Tristia* (1922), exhibits a desperate longing for a peaceful and harmonious society. Opposed to the Bolsheviks, he was arrested and imprisoned in 1934.

Mander Karel van (1548–1606), Dutch painter and art historian. He is chiefly remembered for his biographical work on painters, *Het Schilderboek* (1604), modelled on VASARI's similar work of 1550.

Mandeville, Geoffrey de, Earl of Essex (died c.1144), English baron who changed sides in the civil war of STEPHEN's reign. He was appointed Constable of the Tower of London in 1130, but later turned to banditry in Cambridgeshire.

Mandeville, Sir John (fl. 1350), purported English author of a popular medieval travel book. The book was probably written by a Frenchman and translated into English. It comprises a guide to the Holy Land and descriptions of the Orient, its facts most likely culled from other medieval sources.

Mandible, in vertebrates the lower jaw, in insects and Crustacea one of a pair of mouthparts, used for crushing and eating.

Mandolin, stringed musical instrument related to the LUTE and associated with 18th-century Italy. It has four or six paired wire strings which are played with a plectrum. Composers such as VIVALDI, HUMMEL, VERDI, MAHLER and SCHOENBERG have written for the instrument, but it is most often used today as an accompaniment to folk songs and dances.

Mandrake, plant of the potato family native to the Mediterranean region and used since ancient times as a medicine. It contains the ALKALOIDS hyoscyamine, scopolamine and mandragorine. Leaves are borne at the base of the stem, and the large greenish-yellow or purple flowers produce a many-seeded berry. The branched root resembles a distorted human figure and for centuries the plant was believed to utter an almost human shriek when picked. Height: 40cm (16in); family Solanaceae; species *Mandragora officinarum*.

Mandrill, large BABOON that lives in the dense rain forests of central W Africa. Mandrills roam in small troops and forage omnivorously for their diet on the forest floor. The brightly coloured male has a red-tipped, pale blue nose, yellow-bearded cheeks and a reddish rump. Height: 75cm (30in) at the shoulder; weight: to 54kg (119lb). Species *Mandrillus sphinx*. See also DRILL; MONKEY.

Manet, Édouard (1832–83), French painter. His early work was characterized by his choice of subject matter, often taken from contemporary scenes and events, and his use of light and shadow with little half-tone. His style was influenced by Spanish art, particularly the work of VELÁZQUEZ. Although his name is usually linked with the IMPRESSIONISTS and he was important as their predecessor, he did not, in fact, consider himself one of their school and rarely used their technique of broken colour. Both his innovative style and his choice of subjects provoked adverse criticism; *Le Déjeuner sur l'Herbe* was violently attacked by some critics when exhibited at the Salon des Refusés (1863), as was *Olympia*, a portrait of a well-known courtesan. However, he finally achieved recognition with such work as *Le Bar aux Folies-Bergères* (1882), and his importance as an artist has never since been doubted. See also pp.1596–1597.

Man for all Seasons, A (1960), historical drama based on the life of Sir Thomas MORE, by Robert Bolt (based in turn on his own radio play of 1954). It was first produced in London in 1960, and made into a successful film with Paul Scofield playing Sir Thomas More and Robert Shaw as Henry VIII.

Manfredi, Bartolommeo (1580–1620), Italian painter who worked in Rome. He is known mainly as a skilled imitator of the early secular subjects of CARAVAGGIO, such as scenes of fortune-telling and card-playing. He painted chiefly for private patrons.

Mangabey, large, silky grey MONKEY that lives in dense central African forests. Mangabeys live in small troops and feed chiefly on fruit. Tree dwellers, they are generally silent except for an infrequent howling sound. Length: 38–88cm (15–

Man-made fibres

34.6in); weight: to 6kg (13lb). Family Cercopithecidae; genus *Cercocebus*.

Mangan, James Clarence (1803–49), Irish poet who worked for a time in the Irish Ordnance Survey. He suffered from alcoholism, opium-taking and extreme poverty, and died of cholera. He wrote spirited versions of old Irish songs of which his patriotic hymn to Ireland, *My Dark Rosaleen*, is perhaps the best known. His *Collected Poems* was published in 1903.

Manganese, metallic element (symbol Mn) of the first transition series, first isolated in 1774. Its chief ores are pyrolusite (dioxide) and rhodochrosite (carbonate). The metal is used in alloy steels and certain ferromagnetic alloys. Properties: at.no. 25; at.wt. 54.938; s.g. 7.20; m.p. 1,244°C (2,271°F); b.p. 1,962°C (3,564°F); most common isotope Mn^{55} (100%). See also TRANSITION ELEMENTS.

Manganese nodules, concretions with diameters averaging 4cm (2in) that occur in red clay and ooze on the floor of the Pacific Ocean, with the major concentrations around the Samoan Islands. They are thought to have formed as agglomerates from colloidal solution (see COLLOID) in the ocean's waters. The commercial mining of the nodules is being delayed by legal controversy over international rights to this valuable mineral resource. See also p.239.

Manganese processing, production of the metal either in its pure form or, more commonly, as an alloy with iron for steel making. The manganese dioxide (MnO_2) ores (PYROSULFITE and psilomelane) together with iron ores are reduced in blast or electric furnaces to yield ferromanganese, which is essential to the production of steel. Pure manganese is produced electrolytically.

Manganite, hydroxide mineral of the diaspore group manganese oxyhydroxide [$MnO(OH)$]. It occurs as low-temperature veins and secondary deposits and has monoclinic system striated prisms, which are often crusts of small crystals. Its colour is black or grey with a submetallic lustre. Hardness 4; s.g. 4.3.

Mange, non-specific skin disease of animals, usually caused by parasitic mites that become embedded in the skin causing intense irritation. In dogs the most severe form is sarcoptic mange, (known as scabies in human beings) in which the mite lives between the living and dead layers at the surface of the skin. Constant scratching by the affected dog can cause hair or fur loss and deep lesions which may become infected. Although this secondary infection can usually be successfully treated, in rare cases it can be fatal.

Mango, evergreen tree native to SE Asia and grown widely in the tropics for its fruit. It has lanceolate leaves, pinkish-white clustered flowers, and yellow-red fruit which is eaten ripe or preserved when green. Height: to 18m (60ft). Family Anacardiaceae; species *Mangifera indica*. See also p.691.

Mangold, also called mangold-wurzel or mangel-wurzel, root vegetable with spinach-like leaves; it is a variety of BEET-ROOT (*Beta sativa*), as is SUGAR BEET. It is grown widely in Europe as a food for cattle, but was originally native to the Mediterranean region. Family Chenopodiaceae. See also p.684.

Mangonel, also called a trebuchet, medieval siege weapon. It consisted of a long bar, pivoted high off the ground near one end, to which a heavy weight was attached. The other end held a sling, in which a projectile was placed. The mangonel was the major siege weapon introduced into warfare between the fall of the Roman Empire and the invention of gunpowder in the Middle Ages. It came into use during the 12th and 13th centuries. See also p.560.

Mangrove, common name for any one of 120 species of tropical trees or shrubs found in swampy areas. Its stilt-like aerial roots produce thick undergrowth, useful in the reclaiming of land along tropical coasts. Seeds germinate while still on the tree. Height: to 20m (70ft). Families: Rhizophoraceae, Verbenaceae, Sonnerati-

aceae, and Arecaceae. See also pp.308, 332, 333, 374.

Manhattan, borough of New York City, in SE New York State, USA, mainly on Manhattan Island. In 1625, the Manhattan Indians sold the island to the Dutch West India Company and the town of New Amsterdam was built. The English captured the Dutch colony in 1664 and renamed it New York. In 1898 Manhattan became one of five boroughs established by the Greater New York Charter. A cultural, commercial and financial centre, Manhattan has three universities, two art museums, a stock exchange, the Rockefeller Center, and the United Nations Building. Industries: electrical goods, chemicals, fabricated metals, tourism, entertainment, broadcasting, publishing. Pop. (1970) 1,542,541.

Manhattan Project, code-name given to the US atomic bomb project during WWII. Work on the bomb, advocated by Albert EINSTEIN and other scientists, was carried out in great secrecy by a team which included Enrico FERMI and J. Robert OPPENHEIMER, under the authority of Gen. Leslie Groves, at several places in the USA, most notably Oak Ridge, Tennessee. The first test was at Alamogordo, New Mexico, in 1945. See also p.470.

Mani (c.216–c.276), Persian prophet, founder of MANICHAISM, a religious philosophy. As a youth he saw a vision of an angel, which was himself, and several years later, when the vision returned, he believed that he was the inspired prophet of a new religion. Although Mani himself was martyred, his ideas spread quickly throughout Europe, Africa and, in the east, to Chinese Turkestan. The ALBIGENSIANS of medieval Europe were accused of following Mani's ideas.

Mania, mental illness marked by a feeling of intense well-being and excitement. In such a condition, ideas flow at an accelerated rate, speech is rapid and physical activity frenetic and even violent. In extreme cases it is accompanied by confused awareness, loss of sleep and irregular appetite. See also pp.1110–1111.

Manic-depression, psychotic reaction marked by severe alteration of mood ranging from exaggerated feelings of elation and optimism to deep DEPRESSION. Manic and depressive symptoms may alternate in a cyclical pattern, be mixed, or be separated by periods of remission and disturbances of thought and judgement. See also MANIA; pp.1110–1111.

Manichaeism, the religious teaching of the Persian prophet, MANI (c.216–c.276) based on a supposed primeval conflict between light and darkness. According to Mani, the aim of religion was to re-establish the original separation of light from darkness, which had become partially mixed, enslaving man to evil. Adam, Zoroaster, Buddha, Jesus, the Prophets and Mani had all been sent, as messengers of light, to help effect this division. The Manichaean sect, which was influenced by ZORASTRIANISM and CHRISTIANITY, spread rapidly to Egypt and Rome, where it was considered a Christian heresy, and eastward to Chinese Turkestan, where it survived probably until the 13th century.

Manifesto, public declaration explaining past actions or making known reasons, aims or motives of forthcoming actions. It is most commonly associated with statements by political parties, but may be issued to an individual or group of individuals whose actions or proceedings are of importance to the public.

Manifold, in engineering, lateral pipe with outlets to a number of other pipes. In petrol and diesel engines, an intake manifold distributes air and air-fuel mixtures to the engine cylinders. An exhaust manifold collects waste gases and passes them on to the silencer and exhaust pipe.

Manila, largest city of the Republic of the Philippines, on Manila Bay, w Luzon island; capital of the Republic of the Philippines until Quezon City replaced it in 1948. The chief industrial, financial, and cultural centre of the Philippines, the city has been a main port since the 16th century. Spanish traders built the old walled

city (Intramuros) on the site of a Muslim settlement. Following the Spanish-American War in 1898, development expanded beyond the old city, much of which was destroyed in WWII. The port receives most of the imports to the Philippines. Industries: shipbuilding, textiles, clothing and chemicals. Pop. 1,433,253.

Manila hemp, also called abaca, plant native to the Philippines and cultivated in SE Asia and Central America. The fibres from leaf-stalks of the mature plant are used to make cloth, matting, paper and cordage. Fibre length: to 4.6m (15ft). Family Musaceae; species *Musa textilis*.

Maning, Frederick Edward (1811–83), New Zealand author and judge, b. Britain. He was an authority on Maori history and customs. He published *Old New Zealand* in 1863.

Manioc. See CASSAVA.

Manipur, state in NE India, on the Burmese border; the capital is Imphal. After the signing of a treaty in 1762 providing for British assistance against marauding Burmese, Manipur was governed by the State of Assam until 1949 when it was made a Union Territory. It was established as a state in 1972. Crops include rice, mustard and sugar cane. Industries: cotton and silk weaving, carpentry. Area: 22,356sq km (8,632sq miles). Pop. (1971) 1,072,753.

Manitoba, province in s central Canada, the easternmost of the prairie provinces. The terrain varies from the rolling prairie country and lake district of the s to the rugged upland of the Canadian Shield of the NE and the tundra of the far N. Manitoba is famous for its wheat fields. Dairy farming and the rearing of cattle and poultry are also important. Manufacturing includes food products, clothing, electrical products, fabricated metals and transportation equipment. Mineral deposits include nickel, copper and zinc. There are large oilfields in the SW of the province and extensive timber reserves. The major cities are Winnipeg – the capital and largest city – Saint Boniface, Saint James and Brandon. French and English fur traders entered the region in the 17th century. In 1670 Charles II granted the land to the HUDSON'S BAY COMPANY. In 1869 the company sold the land to the newly created confederation of Canada. Area: 650,090sq km (251,000sq miles). Pop. (1980 est.) 1,028,300.

Manizales, city in Colombia, 177km (110 miles) NW of BOGOTÁ; capital of Caldas department. Founded c.1846 by gold prospectors, it was destroyed by an earthquake in 1878 and by fire in 1925. An aerial tramway, 72km (45 miles) long, connects it with Mariquita. Industries: gold, silver and mercury production and coffee. Pop. (1973) 199,904.

Mankiewicz, Joseph Leo (1909–), US film executive who began his career as a caption writer for silent films. He became a producer in 1936 and later a writer-director. His films as a producer include *The Philadelphia Story* (1940) and as a writer-director, *Guys and Dolls* (1955) and *Cleopatra* (1962).

Mankowitz, Wolf (1924–), British author and playwright. His novels include *Make Me an Offer* (1952) and *A Kid for Two Farthings* (1953), both of which were filmed. His musical play, *Expresso Bongo*, was also made into a film (1960), starring Cliff RICHARD, and he has written screenplays for *The Hireling* (1973) and *Dickens of London* (1976).

Manley, name of two prime ministers of JAMAICA. Norman Washington Manley (1893–1969), a lawyer educated at Oxford, founded the socialist People's National Party (PNP) in 1938, and was Jamaica's first Premier from 1959–62. His son Michael Norman Manley (1923–), was an active trade-unionist before becoming a politician. He, also of the PNP, became Prime Minister of Jamaica in 1972. See also p.1613.

Man-made fibres, materials intended to substitute for, supplement or improve on the quality of natural fibres such as cotton, wool and silk. The manufacture of man-made fibres began early in this century with RAYON, still a familiar textile,

Mango: large mangoes weigh up to 2,300gm (5lb); small ones are the size of plums.

Manhattan: the Chrysler Building dominates this part of the New York skyline.

Manitoba has as its capital Winnipeg situated on the Red River.

Norman Manley strove for Jamaican independence and became the first premier.

Mann, Heinrich

Field-Marshal Mannerheim remains a heroic figure in the eyes of all Finns.

Man-of-war, at Sheerness, lies beside an early steam version, on the left.

Manometers usually contain mercury; an adaptation measures blood pressure.

Andrea Mantegna: a detail from *Return from the Hunt* shows early perspective.

which (like cotton) is made of the natural polymer cellulose. In rayon, cellulose is extracted from plants, dissolved and reconstituted as a fibre by spinning it through spinnerets, devices resembling the rose of a watering can. The first truly synthetic, or artificial-polymer, fibre was NYLON – a revolutionary material which, weight for weight, is stronger than steel. The manufacture of nylon begins in the petroleum and coal industries, from which its monomers (materials such as adipic acid and hexamethylene diamine) are obtained. After polymerization, nylon can be melted and melt-spun through spinnerets to make fibres, which can then be further elongated by cold drawing. POLYESTERS, synthetics like nylon widely used for textiles, are also melt-spun. The equally popular ACRYLICS decompose before they melt, so are wet-spun like rayon. POLYETHYLENE (polythene), polypropylene and vinyl plastics such as PVC can also be made as fibres although they are more familiar in such applications, as film or sheet. Inorganic man-made fibres include glass fibre, spun from molten glass; carbon fibre, used to reinforce ceramics and metals; and metallic fibres, used mainly for decorative purposes in clothing. See also pp.590-591.

Mann, Heinrich (1871–1950), German novelist and brother of Thomas MANN. His hatred of tyranny, particularly Nazism, and the educational system is expressed in his trilogy, *The Empire* (1918–25), and *Young Henry of Navarre* (1935).

Mann, Thomas (1875–1955), German novelist and essayist. His first novel, *Buddenbrooks* (1901), superficially a description of the bourgeois class but in fact heavily laden with elements drawn from his study of NIETZSCHE, SCHOPENHAUER and FREUD, was an immediate success. It was followed by other distinguished works, including *Death in Venice* (1911), *Reflections of a Non-political man* (1918) and *The Magic Mountain* (1924). The rising tide of Nazism forced Mann from his non-political stance and in 1930 he published *Mario and the Magician*, an attack on the vulgarity of dictatorship. He became a US citizen in 1944 and won the Nobel Prize in literature in 1929.

Mann, Tom (1856–1941), British labour leader. He organized the London dock strike of 1889, was secretary of the Independent Labour Party (1894–97), worked in Australia after 1902 and was a founder of the British Communist Party in the 1920s. See also p.1693.

Manna, or flowering ash, tree of the olive family that grows in S Europe and Asia Minor. The pinnate leaves have rust-coloured hairs underneath. The flowers are white and showy with large petals. A sugary substance, mannite, is collected from cuts made in the bark and used medicinally. Height: to 18m (60ft); family Oleaceae; species *Fraxinus ornus*.

Mannerheim, Carl Gustav Emil von (1867–1951), Field-Marshal and President of Finland. A baron, he served in the Russian army, rising to lieutenant-general in WWI. After the Russian revolution (1917) he returned to Finland and repelled a Bolshevik offensive. As regent (1918–19) he obtained the recognition of the independence of Finland. He was head of the Defence Council from 1931 and planned the Mannerheim Line, a fortified defence system right across Karelia, against Soviet aggression. When the USSR attacked Finland (1939) this line was instrumental in the resistance to the Soviet forces. He was President of Finland from 1944 to 1946.

Mannerism, in art and architecture, term which refers to the style of Italian art in the 16th century from c.1530, regarded by some historians as transitional between the High Renaissance styles and the Baroque. Others regard it as a coherent style characterized by experimentation, virtuosity, and artifice, with an undercurrent of subjective intensity which represented European art as a whole. In painting, the later work of MICHELANGELO, EL GRECO's paintings from Italy, and the art of FRANCESCO PARMIGIANINO are described as Mannerist. In architecture, Mannerism

introduced a freer use of decoration and laid less stress on accurate proportion than had Classicism. The first indications of this are evident in some later designs of Michelangelo, and the best examples are the buildings of Bartolommeo Ammanati, notably the Collegio Romano, Rome (c.1582–85). The twist bizarre sculptures of GIAMBLOLOGNA and CELLINI are typical of Mannerist sculpture. The value Mannerists placed on the decorative arts was important in encouraging the development of tapestry, ceramics and metalwork. See also pp.1398–1399, 1398–1399, 1438.

Mannheim, city and major port in central West Germany, on the E bank of the River Rhine at the mouth of the River Neckar. Originally a fishing village, it was fortified in 1606 and destroyed by the French in 1689. It was rebuilt in 1697, became the seat of the Rhine Palatinate (1719–77) and passed to Baden in 1803. Its industries include chemicals, cellulose, paper and textiles. Pop. (1974) 325,386.

Manning, Henry Edward (1808–92), British ecclesiastic and cardinal. A member of the OXFORD MOVEMENT, he was ordained a priest in the Church of England in 1833 but in 1851 was converted to Roman Catholicism. He was appointed Archbishop of Westminster in 1865 and became a cardinal in 1875. He took a leading part in debates on papal infallibility in the Vatican Council (1870) and defended this doctrine in his writings. He was an active social reformer and led a campaign against strong drink. His most famous work is *The Eternal Priesthood* (1883).

Manning, Olivia (c.1912–), British novelist, whose first novel, *The Wind Changes*, appeared in 1937. She is best known for her "Balkan trilogy", *The Great Fortune* (1960), *The Spoilt City* (1962) and *Friends and Heroes* (1965), novels about a British diplomat and his wife in E Europe.

Man-of-war, naval vessel of the 17th–19th centuries. From the 1650s men-of-war were divided into six rates, depending on the number of decks and guns. The first, second and third rates were known as SHIPS-OF-THE-LINE. See also p.567.

Man-of-war, Portuguese. See PORTUGUESE MAN-OF-WAR.

Manometer, device for measuring pressure. It consists of a U-shaped tube containing a liquid, one end open to the atmosphere and the other end attached to the vessel whose pressure is to be measured. If the gas pressure in the vessel is greater than atmospheric, it will force the liquid down on the side nearest to the vessel and up on the side open to the atmosphere. The difference in heights of the liquid in the two arms of the tube shows the difference in pressure. See also p.830.

Manon Lescaut (1893), four-act opera by Giacomo PUCCINI with Italian libretto by Ruggero LEONCAVALLO and others, after the novel by the Abbé PRÉVOST. It tells how Manon (soprano), who has eloped with a student, des Grieux (tenor), is banished from France to Louisiana. Des Grieux joins her, but Manon dies as the pair wander homeless in the strange land.

Manor, term applied after the NORMAN CONQUEST to estates into which the rural economy in England was organized. Varying in size and structure, a manor was generally divided into the lord's demesne, on which the VILLEINS were bound to labour, and an area assigned to the villeins for their own use. The manor house was the focal point of the manor. See also MANORIAL SYSTEM.

Manorial system, organization of rural economy existing in England and throughout western and central Europe during the period of the FEUDAL SYSTEM. Typical of the system was the English manor house, the focal point of a MANOR, or estate, which varied in size and compactness, but might consist of several villages, hamlets and farms. A lord presided over the manor, which he held in FIEF from a greater lord, who might be the king. The VILLEINS were each assigned a share, usually a virgate or strip of the village

lands. In exchange for the use of the land, the villein gave some part of his labour to his lord's demesne, and made payments of livestock and money. The custom, or law, of the manor fixed the duties and payments of the villein, who might be a SERF or a freeman. Justice was determined in the manorial court, presided over by the steward or seneschal, where officials were appointed, offenders punished and land transactions registered. See also pp.1330–1331.

Manrique, Jorge (1440–79), Spanish lyric poet. He was a minor poet save for one single, long poem – *Coplas por la muerte de su padre Don Rodrigo* (1492) – written on the death of his father and the most famous elegy in Spanish.

Mans, Le. See LE MANS.

Mansard roof, roof having two slopes on each side, the lower with a very steep pitch, the upper more gently sloped. It is named after the French architect François MANSART who frequently incorporated it into his designs, although it had been in use since the mid-16th century.

Mansart (Mansard), François (1598–1666), French architect. His first major work was the façade at the church of the Feuillants, Paris (1623), and he went on to establish a restrained, Classical style which dominated French 17th-century architecture. The Château des Maisons is his most important surviving building. A type of double-pitched roof is named after him.

Mansbridge, Albert (1876–1952), British pioneer educationist. He founded the Association to Promote the Higher Education of Working Men (1903), which in 1905 became the Workers' Educational Association. He also founded the National Central Library, the World Association for Adult Education (1919) and the Seafarers' Educational Service (1919).

Mansfield, Katherine (1888–1923), British short-story writer, b. New Zealand. Her works, all collections of short stories, include *In a German Pension* (1911), *Bliss* (1920), *The Garden Party* (1922) and *The Dove's Nest* (1923). She was a writer of subtlety and warmth, who created atmosphere with the lightest of touches.

Mansfield Park (1814), novel by Jane AUSTEN. Due to the persuasions of the hateful, overbearing Aunt Norris, Fanny Price, the heroine, is adopted by her rich uncle and falls in love with her cousin, Edmund.

Mansfield's judgment (1772), verdict given by the 1st Earl of Mansfield, British Lord Chief Justice, in favour of the fugitive slave James Somerset. The judgment laid down that an escaping slave could not be forcibly returned to a colony for punishment. It did not imply, as was suggested, that slavery was not allowed in English law.

Manslaughter, crime of killing another person either accidentally or for humane motives. In English law manslaughter is considered to merit less punishment than MURDER; a person charged with murder may, on the other hand, be found guilty of manslaughter if the court considers there to have been mitigating factors (eg the victim's painful and terminal disease, or the protagonist's diminished responsibility for one reason or another at the time).

Manson, Sir Patrick (1844–1922), British PARASITOLOGIST known for his pioneering work in tropical medicine. He discovered that the mosquito was host to the parasite *Filaria bancrofti*, which causes the human disease FILARIASIS. Manson founded the Medical School of Hong Kong and organized the London School of Tropical Medicine.

Mantegna, Andrea (c.1431–1506), Italian painter who profoundly influenced the development of northern Italian painting. In 1460 he became court painter to the GONZAGA family in Mantua and remained there. His works include the innovative *Sr Sebastian* (1465), *Dead Christ* (1466) and *Madonna of Victory* (1495). See also pp.1386, 1386, 1387.

Mantis, or praying mantis, any of several species of mantids, insects found throughout the world. They have powerful front

legs used to catch and hold their insect prey. Colours range from brown and green to bright pinks, enabling some species to blend with the foliage or flowers of their environment. Length: 25–150mm (1–6in). Family Mantidae. See also pp.36–37, 37, 311.

Mantle, in geophysics, solid layer of the Earth extending from about 5km (3 miles) down to about 2,900km (1,800 miles); it lies between CORE and CRUST. The mantle is not homogeneous, but becomes denser with increasing depth; near the core, it increases to 10g/cm³. The downward increase in density causes primary (P) and secondary (S) SEISMIC WAVES, which originate near the Earth's surface, to bend away from the core, like the bending of light waves by the atmosphere to form mirages. Most of the mantle is dense rock, and is a good conductor of such waves. See also pp.194, 195, 202.

Mantra, in HINDUISM and BUDDHISM, sacred word, verse or formula, eg *Aum (Om)* recited during prayers often in order to rid the mind of distractions, and induce a transcendental state. See also p.1915.

Manu, in Hindu mythology, the hero of the DELUGE. Manu caught a fish that offered to save him in exchange for its life. The fish had Manu build a ship, then towed it for years to the Himalayas where it was tied to a tree until the waters receded. Manu is the generic name for each of the 14 consecutive rulers of the earth. According to myth the reign of each will last for several million years and will end in a deluge. The present ruler is the seventh, the son of the Vedic sun god Vivasvan. See also pp.1907, 1907.

Manu, Laws of, ancient SANSKRIT code of law. It was attributed to a mythical BRAHMAN sage of the same name. Probably compiled c.AD 200, the text has been transmitted largely through its commentaries. Considered to be sacred literature as well as the basis of HINDU jurisprudence, it is a treatise on the religious and social obligations of Hindus.

Manuel, name of two Byzantine emperors. Manuel I (c.1120–1180) called Manuel Comnenus, ruled from 1143 to 1180 and attempted to reunite the eastern and western provinces of the former Holy Roman Empire. His neglect of Asia Minor, however, led to his defeat by the Turks at Myrioccephalon (1176). He was succeeded by his son, Alexius II. Manuel II (1350–1425), called Manuel Palaeologus, (r.1391–1425), saw his empire reduced to Constantinople by the Turks. He made a futile trip to Venice, London and Paris seeking aid but in 1425 he was forced to pay tribute to the sultan. He was succeeded by his son, John VIII.

Manuel, or **Emmanuel**, name of two kings of Portugal. Manuel I (1469–1521) succeeded John II to the throne and reigned from 1495 to 1521, a period during which Portugal thrived on the wealth from the Indies and became the leading commercial nation of the West. In order to marry the daughter of FERDINAND II and Isabella of Spain, Manuel reluctantly agreed to expel the Jews and Moors (1496). He was succeeded by his son, John III. Manuel II (1889–1932) was the son of Carlos I and became king in 1908 after both his father and older brother were assassinated. In 1910 he was dethroned by a revolution and a republic was established. He was the head of the house of Braganza and Portugal's last king. He spent his exile in England.

Manukau, city on N North Island, New Zealand, on Manukau Harbour, an inlet of the Tasman Sea, 19km (12 miles) sw of Auckland. The city includes Auckland's airport built on land reclaimed from the sea. Industries: food processing, aluminium, plastics, machinery and synthetic fibres. Pop. (1974) 127,800.

Manumission, legal release of a peasant of VILLEN status from bondage to his lord. The villen gained his freedom either by purchase through a third party or by charter, sometimes in return for a QUIT RENT. The act of manumission was performed publicly, usually in the county court, and the villen was presented with the arms of a freeman.

Manuscript, handwritten book or document, as distinct from a printed or typed one. The oldest manuscripts (c.2600 BC), written on papyrus, have been found in Egyptian tombs. Some of the manuscripts of the Middle Ages were extremely decorative works on vellum (known as illuminated manuscripts), painstakingly copied. With the advent of printing in Europe, the need for hand-copied manuscripts ceased, but the study of the old codices and manuscripts continues in palaeography and they also form an important historical source, eg the DEAD SEA SCROLLS of the Essenes which have thrown much light on the origins of CHRISTIANITY. Today the term is also used to describe unprinted books, letters and papers.

Manutius, Aldus (1449–1515), Italian printer and publisher, founder of the Aldine Press. His type-cutter was Francesco Griffio of Bologna, who produced outstanding roman type-faces. Manutius is renowned for his pocket-size editions of Greek and Latin classics. In 1502 printed Dante's *La divina commedia*, which first showed the famous device of the Aldine anchor and dolphin.

Manx, language formerly spoken in the Isle of Man. Closely related to Scottish Gaelic, it was spoken by most of the native inhabitants of the island until about 1700, when English began to be introduced. By 1900 there were only a few thousand speakers left, and there are now no native speakers.

Manx cat, short-haired domestic cat thought to have been bred originally on the Isle of Man. It has a round head with prominent ears, a short back, and hind-quarters higher than the shoulders; it is characteristically tailless. The luxurious double coat may be any colour. Manx cats have a hopping, rabbit-like walk.

Manzanillo, seaport in E Cuba, on the Gulf of Guacanayabo. Founded in 1784, the port is a distributing centre for a fertile agricultural region. It now exports tobacco, sugar and exotic woods. Industries include sawmills, cigar factories and tanning. Pop. (1970) 77,880.

Manzoni, Alessandro (1785–1873), Italian novelist and poet. His poetry expressed his religious faith, but his greatest work is *The Betrothed* (1827), a historical novel set in 17th-century Milan during the Spanish occupation.

Manza, Giacomo (1908–), Italian sculptor, etcher and lithographer. His work is religious in content and includes the panelled bronze doors of St Peter's, Rome (1964), and the doors of Salzburg Cathedral (1958). He was awarded the Lenin Peace prize in 1966.

Mao. See MIAO.

Maoris, Polynesian inhabitants of New Zealand preceding the Europeans. They have brown skin, black or dark brown hair and brown eyes. By now thoroughly Europeanized, they nevertheless have strong attachments to the Maori language, culture and customs. In Maori society tattooing, carving and weaving were highly developed arts; Maori songs and war chants (*haka*) are kept alive still. The meeting place (*marae*) was the centre of the community. The most prestigious tribes are those that arrived in the "great fleet" (c.1350). Traditionally, Maoris lived by agriculture, hunting and fishing. They have had equal rights with white New Zealanders since the second half of the 19th century. The Maori population is now increasing, having succumbed initially to European diseases. Inter-marriage is becoming much less rare. See also MAORI WARS; pp.1603–1604.

Maori Wars, wars between British settlers in New Zealand and MAORI tribes, from 1845 to 1848 and 1860 to 1872. They arose when the settlers broke the agreement in the Treaty of WAITANGI (1840) to guarantee the Maoris possession of their lands. As a result of the wars a Native Land Court was established (1865), a Maori school system formed (1867) and the Maoris allowed to have four elected members in the New Zealand legislature.

Mao Tse-tung (1893–1976), Chinese Communist leader and head of state. He was an early member of the Chinese Com-

munist Party, becoming Chairman of the People's Republic of China in 1949. The most influential person in modern Chinese history, he was a prime mover of events which led to the Communist accession to power in 1949. He joined the revolutionary army briefly in 1911 to fight against the MANCHU DYNASTY, went to Peking University in 1919, becoming an adherent of Marxism in 1919–20. He organized a Communist group in Hunan in 1920 and in 1923 devoted himself full-time to revolutionary activities, becoming convinced of the revolutionary potential of the peasantry. In 1927 the Communists split with CHIANG KAI-SHEK's Kuomintang when the latter expelled all Communists from high posts in the organization. The years 1927–49 saw the consolidation of the Communist Party under Mao's increasing control. Mao concentrated his efforts on the peasantry rather than the urban masses, and after guerrilla activities against the Kuomintang in the late 1920s, became Chairman of the Communist base at Kiangsi in 1931. His dominance in the party was established by 1935 during the Long March from Kiangsi to Shensi in 1934–1936. Mao built his reputation as a Theorist in Yanan from 1936 until the end of WWII, and by the late 1930s his control over the Communist Party was assured with his concept of the "Sinification of Marxism", the adaptation of MARXISM to the cultural, historical and economic experiences of the Chinese. In 1949 Mao became Chairman of the People's Republic of China, placing emphasis on rapid collectivization and initially concentrating on the development of heavy industry. In 1956 he propounded the Hundred Flowers policy – the freedom to express diverse ideas – with the aim of incorporating the intelligentsia into the Chinese revolution. The late 1950s saw the GREAT LEAP FORWARD with emphasis on decentralization and the development of labour-intensive industries leading to the establishment of people's communes. He retired as Chairman of the Republic in 1959 but remained Chairman of the Communist party. Mao's feeling of the growing elitism within Chinese society and leadership struggles with LIU SHAO-CH'ANG and Teng Hsiao-p'ing led to the CULTURAL REVOLUTION (1966–69). Mao gradually retired from the day-to-day administration of politics in the early 1970s. Following his death, the new leadership of China began to undermine the widespread view that his theories were sacrosanct. His widow and three others (the 'Gang of Four') underwent a showpiece trial, designed to discredit them and their allegiance to the former leader. See also pp.1623, 1697, 1726–1727, 1727.

Map. See CARTOGRAPHY.

Maple, genus of deciduous trees native to temperate and cool regions of Europe, Asia and North America. They have yellowish or greenish flowers and winged seeds. They are grown for ornament, shade or timber, depending on the species; the sugar maple is also tapped for MAPLE SYRUP. Most species have brilliant foliage in the autumn; a typical example is the tree called SYCAMORE in Britain. Height: 4.6–36m (15–120ft). Family Aceraceae; genus *Acer*.

Maple syrup, sweet-tasting concentrated and processed sap of the North American sugar maple, *Acer saccharum*. Trees are tapped and the fluid is allowed to evaporate in the open air. The final syrup is 30 to 50 times more concentrated than the sap and is popular as a sauce for sweet foods. See also pp.693, 693.

Maputo (Lourenço Marques), capital of the state of Maputo and of Mozambique. It was first visited by Antonio do Campo in 1502 and explored by the Portuguese trader Lourenço Marques. It is linked by rail to South Africa, Swaziland and Rhodesia and is a popular resort area. Maputo's products include footwear and rubber. Pop. 799,400.

Maquette, small model, usually of wax or clay, made as a detailed study for a work of sculpture. A less finished model, more commonly made, is known as a bozzetto.

Maquis, popular name for the French

Manx cats can run faster for longer than most other domesticated cats.

Maori art, while intricate and skilful, is of great tribal significance.

Mao Tse-tung, photographed in 1966, waves to the people of Peking.

Maple: in Norway this tree can grow to a height of 30 metres (100 feet).

Mar, John Erskine, Earls of

underground resistance movement against the German forces of occupation in WWII. The maquis specialized in sabotage and by 1944 had developed an efficient intelligence system, which was of service in the liberation of the country (1944). *Maquis* is the French name for a tough shrub.

Mar, John Erskine, Earls of, hereditary Scottish name and title. The 1st (or 6th) earl (d. 1572) was created Earl of Mar by MARY, QUEEN OF SCOTS, but whether this constituted a restoration of the earldom or a new creation is still disputed. The 2nd (or 7th) earl (c. 1558–1634) took part in the RUTHVEN RAID, then became reconciled with James VI of Scotland (later James I of England) and served as treasurer of Scotland from 1616 to 1630. The 6th (or 11th) earl (1675–1732) was nicknamed "Bobbing John", probably because of his political vacillation when his ambitions were blocked. A leader of the JACOBITES who became a supporter of the Union with England, he tried unsuccessfully to raise the standard for the Old Pretender in 1715 and died in exile in France. See also p. 1472.

Mar, Kato, The Rt Hon Sir Kamisee Kapaiwai Tuimacilai (1920–), Fijian politician and Prime Minister of Fiji from 1970. From 1967 to 1970 he was Chief Minister, after leading the Fijian delegation at the Commonwealth Constitutional Conference in London in 1965.

Marabou, See ADJUTANT STORK.

Marabouts, MUSLIM monks. They enjoy great influence in North Africa, where they are looked upon as living saints. The term is now also used for the tombs of Muslim holy men, which are sometimes treated as places of divine worship.

Maraca, Caribbean percussion instrument, originally made from a dried gourd containing dried seeds. It is shaken rhythmically, and became popular in Western countries in jazz and swing bands, especially for dances such as the rumba.

Maracaibo, port city in NW Venezuela, between Lake Maracaibo and the Gulf of Venezuela. Founded in 1529 by the German adventurer Alfinger, it was sacked by the English pirate Henry MORGAN in 1669. It expanded after the discovery of oil in 1917 and is now the country's second largest city. Its products include coffee, cacao and sugar. Pop. 690,400.

Maracanã Stadium, oval football stadium in Rio de Janeiro with a capacity of more than 200,000; the largest in the world. It was built, although not completely finished, for the 1950 World Cup, when a crowd of 199,854 watched Uruguay beat Brazil 2–1 in the final match.

Maracay, city in N Venezuela, on the Pan American Highway 80 km (50 miles) WSW of Caracas. It was the capital of Venezuela from 1908 to 1935. It now supplies much of the meat and dairy produce for Caracas and its industries include textiles and timber. Pop. (1971) 255,134.

Marat, Jean Paul (1743–93), physician, extremist writer and French revolutionary. At the outbreak of the Revolution he founded the inflammatory journal *L'Ami du peuple* and was forced to flee at least twice to London. Working later for the JACOBINS, he was stabbed to death in his bath by Charlotte CORDAY, a supporter of the GIRONDINS.

Marathas. See MAHRATTAS.

Marathon, one of the most demanding of athletics events. The standard marathon race distance is 42.2 km (26 miles, 385 yards). The race approximates to the distance run by a Greek soldier (believed to have been Pheidippides) from Marathon to Athens to announce the Greek victory over the Persians in 490 BC. Usually it starts and ends on a stadium track, with most of the race run through a marked course in city or suburban streets. Marathon racing was included in the first modern Olympic Games of 1896.

Marathon, Battle of (490 BC), battle in which the Athenians under Miltiades defeated a larger army led by Datis and Artaphernes and freed ATTICA from the threat of a Persian invasion. Marathon plain lies to the NE of Athens. See also pp. 1193, 1203.

Marat/Sade (1964), convenient name for the play by Peter WEISS, entitled *The Persecution and Assassination of Jean Paul Marat as Performed by the Inmates of the Asylum of Charenton under the Direction of the Marquis de Sade*. First performed by the Schillertheater, West Berlin and later by the ROYAL SHAKESPEARE COMPANY under Peter Brook, the play explores the nature of violence and revolution in its dialogue, contrasting the revolutionary socialistic tenets of MARAT and the individualistic eccentricities of the nobleman de SADE.

Maratta (Maratti), Carlo (1625–1713), Italian painter of the Roman School. He had an early success with his painting *Nativity* (1650); he then became a celebrated portraitist and was commissioned to paint many altar-pieces.

Marble, metamorphic rock composed largely of recrystallized limestones and dolomites. The term is more loosely used to refer to any crystalline calcium carbonate rock that has a good pattern and colour when cut and polished. The colour is normally white, but when tinted by serpentine, iron oxide or carbon can vary to shades of yellow, green, red, brown or black. It has been a favourite building and sculpting material of ancient and modern civilizations. See also pp. 210–211, 1931.

Marbles, small balls made from almost any hard material, including marble, clay, plastic or glass, and used in playing a game of the same name. Most commonly, coloured glass balls are rolled or tossed on to a limited area with the object of approaching close to, or of hitting, other marbles already on the ground. There are many local variations of the game, but common rules are that the marble must be flicked from between thumb and forefinger, that the target is an arrangement of marbles in the form of a cross, and that the object of a throw is to knock other marbles out of the area marked on the ground. Alternatively there may be a hole into which marbles are to be knocked, or, like bowls, the thrown marble must approach as close as possible to a specific ball, usually of different size or colour. Games with marbles have been associated with cultures as diverse as the North American Indians, and ancient Rome.

Marburg, town in West Germany, on the River Lahn 74 km (46 miles) N of Frankfurt. It developed around a Thuringian border fortress in the 12th century and served as a residence for the rulers of Hesse from the 13th to 17th centuries. It is the location of Europe's first Protestant University (1527). Industries include tourism, pottery and chemicals. Pop. (1970) 46,968.

Marc, Franz (1880–1916), German painter. AN EXPRESSIONIST artist, he was influenced by Robert DELAUNAY. His works, in which colour plays an important symbolic role, include *Cat under the Tree* (1910). See also pp. 1655, 1655.

Marcantonio (Marcantonio Raimondi) (c. 1480–c. 1534), Italian engraver and craftsman who reproduced the paintings of other artists such as RAPHAEL and the woodcuts of DÜRER. Some of his works were copied on MAJOLICA ware which helped spread Renaissance motifs.

Marcasite, brass-yellow mineral, iron sulphide (FeS₂), found commonly in near-surface deposits. It is found as tabular or prismatic crystals in the orthorhombic system, as cockscomb aggregates and as stalactitic, globular and radiating forms. It has a metallic lustre and is brittle. Hardness 6–6.5; s.g. 4.9.

Marceau, Marcel (1923–), French mime. His best known creation was Bip, a sad white-faced clown with a tall, battered hat. Marceau and his company, which he started directing in 1949 to reawaken interest in the art of MIME, toured extensively and Marceau made several films, including *Un jardin public* (1955), and made a memorable appearance in *Silent Movie* (1976).

Marcel, Gabriel (1889–1973), French philosopher, dramatist and critic. He was a leading exponent of the Existential school, holding that knowledge of existence comes not from discursive reason

but rather from direct contact or participation. The basis of Marcel's analysis of existence and reality is faith. His philosophy has been described as the Christian expression of EXISTENTIALISM. His best known works are *Being and Having* (1949) and *The Mystery of Being* (1950–51).

Marcellinus, Saint (r. 296–304), Pope who reigned during the persecution of DIOCLETIAN. He was said to have sought martyrdom after succumbing to the demand of the persecutors for the sacred books of the Church.

Marcellus, name of two popes. Marcellus I (r. 308–309) was exiled by the Emperor Maxentius but succeeded in reorganizing the Roman Church, dividing it into 25 parishes. He was later canonized. Marcellus II (r. April–May 1555) shared the presidency of the Council of Trent (1545–47) and, after becoming Pope, initiated the publications of the reform documents in a bull.

Marcellus, name of several political figures at Rome, of whom the most important were Marcus Claudius Marcellus (c. 268–208 BC), who thwarted HANNIBAL's attack on NOLA in 216 BC, and Marcus Claudius Marcellus (42–23 BC), who was named as successor to his uncle, the Emperor AUGUSTUS, but who died 37 years before Augustus.

March, third month of the year, consisting of 31 days of which the 21st is the vernal EQUINOX. In the Roman Republican calendar it was the first month and, named after MARS, the god of agriculture and war, marked the start of agricultural renewal and the season of military campaigns. In spite of becoming the third month of the year in the Julian calendar, the feast of the Annunciation (25 March) was celebrated as New Year's Day until the late 16th century.

Marchand, Jean-Baptiste (1863–1934), French soldier and an explorer in Africa. Heading an expedition in 1898 to lay claim to a part of Sudan, he was confronted by the British in what is known as the FASHODA INCIDENT. He fought later in the BOXER REBELLION (1900) and WWI.

Marcher lords, English nobles who were permitted after 1066 to rule whatever parts of Wales they could conquer and hold. Given sovereign rights within the areas they held, which were collectively known as the MARCHES, they not only served to check Wales but also became a threat to the English monarchy, particularly in the Wars of the ROSES. In 1354 the territories were perpetually annexed to the English Crown, but the lordships were not finally abolished until 1536 with the enactment of a series of laws effecting union between Wales and England.

Marches, area bordering Wales and England which was conquered between 1067 and 1282 by the MARCHER LORDS, and ruled by them until 1536. The lordships often corresponded to the Welsh administrative areas, the *commotes*. Most were divided into the low-lying Englishry, where English law, administration and social patterns were imposed, and the upland Welshry, which retained a considerable degree of national identity. The Marches corresponded approximately to the former Welsh counties of Brecknock, Denbigh, Glamorgan, Montgomery, Pembroke and Radnor, and the English county of Monmouth and parts of Shropshire, Herefordshire and Gloucestershire.

Marciano, Rocky (1923–69), US boxer, real name Rocco Francis Marchegiano. On his climb to the heavyweight title he became the second boxer ever to knock out Joe LOUIS (1951) and won the title in 1952 by knocking out Joe WALCOTT in 13 rounds. He retired as undefeated champion in 1956.

Marconi, Guglielmo (1874–1937), Italian physicist who developed RADIO. By 1897 Marconi was able to demonstrate radio telegraphy over a distance of 19 km (12 miles) and, after forming a wireless telegraph company, established radio communication between France and England in 1899. By 1901 radio transmissions were received across the Atlantic Ocean, and in 1909 Marconi was awarded the Nobel

Prize in physics. His later work on short-wave radio transmission formed the basis of nearly all modern long-distance communication. See also pp. 638–639.

Marco Polo. See POLO, MARCO.
Marcos, Ferdinand Edralin (1917–), President of the Philippines. Elected President in 1965, he was re-elected in 1969, becoming the first President of the Philippines to serve a second term. His presidency has been marked by student unrest and guerrilla activity; in 1971 and 1972 he declared martial law and in 1973 he established a new and authoritarian constitution.

Marcus, Saint (d. c. 679), also called Marcus, Mark or Martin, Italian monk at Monte Cassino who became a hermit on Mt Massicus. He is mentioned in St Gregory's life of St Benedict, and according to legend the sacrament was brought to him by an angel.

Marcus Aurelius (Antoninus) (121–180), Roman emperor (r. 161–180) and philosopher, originally named Marcus Annus Verus. He was an able and energetic ruler, and recurring crises meant that for most of his reign he was fighting wars. In 161 he repelled a Parthian invasion of Syria. In 167–168, he drove the Marcomanni, a Germanic tribe, out of Italy. There were also revolts or invasions in Egypt, Spain and Britain. He promulgated many laws, often in favour of the poor, but was not tolerant of Christians. His *Meditations*, his one surviving work, is a collection of thoughts and theories that occurred to him during his numerous campaigns. See also pp. 1233, 1233, 1242, 1243, 1250.

Marcuse, Herbert (1898–1979), US social philosopher and author, b. Germany. In *Eros and Civilization* (1958) he attempted to fuse Marxist and Freudian theories into a critique of modern industrial societies. *One Dimensional Man* (1964), in which he argued that Americans were oppressed and beginning to accept oppression, made him a hero of the New Left radicals and provided a rationale for student revolts in the 1960s. See also pp. 1750, 1751, 1751.

Mardi gras, community festival or carnival held on Shrove Tuesday, the day before the beginning of Lent, in many Roman Catholic countries, particularly France. In the USA, most notably New Orleans, it includes street parades, concerts and dances.

Marduk, god of the spring sun and supreme deity of the Babylonian pantheon. The champion and king of the gods in the fight against Tiamat, KINGU and the forces of darkness, his victory was celebrated at the New Year. Marduk was originally a vegetation god but acquired the attributes of local deities as the power of Babylon grew.

Mare, Walter de la. See DE LE MARE, WALTER.

Marengo, Battle of (1800), victory of the French under NAPOLEON over the Austrians under Melas at the end of the French Revolutionary Wars. Their victory gave the French control of N Italy and the strategic initiative in Europe. See also pp. 1552–1555, 1552–1555.

Mareth Line, fortification in southern Tunisia, N Africa. It was the scene of one of the final battles between the retreating AFRIKA KORPS and the British Eighth Army in 1943.

Marey, Étienne-Jules (1830–1904), French inventor and professor of natural history. He invented the SPHYMOGRAPH and a camera that took a series of photographs, enabling him to study the flight of birds.

Marfan's syndrome, also called arachnoidactyly, rare disorder affecting the development of connective tissue in the body, notably in the skeleton, eye and heart. The limbs and fingers generally become elongated and spindly. Severe damage may be caused to the heart and eye.

Margai, Sir Milton (1895–1964), first Prime Minister of Sierra Leone. A physician, he turned to politics after WWII and led his country to independence in 1961. He was followed as Prime Minister by his brother, Sir Albert Margai.

Margaret, Maid of Norway (c. 1283–90),

grand-daughter of the Scottish king Alexander III. As Alexander's only living heir she had been pledged to marry the son of Edward I of England; after her early death on the way to England, Edward declared his overlordship of Scotland, which led to its coming under English rule.

Margaret, Saint (d. 1093), queen consort of MALCOLM III, King of Scotland. A deeply religious woman, she sought to replace the Celtic practices of the Scottish Church with those of Rome by founding monasteries and introducing English priests into Scotland. She was canonized in 1250. See also p.1316.

Margaret of Anjou (1430–82), wife of HENRY VI of England, whom she married in 1445. During the Wars of the Roses (1455–85) she fought the Yorkists for the right of her only son, Edward, to succeed to the throne. She was finally defeated at the Battle of Tewkesbury (1471), where her son was killed. See also p.1377.

Margaret Rose, Princess (1930–), only sister of Queen ELIZABETH II, second daughter of King GEORGE VI. In 1960 she married Antony Armstrong-Jones, a photographer, who was created Earl of Snowdon in the same year. A son, David Albert Charles, was born in 1961 and a daughter, Sarah Frances Elizabeth, in 1964. In 1978 the marriage broke down and the couple were divorced.

Margaret Tudor (1489–1541), Queen of Scotland, daughter of HENRY VII of England. She married JAMES IV of Scotland in 1503 and at his death in 1513 became regent for their infant son, James V. Removed from power in 1515, she continued to play an important part in the uncertain Scottish political scene, her affiliation varying with her personal interest of the moment and her desire for power and money. See also pp.1379, 1379.

Margarine, buttery substance made from vegetable fats with aqueous milk products, salt, flavouring, food colouring, emulsifier and vitamins A and D blended in. It is used for cooking and as a spread. Corn or safflower oil is the most popular modern fat ingredient, due to the fear of polyunsaturated fats in relation to health.

Margay, small CAT found in tropical forests from Mexico to Brazil; it is sometimes domesticated. The coat is cream yellow with black spots. Length: to 110cm (43.3in) including the tail. Family Felidae; species *Felis wiedii*. See also p.315.

Marggraf, Andreas Sigismund (1709–82), German chemist whose discovery of beet sugar in 1747 led to the development of a new industry. He also introduced the use of the microscope in chemical research and simplified the process of extracting phosphorus from urine.

Margrave, former German title of nobility introduced in the 9th century for administrative reasons by the CAROLINGIANS under CHARLEMAGNE. The Carolingians sent imperial representatives with extensive powers to rule over *marks* (border lands) of their empire.

Margrethe, or Margaret, the name of two queens of Denmark. Margrethe I (1353–1412) became regent of Denmark and Norway for her son on the death of her father, WALDEMAR IV of Denmark, (1375) and her husband, Haakon VI of Norway (1380). The union lasted until 1414. She also ruled Sweden from 1389 to 1397. Margrethe II (1940–), the eldest daughter of King FREDERICK IX, had her right to the throne established (1953) through a new constitution that allowed female succession. On the death of her father in 1972 she thus became Denmark's first ruling queen since Margrethe I.

Marguerite, perennial plant of the daisy family native to the Canary Islands. It has white-rayed, yellow-centred flower heads about 5cm (2in) across. Height: to 91cm (3ft). Family Compositae; species *Chrysanthemum frutescens*.

Marianas Islands, volcanic island chain in the W Pacific Ocean, approx. 2,400km (1,500 miles) E of the Philippines and N of the Caroline Islands, extending N to S approx. 800km (500 miles) along the Marianas Ridge. The group includes Guam, Saipan, Tinian, Rota, Pagan and

ten other islands. Discovered by Ferdinand MAGELLAN in 1521, and named Islands of Thieves, the islands were renamed the Marianas Islands in 1668. They were taken by US forces 1944 and made a US Trust Territory. Exports include sugar cane, coconuts and coffee. Area: approx. 1,000sq km (390sq miles). Pop. (1975 est.) 108,500 (most of whom are on Guam).

Maria Theresa (1717–80), Archduchess of Austria, Queen of Bohemia and Hungary (1740–80); co-ruler with her son Joseph II, 1765–80, wife and mother of Holy Roman emperors (1745–65 and 1765–80 respectively). In 1713 her father, the Holy Roman Emperor CHARLES VI, altered Hapsburg law by the Pragmatic Sanction to allow female succession. But on his death (1740) her succession was disputed by almost all the major European powers. Prussia seized Silesia, precipitating the War of the Austrian Succession (1740–48). In 1756 Austria formed an alliance with France and Russia, thereby antagonizing Prussia and England. In the ensuing SEVEN YEARS WAR (1756–63) Austria lost no territory, but its traditional role as dominant German state passed to Prussia. Although essentially conservative, Maria Theresa devoted her energies after 1748 to a vast programme of reform. See also p.1459.

Maribor, city in NW Yugoslavia, on the River Drava. Originally part of Styria, the city was transferred after 1918 to Yugoslavia. It is now a commercial and manufacturing centre, whose industries include textiles, chemicals and aluminium. Pop. (1971) 97,167.

Marie Antoinette (1755–93), Queen of France, daughter of FRANCIS I and MARIA THERESA of Austria. In 1770 she married the French dauphin, later LOUIS XVI, and her life of pleasure and careless extravagance caused deep public resentment. In 1789, during the FRENCH REVOLUTION, she was taken with the King from Versailles to Paris. She was seized at Varennes when the royal family attempted to escape and was guillotined in 1793.

Marie de France (fl.1160–1190), French poet and noblewoman who lived and wrote in England. She is best known for her *lais*, short narrative poems taken from Celtic folklore. *Chevrefoil*, a Tristan and Isolde story, deals with physical and romantic love; she also wrote *Lanval*, *Eliu* and a collection of fables, *Ysopet*.

Marie de l'Incarnation, or Marie Guyard (1599–1672), French nun who joined the URSULINES after the death of her husband and in 1639 became the first female missionary of New France (Canada). She soon established a convent in Quebec and mastered the Huron and Algonquin languages. She wrote religious treatises in these languages and worked as a missionary among the local Indians.

Marie-Louise (1791–1847), princess of the HAPSBURG family who became Empress of France. She was the eldest daughter of Francis I, the Austrian Emperor, and was married to NAPOLEON I in 1810 as a diplomatic manoeuvre. She gave birth to a son in 1811. After Napoleon's defeat in 1814 she became Duchess of Parma, and married again in 1814 after Napoleon's death.

Mariette, August-Ferdinand-François (1821–81), French archaeologist noted for his work in Egypt. In 1850 he discovered the Avenue of Sphinxes and the Sarapeum (the temple of bulls) at the site of ancient MEMPHIS. Conservator of monuments for the Egyptian government, he dealt with the problem of unauthorized excavation and founded the Egyptian Museum near Cairo.

Marigold, any of several mostly golden-flowered plants, mainly of the genera *Chrysanthemum* and *Tagetes* of the daisy family (Compositae), or the genus *Calendula* of the aster family. The corn marigold (*Chrysanthemum segetum*) is a common flower of the fields and waysides of the British Isles. Those most commonly cultivated are the French marigold (*Tagetes patula*) and the African marigold (*T. erecta*), both hardy annuals.

Marijuana, narcotic DRUG prepared from

the dried leaves of the Indian hemp plant (*Cannabis sativa*); it is different from HASHISH, which is prepared from resin obtained from the flowering tops of the plant. Some people smoke marihuana like tobacco. In moderate doses it is a relaxant and euphoriant, producing a sense of excitement or elation, intensifying sensations and distorting the sense of elapsed time. This may be followed by a phase of tranquillity and possibly fatigue; large doses produce intoxication. One of the "soft" drugs, it has been condemned by some authorities because its habitual use may lead to addiction and possible experiments with other, more dangerous drugs. But whether marihuana is physically harmful or a harmless pleasure remains a controversy. Taken with alcohol it is particularly intoxicating: the two enhance each other's effects. See also ADDICTION; pp.712, 1081.

Marimba, percussion instrument with tuned wooden bars, ranging five to six octaves, that are set in a frame over resonators and struck with mallets. The modern marimba was developed in South America although it probably originated in Africa, where the resonators are often made from gourds. Darius MILHAUD wrote concertos for the marimba.

Marin, John (1870–1953), US painter whose individualistic style contains abstract and expressionistic elements. His works include *Movement*, *Fifth Avenue* (1912) and *Maine Islands* (1922).

Marine biology, science and study of life in the sea, including organisms that live in the water, in the sea bed and along shores. Marine biologists explore the ways in which these organisms fit into their environments, as well as their interactions with the human environment. Marine biology is part of OCEANOGRAPHY. See also pp.332–341.

Marine engineering, branch of engineering that deals with the construction, maintenance, and operation of the power plant and other mechanical equipment of seagoing vessels, docks and harbour installations. See also pp.474–475, 536–537.

Marine engines, power plants used to propel sea-going ships, and as auxiliaries in smaller sailing vessels. In the 19th and early 20th centuries, marine engines were coal-fired, piston-driven steam engines. Today large steam engines are still used but these are usually oil-fired-turbine engines; steam, raised in a boiler, turns a turbine, which is geared down to turn propeller shafts. Small, medium and large diesel engines, and small petrol engines (including outboard motors) are also in general use. A few ships, notably certain icebreakers and submarines, are fitted with nuclear engines in which steam for turbines is raised by heat from the radioactive decomposition of uranium fuel. See also pp.420–421.

Mariner space missions, series of US spacecrafts which studied the planets Mars and Venus. The first spacecraft to reach and pass another planet (Venus) was Mariner 2 in 1962. In 1965 Mariner 4 accomplished the first approach to Mars and sent back remarkable pictures. Mariner 5 flew by Venus (1967) and analyzed its atmosphere, and in 1969, Mariners 6 and 7 flew by Mars, analyzed its atmosphere and sent back pictures. In 1971 Mariner 9 was the first spacecraft to orbit another planet (Mars), and Mariner 10 flew past Venus in 1974 to become the first probe of Mercury. Mariner 11, re-named Voyager 1 and destined for Jupiter (1979) and Saturn (1981), was launched in 1977.

Marines. See ROYAL MARINES.

Marinetti, Filippo Tommaso (1876–1944), Italian poet and founder of FUTURISM. Repudiating traditional artistic and literary values and forms, he advocated instead the glorification of machinery, speed and war in such works as his manifesto of futurism (1909) and *Futurismo e Fascismo* (1924). See also pp.1657, 1657.

Marini, Marino (1901–66), Italian sculptor, painter and engraver. Although devoted mainly to pictorial art for many years, he turned to sculpture after 1928.

Marcus Aurelius: the emperor's statue stands in Rome's Piazza del Campidoglio.

Margaret of Anjou, the Lancastrian inspiration, died banished and impoverished.

Marguerites, if their shoots are pruned in Autumn, grow large very quickly.

Marie Antoinette's portrait by Marie Vigée le Brun led to their friendship.

Marinus

His work preserves a dramatic sense of reality in a simplified form, as in many versions of a horse and rider.

Marinus, name of two popes. **Marinus I** (r.882–84) was the first bishop of a diocese other than that of Rome to become Pope. He is said to have exempted the Roman *Schola Saxonum* from taxes at the request of Alfred the Great. **Marinus II** (r.942–46) attempted to tighten the discipline of the clergy and monks in Rome, France and Germany. He also fortified Monte Cassino against the attacks of the Bishop of Capua.

Marionette, full-length puppet operated by strings attached to each limb and controlled from above. Marionettes developed from similar puppets manipulated in such places as Burma, Ceylon and 17th and 18th-century Europe by both strings and metal rods. In the 19th century total string control was achieved by puppeteers such as Thomas Holden and, in its imitation of almost any human action, the marionette came to be regarded as the most versatile and advanced form of puppetry.

Mariotte, Edme (c.1620–84), French physicist and plant physiologist noted for his independent discovery of BOYLE's law. He was a Roman Catholic priest, and also a founder of the Academy of Science in Paris.

Marists, congregation of priests, lay brothers, sisters and missionary sisters dedicated to the Blessed Virgin Mary. The Marist brothers were founded in 1817 by Marcellin Champagnat and the Marist fathers by Jean Claude Courveille and Jean Claude Marie Colin in 1822. The Marists did much missionary work throughout the Pacific, Europe, North America and Australasia, and have teaching orders in these areas.

Maritime law, branch of the law which is quite distinct in its function and practice from domestic law. It is primarily concerned with the rights of the mercantile concerns using the oceans of the world. In Britain various Merchant Shipping Acts have supplemented the generally international nature of the present law.

Maritime Trust, in the world of ships, the equivalent of the NATIONAL TRUST; it was established in Britain in 1970 to preserve vessels of historic interest. The Duke of Edinburgh is its president.

Marius, Gaius (c.157–86 BC), Roman politician and general who created a new and highly trained army. Of middle-class birth, Marius was elected consul seven times and became the enemy of the patrician SULLA. When Sulla took command of the Roman forces in the east, Marius jealously sought to deprive him of the command but was defeated in battle and forced to flee. In 87 he raised an army in Etruria and with Cinna captured Rome, where they were elected consuls. Marius ordered the destruction of his enemies, and it took 4,000 slaves five days and nights to complete the slaughter. Marius died shortly afterwards. See also pp.1227, 1230, 1230.

Marius, Simon (1573–1624), German astronomer, and one of the first to use a telescope. He observed sunspots and named the four largest moons of Jupiter, which Galileo also claimed to have discovered.

Marjoram, or origanum, perennial herb of the mint family about 60cm (24in) tall with purplish flowers. It is native to the Mediterranean region and w Asia and is cultivated as an annual in northerly climates. Wild marjoram is native to Europe and Asia. It is used extensively as seasoning. Species *Origanum vulgare*.

Mark, Saint, apostle and one of the four evangelists of the New Testament. He was the cousin of the apostle BARNABAS and accompanied him and St PAUL on several missionary journeys until a disagreement with Paul caused him to detach himself, traditionally to become the secretary to St PETER and write the first gospel following Peter's teaching. According to the Church historian Eusebius, Mark founded the church at Alexandria. Feast day: 25 April. **Mark, the Gospel according to Saint**, earliest gospel in the New Testament.

Written about AD 55–65, it is believed to be one of two reference works (the other being "Q") used by St MATTHEW and St LUKE in compiling their own gospels. St Mark is traditionally considered to have been the secretary of St PETER; to many people, therefore, his gospel reflects the views and teachings of that apostle. The gospel is nevertheless written in a concise Hellenistic style.

Mark Antony (c.82–30 BC), distinguished Roman soldier and politician, friend of JULIUS CAESAR and CLEOPATRA's lover. His affair with Cleopatra led to defeat at ACTIUM by Octavius, after which he and Cleopatra fled to Egypt, where they both committed suicide.

Market Bosworth, town in Leicestershire, England, 19km (12 miles) w of Leicester and near the site of the Battle of Bosworth Field (1485), the last battle of the Wars of the ROSES. There the Lancastrians, led by Henry Tudor, later HENRY VII, defeated and killed the Yorkist king RICHARD III. See also pp.1377, 1377.

Market research, study of consumer preference and demand, for the purpose of increasing the sales of commercial products. It is often undertaken by companies specializing in the field and involves the collection, recording and analysis of data. A common method of market research involves testing a product on a small sample of people statistically compiled to form a representative sample of likely consumers of the product. Interviewing to ascertain popular preferences for products is another method. Market research techniques are also used in politics by PUBLIC OPINION POLLS – for instance the GALLUP POLL which predicts election results.

Markhor, largest wild goat, inhabiting mountains of Afghanistan and the w Himalayas. Males have long, corkscrew horns and shaggy beards. Height: 100cm (40in) at shoulder; weight 90kg (200lb). Family Bovidae; species *Capra falconeri*.

Markiewicz, Constance Georgine, Countess de (1876–1927), Irish Republican politician married to a Polish count. Sentenced to death for her militant part in the EASTER RISING (1916), she was reprieved and released from prison in 1917. In 1918 she became the first woman to be elected to the British House of Commons, although she never took her seat.

Markova, Dame Alicia (1910–), British ballerina, real name Lilian Alicia Marks. She joined the Vic-Wells Ballet in 1931, and was its first prima ballerina. Famous for her *Giselle*, she was the first British dancer to take the title role. Other classical ballets in which she excelled are *Les Sylphides* and *Swan Lake*. See also p.1759.

Marks and Spencer, large chain-store selling mainly clothes. It originated in 1884 when Michael Marks set up a market stall which sold each item for one penny. In 1894 Marks took Thomas Spencer into partnership. In the mid-1970s it had more than 250 shops and employed about 40,000 people in Britain.

Markus, Mrs Rika ("Rixi") (1910–), British contract bridge player. She played for Austria in the 1930s, and for Britain after 1945. She has won 12 international titles, including the World Women's Pairs Championship twice (1962, 1974) in partnership with Fritz Gordon.

Marl, grey or blue-grey mixture of limestone, clay and sand. It is crumbly in texture and often formed as a lake sediment in the vicinity of submerged plants. It is used in some countries as mortar for building and for road surfaces.

Marlborough, John Churchill, 1st Duke of (1650–1722), English general and statesman. One of the greatest commanders in English history, Marlborough led the Allied armies against LOUIS XIV in the War of the SPANISH SUCCESSION, destroying French power and ambition at BLENHEIM (1704), RAMILLIES (1706), OUDENARDE (1708) and MALPLAQUET (1709). On the ascendancy of his political enemies, the Whigs, in 1711 he was dismissed from all his offices but in 1714, with the accession of the Hanoverian GEORGE I, he was restored to royal favour. See also pp.1427, 1431, 1446–1447, 1446–1447.

Marlborough, Sarah Jennings Churchill, Duchess of (1660–1744), favourite of QUEEN ANNE. She married John Churchill, later 1st Duke of MARLBOROUGH, in 1677 and her influence with the future queen, which was considerable, assisted his career. Her influence declined after 1706, when she and the queen began to quarrel over Whig cabinet appointments; she became replaced in the queen's affections by Abigail Masham. See also pp.1446–1447.

Marlin, any of several species of large marine fish found in warm waters of the Atlantic and Pacific oceans, especially the blue marlin (*Makaira mitsukurii*); it is often fished for sport. It is blue with a coppery tint and violet side markings. The fins and long snout are sharply pointed. Length: to 8m (26ft); weight: 635kg (1,400lb). Family Istiophoridae. See also p.340.

Marlowe, Christopher (1564–1593), English poet and playwright, often labelled "Shakespeare's greatest predecessor"; one of the most powerful and original artists to write in the English language. Much of his success derives from his ability to make his heroes dangerous, even ferocious, but still human, as in *Tamburlaine the Great* (c.1587), *The Jew of Malta* (c.1590) and *The Tragical History of Doctor Faustus* (c.1588). Marlowe led a dissolute life and in 1593, with a Privy Council order for his arrest hanging over him, was killed in a brawl. See also pp.1416, 1416, 1419, 1419.

Marmara, sea in NW Turkey, between Europe (to the N) and Asia (S). It is connected with the Black Sea (E) by the Bosphorus and with the Aegean Sea through the Dardanelles. Its largest island is Marmara, famous for its alabaster and marble quarries, and ISTANBUL is located on the N shore at the entrance of the Bosphorus. Area: 11,474sq km (4,430sq miles).

Marmoset, small diurnal, arboreal MONKEY of tropical America. Among the smallest of all monkeys, marmosets are the size of small squirrels. They have soft, dense fur that varies in colour, and have pointed, sickle-shaped nails. Those of certain genera are often called tamarins. Family Callitrichidae; genera *Callithrix*, *Leontopithecus*. See also pp.102, 315.

Marmot, stocky, terrestrial rodent of the SQUIRREL family, native to North America and Eurasia. Most marmots have brown to grey fur, short, powerful legs and furry tails. They eat vegetation by day, find shelter at night and hibernate in grass-lined burrows. Length, excluding tail: 30–60cm (12–24in); weight: 3–8kg (6.6–16.5lb). Family Sciuridae. See also p.296.

Marne, Battles of, two German defeats of WWI. The first, in Sept. 1914, was an Allied counter-attack directed by Gen. JOFFRE, which stopped the German advance on Paris; the second, in July 1918, was another counter-stroke, directed by Marshal FOCH, which drove back the final German offensive. See also pp.1668–1669.

Maronites, Christian community of Syrian origin which claims to have been founded by St Maron in the late 4th and 5th centuries. The majority of its members are to be found in the Lebanon, where it is the major religious group, but small colonies exist in Syria, Palestine, Cyprus, North and South America. The Maronites became separated from the rest of Christendom because of their acceptance of MONOTHEISM, in consequence of which they were excommunicated by the Third Council of Constantinople in 680. In 1182 they may have attempted to establish communion with the Roman Catholic Church but this did not effectively come about until the 16th century. Since then they have had the status of a uniate Church, ie an Eastern Church in union with Rome but retaining its own rite and canon law.

Marot, Clément (1496–1544), French poet, one of the first to write sonnets. He held various positions at court but, accused of heresy, was several times imprisoned. He wrote witty court poems but

his metrical translation of the *Psalms* was condemned by the SORBONNE. See also pp.1450, 1450.

Marque, letters of, commissions granted by states at war to private individuals allowing them to fit out ships to take part in the war. In the 17th and 18th centuries ships carrying letters of marque were known as PRIVATEERS and, as the name implies, were little more than pirates. Signatories of the Declaration of Paris (1856) agreed to abolish letters of marque, a prohibition extended worldwide by the Hague Convention of 1907.

Marquesas Islands, volcanic island group, part of French Polynesia, in the Pacific Ocean, S of the equator and N of Tuamotu. The group of twelve includes Fatu Hiva, Hiva Oa and Nuku Hiva. The islands are mountainous, with fertile valleys and several good harbours. The French took possession and settled them in 1842, introducing European diseases that killed many of the native Polynesians. The capital is Hakepehi on Nuku Hiva. Exports include tobacco, vanilla and copra. Area: 1,243sq km (480sq miles). Pop. (1971) 5,600.

Marquess, or marquis, noble title, in rank below a DUKE and above an EARL, originally of an officer in charge of a border region (or march) of a kingdom. The first marquess in English history was Robert de Vere, created Marquis of Dublin by RICHARD II in 1385. The oldest surviving title is the Marquis of Winchester, created in 1551.

Marquet, Albert (1875–1947), French painter and friend of MATISSE. He contributed to the first FAUVIST exhibition (1905), and became one of the boldest of the Fauves in his concern for harmony and equilibrium and the solidity of forms. Important among his paintings is *Quai des Grands-Augustins* (1905).

Marquetry, inlay of ornamental woods or other decorative materials applied to furniture or wall panelling in a variety of patterns and designs, or arranged to make a picture.

Marquette, Father Jacques (1637–75), French Jesuit missionary and explorer in North America. Marquette arrived in Quebec in 1666 as a missionary priest. After two years he moved deeper into the wilderness to preach among Indians around the Great Lakes. Chosen by the Canadian government in 1673 to explore, he and five others were the first white men to discover the Mississippi River.

Marquis, Donald (1878–1937), US writer and humorist. Many of his stories and verses first appeared in his columns in the New York *Sun* and *Herald Tribune*. He invented a number of characters, notably "archy the cockroach" and "mehitabel the cat", whose adventures are related in *archy and mehitabel* (1927).

Marqueses. See MARQUESAS ISLANDS. **Marrakech**, city in w central Morocco, at the NW foot of the Atlas mountains. Founded in 1062 by the ALMORAVIDS, it was the country's capital until 1147 and it subsequently served as the sultan's residence. In the 1960s and '70s it was favoured by hippies. Its modern industries include tourism and leather goods. Pop. 350,080.

Marram grass, or beach grass, important grass of sand dunes; its roots help to bind the sand together and so prevent dune movement. *Ammophila arenaria* has long leaves that are curled into cylindrical spikes to resist water loss.

Marranos, Spanish Jews who were outwardly converted to Christianity to escape persecution in medieval times, but who continued to practise Judaism secretly.

Marriage, in the modern Western sense, legal status of a man and a woman joined by ceremony as husband and wife. This is known as MONOGAMY, but some societies practise POLYANDRY and POLYGAMY. Marriage has been favoured throughout history as a regulator of sexual relationships and as a stable basis for the establishment of the family unit within which children can be reared.

Marriage à la Mode (1673), play by John DRYDEN, in which he modified his heroic style and created a typically elaborate

Restoration comedy. Its carefully planned plot and sophisticated wit ensured its success.

Marriage à la Mode (c. 1742–44), series of six satirical, anecdotal paintings by William HOGARTH, tracing the inevitable course of an arranged marriage. Like the artist's similar works, *A Harlot's Progress* (c. 1731) and *A Rake's Progress* (c. 1735), they were produced with a view to their eventual reproduction as engravings. See also p.1546.

Marriage of Figaro, The (1786) four-act opera by Wolfgang Amadeus MOZART with Italian libretto by Lorenzo da PONTE, after Pierre BEAUMARCHAIS' comedy. Its Vienna première was conducted by Mozart himself. Musically and politically revolutionary, the story is of servants duping their aristocratic master. See also p.1453.

Married Women's Property Act (1882), most important of a series of British laws (1870, 1882 and 1893) which gave married women the right to own and dispose of property in their own right. Before 1882 a husband became absolutely entitled to his wife's property upon marriage.

Marriner, Neville (1924–), British conductor. He was appointed Professor at the Royal College of Music, London in 1950, and became conductor of the London Symphony Orchestra in 1954. Two years later (1956) he founded the chamber orchestra the Academy of St Martin in the Fields. In 1968 he also became conductor of the Los Angeles Chamber Orchestra.

Marrow, large vegetable of the GOURD family, closely related to the PUMPKIN. It is usually briefly boiled in water and served with butter, together with meat and other vegetables. Species *Cucurbita pepo*. See also pp.684, 685.

Marrow, soft tissue containing blood vessels, found in the hollow cavities of bones. The marrow found in many adult bones, including the shafts of long bones, is somewhat yellowish and functions as a store of fat. The marrow in the flattish bones, including the ribs, sternum (breast bone), skull, spinal column and the ends of the long bones, is reddish and contains reticular cells that give rise to myeloblasts. The myeloblasts give rise eventually to red blood cells as well as to most of the white blood cells (but not LYMPHOCYTES) and platelets. See also p.153.

Marryat, Capt. Frederick (1792–1848), British author, whose seafaring novels were based on his own experiences in the Royal Navy. *Peter Simple* (1834) and *Mr Midshipman Easy* (1836) are adventures with strong characters, full of nautical detail. In later life he wrote adventure stories for children, including *Masterman Ready* (1841) and *The Children of the New Forest* (1847).

Mars, ancient Roman god of war, often depicted as an armed warrior; one of the three protector-deities of the city of Rome itself (with JUPITER and Quirinus). He was originally associated with agriculture but later took on his dominant military aspects; the wolf and woodpecker were sacred to him.

Mars, fourth planet from the Sun, with two satellites (PHOBOS and DEIMOS), and more Earth-like than any other known world. Its thin atmosphere is mainly carbon dioxide; temperature –120°C (–184°F) to over 16°C (60°F). Mean distance from the Sun, 228,000,000km (141,500,000 miles); mass, 0.11 of Earth; diameter, 6,790km (4,220 miles); rotation period, 24hr 37min; period of sidereal revolution, 687 days. See also SOLAR SYSTEM; pp.944–953.

Marsala, port in W Sicily, Italy, on the Mediterranean Sea. The ancient city of Lilybaeum, it has a cathedral and old city walls. GARIBOLDI's forces landed there in 1860 in the conquest of Sicily. Marsala is famous for its sweet wines. Exports: wines, salt, grain. Pop. (1971) 79,038.

Marsden, Samuel (1764–1838), British clergyman, a leading colonist in Australia and New Zealand, and chaplain of a convict colony. In 1794 he emigrated to New South Wales and was influential in developing agriculture and improving education. In New Zealand he established the

first white mission settlement in 1814. **Marseillaise, La** (1792), French national anthem, with both words and music by Claude Joseph Rouget de l'Isle. Composed as a marching song for troops on the Rhine, it was first performed publicly by the band of the National Guard of Strasbourg in April, 1792. In June it was adopted with enthusiasm by the Marseilles Volunteers as their marching song and thereafter became known by its present name.

Marseilles (Marseille), port in SE France, on the Gulf of Lions; capital of Bouches-du-Rhône département, and connected to the River Rhône by an underground canal. The second-largest and oldest city in France, it was founded in 600 BC by Phocaean Greeks. During the CRUSADES Marseille was a commercial centre and shipping port for the Holy Land. The 19th-century conquest of Algeria by France and the opening of the Suez Canal (1869) brought great prosperity to the city. In the harbour is the Château D'Iff, a prison built in 1524 on a small rocky island. Industries: flour milling, soap, vegetable oil, cement, sugar refining. Pop. 914,356.

Marsh, Dame Ngaio (1899–), New Zealand detective-story writer and producer of plays. Her numerous detective novels include *Enter a Murderer* (1935), *Vintage Murder* (1937), *Final Curtain* (1947) and *Black as He's Painted* (1974). Her novels are perceptive in characterization and many reflect her knowledge of the theatre. She was made a DBE in 1966.

Marsh, low grassland area, devoid of peat, saturated by moisture during one or more seasons. Typical vegetation includes grasses, sedges, reeds and rushes. Marshes are sometimes the breeding sites of mosquitoes and other disease carriers, but are valuable in maintaining water tables in adjacent ecosystems. See also pp.330–333.

Marshall, senior member of the royal HOUSEHOLD in England after 1066. Originally master of the horse, he became responsible for maintaining order in the court and acted as judge in the Court of Chivalry, over which he still presides as Earl Marshall. In the reign of HENRY I the office belonged to the FitzGilbert family, later passing to William Marshall, Earl of Pembroke (d. 1219). It passed then to the Earls of Norfolk, and the Mowbrays, Howards and Arundels.

Marshall, Alfred (1842–1924), British neo-Classical economist whose *Principles of Economics* (1890) was a landmark in modern economics. Marshall showed that supply and demand were like the blades of a pair of scissors; both blades are needed equally if the scissors are to work properly.

Marshall, George Catlett (1880–1959), US general. He served as a staff officer during WWI and, after various commissions including service in China (1924–27), became Chief of Staff during WWII. He was instrumental in devising Allied strategy, advocating the conquest of Germany through France. After the war, he was the inspiration of the MARSHALL PLAN, a scheme to help economic recovery in Europe.

Marshall, John (1755–1835), noted Chief Justice of the US Supreme Court. He gained national prominence in 1788 when he argued successfully for the Constitution against Patrick HENRY, and was a commissioner to France in the XYZ AFFAIR.

Marshall, Sir John Hubert (1876–1958), British director-general of the Indian Archaeological Survey (1902–31). He made important prehistoric finds at Taxila and HARAPPA, and was responsible for the preservation of many monuments.

Marshall, John Ross (1912–), New Zealand politician and Prime Minister (1972). A lawyer, he proved an urbane Cabinet Minister for 20 years, holding important portfolios such as Health, Justice, Industries and Commerce, and Overseas Trade. He became Prime Minister in 1972 but his National Party was heavily defeated at the polls that year and he was dropped as leader in 1974. He retired a year later.

Marshall Islands, group of atolls and coral reefs in the W Pacific Ocean, E of the Caroline Islands. Administered as a US Trust Territory of the Pacific Islands, they consist of two great chains, the Ralik (W) and the Ratak (E), which run almost parallel NW to SE, covering an ocean area of 11,655sq km (4,500sq miles). The native inhabitants are Micronesian. Annexed to Germany in 1885, the group was taken by Japan in 1914 and by the US in WWII (1944). Products: copra, coconuts, tropical fruits, vegetables and fish. Total land area: approx. 179sq km (69sq miles). Pop. (1970 est.) 20,200.

Marshall Plan, US programme of economic aid to Europe proposed by Secretary of State George C. MARSHALL in 1947. The Economic Co-operation Act (1948) authorized the plan. The USA spent more than \$13,000,000,000 in five years to promote postwar economic recovery in Europe. For this work Marshall was awarded the 1953 Nobel Peace Prize. See also pp.1701, 1716, 1742, 1742.

Marshalsea Prison, old London prison linked with the Marshalsea Court, established for defaulters in the royal household. It later came to be used as a prison for debtors and for those convicted of piracy and other crimes committed on the high seas. It was abolished in 1842 and replaced by the Queen's Prison.

Marsh gas. See METHANE.

Marsh mallow, perennial herb native to E Europe and related to the garden hollyhock. It has pink flowers with five overlapping petals. A sweet confection of the same name was prepared from the roots. Height: 1–1.8m (3–6ft). Family Malvaceae; species *Althea officinalis*.

Marsh marigold, perennial plant of the buttercup family native to cold and temperate swamps of the Northern Hemisphere. It has hollow stems, kidney-shaped leaves, and large pink, white or yellow flowers. There are about 20 species. Family Ranunculaceae; genus *Caltha*.

Marsigli, Count Luigi Ferdinando (1658–1730), Italian soldier, naturalist and oceanographer. After long service in the Austrian army, during which he was captured, he was demoted in 1704. Thereafter he engaged in scientific study, founding the Accademia delle Scienze in Bologna (1712) and becoming a member of the Royal Society (1722) to which he was presented by NEWTON.

Marston Moor, battle site 11km (7 miles) W of York, England. It was the scene of the decisive defeat of Royalist forces under Prince RUPERT by the Parliamentarians under FAIRFAX (2 July 1644) in the English Civil War.

Marsupial, mammal of which the female usually has a marsupium, or pouch, within which the young are suckled and protected. A few marsupials, including the NUMBAT, have no pouch. At birth, the young are in a very early stage of development, corresponding roughly to the third intra-uterine month of the human foetus. The tiny, blind newborn KANGAROO, after emerging from the genital aperture of its mother, instinctively crawls up her belly fur until it reaches her pouch and stays there, attached to her teat, until mature enough to emerge. Like the kangaroo, most marsupials are Australasian, and include such varied types as the KOALA, WOMBAT, TASMANIAN DEVIL, BANDICOOT and marsupial MOLE. The only marsupials to live outside Australasia are the opossums and similar species that are found in the Americas. See also pp.86, 88, 90–91, 302.

Martello towers, series of gun towers built along the S and E coasts of England during the Napoleonic Wars. They were low, round towers with a gun platform on top, named after the tower at Cap Mortella, Corsica, which gave strong resistance to an English attack in 1794.

Marten, any of several species of carnivorous mammals of the WEASEL family that live in forested areas of Eurasia and North and South America. Martens have a long body and short legs and are hunted for their fur. The dark brown skins of the SABLE, *Martes zibellina* are the most valu-

able but the skins of the lighter stone or beech marten, *Martes foina*, are also prized. Family Mustelidae. See also pp.99, 304.

Martial(ist), Marcus Valerius (c. 40–c. 104) Roman poet, b. Spain. He lived in Rome from about AD 64, enjoying the patronage of the emperors DOMITIAN and TITUS and the friendship of JUVENAL and QUINTILIAN. He wrote more than 1,200 epigrams, which are considered the finest of the genre. He is not only one of the wittiest writers of antiquity, but also gives an unrivalled picture of life in Rome in the first century.

Martial law, condition prevailing when normal civil government is superseded by military authorities, and military law is applied to the civilian population. It is often enforced in times of potential public disorder or when there is a threat to public safety. Martial law can be restricted to particular regions of a country and is commonly declared after a military coup in order to prevent a violent reaction to the new government.

Martin, Saint (c. 315–97), Bishop of Tours. Born a heathen, he became a Christian in his youth. As a Roman soldier he is reputed to have torn his cloak to share it with a beggar. From 360 he lived as a monk, and was acclaimed bishop in 371, against his will. His feast day is known as MARTINMAS.

Martin, name of several popes. Martin I, Saint (r. 649–55) summoned the first of the LATERAN COUNCILS. He stressed papal authority over all and refused to obey the edict of the Byzantine emperor, Constans II, forbidding religious discussions. Arrested by Constans and publicly degraded, he died soon after being exiled to the Crimea and was acclaimed a martyr (the last pope to be martyred). Martin IV (r. 1281–85), b. France, gave the FRANCISCANS the right to preach and to hear confessions. Elected at Viterbo in Italy, he was never able to enter Rome because of hostilities. Martin V (r. 1417–31), whose election ended the GREAT SCHISM, moved the papacy permanently to Rome in 1420. His main concern was to consolidate Church unity and papal prestige through political means, and he reorganized the CURIA.

Martin, Archer John Porter (1910–), British biochemist who developed partition CHROMATOGRAPHY, particularly for use in amino acid analysis. For this research he shared the 1952 Nobel Prize in chemistry with Richard L. M. SYNGE.

Martin, Frank (1890–), Swiss composer. His distinctly personal style shows a mastery of counterpoint, harmony and emotional continuity; in later works he used a modified 12-note system. His best-known work is the *Petite Symphonie Concertante* (1945), and others include a piano quintet (1920), a string trio (1936) and a concerto for harpsichord and orchestra (1952).

Martin, Homer Dodge (1836–97), US painter of landscapes who was influenced by IMPRESSIONISM. He broke away from the direct approach of the HUDSON RIVER SCHOOL, strengthening his Impressionistic approach during two visits to France in 1876 and 1882.

Martin, John (1789–1854), British painter of romantic melodramatic landscapes. His other works included dramatic architectural scenes filled with figures to depict heroic or biblical themes.

Martin, Kenneth (1905–), British painter and sculptor who focused his attention on landscapes in the 1930s but turned towards abstract painting in the 1940s. From the early 1950s he became involved in producing mobiles, in order to explore change and space. His steel and bronze construction, *Mobile Spiral* (1956), is a typical example.

Martin, Pierre Emile (1824–1915), French engineer who pioneered the process of open-hearth steel manufacture. The Siemens-Martin process pre-heats the air-blast by a heat-regeneration means and the excess carbon is removed by adding a calculated amount of iron ore. By applying this process to an open-hearth furnace which was charged with a mixture

Martin, Violet Florence

of pig-iron and wrought-iron, Martin was able to obtain the desired carbon content simply by dilution. See also p.397.

Martin, Violet Florence. See ROSS, MARTIN. **Martin**, fast flying bird closely related to the SWALLOW and native to Europe and North America. It has long, pointed wings, and short legs which it seldom uses. The house martin (*Delichon urbica*) migrates from Europe and Asia to India and South Africa, often nesting under the eaves of houses. The purple martin (*Progne subis*) ranges from Mexico to the Arctic and nests in hollow trees. The sand martin (*Riparia riparia*) is found in approximately the same areas as the other two species; it burrows into sandbanks to nest. Family Hirundinidae.

Martin du Gard, Roger (1881–1958), French novelist. His major works, *Jean Barois* (1913), a novel of France during the DREYFUS AFFAIR, and the eight-novel series *Les Thibault* (1922–40), the story of a family and its religious and political convictions at the time of WWI, are objective treatments of the moral and intellectual preoccupations of his generation. He was awarded the Nobel Prize in literature in 1937.

Martineau, Harriet (1802–76), British writer and reformer. Her works include collections of stories that propound her social and economic theories, among them *Illustrations of Political Economy* (9 vols, 1832–34) and *Poor Laws and Paupers Illustrated* (1833–34). She visited the USA in 1834. She became an advocate of the abolition of slavery and wrote *Society in America* (1837), about US life.

Martinet, Jean (d. 1672), French soldier who helped to reorganize (1660–70) the army of Louis XIV into the first regular army in Europe. He is best known for the introduction of a system of uniform drill. In English his name has come to be applied to one who strictly adheres to rules and is a stickler for detail.

Martinez Ruiz, José (1894–1967), Spanish writer, better known by his pseudonym, Azorín. His most successful works are essays, such as *Los Pueblos* (1905), which are notable for his Impressionistic descriptions of Castilian towns and his attempt to define the eternal qualities of Spanish life.

Martini, Simone (c. 1284–1344), Sienese painter. Influenced by Duccio's style, he used decorative outline and rich colouring in his many frescoes and altarpieces. His masterpiece is the *Annunciation* (1333).

Martinique, island in the Windward group, West Indies; an overseas French département. Of volcanic origin, it is the largest of the Lesser Antilles; Fort-de-France is the capital. Discovered in 1502 by Christopher COLUMBUS, Martinique was inhabited by Carib Indians until they were displaced by French settlers after 1635. Attacked in the 17th century by the Dutch and the British, the island became French after the NAPOLEONIC WARS. Products: sugar, rum, fruits, cocoa, tobacco, vanilla, vegetables. Area: 1,100sq km (425sq miles). Pop. (1975 est.) 363,000. See also p.2097.

Martinmas, feast of St MARTIN of Tours, celebrated on 11 Nov. The feast gave its name to the "mart", the fattened cow or ox killed in the Middle Ages at Martinmas, and salted for winter use.

Martinson, Jean (1910–76), French conductor and composer who studied with ROUSSEL. He has directed a number of European orchestras and in 1968 became director of the French National Orchestra. His compositions include four symphonies, chamber music, sonatas, a cello concerto and the opera *Hécube* (1949).

Martinson, Harry Edmund (1904–), Swedish writer. From the age of six he lived as a tramp and later as a seaman; his experiences influenced the underlying mood in both his poetry and his novels. His space fantasy *Aniara* (1956) became a successful opera (1959). He shared the 1974 Nobel Prize in literature with Eyvind JOHNSON.

Martín, Bohuslav (1890–1959), Czech composer. In 1913, he became a violinist in the Prague Philharmonic Orchestra and only in 1923 did he turn to composition in

earnest. He studied with ROUSSEL in Paris, where he remained until 1940. Much of his music is based on Bohemian folk rhythms and Czech dances, which despite carefully stylized treatment retain their basic simplicity. He composed many operas and ballets, including *The Butterfly that Stamped* (1929) and *Comedy on a Bridge* (c. 1950), as well as orchestral and chamber works.

Martyr, from a Greek word meaning "witness", one who dies for his faith. The term is particularly applied to Christians who suffered for their beliefs. John Foxe's *Book of Martyrs* (1563) is a record of Anglican and Protestant martyrs in England.

Marvell, Andrew (1621–78), English metaphysical poet and satirist. In 1657 he was appointed John MILTON's assistant and in 1659 he was elected to Parliament. A Puritan and yet a defender of individual liberty, he is chiefly remembered today for his lyric poetry, published in 1681 in a collection which included *The Garden*, *Bermudas* and *To His Coy Mistress*. See also pp.1416–1417.

Marx, Karl Heinrich (1818–83), German social philosopher and political theorist, founder (with Friedrich ENGELS) of world COMMUNISM. He studied history, philosophy and law, was influenced by G. W. F. HEGEL, Ludwig FEUERBACH and Moses Hess and produced his own philosophical approach of DIALECTICAL MATERIALISM. He proclaimed that religion was "the opium of the people" and in *The German Ideology* (1845–46), written with Engels, described inevitable laws of history. In Brussels he joined the Communist League and wrote with Engels the epoch-making COMMUNIST MANIFESTO (1848). Marx took part in the revolutionary movements in France and Germany, then went to London (1849) where he lived until his death. Although Engels helped him financially, these were years of poverty and illness. He toiled at research in the British Museum and produced a stream of writings, including *Das Kapital* (3 vols, 1867, 1885, 1894, the last two edited by Engels), which became the "Bible of the working class." In 1864 he was founder of the International Workingmen's Association (the First International) and became its leading spirit. He denounced both the non-revolutionary reformism of British labour leaders and the anarchy of philosopher Mikhail BAKUNIN, generally favouring legal methods to hasten the collapse of CAPITALISM. Marx was one of the most important political theorists of modern times. His ideas exerted a powerful influence after his death and helped to change the course of history. See also MARXISM; pp.1714–1715, 1757, 1759, 1784.

Marx Brothers, US team of vaudeville and film comedians. The members were Chico (Leonard) (1891–1961), Harpo (Arthur) (1893–1964), Groucho (Julius) (1895–1977), and Zeppo (Milton) (1894–1977) and Zeppo (Herbert) (1901–), who both withdrew from the team by 1935. Their films include *Animal Crackers* (1930), *Duck Soup* (1933) and *A Night at the Opera* (1935). See also p.1752.

Marxism, school of socialism that arose in 19th-century Europe as a response to the growth of industrial CAPITALISM. It is named after Karl MARX who, with Friedrich ENGELS, articulated an economic interpretation of history that held that all changes in society's structure were determined by changes in productive activity. According to Marxism, a Communist society was historically inevitable. Capitalism, because of its emphasis on profits, would eventually so reduce the condition of workers that they would rebel, overthrow the capitalists and establish a classless society (the so-called dictatorship of the proletariat). The new society thus brought about would enable all individuals to achieve self-fulfilment and all production would be centralized in the state. Faith in man, the denial of God and belief in the class struggle were at the heart of Marxist thought. *The Communist Manifesto* (1848) and *Das Kapital* (1867, 1885, 1894) both contain ideas central to

Marxism, which forms the basis of COMMUNISM and strongly influenced the related ideology, SOCIALISM. See also pp.1650–1651.

Mary, Saint, or the Blessed Virgin Mary, mother of JESUS CHRIST who figures prominently in the first two chapters of the Gospels according to St MATTHEW and St LUKE which record the birth of Christ. Both gospels testify to her virginity (see VIRGIN BIRTH), and to her maternity. At Jesus's crucifixion, Mary was placed in the care of St JOHN. Mary has always been held in high regard in Christendom; by her assent in being the instrument in God's INCARNATION she exemplifies the divine-human relationship that is part of God's plan for mankind's salvation. In the early Church, the principal Marian feast was called the Commemoration of St Mary, from which developed the later feast of the ASSUMPTION (15 August). Other Marian feasts are: the Nativity (8 September), the ANNUNCIATION, or Lady Day (25 March), the Purification, or CANDLEMAS (2 February), the Visitation (2 July) and, for Roman Catholics, the IMMACULATE CONCEPTION (8 December). The most famous shrines of Mary are those at LOURDES and FATIMA, where she is said to have appeared to children.

Mary I, or Mary Tudor (1516–58), Queen of England, daughter of HENRY VIII and Catherine of Aragon; she is known as "Bloody Mary". On the death of EDWARD VI she overcame Lady Jane GREY's challenge for the throne and became queen in 1553. Her determination to re-introduce Roman Catholicism in England occasioned the major errors of her reign – her marriage to Philip of Spain in 1554 and persecution of her Protestant subjects. See also pp.1404, 1405, 1795.

Mary II (1662–94), Queen of England, Scotland and Ireland. Although her father, JAMES II, was a Roman Catholic, Mary was a Protestant. She married the Dutch noble WILLIAM III OF ORANGE in 1677, and her support enabled them to become joint sovereigns in 1689 following the GLORIOUS REVOLUTION that deposed JAMES. She died from smallpox, and William then ruled alone. See also pp.1446, 1794, 1795.

Mary, Queen of Scots (1542–87), daughter of JAMES V of Scotland. She married Francis II of France in 1558 and after his death in 1560 married Henry, Lord DARNLEY, in 1565. He died under mysterious circumstances in 1567 after he had had David Rizzio, her favourite, murdered the year before. She was deposed after her marriage to the Earl of BOTHWELL and sought refuge in England. After Mary was shown to have been involved in the RIDOLF PLOT (1572) and the BABINGTON CONSPIRACY (1586), Elizabeth I agreed reluctantly to her execution. See also pp.1410, 1410, 1432, 1432.

Maryinski Theatre. See KIROV BALLET AND OPERA COMPANY.

Maryland, state in E USA, on the Atlantic Ocean. The w half of the state is part of the Piedmont plateau region. E Maryland is dominated by Chesapeake Bay and its associated coastal marshlands. The rearing of cattle and chickens is the most important farming activity. Corn, hay, tobacco and soy beans are the chief crops. Major industries are iron and steel, shipbuilding, primary metals, food processing, transport equipment, chemicals, electrical machinery and fishing. The main cities are Annapolis, the state capital, and Baltimore, the largest city.

A charter for a large territory that included Maryland was granted by Charles I to Cecilus Calvert, 2nd Baron Baltimore, in 1632. The first settlements were founded in 1634. Maryland was active in the drive for American independence. In 1791, the state ceded an area of land on the Potomac River to create the District of Columbia, the site of the national capital. During the AMERICAN CIVIL WAR, Maryland was one of the border states that did not secede from the Union, but its citizens served in both armies. After the war, industry developed rapidly around Baltimore. During both World Wars, the city was a centre of the

production of war materials. Area: 27,394sq km (10,577sq miles). Pop. (1975 est.) 4,098,000. See also p.2161.

Marylebone Cricket Club. See MCC. **Mary Magdalene, Saint**, early follower of Jesus Christ, from the village of Magdala on the w bank of the Sea of Galilee. According to the gospels, Christ freed her of seven demons. She accompanied Christ on His preaching tours in Galilee, witnessed His crucifixion and burial, and was the first person to see Him after His resurrection. She has often been identified with the "woman who was a sinner", who anointed Christ's feet (Luke 7:37), but hardly ever with Mary the sister of Martha who also anointed Him (John 12:3); there is no evidence for either identification in the gospels. Feast day: 22 July.

Mary of Guise, or Mary of Lorraine (1515–60), wife of JAMES V of Scotland (who in 1538 became her second husband). He died in 1542, leaving the throne to MARY, QUEEN OF SCOTS. As Regent in 1554, Mary of Guise persecuted the Protestant faction, provoking a rebellion in 1559 which, with English help, deposed her. See also pp.1379, 1410.

Mary of Modena (1658–1718), Queen Consort of JAMES II of England (married 1673). She shared James's unpopularity over rumours about the Popish Plot (1678) and her son's birth (1688). After the GLORIOUS REVOLUTION she joined James in France.

Mary of Teck (1867–1953), Queen Consort of GEORGE V of England (married 1893). Her concern with welfare work made her popular with the British people.

Mary Poppins (1934), novel for children by P. L. Travers, the first of several books about the prim but kindly nanny Mary Poppins. It was made into a film by Walt DISNEY in 1964.

Mary Tudor (1496–1533; r. 1514–33), Queen Consort to Louis XII of France and daughter of HENRY VII of England. Her marriage to Louis in 1514 was a diplomatic arrangement; when he died in 1515 she secretly married Charles Brandon, Duke of Suffolk.

Masaccio (1401–28), Italian painter whose real name was Tommaso Giovanni di Mone. He had a great influence on Florentine painting and his *Trinity* fresco in Santa Maria Novella, Florence, which shows the influence of BRUNELLESCHI, helped the understanding of space and PERSPECTIVE in painting. See also pp.1382, 1383.

Masada, fortified, flat-topped hill in SE Israel; it was the site of the ZEALOT Jews' last stand against Roman authority. In AD 66 the Jews regained the fortress, massacring the Roman garrison, established there in 4 BC. In AD 73, after two years of siege, 15,000 Roman soldiers subdued the defending force of 1,000 men, women and children. Rather than be captured and enslaved, the Jews committed mass suicide, although seven women and children survived. The site was excavated by Yigael Yadin and an international team in 1963–65.

Masai, Nilotic African people of Kenya and Tanzania, consisting of several sub-groups. They are characteristically tall and slender. Their patrilineal, egalitarian society is based on nomadic pastoralism, cattle being equated with wealth. The traditional Masai kraal is a group of mud houses surrounded by a thorn fence. They have a system of age groups, and individuals move together through a hierarchy consisting of junior and senior warriors followed by junior and senior elders.

Masan, city in SE South Korea, on Chinhae Bay. It developed as a port at the turn of the century, but was closed in 1908 as part of a naval fortified zone. Originally an agricultural market, Masan has developed as a manufacturing centre since Korean independence. Industries: chemicals, machinery textiles. Pop. (1970) 186,890. **Masaniello**, (1828), Italian title for *La Muette de Portici*, a five-act opera by Daniel AUBER, with libretto by Scribe and Delavigne; it was first produced at the Paris Opéra. The theme concerns political revolution. The 1830 production in Brus-

sels had far-reaching political repercussions in contributing incentive for the Belgians' revolt against the Dutch in that year.

Masaoka Shiki (1867–1902), Japanese poet who revitalized the traditional poetic forms of *haiku* and *tanka*. He sought inspiration in the simplicity of the earliest, 8th-century, period of Japanese poetry.

Masaryk, Jan (1886–1948), Czechoslovakian diplomat, son of Tomáš MASARYK. He was Foreign Minister under Edward Beneš and in the government-in-exile in London during WWII. After the Allied victory, he headed the foreign ministry once again, attempting to resist increasing Communist domination.

Masaryk, Tomáš (1850–1937), Czechoslovak statesman, first President of Czechoslovakia (1918–35), who worked for independence for his country. His Czechoslovak National Council was recognized by the Allies in 1918 as the provisional government of the future state.

Mascagni, Pietro (1863–1945), Italian conductor and composer of operas. The early opera *Cavalleria Rusticana* (1890) was his most successful. He conducted his operas on tours in the USA (1903) and, more successfully, in South America (1911) before succeeding TOSCANINI as musical director of La Scala, Milan, in 1929. His Fascist sympathies are evident in the opera (1935).

Masefield, John (1878–1967), British poet and novelist. A writer of inventive and rhythmical verse, he was POET LAUREATE from 1930 until his death. His long narrative poems include *The Everlasting Mercy* (1911), innovative in its use of colloquialism, and *Reynard the Fox* (1919). His most famous poem is *Sea Fever*. He also wrote verse dramas and adventure novels, often about the sea.

Maser, device using "inverted populations" of atoms (ie atoms artificially kept in states of higher energy than normal) to provide amplification of radio signals. The term is an acronym for Microwave Amplification by Stimulated Emission of Radiation. The principle of the maser was first discovered by Charles TOWNES of Columbia University, who later (1964) shared the Nobel Prize in physics for his work. The first maser used electrostatic (charged) plates to separate high-energy ammonia atoms from low-energy ones. Radiation of a certain frequency would then stimulate the high-energy ammonia atoms to emit similar radiation and strengthen the signal. The very narrow frequency emitted made the ammonia maser one of the most accurate "atomic clocks" known. See also LASER; pp.862–863.

Maseru, capital city of Lesotho, s Africa, on the River Caledon. Originally an obscure trading town, it flourished when made the capital of the British Basutoland protectorate (1869–71 and 1884–1966) and became the capital of the independent kingdom in 1966. It is a trade, transport and administrative centre. Pop. 15,000.

Mashad. See MESHAD.

Masham, Abigail, Lady (d.1734), favourite of Queen ANNE of England. She sympathized with the Queen's ecclesiastical and political opinions and supplanted the Duchess of Marlborough in Anne's favour (1711–14).

Mashonaland, former province in NE Rhodesia (Zimbabwe), Southern Africa; now divided into Northern and Southern Mashonaland provinces. The region has fertile farmland and rich gold deposits. Mashonaland was acquired by the British South Africa Co after 1890, and became part of the British colony of Southern Rhodesia in 1923. The principal town is Salisbury. Area: 205,990sq km (79,533sq miles). Pop. (1969): (N) 740,480; (S) 1,135,220.

Masina, Giulietta (1921–), Italian film actress who made her debut in 1941. She married the director Federico FELLINI in 1943. Her films include *Senza Pietà* (1947), *La Strada* (1953), *Nights of Cabiria* (1957) and *Juliet of the Spirits* (1965). Capable of portraying extreme vulnerability and pathos, she has been described as a female CHAPLIN.

Masked Ball, A (*Un Ballo in Maschera*) (1859), three-act opera by VERDI with text by Somma, based on Scribe's libretto for AUBER's *Gustave III, ou Le Bal Masqué*. It was first produced in Rome. It centred around the assassination of Gustavus III of Sweden who, in March 1792, was shot in the back during a masked ball. But since a recent assassination attempt had been made on the life of Napoleon III, Verdi was persuaded to change the locale to 17th-century Boston, USA, although many later productions restored the opera's action in Sweden.

Maskelyne, Nevil (1732–1811), British astronomer. In 1765 he was appointed the fifth ASTRONOMER ROYAL, a post he held for 46 years. He introduced the method of determining longitude by the measurement of lunar position into navigation, and calculated the Earth's density.

Masks, covers worn over the face or head for disguise or protection. Their major use has been ceremonial, and they have been especially important in the theatre. Masks were an essential part of the Japanese NO dramas and Chinese temple dramas. In ancient Greece, drama masks were used to portray a fixed emotion such as joy, grief or rage, and at the same time they acted as sound-boxes in the projection of the voice. They were used in the medieval mystery plays and featured in Renaissance Italian COMEDIA DELL'ARTE. In modern drama, the staging of Peter Shaffer's *Equus* required several actors to wear masks representing a horse's head.

Masochism, taking pleasure in being hurt or abused physically or psychologically. Masochism is often linked with sexual arousal and gratification, and may take the form of a desire to be dominated or mistreated. See also SADISM.

Mason, James (1909–), British film actor. He made his stage debut in 1931 and appeared in *Fanny by Gaslight* (1944) and *Odd Man Out* (1947). He moved to the USA in 1948 and played complex character parts in films such as *Lolita* (1962), *The Seagull* (1968) and *Cross of Iron* (1977).

Mason, John (1586–1635), founder of New Hampshire USA, b. England. He received a patent for a tract of land 97km (60 miles) wide between the Merrimack and Piscataqua rivers, which he named New Hampshire. In 1746 one of his descendants sold the land rights to a dozen Portsmouth men (the Masonian Proprietors), who issued settlement permits and land titles in the undeveloped areas of Mason's grant.

Mason, Ronald Alison Kells, (1905–1971), New Zealand poet, novelist and playwright. He began his career as a trade union secretary, and much of his work displays left-wing sympathies. His collected poems were published in 1962 and he wrote the play *Straight is the Gate* (1969).

Mason-Dixon Line, boundary between the states of Pennsylvania and Maryland, USA, surveyed by Charles Mason and Jeremiah Dixon between 1765 and 1768. It is the traditional line which divides the North from the South.

Masonry, art and skill of building or working with stones, and any building-work in stone. Stones are quarried and left to season by exposure to the air. They are used either dressed (squared and smoothed) or undressed. Undressed stones packed closely can form a durable rubble wall, which may be clad to give a smooth surface. Dressed stones laid like brick-work without mortar make strong structures because of the weight and compressive forces generated by the stones. In the 2nd century BC, masons were using concrete as a bonding agent, which they made by mixing stones with mortar. Most modern masonry involves cladding bricks, concrete or steel with stone. See also pp.548–553.

Masorah, or **Masorah**, collection of notes written in the margins of the Hebrew Bible, to ensure the correct linguistic and scriptural tradition in the reading aloud of the text. Masorah is Hebrew for "tradition".

Masorettes, group of biblical scholars and scribes who wrote Aramaic and Hebrew

and were responsible for producing the MASORAH, or elaborate marginal notes on the Hebrew Bible, between the 6th and 12th centuries.

Masqat. See MUSCAT.

Masque, dramatic presentation popular at court and in the great houses of the nobility at the end of the 16th century and the beginning of the 17th. Court masques often involved elaborate costumes and scenery, and Inigo JONES was well known for his spectacular designs for the masques of BEN JONSON. The masque consisted of verse, comedy and, as an essential feature, a dance for a group of masked revellers. The earliest truly dramatic masque of which there is a text is *Proteus and the Adamantine Rock*, performed at Gray's Inn in 1594 in honour of Elizabeth I.

Mass, measure of the quantity of matter in an object. Scientists distinguish between two types of mass: gravitational mass is a measure of the mutual attraction between bodies such as the Earth, as expressed in NEWTON'S law of gravitation. Inertial mass is a measure of a body's resistance to change in its state of motion, as expressed in Newton's second law of motion. Spring balances and platform scales provide a measure of gravitational mass; inertia balances provide a measure of inertial mass. EINSTEIN'S general theory of RELATIVITY is based on the principle of equivalence, according to which the inertial mass and the gravitational mass of a body are equivalent. See also INERTIA; WEIGHT; pp.824–827.

miss, one of the alternative names used by Roman Catholics and some High Church Anglicans for the celebration of the EUCHARIST. The term is generally believed to derive from the formal dismissal at the end of the Latin rite: *Ite, missa est* (You may go, it is done).

Mass, in music, a setting of the religious service. The most famous is BACH'S mass in B minor. The most famous English settings are BYRD'S four- and five-part masses.

Massachusetts, state in NE USA, on the Atlantic Ocean; one of the New England states. In the E is a low-lying coastal plain. The uplands of the interior are divided by the Connecticut River valley and the Berkshire valley. The principal rivers are the Housatonic, Merrimack and Connecticut. A highly industrialized region, Massachusetts is one of the most densely populated states in the nation. Agricultural produce includes cranberries, tobacco, hay, vegetables and market garden and dairy produce. The major industries are electronic equipment, plastics, footwear, paper, machinery, metal and rubber goods, printing and publishing and fishing. The chief cities are Worcester, Springfield, Cambridge and New Bedford. The state capital and largest city is Boston.

The first settlement was made in 1620 at Plymouth on Massachusetts Bay by the Pilgrims. Boston was founded by English Puritans in 1630 and it became the centre of the MASSACHUSETTS BAY COLONY. Massachusetts strongly resisted the policies of the British crown that led to the American War of Independence. After achieving statehood in 1788, Massachusetts prospered. In the 19th century it was a centre of learning and culture, being the home of writers such as EMERSON, THOREAU and HAWTHORNE. In the AMERICAN CIVIL WAR, Massachusetts supported the Union. Area: 21,386sq km (8,257sq miles). Pop. (1975 est.) 5,828,000. See also p.2161.

Massachusetts Bay Colony, one of the earliest settlements in North America. It was founded as a trading company at Salem in 1629. The charter brought to the colony by Puritan Gov. John Winthrop in 1630 encouraged an influx of PURITANS seeking religious and economic opportunities. This colony was under self-rule with a theocratic government – all of whose representatives were church members. The colony spread to Boston and several other nearby towns. The charter was cancelled in 1684, and the area put under direct English rule.

Massachusetts Bay Company, English company chartered by CHARLES II in 1629

Masai spears and shields are used by the men; the women work in the fields

Pietro Mascagni is most famous for his opera *Cavalleria Rusticana*.

Masks: Devil Dancers of the East Indies wear masks representing primary demons.

James Mason portrayed Field-Marshal Erwin Rommel in *The Desert Fox* (1951).

Massachusetts Institute of Technology

to trade and establish the MASSACHUSETTS BAY COLONY. It was given the land between the Charles and Merrimack rivers and was made independent of an English board of governors as a result of an omission in the charter. The company and the colony were one and the same until 1684, when the company's charter was annulled.

Massachusetts Institute of Technology. See MIT.

Massacre of St Bartholomew's Day. See BARTHOLOMEW'S DAY MASSACRE, ST.

Mass action, law of, principle that a chemical reaction rate is proportional to the product of the concentrations of each reactant.

Massage, systematic rubbing or kneading of the body for therapeutic purposes. Face massage is practised as a beauty aid; heart massage, massage of the chest over the heart, is a medical technique for setting an inert heart beating again.

Massasoit (c.1580–1661), American Indian chief of the Wampanoag tribe of Massachusetts and Rhode Island. In 1621 he made a treaty with John Carver of Plymouth Colony that the Indians would not harm the pilgrims if the pilgrims respected the rights of the Indians.

Mass culture, general culture of an advanced industrial society. It is usually associated with passive attitudes on the part of the majority of the population, which does not create, but merely absorbs. Further, it is often closely connected with the need of large-scale industry to sell great quantities of goods. Mass culture, therefore, is closely associated with advertising, and includes the popular record and clothing industries in Western society. In this sense it is distinct from folk culture, in which the individual is much more creative.

Mass defect, difference in mass between the total rest mass of protons and neutrons, when free, from which a particular nucleus is formed and the slightly lower mass of the nucleus itself. The mass defect is converted into energy so that the particles can be bound tightly together to form the nucleus. See also BINDING ENERGY; RELATIVITY.

Massenet, Jules (Émile-Frédéric) (1842–1912), French Romantic composer who dominated 19th-century French lyric opera. He composed many operas, including *Le Cid* (1885), *Werther* (1892) and *Thérèse* (1909). His two masterpieces are considered to be *Manon* (1884) and *Thaïs* (1894). See also pp.1582, 1599.

Massey, Sir Harrie Stewart Wilson (1908–), Australian physicist. He studied in Melbourne, and taught in Britain from 1929. He served on a number of commissions dealing with atomic energy and space research. His publications include *The Theory of Atomic Collisions* (1933) and *The New Age in Physics* (1960).

Massey, Raymond (1896–), US actor, who gained experience on the London stage and gave many fine screen performances. These included *The Speckled Band* (1931), *Things To Come* (1936), *A Matter of Life and Death* (1946) and *East of Eden* (1955). His most famous role was perhaps that of Abraham Lincoln in *Spirit of the People* (1939).

Massey, Vincent (1887–1967), Canadian politician. He served as Canada's first minister to the USA (1926–30), and High Commissioner in Britain (1935–46). He was the first Canadian-born Governor-General of Canada (1952–59).

Massey, William Ferguson (1856–1925), New Zealand politician who became Prime Minister in 1912, in which post he died. After going to New Zealand in 1870 Massey set up as a farmer in Mangere until he entered politics in the early 1900s, when he helped form the Reform Party. In 1915 he formed and led the coalition Government that ruled until 1919.

Massif Central, extensive mountainous plateau in SE central France. The volcanic Auvergne Mts form the core of the region, which also includes the Cévennes (SE) and the Causses (SW). Sheep and goats are grazed on the slopes. Hydroelectric power is generated there and coal and kaolin

mined. The highest peak is Puy de Sancy, rising to 1,886m (6,186ft). Area: 85,000sq km (32,819sq miles).

Massine, Léonide (1896–1979), US choreographer and ballet dancer, b. Russia. He attended the Imperial Ballet School and became principal dancer and choreographer for DIAGHILEV'S BALLETS RUSSES. His choreography includes *Le Soleil de Nuit* (1915), *La Boutique Fantasque* (1919) and *Three Corners* (1919). He influenced the development of choreography when he created his first symphonic ballet, *Les Présages* (1933), using Tchaikovsky's *Fifth Symphony*. He also staged dances and performed in the films *The Red Shoes* (1948) and *Tales of Hoffmann* (1951). See also p.1759.

Masinger, Philip (1583–1640), English dramatist. He wrote more than 40 plays, often in collaboration, many of which are now lost. He is best known for his realistic comedies about domestic life such as *A New Way to Pay Old Debts* (1625) and *The City Madam* (1632).

Mass media, general term for the modern avenues of public information. They are radio, television, newspapers and films. These media disseminate information and entertainment on a wide scale and their powers of manipulating people, perhaps to buy things or to vote, are the subject of much discussion and research.

Mass number, distinguishing property of ATOMS of chemical elements, being the total number of NUCLEONS (nuclear particles) in the NUCLEUS. It is usually shown as a suffix to the chemical symbol of an element. Thus the lightest element, hydrogen, has one PROTON only in its nucleus, and its symbol is H¹. Heavier elements have both protons and NEUTRONS in their nuclei; one ISOTOPE of uranium has a mass number of 238, i.e. each of its nuclei contains 238 nucleons (protons plus neutrons), and its symbol is U²³⁸.

Mass observation, organization founded in Britain in 1937 by Charles Madge and Tom Harrison. It aimed to develop the scientific study of human behaviour, using volunteer "observers". The object was "observation of everyone by everyone". After WWII the company's successor, Mass-Observation Ltd, focused on conventional MARKET RESEARCH.

Mass production, manufacture of goods in large quantities by standardizing work and machinery and by using assembly-line methods. The first machinery with standardized interchangeable parts was designed by Marc Isambard BRUNEL in 1803 to mass-produce pulley-blocks for the naval dockyard at Portsmouth, England. By 1873, US inventors like Samuel Colt were using interchangeable parts and precision measurements in the firearms industry. The proving ground for the assembly line, with parts on a conveyor belt moving past stationary workers, was Henry FORD's factory for the mass production of the Model T car in the 1910s. Later, machines took over more and more of the repetitious labour. More recent developments include automated controlling devices, computers and electronic sensors. See also pp.454–455.

Mass spectrograph, or mass spectrometer, instrument for separating IONS according to their MASSES (or more precisely, according to their charge-to-mass ratio). In the simplest types, the ions are first accelerated by an electric field and then deflected by a strong magnetic field, the lighter the ions the greater the deflection. By varying the field, ions of different masses can be focused in sequence on to a photographic plate and a record of charge-to-mass ratios obtained. In a mass spectrometer the ions are detected electrically. The apparatus is used to measure atomic and molecular mass, identify isotopes and determine chemical structure. See also pp.904–905.

Massys, Quentin (c.1465–1530), Flemish painter. He used elements of Italian RENAISSANCE style in his paintings and had considerable influence among Italianate painters in The Netherlands. His works include highly observed, precisely-drawn portraits, eg *The Money-Changer and his Wife* (1514), and many genre and reli-

gious paintings. See also pp.1372, 1394.

Mast, long wooden or metal pole rising vertically from the keel of a ship, used to support the sails. Radio antennae, signals (eg flags and lights) and lifting equipment are also carried on masts. The tallest mast on a full-rigged ship is the mainmast; the foremast (nearest the bow) is forward of the mainmast and the mizzen-mast is aft (nearest the stern). See also pp.566, 567.

Mastaba, mud-brick burial structure in Old Kingdom Egypt. Generally rectangular with inward-sloping sides and a flat roof, a mastaba contained the body of a noble at the bottom of a sealed shaft, and had two open chambers at the top. The PYRAMID was a direct development from it.

Mastectomy, in surgery, removal of all or part of the female breast. It can be simple or radical: simple for non-malignant growth and radical when cancer is present. However, the efficacy of the radical operation is disputed.

Master of, term used by art historians to identify an unknown artist whose style can be recognized in several works. Often the painter's name is derived from his most notable work, as with the Dutch artist known as MASTER OF THE VIRGO INTER VIRGINES.

Master of Flémalle, Flemish painter, probably Robert Campin (c.1378–1444), who worked in Tournai. Rogier van der WEYDEN was his pupil. Works attributed to him include *Thief on the Cross* (before 1430) and *Virgin and Child* (date uncertain).

Master of St Bartholomew (fl. late 15th and early 16th centuries), German painter. His paintings, in bright, enamel-like colour and sometimes suggesting the influence of Rogier van der WEYDEN include *The Descent from the Cross* (c.1501) and the altarpiece of St Bartholomew (1505–10), from which his name derives.

Master of St Giles (fl.1480–1500), French or Dutch painter who worked at the French court in Paris, Lyons and the Loire valley. He was named after two panel paintings, *The Mass of St Giles* and *St Giles and the Hind* (both now in the National Gallery, London).

Master of the Rolls, third ranking legal officer in England, below the Lord Chancellor and the Lord Chief Justice. He is a member of the High Court of Justice and presides with the Lord Justices of Appeal in the Court of Appeal. He is the keeper of all records of the court of Chancery and of the rolls of all writs and letters patent which are issued under the Great Seal.

Master of the Virgo inter Virgines (fl. c.1470–1500), Dutch painter. He probably worked in Delft and was best known for his individualistic treatment of religious subjects. Many of his figures wore unusual costumes of Oriental design.

Masters, Edgar Lee (1868–1950), US author who in 1915 wrote *Spoon River Anthology*, his greatest poetic success. He spent many of his later years writing biographies.

Masters, John (1914–), British author. He was commissioned in the Indian Army in 1934, and saw active service on the North-West Frontier and the Middle East (1936–45). He was a prolific writer, setting most of his work in India and the East. His novels included *Bhowani Junction* (1954), *The Ravi Lancers* (1972) and three volumes of autobiography: *Bugles and a Tiger* (1956), *The Road Past Mandalay* (1961) and *Pilgrim Son* (1971).

Masters, The (1951), novel by C. P. SNOW. One of the *Strangers and Brothers* sequence, it concerns the struggle for power in a Cambridge college. Royce, the Master, is dying and the Fellows have to consider choosing one of two candidates as his successor. The Master's illness is prolonged, and strong feelings develop among the supporters of both candidates.

Masters, William Howell (1915–), US physician who, with his psychologist wife Virginia (née Johnson) (1925–), became noted for laboratory studies of the physiology and anatomy of human sexual activity. They also conducted clinical marriage counselling for people with

sexual problems. Their works include *Human Sexual Response* (1966) and *Human Sexual Inadequacy* (1970).

Mastersinger. See MEISTERSINGERS.

Mastiff, large watchdog and fighting dog that was first bred in England over 2,000 years ago. Properly called Old English mastiff, it has a broad, rounded head with a dark-coloured, blunt, square muzzle and small V-shaped ears. The wide deep-chested body is set on strong legs with large feet and the tail is long and high-set. The short, coarse coat may be brown, grey or brindle. Height: to 84cm (33in) at shoulder; weight: to 95kg (210lb).

Mastitis, inflammation of the MAMMARY GLAND. In human beings, acute mastitis is caused by bacterial infection and may occur after childbirth. The breasts become swollen and painful and abscesses may form. Chronic mastitis, characterized by a localized, painful swelling, is caused by hormonal disturbances. In animals, mastitis is due to bacterial infection; economically, it is one of the most serious diseases of dairy cattle, sometimes causing GANGRENE of the udder and teats.

Mastodon, any of several species of extinct elephantine mammals, all of which existed mainly in the PLEISTOCENE epoch. Mastodons had a long coat of red hair; the grinding teeth were notably smaller and less complex than those of modern elephants, and the males had small tusks on the lower as well as the upper jaw. Genus *Mastodon*.

Mastoid, raised region behind the ear, also called the mastoid bone. It contains cells of the inner ear which may become infected in mastoiditis. This once-common disorder was frequently operated upon but nowadays is usually cured quickly with antibiotics.

Masturbation, self-stimulation by manipulation of the genital organs for pleasure, usually to orgasm. Once regarded as taboo, sinful or physically harmful, moderate masturbation is no longer considered abnormal or damaging to the health. See also p.1136.

Matabele, or Ndebele, Bantu-speaking people who live in MATABELELAND, Zimbabwe (Rhodesia). Originally part of the NGUNI, the tribe migrated first to Basutoland in 1823, and then to Southern Rhodesia. The Matabele fought European settlers until defeated in 1893. The group now numbers about 300,000 people.

Matabeleland, former province of SW Rhodesia (Zimbabwe), Southern Africa; now divided into Northern and Southern Matabeleland provinces. The region lies between the Limpopo and Zambezi rivers and has rich gold deposits. Matabeleland was dominated by the British South Africa Co after 1889 and it became part of the British colony of Southern Rhodesia in 1923. The main town is Bulawayo. Area: 183,372sq km (70,800sq miles). Pop. (1969): (N) 602,110; (S) 367,110.

Mataco, most important South American Indian tribe inhabiting the Gran CHACO. Speaking the Mataco-Macá language, some 40,000 Mataco inhabit NE Argentina.

Matador, person who kills the wounded bull in a bullfight. He is the "star" of the show, is dressed in highly decorated top and breeches and employs graceful, florid movements with the body and the *muleta* (a piece of red cloth) to avoid the animal's charges.

Mata Hari (1876–1917), Dutch courtesan and double agent, real name Margaretha Geertruida Zelle. She was the wife of a Dutch colonial officer with whom she lived in Java until 1902, when she left him and travelled to Europe, calling herself Mata Hari. From 1905 she was a professional dancer, performing dances she had learnt while in Java. She became well-known in Paris, and was in the pay of both the French and German intelligence services. She was executed by the French as a spy during WWI.

Matamata, South American turtle that has a bossed carapace resembling a piece of dead tree. The large head, which is set on a snake-like neck, is flat and triangular with small feeble jaws. It can greatly distend its

throat and feeds by sucking in a huge volume of water. Length: to 40cm (16in). Family Chelydidae; species *Chelys fimbriata*. See also p.331.

Matanzas, city in w central Cuba, 97km (60 miles) E of Havana; capital of Matanzas province. A major port, its industries include the manufacture of rayon, footwear and fertilizers. Pop. (1970 prelim.) 85,400.

Matanzima, Chief Kaiser Daliwonga (1915–), Prime Minister of the TRANSKEI, South Africa. A critic of the land policy of the South African government, Matanzima has proposed the merger of all BANTU homelands. He was elected Chief Minister in 1963 and Prime Minister in 1976.

Matapan, Battle of Cape (March 1941), major naval engagement in WWII. The British Mediterranean Fleet under Admiral Cunningham attacked an Italian squadron off the coast of Greece, sinking three cruisers without damage to its own ships.

Matches, short lengths of wood tipped with heads that can be ignited by friction ("striking"). The first matches, called "phosphoric tapers", were introduced in 1781; the modern friction match was invented by John Walker (c.1781–1859) in about 1828. The heads of all matches in common use contain the chemical oxidant potassium chlorate. In safety matches this must, to ignite, be struck against a prepared surface containing red phosphorus. The heads of matches that ignite when struck on any rough surface contain both potassium chlorate and the compound phosphorus sesquisulphide.

Matchlock, early FIREARM. It was the first gun that could be used effectively by one infantryman. Its mechanism consisted of a primitive trigger which brought a glowing match into contact with a priming charge. Invented in about 1425, it was the commonest military firearm from 1550 to 1675. But it was heavy (some early matchlocks weighed 11kg; 25lb), and the need for a constantly lit match was inconvenient and dangerous. At the end of the 17th century it was superseded by the FLINT-LOCK. See also p.556.

Maté, or yerba maté, South American evergreen shrub or tree. In the wild, it is a tree; cultivated, it is pruned as a small shrub. The dried leaves are infused to make a stimulating beverage called Paraguayan tea, a staple drink of the GAUCHOS of the pampas. Height: to 6m (20ft). Family Aquifoliaceae; species *Ilex paraguariensis*.

Materialism, in philosophy, a system of thought that explains the nature of the world as dependent on matter. It denies the independent existence of spirit. Periods of scientific advance throughout history have been marked by strong materialistic tendencies. The doctrine was formulated as early as the 4th century BC by DEMOCRITUS. Other early Greek teaching such as that of EPICURUS and STOICISM thought of reality as material in nature. The theory was renewed in the 17th century by THOMAS HOBBES and others who believed that consciousness belonged to the physical world. Dialectical materialism as preached by KARL MARX is a modern development of the older theory. See also pp.1881, 1887.

Materia medica, study of the source, composition, characteristics and preparation of drugs. As such it is a branch of the larger discipline of PHARMACOLOGY.

Mathematical model, set of formulas or equations that describes the behaviour of a physical system in purely mathematical terms. A modern design technique is to use mathematical models, generated by ANALOG COMPUTERS, to study structures such as buildings, bridges and aircraft before they are built. See also p.468.

Mathematical Principles of Natural Philosophy (1687), the first mature treatise in classical mechanics, by ISAAC NEWTON. It is a synthesis of work since GALILEO, important for presenting the three laws of motion, the theory of universal gravitation and the principles governing the tides.

Mathematics, study concerned originally with the properties of numbers and space;

now more generally concerned with deductions made from assumptions about abstract entities. Mathematics is often divided into applied mathematics, which involves the use of mathematical reasoning in other fields, such as engineering, physics, chemistry and economics and pure mathematics, which is purely abstract reasoning based on axioms. However, the two fields are not totally independent – the subjects of pure mathematics are often chosen for their application to specific problems and the abstract results of pure mathematics, such as GROUP THEORY and differential geometry, often find practical uses. The main divisions of pure mathematics are into GEOMETRY and ALGEBRA. Often analysis, reasoning using the concept of limits, is distinguished from algebra; it includes differential and integral CALCULUS. See also ARITHMETIC; TRIGONOMETRY; pp.776–809.

Mather, name of two American Puritan Ministers. Increase Mather (1639–1723) obtained a new colonial charter for Massachusetts in 1691, and wrote *Cases of Conscience Concerning Evil Spirits* (1693), which helped to end the SALEM Witchcraft Trials. His son Cotton (1663–1728) tried to retain the old system of clerical rule, but was also interested in new scientific developments. The outbreak of witch-hunting in the 1690s owed much to his belief in demonic possession.

Mathias, Robert Bruce (1930–), US athlete who, at 17 years 9 months, was the youngest male gold medalist when he won the decathlon at the 1948 Olympic Games. He achieved an unprecedented double when he won the same event in 1952. In 1967 he was elected to the US House of Representatives.

Mathias, William (1934–), British composer. After studying in Wales and at the Royal Academy of Music, London, he taught at the University of Edinburgh before becoming, in 1970, head of the music department at the University College of North Wales. His numerous compositions include orchestral, choral and church music.

Mathieson, Muir (1911–), British musician who made great contributions to film music from 1931. He arranged and conducted the score by ARTHUR BLISS for Alexander KORDA's film *Things to Come* (1936) as well as contributing his own scores to numerous films such as *Brief Encounter* (1946). He also directed many educational films; for *The Instruments of the Orchestra* (1945), he commissioned Benjamin BRITTEN to arrange a theme from Purcell's *Abdelazar*, which Britten later reworked into the suite *The Young Person's Guide to the Orchestra*.

Mathis, Johnny (1935–), US popular singer. After starting his career in San Francisco in 1955, he rose to become perhaps the wealthiest black US entertainer of his time. Although personally interested in jazz, he resisted its appeal and recorded romantic ballads such as *The Twelfth of Never* and *Moon River*.

Matilda, or Maud (1102–67), Empress of Germany, daughter of HENRY I of England, who married HENRY V of Germany in 1114. Although she was recognized as Henry's successor, STEPHEN became king in 1135 and after a protracted civil war forced her to leave England.

Matilda, Australian colloquial term for a bushman's bundle, or swag. To "waltz matilda" or "walk matilda" means to take to the road or outback carrying a bundle. This is the subject of the well-known ballad *Waltzing Matilda*.

Matisse, Henri Emile Benoit (1869–1954), French painter and sculptor whose early paintings included naturalistic compositions in neutral tones. From 1899, he experimented with the techniques of NEO-IMPRESSIONISM in paintings such as *Luxe, calme et volupté* (1905). He was the first to develop the style of painting that became known as FAUVISM, and became one of the leading painters associated with the group, using bright pure colours and well-defined subject matter. *Women with the Hat* (1905), his first recognized work

in this manner, was a reaction against the POINTILLISM style which was then in vogue; *The Red Studio* (1911) increased the sensation of vivid colour. From 1920 he diversified, producing collages, stage designs, stained glass and sculptures in terracotta and bronze. From 1935 to 1941, when he became bedridden, he had begun to explore the use of etching for illustrations.

Mato Grosso, second-largest state in Brazil, bordering on Bolivia and Paraguay; the capital is Cuiabá. Much of the area lies on the central plateau of Brazil and there is rain forest in the N and marshland in the SW. Cattle rearing is the chief occupation. Rice, tobacco and sugar-cane are grown. There are extensive mineral deposits but most of them are unexploited. Area: 1,930,849sq km (745,501sq miles). Pop. (1970) 1,475,117.

Matosinhos, suburb of Oporto, NW Portugal, at the mouth of the River Leça. The church of Bom Jesus de Bouças is a pilgrimage centre. Industries: fishing, tourism, tiles. Pop. (1970) 23,973.

Matriarchy, any society or group that is ruled by women. Matriarchal societies exist among some primitive peoples in South America. See also PATRIARCHY.

Matrilateral society, human society in which descent is traced through women, and property is usually inherited through the female line. Matriliney is often confused with MATRIARCHY, a society ruled by women. Long established in certain primitive societies, matriliney can today be seen among the North American PUEBLO INDIANS.

Matys, Quentin. See MASSYS, QUENTIN.

Matthes, Roland (1950–), East German backstroke swimmer who, as world record-holder, won the 100m and 200m at the 1968 and 1972 Olympic Games, the 1970 European Championships, and the 1973 World Championships. In 1976 he added a bronze (100m) to his four Olympic gold and one relay silver medals.

Matter, substance of the universe. Ordinary matter is made up of atoms composed of ELECTRONS, PROTONS and NEUTRONS. These three particles are combined into ELEMENTS, an ordered series of atoms having from one to more than 100 protons in their nuclei. (Many other subatomic or ELEMENTARY PARTICLES can be produced at high energies and live for short periods of time). The elements other than hydrogen and helium (eg carbon, oxygen and iron) were built up by thermonuclear reactions in stars. Four forces are known to be associated with matter. At large distances, all uncharged matter exerts an attractive force; this is called gravitation. Charged particles exert an attractive or repulsive electromagnetic force which accounts for nearly all everyday phenomena – eg, the sense of touch is dependent on the repulsion of MOLECULES at close range. The strong interaction is responsible for binding the protons and neutrons together in the NUCLEUS and the weak interaction is responsible for beta-decay. See also ANTI-MATTER; MATTER, STATES OF; pp.812–813, 813, 836–841.

Matter, states of, classification of matter according to its structural characteristics. Four states of matter are generally recognized: solid, liquid, gas and plasma. Any one ELEMENT or compound may exist sequentially or simultaneously in two or more of these states: eg, water, ice and water vapour can all exist at one temperature and pressure. SOLIDS may be crystalline (have a regularly repeated molecular structure), as in salt and metals; or amorphous, as in tar or glass. LIQUIDS have molecules that can flow past one another but which remain almost as close as in a solid. In a GAS, molecules are so far from one another that they travel in relatively straight lines until they collide. In a PLASMA atoms are torn apart into electrons and nuclei by the high temperatures, such as those in stars. See also pp.836–841.

Matterhorn (Monte Cervino), mountain peak in Switzerland, in the Pennine Alps, on the Swiss-Italian border 10km (6 miles) SE of Zermatt. It has a distinctive pyramidal peak formed from several

CIRQUES and was first scaled in 1865 by the British mountaineer Edward Whymper. Height: 4,478m (14,691ft).

Matthew, Saint, one of the twelve apostles of Jesus and by tradition the author of the gospel placed first in the New Testament, although modern authorities date the gospel too late (AD 70–75) for it to be at all likely. In the lists of the disciples, in the SYNOPTIC GOSPELS, Matthew is sometimes called Levi; at the time of his call by Jesus he was working as a tax collector or excise officer. Feast day: 21 Sept. in the West, 16 Nov. in the East.

Matthew, the Gospel according to Saint, gospel traditionally placed first in the New Testament. Written about AD 70–75, it contains more of the teachings of Jesus than any other gospel, perhaps because it relies more on the source "Q" than does the Gospel of St LUKE although both used material from the earlier Gospel of St MARK. It is also the only SYNOPTIC GOSPEL written in a deliberately Jewish, rather than Hellenistic, style always concerned to emphasize connections between Old Testament prophecy and New Testament fulfilment.

Matthews, Denis (1919–), British concert pianist, who studied with Harold Craxton and William ALWYN. His first public appearances were in London at the Queen's Hall and at the National Gallery concerts in 1939. His publications include *In Pursuit of Music* (1966), an autobiography, and *Keyboard Music* (1972).

Matthews, Sir Stanley (1915–), British footballer who played for Stoke City, Blackpool and England. His professional career lasted from 1932 to 1965; he played 786 first-class matches, including 54 games for England. He won only one major honour, an FA cup winner's medal in 1953, but was renowned as one of the game's finest outside-righters.

Matthias Corvinus (1443–90), King of Hungary (1458–90), the son of János Hunyadi. While protecting the peasants, he reformed the administration, strengthened the army, promoted commerce and founded a new university at Buda and a famous library, the Bibliotheca Corvina. He took Bosnia from the Turks and was proclaimed King of Bohemia in 1469, as well as of Styria, Austria and Carinthia.

Maturin, city in NE Venezuela, on the Rio Guarapiche; capital of Monagas state. It is an agricultural trade centre for a region producing cacao, cotton, cereals and beef. Pipelines run from the city to oilfields to the N and W. Pop. (1971) 121,662.

Maudsley, Henry (1771–1831), British engineer who became a leading builder of MARINE ENGINES. He made many innovations in engineering practice, including the production of accurate plane surfaces, the use of a LATHE slide rest, an accurate bench MICROMETER and a practical screw-cutting lathe.

Maufe, Sir Edward (1883–1974), British architect who in 1932 won the competition to design the new cathedral at Guildford. He also began the reconstruction of Gray's Inn (1947), and the Middle Temple (1948). His other buildings include additions to colleges at Oxford and Cambridge.

Mauger, Ivan (1940–), New Zealand speedway rider who, in 1970, became the first rider to win three successive world championships. He won the title again in 1972 and 1977.

Maugham, William Somerset (1874–1965), British novelist, dramatist and essayist. He wrote with wit and irony, and often showed a cynical attitude to life. He achieved initial fame as a playwright and his successes include *Lady Frederick* (1912) and *The Circle* (1921). Among his famous novels are *Of Human Bondage* (1915), *Ashenden* (1928) and *Cakes and Ale* (1930).

Mau, Polynesian demi-god or hero. He caught the sun, tamed fire and spread good works among the people. He discovered the North Island of New Zealand by fishing it up from the sea.

Mau Mau, Kenyan secret terrorist organization in the 1950s, comprising mainly KIKUYU tribesmen, dedicated by oath to expel white settlers from Kenya. In 1952

Mauna Loa

François Mauriac wrote two studies of Christ; one was *The Life of Jesus*.

André Maurois, photographed in 1967; his real name was Emile Herzog.

Mausoleum: Castel Sant'Angelo in Rome contains the emperor Hadrian's tomb.

Maximilian; artist's impression of his last moments before execution by Mexicans.

the Mau Mau began a reign of terror against Europeans; the settlers retaliated, British troops were drafted in and casualties multiplied. Although approximately 11,000 Mau Mau were killed in the reprisals, the Kikuyu resistance developed into the Kenyan independent movement. Jomo Kenyatta, who had been jailed as a Mau Mau leader, became Prime Minister of independent Kenya in 1963.

Mauna Loa, volcanic mountain in central Hawaii, in the Hawaii National Park. It includes Kilauea and Mokuaweoweo, two of the world's largest active craters. It has erupted twice this century (1942 and 1950). Height: 4,160m (13,648ft).

Maundy Thursday, in the Christian liturgical calendar, the day before GOOD FRIDAY, commemorating the institution of the EUCHARIST and the washing of the disciples' feet by Jesus. Church ceremonies can include the washing of the feet and blessing the chrism (holy oil). In Britain, the custom of the sovereign washing the feet of the poor has been replaced by the donation of alms to deserving pensioners. This Maundy money constitutes one specially minted silver penny for each year of the monarch's reign and is distributed biennially at Westminster Abbey.

Maupassant, Guy de (1850-93), French short-story writer and novelist. He was influenced by the Naturalists and produced the short story *Boule-de-suif* for their collection *Les Soirées de Médan* in 1880. His other short stories are collected in *La Maison Tellier* (1881), *Contes de la Bécasse* (1883) and *L'Inutile Beauté* (1890). *Pierre et Jean* (1887) is regarded as his finest novel.

Mauerpertuis, Pierre-Louis Moreau de (1698-1759), French astronomer and mathematician responsible for the principle of least action in physics. He was also a pioneer in genetics and an early evolutionist, as well as President of the Berlin Academy of Science from 1745 to 1753.

Mauriac, François (1885-1970), French novelist and playwright. His novels, *A Kiss for the Leper* (1922), *Genitrix* (1923) and *The Desert of Love* (1925), portray the futility of pursuing fulfilment in materialism and secular love. His three-volume *Mémoires* (1957-67) portray his reaction to contemporary moral values. He was awarded the 1952 Nobel Prize in literature. See also p.1775.

Maurice, Furnley. See WILMOT, FRANK LESLIE THOMPSON.

Maurice, John Frederick Denison (1805-72), British author and clergyman who wrote *Theological Essays* (1853) and *Social Morality* (1869). He was professor of English literature and history (1840-53) and professor of moral philosophy (1866) at Cambridge University.

Maurice, known as Maurice of Nassau (1567-1625), Prince of Orange, stadtholder of the Netherlands (1584-1625). He was chosen stadtholder by the United Provinces on the death of his father, William the Silent, and was made commander-in-chief soon after.

Maurier, Daphne du. See DU MAURIER, DAME DAPHNE.

Maurier, Sir Gerald du. See DU MAURIER, SIR GERALD.

Maurists, group of French BENEDICTINE monks of the congregation of St-Maur, named after the 6th-century St Maurus. Founded in 1618, the congregation was chiefly famous for its devotion to scholarship. It was suppressed in 1789 and disbanded by Pope Pius VII in 1818.

Mauritius, independent island nation of the Commonwealth in the Indian Ocean, approx. 800km (500 miles) E of Madagascar. It was a British colony until it gained its independence in 1968. Sugar, the principal product, accounts for approx. 90 per cent of all exports. Tea is also an important crop. The capital is Port Louis. Area: 2,046sq km (790sq miles). Pop. (1975 est.) 899,000. See also p.2098.

Maurois, André (1885-1967), French biographer, historian, and novelist. He wrote popular histories of England, France, the USA and the USSR, war reminiscences (*The Silence of Colonel Bramble*, 1918), and novels, such as *Whatever Gods May Be* (1928). He is best known for his

biographies, including those of SHELLEY (1923), BYRON (1930), PROUST (1949) and HUGO (1954).

Maury, Matthew Fontaine (1806-73), US naval officer and one of the proponents of OCEANOGRAPHY. He was superintendent of the US Naval Observatory and Hydrographic Office (1842-61) and produced charts showing winds and currents for the Atlantic, Pacific and Indian oceans. He proved the feasibility of laying a transatlantic cable, and wrote *The Physical Geography of the Sea* in 1855. See also HYDROGRAPHY.

Maurya Empire (c.321-185 BC), ancient Indian empire founded by Chandragupta (r.c.321-c.291 BC). After the defeat of the Magadha kingdom the Maurya capital was established at Pataliputra (modern Patna). Chandragupta's son Bindusara (r.c.291-c.268 BC) conquered the Deccan; all India north of Mysore and parts of Afghanistan were united under his son, ASHOKA (r.c.276-c.236 BC). In the culture of the Mauryan Empire can be seen the first expression of native Indian civilization. See also pp.1194-1195.

Mausoleum, particularly impressive tomb. The word comes from Mausolus, ruler of Caria, whose widow raised a great tomb at HALICARNASSUS (c.350 BC), one of the Seven Wonders of the World, to his memory. The best-known mausoleum is the TAJ MAHAL in India; another notable example is Hadrian's Tomb in Rome.

Mauthausen, Nazi CONCENTRATION CAMP in Austria, near Linz, built in 1938 and liberated by the US army in 1945. The inmates, of all nationalities, were subjected to scientific experiments. It is estimated that about 56,000 prisoners died there.

Mauve, Anton (1838-88), Dutch painter, a leading representative of the BARBIZON SCHOOL in Holland. His atmospheric landscapes recall works by COROT and MILLET. **Mauveine**, first synthetic dye, made in 1856 by Sir William Henry PERKIN, a British chemist. Also known as ANILINE purple and tyrian purple, it was the first of the large range of coal tar dyes.

Maverick, Samuel Augustus (1803-70), US cattle rancher and political leader. He became prominent in Texan politics by helping to set up the republic in 1836 and serving in the legislature. He did not brand his cattle, hence the term "maverick" for an unmarked stray animal.

Mawson, Sir Douglas (1882-1958), British geographer and Antarctic explorer. He accompanied Sir Ernest SHACKLETON on the first expedition to reach the South Magnetic Pole (1907-09) and led the Australasian Antarctic expedition (1911-14). From 1929 to 1931 he led British, Australian and New Zealand Antarctic expeditions.

Maxim, Sir Hiram Stevens (1840-1916), US inventor of the MAXIM GUN. He had a genius for mechanical invention. He took out his first patent at the age of 26 (for a hair-curling iron) and later invented various pumps, an electric pressure regulator and even a mousetrap. In 1881 he settled in London, where he built the first fully automatic machine gun in 1883. He also invented a smokeless powder (cordite) for use in the gun's cartridges. See also p.558.

Maxim gun, first modern automatic firearm. It was the first MACHINE GUN successfully to use the recoil energy of the fired bullet to eject the shell and to place another cartridge in the firing chamber. Hiram MAXIM invented the gun in 1883; Vickers mass-produced the weapon, and by 1900 nearly all modern armies had adopted variants of the original design. Machine guns of the Maxim type dominated the battles of WWI. See also p.558.

Maximilian I (1459-1519), Holy Roman Emperor, (1493-1519). He gained the Burgundian possessions in the Netherlands through his marriage to Mary of Burgundy (1477) but was constantly at war with France, first to defend these lands and then his possessions in Italy. He established the HAPSBURGs as the dominant power in 16th-century Europe.

Maximilian II (1527-76), Holy Roman

Emperor (1564-76), King of Bohemia (1562-76) and King of Hungary (1563-76). He was tolerant of Protestants in his domain and ended a war with the Ottoman Turks in 1568 by a truce with Sultan Selim III. He tried to stay neutral during the religious disputes of the 16th century.

Maximilian, Ferdinand Joseph (1832-67), Emperor of Mexico (1864-67), Archduke and brother of Emperor FRANCIS JOSEPH of Austria. Maximilian courted the liberals and alienated the conservative supporters of his French-dominated regime. When Napoleon III withdrew from the Mexican venture, Maximilian was defeated by forces led by JUÁREZ.

Maximilian I (1756-1825), Elector (1799-1806) of Bavaria and King (1806-25). He was made king by the Treaty of PRESSBURG (1805) after allying himself to NAPOLEON I. He later joined the anti-Napoleon coalition in 1813. At the Congress of Vienna in 1815 he opposed the consolidation of Germany and granted a liberal constitution to Bavaria in 1818.

Maximilian II (1811-64), King of Bavaria (1848-64) who attempted unsuccessfully to form a coalition of small German states against the large powers Prussia and Austria. He later supported Austria in order to stem Prussian power.

Maximilian I (1573-1651), Duke (1597-1651) and Elector (1623-51) of Bavaria who fought against the Protestants in the THIRTY YEARS WAR. After his army defeated Elector Frederick V of the Palatinate in 1620, Ferdinand II gave him the Palatinate electorship and territories.

Maximilian II (1662-1726), Elector of Bavaria (1679-1704, 1713-26). He was governor of the Spanish Netherlands (1692-99), but in the War of the SPANISH SUCCESSION (1701-14), he allied himself with France. After being defeated in 1704 at the Battle of BLENHEIM, he was forced to flee to The Netherlands, and was not reinstated as Elector of Bavaria until 1713.

Maxwell, James Clerk. See CLERK-MAXWELL, JAMES.

May, Peter Baker Howard (1929-), British cricketer who played for Cambridge University, Surrey and England. In 66 TEST matches between 1951 and 1961 he scored 4,537 runs at an average of 46.77. He also captained England 41 times. In 1957, at Edgbaston, he scored 285 not out in a world record stand of 411 for the fourth wicket, with Colin COWDREY as his partner.

May, Sir Thomas Erskine, Lord Farnborough (1815-86), British constitutional jurist who wrote the authoritative *A Practical Treatise on the Law, Privileges, Proceedings and Usage of Parliament* (1844). Called to the bar in 1838, he worked for most of his life in the Houses of Parliament.

May. See HAWTHORN.

May, fifth month of the year, consisting of 31 days. Considered the last month of spring, it was called "Maius" in the Roman calendar, probably after the Greek goddess Maia, mother of Hermes, or after Maia Majesta, a local Italian goddess of spring, to whom sacrifices were made to ensure the fertility of crops. Similarly many of the festivals and ceremonies now occurring in May relate to agriculture. In the Roman Catholic Church the entire month is dedicated to the Virgin Mary.

Maya, one of the most important tribes of Central American Indians. They established a remarkable civilization (which reached its peak from the 3rd to the 9th centuries AD) in what is now the whole of Belize, w El Salvador and Honduras, and parts of Mexico, including Yucatán. They were short, stocky and dark, and are believed to have travelled originally from Asia many thousands of years ago.

The Maya are renowned mainly for their knowledge of astronomy and mathematics. Priests prepared tables of dates by means of which they were able to predict solar eclipses. They also accurately traced the orbit of Venus. They wrote their numbers with a system of dots and dashes, and developed a symbol that served roughly the same purpose as the modern zero. Their surviving architecture

is represented mainly by high stone pyramids topped by temples. Religion was based on an ordered cosmology, with a god of fire and creation, also a god represented by a feathered serpent. Human sacrifice was common in the classic period. Today more than 1.5 million Maya Indians still inhabit the region. See also pp.1179, 1364-65.

Mayagüez, port in w Puerto Rico, on the Mona Passage. Founded in c. 1700, it was severely damaged by an earthquake in 1918. There is a college of the University of Puerto Rico (1763) and a us government agricultural research station in the city. Exports: sugar-cane, coffee, tropical fruits, needlework. Industries: brewing, food canning, electronic components. Pop. (1970) 69,485.

Mayakovsky, Vladimir (1893-1930). Soviet poet and dramatist. Leader of the FUTUREIST movement, he founded and edited the journal *Left Arts Front*. His work includes the poems *A Cloud in Trousers* (1914-15) and *150 Millions* (1919-20) and the plays *Mystery Bouffe* (1918), *The Bedbug* (1928-29) and *The Bathhouse* (1929-30).

Maybach, Wilhelm (1846-1929). German engineer. He worked with Gottlieb Daimler in the design and manufacture of internal combustion engines and motorcars, for which he designed many improvements in fuel injection, gears, and so on. He opened his own factory in 1909, building engines for airships and, later, Maybach cars. See also p.490.

May Day, first day of MAY, traditionally celebrated as a festival, whose origin may lie in the spring fertility rites of India and Egypt. The Roman festival of Flora, goddess of spring, was held from 28 April to 3 May. In Britain since the Middle Ages the festivities have centred on the dance round the Maypole. In Communist and some other countries May Day is a labour holiday, marked especially in Moscow by a great military display.

Mayer, Julius Robert von (1814-78). German physicist and physician who determined the mechanical equivalent of heat (for which J.P. JOULE received credit), and propounded a statement of the law of conservation of energy (credited to Hermann HELMHOLTZ). He also stated that the Sun was the ultimate source of living and non-living energy. Lack of recognition led him to attempt suicide and he was committed to an asylum.

Mayer, Maria Goeppert (1906-72), us physicist, b. Germany, who in 1949 proposed that protons and neutrons in an atomic NUCLEUS are arranged in orbits or shells, much as electrons are arranged around the nucleus. In this theory protons and neutrons are arranged and this provided an explanation of the apparently anomalous properties of some nuclei. She shared the 1963 Nobel Prize in physics with Johannes H.D. Jensen and Eugene P. WIGNER.

Mayfair, area N of Piccadilly, London Its name derives from a fair held there in May from 1686 until the 1730s; Shepherd's Market now occupies the site. From 1730 to 1743 Dr Alexander Keith became notorious for solemnizing unofficial marriages in Mayfair; George Frederick HANDEL lived and died there.

Mayflower, ship that carried the PILGRIM FATHERS from England to New England in 1620. The *Mayflower* set sail on 15 Sept. and on 21 Nov. the passengers sighted land. Before the Pilgrims disembarked on 26 Dec. at the site of Plymouth, Mass., they signed the famous Mayflower Compact, an agreement for the temporary government of the colony based on the will of the majority. The ultimate fate of the *Mayflower* is unknown, but a replica was sailed by a British crew from England to Massachusetts in 1957 and is on permanent exhibition at Plymouth, Mass.

Mayfly, soft-bodied insect found throughout the world. The adult does not eat and lives only a few days, but the aquatic larvae (NYMPHS) may live several years. Adults have triangular front wings, characteristic thread-like tails and vestigial mouthparts; they often emerge from streams and rivers in swarms. Length:

10-25mm (0.4-1in). Order Ephemeroptera. See also pp.36, 328-329.

Mayhew, Henry (1812-87). British journalist and writer. With his brother, Augustus, he wrote a number of successful works of comic fiction, and was a founder and co-editor of *Punch*. He is most famous for his pioneering work in sociology, *London Labour and the London Poor* (1851-62), a study of life in the slums of London.

Mayo, Robert Hobart (1890-1957). British aircraft designer. In the 1930s he worked on an aircraft which comprised a "flying boat" carrying a seaplane. The latter was released at a certain height, enabling it to take cargo and fuel over long distances.

Mayo, county in NW Republic of Ireland, in Connaught province; bounded to the N and W by the Atlantic Ocean. A largely mountainous region, it has numerous lakes and is drained by the rivers Erriff and Moy. Oats and potatoes are the chief crops and cattle, sheep, pigs and poultry are reared. Woollen milling and toy manufacturing are the main industries. The county town is Castlebar. Area: 5,397sq km (2,084sq miles). Pop. (1979) 114,019.

Mayor, executive head of municipal government (from the Latin *maior*, meaning "greater"). A mayor has a variety of ceremonial, as well as executive, duties. In most boroughs of England, Wales and Northern Ireland the chairman of the elected council is the mayor, although in some boroughs his title is Lord Mayor. The Lord Mayor of the City of London is not elected; he serves an entirely ceremonial function.

Maypole, tall, slim pole used in a ritual folk dance usually performed on MAY DAY (1 May). It was decorated with flowers and coloured ribbons that were woven into intricate patterns by dancers who circled the pole. The maypole was probably a substitute for the living tree used in earlier spring fertility rites.

May Queen, character of pre-Christian origin, a young girl ceremonially crowned in celebration of the coming of summer on May Day (1 May). A MAYPOLE is set up, and the May Queen's attendants dance around it strewing flowers in homage.

Mazagan. See EL-JADIDA.

Mazarin, Jules, Cardinal (1602-61). Italian papal nuncio who became a statesman in France. Chosen by Cardinal RICHELIEU to be his successor in 1642, Mazarin derived great support from the young LOUIS XIV's regent, his mother, ANNE OF AUSTRIA. This situation made his position impregnable until his death, except for the period of the FRONDE uprisings (1648-53), when he controlled state matters in secret from Cologne. His negotiations and treaties established a peace in Europe that favoured France. The Peace of Westphalia in 1648 and the Peace of the Pyrenees in 1659 gained much new territory for France and the marriage contract with the Spanish infanta gave France's Louis XIV claims on Spain's inheritance.

Mazdaism. See ZOROASTRIANISM.

Mazurka, lively Polish folk dance, similar to the POLKA. As a ballroom dance it is performed by four or eight couples in a circle. The basic movements are foot-stamping and heel-clicking within the turning movement to a 3/4 metre. Frédéric CHOPIN composed more than 50 mazurkas for the piano.

Mazzini, Giuseppe (1805-72). Italian patriot and political thinker of the RISORGIMENTO (Italian unification movement). A member of the *Carbonari* (the Italian republican underground) from 1830, he founded the "YOUNG ITALY" movement in 1831, dedicated to the republican unification of Italy. He fought in the Italian revolutionary movement of 1848 and ruled in Rome in 1849, but was then exiled. Although he was active in revolutionary activities during the 1850s, he played a minor role in 1861 when the unified Italian kingdom was established. See also pp.1586, 1589.

Mbabane, town in NW Swaziland, SE Africa, in the Highveld; the capital and administrative centre of the country. It is a commercial centre for the surrounding

agricultural region, and tin and iron ore are mined nearby. Pop. 21,000.

Mbale, town in SE Uganda, in Bugisu district, 120km (75 miles) NE of Lake Victoria. It is an agricultural trade centre for a region producing coffee, cotton, bananas, grains, and dairy produce. Pop. 23,544.

Mboya, Thomas Joseph (1930-1969). Kenyan statesman. He served in the territorial government during the MAU MAU conflicts of the 1950s and in the Kenyan Independence Movement. He held several ministerial posts under Jomo KENYATTA until his assassination.

Mbuji-Mayi, city in s central Zaire, s Africa, formerly known as Bakwanga. It grew rapidly after Zaire's independence in 1960, becoming an important commercial centre on the River Bushimaie. It is a noted diamond market. Pop. (1974) 336,654.

MCC (Marylebone Cricket Club), world cricket authority from its founding in 1787 to 1969. It was founded by the Earl of Winchelsea and three other English noblemen, simply by changing the name of the White Conduit Cricket Club (1752). Its ground is LORD'S CRICKET GROUND, the freehold of which it bought in 1866. It first laid down the laws of cricket and had general supervision of the game until the establishment of the CRICKET COUNCIL in 1969. It was also responsible for administering English TEST cricket, and English touring sides bore the name MCC as a courtesy until 1977.

Mead, Margaret (1901-78), us anthropologist mainly concerned with different cultural responses to adolescence and the sex roles. Her field work in Oceania produced her first major work *Coming of Age in Samoa* (1928) and the important *Growing Up in New Guinea* (1930). Later came *Male and Female* (1949), work on us ethnic and social problems, affiliation with Doxidiad ekistics movement and the biographies of the 70s.

Mead, alcoholic drink, known since ancient times, made from water and fermented honey. Alcoholic beverages made from honey were common in northern countries where grapes are difficult to grow. See also p.693.

Meade, Richard (1938-), British horse trials rider who won the three-day event individual gold medal at the 1972 Olympic Games and was in the gold medal-winning teams in 1968 and 1972. He helped Britain win world (1970) and European (1967, 1971) titles, and won the Badminton Trials in 1970.

Meadowsweet, also called queen of the meadow, European plant that thrives in damp areas, especially beside streams. It has fern-like leaves and fragrant white flower clusters. Height: 120cm (4ft). Family Rosaceae; species *Filipendula ulmaria*.

Meads, Colin Earl (1935-), New Zealand rugby union forward who played for King Country and New Zealand. Sometimes called "Pine Tree", Meads was one of the finest lock forwards of all time, and had completed 55 Test appearances when he retired in 1972.

Meale, Richard Graham (1932-), Australian composer. In 1969 he was appointed lecturer in music at Adelaide University. His works include *Las Alboradas*, *Very High Kings*, *Clouds Now and Then* and *Incredible Floridas*.

Mealies, South African name given to maize, the major crop of the republic. In the form of cobs, mealie-rice or mealie-meal, mealies are the principal food of most of the black South Africans.

Meals on wheels, service that provides hot meals delivered to the homes of people who live alone and are incapable, through illness or old age, of cooking for themselves. It started as a voluntary service but is now widespread and is sponsored by governments.

Mealworm, larva of a medium-sized BEETLE (family Tenebrionidae) that infests grain products such as flour. Meal worms are bred as food for birds and insectivorous pets. Length: about 32mm (1.25in). Genus *Tenebrio*.

Mean, or arithmetic mean, the mathematical average. It is found by adding a group

Vladimir Mayakovsky was the Bolshevik spokesman during the revolution, 1917.

Mayflies in adult form have a lifecycle of only a day or two.

Maypole: a 1955 photograph of Elstow May Festival, Elstow, near Bedford.

Mealworms, once a problem in warehouse and bakeries, are now bred as pet food.

Mecca: pilgrims circle seven times the holiest shrine in Islam at the Mosque.

Medals commemorate both people and events; above, the Grand Duke of Tuscany.

Sir Peter Medawar (right) gave the 1959 Reith Lectures on *The Future of Man*.

Medea boiled an old ram to convince King Pelias he could be rejuvenated.

of numbers and dividing by the number of items in the group. The mean is a common measure in STATISTICS; it includes every number in the set being averaged in its computation.

Meander. See MAEANDER.

Mean free path, average distance a molecule moves between successive collisions. The concept is most widely used in the KINETIC THEORY of gases, for which the mean free path is usually about 10^{-7} m at normal temperature and pressure.

Mean sea-level, mean height of the sea calculated from measurements at regular intervals at points on the open coast. It is used as a standard or fixed geodetic point. See also GEODESY.

Means test, assessment of a person's financial status, usually by a government department, to decide whether the applicant is eligible for state aid. In most means tests an applicant has to complete a questionnaire and undergo an investigation of his financial status. Means tests were devised to limit state expenditure to those actually in need of state subsidies, and are most commonly used to decide eligibility for rate rebates, supplementary benefits, mortgage relief and legal aid.

Meares, John (c.1756-1809), British explorer and trader. He first visited the NW American coast in 1786 on a trade mission from Macao. In 1788 he built a trading post on Nootka Sound at Vancouver, which became the object of a territorial dispute between Spain and England.

Measles (rubeola), extremely infectious viral disease whose symptoms (cough, conjunctivitis and typical spots on the mucous membranes lining the mouth) appear about two weeks after exposure to the disease. Three or four days later a rash erupts behind the ears or on the face, then spreads over the body. Hypersensitivity to light is characteristic of an attack. Complications such as pneumonia and encephalitis may occur, and middle-ear infection is a hazard of the disease, which was once a major cause of infant mortality in Western countries. Vaccination or one attack usually produces life-long IMMUNITY to measles. See also pp.1232-1233.

Measure for Measure (1604), five-act comedy by William SHAKESPEARE, based on George Whetstone's play *Promos and Cassandra*. Set in Vienna, it is different in method and spirit from Shakespeare's other plays; its tone is partly satirical and partly religious.

Meat, flesh of animals used as food. The term generally includes poultry and game, but excludes fish used as food. Red meat (such as beef steak) is mostly muscle, getting its colour from the red muscle protein myoglobin. Most cuts of meat, however, contain some fat and connective tissue, as well as blood, blood vessels and, possibly, glandular material. See also pp.728, 730-733, 736-737.

Meath, county in E Republic of Ireland, in Leinster province, on the Irish Sea. A fertile low-lying region, it is drained by the Boyne and Blackwater rivers. Cereal crops and potatoes are grown and cattle are reared. Industries include woollen textiles and paper-milling. The county town is Trim. Area: 2,338sq km (903sq miles). Pop. (1979) 90,715.

Meat tenderizer, substance that makes meat tender by breaking down connective tissue in it. The substances used are ENZYMES, such as papain and bromelain, that primarily digest the PROTEIN of the connective tissues but also possibly, to a limited extent, the protein of muscle fibre. The enzymes may be injected into animals before or after slaughter or may be spread on the cut surface of the meat before cooking. Mechanical tenderizers are used to spike meat so that its increased surface area aids cooking.

Mébiame, Léon (1934-), Gabonese politician. He joined the Gabonese government in 1967, and became Prime Minister in 1975.

Mecca, city in W Saudi Arabia. It is considered the birthplace of MOHAMMED and thus regarded as the holiest city of ISLAM. The flight or HEGIRA of Mohammed from Mecca in 622 marks the beginning of the

Muslim era. The city was controlled by Egypt during the 13th century; the OTTOMAN Turks held it (1517-1916) when HUSSEIN IBN ALI secured Arabian independence. Mecca fell in 1924 to IBN SAUD, who later founded the Saudi Arabian kingdom. Much of Mecca's commerce depends on pilgrims, whose chief goal is the great Mosque enclosing the KAABA, although oil revenues have brought added income to the city since WWII. See also p.1279.

Mechanical advantage, factor by which any machine multiplies an applied force. It may be calculated from the ratio of the forces involved or from the ratio of the distances through which they move, as with simple machines such as LEVERS and PULLEYS. Ideally the ratios derived either way should be the same, but some force is always used overcoming friction. Thus a machine's efficiency is the ratio of its actual mechanical advantage to its ideal mechanical advantage, and is always less than one. See also pp.446-448.

Mechanical engineering, field of ENGINEERING concerned with the design, construction and operation of engines, machinery and power plants. The skills of the mechanical engineer are necessary in all industries, including power generation, factories and transport; the sciences of physics and mathematics are applied to these and other specialist areas. Some of the achievements of the mechanical engineer include the development of wind, water and steam power; internal combustion engines; assembly line production; and the hydraulic, fluidic and computer control of machines and machine tools. See also pp.420-479, 486-521.

Mechanics, branch of physics concerned with the behaviour of MATTER under the influence of FORCES. It may be divided into statics - the study of matter at rest - and dynamics - the study of matter in motion; it may also be classified into solid mechanics and fluid mechanics. Dynamics may be further divided into kinematics - the description of motion without regard to cause - and kinetics - the study of motion and force. In statics, the forces on an object are balanced and the object is said to be in equilibrium; static equilibrium may be stable, unstable or neutral. Classical dynamics rests primarily on the three Laws of MOTION formulated by Isaac NEWTON in his *Principia* (1687). Modern physics has shown these laws to be special cases approximating to more general laws. Relativistic mechanics deals with the behaviour of matter at high speeds, approaching that of light, whereas QUANTUM MECHANICS deals with the behaviour of matter at the level of atoms and molecules. See also NEWTON'S LAWS; QUANTUM THEORY; RELATIVITY. pp.822-823.

Mechanism, school of philosophy, prominent in the 18th century, associated especially with DIDEROT and HOLBACH. Mechanists assert that men's actions, being the actions of chemical organisms, are, like all natural events, the result of previous chemical and physical interactions. The notion of human self-determination, or FREE WILL, is thus negated. See also DETERMINISM.

Mecklenburg, former German duchy and name of its ruling house. It was founded by Przybyslaw, son of Niklot, in the second half of the 12th century, and continued until 1919. It was the only Slavic dynasty in western Europe. It was made a duchy in 1348. Divided at various times into several dynasties, in 1701 it was split into Mecklenburg-Schwerin and Mecklenburg-Strelitz.

Mecoptera, order of insects known as scorpion flies. See also pp.36-37.

Medals and decorations, pieces of various shapes, but usually round, and of different sizes, which are struck or cast in metals such as gold, silver or bronze. They are usually commemorative pieces rather than coins used for exchange, although the coins minted by the Greeks and Romans to commemorate events such as military victories greatly influenced the subsequent development of the art of striking medals. That art begins properly with the Renaissance in Italy. Initially, high-relief

bronze medals were often cast in the LOST-WAX process; during the 15th century, distinguished above all by the work of PISANELLO, DÜRER and MASSYS, excellent medals in restrained and simple styles were made for popes, temporal rulers and private individuals to commemorate people, places or events. Striking replaced casting and the screw press replaced hand-hammered dies in the 16th century, resulting in extremely detailed medals such as those of CELLINI. In England the earliest campaign medal to commemorate a specific victory was issued to celebrate the defeat of the Armada. The 17th century saw the emergence of some fine English medallists, such as Thomas Rawlins, and members of the Warin family. Little of interest was produced in the 18th century, but the medallist's art enjoyed a revival in the 19th when, in addition, the invention of the steam press resulted in the production of thousands of medals in a short time at a low cost. Until the 19th century campaign medals were awarded in England only to officers. It was not until the Waterloo Medal (1816) was struck that all ranks were eligible to receive decorations. The VICTORIA CROSS, Britain's highest decoration for valour, was founded in 1856 by Queen Victoria; the second highest, the GEORGE CROSS, was instituted by King George VI in 1940 and may be awarded to civilians as well as to the military. The medallists of the 20th century have on the whole rejected the technological advances of the 19th and have returned to simpler techniques.

Medan, city in NE Sumatra, Indonesia, on the Deli River; capital of North Sumatra province and the largest city on the island. Exports: rubber, tobacco, coffee, sisal. Industries: machinery, tiles, motor vehicles, tourism. Pop. (1971) 635,562.

Medawar, Sir Peter Brian (1915-), British biologist. He shared the 1960 Nobel Prize in physiology and medicine with Sir Frank Macfarlane BURNET for the discovery of acquired immune tolerance. Medawar confirmed Burnet's theory that an organism can acquire the ability to recognize foreign tissue during embryonic development, and if that tissue is introduced in the embryonic stage it may be reintroduced later without inducing an immune reaction.

Medea, daughter of Aeetes, King of Colchis, whom she defied to help Jason find and retrieve the Golden Fleece, sacrificing her brother to do so. Renowned as a sorceress, she lived with Jason many years but fled to Athens after his tiring of her caused her to commit murder in jealous rage. The theme of a Greek tragedy by EURIPIDES (431 BC), the story has been adapted throughout European literature.

Medellín, city in NW central Colombia, approx. 240km (150 miles) NW of Bogotá; capital of Antioquia department and the second-largest city in Colombia. Gold and silver are mined in the surrounding region and Medellín has a national mint. There are several 17th-century churches and several colleges of the University of Colombia in the city. Medellín's industries include food processing, chemicals and steel. Pop. 1,070,924.

Medes, group of ancient Iranian tribes from around the Elburz Mts. They frequently clashed with the Assyrians during the 9th century BC, and were conquered by the Scythians in the 7th century. The Median king Cyaxares drove out the Scythians and also helped the Babylonians destroy the Assyrian Empire; this period (c. 615-c. 585 BC) saw the greatest extent of Median power. CYRUS THE GREAT defeated the last Median king in 550 BC and incorporated Media into his empire.

Media. See MASS MEDIA.

Median, in statistics, the middle item in a group found by ranking the items from smallest to largest. In the series, 2, 3, 7, 9, 10, for example, the median is 7. With an even number of items the MEAN of the two middle items is taken as the median.

Mediation, in industrial relations, a type of intervention in which the disputing sides accept the offer of an outside agency to recommend a solution for their controversy. Mediation differs from ARBITRA-

tion in being diplomatic rather than judicial. The mediator has no power to force an agreement but must rely on his ingenuity to bring conciliation by clarifying issues and suggesting new approaches.

Medicare, US programme of hospital and medical care for people aged 65 and over, introduced in 1965. It is a federal health insurance plan and costs are met by a social security tax. Hospital benefits include hospital care, out-patient diagnosis and home care services. Medical insurance is voluntary, and covers most of the cost of consultation and treatment.

Medici, Italian family who ruled Florence and, later, Tuscany, from the 15th to the 18th centuries. Included in the family were three popes, LEO X (r. 1513–21); CLEMENT VII (r. 1523–34); and LEO XI (r. 1605). The family's name was Medici di Cafaggiolo, and its first member of importance was Giambono de' Medici (Chiarissimo I), who became a member of the Florence general council in 1201. Giovanni di Averdo III (Giovanni di Bicci) (1360–1429) became one of the richest bankers in Italy, and was mainly responsible for the family's rising influence after Salvstro di Alamanno's exile. Cosimo the Elder (1389–1464) spent vast sums of money on the arts and humanist scholarship and sponsored the first public library in Florence. Another Medici famous for his interest in the arts was Lorenzo the Magnificent (1449–92), who provided Florence with its most splendid period under the Renaissance. He was also able, through his abilities as a diplomat, to maintain a balance of power among rival Italian states, and it was as a result of this influence that Florentine politics became more closely allied with the papacy than hitherto. The family's history is one of coup and counter-coup between their imperial interests and the Florentine republican cause. The ancient forms of republicanism were restored c.1494 under Piero di Lorenzo, and the republicans were split into two factions: the Piagnoni, who continued the Savonarolan tradition; and the Arrabbiati, who reacted against puritan theocracy. Pope Julius II, however, was influential in the return of the Medici in 1512. The republic was again restored in 1527 when Cardinal Passerini's regency became unpopular. Charles V, however, assisted the Medici back to power and Alessandro de' Medici was nominated head of the Florentine state in 1530. See also CATHERINE DE' MEDICI; pp.1372, 1373, 1380, 1382–1383, 1386–1387, 1399.

Medicinal herbs, numerous plants that have been used medicinally, often since ancient times. Many herbs were believed to have magical powers. Roman emperors wore symbolic crowns of bay (laurel) leaves; hyssop and garlic supposedly ward off evil. In 1597 the herbalist John Gerard published a lengthy volume listing thousands of plants with healing properties; many of these are still widely used in soaps, cosmetics and lotions. Modern herbalists still use plants such as camomile, comfrey, mint and rosemary, all of which are believed to be effective in the treatment of various ailments. See also pp.708–709.

Medicine, science concerned with the treatment and prevention of disease and the preservation of health. Pictographs dating from the earliest times show medical procedures and we can deduce from ancient skeletons that the practice of medicine goes back to prehistoric man. The Egyptians included magico-religious elements along with empirical therapies for many ailments, and the Hebrews placed a marked emphasis on hygiene. The Greeks had become thoroughly secular in their approach to medicine by the 6th century BC and several medical schools had been built by that time. The Romans and then the Arabs carried on and developed further the Greek medical tradition. During the RENAISSANCE this knowledge was taken back to Europe.

The dawn of modern medicine coincided with accurate anatomical and physiological observations first made in the 17th century. By the 19th century practi-

cal diagnostic procedures for many diseases had been developed; bacteria had been discovered and research undertaken for the production of immunizing serums in attempts to eradicate disease. The great developments of the 20th century include CHEMOTHERAPY (the treatment of various diseases with specific chemical agents), new surgical procedures, including organ transplants, and sophisticated diagnostic devices such as radioactive tracers. See also index to *Man and Society*.

Medicine man, also described as witch doctor, a person whose role in primitive or tribal societies is that of both priest and doctor, particularly when the causes of misfortune are considered to be supernatural. In societies where medicine men are also guardians of tribal lore and ritual their secular power may be considerable.

Medina, city in Saudi Arabia, 338km (210 miles) N of Mecca. Originally called Yathrib, the city was renamed Medinat an-Nabi, "the Prophet's city", after MOHAMMED fled there in 622, making it his capital. In 661 the Umayyad caliphs moved their capital to Damascus and Medina's importance declined. It came under Turkish rule (1517–1916), when the independent Arab kingdom of the HEJAZ was formed. In 1932 it became part of Saudi Arabia. Medina is the site of the Great Mosque which contains the tombs of Mohammed, FATIMA and the Caliph OMAR. See also p.1278.

Medina del Campo, Treaty of (1489), agreement between England and Spain to establish a common policy towards France. Its chief importance lay in its reduction of tariffs between England and Spain and in the recognition which it gave to the new Tudor dynasty.

Medina-Sidonia, Alonso Pérez de Guzmán, Duque de (1550–1619), Commander-in-Chief of the Spanish ARMADA in 1588. His inexperience of naval strategy did not prevent Philip II from retaining him as "admiral of the ocean", but he was defeated at Cádiz in 1596 and at Gibraltar in 1606. See also p.1411.

Meditation, mental concentration, generally on a spiritual theme, leading to the unsleeping loss of awareness. There are many techniques and aids to its achievement. These include the repetition of a MANTRA or verse, concentrating on one's breathing, puzzling over a riddle or, in Japanese Zen Buddhism, a *Koan*, the use of bodily exercises as in YOGA or the visualization of a well-known object, such as a tree or a rose-bush. In Buddhism four stages are recognized (the Sanskrit *dhyanas*): separation from exterior impressions; focusing without reasoning; an impression of relaxation; and, finally, a state of integration where even relaxation ceases to be felt. Four further exercises (the *samapattis*) follow: awareness of the physical infinity of space; a feeling that one's perceptions are infinitely keen; a consciousness that all constructions whether material or mental, are unreal; and lastly that unreality is the object of thought. The final goal is Nirvana – spiritual freedom.

Mediterranean Sea, largest inland sea in the world, between Europe and Africa, extending from the Strait of Gibraltar to the coast of SW Asia. It is connected to the Black Sea via the Dardanelles, the Sea of Marmara and the Bosphorus, and to the Red Sea by the Suez Canal. It includes the Tyrrhenian, Adriatic, Ionian and Aegean seas. It receives the waters of several major rivers, including the Nile, Rhône, Ebro, Tiber and Po. In ancient times the Mediterranean was controlled by the Roman, Byzantine and Arab maritime powers. In the Middle Ages, Venetian and Genoan states dominated the area. The opening of the Suez Canal in 1869 made the Mediterranean one of the world's busiest shipping routes. The development of the Middle Eastern oilfields has further increased its importance. European rivalry for control of the coasts and islands of the Mediterranean led to several campaigns during both World Wars. There is high salinity as a result of rapid evaporation, and a small tidal range. There are about 400 species of fish in the Mediter-

anean and tuna, sardines and anchovies are among those caught commercially. Area: 2,509,972km (969,100sq miles). See also pp.234, 763.

Medium wave radio. See RADIO.

Medlar, fruit-bearing shrub or small tree native to S Europe and the Middle East and naturalized in central Europe and Britain. Often gnarled, it has oblong leaves and brown, apple-like fruit which are edible only at the onset of decay. Height: 4.5 to 7.6m (15–25ft). Family Rosaceae; species *Mespilus germanicus*.

Médoc, red wine from the Médoc peninsula, France, the area NW of Bordeaux between the estuary of the Gironde and the Bay of Biscay. The châteaux of the Médoc adopted a classification of their wines in 1855 (still used today) to distinguish between the many wines of varying quality produced in the region.

Medulla oblongata, principal structure of the hindbrain, joining the BRAIN to the SPINAL CORD. Medulla functions are necessary to maintain life, eg it is the primary control of respiration and heartbeat. It contains part of the reticular formation that plays a role in arousal states, eg consciousness, wakefulness and attention. General anaesthetics, such as chloroform, probably work by depressing medulla activity. See also p.128.

Medusa, in Greek mythology, a beautiful girl who was seduced by POSEIDON in the temple of the goddess ATHENA. The outraged goddess turned Medusa's hair to writhing serpents and gave her a face that turned to stone all who looked at her. She joined Stheno and Euryale as the only mortal of the three gorgons, until Athena sent PERSEUS to decapitate her. From the wound sprang PEGASUS and Chrysaor, children of Poseidon. See also pp.1900, 1903–1904.

Medusa, in zoology, a free-swimming form of COELENTERATE animal, eg a jellyfish. There are many types of medusae. Some are small creatures, transient stages in the life cycle of the coelenterate; they soon change into the dominant, POLYP stage. Other medusae are larger and live longer, the polyp stage being the briefer of the two. Yet other medusae, including many JELLYFISH, have no polyp stage, and when they reproduce give rise directly to medusa offspring.

Medway, river in SE England; it rises in the Weald, flows NE through Kent via Maidstone and the Medway Towns (Rochester, Chatham and Gillingham), to enter the Thames estuary at Sheerness. Length: 113km (70 miles).

Medway Raid, The (June 1667) attack on the Medway dockyards in Kent, England, by Dutch ships during the second Dutch war (1665–67). Six English ships-of-the-line were burnt and two towed away. The English fleet could not prevent the raid because of stringent economies made by the government.

Meegeren, Hans van (1889–1947), Dutch painter and celebrated forger, especially of VERMEER paintings, eg *Christ at Emmaus* (1937). He deceived art experts for years and was discovered only after his own confession in 1945, following his arrest as a collaborator with the Germans for having sold an "old master" to Hermann GOERING (actually one of his own forgeries).

Meerkat, or *suricate*, any of a number of small carnivorous mammals closely related to the MONGOOSE, native to the bush country of South Africa. It is similar in appearance to the mongoose but without the bushy tail. Length: 47cm (19in). Typical species *Suricata suricatta*.

Meerschaum, or *sepiolite*, clay silicate mineral, hydrated magnesium silicate, found mainly in Asia Minor. It is opaque white in colour, and has a fibrous texture and a hardness of 2–2.5; s.g. 2. It is used chiefly for making tobacco pipes.

Megaliths, large structures generally built of undressed stone during the NEOLITHIC and early BRONZE AGE. Megalithic building spread N through Spain, along the coast of W Europe and into Scandinavia. The most ancient types were stone tombs, of which the basic unit was the DOLMEN, made of several upright supports and flat

Medici: Lorenzo the Magnificent, a portrait by an unknown 16th-century artist.

Meditation: yoga poses are said to be conducive to mental and physical harmony.

Mediterranean Sea has many popular tourist resorts on its shores: St Tropez.

Medusa was a beautiful young girl before Athena turned her into a gorgon.

Megaloptera

Megiddo was King Solomon's city, and his chariot stables have now been unearthed.

Golda Meir speaks at a world conference on Soviet Jewry in 1976.

Meissen: the Albrecht Castle and the cathedral dominate this ancient city.

Ernest Meissonnier's Bay Horse: much of his work is at present in the Louvre.

roofing slabs. Another type was the menhir, a single upright usually unconnected with any grave sites. They were frequently arranged in parallel rows (as at Carnac, France) or in circles, half-circles and ellipses (as at Stonehenge and Avebury, England). Both types were often decorated with magical symbols.

Megaloptera, order of insects that includes the ALDERFLY. See also pp.36-37.

Megapode, or mound bird, Australian GAME BIRD with short, rounded wings, strong legs and clawed feet. One group, typified by the hen-sized, crested scrub fowl (*Megapodius*), rakes debris into a large compost pile. The female excavates a deep hole in the mound and lays in it 5 to 8 oval eggs. Other megapodes often migrate to special areas to build their incubators in black sand warmed by the sun, or in areas heated by underground volcanic activity. Family Megapodiidae.

Megarians, school of Greek philosophy from the early 4th to the early 3rd century BC. Founded by SOCRATES' disciple EUCLID OF MEGARA, the school held that evil is only a semblance and cannot exist, and that "good" is indivisible and immutable. It was influenced by both Eleatic ONTOLOGY and Socratic ETHICS, and in turn influenced STOICISM. See also ELEATICISM.

Megatherium, any of several species of extinct giant ground sloths of the PLEISTOCENE Epoch. Most lived in South or North America. The front feet bore huge claws, and the jaws had grinding teeth to deal with a diet of plants. Length: approx. 6m (20ft). See also p.183.

Megiddo, ancient city in Palestine on the River Kishon. It was continuously inhabited from c.4000 BC to c.450 BC, and recent excavations revealed 20 levels of settlement. Strategically located on the route from Egypt to Mesopotamia, it was the site of many battles, the last of which was in WWI. According to the Bible it will also be the site of the ultimate battle between the forces of good and evil; the site is usually known in this context by its Hebrew name, ARMAGEDDON.

Mehemet Ali. See MUHAMMAD ALI.

Mehmet, name of six sultans of the OTTOMAN EMPIRE. Mehmet I (1387-1421) came to the throne in 1413, reunited the empire and consolidated his power in the Balkans. Mehmet II (1431-81) came to power in 1451 and two years later captured Constantinople, which he largely rebuilt and which became the capital of the Ottoman empire. During his reign the Ottoman state was strengthened sufficiently to dominate the Mediterranean world for the next 200 years. Mehmet III (1566-1603) who succeeded to the throne in 1595 was the last sultan to be sent on active service within the state before coming to power. Mehmet IV (1642-93) was proclaimed sultan in 1648 by the JANISARIES. The empire was in decline by this period and Mehmet was deposed in 1687 after several military defeats. Mehmet V (1844-1918) succeeded to the throne after the YOUNG TURK revolution of 1909 but exercised no influence within the state. During his reign most of the empire's European possessions were lost. He died just before Turkish surrender. He was succeeded by his brother Mehmet VI (1861-1926) who reigned 1918-22. He capitulated to the ALLIES, signing the harsh Treaty of SEVRES, but was deposed in 1922 by Kemal ATATÜRK who proclaimed a republic in 1923. Mehmet VI died in exile in Italy. See also pp.1354-1355.

Mehta, Zubin (1936-), Indian conductor who studied at the Vienna Academy of Music and made his career in the West. He was appointed musical director of the Los Angeles Philharmonic Orchestra in 1961.

Meighen, Arthur (1874-1960), Prime Minister of Canada (1920-21; 1926). He was a lawyer and a Conservative MP (1908-21, 1922-26), Solicitor General (1913) and Minister of the Interior (1917). He advocated a protective tariff against US goods entering Canada to protect the Canadian economy, and was instrumental in enlarging Canada's role in world affairs.

Meiji Restoration (1868), shift of power in Japan from the TOKUGAWA shogunate (1603-1867) to the emperor and his supporters. Encouraged by foreign contact (particularly Admiral Perry's visit in 1853) and a weakened central government, a group of young SAMURAI united against the Tokugawa shogunate, forcing a restoration of power to Emperor Meiji, a boy of 14 at the time. The samurai leaders engineered an abrupt change in the government, ending Japanese isolation, abolishing feudal domains (1871) and centralizing administration. See also pp.1624-1625, 1624-1625.

Meikle, Andrew (1719-1811), Scottish inventor. In 1784 he designed the first practical mechanical threshing, consisting of a number of flails attached to a rotating drum. It was patented four years later.

Meilhac, Henri (1831-97), French playwright and librettist. He collaborated with Ludovic Halévy in several diverting drawing-room comedies, including *Froufrou* (1869) and *Loulou* (1876). Their collaboration, which lasted some 20 years, included the libretti for OFFENBACH's operettas *La Belle Hélène* (1864), *La Vie Parisienne* (1866) and *La Grande-Duchesse de Gérolstein* (1867).

Meiningen Players, theatre company that toured Europe from 1881 to 1891. The founder, George, Duke of Saxe-Meiningen, used historically accurate costumes and settings and, by recognizing the importance of central artistic control, introduced the concept of the director and ensemble acting in productions of plays. STANISLAVSKY was influenced by the work of the company.

Mein Kampf ("My Struggle"), personal and political testament by Adolf HITLER. It was written in two parts, the first published in 1924, while he was in prison, the second in 1927, a year after his release. It contains the stock Nazi themes of anti-Semitism, anti-Bolshevism and Fascist totalitarian government. Its forced sales brought Hitler a fortune and it became the "bible" of the Nazis.

Meiosis, in biology, the process of two consecutive nuclear divisions to form germ cells, reducing the CHROMOSOME number by half from diploid to haploid. The first meiotic division reduces the chromosome number to a half; the second division forms four haploid reproductive cells. Spermatogenesis yields four functional SPERMES and oogenesis yields one mature OVUM and three polar bodies (that degenerate).

Meir, Golda (1898-1978), Israeli politician, b. Goldie Mabovitch in the Ukraine. In 1906 she emigrated to the USA, and moved to Palestine in 1921 to live on a kibbutz. In 1946-48 she often acted as *de facto* leader of the Jews in Palestine and after independence served as ambassador to the USSR and as Minister of Labour (1949-56). She also served as Foreign Minister (1956-66). In 1969 she became Prime Minister, but resigned in 1974 after criticism over lack of preparedness at the outbreak of the 1973 ARAB-ISRAELI WAR.

Meissen, town near Dresden, Germany and the correct name for Dresden porcelain, which is made at Europe's oldest porcelain factory. By 1710 Johann Friedrich Böttger had evolved a hard-paste formula approaching that of Chinese porcelain. His Royal Saxon factory set the style of European china with its enamelled tea services and delicately modelled figurines.

Meissonnier, Jean Louis Ernest (1815-91), French painter and graphic artist. He is especially known for his large, detailed canvases showing the Napoleonic Wars.

Meistersingers, one of the musical and poetic guilds that flourished in German cities in the 15th and 16th centuries. Each member was obliged to follow a strict religious code and was required to compose and sing according to rigid rules; candidates for the rank of Meister were judged in public contests. Knowledge of the movement became more general with the production of Richard WAGNER's opera *Die Meistersinger von Nürnberg* (1868).

Meitner, Lise (1878-1968), Austrian physicist. Together with Otto HAHN, she

discovered PROTACTINIUM and the fission of URANIUM, and investigated beta decay and nuclear isomerism. She worked with Fritz STRASSMANN on the products resulting from neutron bombardment of uranium. She is also noted for her research on the radioactive disintegration products of ACTINIUM, THORIUM and RADIUM.

Meknes, city of N central Morocco, approx. 58km (36 miles) wsw of Fès. It was founded in the 10th century as an ALMOHAD citadel and flourished in the 17th century under Sultan Ismail, who built a palace there. Its modern industries include oil refining, food processing and carpet weaving. Pop. 244,520.

Mekong, or Lancangjiang, river in SE Asia. It rises in Tibet, China, and flows through Yunnan province. It forms the Burma-Laos border and part of the Laos-Thailand border and then flows through Cambodia and Vietnam, creating a vast river delta that is one of the most important rice-producing regions in Asia. Length: approx. 4,180km (2,600 miles).

Melamine, organic chemical compound that reacts with formaldehyde (HCHO) to form a resin POLYMER, one of the thermosetting PLASTICS. It is a heterocyclic compound having the formula $C_3N_6H_6$. Melamine resins are used as adhesives, for impregnating paper, for treating wool against shrinkage, and as constructional plastics. See also pp.589-590, 589-590.

Melancholia, in psychiatry, a mental disorder with marked feelings of depression, often accompanied by agitation. It has been described in various ways in the history of psychiatry. Emil KRAEPELIN wrote about "involitional melancholia" found in middle-aged people who have had no previous mental illness. In women this was often associated with the MENOPAUSE. Sigmund FREUD made the classic distinction between the more normal state of mourning that follows a personal loss and melancholia, in which the depression does not pass and often takes the form of ambivalence, guilt and self-punishment. See also pp.1112-1113.

Melanchthon, Philipp (1497-1560), German theologian and educator, real name Philipp Schwarzzer, considered with Martin LUTHER as a founder of PROTESTANTISM. He was professor of Greek at Wittenberg, and moderated Lutheranism with HUMANISM. Melanchthon wrote the *Confessions of Augsburg* (1530), a major statement of Protestant beliefs.

Melanesia, collective term for a large area of island groups in the w Pacific Ocean, generally s of the equator, w of the International Date Line, n and e of Australia and e of Indonesia. The members include the Bismarck Archipelago, Solomon Islands, New Hebrides and the Tonga group. The language and culture of the native inhabitants of this area are largely similar. Melanesia is one of the subdivisions of OCEANIA; the others are POLYNESIA (to the w) and MICRONESIA (to the n).

Melanesian people, inhabitants of the central Pacific, n and e of Australia and New Guinea. Most live by fishing and subsistence agriculture. There is considerable cultural diversity, and religious beliefs include TOTEMISM, ANIMISM, ANCESTOR WORSHIP and CARGO CULTS. See also pp.119, 121, 122.

Melanin, dark pigment found in the skin, hair and parts of the eye. The amount of melanin determines skin colour. Absence of melanin results in an ALBINO.

Melba, Dame Nellie (1861-1931), Australian soprano, real name Helen Porter Mitchell. The *prima donna assoluta* of her day, she made her debut in Brussels in 1887. Initially a high coloratura soprano, she was famous for playing the roles of Lucia (in *Lucia di Lammermoor*) and Gilda (*Rigoletto*) and later for such lyric roles as Mimi (*La Bohème*) and Marguerite (*Faust*). She was especially admired for her technical virtuosity.

Melbourne, William Lamb, 2nd Viscount (1779-1848), British politician. He became a Whig MP in 1806, but lost his seat in 1812 for supporting Catholic emancipation. He returned to Parliament in 1816, and became Irish Secretary (1827-28) and Home Secretary (1830-

34). As Prime Minister (1835–41) he was the political mentor to the young Queen Victoria, encouraging liberalism but resisting further parliamentary reform. See also p.1590.

Melbourne, capital city of Victoria state, SE Australia, on the Yarra River at the N end of Port Phillip Bay. Founded in 1835 by settlers from Tasmania, the city is a major centre of finance, commerce and transport. It has three universities and the Victorian Arts Centre. Melbourne served as the seat of Australian federal government from 1901 to 1927. It exports wool, flour, meat, fruit and dairy produce. Melbourne is a major manufacturing centre, and its industries include aircraft, motor vehicles, shipbuilding, textiles, chemicals and agricultural machinery. Pop. (1976) 2,479,225. See also p.1975.

Melbourne Cricket Ground, sports stadium in Melbourne, Australia. It is the largest cricket ground in the world, and since modernization for the Olympic Games of 1956 can hold more than 100,000 people. Cricket was first played there in 1854, and it was the venue of the first Test match between England and Australia, in 1877.

Melbourne Cup, the premier horse race in Australia, run on the first Tuesday of November at Flemington, Melbourne. First raced in 1861, it is a handicap over two miles (3.2 km) for three-year-olds and over, and is the richest race in Australia. It is linked with the Caulfield Cup, run in October, as an ante-post double, in which before either race people bet on their selection of the winner of both races.

Melchior, or Melchior, Saint (c.310–14), Pope who presided over the commission which condemned DONATISM (313). During his papacy the Edict of Milan (312), which acknowledged the right of the Christian churches to exist, was issued by Constantine and Licinius.

Melchiorites, members of an extreme ANABAPTIST group who took their name and beliefs from Melchior HOFMANN, a 16th-century German lay-preacher. Imbued with ideas about death, the day of judgment and life after death, he prophesied the end of the world, and clung to his beliefs during frequent periods of imprisonment.

Mélee, or tourney, earliest form of tournament. The medieval sport of combat, it was introduced into England in the late 11th century, probably from France, and flourished until the 16th century. Two competing groups of horsemen took part, charging at a given signal and attempting to unseat, or strike the crests off, each other. See also JOUST.

Melgar-Castro, Juan Alberto (1930–), head of state of Honduras. He was Commander-in-Chief of the army before being named President of the country after a bloodless military coup in April 1975, when he succeeded President López Arellano.

Méliès, George. See JOURNEY TO THE MOON, A.

Melloni, Macedonio (1798–1854), Italian physicist who studied INFRARED radiation. He improved the thermopile and used it to detect infra-red radiation. He also showed that rock salt is transparent to infra-red and by 1850 had demonstrated that infra-red undergoes reflection, refraction, polarization and interference in the same way as does visible light. Thus he laid the foundation for James CLERK-MAXWELL's hypothesis of a spectrum of ELECTROMAGNETIC RADIATION beyond the visible region.

Melodrama, theatrical form originating in late 18th-century France and achieving its greatest popularity in the century that followed. It relied on simple, violent plots whose strongly emotional situations, often based on notorious crimes, were heightened by the use of music and elaborate stage effects. Melodramatic plays generally appealed to unsophisticated audiences and the exaggerated styles that its actors adopted have often led to the term "melodrama" being used pejoratively. Playwrights specializing in melodrama include August von KOTZBUE, Guilbert de Pixérécourt (1773–1844) and

Thomas Holcroft (1744–1809). Victorian actor-managers such as IRVING, TREE and Wilson Barrett (1846–1904) made strong use of the form.

Melody, in music, sequence of notes that makes a recognizable musical pattern. The term is most commonly used of the dominant part or voice (the "tune") in Romantic and light music, in which any harmonic accompaniment is nearly always totally subordinate. Music featuring several melodies simultaneously and harmoniously is termed "contrapuntal" or POLYPHONY, and is characteristic of the late BAROQUE period (and J.S. BACH in particular). Much early written music indicated only the melody and the chord progressions in the bass line, and the performer had to improvise the remaining harmonies according to musical rules.

Melon, annual vine and its large flesh fruit; most varieties are derived from the musk melon, *Cucumis melo*. Melons grow in warm temperate and subtropical climates. The cantaloupe melon, with its rough skin, probably originated in Armenia; the smoother yellow rind honeydew, in SE Asia. The large, dark green watermelon, with its red watery flesh, is believed to have come from Africa. Family Cucurbitaceae. See also p.689, 689.

Melon aphid. See COTTON APHID.

Melo Neto, João Cabral de (1920–), Brazilian poet, one of the leaders of Concreteism, a late stage of Brazilian MODERNISM, which stresses poetry that is direct and concrete. They are collected in *The River* (1954) and *Two Waters* (1956).

Melos (Mílos), island in SE Greece, in the Cyclades (Kikládhes) group in the Aegean Sea. A centre of early Aegean civilization, the island has been extensively excavated, the most important find being the statue of *Venus de Milo*, now in the Louvre, Paris. Products: grain, cotton, fruits, olive oil. Area: 150sq km (58sq miles). Pop. (1971) 4,593.

Melting point, temperature at which a substance changes from solid to liquid. The melting point of the solid has the same value as the freezing point of the liquid, eg the melting point of ice (0°C) is the same as the freezing point of water. See also p.842.

Meltwater, water produced by thawing glaciers, and snow or hail deposits. Some scientists predict that meltwater from the Earth's poles would flood large areas of the continents if the polar ice-caps thawed.

Melville, Herman (1819–91), US novelist. He became a sailor in 1839 and joined a whaling ship in 1841. His first novel, *Typee*, was written in 1846, and *Moby Dick*, an allegorical story of the search for a great whale, in 1851. His short story *Billy Budd*, written late in life, was published in 1924. Melville's work was relatively neglected during his lifetime. See also p.1772.

Melville Peninsula, peninsula in Northwest Territories, Canada, between Committee Bay (W) and Foxe Basin (E). A region of tundra, it is sparsely populated. There is a trading post at Repulse Bay on the S coast. Area: 62,564sq km (24,156sq miles).

Membrane, in biology, boundary layer or layers inside or around a living CELL or an organ or tissue. Cell membranes comprise the plasma membrane surrounding the cell, the network of membranes inside the cell (endoplasmic reticulum) and the double membrane surrounding the NUCLEUS. The multicellular membranes of the body comprise mucous membranes of the air, digestive and urinogenital passages, synovial membranes of the joints, and serous membranes that coat the inner walls of the abdomen, thorax and the surfaces of organs. See also p.174.

Memling, Hans (c.1440–1494), Flemish painter, b. Germany, who probably studied under Rogier van der WEYDEN in the Netherlands. He was the head of a flourishing workshop and painted portraits and religious works. His paintings, with their balanced compositions, are characterized by their high finish and realistic attention to details, such as the colour and texture of

clothing and fabric. See also p.1385.

Memory, capacity to retain information and experience and to recall them in the future. Modern psychologists often divide memory into two types, short-term (STM) and long-term (LTM). An item in STM (for example, a telephone number dialled once) lasts for several seconds after an experience, but is lost if not used again. An item enters LTM if it is of sufficient importance or is information required frequently. Some psychologists believe that items in LTM are never lost: forgetting, in their view, is an inability to get the items out of storage and into consciousness. See also pp.132–133, 132–133.

Memory, computer. See COMPUTER MEMORY.

Memory core, device used to store information in a COMPUTER MEMORY. It consists of a small FERRITE ring, the direction of magnetization of which is registered as 0 or 1. Cores are permanent magnets, from which the information is not lost (as it may be with a solid-state memory) if the current to the computer is switched off. See also p.466.

Memphis, Slim (1916–), US blues singer and pianist, real name Peter Chatman. He travelled to Chicago in 1939 and started recording with artists such as Big Bill BROONZY and his half-brother Washboard Sam. His singing style was unremarkable but his piano-playing, influenced by Roosevelt Sykes and Joshua Altheimer, was widely acclaimed.

Memphis, ancient city of Egypt, 23km (14 miles) S of Cairo, part of which is now occupied by the village of Mit Ra-hina. Founded in c.3100 BC by MENES, the city remained important until ALEXANDRIA began to develop in the 4th century BC. Memphis was dedicated to the god PTAH and the temples of Ptah, RE and ISIS and statues of RAMESSES II have been found at the site. Material from its ruins were used by the Arabs for building Fustat and Cairo.

Memphis, city and river port in SW Tennessee, USA, on the Mississippi River; largest city in Tennessee. Strategically located on Chickasaw Bluff above the Mississippi, the site of Memphis was used for a French (1682), Spanish (1794) and US (1797) fort before the first permanent settlement was made in 1819. Today it is a major transport centre and livestock market, and its industries include timber, farm machinery, food processing and pharmaceuticals. Pop. (1970) 623,530.

Memsahib, polite form of address used in Bengal, India, to designate a European married woman. Sahib is the equivalent form for a man. In the later days of the British Raj the term was used widely in India, although an alternative, Madam Sahib was used in Bombay.

Menai Strait, part of the Irish Sea between Anglesey and the NW coast of Wales. Two famous bridges span it: Thomas Telford's suspension bridge, built in 1826 (strengthened 1939), and Robert Stephenson's tubular bridge built in 1850 to carry a railway (but destroyed by fire in 1970).

Menander (c.342–292 BC), Greek playwright who wrote more than 100 comedies in 30 years. His favourite theme was unhappy love; his style was amusing and perceptive rather than broadly humorous. With PHILEMON, he was one of the leaders of NEW COMEDY. His plays mostly survive in fragments, but an entire play, *The Bad-Tempered Man*, was first published in 1958, soon after its discovery in Egypt. See also p.1209.

Menarche, onset of the MENSTRUAL CYCLE in young females which marks a stage of PUBERTY and the beginning of ADOLESCENCE.

Mencius (372–289 BC), Chinese philosopher. His teachings were recorded by his disciples in the book *Mencius*, one of the Four Books in the canonical writings of CONFUCIANISM, and he is considered China's "second sage" after Confucius. He travelled widely in China, attempting to introduce reforms to ensure peace and opposing unjust rulers. See also pp.1259, 1889.

Mendel, Gregor Johann (1822–84), Austrian naturalist. He discovered the

Mendel, Gregor Johann

Melbourne Cup was won convincingly in 1949 by Fonzami ahead of Hoyle.

Melon plants trail their stems, attaching themselves to objects with tendrils.

Hans Memling's *The Nativity*: many of his works remain in Bruges, his home town.

Memphis, Tennessee, was originally a cotton town: the main shopping centre.

Mendelevium

laws of HEREDITY and in so doing laid the foundation for the modern science of GENETICS. Mendel joined the monastery at Brunn (modern Brno) in 1824 and was ordained in 1847; he began plant experiments in 1856 in the monastery gardens. His experimental breeding of the garden pea led him to formulate two laws: the principle of segregation and the principle of the independent assortment of characters. His discoveries, published in *Experiments with Plant Hybrids* (1865), were virtually ignored until 1900, when his work was rediscovered and recognized. See also pp.178-179, 1636.

Mendelevium, radioactive metallic element (symbol Md) of the ACTINIDE group, first made in 1955 by the alpha-particle bombardment of einsteinium-253. Properties: at. no. 101; most stable isotope Md²⁵⁸ (half-life 2 months).

Mendeleyev, or Mendeleev, Dmitri Ivanovich (1834-1907), Russian chemist. He studied at St Petersburg, where he later became professor. After hearing the lectures of Stanislao CANNIZZARO, he developed an interest in the relationship between the 63 elements then known. He devised the periodic law and the modern form of the PERIODIC TABLE at about the same time as the German Lothar MEYER. This table enabled him to predict the existence of several elements, including GALLIUM and SCANDIUM. His work was published in Russian in 1869, and was soon translated into German. His textbook *Principles of Chemistry* (1868-70, tr. 1905), became a standard work. See also pp.888, 889.

Mendelssohn, Eric (1887-1953), German architect whose Einstein Observatory at Potsdam (1920), an early work, is perhaps the most famous of EXPRESSIONIST buildings. He later worked in FUNCTIONALIST style, designing offices and the Schocken Department Store in Stuttgart (1926). During the 1930s he practised in England, designing, with S. Chermayeff, the De la Warr Pavilion, Brighton (1933). In 1941 he settled in the USA, where he designed the Maimonides Hospital, San Francisco.

Mendelssohn (-Bartholdy), Felix (1809-47), German composer and conductor. He was a child prodigy and at 16 composed an octet; at 17 he wrote his overture to *A Midsummer Night's Dream*. A prolific composer, his works include a *Violin Concerto* (1844), five symphonies and *Songs without Words* (1829-34) for piano, and chamber music. His two oratorios, *St Paul* (1836) and *Elijah* (1846), are considered to be among the greatest of the 19th century. He was also recognized as the foremost conductor of his day. See also p.1582.

Mendelssohn, Moses (1729-86), German-Jewish philosopher. He pleaded for the separation of Church and state and, in *On the Civil Improvement of the Jews* (1781), he proposed social emancipation of Jews. He was also known for his proofs of the existence of a personal God and in *Phaedo*, or *on the Immortality of the Soul* (1767) attempted to prove the immortality of the soul.

Menderes, Adnan (1899-1961), Turkish politician who was responsible for the formation of the Democratic Party in Turkey (1946), the first legal opposition party in the country. He became Premier in 1950 when his party came to power, but was executed after an army coup in 1960.

Mendes, Francisco (1939-), Guinean nationalist leader and politician who fought in the guerrilla struggle for the independence of Guinea-Bissau as a member of PAIGC (Partido Africano de Independência da Guiné e Cabo Verde) from 1960. In 1973 he became, in effect, the country's leader, but was subsequently ousted.

Méndez, Aparicio, (1904-), Uruguayan lawyer and politician whose first political post was as Minister of the Electoral Court from 1943 to 1946. Steadily rising through the administrative hierarchy Méndez was President of Uruguay 1976-81.

Mendicant Orders, name given collectively to religious orders which lay special stress on the vow of poverty; they used to

subsist mainly on alms. In the 13th century a new spirit of enthusiasm sprang up under the teachings of St FRANCIS OF ASSISI and St DOMINIC, and orders of friars were founded which were forbidden to possess property beyond the houses in which they dwelt. The most notable of these were the CARMELITES, FRANCISCANS and DOMINICANS. The AUGUSTINIANS followed, and in 1424 the Servites were also officially recognized as a mendicant order.

Mendip Hills, range of hills in SW England, extending 29km (18 miles) SE from SW Avon to the Frome valley in Somerset. Composed of limestone, the hills contain many caves, including the Cheddar Caves. There are many Roman remains in the area. The highest point is Black Down, rising to 326m (1,068ft).

Mendoza, Antonio de (c.1490-1552), first Viceroy of New Spain (1535-50), appointed by Charles I (Holy Roman Emperor CHARLES V). Mendoza successfully established the authority of the Crown over that of the individual conquistadors and introduced many reforms. In 1551 he was appointed Viceroy of Peru. **Menelaus**, in the *Iliad*, the King of Sparta, husband of HELEN and younger brother of AGAMEMNON. The rulers of Greece came to the aid of Menelaus after Helen was abducted by the Trojan prince, PARIS. During the Trojan war Menelaus met Paris in single combat, but Paris escaped. Helen and Menelaus were reunited after the success of the Greek siege.

Menes (fl.3100 BC) Egyptian king said to have unified upper and lower Egypt. He is also known as Aha, Nar-mer and Scorpion. He was the first king of the 1st Dynasty and is said to have founded the capital MEMPHIS. See also pp.1166, 1166. **Mengoni, Giuseppe** (1829-1877), Italian architect who designed the Galleria Vittorio Emanuele in Milan by winning a competition for its design in 1861. It was built in 1864-67, although its decoration continued until 1877, and is one of the most ambitious of all shopping arcades.

Mengs, Anton Raphael (1728-79), German painter and writer on art. He was one of the most famous early neo-Classical painters. His *Parnassus* was executed for the ceiling of the Villa Albani, Rome (1761).

Menhaden, herring-like marine fish that lives in schools in temperate Atlantic waters. An important source of fish-meal and oil, it is green or blue and silver. Length: to 51cm (20in). Family Clupeidae; species *Brevortia tyrannus*.

Menhir, archaeological term given to single standing stones found in Western Europe. Probably of NEOLITHIC origin, they are usually tall and square in section, tapering towards the top. They are thought to have been used to mark places of religious or ritual significance.

Menière's disease, disease of the labyrinth of the inner ear in which the symptoms are deafness, vertigo, sometimes accompanied by vomiting and ringing in the ears. It is caused by excessive fluid in the labyrinth of the ear and may occur during middle age. It is generally treated with ANTIHISTAMINE drugs; in severe cases, surgery may be necessary.

Meninas, Las (1656), famous portrait group by VELÁZQUEZ, showing the Spanish Infanta and her entourage, including her maids and a dwarf, and including the painter at his easel. The royal couple, who are sitting for the double portrait, are reflected in a mirror.

Meninges, three membranes that cover the BRAIN and SPINAL CORD. The outermost membrane, the dura mater, is a tough protective covering. Within it is the second membrane, the arachnoid; the inner membrane, the pia mater, is a delicate layer on the surface of the brain and spinal cord containing blood vessels which supply the nervous system with nourishment. Between the arachnoid and the pia mater is the subarachnoid space, which contains cerebrospinal fluid. See also pp.126, 128.

Meningitis, inflammation of the MENINGES covering the brain and spinal cord, resulting from infection with meningococci or other micro-organisms. See also MS p.96.

Meniscectomy, surgical removal of damaged cartilage from the knee joint.

Mennonites, Christian sect founded by the Dutch reformer Menno SIMONS (1496-1561) and influenced by ANABAPTIST doctrines. Organizationally, each local Mennonite congregation is independent. They believe in the BAPTISM of adult believers and reject infant baptism as well as the doctrine of the real presence in the EUCHARIST. Most of them are opposed to military service and the taking of oaths.

Menno Simons (1496-1561), Dutch religious reformer, after whom the MENNONITES are named. Originally a Roman Catholic priest, he joined the ANABAPTISTS c.1536 and preached in Germany and Holland. He was not deterred by persecution and made many converts. His major book was *The Foundations of Christian Doctrine* (1539).

Men-of-war. See MAN-OF-WAR.

Menopause, stage in a woman's life when the MENSTRUAL CYCLE ceases, generally between the ages of 45 and 52. Periods of mild depression are not uncommon during the "change of life" and in some cases severe depression develops. Various hormonal treatments are available for cases of a prolonged menopause. See also pp.1077, 1142.

Menorah, sacred seven-branched candle-holder which has become a symbol of Judaism throughout the world. It is rich in symbolic meaning. Some interpret it in terms of the seven planets, the tree of life or the six-day creation of the universe with the centre shaft as the Sabbath. An eight-branched menorah is used during the HANUKKAH festival.

Menorca. See MINORCA.

Menotti, Gian-Carlo (1911-), US composer, b. Italy. His operas in modern OPERA BUFFA style have been most successful and include *The Telephone* (1947). *The Consul* (1950) is a theatrically powerful work and Menotti has also composed operas specifically for television such as *Amahl and the Night Visitors* (1951) and *Labyrinth* (1963).

Mensheviks, moderate faction of the Russian Social Democratic Labour party. They broke with the BOLSHEVIKS at the 1903 Party Congress because of Lenin's insistence on a centralized party of professional revolutionaries. After the Bolshevik seizure of power in November 1917, many Mensheviks capitulated to the Bolsheviks. The Mensheviks were suppressed in 1922. See also p.1676.

Menstrual cycle, in female human beings and primates, stage during which an OVUM ripens and is released from the OVARY and the ENDOMETRIUM thickens and prepares to receive the fertilized egg. The average human menstrual cycle is 28 days, but this varies considerably. At the beginning of the cycle, PITUITARY hormones stimulate the growth of an egg cell, contained in a follicle in one of the two ovaries. This is known as the proliferative stage. At approximately mid-cycle the follicle bursts, the egg is released (OVULATION) and travels down the FALLOPIAN TUBE to the uterus. The follicle (now termed the CORPUS LUTEUM) secretes two hormones, PROGESTERONE and OESTROGEN. During this secretory phase of the cycle, the endometrium becomes distended, ready to receive the fertilized egg. Should fertilization (conception) not occur, the corpus luteum degenerates, hormonal secretion ceases, the endometrium breaks down and menstruation occurs; the unfertilized egg is discharged in the blood flow from the VAGINA. In the event of conception, the corpus luteum remains and maintains the endometrium with hormones until the PLACENTA is formed. Menstruation therefore marks the end of the cycle. It is customary for the purposes of contraception (BIRTH CONTROL) and calculating the date of an expected birth to count the first day of bleeding as the first day of the next menstrual cycle. The onset of the menstrual cycle (MENARCHE) is normally at PUBERTY (age 10-15 years) and ceases with the MENOPAUSE (age 40-50 years). See also pp.165, 1134.

Mental health, proper adjustment of an individual's mind to his environment.

Mental health, it is now known, invariably has a social context and modern treatment for abnormalities, or psychological disturbances, tries to help the individual to develop a more integrated relationship with his circumstances, especially his friends and society in general. See also pp.1106-1121.

Mental illness, any failure of MENTAL HEALTH, can be divided into three main categories which are more or less distinct but which overlap to some extent. First, some mental disorders can be clearly attributed to injury or organic disease of the BRAIN, eg if the frontal lobes are injured, intellectual and personality deterioration can occur. In some diseases of uncertain cause, such as MULTIPLE SCLEROSIS, EPILEPSY, CEREBRAL PALSY and PARKINSON'S DISEASE, nervous tissue is injured but intellectual deterioration is by no means certain to accompany it. CEREBRAL HAEMORRHAGES (strokes), severe types of ENCEPHALITIS, and poisoning with heavy metals such as mercury or lead can result in mental deterioration.

Second, mental illness or defect can be the result of an hereditary predisposition. In CRETINISM there is severe mental defect caused by inherited thyroid deficiency. A single dysfunctioning gene causes PHENYLKETONURIA (PKU) which, if not recognized at birth and duly treated, can also cause severe mental defect. Huntington's CHOREA affects a mature adult with an inevitably progressive and fatal deterioration of body and mind: it is probably the most severe of the hereditary degenerative nervous illnesses. MICROCEPHALY and HYDROCEPHALUS are congenital conditions of uncertain cause also associated with mental defects.

Third, mental illness may be psychogenic, ie without clear evidence of any injury or disease affecting the brain. This category includes the PSYCHOSES, NEUROSES and personality disorders. SCHIZOPHRENIA and depressive psychoses are the most widespread of mental illnesses, accounting for a large number of patients in mental hospitals. The present tendency is, however, towards outpatient treatment for them, when possible. Neuroses, which can be severe but do not often warrant prolonged stays in hospital, include persistent ANXIETY, PHOBIAS, OBSESSIONS and HYSTERIA. Their treatment accounts for a huge dispensation of sedative and other palliative DRUGS by general practitioners. Personality disorders are often hard to define exactly because they mirror traits present to some extent in all people; for example, who has not felt "schizoid" or cut off from reality, or unduly aggressive, at times? However society has deemed it necessary to imprison some people of psychopathic personality when it seems likely that they will otherwise do injury, or further injury, to innocent people. See also INSANITY; pp.1106-1121.

Mental retardation, defect of intelligence existing at birth, irrespective of cause. Assuming a normal intelligence quotient (IQ) of 90-110, impairment is often described as borderline (IQ 68-85), mild (IQ 52-67), moderate (IQ 36-51), severe (IQ 20-35) and profound (IQ under 20). Mild impairment permits a limited but independent existence; moderate impairment seriously limits the individual, although special training may allow him to function minimally. Severe impairment, however, requires nearly total care. See also pp.1114-1115.

Mental stress, feelings of tension, expectancy or anxiety. This stress may be self-induced or imposed from outside. The most common form is a NEUROSIS, in which someone is led into compulsive, repetitive behaviour, such as checking for the post repeatedly after the postman has been. Another common form is DEPRESSION. See also pp.1106-1107.

Menthol, white, crystalline chemical compound having a strong odour of peppermint. Its main source is the oil from a Japanese plant, *Mentha arvensis*. Chemically it is a cyclic alcohol with the formula C₁₀H₁₈O. It is an ingredient of some ointments and nasal sprays and is used to flavour toothpaste and cigarettes.

Menuhin, name of a family of musicians. Yehudi (1916–), a US-born violinist, is one of the world's most gifted and popular musicians. A child prodigy, he made his concert debut at the age of seven, and studied with Georges Enesco and Adolf Busch. During WWII he gave numerous performances for the Allied forces and after 1945 played to raise money for humanitarian causes. He was an early champion of Bela Bartók and founded music festivals at Gstaad (1957), Bath (1959) and Windsor (1969). In 1963 he founded in England a school for musically gifted children. Menuhin has introduced Indian music to Western audiences and received many decorations as an international musician. Hephzibah Menuhin (1920–), his sister, is a pianist who has given many recitals, most often as accompanist to Yehudi. Yaltah, another sister, and Jeremy, a son, are also pianists.

Menzel, Adolf Friedrich Erdmann von (1815–1905), German painter and illustrator. His early works included naturalistic landscapes, but he is best known for his historical woodcuts of the *Life of Frederick the Great* (1840–42).

Menzies, Sir Robert Gordon (1894–1978), Australian Prime Minister from 1939 to 1941 and from 1949 to 1965. His second term of office was a period of growing national development. He encouraged British and US commitment to the security of South-East Asia and supported ANZUS and SEATO. In 1965 he was appointed warden of the Cinque Ports. See also pp.1733, 1733.

Meo. See MIAO.

Mercalli scale, modified, scale of 12 points used for measuring earthquake intensity. Named after the Italian seismologist, Giuseppe Mercalli (1850–1914), it is based on damage done at any point and so varies from place to place. Earthquake magnitude, on the other hand, is a function of the total energy released. See also p.203.

Mercantilism, economic and political doctrine of the 17th and 18th centuries, developed in Europe at a time when local economies were being turned into national ones. The introduction of large quantities of precious metals from the New World inspired mercantilism. The essential aim of mercantilism was to increase the wealth, and therefore the power, of the state by the accumulation of such precious metals. To this end exports were encouraged by bounties and imports restricted. Mercantilism declined during the 18th century as the increasing complexity of society made it impossible to administer; it ended finally in the 19th century when classical economists saw no sense in the acquisition of precious metals which in themselves did not satisfy human needs.

Mercator, Gerhardus (1512–94), Flemish geographer and cartographer who developed the first modern system of map projection. He worked as cartographer to the Emperor Charles V and as cosmographer to the Duke of Cleves after 1559. In 1568 he produced the first nautical chart to use the so-called Mercator projection (which he did not himself invent). The preface to his collection of maps (1595) had an illustration of the Titan Atlas supporting a globe which inspired the modern term "atlas". See also p.243.

Mercenaries, professional paid soldiers who are prepared to fight in any cause and for any state. Mercenary forces are as old as organized warfare and often they were unreliable and dangerous to their employers. In 15th-century Europe the *condottieri*, sometimes also called "free companies" sold their services to various kings and princes, especially in Italy. The Swiss Guard at the Vatican are a remnant of the Swiss mercenaries hired by Renaissance popes. The Swiss also featured in the French Revolution of 1789 as they comprised Louis XVI's bodyguard and were hated symbols of the *ancien régime*. In recent times mercenaries, often from western European countries, have been employed in revolutionary wars in Africa.

Mercer, David (1928–80), British dramatist whose work explored political disen-

chantment and the severe tension surrounding mental breakdown. His stage plays include *Belcher's Luck* (1966), and *Duck Song* (1974); his television works, the trilogy *The Generations* (1964) and *Shooting the Chandelier* (1977). Two other television plays, *A Suitable Case for Treatment* (1962) and *In Two Minds* (1967) were later filmed as *Morgan – A Suitable Case for Treatment* (1965) and *Family Life* (1971).

Mercer, Joe (1915–), British footballer and manager. A wing-half, he won league and cup honours with Everton and Arsenal and played five times for England in 1938–39. He achieved managerial success with Manchester City in the late 1960s and was England's caretaker manager in 1974.

Mercer, Johnny (1909–76), US musician who started his musical career as a singer with Benny Goodman and Paul Whiteman. His imaginative lyrics helped to raise the standards of popular song-writing. Stage successes in which he collaborated include *L'il Abner* (1956; filmed 1959) and *The Good Companions* (1974), but he is best known for his many contributions to films such as *Seven Brides for Seven Brothers* (1954). He won an Oscar for his song *Moon River*, written for the film *Breakfast at Tiffany's* (1961).

Merchant Adventurers, English trading company formed from groups of merchants associated with particular towns, chartered in 1407. Its principal trade was exporting English woollen cloth to The Netherlands, but by 1550 its officers controlled almost three-quarters of England's overseas trade. Attacked as a monopoly in the 17th century, the company lost many privileges and in 1689 its charter was abrogated. See also p.1327.

Merchant banks, group of about a dozen private specialist banks in London whose chief function is to finance trade between Britain and foreign countries. They rose to prominence in the 18th century and were the principal agents in making London the financial centre of the world, for both short-term and long-term borrowing. The instrument of their business was, and remains, the *BILL OF EXCHANGE*, which they "accept" and so promise that they will pay the amount due. They are thus known as acceptance houses and earn their income (at a rate of about 1% of the value of the goods dealt with) by lending their name to the buyer and seller as a guarantee. In addition to being acceptance houses, they also operate as issuing houses, sponsoring capital issues on behalf of their customers, both foreign governments wishing to raise loans in London and home firms.

Merchant of Venice, The (c.1596), five-act play by William Shakespeare in which appears one of his most famous creations, the Jew Shylock, at once repellent and inviting sympathy. The theme of mercy and tolerance is Shakespeare's own, but the interwoven stories of this comedy are drawn from medieval legends, the germs of which are found in *Gesta Romanorum*.

Merchant Navy, section of a nation's fleet concerned not with defence but with carrying cargo and passengers to and from international ports. In Britain, the origins of an organized merchant navy lie in the formation of the *MERCHANT ADVENTURERS' COMPANY* in 1407, but its period of real growth came with the maritime expansion of England in the late 16th and 17th centuries, when the great chartered companies, such as the *EAST INDIA COMPANY*, built up large fleets, their monopoly protected both by the terms of their charters and by the series of *NAVIGATION ACTS* which lasted from 1651 to 1849. The great extent of the British empire made Britain's merchant navy the largest in the world up to WWII. In 1976 the world's largest merchant navy, measured by gross tonnage, was the Liberian. It was followed by the merchant navies of Japan, Britain, Norway and Greece. The British merchant navy had a gross tonnage of 33,000,000 tons (tonnes) in 1976 and has about 3,550 ships of 100 gross tons (tonnes) or more; 513 were tankers, (16,146,592 tons) and 235 ore and bulk carriers (5,280,801 tons).

Merchant Staplers, English trading com-

pany active between 1350 and 1500 in the export of raw wool. This trade, a Crown monopoly, was concentrated at various towns known as "staples" to facilitate fiscal administration; between 1363 and 1558 the continental staple was at Calais. The Staplers' power and prestige were at their zenith in the 15th century.

Merchet, in feudalism, compensation paid by a villein to his lord if the villein's daughter married. As the villein, his kin and chattels belonged to the lord, the lord was entitled to merchet for any loss of service.

Mercia, kingdom of Anglo-Saxon England, covering at its greatest extent the area between Wales, the rivers Thames and Humber, and East Anglia. Settled by the ANGLES (c.500), Mercia expanded its frontiers by war until OFFA, King of Mercia (757–96), ruled virtually all England. Mercian power declined rapidly in the late 9th century, plagued by Danish invaders who ruled part of it from 877, and finally crushed by WESSEX (919). See also p.1288.

Mercier, Honoré (1840–94), Prime Minister of Quebec (1887–91). He was a Conservative French Canadian leader and founded the Parti National in 1871 to protest against union with British Canada. Later he joined the Liberals and presided over a coalition government, supporting provincial autonomy.

Mercx, Eddy (1945–), Belgian road-racing cyclist. Amateur world champion at 19, he became famous as a professional winning five Tours de France, including four consecutive victories (1969–72) and the 1967, 1971 and 1974 world championships.

Mercury, in Roman mythology, the god of commerce, merchants and thieves, usually identified with HERMES, the Greek messenger god. Mercury had a temple on the Aventine (built in 495 BC). His festival was observed on 15 May.

Mercury, smallest planet and the planet closest to the Sun. It has no satellites, a very thin atmosphere and is visible from Earth only after sunset or before sunrise. Mean distance from the Sun 58,000,000 km (36,000,000 miles); mass 0.05 times that of the Earth; volume 0.05 times that of the Earth; diameter 4,880 km (3,032 miles); rotation period, 58.7 days; sidereal period 88 days; temperature range 370°C (700°F) (day) to 0°C (32°F) (night). See also pp.926–927, 926–927, 938–939, 938–939, 942–943, 1027.

Mercury, liquid metallic element (symbol Hg) of group IIB of the periodic table, known from earliest times. The chief ore is cinnabar (a sulphide), from which it is extracted by roasting. The element is a dangerous cumulative poison. Mercury is used in barometers, thermometers, and laboratory apparatus, and in mercury-vapour lamps and mercury cells. Properties: at. no. 80; at. wt. 200.59; s.g. 13.59; m.p. –38.87°C; (–37.97°F); b.p. 356.58°C (673.84°F); most common isotope Hg²⁰² (29.8%).

Mercury fulminate. See FULMINATE.

Mercury poisoning, condition caused by the ingestion of mercury compounds, or their absorption through the skin. Mercury is a cumulative poison and its effects have always plagued workers in industries using mercury compounds. The industrial dumping of mercury wastes into the sea allows it to enter the human food cycle, because fish and birds ingest the mercury and these are eaten, passing on the poison. MINIMATA DISEASE is the worst recent example of this process. Symptoms of mercury poisoning include loss of coordination, balance and peripheral vision, sensory disturbance and deformed offspring.

Mercury switch, in electrical engineering, switch in which mercury is contained in a tube which, when tilted, causes the mercury to bridge two contacts. An alternative design consists of mercury cups into which movable contacts dip.

Mere, chief striking weapon of the MAORIS. **Meredith, George** (1828–1909), British novelist and poet. His early work was badly received and he was forced to supplement his income by journalism. Success arrived with the publication of *The*

Egoist (1879) in which Meredith analyses the moment of self-discovery with great psychological subtlety. *Diana of the Crossways* (1885) was also acclaimed and he was much admired by early 20th-century writers such as E. M. FORSTER.

Meredith, William ("Billy") (1874–1958), British footballer who played for Manchester City, Manchester United and Wales. A tireless outside right, he played in 48 internationals between 1859 and 1920 and played his last FA Cup game in 1924, when he was nearly 50 years old.

Merganser, any of several species of slender, freshwater or marine ducks that dive for food, especially the red-breasted merganser (*Mergus serrator*) which has a hooked bill. The GOOSANDER (*M. merganser*) differs mainly in coloration. Family Anatidae.

Mergenthaler, Ottmar (1854–99), US inventor. In 1884 he patented his LINO-TYPE machine for setting solid lines of type, now used by many newspapers. The following year the machine was improved by a device that automatically justified the type (ranged it to a regular margin at both ends of the lines). See also p.613.

Merger, coalition or amalgamation of two companies or the absorption of one company by a larger one. The shareholders usually receive shares in the new company in proportion to their shares in the old ones. Reasons for mergers include the elimination of competition, increase in productivity, greater efficiency or reduction of tax liability.

Meridian, imaginary line on the surface of the Earth running N to S from pole to pole. It is used to indicate longitude, passing, is measured in degrees E or W from the 0° line which through Greenwich, London, and is known as the prime meridian.

Mérimée, Prosper (1803–70), French novelist. His historical novels and short stories were ROMANTIC in theme but objective in style. His works include the collections of short stories *Mosaïque* (1833) and *Colomba* (1841). He also wrote *Carmen* (1843), on which Georges Bizet based his opera of 1875.

Merino, breed of fine-wool sheep that originated in Spain and is now farmed mainly in the USA and Australia. There are many local varieties, all of which have heavy white wool which is soft and pliable on the belly. Males bear tightly spiralled horns.

Merionethshire (Meirionnydd), former county in NW Wales; in 1974 it was assigned to Gwynedd. The region is mountainous and the chief rivers are the Dyfi, Mawddach and Dee. The most important agricultural activity is sheep farming, and deposits of manganese and slate provide the region's economic wealth. Tourism is also an important industry. The county town was Dolgellau. Area: 1,709sq km (660sq miles). Pop. (1971) 35,277.

Merit, Order of. See ORDER OF MERIT.

Meritocracy, system of government that grants the power to rule to those persons who are deemed the best to have it. Unlike an ARISTOCRACY or DEMOCRACY, a meritocracy requires both equality of opportunity and a society cohesive enough to agree on the criteria for merit.

Merlin, legendary magician and teacher. His origins may be traced to early Celtic folklore, although his name is usually associated with the Arthurian legends as the mentor of KING ARTHUR. Merlin is said to have been seduced by Nimue who, after gaining his magical knowledge, imprisoned him eternally in a tree.

Merlin, small European FALCON found in hills and open moorland, where it flies over the ground, catching small birds. It may hover, but not as commonly as the KESTREL. Length: to 33cm (13in), species *Falco columbarius*.

Mermaid, legendary sea creature said to have the head and upper body of a woman but a fish-tail from the waist down. Mermaids (and mermen) are referred to in ancient mythology and folklore and were thought to have magical powers. The behaviour of DUONGS and MANATEES at sea, in particular their manner of suckling their young, is thought to be the basis of these beliefs. See also p.1900.

Mesmerism: an irate father tries to take his daughter from Mesmer during treatment.

Merman, Ethel (1909–), us singer and actress. She sang *I've Got Rhythm*, in *Girl Crazy* (1930), her first main stage role. Her loud, brassy voice was heard in musical comedies such as *Annie Get Your Gun* (1946–49), *Call Me Madam* (1950) and *Gypsy* (1959).

Meroe, ancient city on the Nile, just to the S of its confluence with Atbarah river. It is also the name of the civilization centred on it which flourished from the 6th century BC until its decline in the 4th century AD. See also pp.1182–1183, 1362.

Merovingians (476–750), name of the dynasty of Salian Franks. CLOVIS I (c. 481–511), the first of the line, established his authority over most of present-day France by conquest; his conversion to Christianity occasioned the union of papal and Frankish interests, one of the most significant events of medieval history. The policy of equal rights of inheritance for each of his sons, however, led to the division of the kingdom and battles for supremacy. After the death of Dagobert I (639), the last effective ruler, the separate regions were ruled by powerful mayors of the palace, who used the Merovingian kings as puppets. One of these mayors, PEPIN the SHORT, ultimately deposed Childeric III in 750 and founded the CAROLINGIAN dynasty.

Merrie England (1902), two-act operetta by the British composer Sir Edward GERMAN, with libretto by Basil Hood. It was first performed at the Savoy Theatre, London. Written in the tradition of the GILBERT and SULLIVAN Savoy operas, it has remained extremely popular.

Merry Widow, The (1905), three-act OPERETTA by Franz LEHÁR with libretto by Léon and Stein, first produced in Vienna. One of the most popular of Viennese operettas, the story is a light-hearted piece of amorous intrigue, revolving round the widow, Hanna Glawari, and her fortune.

Merry Wives of Windsor, The (c. 1600), comedy by William SHAKESPEARE, said to have been written at the command of Queen Elizabeth I who, after seeing *Henry IV* and being captivated by the character of Falstaff, wished to see a play about Sir John in love. The redoubtable Falstaff is shown addressing ardent love-speeches to the "merry widows", Mistress Ford and Mistress Page, and contrives to make a fool of himself.

Mersey, river in NW England, formed at the confluence of the Tame and Goyt rivers. It flows W, draining N Cheshire and Greater Manchester, entering the Irish Sea through a wide estuary, on which Birkenhead and Liverpool stand. Length: 113 km (70 miles).

Merseyside, metropolitan county in NW England, formed in 1974 from parts of the former counties of CHESHIRE and LANCA-SHIRE. Area: 646sq km (249sq miles). Pop. (1981 est.) 1,503,200.

Merton, Thomas (1915–69), us poet and religious writer. He became a Trappist monk in 1941, but remained in touch with contemporary events. He is best known for his autobiography, *The Seven Storey Mountain* (1948), and wrote many volumes of poetry and philosophy, including *Figures for an Apocalypse* (1947).

Merv, historical city in central Asia, now in Turkmenistan, USSR. It was the seat of an ACHAEMENID satrapy, and under the Arabs it was an Islamic cultural centre in the 12th century.

Mesa, large, broad, flat-topped hill or mountain of moderate height and with steep cliff-like sides. A mesa is capped with layers of resistant horizontal rocks which may then erode to form narrower BUTTES. See also pp.223, 228.

Mescaline, substance obtained from the dried tops of the peyote cactus, *Lophophora williamsii*. It causes visual hallucinations and other fantastic psychological effects. In North America and Mexico, mescaline is the basis of many Indian religions. See also pp.1080, 1081, 1116.

Mesembryanthemum, genus of numerous species of erect or creeping shrubs or plants with succulent leaves; most grow in dry regions. The ice plant, *M. crystallinum*, is commonly grown as an ornamental. Family Aizoaceae.

Mesentery, sheet of tissue, or double layer of the PERITONEUM which attaches the intestines to the back wall of the abdomen.

Mesheh (Mashad), city in NE Iran; the capital of Khorāsān province. Its name means "burial place of a martyr" and refers to the burial shrine of the Imam, Ali Reza. The city prospered in the 18th century when it became the capital of Persia. Mesheh was of great strategic importance in the late 19th century because of its location near Iran's borders with the USSR and Afghanistan. Industries: food processing, carpets and textiles. Pop. (1973) 592,000.

Mesmer, Franz (or Friedrich) Anton (1734–1815), German physician. He developed MESMERISM, later called HYPNOSIS, in Vienna and Paris. His work was important in arousing interest in the use of hypnosis in medicine. See also pp.1059, 1108–1109.

Mesmerism, 19th-century forerunner of hypnotism, named after the Austrian Dr Franz Anton MESMER whose experiments with the therapeutic use of a form of magnetism led to his discovery that he could produce a hypnotic state in patients and thereby treat their nervous disorders. He postulated a form of interpersonal influence which he called "animal magnetism", on which his therapeutic method was based. He was denounced as a charlatan, but a pupil, Chastenet de Puységur, developed his theory, and eventually it became an accepted part of PSYCHOANALYSIS. See also HYPNOSIS; pp.1059, 1108.

Mesoamerica, term coined to describe the civilization of what is now S Mexico, Belize, Guatemala, Nicaragua and El Salvador and part of Honduras and Costa Rica in the years before the Spanish colonization. The various cultures, which had economic and political ties, shared such aspects as pyramid-temples and a similar pantheon of gods. See also pp.1178, 1364, 1364.

Mesencephalic. See CEPHALIC INDEX.

Mesoderm, in the young embryos of higher animals, the middle of the three embryonic tissues (the others being ECTODERM and ENDODERM). In later development of the embryo the mesoderm gives rise to muscles, blood and connective tissues.

Mesolithic Age, also called the Middle Stone Age, the period in NW Europe in man's evolution following the PALAEO-LITHIC and preceding the NEOLITHIC. It developed after the end of the glacial period when the last of the ice-sheets retreated (c. 8000 BC). The environment changed as temperature rose; scrub gave way to forest land and small game proliferated. Hunters and fishermen adapted their way of life to exploit these changes. A nomadic form of life became unnecessary and settlement in clusters of huts was a feature of the Mesolithic Age, as were chipped-stone tool kits, sometimes including microliths. See also pp.115, 117, 117, 119, 1157, 1174, 1175.

Mesomorph, term used in physical anthropology to denote a type of human bodily development in which muscularity is at a peak and subcutaneous fat is minimal. See also ECTOMORPH; ENDOMORPH.

Meson, sub-atomic particle, member of a subgroup of HADRONS, all of which have either zero or integral spin. They include the pions, kaons and eta mesons. There is no restriction on the number of mesons produced or destroyed in a nuclear reaction or present in a particular energy state. See also pp.818–819, 819.

Mesophyte, plant that grows under average moisture conditions, thriving where there is a good balance of water and evaporation. Such plants have well developed root and leaf systems. See also HYDRO-PHYTE; XEROPHYTE.

Mesopotamia, ancient region in SW Asia, between the rivers Tigris (E) and Euphrates (W), and extending between the mountains of Armenia (N) and the Persian Gulf (S). It corresponds roughly to modern central Iraq, NE Syria and S Turkey. Historically it was the site of some of the first permanent settlements (c. 6000 BC). The Sumerians to the S used stone as building material and developed written communication (c.3000 BC). The first empire in Mesopotamia was founded by

the AKKADIANS (c. 2340 BC). This example of empire building was followed by the Babylonian dynasty. The area came under Persian control when it fell to ALEXANDER THE GREAT but enjoyed a period of importance when Baghdad became the capital of the ABBASID caliphate. In 1258 however, the MONGOLS devastated the area and Mesopotamia never regained its past prominence. See also pp.1160–1164, 1188–1189, 1192–1193, 1214–1215.

Mesopotamian Campaign (1914–18), Anglo-Indian offensive against the Turks during WWI to protect oilfields and retain the loyalty of the sheiks of Kuwait and Mohammerah. Landing at Basra in Nov. 1914, a small force moved up the River Tigris to attack Baghdad. Defeated at the Battle of Ctesiphon (Nov. 1915), the Allies were then besieged at Kut, which fell in April 1916, the Turks taking 10,000 prisoners. In a renewed British offensive Baghdad was taken in March 1917, and victory was finally achieved when the Turks were forced to surrender at Sharat (Nov. 1918). A heavy price had been paid, however, with a loss of 28,321 British and Indian lives. See also pp.1670–1671.

Mesosphere, middle shell of gases in the ATMOSPHERE between the STRATOSPHERE and the THERMOSPHERE. See p.246.

Mesozoa, phylum of tiny, multicellular animals parasitic in invertebrates. They do not have well-defined cell layers of ECTODERM and ENDODERM and, as a result, are not included in the subkingdom METAZOA and may represent a separate line of evolution. Reproduction is complex and includes free-swimming ciliated larvae. They range from less than 1mm (0.04in) to several millimetres in length.

Mesozoic period, the second of the three major divisions of geologic time, extending from about 225 million to 65 million years ago. It is divided into three periods: the TRIASSIC, JURASSIC and CRETACEOUS. For most of the era the continents are believed to have been conjoined into one huge land mass called PANGAEA. There was much volcanic activity and mountain building throughout the period, which was also characterized by the variety and size of its reptiles. For this reason it is often called the Age of Reptiles. See also pp.282–283.

Mesquite, or honey mesquite, deciduous tree common in the SW USA and Mexico. Its roots may extend more than 15m (50ft), allowing it to grow in desert regions. It also has small leaflets and spines 5cm (2in) long. Bees make honey from the nectar of the flowers and the pods are collected for use as forage. Height: 2.7–6.1m (9–20ft). Family Mimosaceae; species *Prosopis juliflora*.

Message, André Charles Prosper (1853–1929), French conductor and composer, whose teachers included SAINT-SAËNS. He conducted the first performance of DEBUSSY's opera *Pelléas et Mélisande* (1902), which is dedicated to him. He composed operettas, which include *Véronique* (1898) and *Monsieur Beaucaire* (1919); he also wrote the ballet *The Two Pigeons* (1886).

Messalina Valeria (c. AD 24–48), third wife of the Roman emperor CLAUDIUS, mother of Octavia and Britannicus. Pictured as a royal harlot by Juvenal in *Satire on Women*, her promiscuity led the emperor's secretary Narcissus to persuade Claudius to have her executed.

Messel, Oliver Hilary Sambourne (1904–78), British stage designer, who began his career designing for Cochran revues (1926; 1930–31). Among the plays and operas he designed are *The Lady's Not For Burning* (1949), *Ring Round the Moon* (1950), *The Magic Flute* (1956) and *Der Rosenkavalier* (1959), the last two both for GLYNDEBOURNE. His films include *Caesar and Cleopatra* (1945) and *Suddenly Last Summer* (1959).

Messenger, Herbert Henry ("Dally") (1883–1964), Australian rugby league player known as "The Master". Twice capped at rugby union in 1907, he played five times for Australia at rugby league, becoming their first test captain. A goal-kicking centre, he toured Britain with the 1908–09 Kangaroos.

Mesquite seeds once formed an important part of the diet of the Amerindians.

Willy Messerschmitt congratulates one of his pilots after a record-breaking flight.

Messiah: part of Handel's original score for "I Know that My Redeemer Liveth".

Messerschmitt, Willy (1898–1978), German aircraft designer, famous for the Bf-109 fighter used by the LUFTWAFFE during WWII. This aircraft set a world airspeed record of 700km/h (435mph) in 1939. Messerschmitt also designed the Me-262, the first jet-propelled aircraft to be used in combat (1944). See also p.570.

Messiaen, Olivier, (1908–), French composer and organist. His highly original music combines elements of bird-song, Hindu rhythms and Gregorian chant. His organ works, including *L'Ascension* (1933) and *La Nativité du Seigneur* (1935), have made important contributions to the repertoire of that instrument. Among numerous other compositions is the monumental ten-movement *Turangalila-Symphony* (1949). See also pp.1754–1755, 1755.

Messiah, from the Hebrew meaning "anointed" is one who has been consecrated or set apart by God for a special function or office. The title "Christ" is derived from the Greek version of the term. In the later part of the Old Testament the Jews awaited a Messiah, a future king of the house of David, who would deliver them from their bondage and usher in an era of peace and righteousness. On many occasions Jesus affirmed his identity as the Messiah of Old Testament expectations but taught that his kingdom was not of this world.

Messiah (1741), oratorio by George Frederick Handel, with text partly adapted from the Bible by Charles Jennens. It was first produced in Dublin in 1742 and met with immediate success. It is written in three parts, covering Christ's advent, birth and passion, and is scored for orchestra, four-part chorus and soprano, contralto, tenor and bass soloists. See also p.1453.

Messier catalogue, list of 109 STAR CLUSTERS, NEBULAE and GALAXIES compiled by the French astronomer Charles Messier (1730–1817) and published in 1781. Messier hoped to make comet-hunting easier by listing all of the permanent celestial bodies. The catalogue numbers are in common use. See also p.982.

Messines, Battle of (7 June 1917), opening of the third battle of YPRES. British and ANZAC troops under Gen. Plumer took Messines ridge after 19 mines, containing almost 2,000 tonnes of explosive, were exploded under the German position. The mines had been carefully dug in during the previous year. The explosion was heard in London.

Mestizo, South American of mixed European (Spanish or Portuguese) and Indian ancestry. Today the term also has social and cultural connotations. Mestizos comprise a large part of the population of Latin American countries.

Mestrovic, Ivan (1883–1962), Yugoslavian sculptor. He exhibited with the VIENNA SECESSION in 1902 and 1909 and had his first one-man show in 1933. He is famous for his elongated, cubist-like figures.

Metabolism, chemical and physical processes and changes continuously occurring in a living organism. They involve the breakdown of organic matter, resulting in energy release, and the synthesis of organic components to store energy and build tissues. These processes produce, maintain and destroy PROTOPLASM, releasing energy for vital functions. See also CATABOLISM; pp.128, 909.

Metacarpals, in man and other primates, bones of the palm of the hand. They articulate with the carpals (wrist bones) and phalanges (finger bones). In four-footed animals they are the bones of the forefoot.

Metal fatigue, the progressive fracture of metals subjected to repeated cycles of stress. Fatigue can occur early in the metal's life, with stresses building up as it cools after the manufacturing process. The phenomenon is of particular relevance to aeronautical engineers because metals can break, tear, or otherwise deform permanently under repeated or reversed loads at stress levels much lower than for a single loading. See also SU pp.840, 841.

Metallous, Grace (1924–64), US novelist.

After an undistinguished career writing short stories, she published *Peyton Place* (1957). It caused a minor outcry for its revealing descriptions of New England town life and was adapted for television and became a long-running SOAP OPERA.

Metallic bond, in chemistry, a bond that holds atoms together in METALS. Inside the crystals of metals, ions – positively charged atoms – are held by the electrostatic attraction of a cloud or "sea" of surrounding electrons which can, under various influences, move. Such electron movement under the influence of an applied voltage constitutes an electric current, so accounting for the electrical CONDUCTIVITY of metals. See also pp.840–841.

Metallography, study of the structure of metals and alloys, using optical and electronic microscopes and X-ray diffraction techniques. Examination by microscope reveals the size and shape of crystals and the distribution of non-metallic inclusions. X-ray diffraction is used to study the arrangement of the atoms in a metallic specimen.

Metalloid, element intermediate in properties between those of a metal and a non-metal. In moving from left to right across the PERIODIC TABLE and moving down the groups, there is a transition from metallic to non-metallic properties. Metalloid elements occur as borderline cases in groups III–VI; examples are silicon, germanium and arsenic. They are often semiconductors and have amphoteric hydroxides and oxides. See also p.890.

Metallurgy, study of the chemical and physical properties of METALS, their extraction from ores and their alloying, hardening, corrosion-proofing and plating. Among the physical tests used commonly in the laboratory control of the quality of metals and alloys are those that measure resistance to impact and tension. Chemical and spectrographic analyses are made to control the composition of alloys during manufacture. Works processes include melting, sintering, stamping, forging, dip- and electroplating, anodizing and sheradizing, besides various extraction processes. Research metallurgists are concerned with such topics as the changes in crystal forms of metals and alloys under various circumstances, with consequent changes in physical and chemical properties. See also pp.392–409.

Metals, chemical elements which are good conductors of heat and electricity, the atoms of which are bonded together within crystals in a unique way; mixtures of such elements (alloys) are also metals. Many metals are hard, lustrous materials. MERCURY is exceptional in being a liquid at room temperature. SODIUM and POTASSIUM are examples of metals which are soft and chemically very reactive: they tarnish quickly in air and are most familiar as their salts. The lightest metal is LITHIUM, which is also very reactive. The heaviest is OSMIUM, which is 22.6 times denser than water and is one of the PLATINUM group, relatively unreactive metals also called noble metals; other noble metals are GOLD and SILVER. Malleability and ductility are further metallic characteristics and of all metals gold is the most malleable; it can be beaten out so thin as to be virtually translucent. Some metals have very high melting-points and so find various high-temperature applications; TUNGSTEN, with the highest melting-point of all (3,410°C), is employed for incandescent lamp filaments. ALUMINIUM, followed by IRON, are the two most abundant and useful of metals. TITANIUM, although rarely seen as the metal, is more commonly distributed than the more familiar COPPER, ZINC and LEAD. Other metals of great economic importance, because of their radioactivity, are URANIUM and PLUTONIUM, the latter being an example of a TRANSURANIC ELEMENT. See also pp.394–401, 888–891.

Metamorphic rocks, broad class of rocks that have been changed by heat or pressure from their original nature – SEDIMENTARY, IGNEOUS, or older metamorphic. The changes characteristically involve new

crystalline structure, the creation of new minerals or a radical change of texture. Thus the metamorphic rock slate is made from sedimentary shale, the metamorphic gneiss from igneous granite. See also pp.208, 208.

Metamorphoses, series of tales, chiefly mythological, in Latin verse by OVID. They comprise 15 books, written in HEXAMETERS, relating interwoven myths, beginning with the creation of the world.

Metamorphosis, change of form, structure or substance during the development of various organisms, such as the changing of a caterpillar into a moth. Sometimes the change is gradual, as with a grasshopper, and is known as incomplete metamorphosis. Complete metamorphosis involves a change in habit or environment and usually involves LARVA, CHRYSALIS (or pupa) and adult stages. See also pp.38–39, 39, 42, 42.

Metaphor, figure of speech involving the use of an otherwise unconnected image as illustration or comparison. Unlike the SIMILE, the metaphor makes no use of a linking word such as "like" or "as" to introduce its image. For example, "He is a wise old owl" is a metaphor, whereas "He is as wise as an old owl" is a simile.

Metaphysical dynamism, philosophical view that REALITY is sheer energy or process. It is an ontological theory – ontology is the study of being or the basis of existence – which holds that reality cannot be split into either MIND or matter, and that the most that can be said about it is that it is continually changing (dynamic). The formulation of Henri BERGSON held that the *elan vital* is fundamental.

Metaphysical poetry, 17th-century English literary form, characterized by "metaphysical conceits" (figures of speech that employ abstract images) and a reliance on wit and subtle argument. Although this method was by no means new, men such as George HERBERT, John DONNE and Andrew MARVELL infused new life into English poetry in the seventeenth century by using it extensively.

Metaphysics, branch of philosophy that deals with the first principles of reality and with the nature of the universe. The term comes from the Greek *meta ta physika*, "of things natural". Metaphysics is divided into ONTOLOGY, the study of the essence of being, and COSMOLOGY, the study of the structure and laws of the universe. Leading metaphysical thinkers included PLATO, ARISTOTLE, KANT and WHITEHEAD. See also pp.1880, 1886–1887.

Metasomatism, production of mineral deposits by the movement of hot fluids from an igneous body through cracks or pores in the surrounding rock. Veins of lead and tin ores surrounding the Cornish granites were formed in this way. See also p.259.

Metastasio, Pietro. See TRAPASSI.

Metastasis, transfer of cells or microorganisms beyond their original sites. It is especially characteristic of malignant TUMOURS and spreading infections such as TUBERCULOSIS.

Metatarsals, bones of the feet (hind feet in quadrupeds). They articulate at one end with the tarsals (ankle bones) and at the other with the phalanges (toe bones).

Metaxas, Ioannis (1871–1941). Greek soldier who declared himself dictator after the 1936 election and ruled until 1941. He resisted being drawn into WWII until Oct. 1941 when Greek neutrality was threatened by the Italian invasion of Albania.

Metazoa, subkingdom of animals whose bodies originate from a single cell and are composed of numerous differentiated cells. They range from COELENTERATES to MAMMALS. They do not include sponges (subkingdom Parazoa) or protozoans (subkingdom Protozoa).

Metchnikoff, Elie (1845–1916), Russian microbiologist. He shared the 1908 Nobel Prize in physiology and medicine with Paul EHRLICH for work on the mechanism of IMMUNITY, which included the discovery that white blood cells are important in the body's resistance to infection and disease. He was also noted for his theories con-

cerning longevity. He wrote *Immunity in Infectious Diseases* in 1905.

Metellus, distinguished Roman family. Among the foremost were Quintus Caecilius Metellus Macedonicus (d. 116 BC), a general who pacified Greece in 146 and suppressed the Celtiberians in Spain. As censor he supported compulsory marriage to increase the birth-rate. He was an active opponent of Tiberius Sempronius and Gaius Sempronius Gracchus. His nephew Q.C. Metellus Numidicus (d. c. 91 BC) commanded Roman forces in Numidia during the Jugurthine War. He was elected consul in 109 and was later briefly exiled. His son Q.C. Metellus Pius (d. c. 63 BC), fought in the Social War. See also SCIPIO.

Meteor, luminescent phenomenon produced by a small, stony or metallic body from outer space entering the Earth's atmosphere, as well as the solid body itself (more properly called a METEOROID). A brilliant meteor consists of a large luminous head followed by a sparkling comet-like wake. Most meteors disintegrate to dust before they reach the surface of the Earth. See also p.970.

Meteorite, particle or body from space (METEOROID) that survives passage through the Earth's atmosphere. Meteorites generally have a pitted surface and a fused charred crust. There are three main types: iron meteorites (siderites); stony meteorites (aerolites) and mixed iron and stone meteorites. Some are tiny particles; other weigh up to 200 tonnes. Meteorites have been dated to about the same time as the origin of the Earth. See also p.970.

Meteoroid, solid particle that revolves around the Sun. Meteoroids were considered to be a possible hazard in the early days of space-flight, especially if a space vehicle had to pass through a METEOR SHOWER. See also p.970.

Meteorology, the study of weather conditions and a branch of the study of CLIMATOLOGY. Meteorologists study and analyse data from a network of weather ships, aircraft and satellites in order to compile maps showing the state of the high- and low-pressure regions in the Earth's atmosphere. They also anticipate changes in the distribution of the regions and forecast the future weather. Wind strength and direction can be predicted accurately by measuring the differences in air pressure over the surface of the Earth. See also pp.246–252, 863.

Meteor shower, swarm of hundreds of METEORS occurring simultaneously and travelling in parallel paths, although they appear to emanate from a single point, called the radiant. Radiant positions frequently rise together with various constellations and such commonly predictable showers are therefore named Leonid, Perseid, Gemminid, and so on. Other showers occur infrequently at varying intervals. It is thought that shower METEORIDS are fragments of steadily disintegrating comets. See also p.970.

Meter, instrument that measures a particular quantity. For example, a gas meter measures the amount of gas that has flowed in a certain time, and a voltmeter measures the voltage between two points in an electrical circuit.

Methadone, synthetic opiate drug whose use is widespread as an institutionalized solution to HEROIN addiction. Similar to MORPHINE and heroin in chemical structure, it is an addictive drug, although withdrawal is believed to be milder than it is with the other two.

Methane (marsh gas), colourless odourless inflammable gas (formula CH₄), the first member of the alkane series of HYDROCARBONS. It is the chief constituent of NATURAL GAS, from which it is obtained. It is used in the form of natural gas as a fuel and in the pure form as a starting material for the manufacture of many chemicals. Properties: m.p. – 182.5°C (– 296.5°F); b.p. – 164°C (– 263°F).

Methanol (methyl alcohol), colourless poisonous inflammable liquid (formula CH₃OH) obtained synthetically either from carbon monoxide and hydrogen, by the oxidation of natural gas or by the

Methedrine

destructive distillation of wood. It is used as a solvent, rocket fuel, denaturant for ethanol and in chemical syntheses. Properties: m.p. 93.9°C (-137°F); b.p. 64.9°C (148.8°F).

Methedrine, trade name for a drug used in the same way as AMPHETAMINES, usually for combating depression. Its full chemical name is methamphetamine hydrochloride, and its formula is $C_{10}H_{15}N \cdot HCl$.

Method, in 20th-century drama, the use of a system of acting evolved from the teachings of Konstantin STANISLAVSKY; it emphasizes the development of an actor's role by introspective and psychoanalytical techniques rather than the eventual external skills of actual presentation. Adapted by the Group Theatre in the 1930s, it achieved attention from the work of the Actors' Studio, which was founded in 1947 by Elia KAZAN and Lee STRASBERG. Its pupils included James Dean, Paul Newman, Marilyn Monroe and Marlon Brando.

Methodism, worldwide religious movement begun in England in the 18th century and developed into an international Church. It was originally an evangelical movement within the Church of England, started in 1729 by John and Charles WESLEY, who sought to direct the Church's energies towards the working class and who placed more emphasis on personal salvation than on Church organization. John Wesley stayed within the Anglican Church until his death in 1791. The Wesleyan Methodists, however, broke away formally in 1795 and in the following years they themselves divided into other sects, such as the Methodist New Connection (1797) and the Primitive Methodists (1811). The United Methodist Church reunited the New Connection with the smaller Bible Christians and the United Methodist Free Churches in 1907; in 1932 these united with the Wesleyans and Primitives. In the 1970s there were about 6 million British Methodists.

Methodius of Olympus, Saint (d.311), Christian writer who probably died a martyr during the last persecution at Chalcedon. He was influenced in his writing by PLATO, and his *Symposium*, or *Treatise on Chastity*, constitutes a summary of Christian doctrine.

Methotrexate, chemical substance (an antimitabole) that interferes with the synthesis of the vitamin folic acid, an essential component of cells. It is used to treat malignant tumours, LEUKAEMIA and PSORIASIS.

Methuselah, in the Bible, son of ENOCH and eighth in antecedence from ADAM and EVE. He is said to have died at the age of 969 and been the longest-lived person ever. He was the father of many children, including Lamech, the father of NOAH.

Methyl alcohol. See METHANOL.

Methylated spirit, form of ethanol (ethyl alcohol) sold without excise duty because it is not intended to be drunk. It contains 5% methanol (methyl alcohol), which is extremely poisonous, and enough pyridine to give it a foul taste. It is dyed purple and used as a solvent and fuel.

Methyl mercury. See MINIMATA DISEASE.

Metre, in music, rhythmic groupings, each of which contains an equal number of beats or time units. It is usually expressed in the time signature at the beginning of the stave on the first line, after the clef. A 4/4 metre (simple time) has four crotchet beats per bar; a 6/8 metre (compound time) has two dotted crotchets (three-quarter) beats per bar.

Metre, in poetry, pattern that occurs when the rhythm of a poem becomes regular enough to be measured. It imposes a regular recurrence of stresses that divides a line into equal units called metrical feet. The most commonly used feet are anapaest, dactyl, iamb and trochee. The metre of a poem is described according to the kind and number of metrical feet per line. For example, iambic pentameters have five iambs per line.

Metric system, decimal system of weights and measures based on a unit of length called the metre (m) and a unit of mass called the kilogramme (kg). The metre was originally defined as one ten-

millionth of the Earth's quadrant (a quarter of the circumference) and is now defined in terms of a wavelength of light. Larger and smaller metric units are related by powers of 10. Devised by the French in 1791, the metric system is used internationally by scientists and has now been adopted for general use by most of the Western world. See also WEIGHTS AND MEASURES; pp.776-777.

Metro, name of the underground railway network of certain cities, especially Paris. The first line, from the Porte Vincennes to the Porte Maillot, was opened in 1900. In the mid-1970s there were more than 80 stations served by the Metro. The name Metro also applies to the underground networks in Moscow and Montreal. See also pp.508-509.

Metro-Goldwyn-Mayer. See MGM.

Metronome, instrument designed to mark the tempo of music, invented by Nikolaus Wenkel but patented by J. N. MAELZEL in 1816. It consists of a ticking pendulum that swings back and forth at a rate controlled by an adjustable weight that can be slid up and down the pendulum. Some modern metronomes are electric clocks. By setting the metronome at the speed indicated on the music, a performer can be sure he is adopting the tempo intended by the composer.

Metropolitan Opera Company, New York company famous for the high standard of its productions; an appearance with it is coveted by the greatest singers throughout the world. Operas premiered at "the Met" include *Gianni Schicchi* (1918) and *The Girl of the Golden West* (1910), both by PUCCHINI. A new Met was opened in the Lincoln Center for the Performing Arts, New York, in 1966.

Metropolitan Police, one of the British police forces. It is responsible for the administration of law and order in the metropolitan area of London, other than the City of London (which is the responsibility of the City of London Police). It is headed by a Commissioner of Police and is under the control of the Home Secretary.

Metsu, Gabriel (1629-67), Dutch painter who worked in Leiden and Amsterdam and was influenced by REMBRANDT. He is perhaps best remembered for his genre pictures of middle-class life; eg *Mother and Sick Child*, which shows an extraordinarily deep feeling for the subject.

Metternich, Prince Klemens Wenzel Nepomuk Lothar von (1773-1859), Austrian statesman who came to loathe revolutionary excesses and who became Foreign Minister in 1809. On taking office he pursued a policy of conciliation towards NAPOLEON but in 1813 formed the QUADRUPLE ALLIANCE with England, Prussia and Russia to defeat him. He reached the zenith of his influence at the Congress of VIENNA (1814-15), which restored Europe to a group of anti-democratic states. He was driven from power by the revolution of 1848. See also pp.1558-9, 1559, 1586, 1650.

Metzinger, Jean (1883-1956), French painter, influenced first by NEO-IMPRESSIONISM and later by CUBISM, author of the book *Du Cubisme* (with Albert Gleizes) in 1912. He used violent colours and geometric planes in compositions such as *Tea-time* (1911).

Meuse (Maas), river that rises in NE France, flows across Belgium and The Netherlands to join the Waal River before entering the North Sea. It forms part of the border between Belgium and The Netherlands. There was much heavy fighting in the region of the Meuse during WWI, including the Battle of VERDUN. Length: 934km (580 miles).

MeV, abbreviation for million electron volts, the unit of energy used in particle physics to express the energy of subatomic particles from an ACCELERATOR.

Mexicali, city in NW Mexico, bordering Calexico, California, USA. Its products include cotton and cereals, although today most of its income is derived from tourism. Pop. (1970) 390,411.

Mexican hairless dog, terrier-like toy dog that may derive from a Chinese breed, possibly taken to Mexico in the 16th century. Its only hair is found as tufts on its

head and tail. Weight: to 4.5kg (10lbs). Height: 30-50cm (12-20in) at the shoulder.

Mexican jumping beans, seeds of certain shrubs harbouring larvae of the moth *Carpocapsa saltator*. When activated by warmth, the larvae begin moving, and this is sufficient to produce a twitching or jumping effect.

Mexican War, (1846-1847), armed conflict between the USA and Mexico, the immediate cause of which was the US annexation of Texas (1845). Mexico claimed that the Nueces River should be the SW boundary of Texas, whereas the Texans insisted that it should be the Rio Grande. Hostilities commenced when US forces, under Gen. Zachary TAYLOR, invaded the disputed area. The Mexicans were overwhelmed and, by the Treaty of Guadalupe Hidalgo (1848), were obliged to relinquish all claims to Texas (the present states of New Mexico, Utah, Nevada, Arizona and California) in return for \$15 million. See also p.1627.

Mexico, republic in North America. Formerly a Spanish colony, it has been one of the most rapidly developing nations of Latin America during the 20th century. The chief crops include cotton, sugar, fruit, vegetables and coffee. One of the world's leading producers of silver, Mexico also has large deposits of natural gas, coal, copper, sulphur, gold, lead, uranium, zinc and oil. Industries include consumer goods, fishing, timber and tourism. The capital is Mexico City. Area: 1,972,547sq km (761,000sq miles). Pop. (1981 est.) 61,000,000. See also p.2098.

Mexico, Gulf of, arm of the Atlantic Ocean, S of USA and E of Mexico, connected to the Atlantic by the Florida Strait, through which the Gulf Stream flows, and to the Caribbean Sea by the Yucatán Channel. It receives the Mississippi River and the Rio Grande. Cuba lies at the entrance to the Gulf. Max. depth: 3,732m (12,245ft). Area: approx. 1,813,000sq km (700,000sq miles). See also p.239.

Mexico City, capital and largest city of Mexico. The centre of the AZTEC civilization, the city was taken by Hernán CORTÉS in 1521 and it became the seat of the viceroyalty of the Spanish colonies from 1521 to 1821, when Mexico gained its independence. Industries include chemicals, tourism, cement, tobacco, petroleum products, textiles and glassware. Pop. (1977 est.) 941,912.

Meyer, Deborah ("Debbie") (1952-), US freestyle swimmer who, at the 1968 Olympic Games, became the first swimmer to win three gold medals at one Olympics (200m, 400m, 800m).

Meyer, Julius Lothar (1830-95), German chemist who worked on the relationship between atomic volume and atomic weight. He devised the PERIODIC TABLE at the same time as D. I. MENDELEYEV, with whom he received the Davy Medal in 1882.

Meyerbeer, Giacomo (1791-1864), German composer b. Jakob Liebmann Beer. He wrote successful Italian operas in the style of ROSSINI after 1816, but his greatest acclaim came in Paris where his works laid the foundations of French grand opera. With libretti by SCRIBE, these included *Robert le Diable* (1831), *Les Huguenots* (1836) and *Le Prophète* (1849).

Meyerhof, Otto (1884-1951), German biochemist. He shared the 1922 Nobel Prize in physiology and medicine with Archibald HILL for work on muscle action and the relationship between the consumption of oxygen and the transformation of lactic acid in muscles. He became professor of biochemistry at the University of Pennsylvania in 1940.

Meyerhold, Vsevolod (1874-1940), Russian actor-director and the first great experimentalist in early 20th-century Russian theatre. He was made a member of the Moscow Art Theatre in 1898, toured Russia with his Society of the New Drama and ran STANISLAVSKY's experimental theatre studio. The Stalinist regime brought his work to an end.

Mezzah (Hebrew, "doorpost"), small parchment on which has been inscribed

selected verses from the TORAH. It is encased in a tube and fixed to the doorpost of a Jewish living-room.

Mezzanine, in architecture, a low-ceilinged storey in a building, situated between the levels of two other floors. A mezzanine floor is usually between the ground floor and the first floor.

Mezzo-soprano, literally "middle" soprano, range of the human voice falling between SOPRANO and CONTRALTO. It may roughly be described as occupying the octaves above and below the G above middle C.

Mezzotint, method of ENGRAVING by scraping a design into a copper plate with a rocker, a tool with a serrated edge. The roughened surface produced, called a burr, results in light and dark tones in the print.

MGM (Metro-Goldwyn-Mayer), US film production company, formed in 1924-25. Perhaps the most successful of all Hollywood studios, it prospered during the Depression and WWII, releasing *Gone With the Wind* (1939). The rise of television and the European film industry contributed to MGM's decline since the 1950s.

Miami, resort city in SE Florida, USA, on Biscayne Bay, the second-largest city in the state. Originally a small agricultural community, it developed quickly after 1895, when Henry M. Flagler extended the Florida East Coast Railroad, dredged the harbour and began building recreational facilities. Modern Miami has many sporting facilities, including the Orange Bowl Stadium. Industries: tourism, clothing, concrete, metal products. Pop. (1980) 335,360.

Miao (Meo), people who live in the mountains of China, Vietnam, Laos and Thailand. Predominantly agricultural, they cultivate maize, rice and the opium poppy. They traditionally practise spirit and ancestor worship.

Miaskovsky, Nikolai (1881-1950), Russian post-Romantic composer who became professor of composition at the Moscow Conservatory (1921-50). His work includes 27 symphonies, ten string quartets and many songs.

Mica, group of common rock-forming minerals of the sheet silicate (SiO_4) type. All contain aluminium, potassium and water in the form of OH^- ions; other metals such as iron and magnesium may be present. Micas have perfect basal cleavage; common members are muscovite, biotite, phlogopite and lepidolite.

Micah, Old Testament book and name of the sixth of the 12 minor prophets. A contemporary of AMOS, HOSEA and ISAIAH, he anticipated the destruction of JERUSALEM, but incorporated elements of hope in his writings, including a well-known Messianic prophecy.

Michael, Saint, one of the four archangels mentioned in the Bible, the others being Gabriel, Raphael and Uriel. In the Old Testament Michael is the guardian of Israel and the highest of the archangels. In Revelation in the New Testament he is said to have thrown down the Dragon (Satan). Feast: 29 Sept. He is given prominence also in Islam.

Michael, name of nine Byzantine emperors. Michael I (d.845; r.811-13) recognized the claim by CHARLEMAGNE to be ruler of the Western Empire. Michael II (r.820-29) founded the Amorian dynasty. Michael III (838-67; r.842-67) is regarded by historians as a successful leader in the wars against the Arabs. Michael IV (r.1034-41), born a peasant's son, was proclaimed emperor by request of the Empress Zoe whom he married in 1034. Michael V (r.1041-42) was deposed after a political uprising. Michael VI (r.1056-57) was deposed by Isaac COMNENUS. Michael VII (1059-78; r.1071-78) neglected the defence of the empire, losing part of Asia Minor and the remaining Byzantine possessions in southern Italy. Michael VIII (1224-82; r.1259-82) was founder of the Palaeologan dynasty and the restorer of the Byzantine Empire. Michael IX (c.1277-1320; r.1295-1320) was emperor with his father, Andronicus II.

Michael (1596–1695), Tsar of Russia (1613–45), founder of the ROMANOV DYNASTY. His election as tsar ended the chaotic period known as the Time of Troubles that had existed since the death of FEODOR I in 1598. Michael made peace with Sweden in 1617 and Poland in 1618 and, during his reign, some Western influences were introduced but the peasants were further reduced to serfdom.

Michael (1921–), King of Romania, 1927–30, 1940–47. From 1927 to 1930 power was actually in the hands of a council of regents. He aligned with the Allies in 1944, but abdicated in 1947.

Michaelmas, feast for St Michael and all angels celebrated on 29 Sept. Goose is traditionally eaten at Michaelmas in Britain, where it is also the name for a quarterly court term (12 Oct. to 21 Dec.) and academic terms at the universities of Oxford and Cambridge.

Michaelmas daisy, perennial herbaceous plant of the aster family. Introduced to Britain from N America, subsequently hybridization and selection has resulted in a wide variety of colour and habit. Common garden varieties are *Aster amellus* and *Aster novi-belgii*.

Michaux, French family of bicycle pioneers. Pierre (d.1883) and his son Ernest together designed the first bicycle with a rotating crankshaft in 1861, and founded a successful factory producing *Vélocipèdes* shortly afterwards. They also designed a steam-driven motorcycle in 1869.

Michelangelo, **Arturo Benedetti** (1920–), Italian pianist and teacher. He won the International Musical Competition in Geneva in 1939 and since WWII has divided his time between performing, teaching and making recordings, mostly of Romantic music.

Michelangelo Buonarroti (1475–1564), Italian sculptor, painter, architect and poet, an outstanding RENAISSANCE figure and a creator of MANNERISM. He trained in Florence, first in the technique of FRESCO, under GHIRLANDAIO, and then in the Medici School, where he was influenced by the ideas of the humanists. In 1499 he sculptured the *Pietà* for St Peter's, Rome, which established his reputation. Michelangelo spent most of his productive years in Rome or Florence. He considered himself primarily a sculptor and created numerous monumental and heroic figures. Among these are *David* (1501–04), *Moses* (1513–16), *The Slaves* (c.1513) and the symbolic figures *Day*, *Night*, *Dawn* and *Evening* for the Medici Chapel, Florence, which he also designed (from 1520). His masterpiece in painting was his fresco cycle (1508–12) and *Last Judgement* (completed 1541) for the Sistine Chapel, Rome.

The Laurentian Library, Florence, which Michelangelo started planning in 1524, is among the earliest important examples of Mannerist architecture. In 1539 he began laying out the new Roman Capitol, and from 1546 to 1564 he was chief architect of St Peter's. During these last years he also wrote some of his finest sonnets. Probably no artist has been more influential. See also pp.1740–1741, 1740, 1748, 1748.

Michelozzo, **Michelozzi** (1396–1472), Florentine sculptor and architect, one of the first generation of RENAISSANCE architects. He received many commissions in Florence from the Medici family. With Lorenzo Ghiberti he worked on such projects as the north doors for the Baptistery in Florence. He worked with the sculptor DONATELLO on many tombs. His most important work was the Medici Palace (now the Rucellai Palace), Florence (c.1444–59). See also p.1383.

Michelsen, **Alfonso López** (1913–), Colombian politician. He began his career as a lawyer and was elected to the Senate in 1962 as a radical. He served as Foreign Minister (1967–70) and became President (1974–).

Michelson, **Albert Abraham** (1852–1931), US physicist, b. Germany. In 1887 he conducted an experiment with Edward MORLEY to determine the velocity of the Earth through the ETHER, using an INTER-

FEROMETER of his own design. The negative result prompted the development of the theory of RELATIVITY. He determined the speed of light, and was awarded the 1907 Nobel Prize in physics. See also pp.856, 857, 857–858.

Michelson-Morley experiment, notable experiment performed in 1887 by the American physicists A. A. MICHELSON and E. W. MORLEY to determine the motion of the Earth through the ETHER. That such a motion was not detected discredited the ether theory and led to a crisis in physics that was resolved by EINSTEIN's theory of RELATIVITY. See also pp.856–857.

Michener, **James** (1907–), US author and winner of the 1947 Pulitzer Prize for his first collection of short stories, *Tales of the South Pacific* (1947). His novels include *The Bridges at Toko-ri* (1953), *Sayonara* (1954), *Hawaii* (1959), *The Source* (1965) and *Centennial* (1974).

Michigan, state in N central USA, bordered by four of the GREAT LAKES. Michigan is made up of two peninsulas separated by the Straits of Mackinac, which connect lakes Michigan and Huron. The Upper Peninsula ranges from the swampland of the NE lake shore to the mountains of the W. Copper and iron ore are mined and timber is a valuable resource. The Lower Peninsula is also forested and mineral deposits include oil, gypsum, sandstone and limestone. In the S cereal crops are cultivated and livestock rearing is important. The Lower Peninsula has most of Michigan's population and industries, which include motor vehicles, primary and fabricated metals, chemicals and food products. The state capital is Lansing and the largest city is Detroit.

The French first settled the region, but lost it to Britain after the SEVEN YEARS WAR. The British finally relinquished the area in 1796 and the Territory of Michigan was organized in 1805. The opening of the Erie Canal in 1825 aided Michigan's growth by linking it to the Atlantic through the Great Lakes, but the real industrial boom came with the development of the motor vehicle industry in the second decade of the 20th century. Area: 93,669sq km (58,216sq miles). Pop. (1977 est.) 9,185,000. See also p.2161.

Michigan, Lake, third-largest of the GREAT LAKES, connected with Lake Huron by the Straits of Mackinac; the only one of the Great Lakes entirely within the USA. It was discovered by the French explorer Jean Nicolet in 1634. The ST LAWRENCE SEAWAY has opened up the lake to international trade. Chicago is on the SW shore. Area: 58,016sq km (22,400sq miles).

Micombero, **Michel** (1940–), Burundi soldier and statesman. He assumed the presidency after a military coup in 1966, but was deposed in 1976.

Microanalysis, technique in chemical analysis that makes use of extremely small samples – smaller even than those used in the more common semi-microanalysis. See also pp.904, 904.

Microbe, general name for any micro-organism, including BACTERIA, MICROSCOPIC FUNGI, PROTOZOA, MICROSCOPIC ALGAE, and various types of animals of microscopic size. VIRUSES are sometimes included in this category but it is debatable whether they can be called living organisms. See also pp.1061, 190–191.

Microbiology, study of micro-organisms, their structure, function and significance. Types of micro-organisms include VIRUSES, BACTERIA, PROTOZOANS and microscopic unicellular ALGAE and FUNGI. Aspects of this study involve disease organisms and organisms useful to man, such as bacteria to fight disease or yeasts to promote fermentation. Microbiology began during the 17th century with the invention of the microscope, which enabled scholars to view micro-organisms for the first time. Pioneers in the field include ROBERT HOOKE, ANTONIE VAN LEEUWENHOEK and LOUIS PASTEUR. See also pp.174, 190.

Microcephaly, condition of having an extremely small head. It is usually accompanied by severe mental retardation and is thought to be caused by genetic factors, infections during the mother's pregnancy

or exposure to radiation during pregnancy.

Microcline, felspar mineral, KAlSi₃O₈, with a triclinic crystal structure, hardness of 6–6.5, specific gravity of 2.56 and a characteristic checkered twinning easily seen through a microscope. It is common in granites.

Microeconomics, one of the two major subdivisions of ECONOMICS, the study of individual components of the economic system. It analyses individual consumers and producers, the market conditions and the law of supply and demand – things that affect individual profitability. See also MACROECONOMICS.

Microelectronics, electronic systems designed and produced without wiring or other bulky components. They allow a high packing density that greatly reduces the size of component assemblies. In the years following WWII, the application of such newly developed devices as semiconductor TRANSISTORS and diodes saw the beginnings of the microelectronics industry. This accelerated with the development of PRINTED CIRCUITS, in which metal connections between miniaturized components are etched out in a single piece, on a circuit board. Even further reduction in size, or microminiaturization, was later achieved with INTEGRATED CIRCUITS, in which complex circuits can be made smaller than a fingernail. Molecular electronics is a new development which promises to be the ultimate in size reduction, in which complex circuits of microscopic size are grown inside single crystals. The applications of microelectronics generally have been felt most in the COMPUTER industry, but pocket calculators, watches, miniaturized radios and miniaturized television sets are evidence of the growing importance of microelectronics to consumers. See also p.882–883.

Microfilm, reduced photographic reproduction of voluminous reading matter such as newspapers, periodicals, books and business records. First used in the 1920s, microcopy storage gained in popularity as a library and commercial information retrieval system in the 1960s and 1970s. Reduction is now so advanced that a microfiche, a single sheet of microfilm, can store up to 1,000 pages of text matter within an area of 75 × 125mm (3 × 5in).

Micrometer, hand-held caliper instrument used in engineering machine shops to check the thickness of metal parts. The caliper of the micrometer is placed over the part to be measured and a screw is turned by the thumb, advancing a spindle until it touches the metal part (which is then just held by the caliper). The thickness is read off the uncovered part of a scale, to an accuracy of about 0.002mm (0.0001in). In astronomy, a filar micrometer can be fitted to the eyepiece of a telescope, and consists of two fine threads, one of which is movable. It is used to measure accurately the apparent distance between stars. See also p.783.

Microminiaturization. See MICROELECTRONICS.

Micronesia, collective term for a large area of island groups in the W Pacific Ocean, generally those S of Japan, W of the INTERNATIONAL DATE LINE, N of Melanesia and E of the Philippines. The larger groups include the Marianas Islands, Marshall Islands, Gilbert and Ellice Islands and Caroline Islands; the native inhabitants are chiefly Polynesian and share related languages and cultures. Micronesia comprises a subdivision of OCEANIA, as do POLYNESIA and MELANESIA.

Micronesian people, the inhabitants of the islands of the W Pacific, one of the three main divisions of OCEANIA. There is considerable cultural diversity in the region, of which complex exchange rituals, feasts and oratorical skills are major features. Micronesians live by fishing and cultivation of crops such as yams and taro. See also pp.119, 122.

Microphone, device for converting sound into oscillating electric currents of the same frequency. The main types are the carbon microphone, in which the sound pressure causes a variation in the electrical

resistance of carbon granules held between a diaphragm and a carbon block; the crystal microphone, in which the sound impinges upon a crystal, which generates an oscillating current by the PIEZOELECTRIC EFFECT; and the moving coil microphone, in which a coil attached to a diaphragm oscillates in a stationary magnetic field. See also p.642.

Microscope, optical device for producing an enlarged image of a minute object. The first practical microscope was made by Anton van LEEUWENHOEK in 1668. The modern compound microscope has two converging lens systems, the objective and the eyepiece, both of short focal length. The object to be examined is placed close to the objective lens and illuminated by a strong source of light. The objective produces a magnified image of the object, which in turn is further magnified by the eyepiece to give the image seen by the observer. Most microscopes have three objective lenses on a turret, which may be interchanged to give a choice of low, medium or high magnification. Due to the nature of the visible spectrum of light, an optical microscope can magnify objects only up to 2,000 times, and this magnification is possible only by using lenses immersed in oil.

For extremely small organisms and objects an optical microscope cannot be used, because it is incapable of resolving them. For these purposes the electron microscope was devised. It works in much the same way except that the minute object is 'illuminated' with a stream of electrons and the 'lenses' consist of magnets that focus the electron beam. Electrons have shorter wavelengths than light and thus provide greater resolution, and so smaller objects may be seen. The image from an electron microscope is obtained by converting the pattern made as the electrons pass through the minute object into a video display, which may be photographed. These microscopes can magnify up to a million times.

A polarizing microscope illuminates mineral specimens with POLARIZED light which refracts into two beams whose velocity difference divided by the specimen's thickness yields an identifying birefringence index. See also pp.257, 911.

Microswitch, electric switch which requires only a small effort and movement to open or close it. The prefix 'micro' is derived from its function as a small movement, rather than a small-sized switch. It is used for automatic, or semi-automatic, applications in electro-mechanical machines in which a moving actuator opens or closes the switch to stop or start an operation.

Microtome, precision device for slicing thin sections of specimens for examination under a MICROSCOPE.

Microtone, musical interval of less than one-quarter of a tone. Most Western instruments cannot play such notes, but the Mexican Julián Carrillo invented instruments to play his microtone compositions.

Microwave, ELECTROMAGNETIC RADIATION of wavelength between one millimetre and one metre, and a frequency range of approx. 255 to 300,000MHz. This puts microwave radiation between infra-red and shortwave radio waves on the ELECTROMAGNETIC SPECTRUM. Microwave is being increasingly used today for such purposes as RADAR, TELEVISION broadcasting, moderate distance RADIO communications and in high-speed MICROWAVE HEATING. See also pp.638, 646.

Microwave heating, use of electromagnetic radiation having a frequency range of about 1,000 to 300,000MHz to heat materials. Microwave ovens are perhaps the major application to date; these offer a very fast method of cooking meat – joints which normally take an hour or more are cooked by microwaves in minutes.

Microwave transmission, accomplished with transmission lines, a system of material boundaries that guide MICROWAVE in a continuous path from one place to another. The structures most commonly used are COAXIAL CABLES and hol-

Midas

low WAVEGUIDES. See also p.638.

Midas, name of several historical Phrygian rulers and one legendary, foolish king. As a reward for rendering a service to the god Dionysus, King Midas asked that anything he touched should become gold. Dionysus agreed and Midas was unable to eat or drink because his food was transmuted. His story was told by OVID.

Mid-Atlantic Ridge, underwater topographic feature along the margin between the American crustal plate on one side and the European and African plates on the other. It follows the mid-line of the Atlantic Ocean, and the plates are growing at a rate of 2cm (0.8in) per year. See also p.238.

Mid-Bedfordshire, county district in central BEDFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 504sq km (194sq miles). Pop. (1981 est.) 108,200.

Mid-brain, one of the three divisions of the embryonic BRAIN of backboned animals, also called the mesencephalon. In a fully formed human being the mid-brain has become overlaid by the greatly developed cerebral lobes. It is thick-walled and is concerned particularly with sight and hearing. See also pp.128-129.

Middle age, period of life extending roughly from the 40th to the 60th year. This is the period when the cumulative effects of wear on the body begin to be felt. There is a tendency for vision to be impaired due to hardening of each lens, and a reduction in the ability to hear sounds of high frequency. Heart disease also takes a heavy toll of the middle-aged, particularly of male city-dwellers in high stress occupations. Both sexes are liable to suffer depressive illness, women perhaps more severely than men on the whole, because of the greater physical upset at menopause. However, intellectual functions are not generally impaired; some studies have shown a gradual increase in IQ into the 7th decade of life. In spite of this, middle age is a period of shrinking career opportunities, especially for people in highly developed societies.

Middle Ages, period in Western European history between the disintegration of the West Roman Empire in the 4th and 5th centuries and the period of the RENAISSANCE, beginning in the 15th. Dates for the close of the Middle Ages are imprecise, since the Renaissance developed and flourished at different times in different countries. The term "Middle Ages" was first used by the HUMANISTS of the 15th century who saw themselves as rediscovering the civilization of the Ancients. Classical antiquity was nonetheless a formative influence on the medieval period, as were the Germanic and Scandinavian invaders of w Europe between the 3rd and 12th centuries. But the Middle Ages was marked above all by the rise and dominance of CHRISTIANITY, with the emergence of a strong papacy, the growing importance of monastic orders and the Church's monopoly in education. It is the period not only of liturgical development and doctrinal disputes, but also of the CRUSADES and struggles between a politically powerful Church and increasingly self-conscious state. The decentralization of power in the sub-Roman period gave rise to the FEUDAL SYSTEM, one of the most important political and social developments of the time.

In the East the cultural and political centre was Constantinople, capital of the BYZANTINE EMPIRE. It exerted a considerable influence on the West in spite of increasing ecclesiastical and political differences, culminating in the sack of Constantinople in 1204. Although at one time considered a period void of learning and creativity, the later Middle Ages in particular produced an extension of literacy. The rise of vernacular literatures, the founding of the first universities in the 12th century and the period's own unique form of art and architecture, such as the ROMANESQUE and GOTHIC styles, are among its cultural achievements. Philosophy developed throughout the latter half of the period, reaching its peak in the 13th-century syntheses of theological doctrine

and Aristotelianism. Much of modern thought, music and political structure derives from the Middle Ages. See also DARK AGES; pp.1268-1352.

Middle America. See MESOAMERICA.

Middle Angles, heathen people of Germanic descent who settled an area in England in the 5th century. Their name was used to refer to their geographical position between the kingdoms of East Anglia and Mercia. Although little is known of them, they appear to have retained independence until the 7th century, when they came under the Mercian rule of Peada.

Middle East, general description of the states of NE Africa and SW Asia w of Pakistan. The term was first used in 1902 to describe the area around the Persian Gulf, and was used to describe the larger area during WWII. The justification for such a blanket description lies in the common Islamic culture of most of the countries included; on this basis the N African states, Afghanistan and Pakistan are sometimes included.

Middle English, period in the evolution of the English language from the Norman Conquest until about 1500. This period saw the borrowing of many words from Norman French and the reduction of many inflectional endings. Grammatical gender was superseded by natural gender, and the use of the Anglo-Norman writing system caused radical changes in spellings and shifts in the stress patterns of words.

Middle Kingdom, period in the history of ancient Egypt, from c.2040 BC to 1786 BC. It began with the unification of Egypt by Mentuhotep II. Its capital was at al-Lisht, s of Memphis. It marked a high point of centralized government, particularly under the Eleventh and Twelfth dynasties. See also pp.1166-1167.

Middlesbrough, county district in S CLEVELAND, England; created in 1974 under the Local Government Act (1972). Area: 47sq km (18sq miles). Pop. (1981 est.) 150,100.

Middlesex, former county of SE England, adjoining London. In 1965 most of the county was absorbed into GREATER LONDON. The Middlesex area of Greater London is considered as a county for the purposes of law.

Middle Stone Age. See MESOLITHIC AGE.

Middleton, Osman Edward (1925-), New Zealand author whose short stories observing ordinary life - both European and Maori - appeared in collections such as *A Walk on the Beach* (1964) and *The Loners* (1972).

Middleton, Stanley (1919-), British writer whose novels explored domestic situations and included *A Short Answer* (1958), *Wages of Virtue* (1969) and *Ends and Means* (1977). *Holiday* (1974) won the Booker Prize.

Middleton, Thomas (c.1570-1627), English playwright. He wrote *The Honest Whore* (1604) in collaboration with Thomas DEKKER, *The Changeling* (1621) with William ROWLEY, and the political satire *A Game at Chess* (1624).

Middle West (Midwest), region of the USA surrounding the GREAT LAKES and the upper Mississippi River valley. The name is also applied to the area between the Allegheny and Rocky Mts. Part of the interior plains, the area has some of the finest farmland in the USA and is particularly noted for wheat, maize and pigs. It also includes highly industrialized regions and the cities of Chicago, Detroit, St Louis and Minneapolis.

Midgard, in Norse mythology, the Middle Earth or abode of mankind. The body of the giant YMIR, or Aurgelmir, who was killed by the gods, was placed in the centre of the universe and used to make the Midgard, his hair becoming trees and his bones mountains. His skull formed the vault of the heavens.

Midge, small mosquito-like fly of the order Diptera. Most midges have red aquatic larvae called bloodworms, a favourite food of fish. The majority are harmless, but some suck human and animal blood. Families Chironomidae, Caratopogonidae, Cacidomyidae.

Mid-Glamorgan, county in South Wales,

on the Bristol Channel; formed in 1974 from parts of the former counties of GLAMORGAN, BRECKNOCKSHIRE and MONMOUTHSHIRE. The administrative centre is Cardiff. Area: 1,019sq km (393sq miles). Pop. (1981 est.) 538,200.

Midlands, region in central England, generally thought to include the counties of DERBYSHIRE, LEICESTERSHIRE, NORTHAMPTONSHIRE, NOTTINGHAMSHIRE, STAFFORDSHIRE, WARWICKSHIRE, WEST MIDLANDS and the E part of HEREFORD AND WORCESTER. It is a highly industrialized region and includes Birmingham, Coventry, Leicester, Derby, the cities of the POTTERIES, including the area known as the BLACK COUNTRY.

Midlothian, former county in SE Scotland, s of the Firth of Forth; in 1975 it was divided between Lothian and Borders regions. The land rises in the s to the Pentland and Moorfoot Hills, and the main rivers are the Gala Water, Esk, Almond and the Tyne. Sheep are grazed in the hills, and cereal crops and potatoes are grown on the lowlands. Industries include shipbuilding, engineering, brewing, paper and textiles. The county town was Edinburgh. Area: 948sq km (366sq miles). Pop. (1980) 748,603.

Midnight sun, phenomenon observed in regions within the Arctic and Antarctic circles during the summer solstice, when the Sun never sinks totally below the horizon. This persistence of the Sun is a consequence of the tilt of the Earth's axis, which alternatively presents the face of each flattened polar area to the Sun for a period of six months.

Mid-ocean ridge, great median ridge of the sea bottom where new LITHOSPHERE is being formed. The ridges are the spreading edges of the tectonic plates that cover the Earth. They form a world-encircling system that extends, with several side branches, along the MID-ATLANTIC RIDGE up, around, and down through the Indian Ocean (the Mid-Indian Ridge) and across the Pacific (the Pacific-Antarctic Ridge). See also SEA-FLOOR SPREADING; pp.238, 239.

Midrash, in Hebrew literature, rabbinical interpretation and exposition of the text of the Hebrew Scriptures, written from about the 4th century BC to the 11th century AD. These writings are divided into *halakah*, which deals with legal sections of the Bible, and *haggadah*, which deals with biblical legends. A large part of the TALMUD is Midrashic writing.

Midshipman, defunct naval title assigned to young officer recruits below the rank of sub-lieutenant. The name derives from the quarters they were assigned amidships.

Midsummer Day (24 June), in the Christian calendar, the feast of the nativity of St John the Baptist. The day before is known as Midsummer Eve, or St John's Eve. In Celtic times the summer solstice (21 June) was celebrated with much revelry. Bonfires would be lit in honour of the Sun, and it was thought that anyone passing through the embers would enjoy good health. Later the Christian Church took on the tradition of a midsummer celebration. See also pp.1904, 1905.

Midsummer Marriage, *The* (1955), three-act opera by Sir Michael TIPPETT. Its first performance, starring Joan SUTHERLAND at Covent Garden, was not successful but later productions have established its musical reputation.

Midsummer Night's Dream, *A* (c.1595), five-act comedy by William SHAKESPEARE. The first of his romantic masterpieces, its plot revolves round the romance of Hermia and Lysander and that of the king and queen of the fairies, Oberon and Titania. The work is notable for its idyllic, sylvan setting and its rustics, led by Bottom, who perform their own play, *Pyramus and Thisbe* in the last act.

Mid-Sussex, county district in E WEST SUSSEX, England; created in 1974 under the Local Government Act (1972). Area: 338sq km (130sq miles). Pop. (1981 est.) 115,700.

Midway Islands, coral atoll in the central Pacific Ocean, 2,000km (1,243 miles) WNW of Honolulu. It is US Territory com-

prised of two islands, Eastern and Sand, which are administered by the Department of the Interior. They were annexed to the USA in 1867, came under the authority of the US Navy Department and were made an air base in 1935. They were the scene of the Battle of Midway, an important WWII Allied victory in 1942. Area: 5sq km (2sq miles). Pop. (1975 est.) 2,000.

Midwest. See MIDDLE WEST.

Midwife, person who assists in the delivery of a child and the care of the mother. Midwifery gained recognition with the establishment of maternity hospitals and the provision of training for midwives in Europe in the 17th and 18th centuries. Legal recognition of the profession in Britain came with the Midwives' Act of 1902, which regulated the practice of midwifery. Today midwives must undergo formal training and hold a certificate issued by the Central Midwives' Board.

Midwife toad, small European amphibian with dull-grey, warty skin. The male wraps the fertilized eggs, which are laid in strings, around his back legs. After about three weeks the male enters water and the young emerge from the egg cases. Length: to 5cm (2in). Family Discoglossidae; species *Alytes obstetricans*.

Mieris, name of a family of Dutch painters, the most important of whom was Franz Jansz van Mieris (1635-81). A portraitist and genre painter, he was noted for his skilful handling of colour and treatment of silks and fine fabrics.

Mies van der Rohe, Ludwig (1886-1969), German-born US architect who worked in Germany until 1937, when he emigrated to the USA to escape Nazism. He was a member and director (1930-33) of the BAUHAUS. His true greatness as an architect was revealed in his German Pavilion for the Barcelona Exhibition (1929) and in the Tugendhat House, Brno (1930). His concern for quality continued to be central to his work in the USA, where he perfected the elegant, unadorned skyscraper. Typical of his later work are the Farnsworth House in Plano, Illinois (1950), the Lake Shore Drive Apartments in Chicago (1951), and the Seagram Building in New York (1958). See also p.1688.

MiG, name of Soviet aircraft originally developed by Col.-Gen. A. Mikoyan and Mikhail I. Gurevich, a mathematician. The MiG-15 jet fighter, built in 1947, was of advanced design, and constant development has produced many successful types. The most recent design is the MiG-25, NATO code-name Foxbat, an all-weather fighter capable of speeds up to Mach 3.2. See also pp.572-573, 572.

Mighty five. See RUSSIAN FIVE.

Mignard, Pierre (1612-95), French painter, the rival of LEBRUN. After studying under BOUCHER he worked in Rome, painting madonnas which were popularly known as "Mignardes". In 1657 he returned to France, where he began painting court portraits, succeeding LEBRUN as First Painter to Louis XIV in 1690.

Mignonette, any of 70 species of plants that grow in N Africa, Asia and Europe. They have small flowers clustered in a terminal spike, thick stems and coarse, lance-shaped leaves. A common species is the annual *Reseda odorata*, which has strongly scented flowers. Height: to 45cm (18in). Family Resedaceae.

Migraine, splitting, throbbing headache commonly on one side only, often accompanied by nausea, vomiting and visual disturbances such as flashes, and distorted vision. Of no known cause, its sufferers are most frequently women. There is no effective medication except strong ANALGESICS, and it is recommended that sufferers lie in a darkened room during an attack.

Migration, any periodic movement of animals or humans, usually in groups, from one area to another, in order to find food, breeding areas or better conditions. Animal migration, strictly speaking, involves the eventual return of the migrant to its place of departure. Fish migrate between fresh and salt water or from one part of an ocean to another. Birds usually migrate

along established routes. Mammals migrate, usually in search of food.

Genuine migration of humans does not include individual exploration or the aimless wanderings of nomads. For thousands of years the deserts of central Asia have widened inexorably and this phenomenon has resulted in the true migration of prehistoric tribes to China, the Fertile Crescent of the Middle East and Europe. Another type of migration occurred in the 1300s AD when the Maoris of New Zealand left their overpopulated homes in the islands of central Polynesia. A classic example of a political migration was provided by the EXODUS of the Israelites from Egypt to seek a new homeland in CANAAN. See also pp.60-61, 78-79, 116-119.

Mihajlovic, Draza (c.1893-1946), Yugoslavian soldier and anti-Communist. He fought with the Serbian guerrillas, the CHETNIKS, in WWI. In 1942 he became Minister of War in the Yugoslav government-in-exile. He clashed with TITO and was executed in 1946.

Mikado, ancient title of the emperor of Japan, meaning "exalted gate". It referred to the imperial palace and took the place of the emperor's personal name, the use of which was forbidden.

Mikado, The (1885), comic opera by William GILBERT and Arthur SULLIVAN, first produced in London. Set in ancient Japan, it is the story of a Japanese emperor (MIKADO) whose daughter loves one man but is betrothed to another, the Lord High Executioner.

Mikoyan, Anastas Ivanovich (1895-1978), Soviet political leader. He became commissar for foreign trade in 1926 and denounced STALIN in 1953. He supported Nikita KHRUSHCHEV and became President in 1964, resigning in 1965.

Milan (Milano), industrial city in Italy. It was conquered by Rome in 222 BC and became an important city of the Western Roman Empire. It was a free commune by the 12th century and a powerful Italian state under the SFORZA family from 1447 to 1535, when it was taken by the Spanish. Milan fell to NAPOLEON (1796-1814) and became part of Italy in 1860. Its modern manufactures include machinery, textiles and chemicals. There is a fine cathedral. Pop. (1980 est.) 4,000,000.

Milan, Edict of (313), proclamation by which CONSTANTINE I (the Great) granted religious tolerance throughout the Roman Empire. Thus the long and cruel persecution of the Christians by the emperors of Rome was ended, and prelates were able to assume a position in civil administration.

Milan, School of, school of Italian painting that flourished in the 15th and 16th centuries. Vincenzo FOPPA was its leading artist before the arrival in Milan of LEONARDO DA VINCI who, with his followers, thereafter dominated the school.

Mildenhall Treasure, hoard of 34 separate pieces of mostly 4th-century Roman silverware, including dishes, goblets and spoons; three pieces bear Christian inscriptions. It was discovered in 1942 near Mildenhall, Suffolk. Declared to be treasure trove in July 1946, the best pieces were restored and displayed at the British Museum, London. See also WATER NEWTON TREASURE; p.1243.

Mildew, external filaments and fruiting structures of numerous mould-like FUNGI, familiarly seen growing on such materials as leather, cloth and wood. More important economically are two groups that attack plants: downy and powdery mildews. Downy mildews (Peronosporales) are parasites of higher plants and cause substantial damage to growing crops. Velvety grey patches of spores form on the leaves, and much damage is done to the internal structure of the plant tissue. The Irish potato famine of 1845-48 was due to *Phytophthora infestans*, which causes blight in potatoes. Powdery mildews (Erysiphales) form a characteristic powdery coating on infected leaves. They cause less damage than downy mildews. See also pp.352-353, 667, 696, 697, 719.

Mill End, district of E London where Richard II parleyed with Wat Tyler, leader of the PEASANTS' REVOLT (1381). In

the 17th century the urban militia, the train bands, exercised there. Its name is derived either from the fact that Mile End Green was one mile long or from the distance of Mile End from the walls of the city of London. In 1887 a People's Palace was opened by Queen Victoria there providing concerts and exhibitions.

Miles, Antony John ("Tony") (1955-), British chess player. Runner-up in the 1973 world and European junior championships, he won the world junior championship in 1974 and was awarded the title of International Master. He became a Grand Master in 1976.

Miles, Baron (Life Peer) (1907-), British actor-manager and director. His first stage appearance was in *Richard III* in 1930, after which he spent five years in repertory. He formed the Mermaid Theatre Trust which built the riverside Mermaid Theatre at Blackfriars, London. The first play performed there was the musical *Lock Up Your Daughters*, in 1959. He has also appeared in several films.

Milfoil, or yarrow, common weed of the ASTER family, native to Europe and North America. Used since ancient times for medicinal purposes, its scientific name was chosen in honour of Achilles, who was allegedly the first to use it in the treatment of wounds. It bears flattened bunches of small composite flowers. Height: to 90cm (3ft). Species *Achillea millefolium*.

Milford Haven, Louis Alexander, 1st Marquess of (1854-1921), British admiral from 1904. The son of Prince Alexander of Hesse, he was formerly the Prince of Battenburg but became a British subject, relinquishing his German titles and taking the name Mountbatten in 1917. He was Commander-in-Chief of the Atlantic fleet (1908-10) and First Sea Lord in 1912, but resigned his post at the outbreak of WWI in 1914.

Milford Sound, inlet of the Tasman Sea on the SW coast of South Island, New Zealand. A resort area, it is part of the Fiordland National Park. Length: approx. 19km (12 miles). Width: approx. 3km (2 miles).

Milhaud, Darius (1892-1974), leading 20th-century French composer. In the incidental music to Claudel's translation of Aeschylus' *Orestes*, (1913-22), he experimented with polytonality, using several simultaneous themes in different keys. He also included American jazz elements in works such as *La Création du Monde* (1923), which was originally written as a ballet. A prolific, versatile composer, he composed in all the standard forms, his most ambitious work being the opera *Christophe Colomb* (1930). See also pp.1754-1755, 1754.

Military government, the rule of enemy territory through military occupation. The practices of military government were standardized at the Hague Peace Conferences of 1899 and 1907. WWII saw the most intensive use of this form of government, although the rules of the Hague Conference (1907) were often violated by Germany's use of executions and slave labour. As a result of the experiences and abuses in WWII, a new agreement in military government was signed in 1949 in Geneva. See also MARTIAL LAW.

Militia, non-standing reserve military force for use in emergencies, usually organized on a local basis. In Britain it derives from the Anglo-Saxon *fyrd*, raised by the sheriff, in which all freemen were obliged to serve. Under the Tudors it came to be raised by the lords-lieutenant of the counties. It acquired the name militia in the 17th century, when the obligation to provide men at arms for service anywhere in the country was laid upon landowners. In 1757 service was made compulsory and county quotas were filled by ballot. It was then that the militia began to be properly trained. In 1852 service became virtually voluntary. The militia was replaced by the Territorial Force in 1908, which became the TERRITORIAL ARMY in 1921. This was replaced in 1967 by the Territorial and Army Volunteer Reserve.

Milk, liquid food secreted from mammary glands by the females of nearly all mam-

mals to feed their young. The milk of domesticated cattle, sheep, goats, horses, camels and reindeer has been used as food by man since prehistoric times; both directly and to make BUTTER, BUTTERMILK, CHEESE and fermented milks such as yogurt. Milk is essentially a suspension of fat and protein in water, sweetened with lactose sugar. The proportions of these constituents vary with each mammal, those of cows' milk being water 87.1%, protein 3.4%, fat 5.9%. In modern dairying, cows' milk is pasteurized at about 72°C for 16 seconds to kill all harmful microbes, then bottled under aseptic conditions. Nevertheless, milk sours after a day or so because of the action of lactic acid bacteria. See also MILK PRODUCTS; pp.658, 723, 725-727, 726-727.

Milkfish, valuable food fish found in tropical waters of the Indian and Pacific oceans. Well adapted for cultivation on fish farms, this silvery fish has a deeply-forked tail and spawns in brackish water. Length: to 1.5m (5ft). Family Chanidae; species *Chanos chanos*. See also pp.740-741.

Milking, taking milk from a mammalian mother. Milking dairy cows is nowadays usually done with machines, which are both faster and more hygienic than hand methods. A cow's udder, after being thoroughly cleaned to remove all dirt that could infect the milk, is fitted with teat cups connected by flexible hoses to an electrically driven machine. This produces an intermittent vacuum in the hoses that extracts the milk and conveys it to a tank for temporary storage, before it is removed for pasteurization or other processing. See also pp.724-725.

Milk products, in modern dairy processing, include dried, condensed and evaporated milks, ICE CREAM, bottled and tinned cream, BUTTER, fermented milks, and many kinds of CHEESE. Dried milk, used widely in ice cream and in cheese and meat processing, is made by spraying milk in hot air into an evaporator vessel. Condensed milk is sweetened milk concentrated by warming and placing in a vacuum. Evaporated milk is similarly made but is unsweetened and is HOMOGENIZED to prevent fat separating off. Both these milk concentrates keep well. In the making of fermented milks, milk is deliberately (but selectively) soured with microbes - in YOGURT with a culture of *Lactobacillus* bacteria. See also pp.724-727.

Milk snake, also called king snake, shiny patterned snake found from Canada to Ecuador. It is usually three-coloured with brown or red, black and yellowish transverse rings or saddles. It was once believed to suck milk from cows. Length: 92cm (3ft). Family Colubridae; species *Lampropeltis triangulum*.

Milkweed, any of numerous species of perennial plants with milky sap in the milkweed family, Asclepiadaceae. They include shrubs, woody vines and some succulent desert plants; they grow in tropical or subtropical regions in Africa and the Americas. Height: to 1.8m (6ft).

Milky Way Galaxy, barred spiral galaxy containing the SOLAR SYSTEM. It is a lens-shaped structure, 100,000 light years across. The broad band of innumerable stars visible from Earth - the Milky Way proper - represents the view along the plane of the galaxy. The centre of the galaxy is never visible, being optically obscured by interstellar dust and gas. Radio astronomy has determined that the centre lies beyond the constellation of Sagittarius. The Sun is situated on one of the spiral arms, about 32,000 light years from the galactic centre. See also pp.811, 923, 923, 982, 996-997, 996-997, 1011-1014, 1017, 1020-1021.

Mill, James (1773-1836), British philosopher who met Jeremy BENTHAM in 1808 and worked with him towards UTILITARIANISM. He was the father of John Stuart MILL, and wrote an *Analysis of the Phenomena of the Human Mind* in 1829. See also p.1477.

Mill, John Stuart (1806-73), British philosopher who was educated by his father, James MILL - recounted in his *Autobiogra-*

The Mikado is perhaps the most popular of all Gilbert and Sullivan's works.

Milan's Gothic cathedral dominates the heart of the city in stately splendour.

Darius Milhaud belonged to "The Six", an influential group of composers.

Milkfish can survive in waters cold enough to kill most other fish.

Millais, Sir John Everett

Glen Miller's band became the most popular of all dance bands in the 1940s.

Jonathan Miller's talents include those of actor, theatre director and author.

Millipedes, entwined round each other head to head, often mate for hours.

John Milton, hopelessly blind, dictated *Paradise Lost* to his daughters.

phy (1873) – and who advocated UTILITARIANISM. His book *On Liberty* (1859) made him famous as a defender of human rights. *System of Logic* (1843) was an attempt to provide an account of inductive reason. See also pp.1651, 1851, 1882, 1886–1887, 1889.

Millais, Sir John Everett (1829–96), British painter, a founder member of the PRE-RAPHAELITE BROTHERHOOD. His *Christ in the House of his Parents* (1850) was typical of his attention to realistic detail. From 1870 he painted mainly landscapes, such as *Chill October* (1870), and portraits. See also p.1594.

Millar, John (1735–1801), British historian. He wrote *Historical View of the English Government from the Settlement of the Saxons in Britain to the Accession of the House of Stewart* (1787), and was a Whig who sympathized with both the American and French revolutions.

Millay, Edna St Vincent (1892–1950), US poet, who wrote *Renascence* (1912), *A Few Figs from Thistles* (1920), *Second April* (1921) and *The Harp-Weaver and Other Poems* (1923), which won a Pulitzer Prize. She was also a political activist.

Millbank, stretch of the Embankment in London on the N side of the River Thames between Lambeth and Vauxhall bridges. Its name derives from a smock mill. Today the area is largely given over to offices. The Tate Gallery is on the site of the notorious Penitentiary (1812–21) where prisoners awaited transportation.

Millé, Cecil Blount de. See DE MILLE, CECIL BLOUNT.

Millennium, the second coming of Christ for a 1,000-year reign, during which Satan will be bound in a pit, as described in the Book of Revelation (Ch.20). At the end of 1,000 years, Christ will take the kingdom of saints back to heaven with him and Satan will be freed. This belief was popular until the 4th century and then dormant until the RENAISSANCE, when it was embraced by ANABAPTISTS, MORAVIAN Brethren, and FIFTH MONARCHY MEN of 17th-century England and later by 19th-century MORMONS and ADVENTISTS.

Miller, Alton Glenn (1904–44), US jazz trombonist and bandleader. He formed what became the most popular dance band of all time, featuring a distinctive reedy sound and a popular theme song, *Moonlight Serenade* (1939), which Miller composed. He created the famous USAF band in WWII. See also p.1756.

Miller, Arthur (1915–), US playwright, who won a Critics' Circle Award for *All My Sons* (1947) and a Pulitzer Prize for *Death of a Salesman* (1947). His other plays include *The Crucible* (1953), *A View From the Bridge* (1955), *After the Fall* (1964) and *The Price* (1968). See also pp.1773, 1773.

Miller, Henry (1891–), US author. Most of his novels, which were banned until the 1960s in the USA and Britain, were first published in Paris, where he lived between 1930 and 1939. His works include *Tropic of Cancer* (1934), *Tropic of Capricorn* (1939) and *The Air-Conditioned Nightmare* (1945). See also pp.1773, 1773.

Miller, Jonathan Wolfe (1934–), British director. He wrote parts of, and appeared in, *Beyond the Fringe* (1961). His first production for the NATIONAL THEATRE *The Merchant of Venice* (1970). He was appointed its associate director in 1973.

Miller, Johnny (1947–), US golfer. Tall and blond, he won the 1973 US Open Championship, the 1976 British Open, and the World Cup individual and team awards in 1973 and 1975. In 1974 he equalled the US PGA tour record of eight victories.

Miller, Keith Ross (1919–), Australian cricketer who played for New South Wales, Victoria and Australia. He was a fast bowler and an aggressive batsman; a true all-rounder. In 55 Test matches between 1946 and 1956, Miller took 170 wickets at an average of 22.97 and scored 2,958 runs at an average of 36.97.

Miller, Stanley (1930–), US biochemist. In 1953 he carried out the first deliberate attempt to create life, by passing a mixture of AMMONIA, METHANE, water vapour and

HYDROGEN through water which was continuously sparked by a corona discharge.

Millet, Jean-François (1814–75), French painter who specialized in the portrayal of the everyday life of peasants. His first recognized works, *The Milkmaid* and *The Riding Lesson* (both 1844), were favourably received. He later concentrated on rustic scenes, and *The Gleaners* (1857) and *The Angelus* (1859) are typical of his idealistic approach. His paintings of hard work led critics to regard him as a socialist. See also p.1594.

Millet, CEREAL grass that produces small, edible seeds, found in most parts of the world. The stalks have flower spikes and the hulled seeds are white. In the USSR, w Africa and Asia it is a staple food. In w Europe it is used mainly for pasture or hay. Pearl millet (*Pennisetum glaucum*) grows in poor soils and is used as food in India and Africa. Height: 1m (39in). Family Gramineae. See also pp.677, 754.

Millikan, Robert Andrews (1868–1953), US physicist who determined the value of the electronic charge. He was also able to verify EINSTEIN'S photoelectric equation and he found a precise value for PLANCK'S constant. For his work on the electronic charge and the photoelectric effect he was awarded the 1923 Nobel Prize in physics.

Millin, Sarah Gertrude (1889–1968), South African novelist. Her works deal with South African life and include *God's Stepchildren* (1924), *Mary Glenn* (1925), *The South Africans* (1926) and *The Dark Gods* (1931). *General Smuts*, a biography, was published in 1936.

Milling, ore, stage in the treatment of crude ore which mechanically extracts valuable minerals. Primary and secondary crushers grind down large fragments. Fine grinding (comminution) is done with rotating cylindrical mills that contain steel balls, rods or pebbles. The fine powder is then sorted by a variety of methods.

Millionairess, The (1936), four-act play by George Bernard SHAW. An unsuccessful farce, the play was prefaced by an introductory essay about naturally dominant people and the ordering of institutions to thwart them. The play itself deals lightheartedly with the same theme. A film version with Sophia LOREN and Peter SELLERS was directed by Anthony ASQUITH in 1961.

Millipede, any of numerous species of invertebrate arthropod animals found throughout the world. It has a segmented body, one pair of antennae, two pairs of legs per segment and can be orange, brown or black. All species avoid light and feed on plant tissues. Some tropical species squirt a repellent or poisonous secretion from pores in body segments. Length: 2–280mm (0.2–11in). Class Diplopoda. See also pp.34, 306, 311.

Mill on the Floss, The (1860), novel by George ELIOT. The theme of purification through personal trials is nowhere more evident than in this work. Maggie Tulliver, sensitive and intelligent, but dominated by her brother Tom, renounces her own chances of happiness for the general good.

Mills, Frederick ("Freddie") (1919–65), British light-heavyweight boxer. He began to fight as a professional at the age of 16, became British light-heavyweight champion in 1942 and was narrowly defeated by Gus Lesnevitch, the world champion, in 1946. Mills beat Lesnevitch in 1948 to take the world title and was defeated by Joey Maxim in 1950.

Mills, Sir John (1908–), British actor. He became established in the 1930s by such films as *Goodbye Mr Chips* (1939) and played a succession of military roles in films which included *In Which We Serve* (1942) and *This Happy Breed* (1944). In later years he developed character parts such as the idiot in *Ryan's Daughter* (1971), for which he won an Oscar.

Milne, Alan Alexander (1882–1956), British essayist, dramatist and author of children's books. For his young son Christopher Robin he wrote the verses in *When We Were Very Young* (1924) and *Now We Are Six* (1927), and the stories in *Winnie-the-Pooh* (1926) and *The House at Pooh Corner* (1928).

Milne, Edward Arthur (1896–1950), British cosmologist. He postulated kinematic relativity, an alternative to EINSTEIN'S GENERAL THEORY OF RELATIVITY, based on time measurement rather than space.

Milne, John (1850–1913), British geologist whose invention of the SEISMOGRAPH in 1880 helped to found the science of SEISMOLOGY. He helped to establish many seismicological stations, particularly those for recording earthquakes in Japan. His books include *Earthquakes* (1883) and *Seismology* (1898).

Milner, Alfred Milner, 1st Viscount (1854–1925), British imperial administrator. He was High Commissioner and then Governor of South Africa (1897–1905), and his determination to establish British dominance over the BOERS helped precipitate the SOUTH AFRICAN WAR (1899–1902). As a cabinet minister (1916–21) he formed the unified Allied command in 1918.

Milosz, Czesław (1911–), Polish poet and novelist, b. Lithuania. His novels *Dolny Issy* (*The Valley of the Issa*, 1955–57) and *Zdobycie Wkady* (*The Usurpers*, 1955) demonstrate a critical self-awareness. *Zniewolony umysł* (1953; tr. *The Captive Mind*, 1962) analyses the effects of Communism on contemporary writers. His post-war poetry includes *Światło dzienni* (1953) and is collected in *Selected Poems* (1973).

Milstein, Nathan (1904–), US violinist, b. Russia. He studied in Moscow with Leopold AUER, made his first concert tour of Russia in 1923 and appeared in the USA in 1929. His many recordings include the six sonatas for violin composed by J. S. BACH.

Miltiades (c.554–489 BC), Athenian nobleman and son of Cimon, credited with the plan to meet the Persians at the Battle of MARATHON in 490 BC.

Milton, John (1608–74), English poet and prose writer. He travelled widely in Europe between 1638 and 1639 and served as Latin secretary to the Commonwealth government (1649–60). In 1652 he became blind. His work is characterized by Latinized language and grandeur of imagery. His theology was unconventional, based on the section ideas prevalent in the 1640's. His greatest works are *L'Allegro* and *Il Penseroso* (both 1632), *Comus* (1634), *Lycidas* (1637), *Areopagitica*, a *Speech* (1644), *Paradise Lost* (1667), *Paradise Regained* (1671) and *Samson Agonistes* (1671). See also pp.1416–1417, 1424.

Milton Keynes, town in Buckinghamshire, s central England, 32km (20 miles) s of Northampton; established in 1967 under the New Towns Act. It is the headquarters of the OPEN UNIVERSITY (1961), and light industry is developing. Pop. (1981 est.) 121,400.

Milwaukee, city and port of entry in SE Wisconsin, USA, on the w shore of Lake Michigan. The North West Company established a fur-trading post there in 1795. Milwaukee was founded in 1836 and, during the second half of the 19th century, received many German settlers. There is a college of the University of Wisconsin (1908) in the city. Industries include diesel and gas engines, construction and electrical equipment, brewing. Pop. (1980) 1,397,143.

Mimas, one of the inner four satellites of the planet Saturn. It is 185,590km (115,270 miles) from Saturn and has a diameter of 500km (310 miles). Its mean sidereal period is less than one day. The satellite has a low density and is thought to be composed of ice. See also pp.962, 965, 965.

Mime, in drama, the communication of mood, story and ideas by the use of gestures, movements and facial expressions, with no verbal communication. Its antecedents lie in Greek and Roman theatrical traditions and the COMMEDIA DELL'ARTE, although modern mime derives mainly from the performances of the first great French mime artiste, Jean-Baptiste-Gaspard Debureau (1796–1846). The art was further developed by Etienne Decroux (1898–) into an organized language of physical expres-

sion. His pupils, who included Jean-Louis BARRAULT and Marcel MARCEAU, consolidated mime's status, both as an art form in its own right and as a factor in dramatic training.

Mimeograph, type of duplicator for making many copies. It consists of a frame in which a stencil is stretched and an inking roller for pressing ink through the porous lines of the stencil on to paper. *See also* p.616.

Mimicry, form of animal protection in which the mimic, generally a harmless edible species, imitates the warning shape or coloration of a "model", a poisonous or dangerous species. When coloration increases an animal's chances of survival, it is commonly referred to as **PROTECTIVE COLORATION**. Batesian mimicry, named after the British naturalist Henry BATES, is exemplified by HOVERFLIES, which mimic inedible wasps; similarly, the VICEROY BUTTERFLY imitates the inedible MONARCH BUTTERFLY. The less common Müllerian mimicry, named after the German naturalist Fritz Müller, involves two or more harmful species that share a similar pattern, thus reinforcing it as one of the warnings to predators. A third form is aggressive mimicry, in which a predatory or parasitic species resembles a harmless one, thus allowing the former to remain undetected by its prey or host.

Mimir, in Norse mythology, wisest of the gods and keeper of wisdom. His tribe, the AESIR, sent him as a hostage to the rival VANIR, who killed him. Mimir's head was preserved by ODIN, who used it as a source of knowledge. In another story Mimir demanded an eye from Odin in return for a drink from the well of wisdom.

Mimosa, genus of plants, shrubs and small trees native to tropical North and South America. They have showy, feather-like leaves and heads or spikes of white, pink or yellow flowers. Family Mimosaceae. *See also* p.357.

Minaret, tower, usually part of a MOSQUE from which MUSLIMS are called to prayer by a MUEZZIN. The earliest minarets were built in Egypt c.673 as low square towers; later Persian developments included covered balconies and extensive tiling.

Minas, city in SE Uruguay; capital of Lavalleya department. Founded in 1783, the city was named after its granite and marble quarries. It is noted for its mineral waters and is a resort area for Montevideo, to which it is connected by the Pan-American Highway. Pop. 31,000.

Minas Gerais, state in SE Brazil; the capital is Belo Horizonte. It was declared a province in 1822 and a state of the federal republic in 1891. Located on a plateau, it has a subtropical climate and many resorts and thermal springs. Minas Gerais is also rich in mineral deposits. Its products include coffee, pasture grass, maize, rice and cassava. Area: 587,171sq km (226,707sq miles). Pop. (1980 est.) 13,688,900.

Minch, The (North Minch), arm of the North Atlantic ocean separating the islands of the Outer Hebrides from the NW coast of Scotland. Width: approx. 56km (35 miles).

Mind, hypothetical concept postulated to account for the thoughts and behaviour of conscious beings that cannot be accounted for in terms of purely physical phenomena such as the BRAIN and brain processes. Philosophers such as René DESCARTES distinguish between mind and matter, two totally independent entities. Some hold the world to be a product of the mind, whereas others hold it to be all matter. There are difficulties with all of these views, and Gilbert RYLE has proposed that the separate concepts of mind and matter are due to semantic confusion and that there is no essential difference between the two.

Mindanao, second-largest island of the Philippines; Davao is the most important city and port. The island is mountainous and has extensive forests. Products: coconuts, mahogany, iron ore, pineapples, hemp. Area: 94,631sq km (36,537sq miles). Pop. (1970) 7,292,691.

Minden, Battle of (1759), engagement in the SEVEN YEARS WAR (1756-63), fought

near the town of the same name in NW Germany. Anglo-Hanoverian forces under Ferdinand of Brunswick routed a larger French army under the Prince de Broglie. The French were thereafter unable to influence events in Germany during the rest of the war.

Mindszenty, József, Cardinal (1892-1975), Hungarian Roman Catholic prelate. An outspoken opponent of Nazism and Communism, he spent much of his life in jail or self-imposed confinement. He was released briefly by the revolutionaries during the 1956 Hungarian uprising. With the return of Communist power he sought asylum in the US legation in Budapest. He left the legation in 1971 to live in Rome. *See also* p.1725.

Mine, excavation from which minerals (mainly coal and metal ores) are extracted. Underground mines are of two main types: shaft mines and drift mines. Shafts are sunk vertically in the Earth's crust until they reach the depth of the seams to be exploited, which are reached by tunnels, or galleries. The gold mines of South Africa, the world's deepest mines, are shaft mines. Drift mines are generally shallower, the seams being reached by a drift, or gradually sloping shaft, which leads on to a gallery system. In open-cast mining the seams are near or on the surface and are exposed by giant dragline machines which dig away the topsoil; this is also called strip mining. *See also* COAL-MINING; pp.436-437.

Mine, concealed or buried explosive device detonated through contact with individuals or vehicles. Underwater mines are used either to protect or to blockade coastal areas. *See also* p.583.

Mineralization, FOSSIL-forming process whereby preserved hard parts of plants and animals are altered by the minerals in the soil. Circulating water dissolves certain constituents of bones and shells, which are replaced by silica, iron or other compounds. This replacement can be so exact as to preserve the finest structures. *See also* pp.262-268.

Mineralogy, investigation of naturally occurring inorganic substances found on Earth and elsewhere in the Solar System. Major subdivisions are CRYSTALLOGRAPHY, which studies the composition and atomic arrangement of minerals; paramagnetic mineralogy, which deals with the associations and order of crystallization of minerals; descriptive mineralogy, concerned with the physical properties used in identification of minerals; and taxonomic mineralogy, the classification of minerals by chemical and crystal type. *See also* GEO-CHEMISTRY; PETROLOGY; pp.256-261.

Mineraloid, mineral substance that is non-crystalline or amorphous. Its origin can be that of a gel, ie a colloidal precipitate such as opal; by cooling so rapidly that crystallization could not occur, eg volcanic glass; or its original crystal structure by the disruption of radioactivity. *See also* MINERALS.

Mineral oil, also called liquid paraffin and liquid petrolatum, colourless liquid without taste or smell, distilled from PETROLEUM. It is used as a lubricant, and as a solvent in the manufacture of plastics. It is also used medicinally as a laxative.

Minerals, natural, homogeneous and with a few exceptions, solid and crystalline materials that form the Earth and make up its ROCKS. Most are formed through inorganic processes, and more than 3,000 minerals have been identified. They are classified on the basis of a chemical make-up, crystal structure and physical properties such as hardness, specific gravity, cleavage, colour and lustre. Some minerals are economically important as ORES from which metals are extracted. *See also* pp.256-261.

Mineral waters, originally natural waters valued for their mineral content, now also used to describe carbonated drinks containing salts or various flavourings. "Medicinal waters" from many famous spas were (and still are) bottled and sold. They are classified according to location, use and chemical content. Synthetic mineral waters were developed to imitate natural ones.

Minerva, Roman goddess of the arts, professions and handicrafts, whose cult is believed to have originated in Etruria. She was often identified with the Greek goddess ATHENA, and so became goddess of wisdom and later of war. She was honoured at the festival called the Quinquatria, held annually on 19 March.

Mines Acts, series of acts of the British Parliament regulating conditions and hours of employment in collieries. The first act, passed in 1842, was an early milestone in the growth of state involvement in industry. It was based on the report of the Royal Commission on the Employment of Children in Mines (1840), whose description of children and women suffering underground stirred the public conscience. It was also the work of the Tory reformer Lord Ashley, later Earl of SHAFTESBURY. The act prohibited the employment of women and children underground and the employment of boys under the age of 10. It appointed inspectors to enforce the act and to furnish the Home Office with reports. In 1860 the age limit for boys as enginemen was raised to 18 years. In the mid-19th century there was also a series of acts passed to improve conditions of safety in the mines. The next important act was passed in 1908. It limited the underground shift to eight hours a day. It was the first law to regulate hours of labour for adult men.

Mingan Islands, group of 15 small islands and numerous islets in the St Lawrence River N of Anticosti Island in E Quebec, Canada. They were discovered by Jacques CARTIER in 1535 and purchased by the HUDSON'S BAY COMPANY in 1836.

Ming dynasty (1368-1644), the last of the great Chinese dynasties before the conquest of China by the MANCHUS. The first Ming emperor, CHU YUAN-CHANG (r.1328-98), expelled the Mongol YUAN dynasty and had unified all of China proper by 1382. The Ming brought a period of cultural and philosophical advance during which China influenced many adjacent areas, including Japan. Great seagoing expeditions were launched to the S and W, reaching the E coast of Africa. Peking was laid out in its present form, and the traditional bureaucracy was reinforced. In the later years of the dynasty, however, a growing population, corrupt officials and weak emperors incited revolts among peasants in the border regions, thereby preparing the way for the Manchu conquest of China. *See also* pp.1261, 1356, 1356.

Mingus, Charles (1922-79), US jazz bass-player and composer, who started leading his own bands in the 1950s. He is well known for his experiments with atonality and impressionism, and his best-known work is *The Black Saint and the Sinner Lady* (1963). His autobiography, *Beneath the Underdog*, appeared in 1971.

Miniature bull terrier, smaller version of the BULL TERRIER, evolved from small bull terriers and the old toy bull terrier. Height: to 36cm (14in) at the shoulder.

Miniature painting, term which originally meant the art of manuscript illumination but was later applied to very small paintings, usually portraits. The earliest miniatures, dating from the late 15th century, were executed in the same materials as illuminated manuscripts - gouache paint on vellum or card - but from the 18th century miniaturists usually painted in water-colour on ivory and sometimes worked in oils on metal. After the mid-19th century the art of miniature painting declined. Famous miniaturists include HOLBEIN THE YOUNGER, NICHOLAS HILLIARD, ISAAC OLIVER and Richard COSWAY in England, Jean and François CLOUET in France and Friedrich Heinrich Füger (1751-1818) in Germany.

Miniature pinscher, small terrier-like dog. It has a small narrow head, a straight, tapering muzzle and erect or drooping ears. The deep-chested body is set on straight, muscular legs and the tail is commonly docked. The smooth, hard coat may be red, black or brown, often with tan markings. Height: to 30cm (12in) at the shoulder.

Miniature poodle, medium-sized breed of POODLE, a dog that is believed to have ori-

ginated in Germany; the other sizes are standard and toy. It has a small head and a fine muzzle. The slender body is set on delicate legs and the tail is short and erect. The soft, profuse coat, which is curly and fluffy, may be any solid colour. Height: to 38cm (15in) at the shoulder.

Miniature schnauzer, small breed of SCHNAUZER dog. It has a square head, a box-like whiskery muzzle, pricked V-shaped ears and a sturdy neck. The straight body is set on muscular legs and the tail is commonly docked. The wiry coat may be all black or white and grey. Height: to 35cm (14in) at the shoulder.

Miné, Claude-Étienne (1804-79), French army officer who invented the Minié rifle in 1849. His development of the cylindrical bullet solved the problem of rifling a muzzle-loading FIREARM, causing the bullet to spin in flight. The rifle was adopted by the armies of Europe and used in the American Civil War (1861-65).

Minimal art, 20th-century school which claims that anything on a canvas is a painting, any object a work of art. Its sources were MALEVICH's *Black Square on a White Ground* (c.1913) and DUCHAMP's exhibition of objects such as the urinal of 1917, called *Fountain*. The school developed an anonymity of line and form, often highly coloured, shown by painters such as Frank STELLA.

Minimata disease, type of poisoning by MERCURY, so-called because it first occurred (1950s) in people living near Minimata Bay, Japan. It affected people who had eaten fish that had absorbed methyl MERCURY, a component of the POLLUTION of the waters of the bay by industrial effluent. Symptoms include anaemia, tremors and paralysis; it can be fatal (in the original outbreak, nearly 50 people died). *See also* pp.762, 763.

Minimum lending rate. *See* MLR.

Mining, the process of obtaining metallic and non-metallic materials from the Earth's crust. Included are underground, surface, and underwater methods. Mining mostly involves the physical removal of rock and earth. Petroleum, gas, and some sulphur are extracted by techniques which are different from those which would normally be put under the heading "mining". Any mining operation comprises four stages: prospecting, exploration, development and exploitation. Once a valuable deposit has been found and delineated, decisions are made on modes of entry, subsidiary developments and removal techniques. In underground mining, various methods are employed to obtain minerals buried deep in the ground. Access may be through oblique or vertical shafts or horizontal tunnels. Cross cuts are made at various levels and the ore body is divided into blocks by vertical "raises" that connect different levels. The ore is broken up by the use of hand tools, blasting or machinery. Coal, potash and rock salt are generally mined by the room and pillar method in which haulageways open into rooms supported by tenant rock. Underwater mining is done by the use of large conveyor belts which are capable of bringing to the surface many tonnes of material each minute. The parent ships sift the material and deposit the unwanted material overboard. *See also* pp.410-414, 436-437, 458-459.

Ministerial responsibility, British constitutional doctrine which holds that ministers in a government are answerable for their actions and the legislation which they introduce to the House of Commons. The idea evolved gradually in Britain in the 18th and 19th centuries, along with the rise of the CABINET system. It meant that ministers were no longer the servants of the Crown, except in name only, but the servants of the Commons. As a result a government defeated on a major issue in the Commons usually feels compelled to ask for a dissolution of Parliament or to resign. The idea has spread to other countries with a parliamentary system based on the British model.

Mink, small semi-aquatic mammal of the WEASEL family with soft, durable water-repellent hair of high commercial value. Old World minks (*Mustela lutreola*)

Minkowski, Hermann

resemble American minks (*Mustela vison*), but do not have such valuable fur. They have long, slender bodies, short legs, and long, bushy tails. Wild minks have dark brown fur with long black outer hair. Ranch mink have been bred to produce skins of silver, pastels and variations of natural shades. They eat fish, rodents and birds. Length to: 73cm (29in) including the tail; weight: 1.6kg (3.5lb). Family Mustelidae. See also p.305.

Minkowski, Hermann (1864-1909), Russian-German mathematician who contributed to the mathematical foundations of EINSTEIN'S work on RELATIVITY and was the discoverer of space-time.

Minneapolis, city and port of entry on the Mississippi River, in SE Minnesota, USA; largest city in Minnesota. Settled in c. 1839, it was developed as a timber centre. When the plains were planted with wheat and the railways were constructed, the city became and remains a leading milling centre. Minneapolis is the seat of the University of Minnesota (1851). Industries include farm machinery, food processing, electronic equipment, printing and publishing, fabricated metals and textiles. Pop. (1980) 2,114,256.

Minnelli, Liza (1946-), US singer and actress, the daughter of Judy Garland and Vincente MINNELLI. Her films include *Charlie Bubbles* (1967), *Tell Me That You Love Me*, *Junie Moon* (1970), *Cabaret* (1972) and *New York, New York* (1977).

Minnelli, Vincente (1913-), US film director and producer whose best work has been in musicals, notably *Meet Me in St Louis* (1944), *An American in Paris* (1950), *The Band Wagon* (1953) and *Gigi* (1958). His other films include *Tea and Sympathy* (1956) and *Some Came Running* (1958).

Minnesingers, medieval German poets or singers of courtly love (or Minne), similar in style to the Provençal TROUBADOURS whom they copied originally. An individual German style developed in the 14th century however, and several of the poems are considered the best of Middle High German lyric verse.

Minnesota, state in N central USA, on the Canadian border. The terrain varies from the prairies of the S to the forests of the N. There are mountains in the E. The state is drained chiefly by the Minnesota, St Croix and Mississippi rivers. Wheat and maize are the major crops, grown on the prairies, and there are many farms raising dairy cattle. Since the 1950s manufacturing has replaced agriculture as the main economic activity. Food processing, electronic equipment, machinery, paper products, chemicals, printing and publishing are the chief industries. There are rich deposits of iron ore in the Mesabi Range in the E. The most important cities are St Paul (the state capital), Minneapolis and Duluth.

French fur traders entered the region in the 17th century. The area E of the Mississippi passed to Britain after the SEVEN YEARS WAR, then to the USA after the American War of Independence. The lands W of the Mississippi were acquired from France in the LOUISIANA PURCHASE of 1803. The Minnesota Territory was organized in 1849. Homesteaders from Germany, Norway and Sweden settled the area during the 1880s, after which the state grew rapidly. Area: 217,735sq km (84,067sq miles). Pop. (1977 est.) 4,019,000. See also p.2161.

Minnow, subfamily of freshwater fish found in temperate and tropical regions. The family includes shiners, dace, chub, tench and bream. More specifically, the term includes small fish of the genera *Phoxinus* and *Leuciscus*. Length: 3.8-45.7cm (1.5-18in). Family Cyprinidae. See also p.328.

Minoan civilization (flourished c.3000-c.1200 BC), ancient Cretan culture, named after the legendary King Minos. Its capital, Knossos, was twice destroyed by earthquakes and rebuilt. Its palaces were among the finest in the world, particularly those at Knossos, Phaistos, Gournia and Cyclonia. The civilization has been divided into three periods: early (c.3000-2100 BC), middle (c.2100-1550 BC) and late (c.1550-c.1100 BC). The

whole period saw the development from the use of neolithic implements to an advanced system of mercantile trade which, at the height of Minoan influence, extended throughout the Mediterranean area. Two scripts were developed, the "A" and the "B", and a distinctive pottery has since been found throughout the island; the Minoans also became skilled in metalworking. The end of the civilization was probably caused by an earthquake, followed by an invasion by the Mycenaeans. See also pp.610, 610, 1170-1172, 1170-1171, 1904.

Minor, in English law, person under 18 years of age. A minor cannot vote at elections, nor hold freehold or leasehold property, nor be made bankrupt. He cannot make a valid will nor a valid marriage without the consent of his parent or guardian. Contracts entered into by a minor may be repudiated by him up to a reasonable time after reaching his majority.

Minor, in music, two kinds of diatonic scale, in distinction to the MAJOR scale. In the harmonic minor scale, the intervals of the third and the sixth above the tonic are minor intervals, a semitone lower than those corresponding in the major scale. The other interval series is the melodic minor scale, which raises the sixth degree of the harmonic minor scale by one semitone in the ascending form and lowers both the seventh degree (leading note) and the sixth degree in the descending form. See also KEY.

Minorca, Spanish island, second largest of the Balearic Islands, in the Mediterranean Sea, approx. 40 km (25 miles) NE of Majorca; the capital is Mahón. Occupied at different times by the Carthaginians, Romans and Vandals, it was conquered by James I of Aragón in the 13th century, captured by the British in 1709 and taken by the French in 1756. It was returned to Spain by treaty in 1783. Its products include fruit and vegetables. Tourism is a valuable source of income. Area: 702sq km (271sq miles). Pop. (1970) 50,217.

Minos, in Greek mythology son of EUROPA and ZEUS, King of Crete and a famous law-giver, consigned at his death to HADES to judge human souls. He angered POSEIDON who, in revenge, caused the king's wife Pasiphaë to mate with a bull. She duly gave birth to the monstrous MINOTAUR, half man, half bull, who was kept in the LABYRINTH. See also THESEUS.

Minot, George Richards (1885-1950), US physician. He shared the 1934 Nobel Prize in physiology and medicine with George Hoyt Whipple and William Parry Murphy for discovery of a liver therapy diet to combat pernicious ANAEMIA.

Minotaur, in Greek mythology, beast with the head of a bull and the body of a man, the issue of Pasiphaë, wife of MINOS, and a bull. He was confined by Minos in the LABYRINTH built by DAEDALUS. A tribute of seven youths and seven maidens, who were to be fed to the minotaur, was exacted by Minos from many Greek cities. The minotaur was killed by THESEUS.

Minsk, capital city of Belorussia (Belorusskaja SSR), USSR, on the River Svisloč, 644km (400 miles) WSW of Moscow. Founded c.1060, it became part of Russia in 1793. Industrial development began in the 1870s and Minsk is now one of the largest manufacturing centres in the country. Products include textiles, machinery, and cement. Pop. (1979) 1,276,000.

Minster, old name for a monastery church, abbey or priory church. The term is often retained after the disappearance of the monastic foundation; an example is Westminster Abbey. It may also apply to a large church or cathedral, such as York Minster, which has no traceable monastic connections.

Minstrels, itinerant musicians and professional entertainers; more specifically, secular musicians, usually instrumentalists. The term minstrel replaced the earlier Provençal JONGLEUR in the 14th century. Minstrels were popular from the 12th to 17th centuries, and some were attached to courts. Most of their music was based on memory and improvisation, and consequently little of their music has survived. In the 14th and 15th centuries, their social

importance is reflected in the number of minstrel guilds which were formed throughout Europe. In the 20th century singers and banjoists with blackened faces have been known as minstrels.

Mint, in botany, any of numerous species of aromatic herbs, with a characteristic flavour, of the genus *Mentha*. It is commonly used as a flavouring in cooking, confectionery and medicines. The leaves may be used whole, chopped or dried, or an extract added for its flavour. Most species have oval leaves and spikes of purple or pink flowers. Family Labiateae. See also PEPPERMINT; pp.371, 708-709.

Mint, Royal, British government department responsible for providing money for circulation in the United Kingdom. A mint had existed in London since Anglo-Saxon times. In about 1300 it was situated in the Tower of London, and in 1325 its officers were incorporated by Royal Charter. Contractors continued to be employed until 1851, when the Mint became a government department. In 1810-11 it was removed to Tower Hill but since 1968 has been located at Llantrisant, near Cardiff, Wales, manufacture beginning in 1969 - although Tower Hill continued to produce coins until 1975. The Chancellor of the Exchequer is *ex officio* Master of the Mint, which is administered on a daily basis by the Deputy Master and the Royal Mint Advisory Committee.

Minto, Gilbert John Elliot-Murray-Kynynmound, Earl of (1845-1914), British statesman. He was Governor-General of Canada (1898-1904) and Viceroy of India (1905-10). With John MORLEY he began the change to Indian self-rule in their reforms of 1909.

Mintoff, Dominic (1916-), Maltese politician. He helped to reorganize the country's Labour Party in 1944 and was first elected to the legislative assembly in 1947. He became leader of the party in 1949 and was first Prime Minister in 1955-58. He was again elected Prime Minister in 1971.

Minton, Thomas (1765-1836), first of a famous family of potters, born in Shropshire. He worked as an engraver with SPODE in London before settling in Stoke-on-Trent, where in 1793 he founded his own pottery. He was the first to engrave the famous willow pattern, adapted from the Chinese.

Minuet, French dance originally from Poitou, fashionable at the court of LOUIS XIV from 1650. It is played in triple time, and consists of graceful and precise glides and steps. It became popular as a dance in the 18th century and was a familiar movement in the SUITES of composers such as HANDEL and MOZART.

Minutemen, colonial militiamen or armed civilians who, in the War of American Independence, agreed to muster at a minute's notice. The term is used especially for those men who were enrolled in 1774 for this purpose by the Massachusetts provincial congress and who fought at LEXINGTON and CONCORD (1775).

Miocene, geological epoch beginning about 26 million and ending about 7 million years ago. It falls in the middle of the Tertiary period and is marked by an increase in grasslands over the globe at the expense of forests and the development of most of the modern mammal groups. No British Miocene deposits are known, although some folding took place caused by the rising of the Alps to the south. See also p.287.

Miquelon Islands. See SAINT PIERRE AND MIQUELON.

Mirabeau, Honoré Gabriel Riqueti, Comte de (1749-91), French political figure who became leader of the Third Estate (bourgeoisie) in 1789. He later tempered his opposition to the court and was President of the National Assembly when he died.

Mira Ceti (Omicron Ceti), red giant star in the constellation of Cetus. It is a long-period variable star with an average period of 331 days, and a range of magnitude from 1.7 to 4 at maximum to 10 at minimum. Mira Ceti is the most celebrated long-period variable. See also pp.991, 991, 1016-1017, 1017.

Miracle, sudden and inexplicable change in the physical circumstances of either a person or an object. Nearly always beneficial to someone, miracles are attributed to the power of God, although in both Christianity and Judaism a human agent is generally involved (eg Jesus or the Old Testament prophets). Many scientific "explanations" of miracles, particularly those of the Old Testament, ignore the fact that for almost every miracle recorded the precise timing of the event, and its significance, was critical for the people concerned.

Miracle in the Gorbals (1944), one-act ballet set in the Gorbals slums of Glasgow. The music is by Sir Arthur Bliss and choreography by Sir Robert Helpmann, and it was first performed in London by the Sadlers Wells Ballet, with sets designed by Edward Burra. The "miracle" occurs when Christ is reincarnated in modern society to experience again His Passion and death.

Miracle plays. See MYSTERY PLAYS.

Miraculous Mandarin (1919), pantomime ballet written by Béla BARTÓK; it was first performed in 1926 in Cologne. Stylistically, it owes much to the ballets of STRAVINSKY, but Bartók was already using folk elements in his music.

Mirage, image (often inverted) sometimes seen near the Earth's surface when light is refracted (bent) as it passes between cool dense air to warmer, less dense air. Mirages are most commonly seen as a shimmering on hot, dry roads; the shimmer is a refracted image of the sky. On rare occasions objects such as buildings and trees, situated over the horizon, can be seen as a mirage. See also p.856.

Miranda, Carmen (1904-55), US film actress, dancer and singer. She was famous for her bizarre costumes, particularly her headgear, which was often fashioned from several layers of fruit. Her films include *That Night in Rio* (1941) and *Copacabana* (1947).

Miriam, in the Bible, sister of MOSES and AARON. She was a prophetess, and is said to have been the sister who watched over the baby Moses until he was found in the bullrushes by the pharaoh's daughter. She became leprosy for criticizing the marriage of Moses to a Cushite woman, but was later healed.

Miró, Joan (1893-), Spanish painter and graphic artist, a leading exponent of abstract SURREALISM. Many of his works are extremely delicate and simple, free patterns of shapes and lines, influenced by Paul KLEE, and executed with wit and imagination. Famous among his paintings are *Harlequin's Carnival* (1925) and *Women and Bird in the Moonlight* (1949).

Mirror, highly polished surface which, because of the laws of REFLECTION, produces an image of objects in front of it. Most mirrors are made of glass "silvered" on one side with silver, mercury or aluminium. They can be flat (plane) or curved (spherical or paraboloidal). Plane mirrors produce an inverted, virtual image that is unmagnified. Spherical mirrors may be concave (caving inwards) or convex (bulging outwards). The image can be right-way-up or inverted, real or virtual, depending on the position of the object in relation to the focal point of the mirror; it may also be either magnified or reduced in size. A spherical mirror suffers spherical ABERRATION which is absent in a concave paraboloidal mirror, as used in reflecting telescopes. See also p.852-853.

Misanthrope, The (1666), psychological comedy by MOLIÈRE. A drawing-room discussion of openness and plain speech turns against its protagonist, because plain speech, without good temper, proves worse than mere politeness. In the original production Molière himself played the part of Alceste, the misanthrope, and his wife Armande took the part of Célimène, the woman he loves.

Miscarriage, common term for a natural (spontaneous) ABORTION, the loss by a woman of a fetus from her womb before it is sufficiently developed to survive.

Miscegenation, interbreeding of human beings of different racial origins. Although modern anthropology has

largely discounted myths about its injurious genetic effects, it is still taboo in many societies and in some it is illegal.

Miser, The (1668), prose comedy by MOLIÈRE which was censured by ROUSSEAU as immoral. It demonstrates the follies of avarice through the story of an old miser, Harpagon, who for financial reasons interferes with his children's marriage plans. The plot turns on a scene in which Harpagon is robbed of his money.

Miserables, Les (1862), novel by Victor HUGO. The central character is a convict, Jean Valjean, who has been sentenced to the galleys for stealing bread for his sister's starving family.

Misericord, a church architecture, a wooden bracket attached to the underside of a hinged seat in the choir stalls. When the seat is turned up, the misericord projects outwards providing support for a choir member or priest during a lengthy performance. Common in medieval churches, they were frequently humorously or grotesquely carved.

Mishima, Yukio (1925-70), Japanese author. His novels, short stories, plays and essays reveal his obsession with beauty and violence. An early novel, *Confessions of a Mask* (1949), is a partially autobiographical study of homosexuality. His final work, the four-volume *The Sea of Fertility* (1970), is an epic of modern Japan. He committed ritual suicide in 1970 at Tokyo's military headquarters. See also p.1775.

Mishnah, collection of Jewish legal traditions and moral precepts that form the basis of the TALMUD. The Mishnah was compiled in about AD 200 under Rabbi Judah ha-Nasi. It is divided into six parts: laws pertaining to agriculture; laws concerning sabbath, fasts and festivals; family laws; civil and criminal laws; laws regarding sacrifices; and laws concerning ceremonial regulations.

Miskolc, city in NE Hungary, on the River Sajó. An important industrial centre, it has a variety of industries including iron and steel-milling and mining for lignite. Miskolc is also the site of a 13th-century Gothic church. Pop. 193,000.

Missal, Roman Catholic service book, containing the text to be said or sung by priests, choir and congregation during the celebration of MASS throughout the year.

Missiles, unmanned and self-propelled flying weapons, powered by ROCKET, RAMJET or TURBOJET. Ballistic missiles travel in the outer atmosphere and can be powered only by rockets. Cruise missiles travel in the lower atmosphere and can be powered by jet engines. GUIDED MISSILES carry self-contained guidance systems or can be controlled by radio from the ground. Unguided missiles are free-flying, with no control other than initial aim and amount of fuel. See also FLYING BOMB; pp.563, 569, 572-573.

Missionary Societies, organizations for the promotion of Christianity among non-Christians. The first such society was established in New England in 1649, but of greater importance was the Society for Promoting Christian Knowledge (1698), which was helped in its foreign commitments by the Society for the Propagation of the Gospel in Foreign Parts (1701). In the 18th century both the Baptists and Methodists established societies, and the 19th century saw the emergence of interdenominational and geographically specialized societies. The International Missionary Council was formed in 1921. See also pp.1616-1617.

Mississippi, state in s central USA, on the Gulf of Mexico. The land slopes down from the hills of the NE to the Delta, a fertile plain between the Mississippi and Yazoo rivers. Pine forests cover most of the s section of the state as far as the coastal plain. Primarily an agricultural state, Mississippi is the leading producer of cotton in the USA; hay and soya beans are also grown. Dairy farming is of great importance. There are valuable reserves of oil and natural gas. The TENNESSEE VALLEY AUTHORITY has helped to introduce new industries to the area, including clothing, wood products, and chemicals. The major cities are Jackson (the state capital), Meri-

dian, Biloxi, Vicksburg and Laurel.

The French claimed the region in 1682, but it passed to Britain after the SEVEN YEARS WAR. The Territory of Mississippi was organized in 1798. The state seceded from the Union in 1861, and Jefferson DAVIS, a Mississippi state senator, became president of the CONFEDERATE STATES. The state was a battleground during the AMERICAN CIVIL WAR and the damage to the economy took decades to repair. Area: 123,584sq km (47,716sq miles). Pop. (1980) 2,520,638. See also pp.1628, 1629, 2161.

Mississippi, river in central USA. It rises in NW Minnesota and flows SE, forming many state boundaries along its course, to enter the Gulf of Mexico in SE Louisiana. With the MISSOURI, it forms the third-longest river system in the world. Its chief tributaries include the Ohio, Missouri, Arkansas and Tennessee rivers. A major transportation route for raw materials and finished goods, it is connected to the GREAT LAKES and the ST LAWRENCE SEAWAY (N) and the Intracoastal Waterway (E). Discovered by Hernan De soto in 1541, it was acquired by the USA in the LOUISIANA PURCHASE of 1803. Since the 1950s improvements have been made to the river's channels, enabling bulkier freight to be transported. The river's upper course freezes over during winter months and springtime flooding is still a major problem. Length: approx. 3,780km (2,348 miles). See also p.208.

Mississauga, residential and industrial suburb of Toronto in SE Ontario, Canada, at the W end of Lake Ontario. It is also a transport centre, and has port facilities and Toronto's international airport. Industries include aircraft, steel, petroleum products, rubber and chemicals. Pop. (1971) 156,070.

Miss Julie (1888), naturalistic one-act play by August STRINDBERG. It explores with great insight a duel in rank and sex between Fröken Julie and the butler-valet of her country house during one Midsummer Eve's Night. First performed in 1889, it runs continuously for 90 minutes with a balletic interlude as part of the action.

Missolonghi (also called Mesolóngion), town in W central Greece, on the Gulf of Patras. It was an important stronghold in the Greek War of Independence, and eventually fell to Ottoman troops after two sieges (1822-23 and 1825-26). The British poet, BYRON, who sympathized with the Greek fighters, died there of fever in 1824.

Missouri, state in central USA, W of the Mississippi River. To the N of the Missouri River is prairie country, where farmers grow corn and raise livestock; S of the river are the foothills and plateau of the Ozark Mts. In the SW is a small wheat-growing area of the Great Plains, and in the SE are the cotton fields of the Mississippi floodplain. Other farm produce includes soya beans, hay and pigs. Mineral resources include coal, lead, zinc and iron ore. Missouri's economy is based on manufacturing. Major industries are transportation equipment, food processing, chemicals, printing and publishing, fabricated metals and electrical machinery. The state capital is Jefferson City and the largest cities are Saint Louis, Kansas City and Springfield.

The French were the first to settle the area in the mid-18th century. The USA acquired the region in the LOUISIANA PURCHASE of 1803. The Louisiana Territory was organized in 1812 and during the next few decades became a main corridor of westward migration. Missouri was admitted to the Union in 1821 without restrictions on slavery, but when the AMERICAN CIVIL WAR began sympathies were bitterly divided and there was much violence. The state remained in the Union. Area: 180,455sq km (69,674sq miles). Pop. (1980) 4,917,444. See also pp.1628, 2161.

Missouri, river in central and NW central USA. It rises at the confluence of the Jefferson, Madison, and Gallatin rivers in S Montana, flows E to central North Dakota, S across South Dakota, and E across Missouri to join the Mississippi River just N of St Louis. It is the chief tri-

butary of the Mississippi, and the longest river in the USA. Sioux City, Iowa, is the head of navigation, and flooding is a serious problem. Explored by the LEWIS AND CLARK EXPEDITION from 1804 to 1806, the river was thereafter used by traders, gold seekers and pioneers as a route to the NW. Length: 4,320km (2,683 miles).

Missouri Compromise (1820), dispute in the US Congress over the accession of Missouri, a slave state, to the Union. To prevent a majority of slave states in the USA, Missouri was only permitted to join at the same time as the free state of Maine. Slavery was prohibited in the rest of the LOUISIANA PURCHASE N of Missouri.

Mr Midshipman Easy (1836), novel by Capt. Frederick MARRYAT, describing the adventures of a young MIDSHIPMAN who suffers only the mildest of naval discipline. The work is as a children's classic.

Mistinguet (1875-1956), French singer and dancer, originally named Jeanne-Marie Bourgeois. The star of the Casino de Paris, she became famous for her performances at the Folies Bergère and the songs *J'en ai marre* and *Mon Homme*.

Mistletoe, any of numerous species of evergreen plants that are semi-parasitic on tree branches. It has small, spatulate, yellowish-green leaves and generally forms a large dense ball of foliage. The small yellow flowers produce waxy, white berries, which are poisonous (except to some species of birds). In Britain, Europe and North America, mistletoe retains a ritualistic significance especially at Christmas and midsummer. Families: Loranthaceae and Viscaceae.

Mistral, Frédéric Joseph Etienne (1830-1914), French writer. He was one of the founders of the Félibrige, an organization set up to promote Provençal as a literary language. He published many works in the *langue d'oc*, including novels, memoirs, plays and his poems *Les Isles d'Or* (1875). His poetry is characterized by beautiful language rather than strong thought. He founded the Arles folklore museum in 1899 and shared the Nobel Prize in literature with ECHEGARAY in 1904.

Mistral, Gabriela (1889-1957), Chilean poet, who helped José VASCONCELOS in his revision of the Mexican school system. Her poetry shows the move to simplicity after the exoticism of MODERNISMO. Her three main collections are *Desolación* (1922), *Tala* (1938) and *Lagar* (1954). In 1945 she became the first Latin American to receive the Nobel Prize in literature.

Mistral, N and NW wind prevalent in the NW Mediterranean in the winter. It sweeps from the MASSIF CENTRAL, France, down the Rhône valley reaching the Rhône delta as a strong, dry wind. Orchards and gardens in the area are usually protected against the mistral by cypress hedges.

MIT (Massachusetts Institute of Technology) university in Cambridge, Massachusetts, USA. It is recognized as a leading technical college with facilities which include a large nuclear reactor, a high-energy accelerator and a nuclear science laboratory. There are more than 70 special laboratories in Massachusetts and other states either directly associated or affiliated to MIT.

Mitchel, John (1815-75), Irish revolutionary, lawyer and journalist. He called for an Irish rebellion in his publication the *United Irishman* and was transported to Australia. He escaped to the USA in 1853 and in 1874 returned to Ireland where, in the following year, he was elected to the British Parliament but was declared ineligible and died shortly afterwards.

Mitchell, Arthur. See DANCE THEATRE OF HARLEM.

Mitchell, Joni (1943-), Canadian singer and songwriter. She moved from reflecting contemporary California in recordings such as *Clouds* (1969) and *Ladies of the Canyon* (1970) to probing the depths of the problems raised by personal relationships in *Court and Spark* (1974). In *Hejira* (1976) she considered the conflict between the desire for freedom and the yearning for warmth and stability.

Mitchell, Margaret (1900-49), US novelist, famous for her one novel, *Gone with*

Mississippi: an aerial view of the mighty river between Arkansas and Mississippi.

Mistletoe, with its romantic associations, was a holy plant to the Druids.

Frédéric Mistral's *Miréio* was awarded the poet's prize of the French Academy (1859).

Reginald Mitchell's Spitfire forms part of a 'Battle of Britain' week display.

Mitchell, Maria

the Wind (1936; Pulitzer Prize 1937) about the AMERICAN CIVIL WAR period. The film adaptation (1939) was extremely successful. See also pp.1752, 1753.

Mitchell, Maria (1818–89), US astronomer. While studying sunspots and nebulae in 1847, she discovered a new comet. She was the first woman to be elected to the American Academy of Arts and Sciences (1848) and the first professor of astronomy at Vassar College (1865–88).

Mitchell, Reginald Joseph (1895–1937), British aircraft designer, best remembered for his work on the Spitfire fighter of WWII. He worked for Vickers-Armstrong (Supermarine) and led a team in designing a number of seaplanes which won the SCHNEIDER TROPHY (1927, 1929 and 1931). See also pp.514–515, 514–515.

Mitchell, Sir Thomas Livingstone (1792–1855), Australian explorer, b. Scotland. As Surveyor-General of New South Wales (1828–55), he led four expeditions into the interior and in 1836 discovered the fertile Western District of Victoria.

Mitchison, Naomi Margaret (1897–1964), British novelist. She wrote various kinds of fiction, but is best known for her historical novels, such as *The Conqueror* (1923), and her science fiction, such as *Memoirs of a Spacewoman* (1962).

Mitchum, Robert (1917–), US film actor. He started his career with small parts in cowboy films and was featured in *The Dancing Masters* (1943), but the 1950s saw his best performances. His relaxed insouciance in *The Lusty Men* (1952) and religious fanaticism in Charles Laughton's *The Night of the Hunter* (1955) reveal Mitchum's range of ability. He was also acclaimed for his performance in *Farwell My Lovely* (1975).

Mite, minute ARTHROPOD found worldwide, many as parasites on plants and animals. The larva has three pairs of legs; the adult has four pairs with claws at the tip, and the head and abdomen are fused. Length: 0.5–3mm (0.02–0.1in). Class Arachnida; order Acarina. See also CHIGGER; RED SPIDER; TICK; pp.33, 34, 328.

Mitford, name of six British sisters, the daughters of Lord and Lady Redesdale (family name Mitford). The most famous, Nancy Mitford (1904–73), was a novelist and biographer. Her first successful novel was *The Pursuit of Love* (1945), which was followed by *Love in a Cold Climate* (1949) and *The Blessing* (1951). Her co-editing of a volume of essays, *Noblesse Oblige* (1956), brought her more fame and led to the practice of labelling speech "U" or "non-U". Her sister Jessica Mitford (1917–) also wrote, protesting about snobbery and privilege in particular and humbug generally, as in *The American Way of Death* (1963) and *Kind and Usual Punishment* (1973). The other two notable sisters, Unity Valkyrie (1914–48) and Diana (1910–) turned to FASCISM; the former travelling to Germany and becoming a disciple of Adolf HITLER and the latter marrying Sir Oswald MOSLEY.

Mitford, Mary Russell (1787–1855), British author. She became popular with the publication of a collection of rural sketches, *Our Village* (five vols, 1824–32). She also wrote a play in blank verse, *Rienzi* (1828).

Mithraism, worship of the Persian god Mithra (Mithras to the Romans) of the sun, justice, contract and war. It became widespread in the Roman Empire during the 2nd century AD, especially among soldiers and slaves. It was a mystical religion with secret rites involving the sacrifice of bulls. Mithraism was suppressed when the Roman emperors adopted Christianity. See also p.1906.

Mithridates VI Eupator, called the Great, King of Pontus (132–63 BC; r. 120–63 BC), who attempted to extend his rule southwards but was repeatedly defeated by the Romans. He was overwhelmed by the forces of SULLA in the war of 88–85 and lost his kingdom in a second campaign in 83–82. He reconquered it in 74 but was defeated by POMPEY in 66 and fled to the

Bosphorus. He was planning an invasion of Italy, but his troops revolted, and he committed suicide. See also pp.1230, 1230.

Mitochondrion, small body found in the cytoplasm of most CELLS, containing enzymes and other agents necessary for energy production.

Mitosis, nuclear division of a CELL resulting in two identical cells. This division includes five phases: interphase (DNA and CHROMOSOMES divide), prophase (chromosomes coil, centrioles start to separate, astral rays and spindles form and the nuclear membrane disappears), metaphase (doubled chromosomes form along the cell's equatorial plate, centrioles move to opposite poles), anaphase (doubled chromosomes separate to opposite poles of the cell and cytoplasmic division starts) and telophase (chromosomes uncoil, nuclear membrane forms, spindle and astral rays disappear). See also MEIOSIS.

Mitra, Mithra or Mithras, god who in different forms was worshipped in India, Persia and then the Roman Empire. Originally, in Vedic mythology, Mitra was the spirit of the day, of the rain and of the sun, linked closely with VARUNA, ruler of the night in the administration of justice. The Persian Mithra was a popular deity of the ACHAEMENID Empire, revered as the god of light and power. See also MITHRAISM.

Mitre, tall head-dress worn by archbishops and other prelates. It is derived from the papal tiara, and has been worn since about the 11th century.

Mitscherlich, Eilhardt (1794–1863), German chemist who in 1819 discovered that compounds of similar composition tend to have the same crystal structure – the phenomenon known as ISOMORPHISM. This helped in the understanding of the relationship between the molecular composition and crystalline structure of compounds. In 1823 he discovered the monoclinic form of sulphur and in 1827 discovered selenic acid. He named benzene and was the first to synthesize nitrobenzene (1832); he was also among the first to recognize catalysis.

Mitsubishi, Japanese industrial and banking conglomerate set up in 1873. Despite opposition in the 1930s, Mitsubishi has become one of the foremost businesses of Japan, and has electronic, mining, chemical, oil and banking interests. Its head offices are situated in Tokyo.

Mitterand, François Maurice Marie (1916–), French politician. He was active in the French Resistance during WWII and served as Minister for ex-Servicemen (1947–48). He became president of the Federation of the Democratic and Socialist Left in 1965 and leader of the Socialist Party in 1971.

Mix, Tom (1880–1940), US actor and writer-director of silent Western films. Mix and his horse Tony were famed as the heroes of many adventure films, including *Tom Mix in Arabia* (1922), *North of Hudson Bay* (1924) *Destry Rides Again* (1927) and *The Last Trail* (1927).

Mixed economy, system in which part of the gross national product (GNP) is produced by the nationalized industries (the public sector) and the remainder by privately controlled companies (the private sector). See also pp.1868, 1869.

Mixtec, Central American Indian civilization centred in the province of Oaxaca and in part of Guerrero, Mexico. During the 9th century the Mixtec conquered the neighbouring ZAPOTEC and until the Spanish conquest it was the dominant culture in the Oaxaca and Puebla regions. Due to epidemics and forced migrations, however, their numbers were drastically reduced; today there are about 250,000 descendants.

Miyagi-ken. See SENDAI.

MKS units, system of units based on the metre, kilogramme and second. See WEIGHTS AND MEASURES.

MLR (minimum lending rate), lowest rate of interest that banks are permitted to charge their borrowing customers. In Britain the rate is fixed by the Treasury in association with the Bank of England, the central bank, and is a means of controlling the flow of currency, supply and demand and the rate of inflation.

Mnemonic device, an aid to MEMORY. Systems designed to improve memory include key words, rhymes and visual imagery. An example of a mnemonic is the phrase "Richard of York gave battle in vain", the initial letters of which are an aid to remembering the colours of a rainbow (red, orange, yellow, green, blue, indigo, violet). See also pp.132–133.

Mnesicles (5th century BC), Greek architect. He designed the Propylaea, or western entrance to the ACROPOLIS, using pentelic marble and black Eleusian stone. He adjusted the Propylaea to the slope of the Acropolis, and because the Erechtheum is similarly handled, it is also sometimes ascribed to him.

Moai, extinct, ostrich-like bird of New Zealand. It is believed that the Maoris hunted it to extinction in the 17th century. It was a flightless bird and had a small head, a long feathered neck and a bulky body; the legs were long and strong. It fed primarily on roots and shoots and was ground-nesting. Height: 3.5m (12ft); species *Dinornis maximus*. See also p.766.

Moab, nation in hills E of the Dead Sea during biblical times. According to the Bible the Moabites spoke a language similar to Hebrew and were of the same race. Apart from the Bible, the main source of information about them is the Moabite Stone, a set of inscriptions discovered in 1868. Moabite culture lasted from c.1400 BC to c.580 BC, when they were conquered by the Babylonians.

Moai hunters, pre-Maori culture of South Island, New Zealand. Probably Eastern Polynesian in origin, little is known about them but that they hunted the MOAI; the culture was discovered in 1939.

Mobile, form of sculpture developed by Alexander CALDER in the early 1930s and named by Marcel DUCHAMP. A mobile consists of a series of shapes (representational abstract) cut from metal, wood, plastic or other materials and connected by wires so that both the parts and the whole revolve freely when suspended in space. This form breaks with the traditional idea of sculpture as a static object.

Möbius strip, shape or figure formed by giving a strip of paper a half-twist, then joining the ends together. It is of great interest in TOPOLOGY, being a one-sided surface (a line can be drawn along the strip and will cover both sides, returning to the starting-point to meet itself). It was invented by August Ferdinand Möbius (1790–1868). See also p.803.

Mobutu Sese Seko (1930–), b. Joseph (Désiré) Mobutu, President of Zaire (formerly the Democratic Republic of the Congo). He worked for Congolese independence with Patrice LUMUMBA but deposed him in 1960 and assumed control of the army. In 1965 he led a coup against Joseph KASAVUBU, becoming Prime Minister in 1966 and establishing a presidential government the following year. He changed the Congo's name to Zaire in 1971.

Moby Dick (1851), novel by Herman MELVILLE, considered his masterpiece. Moby Dick is a white whale which is pursued across the Pacific Ocean by Captain Ahab, whose leg the whale had previously bitten off. Melville gives the chase a significance beyond mere externals, the whale becoming a symbol of the awesome forces of the universe.

Mochica, ancient civilization of N Peru, sometimes called "Early Chimu". It dates from the latter part of the Early Intermediate Period (c.200 BC–AD 600). Named for their home area in the Moche Valley, these people were famous for their magnificent pottery, large quantities of which have survived.

Mock epic, or mock heroic, literary work that burlesques the grand epic style. Famous examples are *The Rape of the Lock* (1714) by Alexander POPE, in which trivial events are described in highly exalted language; *Dunciad* (1728) also by Pope, a more serious satirical poem; and *Ode on the Death of a Favourite Cat* (1747) by Thomas GRAY.

Mockingbird, any of a group of New World birds, known for imitating other birds. The common mockingbird (*Mimus*

polyglottos) of the USA is typical of the group – about 27cm (11in) long, ashy above with brownish wings and tail marked with white. Both sexes build the nest of leaves and twigs. The hen lays pale greenish-blue, brown-spotted eggs. Family Mimidae.

Mockridge, Russell (1928–58), Australian track and road-racing cyclist who won the 1,000m time trial and 2,000m tandem at the 1952 Olympic Games and then won both the amateur and open Grand Prix de Paris. In 1953 he embarked on a successful professional career. He was killed in a collision with a bus during a race.

Model Parliament, English parliament summoned by EDWARD I in 1295. It was called the "Model" parliament by the 19th-century constitutional historian Bishop Stubbs, because at it the knights of the shire and the burgesses (the representatives of the Commons) for the first time treated of the great affairs of the nation with the king and the magnates. This enlargement of the Commons' function was held to be the model for the future. They had previously merely agreed to what the king and the magnates had already decided. It was a change marked in the very language of the writ summoning the parliament, language which, with minor changes, remained the same for the next six centuries.

Moderator, term used in the United Reformed Church and the Scottish Presbyterian Church for various administrative officials. In the United Reformed Church a moderator presides over the General Assembly and is elected annually. It is also a name for one who presides over one of the 12 provinces. This is a permanent position, although renewable every seven years. In a third sense, the term refers to a temporary or interim moderator, who administers local churches without full-time ministers.

Moderator, in nuclear physics, substance consisting of light elements, such as heavy water or graphite, used in fission reactors to slow down the fast neutrons produced by the fission reaction. See also pp.434, 435.

Modernism, movement in the Roman Catholic Church during the late 19th and early 20th centuries to adapt its beliefs to developments in modern science, philosophy and history. The modernists favoured the application of the critical method to the Bible, acknowledging the limitations of the biblical authors, and objecting to the increasing centralization of the Church authority. The most important of the early modernists was A.F. LOISY, who was dismissed from the *Institut Catholique* in Paris for his views. The movement was initially tolerated by Pope LEO XIII but condemned in 1907 by Pope PIUS X, who later required all suspect clerics to take an anti-modernist oath.

Modernismo, Spanish-American literary movement of the late 19th and early 20th centuries, founded by the Nicaraguan poet Rubén DARÍO. A protest against Europeanized colonial literature and a move towards indigenous South American literature, modernismo was concerned primarily with reforming poetic language and methods of expression.

Modern pentathlon, event of five parts in the OLYMPIC GAMES. The events were originally chosen as being typical of the demands made on an officer bearing a military dispatch through enemy territory in wartime during the 19th century. Thus there is a horse-ride over a 800m cross-country course, a 4,000m cross-country run, a 3,000m swim, foil fencing and pistol shooting (20 shots from 25m at a disappearing silhouette). Rather than trying to win individual events, competitors try to amass points above the set minimum for each test. The competition is both for individuals and teams of three.

Moderohn-Becker, Paula (1876–1907), German painter whose work was concerned with externalizing inner feelings and mood, using simplified colour. She was influenced by such artists as Gauguin and Cézanne. In works such as *Self-portrait with a Camelia* (1907) the overall effect is one of Romanticism.

Modes, classified scheme, developed during the 4th to 16th centuries AD to systematize the available material of music, and predating harmony. From the scale worked out scientifically by PYTHAGORAS and other Greek thinkers, St Ambrose in the 4th century probably devised four "authentic" modes, the Dorian, Phrygian, Lydian and Mixolydian, all of eight notes within the compass of the octave but different from each other in the arrangement of tones and semitones in between the notes. Pope Gregory (6th century) would seem to have added four "plagal" modes, which were essentially new forms of the Ambrosian modes (Hypodorian, Hypophrygian etc.). Glareanus (16th century) brought the number to twelve, adding the Aeolian and Ionian modes, the basis of the minor and major scales respectively, and their "plagal" forms.

Modigliani, Amedeo (1884-1920), Italian painter, sculptor and draughtsman, who studied in Florence and Venice before settling in Paris (1906). He was influenced by the work of TOULOUSE-LAUTREC, CÉZANNE and PICASSO, and by CUBISM and especially African art and his Italian heritage. Modigliani evolved a highly individual style, characterized by its sculptural quality and by the elongation of the head and neck in his portraits and erotic nudes. His superb draughtsmanship (echoing that of BOTTICELLI) and his use of colour (which is close to that of the early SIENNESE masters) make him one of the greatest of 20th-century Italian painters. The legend of his life as a Montparnasse hedonist - drunken and amorous - reinforced by his early death from tuberculosis and drink, overlooks his intense concentration on work in his final years.

Modulation, in physics, the process of varying the characteristics of one wave system in accordance with those of another. It is basic to RADIO BROADCASTING. In AMPLITUDE MODULATION (AM), the amplitude of a high-frequency radio carrier wave is varied in accordance with the frequency of a current generated by a sound wave. For static-free short-range broadcasting FREQUENCY MODULATION (FM) is used, in which the frequency of the carrier wave is modulated. See also pp.638, 640.

Modulation, in music, the shift from one base key to another by means of a linking passage of chords common to both keys. The term is also applied to natural sounds altered electronically in some contemporary music.

Module, term used in architecture since ancient times. Derived from the Latin *modulus*, it denoted a unit of measure in classical architecture equal to half the width of a column at its base. It was used to achieve good visual proportions. Today it refers to an interchangeable, often mass-produced, unit used in building construction, electronic equipment and spacecraft design.

Modulor, in architecture, system of proportions which LE CORBUSIER advocated in his *Le Modulor* (1949). It is based on the scale of the adult male figure and is used to determine the proportions of building units.

Moe, Jørgen Engebretsen (1813-82), Norwegian poet and folklorist who travelled around Norway collecting tales. The first volume of *Norwegian Folk Tales* appeared in 1841. He also wrote poetry and the children's classic *In the Well and the Pond* (1851).

Mofolo, Thomas Moko (1877-1948), African novelist, b. Lesotho. He is generally considered to be Africa's first great modern novelist. Praiseworthy among his works are *Pitseng* (1910), *Chaka* (1925) and *The Traveller to the East* (1934), written in the Sesotho language.

Mogadisho, capital city and chief port of Somalia, on the Indian Ocean. Taken in 1871 by the Sultan of Zanzibar, it was leased (1892), then sold (1905) to Italy and occupied by the British in 1941. It is a commercial centre connected to the Gulf of Aden by road. Its main industry is food processing. Pop. 285,000.

Mogok, town in N Burma, 113km (70 miles) NNE of Mandalay. The town was

formerly a major ruby and sapphire-mining centre. Pop. (1972) 8,369.

Mogul arts. See INDIAN ARTS.

Mogul, or Mughal, Empire (1526-1857), Indian empire founded by BABUR, a Muslim descendant of both TAMERLANE and GENGHIS KHAN, who conquered Delhi and Agra (1526). Under AKBAR (r.1556-1605), Babur's grandson, the empire reached its greatest power, extending from Afghanistan to the Bay of Bengal, from Gujarat in the S to northern Deccan. Akbar's grandson, Shah Jahan (r.1629-58), built many splendid buildings, including the twin marvels of the Peacock Throne and the TAJ MAHAL. Under AURUNGEZEB (r.1658-1707), a Muslim fanatic, Hindu revolts weakened the empire, which began to disintegrate under Muhammad Shah (r.1719-48). After 1803 the Mogul emperors were merely puppets of the British. In 1857 the last emperor, BAHADUR SHAH, was forced to abdicate following his part in the INDIAN MUTINY. See also pp.1494-1497, 1499-1497.

Mohacs, Battle of (1526), military engagement in which Louis II of Hungary and Bohemia was defeated by the Ottoman Sultan, SULEIMAN I. The battle marked the beginning of Ottoman domination in Hungary.

Mohair, fibre obtained from the wool of the ANGORA GOAT and used for knitting and weaving yarns. It became important in European textile manufacture in the 19th century, previously being produced only in Asia Minor. Angora goats are now raised in the USA and South Africa.

Mohammad Reza Shah Pahlavi. See REZA SHAH.

Mohammed (Muhammad or Mahomet) (c.570-632), Arab prophet, leader and the inspiration for ISLAM. He was born in Mecca; his family belonged to the powerful Hashem clan, led by his uncle into whose care he came when his grandfather died, two years after Mohammed had been orphaned. He married a rich older woman, Khadijah, and became a trader. In about 610, Mohammed had a vision commanding him to spread the word of God and he began to preach. He gained followers but also enemies, and in 622 he and many of his followers fled to Medina. Muslims, the followers of Islam, later took this Hegira (*hijrah*, "migration") as initiating the first year in their calendar. Thereafter, Mohammed continued preaching, won more followers, and began to war against his enemies. He conquered Mecca in 630, most of the Arab tribes allied with him, and he became the leading figure in Arabia. In Medina following the death of Khadijah he had married the woman who became his favourite wife, Aishah. After his death, his successors began the rapid conquest of a great empire. Mohammed is revered by Muslims as the Prophet of the one God, Allah, and an ideal man, but he never claimed supernatural powers, and he is not held to be divine. The revelations received by him are recorded in the KORAN, the sacred book of Islam. Orally transmitted sayings of the Prophet are also important guides to the faith and the daily life of Muslims. See also pp.1278-1279, 1914.

Mohammed (name of six Ottoman sultans). See MEHMET.

Mohammed V (1909-61), Sultan (1927-57) and King of Morocco (1957-61). A member of the Filali dynasty, he sympathized with the nationalists who wanted freedom from the French. Although deposed and exiled by the French in 1953, he returned in 1955 and was recognized as sultan. He adopted the title of king in 1957.

Mohammedanism. See ISLAM.

Mohammed ben Abdullah (1864-1920), Somali leader also known as the "Mad Mullah". In 1899 he proclaimed a JAHAD against the British and Italians, who had annexed large areas of Somalia in the late 1880s. His Dervish army had considerable success, fighting a protracted war until he died when his base at Taleh was bombed.

Mohave (Mojave), Yuman-speaking tribe of North American Indians who lived in the Mohave Valley of the Colorado River.

In the early 1970s there were about 1,600 members both on and off of the Colorado River Reservation.

Mohawk, Iroquoian-speaking North American Indian tribe of the IROQUOIS CONFEDERACY, formerly inhabiting central New York State, USA. Today there are about 2,000 Mohawk Indians. Most are farmers on two reservations in Ontario, Canada, but some are migrant workers in the US and Canadian steel industries.

Mohegan, tribe of North American Indians of the Algonquian-language family formerly occupying the Thames River area of Connecticut, USA. They constituted the major tribe of the region at the end of the 17th century; their most famous chief was Uncas, although he had been born a PEQUOT Indian. They subsequently sold most of their lands and lived in a small reservation named after them on the Thames River.

Mohenjo-daro, one of the main city centres of the Indus valley civilization (c.2300-1750 BC). Remains (in modern Pakistan) show that its inhabitants built large granaries, employed a system of writing, used standard weights and measures, traded extensively, constructed carts and boats and were competent plumbers and metalworkers. See also pp.1168, 1169.

Mohican (Mahican), Algonquian-speaking tribe of North American Indians formerly inhabiting the upper Hudson valley in New York, E of the Housatonic River in Connecticut, USA. They once numbered about 3,000. They joined the Stockbridge Reservation in 1736 and today the surviving 525 Mohicans occupy the Stockbridge-Munsee Reservation in Wisconsin.

Mohl, Hugo von (1805-72), German botanist who did pioneering research into the anatomy and physiology of plant CELLS. He formulated the idea that the cell nucleus is surrounded by a granular, colloidal substance which in 1846 he called PROTOPLASM, although the term had been invented by Jan Purkinje referring to the embryonic material in eggs. Von Mohl was the first to propose that new cells arise from cell division. In 1851 he claimed that the secondary wall of a plant cell is fibrous, and this was subsequently confirmed. He also gave the first distinct account of the function of osmosis and studied the movement of STOMATA.

Moho, also called the Mohorovičić discontinuity, seismic discontinuity layer at the base of the Earth's crust. The layer was discovered by the Yugoslavian geophysicist Andrija Mohorovičić in 1909 when the velocity of seismic waves was measured and found to be different in a number of sites at various distances from an earthquake's epicentre. The Moho is about 10km (6 miles) from the surface in oceanic regions and 35km (20 miles) from the surface under land masses. The Moho is explained by a difference in density of rocks as they change from crust to mantle and therefore act as deflectors of seismic waves. See also pp.194-195.

Mohole, attempt by US geologists and engineers, begun in the 1950s, to penetrate the Earth's crust to the deeper layers of the mantle, by drilling a borehole at least 10km (6 miles) deep. It was named after the MOHO, the irregular boundary separating the crust and the mantle, which lies between 10 and 35km (6 and 20 miles) deep. Because of rising costs the Mohole was discontinued indefinitely in 1966. See also pp.194-195.

Moholy-Nagy, László (1895-1946), Hungarian designer, painter and sculptor. A teacher at the BAUHAUS (1923-28), he created abstract sculptures that cast shadows as they were rotated to show the interplay of light and movement. He often combined transparent materials, such as plastic and Plexiglass, with polished metal discs. See also p.1687.

Mohorovičić discontinuity. See MOHO.

Mohr, Karl Friedrich (1806-79), German chemist who became the foremost pharmacist of his time in Germany. He improved analytical techniques and invented many items of laboratory equipment. He was also among the first to

Modigliani's portrait of Henri Laurens has the usual expressionless features.

Module: the Apollo spacecraft consisted of command, service and lunar modules.

Mogul Empire: the early 17th century drawing shows Akbar helping a farrier.

Mohawk Indian chief Ho Nee Yath No Row was painted by John Verelst in 1710.

Mohs, Friedrich

Henri Moissan's discoveries enabled him to manufacture artificial diamonds.

Mojave Desert supports specialized vegetation such as this Joshua Tree.

Molar: third molars are called wisdom teeth because they appear in adulthood.

Moles cannot survive more than a few hours without feeding, day and night.

advance the idea of conservation of energy, in 1837; he became professor of chemistry at the University of Bonn in 1867.

Mohs, Friedrich (1773–1839), German mineralogist. He is best remembered for his scale of the hardness of minerals, the **MOHS SCALE**. See also pp.261, 261.

Mohs scale, range of hardness used by geologists to classify the degree of hardness of minerals, devised by the German mineralogist Friedrich Mohs in 1812. The hardest mineral, diamond, has a hardness of 10 on the Mohs scale. It can scratch, or mark, any mineral with a lower Mohs number, including corundum (9); topaz (8); quartz (7); orthoclase (6); apatite (5); fluorite (4); calcite (3); and gypsum (2). Talc (1) can be easily crushed by the fingernail.

Moirae. See **FATES**.

Moiré patterns, series of patterns occurring when a sheet printed with one family of regular curves or lines is superposed on another. The patterns change strikingly as the separate sheets are moved slightly. This effect is used in metal analysis, accurate measurements of flatness, and in op art.

Moiseiwitsch, Benno (1890–1963), British pianist, b. Russia. In 1904 he studied under Leschetizky in Vienna, and made his London debut in 1909. His tours included the USA, Canada, and Australia as well as many engagements in Europe. He was especially esteemed for his interpretation of Romantic music.

Moiseyev, Igor (1906–), Soviet ballet dancer and choreographer. He danced with the **BOLSHOI BALLET** in the 1920s and formed his own company in 1936.

Moissan, Ferdinand-Frédéric-Henri (1852–1907), French chemist. He trained as an apothecary and won international recognition as the first to isolate **FLUORINE** (1886). He also developed an electric furnace that enabled him to prepare samples of several of the less common metals, such as **URANIUM**, long before modern metallurgy made them commercially available. He was awarded the Nobel Prize in chemistry in 1906.

Moisture indicator, substance used to detect water vapour, or an instrument (**HYGROMETER**) used to measure its proportion (ie humidity) in the air. White anhydrous copper sulphate turns blue when it absorbs moisture; paper impregnated with cobalt chloride turns pink. A psychrometer is one type of hygrometer used to measure atmospheric humidity.

Mojarra, any of about 36 species of small, silvery, shallow-water fish found in tropical to temperate seas. They move readily into brackish waters and some species enter fresh water. They have a protrusible mouth that forms a tube when extended, and sheaths of small scales along the bases of the dorsal and anal fins which allow the fins to be depressed into the resulting groove. Family Gerreidae.

Mojave or Mohave, Desert, arid region with low, barren mountains in s California, USA surrounded by mountain ranges on the N and W and the Colorado Desert on the SE. It was formed by volcanic eruptions and deposits from the Colorado River. The desert is the site of the Death Valley National Monument. Area: approx. 38,850sq km (15,000sq miles).

Mokp'o, port in South Cholla province, South Korea. The principal industries are fishing and textiles. Pop. (1970) 177,801.

Moksha, "release", term used to denote the Hindu concept of salvation: the release from transmigration by the absorption of the individual self, Atman, into the universal self, **BRAHMAN**.

Mokuan Reien (d.c. 1343), Japanese artist. A Zen Buddhist priest, he visited China in 1333 and became the first Japanese to learn the Chinese technique of painting in monochromatic ink. His works include a portrait of Hotei, the god of fortune.

Molar, one of the back teeth of mammals, adapted for grinding and chewing food. Several cusps – the points or ridges on the top surface – occlude with counterparts on the opposing molar. In most herbivores the cusps are fused to form ridges for

grinding plant food. In man there are 12 permanent molars, three on each side of each jaw, a total of 12. See also pp.1100, 1101.

Molarity, measure of the concentration of a solution, expressed as the number of moles (gramme-molecules) per dm³ of solution. (It is different from molality, which is the number of moles in a kilogramme of solvent.) For example, a solution containing 0.2 moles per litre of solution has a concentration of 0.2 molar (written 0.2M).

Molasses, syrupy by-product of the refining of cane sugar. Canes are cut, crushed, and their juice mixed with water to be boiled and filtered. After some of the sugar has crystallized out, the thick brown syrup remaining is called molasses or treacle. See also p.295.

Mold, market town in NE Wales, on the River Alyn; administrative centre of Clwyd and of the former county town of Flintshire. Coal-mining is the chief industry. Pop. (1971) 8,239.

Moldavia (Moldavskaja SSR), constituent republic of the USSR, bounded to the N, E and S by the Ukraine, and to the W by Romania; the capital is Kishinev. It became an ASSR in the Ukraine in 1924 and a constituent republic in 1940. The region is fertile with a mild climate, and grains, fruits and vegetables are cultivated. Industries: food-canning, wine, flour-milling, sugar-refining, tobacco-processing, timber, oil. Area: 33,700sq km (13,010sq miles). Pop. (1980 est.) 4,000,000.

Moldavia, historic region in E Romania, bounded by Wallachia (S), Transylvania (W), the Ukraine (N) and the Moldavian Republic (E), of which most of Moldavia is now part. Suceava, Jassy, its historic capitals, and Galați were the chief cities. Conquered by the Greeks, Romans and Bulgars, and under Mongol rule during the 13th century, the region became a dominion of the Ottoman Empire in 1504. **MOLDAVIA AND WALLACHIA** merged in 1861 to create Romania. Area: approx. 38,047sq km (14,690sq miles). See also p.2125.

Moldavia and Wallachia, historic principalities which united in 1861 to become **ROMANIA** in the following year. Wallachia was probably founded in the 13th century and Moldavia in the 14th. Although at various times subject to Poland, Hungary, Russia, the Austrian Empire and the Ottoman Empire, both enjoyed comparative independence until, in 1711, they came to be ruled by the Greek governors called the Phanariots. From 1829 they were dominated by Russia, but after the **CRIMEAN WAR** voted for union and independence.

Mole, any of several species of small, burrowing, mainly insectivorous mammals that live in various habitats throughout the world. The European mole, *Talpa europaea*, has short brown or black fur, a short tail and wide clawed forefeet for digging tunnels. Its eyes are sensitive only to extremes of light and dark; its prey includes mice, worms and small birds. Length: to 18cm (7in). Family Talpidae. See also pp.86, 90, 93, 290.

Mole, basic SI unit of amount of substance. This is the amount of substance which contains as many elementary units as there are atoms in 0.012kg of carbon-12. A mass of one mole of a compound is its gramme molecular weight.

Mole cricket, any of several species of burrowing crickets with a cylindrical body, a pointed head, and forelegs that are modified for shovelling moist earth. The European mole cricket, *Gryllotalpa gryllotalpa*, guards its eggs and young. It feeds on roots and can thus be a pest of growing crops. Length: to 3cm (1.2in). Family Gryllidae. See also p.41.

Molecular biology, biological study of the chemical and physical make-up of molecules comprising living organisms. A major area of study is **GENES** and their components and functions in **HEREDITY**, **EVOLUTION** and the constituents of living organisms. See also **BIOCHEMISTRY**.

Molecular formula, notation for the atoms present in a molecule, written using the

symbols for the atoms with subscripts showing the numbers of atoms present. This is also called the chemical formula of the substance. For instance, C₂H₆O is the molecular formula of acetone. The structural formula gives an indication of the way the atoms are arranged, often by using recognizable groups of atoms, as in CH₃COCH₃ for acetone.

Molecular model, geometrical structure of a molecule made by joining small coloured balls, representing atoms, using stiff metal springs or plastic rods, representing single bonds. They are invaluable aids not only in visualizing shapes of molecules but also in indicating "strain" in bonds and possible conformations that the molecule may adopt in reaction. See also p.892.

Molecular orbital theory, explanation of how electrons are distributed in stable molecules. In the simpler **VALENCY** theory of the chemical bond, each atom of a molecule is assumed to retain its own electrons. Molecular orbital theory, however, treats each electron as associated with the molecule as a whole and it describes the configuration of electrons for each molecule. These patterns are unique for each molecule and can be considered as regions surrounding the molecule in which there is a probability of finding an electron. The calculations are very complex and only the simplest molecules can be treated exactly. See also p.892.

Molecular weight, sum of the atomic weights of all the atoms in a molecule. It is thus the ratio of the average mass per molecule of a specified isotopic composition of a substance to one twelfth of the mass of an atom of carbon-12. The molecular weights of reactants must be known in order to make quantitative calculations about a chemical reaction.

Molecule, smallest particle of substance capable of independent existence and exhibiting the characteristic properties of that substance. Molecules consist of atoms held together by chemical bonds. For example, water molecules consist of two atoms of hydrogen bonded to one atom of oxygen (H₂O). See also p.892.

Mole fraction, fraction of the number of moles of a given component in a solution or other mixture. If there are n_A moles of component A, n_B of B, etc., the mole fraction (X_A) of A is $n_A/(n_A + n_B + \dots)$.

Mole rat, any of several species of burrowing rodents that resemble true moles, found in E Europe, Asia and Africa. Its minute eyes can make out only whether it is light or dark. The soft, thick fur may be black, brown or grey. Length: to 30cm (11.8in). Families Spalacidae and Bathyergidae. See also p.296.

Molière (1622–73), French playwright, real name Jean-Baptiste Poquelin. An accurate observer of contemporary manners and types, he is remembered principally for his comedies of character such as *The School for Wives* (1662), *Tartuffe* (1664), *The Misanthrope* (1666) and *The Imaginary Invalid* (1673). He directed his own plays and often played the leading roles himself. See also pp.1209, 1451.

Molinos, Miguel de (1628–96), Spanish theologian, an important advocate of the doctrine known as **QUIETISM**. His *Spiritual Guide* (1675) taught that Christian perfection is attainable by contemplation and divine assistance. He was imprisoned for heresy in 1685.

Mollusc, any of more than 80,000 living species of invertebrate animals in the phylum Mollusca. They include the familiar snails, clams and squids, and a host of less well-known forms. Originally marine, members of the group are now found in the oceans, in fresh water and on land. There are six classes: the primitive **GASTROPODS**, **CHITONS**, **UNIVALVES** (slugs and snails), **BIVALVES** (clams, etc.), **tusk shells** and **CEPHALOPODS** (squids, etc.). The mollusc body is divided into three: the head, the foot and the visceral mass. Associated with the body is a fold of skin called the mantle which secretes the limy shell typical of most molluscs. The head is well-developed only in snails and in the cephalopods, which have eyes, tentacles and a well-formed mouth. The visceral mass

Monck (or Monk), George

contains the internal organs of circulation (blood vessels and heart), respiration (gills), excretion (kidney), digestion (stomach and intestine) and reproduction (gonads). The sexes are usually separate but there are many hermaphroditic species. See also pp.2,20-24, 25, 26, 274-275.

Molnar, Ferenc (1878-1952), Hungarian author who wrote a large number of light, sophisticated comedies. His reputation was established with the production in 1907 of *The Devil Liliom* (1909) was a great success in the USA and was made into the musical *Carousel*; *The Guardsman* (1910) was also successful on the New York stage.

Moloch, w Semitic deity commonly thought to have been the object of a cult introduced into Israel after the time of Solomon. Children, usually the first-born, were said to have been offered for sacrifice by fire to Moloch, by being rolled into a furnace from the hands of a huge idol, although many scholars dispute this and even doubt the existence of the cult itself.

Moloch, also known as Thorny Devil, small lizard found in Australia. It is orange and brown and covered in spines; it eats mainly ants. Length: to 20cm (8in). Family Agamidae; species *Moloch horridus*.

Molotov, Vyacheslav Mikhailovich (1890-), Soviet political figure. A loyal ally of STALIN, he became a full member of the Politburo in 1926 and was Foreign Minister from 1939 to 1949 and from 1953 to 1956. He was expelled from the Central Committee in 1957. See also pp.1679, 1716, 1716, 1722, 1793.

Molotov cocktail, crude hand-grenade made from a bottle filled with petrol or other inflammable liquid, the neck of which is stuffed with a rag as a wick. These "cocktails" were named after the Soviet statesman Vyacheslav MOLOTOV. Such devices were used by resistance movements during WWII; the name was first used by the Finn opponents of Soviet invasion (1940).

Moltke, the name of two German soldiers. Helmuth Karl Bernhard von Moltke (1800-91) was chief of the Prussian army staff from 1858. He masterminded victories over Denmark (1864), Austria (1866) and France (1870-71). His organization of the general staff was one of the great innovations in 19th-century warfare. His nephew, Helmuth Johannes Ludwig von Moltke (1848-1916), became chief of the German general staff in 1906. He planned Germany's WWI strategy, modifying the SCHLIEFFEN PLAN, but he was replaced in 1914 when the initial German offensive failed to bring victory. See also pp.1244, 1321.

Moluccas (Maluku), island group and province in E Indonesia; Ambon is the capital. Formerly the Spice Islands, the group includes the larger islands of Halmahera, Ceram, and Buru, and the island groups of Sula, Batjan, Obi, Kai, Aru, Tanimbar, Banda, Babar and Leti. Originally explored by MAGELLAN in the early 16th century, the islands were later settled by the Portuguese. The Dutch took the islands c.1605-21 and monopolized the spice trade. Products: spices, copra, timber, sago. Area: 83,675sq km (32,307sq miles). Pop. (1971) 1,088,945.

Molvig, Jon (1923-70), Australian painter. He studied in Europe from 1949 to 1952 but worked mainly in Brisbane and was noted for his colourful portraits which, in their savagery, often resemble those of Willem DE Kooning. His later paintings were simple, symbolical figures on black backgrounds.

Molybdenite, sulphide mineral, molybdenum sulphide (MoS_2). It is a major ore of molybdenum, found in PEGMATITES, IGNEOUS and METAMORPHIC rocks. It has hexagonal system tabular prisms, flakes, and fine granules and is lead-grey in colour with a metallic lustre. Hardness 1-1.5; s.g. 4.7.

Molybdenum, metallic element (symbol Mo) of the second transition series, first identified in 1778 and isolated in 1782. Chief ores are molybdenite (sulphide) and

wulfenite (lead molybdate). It is used in alloy steels and molybdenum compounds are used as catalysts and lubricants. It is an essential trace element for plant growth. Properties: at.no. 42; at.wt. 95.94; s.g. 10.22; m.p. 2,610°C (4,730°F); b.p. 5,560°C (10,040°F); most stable isotope Mo^{98} (23.78%). See also TRANSITION ELEMENTS.

Molybdenum processing, production of MOLYBDENUM from ores containing MOLYBDENITE (MoS_2), usually for molybdenum-iron alloys used in steel-making. The concentrated mineral is roasted to yield molybdenum trioxide, which is mixed with iron in electric furnaces to make ferromolybdenum. The pure metal is produced as a powder and converted to massive metal.

Mombasa, city on Mombasa Island, Kenya, and partly on the mainland, to which it is connected by causeway; the capital of Coast province. From the 11th to the 16th centuries, Mombasa was a centre of the Arab slave and ivory trades. From 1529-1648, it was held by the Portuguese. Taken by Zanzibar in the mid-19th century, the city passed to Britain in 1887, when it was made capital of the British East Africa Protectorate until 1907. An important port, Mombasa exports coffee, fruit and grain. Industries: food-processing, glass, aluminium products. Pop. (1980) 340,000.

Moment. See TORQUE.

Moment of inertia, in physics, is defined as the sum of the products of elements, dm , of a mass, m , and the squares of their distances, r , from a given axis. Thus, $I = \sum dm r^2$, where I is the moment of inertia and \sum indicates a SUMMATION.

Momentum, product of the mass and velocity of a body. The principle that the total momentum of any system of bodies is conserved (remains constant) at all times, even during collisions, is one of the fundamental laws of physics, holding an equivalent position to the law of the conservation of mass-energy. See also ANGULAR MOMENTUM.

Mommsen, Theodor (1817-1903), German historian. A professor of Roman law, he wrote extensively about Classical Rome and was awarded the 1902 Nobel Prize in literature. His best-known work is a three-volume *History of Rome* (1854-56). An opponent of Otto von BISMARCK, Mommsen served in the Prussian House of Representatives from 1863-79.

Mona. See ISLE OF MAN.

Monaco, sovereign state in W Europe, near Italy and bordered by France, which assumed protection of the state in 1860. The chief source of income is tourism: there is some light industry. The capital is Monaco-Ville. Area: 1.5sq km (0.6sq miles). Pop. (1975 est.) 25,000. See p.2099.

Monad, in Greek usage, the number "one", extended in philosophy to apply to any unit. The 17th-century German philosopher Gottfried LEIBNIZ applied the term to autonomous centres of force that, he said, comprise the fundamental metaphysical reality of which the universe is composed. These monads, or souls, do not interact, but are organized to correspond in a pre-established harmony and are therefore eternal.

Monadnock, residual hill rising above a PENEPLAIN, representing the core of the upland area that was eroded to give the plain. The plains of N Australia have many examples. See also pp.215, 215.

Monaghan, county in NE Republic of Ireland, in Ulster province, on the boundary with Northern Ireland. The S and E are hilly, but the rest of the county is part of the fertile central plain of Ireland. The Blackwater and the Finn are the chief rivers. Primarily an agricultural county, Monaghan's main crops are potatoes, oats and flax. Beef and dairy cattle are raised in large numbers. Industries: linen-milling, footwear, furniture. The county town is Monaghan. Area: 1,290sq km (498sq miles). Pop. (1979) 50,376.

Mona Lisa (*La Gioconda*), half-length oil painting by LEONARDO DA VINCI of the wife of a Florentine businessman, Francesco del Giocondo, probably painted between

the years 1503 and 1506. Leonardo probably took the work to France in 1507 and it now hangs in the Louvre, Paris.

Monarch butterfly, or milkweed butterfly, large New World, migratory BUTTERFLY that is believed occasionally to fly across the Atlantic Ocean. It has brownish-orange wings with black veins and borders. Its caterpillars feed on MILKWEED, which gives their bodies a taste disliked by birds. The unrelated VICEROY BUTTERFLY mimics the coloration of the monarch, and so is also avoided by birds. Species *Danaus plexippus*. See also MIMICRY; p.47.

Monarchy, form of government in which one individual, whose power is usually hereditary, represents the state. There are few present-day monarchs holding absolute power and those states which retain their royal families are governed by constitutional monarchies, with royalty performing only ceremonial functions and retaining few royal prerogatives. See also pp.1842, 1851.

Monash, Sir John (1865-1931), Australian soldier. He served at GALLIPOLI (1915), and became commander of the Australian Army Corps in France in 1918. He won two victories, at Hamel (July 1918) and Amiens (Aug. 1918). Monash University, Melbourne, is named after him.

Monastery, communal religious dwelling of monks. In Europe, the houses of BENEDICTINES, the Canons Regular of St AUGUSTINE and the Celtic monasteries of Ireland were the earliest monasteries. Four basic features are essential to them: separation from the world, the autonomy of the government of individual houses, acceptance of the orders, classical rules and commitment to the local community.

Monasticism, ascetic mode of life followed by men and women who have taken religious vows and belong to a recognized religious order. The term generally applies to the strict and often highly ritualized community life of the Enclosed orders (eg the BENEDICTINES and DOMINICANS) who normally have little contact with the outside world. There are, however, other orders that combine asceticism with social welfare work and spiritual guidance to society at large. These orders form by far the larger group, some of whom live in communities but most of whom reside wherever seems required. Monks and nuns of this type are found not only in Christianity but also in HINDUISM, BUDDHISM, JAINISM and TAOISM. The ultimate aim of each order differs according to the religion. Historically in Europe, the purpose of monasticism was to provide spiritual welfare for the deeply religious medieval communities which, because of the hard-working nature of peoples' lives, felt they could not themselves devote sufficient time to earn salvation. See also MONASTERY.

Monazite, mineral containing rare-earth metals (LANTHANIDES) such as cerium and lanthanum, and thorium. It occurs widely in granitic and other rocks, and is the major source of those metals.

Mon boddo, James Burnett, Lord (1714-99), Scottish anthropologist who anticipated DARWIN's evolutionary principles. In his main work, *Of the Origin and Progress of Language* (1773-92), he related human beings to the orang-utan and traced the development of society.

Monck, Charles Stanley, 4th Viscount (1819-94), Governor-General of Canada from 1861 to 1868. An energetic and able administrator, he vigorously supported the confederation of Canada and maintained good relations with the USA during the Civil War.

Monck (or Monk), George, 1st Duke of Albemarle (1608-70), English soldier. In the Civil War he fought for CHARLES I (1643-44) but joined the Parliamentarians two years after his capture by them in 1644. He then served in Ireland and under CROMWELL in Scotland. Monck believed in the supremacy of the civil authority over the military and when the protectorate of Richard CROMWELL collapsed he became one of the most influential figures in the RESTORATION of the Stuarts. As Duke of Albemarle, he fought in

Vyacheslav Mikhailovich Molotov: a photograph taken of him in 1953.

Mombasa: these arches were erected to commemorate a visit by Princess Margaret.

Monarch butterflies, when migrating, often gather into sleeping assemblies.

Monastery: St Jovan-Kaneo, Yugoslavia, is isolated in a beautiful setting.

Mond, Ludwig

the Second Anglo-Dutch War (1665-67) and was in charge of London during the great PLAGUE (1665) and the FIRE OF LONDON (1666). See also pp.1425, 1433.

Mond, Ludwig (1839-1909), British chemist and industrialist, b. Germany. Mond experimented with alkalis and developed a producer gas. He also discovered nickel carbonyl, a gas formed from carbon monoxide and metallic nickel. Using nickel carbonyl he developed a useful method (the Mond process) for extracting nickel from its ore.

Mondale, Walter (1928-), US politician. He was Attorney-General of Minnesota (1960-64) and DEMOCRATIC Senator from Minnesota (1964-67). In 1976 he was elected Vice-President of the USA.

Monday, second day of the week, the beginning of the working week. It is derived from the Old English for "Moon's day".

Mondrian, Piet (1872-1944), Dutch painter. He studied in Amsterdam and passed through an early naturalistic phase. Later he went to Paris, where CUBISM influenced the development of his geometric, abstract style, which he called NEO-PLASTICISM (an alternative name for De Stijl). Compositions using horizontal and vertical lines to outline rectangular shapes of white and primary colours are typical of his art. See also pp.1657, 1686, 1686, 1764.

Monera, large biological grouping comprising the BACTERIA and blue-green ALGAE. They are sometimes considered distinct enough from other protists (unicellular creatures) to be called a separate kingdom. The main difference lies in the organization of the genetic materials within the CELL. Monerans, also called *prokaryotes*, do not have their genetic material packed into a distinct NUCLEUS and lack MITOCHONDRIA and CHLOROPLASTS. Those with a distinct nucleus containing several chromosomes are called *eukaryotes*.

Monet, Claude (1840-1926), French painter; the classic IMPRESSIONIST - and leading member of the movement - who most consistently practised the Impressionist principles of fidelity to visual sensation and of working directly from the subject. Monet was described by Cézanne as "only an eye, but God what an eye!" During the 1860s he studied in Paris where he met RENAISSANCE, SILEY and most of the future Impressionists. He quickly embarked on his lifelong concern of depicting the endless variations of light and atmosphere in nature, and he succeeded, with hundreds of canvases, in capturing the flickering effects of light by breaking it down into prism-like colour components. In order to observe the transformation of a subject under changing light and atmosphere, he started his series of paintings on the same theme: *The Gare St-Lazare* (1876-78), *Haystacks*, *Poplars* (both 1890-92) and *Rouen Cathedral* (1892-94).

In 1874 he took part in the first Impressionist exhibition, which was savaged by the critics; they coined the term *Impressionism* after *Impression, Sunrise*, a painting by Monet who, like his fellow Impressionists, continued to work without patronage for many years. In 1883 he settled in Giverny, where he spent most of his remaining years. To this period belong the late *Water-Lily* series (1906-26), painted in his garden, many in his last years when he was almost blind. These huge canvases, bathed in shimmering light and almost formless colour and embodying a cosmic awareness of nature closer to TURNER than Impressionism, were the starting point of much abstract modern art. See also pp.1596-1597, 1596-1597.

Moneta, Ernesto Teodoro (1833-1918), Italian editor and pacifist, winner of the 1907 Nobel Peace Prize. An enthusiastic member of the movement for Italian unification, he served (1859-66) under GARIBOLDI. From 1867, as editor of the newspaper *Il Secolo*, he devoted himself to the cause of peace and in 1906 was president of the International Peace Congress.

Monetarism, economic and monetary position associated especially with the

views of the economist Milton FRIEDMAN. It asserts the primary importance of controlling the MONEY SUPPLY as the means of achieving a non-inflationary, stable economy capable of supporting high employment and economic growth. It was the chosen economic policy of the Thatcher government in the UK. 1979-

Monetary policy, control of the banking system and the MONEY SUPPLY by a government in the pursuit of various ends, such as a stable currency, a favourable balance of exchanges or a desirable level of employment. It is applied by controlling interest rates, the international movement of CAPITAL, the terms of hire-purchase agreements and the lending activities of banks and other financial institutions.

Money, any type of payment that is generally accepted within an economy as a medium of exchange for goods and services; without money, the economy would have to operate on the significantly less efficient barter system. Money serves as a standard of value and facilitates the lending and borrowing of funds. It may take many forms besides currency or cash (coins and banknotes). A large portion of the MONEY SUPPLY, for example, may be in the form of deposits within a banking system. See also BANKING; BANK OF ENGLAND; BANK RATE; pp.1177, 1203, 1260, 1786-1787, 1786-1787.

Mongolia (Mongol Ard Uls), official name the Mongolian People's Republic, a land-locked nation in central Asia between China and the USSR; also known as Outer Mongolia. Agriculture depends mainly on herd animals. Mineral deposits include coal, tungsten and copper. The capital is Ulan Bator. Area: 1,565,000sq km (604,247sq miles). Pop. (1976 est.) 1,489,000. See p.2099.

Mongolian, group of closely related languages forming a branch of the ALTAIC family. One of its members, Mongol (Khalkha), is the official tongue of the Mongolian People's Republic (Mongolia). Two others, Buryat and Kalmyk, are spoken in parts of the USSR to which they were taken by Mongolian nomads in the 17th century.

Mongolism. See DOWN'S SYNDROME.

Mongoloid people, one of the major human racial groupings. Mongoloid physical characteristics include medium skin pigmentation, a rather flat face, EPICANTHIC FOLDS of the eyes, straight black hair and little facial or body hair. Mongoloids make up most of the population of Asia, and in Greenland and North America are represented in Eskimos. See also pp.120-121, 121-123, 123.

Mongols, nomadic people of Mongolia, Manchuria and Siberia. They live in felt tents, eat mainly meat and milk, and raise horses, sheep and goats. They were once savage conquerors and rulers of the largest territory in history because of their prowess as archers and horsemen. The Mongols, under GENGHIS KHAN (c.1162-c.1227), built a huge empire, parts of which survived until the 17th century.

Mongoose, small, agile, carnivorous mammal of the CIVER family, native to Africa, s Europe and Asia. It has a slender, thickly furred body and a long, bushy tail. Mongooses are active by day and night and eat rodents, insects, eggs, birds and snakes. The Indian grey mongoose (*Herpestes edwardsi*) is well known for killing snakes, especially COBRAS. Some species may be domesticated, but most are highly destructive. Length: 46-115cm (18-45in). Family Viverridae. See also pp.98, 99, 298, 330.

Monism, metaphysical theory that reduces the multiplicity of things to one fundamental reality, either physical or spiritual. See also p.1887.

Monitor lizard, any of several species of powerful lizards that live in Africa, s Asia, Indonesia and Australia, including the KOMODO DRAGON (*Varanus komodoensis*). Most species are dull-coloured with yellow markings; many are semi-aquatic. Length: to 3m (10ft). Family Varanidae. See also pp.69, 80, 303, 346.

Moniz, António de Egas (1874-1955), Portuguese physician and medical researcher. He shared the 1949 Nobel

Prize in physiology and medicine with W.R. HESS for developing the surgical technique known as prefrontal LEUCOTOMY. This treatment of severely mentally ill patients, involving cutting selected brain fibres, was made popular by Moniz in the late 1940s and founded the controversial field of psychosurgery. See also pp.1117, 1117.

Monk, George, 1st Duke of Albemarle. See MONCK, GEORGE, 1ST DUKE OF ALBEMARLE.

Monk, Thelonius (1920-82), US jazz pianist. He helped develop the "bebop", now called "bop", jazz style in the 1940s and displayed a unique style featuring dissonances and distinctive chord structures. His best-known work is probably *Round Midnight*. See also pp.1756, 1756.

Monk, member of a community of men living under vows of religious observance such as poverty, chastity and obedience. There are many Christian monastic communities, especially in the Roman Catholic, Orthodox and Anglican churches, but the term "monk" is not confined to Christianity; it also refers to members of Hindu and Buddhist brotherhoods. See also MONASTERY.

Monkey, any of a wide variety of mostly tree-dwelling, day-active, omnivorous PRIMATES that live in the tropics and subtropics. Most monkeys have flat, man-like faces, relatively large brains, grasping hands and other characteristics of advanced anthropoid development. They fall into two broad groups - Old World monkeys (family Cercopithecidae) and New World monkeys (Cebidae). The 60 Old World species, sometimes called true monkeys, include MACAQUES, BABOONS, BARBARY APES, LANGUR MONKEYS and COLOBUSES. Some, such as baboons, are mainly ground dwellers, but all are excellent climbers. Most have short or long but always non-prehensile tails. They range in distribution from Japan and N China through s Asia and Africa (except in desert regions). The 70 species of New World monkeys include HOWLER MONKEYS, CAPUCHIN MONKEYS, SPIDER MONKEYS and MARMOSETS. They are all tree-dwellers, and most have grasping (prehensile) tails. The thumbs are less flexible and the nostrils are usually more widely separated than in Old World monkeys. They live in tropical forests of Central and South America. See also pp.102, 106, 107, 299, 311, 313, 314, 332-333, 333.

Monkey-flower, one of a number of annual or perennial plants of the FIGWORT family. Monkey-flowers have two-lipped, tubular flowers resembling those of the snapdragon (antirrhinum), with a spotted pattern suggesting a monkey's face. Family Scrophulariaceae; genus *Mimulus*.

Monkey puzzle, or **Chilean pine**, evergreen tree native to the South American ANDES mountains. It has tangled branches, with spirally arranged, sharp, flat leaves. The female seeds are edible. It is grown in Europe mainly as an ornamental. Height to 45m (150ft). Family Araucariaceae; species *Araucaria araucana*. See also pp.308, 366.

Monkfish. See ANGLER FISH.

Monkshood. See ACONITE.

Monmouth, James Scott, Duke of (1649-85), English nobleman, illegitimate son of CHARLES II. He became a successful general and the champion of the Protestants opposing the succession of the Catholic Duke of York to the English throne. Exiled in 1679, he returned in 1685 to assert his claim to the throne but was defeated at the Battle of SEDGEMOOR by JAMES II and executed. See also pp.1427, 1427.

Monmouth, municipal borough, former county town of MONMOUTHSHIRE, SE Wales at the junction of the rivers Monnow and Wye. In 1974 it became part of the new non-metropolitan county of GWENT. Remains include an 11th-century castle (in which Henry V was born in 1387), a Norman priory and bridge (over the Monnow), with a gateway built in 1260. The town is a popular tourist attraction.

Monmouthshire, former county in SE Wales; in 1974 it was divided between

Gwent and Mid-Glamorgan. The land is generally low-lying and fertile, rising to hills in the NW. Much of the area is pasture, but wheat and fruits are also grown. There are large deposits of coal, and steel is manufactured; iron ore is now imported. Monmouth was the county town. Area: 1,404sq km (542sq miles). Pop. (1971) 461,459.

Monmouth's Rebellion (1685), uprising in the West Country of England led by the Duke of MONMOUTH, illegitimate son of CHARLES II, contesting the accession to the throne of the Roman Catholic, JAMES II. Monmouth was defeated at the Battle of SEDGEMOOR. His mainly peasant followers were tried by Judge JEFFREYS. See also pp.1427, 1427.

Monnet, Jean (1888-1979), French economist. Active in government since WWI, he was a member of the British Supply Council during WWI, helping to organize the Allied war effort. His Monnet Plan in 1947 envisaged a controlled growth of French industry and he was the first president (1952-55) of the EUROPEAN COAL AND STEEL COMMUNITY. See also pp.1742, 1742.

Monnoyer, Jean Baptiste (1636-99), Flemish painter and engraver who specialized in floral decorations. He helped decorate the Galerie d'Apollon at the Louvre. In about 1685 he came to London and decorated the town house of the Duke of Montagu. Other stately homes decorated by him include Hampton Court and Kensington Palace.

Monoamine oxidase (MAO), enzyme widely distributed in animals; other names are adrenaline oxidase and tryptamine. Its function in the body is the breakdown of certain biologically active amines, three of the most important of which are the tryptamine derivatives, the catechol amines (eg epinephrine and dopamine) and histamine.

Monocline, in geology, sudden downward turn in the direction of a rock strata within a fold, surrounded by horizontal rock.

Monocotyledon, subclass of flowering plants (ANGIOSPERMS) characterized by one seed leaf (COTYLEDON) in the seed embryo; the leaves are usually parallel-veined. Lilies, onions, orchids, palms and grasses are examples of monocotyledons. The larger subclass of plants is DICOTYLEDON. See also pp.374, 378-381.

Monod, Jacques (1910-76), French biochemist. With François JACOB he developed the idea that messenger RNA carries hereditary information from the nucleus of a CELL to the cellular sites during the synthesis of PROTEINS, and the concept of the operator GENE controlling the activity of other genes. Together with André Lwoff, they were awarded the 1965 Nobel Prize in physiology and medicine.

Monococious plant, in botany, a plant with both male and female reproductive organs. Flowering species have male flowers, bearing STAMENS, and female flowers bearing one or more carpels.

Monogamy, principle in which it is accepted that MARRIAGE is an exclusive union between two members of opposite sexes. It is commonly supported by legal and/or religious institutions. See also POLYGAMY; POLYANDRY.

Monolith, massive freestanding stone used in various Neolithic and Early Bronze Age monuments; alternatively known as MEGALITH. See also MENHIRS.

Monomer, chemical compound composed of single molecules, as opposed to a POLYMER (which has molecules built up from repeated monomer units). For example, propylene is the monomer from which polypropylene is made, and methyl methacrylate is the monomer for polymethyl methacrylate, which is sold under the trade names Lucite, Plexiglas and PERSPEX. See also p.589.

Monophonic sound, sound which is transmitted over a single path or channel to be reproduced by one or more loudspeakers. See also STEREOEPHONIC SOUND.

Monophysite Controversy, religious dispute centring on the Person of Christ. Monophysitism proposes a single, Divine Nature, whereas Orthodox teaching stresses a double Divine and Human Nature.

EUTYCHES was condemned in 448 for preaching an extreme form of Monophysitism, which was opposed at the Council of Chalcedon (451). Thereafter, many variants of the heresy developed, eventually resulting in the consolidation of three great Monophysite churches: the COPTIC, SYRIAN Orthodox and Armenian.

Monophysitism, the belief that in Christ after His INCARNATION, there is only one nature which is divine, as distinct from the orthodox Christian doctrine of a double nature, divine and human. Monophysitism was condemned by the Council of CHALCEDON in 451, after which its adherents became separated from the main body of Christendom. The COPTIC, SYRIAN, Jacobite and Armenian churches are still monophysite. See also CHRISTOLOGY; MONOTHEISM.

Monopolies Commission, British organization set up in 1948 to determine whether monopolistic conditions exist in industries referred to it by the Board of Trade. A monopoly was defined as either restrictive or at least one-third (25% since 1973) of the output of a particular commodity in Britain. Its reports are advisory, and the Commission can also examine any type of service, including professional services. It also deals with business mergers. In 1973 it became re-established as the Monopolies and Merger Commission. **Monopoly**, in economics, status of a manufacturer or supplier in which there is imperfect or even no competition, so that the market demand for a product or service is the only demand. A monopolistic industry has complete power over the market for its product and is able to determine levels of output and prices. Such an industry can charge high prices for less output than in a market with free competition. In many countries there are regulations to limit or prevent monopolies. See also pp.1864, 1864.

Monopoly, board game for two or more players. The players, who are allocated an equal sum of money, acquire property according to the throw of the dice, the aim being to take over (or monopolize) their opponents. It was developed in 1933 in the USA by an unemployed salesman, Charles Darrow, who manufactured the game himself after it was initially rejected by games manufacturers. It has been adapted for differing local topographies; for instance the British version, features the streets of London, the German version the streets of Berlin.

Monorail train, passenger train that runs on a single rail; modern versions are gyroscopically stabilized and propelled by electric motors. The passenger cars are unsupported from the bottom or sides; they generally hang from wheeled axles. Bottom-supported cars, such as those used in zoos and amusement parks, are also referred to as monorails. See also pp.508-510.

Monosodium glutamate (MSG), food additive, a white crystalline powder with a meat-like taste obtained mainly from cereal glutens or from the waste liquor produced in recovering sugar from beet molasses. It is used as a flavour enhancer for meat products.

Monothelism, belief in the existence of a single God in the universe, who is visualized as the creator of all and is both personal and transcendent. Judaism, Christianity and Islam are the three major monotheistic religions.

Monothelism, or Monothelitism, 7th-century Christian heresy asserting the existence of only one (divine) will in Christ rather than the orthodox belief in the existence of two wills in Him, divine and human. The initial proposing of the heresy was politically motivated, to gain the support of Monophysites and enable the formerly divided Christendom to unite against the Persian and Muslim invasions of the Byzantine Empire. It was formulated in documents drawn up in 638 and 648. Monothelism was condemned at the LATERAN COUNCIL in 649 and at the Third Council of Constantinople in 680. See also CHRISTOLOGY; MONOPHYSITISM.

Monotreme, one of an order of primitive mammals that lay eggs. The only living

monotremes are the platypus and two species of echidna, or spiny anteaters, all native to Australasia. The eggs are temporarily transferred to a pouch beneath the female's abdomen where they eventually hatch and are nourished by rudimentary mammary glands. See also pp.86, 88, 90, 91.

Monotype, in art, method of printmaking in which a design is painted on a glass plate with oil colours and prints are made by pressing paper on to the glass to obtain a mirror image. Etching plates or lithographic stones may be used instead of glass plates.

Monotype, in printing, typesetting machine that casts letters one at a time. See also LINOTYPE; PHOTOTYPESETTING; pp.614-615, 614-615.

Monroe, James (1758-1831), fifth President of the United States (1817-25). He served as a member of Congress from 1783-86 and from 1790-94 as a member of the Senate. In 1794 he was made Minister to France, reaching the climax of his diplomatic career when he negotiated the LOUISIANA PURCHASE in 1803. A Jeffersonian, Monroe was chosen to succeed Madison as President and won an easy victory in the election of 1816. His administration was marked by improving relations with Britain and Spain, by the acquisition of Florida, and by the first rumblings of the slavery issue, solved by the MISSOURI COMPROMISE (1820). Monroe is most famous for promulgating the MONROE DOCTRINE (1823).

Monroe, Marilyn (1926-62), US film star, real name Norma Jean Baker. She was a talented comedienne, renowned as a sex symbol until her suicide at the age of 36. Her films include *Gentlemen Prefer Blondes* (1953), *The Seven Year Itch* (1955), *Bus Stop* (1956), *Some Like It Hot* (1959) and *The Misfits* (1961). See also pp.1753, 1773.

Monroe Doctrine, foreign policy statement made by President James MONROE to the US Congress on 2 Dec. 1823. The doctrine attempted to prevent European intervention in American countries by stating that any interference in the affairs of any American country would be considered to be an unfriendly act towards the USA. It was established as policy by WWI and continued into the 1960s, when the USA attempted to exercise a proprietary role in the CUBA MISSILE CRISIS of 1962.

Monrovia, port and capital of LIBERIA on the estuary of the St Paul River. It was settled in 1822 by freed US slaves on a site chosen by the American Colonization Society and named in honour of the US President James Monroe. Monrovia exports latex and iron ore; it also has warehouses and facilities for ship repairing. Its own manufactures include bricks and cement. Pop. (1980 est.) 220,000.

Mons, Battle of (24 Aug. 1914) first battle in WWI that involved the British Expeditionary Force (BEF). Two British divisions held up the German advance for 24 hours, and although heavily outnumbered managed to effect an orderly retreat, reaching the River Marne on 6 Sept.

Monsarrat, Nicholas (1910-79), British author best known for his novel *The Cruel Sea* (1951), which was filmed in 1953. His other works include *The Tribe That Lost Its Head* (1956), *Richer Than All His Tribe* (1968) and *Kappilan of Malta* (1973).

Mons Meg, iron cannon built in c.1460. Its calibre is 49.5cm (19.5in), and it weighs 5 tonnes. Mons Meg is on display at Edinburgh Castle in Scotland. See also p.561.

Monsoons, seasonal reversal of winds, and their associated abrupt weather changes, that blow inshore over land masses in summer and offshore over nearby oceans in winter. The monsoon occurs annually in S Africa and E Asia and is centred on the Indian subcontinent. See also p.254.

Monsoon forest, type of tropical forest found in parts of SE Asia and the Indian sub-continent where rainfall averages between 101.5-203cm (40-80in) annually. It consists of sal and teak trees, both of which are valuable export commodities, with some evergreen undergrowth.

Monstera, any of several species of tropical American, climbing or trailing plants with large glossy leaves that are commonly holed or deeply incised. The plants are sometimes confused with species in the genus PHILODENDRON. *Monstera deliciosa* is a popular houseplant; it is often called a cheese plant. Family ARACEAE.

Monstrance, in the Roman Catholic Church, small decorative dish with a glass cover and a handle to one side, used to display the sacramental wafer or HOST to the congregation during the evening devotional service of Benediction. Usually made of gold, silver or brass in the symbolic form of a sun. It is not used at Mass since there the host itself is elevated. The showing of the monstrance at the service itself constitutes a benediction; no final blessing is given thereafter.

Montage, cinematic film-editing technique. It is a style of cutting and splicing a series of shots to obtain a desired narrative, structural or purely aesthetic effect. The *Odessa Steps* sequence in Sergei EISENSTEIN's *Potemkin* is a classic example of montage.

Montagna, Bartolommeo (c.1450-1523), Italian Renaissance painter of stately religious subjects. Many of his works are monumental, and show a mastery of modelling. Among the best known are *Madonna Enthroned between Four Saints* (1499) and the *Pietà* (1500).

Montagnards (The Mountain), nickname of the deputies of the extreme left who occupied the raised seats in the National Convention during the FRENCH REVOLUTION. With the fall of the GIRONDINS (1793), the Montagnards were the dominant political group during the REIGN OF TERROR, when a centralized government was imposed on France. The Montagnards lost power during THERMIDORIAN REACTION in 1794.

Montagu, Lady Mary Wortley (1689-1762), British letter writer. In 1716 she went with her husband to Turkey, where he was briefly ambassador. Returning to England in 1718, she campaigned to educate the public about inoculation against smallpox. Her letters, which contain lively observations of her travels, were published in 1763.

Montague, Charles, Earl of Halifax. See HALIFAX, CHARLES MONTAGUE, EARL OF.

Montaigne, Michel Eyquem, Seigneur de (1533-92), French essayist. His *Essays*, begun in 1580, touch on almost every known subject. Written in a style that alternates between high eloquence and racy colloquialism, they constitute an intellectual autobiography that moves from stoicism through SCEPTICISM to a mature acceptance of all that life offered. See also pp.1450, 1451.

Montale, Eugenio (1896-), Italian poet, journalist, critic and translator who was awarded the 1975 Nobel Prize in literature. In 1922 he helped to found a literary magazine *Primo Tempo* and from 1948 was the literary editor of *Corriere della Sera*. He is considered as one of Italy's major poets. His work is pessimistic, especially in *Ossi di Seppia* (*Cuttlefish Bones*) (1925), which captures the despondency of postwar Italy. He also translated several works into Italian, including those of T. S. ELIOT, by whom he was influenced, and SHAKESPEARE.

Montana, state in NW USA, on the Canadian border. The W section of the state is dominated by the Rocky Mts. The E is part of the GREAT PLAINS, drained by the Missouri and Yellowstone rivers. Large herds of sheep and cattle are raised on the plains. The principal crops, grown by means of irrigation, are wheat, hay, barley and sugar-beet. The Rockies have large mineral deposits including copper, silver, gold, zinc, lead and manganese. Oil, natural gas and coal are found in the SE. The major industries in the state are timber, food processing and petroleum products; tourism is also an important source of income. The main cities are Helena, the state capital, Billings and Great Falls.

French and Spanish fur traders travelled in the region before 1800, but until the USA acquired the area in the LOUISIANA PURCHASE of 1803, it was little

known. LEWIS AND CLARK explored it (1805-06), and this led to the establishment of trading and military posts. The discovery of gold in 1852 brought a rush of immigrants and the Territory of Montana was organized in 1864. The opening of the Northern Pacific Railroad in 1883 provided a great stimulus to the state's growth and development. Area: 381,086sq km (127,137sq miles). Pop. (1980) 786,690. See also p.2161.

Montand, Yves (1921-), Italian-born French film actor who began his career as a music hall singer. He made his film debut in the mid-1940s and went to Hollywood in 1961 to make *Let's Make Love*, with Marilyn MONROE. He returned to Europe to make *Z* (1969) and *State of Siege* (1973) with the director COSTA-GAVRAS. *Wages of Fear* (1953) is considered his finest film.

Montanism, 2nd-century apocalyptic movement owing its origin to the "prophet" Montanus of Phrygia. He began preaching about AD 156, describing a heavenly Jerusalem that would descend to Phrygia. He usually spoke while in a state of ecstasy, and his prophecies were often accompanied by behaviour resembling demonic possession. Montanism was condemned by the Asiatic synods which excommunicated the Montanists, probably c.177.

Montauban, city in Tarn-et-Garonne dept. S France. It was a centre of the ALBIGENSIANS in the 13th century and the HUGENOTS in the 16th. Industries: aeronautical engineering, textiles, food processing. Pop. 48,600.

Mont Blanc, highest peak in the Alps, and the second-highest peak in Europe, situated on the French-Italian border. The 11km (7 mile) tunnel, cut through the base of Mont Blanc (1958-62), is the longest vehicular tunnel in the world and provides a short route between France and Italy. Height: 4,810m (15,781ft).

Montcalm, Louis-Joseph de, Marquis de Saint-Véran (1712-59), French general in North America. Commander-in-chief of the French army in Canada from 1756-59, he won several victories in the colonial wars against the British, including Fort TICONDEROGA (1758). Lacking support from France, he was defeated by Gen. James WOLFE at Quebec, where he was mortally wounded. See also p.1614.

Mont Cenis Tunnel, also known as the Fréjus Tunnel, a 13km (8 miles) double-track railway tunnel through the Alps, between Modane (France) and Bardonecchia (Italy). Built between 1857 and 1871, it was the first tunnel through the Alps and the first to use the newly invented pneumatic power drill.

Monte Albán (c.300 BC-c.AD 900), ancient ZAPOTEC religious centre located SW of Oaxaca, Mexico. Monte Albán was built on a level hilltop and along the adjacent valleys; stepped platforms supported the religious monuments. See also pp.1178, 1179, 1364.

Monte Carlo, town in N Monaco, on the French RIVIERA and Mediterranean Sea. It was founded in 1858 by Prince Charles III of Monaco in agreement with a joint stock company that wished to build and operate the Casino. Today it is a popular resort noted for its scenery and mild climate, and the Casino remains a great tourist attraction. Pop. (1973) 23,850.

Monte Carlo Rally, world-famous motor event held every January, when cars set off from pre-arranged points in Europe to converge on Monaco several days later. Those beating the winter weather to arrive on time then embark of a series of trials around the mountains and in the city. It was first run in 1911 and 1912, then resumed in 1924. Awards are made for outright and class wins. Its importance has decreased in recent years, relative to races such as the RAC and Safari rallies.

Monte Cassino, famous monastery overlooking the town of Cassino in central Italy. The monastery was founded c.529 by St BENEDICT OF NURSIA whose rule became the basis of the Benedictine order named after him. Monte Cassino became a medieval centre of Christian learning. The monastery was stormed by the Lom-

Montecristo Island

Field Marshal Montgomery, addressing senior NATO officers in 1958.

Montrose, on hearing of the execution of Charles I, led a force to avenge him.

Monument: stairs inside give access to a viewing platform at the top.

Moonfish are brilliantly coloured and appear iridescent in changing light.

bards in 589, the Saracens in 884 and the Normans in 1030. It was reconstructed by Abbot Desiderius in the 11th century and again in the 16th and 17th centuries after an earthquake. It was damaged during WWII but its archives and art treasures were saved.

Montecristo Island, uninhabited Italian island in the Tyrrhenian Sea s of Elba. It is a former penal colony made famous by the Alexandre DUMAS novel *The Count of Monte Cristo*. Area: 16sq km (6sq miles).

Montego Bay, port in NW Jamaica, West Indies. It is a commercial centre with a good harbour and extensive rail connections. Products include sugar cane, coffee, ginger, rum and fruit. Tourism is a valuable source of income. Pop. (1970 est.) 43,000.

Montenegro (Crna Gora), constituent republic of SW Yugoslavia, at the s end of the Dinaric Alps, bordered by Albania (se) and the Adriatic Sea (sw); the capital is Titograd. The region is mountainous and isolated, divided into the Brda region and Montenegro proper to the w of the River Zeta. The population is largely Serbian. The region was an independent principality of Zeta within the Serbian Empire until the 14th century, when the Empire was defeated by the Turks. Formal recognition of independence occurred in 1878 at the Congress of BERLIN. In 1946 Montenegro became one of the six Yugoslavian autonomous republics. Occupations include rearing livestock, mining and farming of cereal crops. Area: 13,812sq km (5,322sq miles). Pop. (1971) 530,361.

Monterrey, city in NE Mexico, 242km (150 miles) s of Laredo, Texas, USA. It is an important commercial centre, having a variety of industries. These include glass blowing, lead smelting and the production of silver, gold and copper. Its equable climate also makes it a popular resort area. Pop. (1977 est.) 1,132,000.

Montespan, Françoise Athénais, Marquise de (1641–1707), mistress of King LOUIS XIV of France. Maid of Honour to Queen Marie Thérèse in 1664, she replaced Mlle de La Vallière as the king's mistress in 1667. She bore him several children. They were educated by Mme de MAINTENON, who succeeded her in the king's favour. She later retired to a convent.

Montesquieu, Charles-Louis de Secondat, Baron de (1689–1755), French social philosopher. He launched his criticism of contemporary society in the *Persian Letters* (1721). In his *Spirit of Laws* (1748) he attempted to explain the evolution of societies in terms of environmental features: climate, geography and DEMOGRAPHY. See also pp.1466, 1467.

Montessori, Maria (1870–1952), Italian educationist who believed that pre-school children, given an environment rich in manipulative materials, would teach themselves. Her method, which she used first with retarded children, was adapted for use in many of the state school systems in Britain and the USA.

Monteux, Pierre (1875–1964), French conductor and founder of the Paris Symphony Orchestra. He toured with the ballet impresario DIAGHILEV (1911–1914), and introduced many important 20th-century works such as STRAVINSKY's *Rite of Spring* and RAVEL's *Daphnis et Chloé*.

Monteverdi, Claudio (1567–1643), Italian composer, the first great opera composer and a pioneer in modern orchestration. He advanced violin technique by trying out new effects in orchestral playing. His many operas include *La Favola d'Orfeo* (1607), *Il Ballo delle Ingrate* (1608) and *L'Incoronazione di Poppea* (1642). He also composed religious music and was the master of the MADRIGAL. See also pp.1452–1453, 1484, 1580.

Montevideo, capital of URUGUAY, in the s part of the country on the River Plate 217km (135 miles) E of Buenos Aires, Argentina. Originally a Portuguese fort (1717), it was captured by the Spanish in 1726 and became the capital of Uruguay in 1828. One of South America's major ports, it is the base of a large fishing fleet and handles most of the country's exports.

Products include textiles, dairy goods, wine and packaged meat. Pop. (1975 est.) 1,229,748.

Montez, Lola (c.1818–61), Irish dancer. She became the mistress of Louis I of Bavaria in 1846, but her liberal influence led to his abdication and her expulsion in 1848. She toured the USA in 1851.

Montezuma, name of two AZTEC emperors. Montezuma I (r.1440–69) increased the size of the empire through a series of wars. Montezuma II (1466–1520) allowed the Spaniards under CORTÉS to enter central Mexico unhindered. Montezuma II was imprisoned by the Spaniards and killed by his own subjects when they rose up against the intruders.

Montfort, Simon de (1208–65), French-born Earl of Leicester. Married to HENRY III's sister, he was the king's adviser until he quarrelled with him and joined the BARONS' WAR. De Montfort defeated Henry at LEWES in 1264 and became virtual ruler of England, but was killed in renewed fighting at Evesham. See also pp.1312, 1313, 1342, 1342.

Montgolfier, name of two French pioneer balloonists, the brothers Jacques Étienne (1745–99) and Joseph Michel (1740–1810). In 1783 they sent up a large linen bag inflated with hot air. Its flight covered more than a mile (about 2km) and lasted for ten minutes. In the same year they gave their first public demonstration of a manned balloon flight over Paris. See also pp.512–513.

Montgomery, Lucy Maud (1874–1942), Canadian author. She was a teacher and journalist before writing seven novels dealing with the life of a Canadian orphan girl. *Anne of Green Gables* (1908), the first book, has been widely translated.

Montgomery of Alamein, Bernard Law, Viscount (1887–1976), British soldier. As commander of the British Eighth Army in WWII, he defeated ROMMEL and the AFRIKA KORPS at EL ALAMEIN in Egypt and led the invasion of Sicily and Italy. He helped to plan the Normandy landings in 1944, leading his troops into Germany and commanding the British occupation forces there. He was made a Field Marshal in 1944 and a Viscount in 1946, and was deputy Supreme Allied Commander, Europe, from 1951 to 1958. See also pp.1711, 1713, 1713.

Montgomery, commercial city in SE central ALABAMA, USA, 137km (85 miles) SSE of Birmingham. It was made the state capital in 1847 and became important as a port and market centre. Today its manufactures include textiles, fertilizers, glass products, paper and machinery. Pop. (1970) 133,386.

Montgomeryshire (Trefaldwyn), former county in E central Wales; in 1974 it became part of Powys. The land is mostly mountainous and is drained by the rivers Dyfi, Severn and Vyrnwy. Lead was once mined there, but the region is now devoted almost wholly to sheep-rearing. The county town was Montgomery. Area: 2,064sq km (797sq miles). Pop. (1971) 42,761.

Month, time taken for the Moon to travel completely around the Earth. The sidereal month is the time of one revolution with respect to the stars and is equal to 27.32 days. As the Earth is in motion around the Sun, the synodic month – from full moon to full moon – is longer than the sidereal month and is equal to 29.53 days. The calendar month is not constant in length and is defined for convenience.

Montherlant, Henri Millon de (1896–1972), French writer. A frequent theme in his novels is the choice between decadence and moral integrity facing the aristocracy. They include *The Bullfighters* (1926), *The Bachelors* (1934) and *Young Girls* (1936). In 1942 he turned to drama, writing *Malatesta* (1946), *Port Royal* (1954) and *La Guerre Civile* (1965).

Montmagny, Charles Jacques Huault de (1583–1653), French colonial governor. He replaced Samuel de CHAMPLAIN as governor of NEW FRANCE (Canada) from 1636 to 1648 and made a peace treaty with the IROQUOIS.

Montmartre, highest point of Paris, on the right bank of the River Seine. In the 19th

century writers and artists collected in Montmartre. One of the most impressive landmarks of Paris, the Church of the Sacré Coeur, was built there in 1919. Today Montmartre is a great tourist attraction and centre of night life.

Montmorency, Anne, Duc de (1493–1567), Constable of France who was brought up with the future king, Francis I, whom he followed into Italy (1515). Made Marshal of France in 1522, he defeated Charles V at Susa (1536) and became Constable (1538) but lost favour in 1541. He was restored to court by Henry II (1547). Unpopular with Francis II, he returned once more to favour with Charles IX (1560) and commanded against the Huguenots (1562). He triumphed at St Denis (1567) but was fatally wounded.

Montmorency-Laval, François de (1623–1708), first Bishop of Quebec (1674–88). He was ordained a priest in 1647 and appointed vicar apostolic to the French colonies in 1658, where he organized church schools, directed missionary work and founded the Quebec seminary in 1663.

Montparnasse, quarter of Paris, in the vicinity of the intersection of the Boulevard de Montparnasse and the Boulevard Raspail on the left bank of the River Seine. The Montparnasse cemetery contains the tombs of BAUDELAIRE, MAUPASSANT and CÉSAR FRANCK, all of whom frequented the area in their youth.

Montpellier, city in s France, 10km (6 miles) N of the Mediterranean coast. It became noticeably larger in the 1960s due to an influx of refugees from Algeria; industry and commerce have been developed accordingly. Manufactures now include textiles, metal goods, printed materials and chemicals. Pop. (1975) 195,603.

Montreal, city on Montreal Island and the N bank of the St Lawrence River, in s Québec province, Canada; largest city in Canada and the country's chief port. Its excellent harbour on the ST LAWRENCE SEAWAY makes it an important entrepôt and it is linked to all the major industrial centres on the GREAT LAKES. Originally the Indian village of Hochelaga, the site was visited by Jacques CARTIER in 1535, and settled by the French in 1642. It was under French control until 1760, when it was taken by the British. The Americans occupied the city during the American War of Independence. The city's growth accelerated with the opening of the Lachine Canal in 1825, connecting it to the Great Lakes. Montreal served as the seat of the Canadian government from 1844 to 1849. A major cultural and educational centre, it has McGill University (1821) and the University of Montreal (1876). It is the focal point of transport routes, commerce and industry in E Canada. Industries include aircraft, electrical equipment, rolling-stock, textiles, metallurgy, chemicals and food processing. Pop. (1976) 2,802,455. See also p.1996.

Montrose, James Graham, 5th Earl and 1st Marquess of (1612–50), Scottish military commander. He fought with the COVENANTERS against the English in 1639, but after 1640 took the side of CHARLES I. His wild army was at first successful in Scotland but he was defeated in 1645, went into exile, returned in 1650, and was captured and hanged. See also p.1433.

Monts, Pierre du Guast, Sieur de (1568–1630), French colonizer of Acadia (Nova Scotia) (1604–48). He was granted a fur-trade monopoly in 1603 and, with Samuel de CHAMPLAIN, founded the first colony at Port Royal in 1605. It proved impossible to enforce the monopoly and they moved (1608) to the St Lawrence and established a fur-trade factory.

Mont Saint Michel, rocky isle 1.6km (1 mile) off NW France, in the Bay of Saint Michel. It is the site of a Benedictine abbey built in 708 by St Aubert. The base of the island is circled with ramparts, towers and bastions rising three stories to support the abbey church. The church spire holds a statue of St Michael, 138m (456ft) above the bay. Built in the GOTHIC style, the abbey attracts many tourists.

Montserrat, island and British colony in the Leeward Islands, in the Lesser Antilles group of the West Indies. Plymouth is the capital and chief port. Discovered in 1493 by Christopher Columbus, it was colonized in 1632 by the British. A former member of the Federation of the West Indies, the island is currently part of the Caribbean Free Trade Association. The shipping of agricultural produce, especially cotton, is the chief economic activity. Area: 98sq km (38sq miles). Pop. (1980) 12,073. See also p.2100.

Monument, The, stone column that stands near Billingsgate in the City of London, England. It was designed by Sir Christopher Wren and completed in 1666. It commemorates the FIRE OF LONDON of 1666 and is thought to stand on the site of the bakery in Pudding Lane where the fire began.

Monza, multi-track autodrome, built in 1922 in a royal park on the outskirts of Milan, Italy. The Italian Grand Prix is raced on the 5.7km (3.5 miles) road-racing circuit, which in places incorporates Monza's famous banked track. It is one of the fastest motor-racing circuits in the world.

Mood, period of stable emotion distinguished by the quality of the feeling—irritability, sadness, optimism, etc.—and the inclination to maintain it. The stability of a mood is a measurable factor in human temperament.

Mood, or mode, group of forms in the grammatical conjugation of a verb serving to show the function in which it is used. Indicative states a fact; subjunctive expresses uncertainty; imperative makes a command. Interrogative, asking a question, and conditional, expressing a condition, are sometimes included as moods.

Moody, Helen Wills (1905–), US tennis player. Considered to be the greatest female player of her time, she won eight WIMBLEDON women's singles titles between 1927 and 1938, 19 major singles titles in all, and was ranked first in the world nine times.

Moog synthesizer, computer tool for composing music by translating ideas into electronically produced synthetic sound. Wave forms generated by programmed or randomly manipulated circuitry and modified by altering intensity, frequency, duration, etc. are combined to create complex signal patterns. Output is obtained from selected mixtures preserved on magnetic tape. The Moog synthesizer was named after its inventor Robert Moog, a US physicist who developed the instrument in the 1960s.

Moon, natural satellite of a planet, in particular the natural satellite of the planet Earth. The Moon is approx. the same age as the Earth (4,500–5,000 million years old). It emits no light of its own, and reflects less than 10% of the sunlight that falls on it. Man has observed the Moon and recorded its apparent motion across the skies throughout history. It is the Earth's closest neighbour and the only celestial body in the sky, with the exception of the Sun, that is visible to the naked eye as a disc rather than a point of light. With an escape velocity of 2.4km (1.5 miles) per second, the Moon has no atmosphere as such. Mean distance from the Earth: 384,000km (239,000 miles); mass: 0.012 times that of the Earth; volume: 0.02 times that of the Earth; diameter: 3,476km (2,160 miles); rotational and sidereal period: 27.3 days; temperature range: approx. 90°C (195°F) (day) to approx. -130°C (-200°F) (night). The first human moon landing was in July, 1969.

Moon and Sixpence, The, novel by W. Somerset MAUGHAM, published in 1919, based on the life of the French painter Paul GAUGUIN. Charles Strickland, a conventional stockbroker, becomes interested in painting in middle life and deserts his wife, family and business in order to live and paint in Tahiti.

Moonfish, or opah, sometimes called kingfish, marine fish found in all seas and important as a food fish in Japan. Its oval body is laterally compressed and coloured blue and rose with white spots. Length: to 182.9cm (6ft); weight: to 270kg (600lb).

Family Lampridae; species *Lampris regius*. Other species of fish, notably *Mene maculata* and *Vomer setapinis*, are also called moonfish.

Moon rat, small, rat-like, nocturnal mammal, the largest species of the hairy hedgehogs, found only in SE Asia. Primarily insectivorous, it has bristly black fur and white markings on its head. Length: to 58cm (23in) overall. Family Erinaceidae; species *Echinorex gymurus*.

Moonstone, potassium feldspar with a milky translucent lustre, valued as a gemstone which is both light-reflecting and hard. Most moonstones of commercial value come from Ceylon. The iridescent quality is produced by crystal planes within the stone.

Moonstone, The (1868), novel by Wilkie COLLINS narrated by several characters and concerning a jewel stolen from an Indian idol and bequeathed to an English girl. Many critics, including T. S. ELIOT, regard *The Moonstone* as the first work of detective fiction in the English language.

Moore, tract of open wasteland, often covered with heather. The soil is acid and commonly marshy or boggy. Found throughout Britain, examples are Dartmoor, Exmoor and the Yorkshire moors.

Moore, Archie (c. 1915–), US boxer. He turned professional in 1936, and won his first 13 matches by knockouts. In 1952 he won the light-heavyweight championship from Joey Maxim and held the title until 1961. He fought Rocky MARCIANO in 1955 and Floyd Patterson in 1956 for the heavyweight championship, but was beaten on both occasions.

Moore, Brian (1921–), Canadian novelist, b. Northern Ireland. His works, humorously written about serious subjects, include *The Lonely Passion of Miss Judith Hearne* (1955), *The Luck of Ginger Coffey* (1960), *Fergus* (1971), *Catholics* (1972) and *The Doctor's Wife* (1976).

Moore, George (1852–1933), Irish novelist, dramatist and short story writer. He studied art in Paris and, inspired by Honoré de BALZAC and Emile ZOLA, turned to writing. Their influence may be detected in the realism of his novels, particularly *Esther Waters* (1894). He was a founder of the Irish National Theatre, later the ABBEY THEATRE.

Moore, George Edward (1873–1958), British philosopher. Concerned with ETHICAL theory, EPISTEMOLOGY and METAPHYSICS, he held that "good in itself" could not be analysed as a concept. His *Principia Ethica* (1903) was a major factor in the declining influence of Hegelianism and Kantianism in British philosophy. Among his other works are *Philosophical Papers* (1959) and *The Common Place Books* (1962), published posthumously. See also HEGEL, GEORGE; KANT, IMMANUEL.

Moore, Gerald (1899–), British pianist who became widely known as an accompanist to many of the world's leading instrumentalists and singers. His experiences are reported in *The Unshamed Accompanist* (1943, revised 1957) and *Am I Too Loud?* (1962).

Moore, Henry (1898–), British sculptor of international standing. His early work was strongly influenced by pre-Columbian art, but by 1928 his style had become more personal and he had gained an international reputation. His sculpture often incorporates hollows to which he gives as meaningful a shape as solid mass; there are also analogies to landscape (hillsides, caverns, etc.) in many of his figures. During WWII he was commissioned by the British government to do his famous drawings of people in the London Underground shelters. The mother and child and the reclining figure are themes central to much of his work. See also pp.1687, 1687, 1764, 1765.

Moore, Sir John (1761–1809), British soldier. After fighting in the West Indies, Holland and Egypt (1796–1801), and serving as a training officer (1803–06), Moore was sent to fight the French in Spain, where he was mortally wounded at CORUNNA. See also p.1555.

Moore, Marianne (1887–1972), US poet. Her poetry covers a wide range of topics and is precise, witty and often satirical.

Volumes of her verse include *Observations* (1924) and *Collected Poems* (1951).

Moore, Patrick (1923–), British astronomer and writer, whose many publications and broadcasts on television and radio established him among the foremost authorities on space-flight, the Moon and the planets. His publications include *Moon Flight Atlas* (1969), *Atlas of the Universe* (1970), *Guide to the Planets* (1971) and *Guide to the Moon* (1976).

Moore, Robert Frederick ("Bobby") (1941–), British footballer who captained England to victory in the 1966 World Cup, won a record 108 caps (1962–73), and led West Ham United to win the 1964 FA Cup and 1965 European Cup-Winners' Cup. A masterly defender, he ended his playing days at Fulham.

Moore, Ronnie (1933–), New Zealand speedway rider who, at 17, was the youngest-ever finalist in the world championships. He won the title in 1954 and 1959, both times with maximum points and despite injuries. He rode for Australia, New Zealand and Britain.

Moore, Stanford (1913–), US biochemist who shared the 1972 Nobel Prize in chemistry with Christian B. ANFINSEN and William H. STEIN for research into the functioning and composition of the ENZYME ribonuclease. Anfinson had first discovered the composition of ribonuclease in the 1950s; subsequently Moore and Stein explained how it catalyses the digestion of food. They used CHROMATOGRAPHY to analyse AMINO ACIDS and PEPTIDES, obtained from biological samples, and to determine the structure of ribonuclease. Using essentially the same technique, Moore and Stein had analysed the structure of deoxyribonuclease by 1973.

Moore, Thomas (1779–1852), Irish poet and songwriter. His works include *Odes of Anacreon* (1800), *Irish Melodies*, a group of lyrics published between 1808 and 1834, and the famous *Lalla Rookh: An Oriental Romance* (1817).

Moorehead, Alan (1910–), British writer of historical documentaries, b. Australia. From 1930 to 1946 he was a journalist and war correspondent. His works include *Mediterranean Front* (1941), *Gallipoli* (1956), *The White Nile* (1960), *The Blue Nile* (1962), *Cooper's Creek* (1963), *Darwin and the Beagle* (1969), and *A Late Education, Episodes in a Life* (1970).

Moorhen, or waterhen, common Old World aquatic bird of the RAIL family, so named because of its liking for rivers and ponds. It has black plumage and a yellow bill, and its long toes lack the webs and lobes typical of other water birds. Length: to 32.5cm (13in). Species *Gallinula chloropus*. See also p.328.

Moor macaque, Old World PRIMATE of islands in the Malay archipelago including Celebes and Tonga. The body is baboon-like with a vestigial tail. The omnivorous diet includes shellfish, insects, fruit and plants. Length: to 72cm (28in). Family Cercopithecidae; species *Cynomacaca mauris*.

Moors, nomadic people of N Africa of Berber and Arabic stock. The Moors were early converts to ISLAM and, having crossed over to Spain and Portugal in 711, they quickly conquered most of the Iberian Peninsula. Abd ar-Rahman I, the last survivor of the Umayyad dynasty from Damascus, established the emirate (later caliphate) of Córdoba in 756. The Moors were opposed by the Christian rulers of N Spain, who gradually extended their power s, while dissension grew within the Moorish ranks. The puritanical ALMORAVIDS crossed from N Africa in 1085 and conquered the more worldly Spanish Moors. They in turn were replaced by the even more zealous ALMOHADS. Only GRANADA remained Moorish by 1250, although it survived until 1492 when it fell to Ferdinand and Isabella. Many of the Moors who remained suffered under the Spanish INQUISITION after Spain and Portugal were reconquered to Christianity. Today the populations of Algeria, Mauretania, Morocco and Tunisia are of Moorish stock.

Moore. See ELK; pp.304-305.

Moot, local assembly in medieval England (from the Old English *gemot* for meeting). Moots, which dealt with both legal and administrative matters, were held wherever a community was organized. The most important by the 10th century were the SHIRE, HUNDRED and BOROUGH moots. The greatest was the Witenagemot ("most of the wise men"), the Anglo-Saxon council of the king and his chief nobles.

Moped, simple, lightweight motor cycle which is usually driven by an engine of less than 50cc and may be pedalled if necessary. The moped derives from the practice of attaching an auxiliary engine to bicycles, and was first developed in Germany in the 1950s.

Moraes, Vinicius de (1913–), Brazilian writer. In his poetry his main concern is the conflict between the flesh and the spirit. He also wrote *Orfeu da Conceição* (1956), a folk-tragedy about the annual Rio de Janeiro Carnival on which the Oscar-winning film *Black Orpheus* was based.

Moraine, general term indicating a mound, ridge or other visible accumulation of unsorted glacial drift, predominantly till. End moraines are formed when a GLACIER is either advancing or retreating and the rock material is dumped at the glacier's edge. Ground moraines are sheets of debris left after a steady retreat of the glacier. See also p.224.

Morales Bermudez, Francisco (1921–), Peruvian soldier and politician, grandson of Col. Remiro Morales who was President of Peru from 1890 until 1894. Morales Bermudez became chief of the army general staff in 1974, and in 1975 was made President of Peru.

Morality plays. See MYSTERY PLAYS.

Moral Rearmament (MRA), Christian revivalist movement, founded in 1922 by a US Lutheran pastor, Frank N. D. BUCHMAN. The popularity of the movement at Oxford University led it sometimes to be called the Oxford Group. The name Moral Rearmament was adopted in 1938. MRA aims to promote virtuous living and particularly tries to "convert" the rich. It has about 3,000 full-time voluntary workers in many countries.

Morar, Loch, in Highland Region, NW Scotland, 5km (3 miles) SW of Mallaig. With a depth of 310m (1,017ft), it is the deepest Scottish loch and one of the deepest depressions in W Europe. It is said that a monster appears in it before the death of a member of the MacDonald Clan. Length: 20km (12 miles). Width: 0.8–3km (½–2 miles).

Moravia, Alberto (1907–), pseudonym of the Italian novelist Alberto Pincherle. His early novels, including *The Time of Indifference* (1929) and *The Fancy Dress Party* (1941), were increasingly critical of FASCISM, and Moravia was forced into hiding until 1944. Later works, examining hypocrisy and alienation, include *The Woman of Rome* (1947), *The Conformist* (1951) and *Two Women* (1957).

Moravia, region in central Czechoslovakia, bordered by Bohemia (W), the White and Carpathian Mts (E) and the Sudetic Mts (N). A fertile region, it is famous for its breeding of horses. Coal, oil, iron ore, copper, lignite and graphite are mined. Moravia became part of Czechoslovakia in 1918. It was occupied by the Germans during WWII. Industries: machine tools, beer, motor vehicles, timber, clothing, furniture. Area: 21,287sq km (8,219sq miles).

Moravian Church, Protestant body which originated in Bohemia and Moravia in the 15th century among followers of Jan Hus and developed in the following century under Jan Augusta (1500–72). In the 18th century, Moravians began extensive missionary work. Several groups migrated to North America, where they founded settlements in Bethlehem, Pennsylvania, and Winston-Salem, North Carolina. The Moravian Church has always distrusted doctrinal formulations and its liturgy is based on hymns emphasizing the life and passion of Christ. There are modern Moravian communities in Europe, North

Moray, James Stewart

Sir Thomas More and his daughter watching from his prison as monks go to execution.

Morgans, first used as carriage horses, also make comfortable saddle horses.

Morgan Le Fay: in legend she made many attempts to have King Arthur murdered.

Berthe Morisot's *La Petite Niçoise*. Her later work owes much to Renoir.

and South America, Africa and India. **Moray, or Murray, James Stewart, 1st Earl of** (c. 1531–70), Scottish nobleman, illegitimate son of JAMES V and half-brother of MARY, QUEEN OF SCOTS. After the return to Scotland of the young Queen Mary (1561), he became her adviser. He opposed her marriage to Lord DARNLEY and, after an unsuccessful rebellion, fled to England. Later, he was reconciled to Mary and, when she was forced to abdicate (1567), he became regent for JAMES VI. He was murdered in 1570 by James HAMILTON.

Moray (Elginshire), former county in NE Scotland, on the Moray Firth; in 1975 it was divided between Highland and Grampian regions. The fertile, low-lying coastal strip rises to hills inland; the chief rivers are the Findhorn, Spey and the Lossie. Sheep are grazed on the hills, and oats and barley are grown. Timber, fishing and the manufacture of whisky and woollen goods are the most important industries. The county town was Elgin. Area: 1,234sq km (467sq miles). Pop. (1971) 51,485.

Moray eel. See EEL.

Moray Firth, inlet from the North Sea bounded by the Nairn, Inverness and Ross and Cromarty coastlines. It is being developed for the extraction of oil.

Mordant, in dyeing processes, chemical that reacts with the dye or the fibre being dyed, or both, to "fix" the dye to the fibre, making it less likely to be washed out. Many mordants are metallic HYDROXIDES or salts (such as ALUM).

Mordecai, in the Old Testament, cousin and foster-father of ESTHER. With Esther, he thwarted Haman's efforts to destroy the Jews. His name is a form of MARDUK.

Mordvinia (Mordovskaja USSR), autonomous republic in w central USSR; the capital is Saransk. Annexed by Russia in the 16th century, the region was made an autonomous oblast in 1930, and an autonomous republic in 1934. It is an area of forested steppe and the major products are rye, wheat, oats, beans, potatoes, corn, tobacco and livestock. Industries include beekeeping, timber, motor vehicles, machinery, furniture and food processing. Area: 26,210sq km (10,116sq miles). Pop. (1970) 1,030,000.

More, Hannah (1745–1833), British author and social reformer who was one of the BLUESTOCKINGS. Her ethical tragedies *Percy* and *Fatal Falsehood* were produced by David GARRICK in 1777 and 1779. She was instrumental in the founding of the Religious Tract Society in 1799.

More, Sir Thomas (c. 1478–1535), English statesman, writer and a Roman Catholic saint. A leading HUMANIST and friend of ERASMUS, his *Utopia* (1516) portrayed an ideal state founded on reason. He became HENRY VIII's adviser and succeeded Cardinal WOLSEY as chancellor, but he enraged the king by refusing to subscribe to the Act of Supremacy which made Henry the head of the Church of England and repudiated papal authority. Henry had him arrested and imprisoned in the Tower of London in 1534 and he was executed on a charge of treason. See also pp. 1381, 1381, 1400, 1402, 1408, 1416, 1416.

Moreas, Jean (1856–1910), French poet, b. Greece. After going to Paris in 1879, he wrote several collections of SYMBOLIST poetry which show the influence of VERLAINE, including *Les Syntes* (1884) and *Le Pèlerin Passionné* (1891).

Moreau, Gustave (1826–98), French painter best known for his fantastic and mystical pictures. He was professor at the École des Beaux-Arts, where his pupils included MATISSE and ROUAULT. He refused to sell his paintings and after his death his Paris house (now the Musée Moreau) with his fine art collection, was bequeathed to the nation.

Moreau, Jeanne (1928–), French film actress who worked with the NOUVELLE VAGUE (New Wave) directors before venturing into English-speaking cinema. Her films include *Les Liaisons Dangereuses* (1960), *Jules et Jim* (1961) and *Mr Klein* (1976).

Morel, any of a number of fungi mushrooms genus *Morchella* that have

conical caps resembling pine cones and hollow stems. One species is *M. esculenta*, a highly prized edible mushroom. It grows only in the wild and can be found only in spring. Some "false morels" that outwardly resemble true ones are poisonous. See also p. 355.

Morelia, city in sw Mexico; capital of Michoacan state. Founded in 1541 as Valladolid, its name was changed in 1828 in honour of the revolutionary hero Morelos y Pavon. The city has the Colegio de San Nicolas which, founded in 1540, is the oldest institution of higher learning in Mexico. Industries: timber, handicrafts. Pop. (1975) 209,014.

Moreno, Jacob. See PSYCHODRAMA.

Mores, term first used by W. G. SUMNER in 1906 to mean those patterns of shared behaviour common to a particular group that, if violated, elicit shock, horror and moral outrage from the other group members. Mores are often verbal, unlike FOLKWAYS, and violation of them is often met with ostracism.

Moresby, John (1830–1922), British naval explorer. He is remembered for having discovered (1873) the large natural harbour in New Guinea that is now the capital, Port Moresby.

Morgan, Clifford Isaac ("Cliff") (1930–), Welsh rugby union player who, as a stocky, elusive flyhalf won 29 caps (1951–58) and toured South Africa with the 1955 British Lions. He played for the Cardiff and Bective Rangers clubs.

Morgan, Conway Lloyd (1852–1936), British psychologist, professor of Zoology at Bristol University (1884–1909). He was one of the founders of modern comparative psychology, which seeks insights into human behaviour through the study of animals. Among his publications are *Animal Behaviour* (1900) and *The Animal Mind* (1930).

Morgan, Daniel (1736–1802), US general who saw service in the French and Indian Wars. He received a gold medal from Congress for his leadership at Cowpens (1781) where he defeated the British during the American War of Independence. In 1794 he helped to suppress the Whiskey Rebellion in Pennsylvania, which tested the newly formed federal government's power to enforce a federal law within a state.

Morgan, Sir Henry (c. 1635–88), Welsh soldier of fortune who in 1668 became leader of a group of BUCCANEERS commissioned by the British government. Among his conquests were Santa Catalina island, Puerto Principe, Puerto Bello and Panama. He was knighted and made Lieutenant-Governor of Jamaica in 1674.

Morgan, Lewis Henry (1818–1881), US anthropologist who did field work among the IROQUOIS and other American Indian groups. Morgan's interest was social organization and he formulated a theory of social evolution from "savagery" to "civilization" in his book *Ancient Society* (1877), but today he is best remembered for his classification of kinship systems.

Morgan, Thomas Hunt (1866–1945), US biologist who was awarded the 1933 Nobel Prize in physiology and medicine for the establishment of the CHROMOSOME theory of HEREDITY. His discovery of the function of chromosomes through experiments with the fruit-fly (*Drosophila*) is related in his book *The Theory of the Gene* (1926, rev. ed. 1928). See also pp. 176–177.

Morgan, William de. See DE MORGAN, WILLIAM.

Morgan, breed of light horse developed in New England by Justin Morgan from a versatile horse of the same name foaled in 1793. A superior saddle, driving, racing and farm horse with stamina and docility, it has a high-held head, a round and deep, short-backed body, and wide-set thin legs. Height: to 1.6m (64in) at the shoulder.

Morganatic marriage, marriage between a prince or nobleman and a woman of humble birth or lower rank in which it is agreed that she shall not accede to his rank and that any children of the marriage shall not succeed to their father's hereditary titles, fiefs and entailed properties. Such marriages were first instituted in Germany

but were not adopted by English or French dynasties.

Morgan le Fay, in Arthurian legend, a fairy sorceress. Possibly derived from earlier Celtic goddesses, including the Welsh Morrigan, she appeared in several medieval romances, sometimes as the sister of KING ARTHUR, sometimes as a dangerous enchantress who opposed GUINEVERE. Tutored by MERLIN, she had magical gifts of healing, divination and transformation. Arthur was finally carried to her island, Avalon.

Morgenstern, Christian (1871–1914), German philosopher, poet and translator. His poetical works include love poetry and *Homecoming* (1910), but his fame rests on his two volumes of "nonsense" verse, *Gallow Songs* (1905) and *Palmström* (1910).

Mörke, Eduard Friedrich (1804–75), German poet. After becoming a theology student and later a curate and pastor, he published several volumes of subtle lyric poetry, including *Gedichte* (1938), a collection he added to in 1848, 1856 and 1867. He also wrote some prose works, notably a novel, *Maler Nollen* (1832).

Moriscos, christianized MOORS of Spain. As Christian rulers from the north reconquered Moorish Spain, they generally established a policy of religious tolerance towards the Moors; later it was decreed that all Moors either be converted or be expelled from Spain. Many Moors ostensibly became Christians but were secretly still Muslims, or were suspected of being so. The Spanish kings regarded them as a threat, and they were persecuted by the Spanish INQUISITION. In 1568 they revolted, and were put down two years later. In 1609, PHILIP III expelled all Moriscos.

Morison, Elsie (1924–), Australian soprano who studied in Melbourne and London with Clive Carey. Her earliest roles were in oratorio and throughout her career was always in great demand as an oratorio singer. She joined the Sadlers Wells Opera Company in 1948 and the Covent Garden Company in 1953. A highly acclaimed singer, she visited Australia as a guest artist in 1957 and 1960, and in 1964 with her husband Rafael Kubelick.

Morison, Stanley (1889–1967), British typographer whose influence on 20th-century printing was immense. He gained a wide practical experience of design for print and in 1923 joined The Monotype Corporation as typographic adviser. In 1930 Morison was commissioned by *The Times* newspaper to design a typeset especially for use on high-speed newsprint presses, and the resulting Times New Roman face proved to be exceedingly popular. The text of this book is set in Times Roman. Morison's publications included *Four Centuries of Fine Printing* (1924), *First Principles of Typography* (1936) and *Printing The Times* (1953). He was also responsible for many of the volumes of *The History of The Times*.

Morisot, Berthe (1841–95), French IMPRESSIONIST painter. She was Edouard MANET's student and sister-in-law, and each influenced the other's artistic development. Her most notable works, including *Young Woman at the Dance* (1880) and *La Toilette*, are painted in clear, luminous colours. See also pp. 1596–1597.

Morita therapy, Japanese form of psychotherapy in which the patient undergoes a rigid form of conditioning that requires his participation in a number of prescribed social activities. Under a specially trained mentor the patient is discouraged from any introspection, the activity believed to lie at the heart of all neuroses. See also pp. 1120–1121.

Morland, George (1763–1804), British painter. He was best known for his idealized pictures of rustic life, and his landscapes, such as *Interior of a Stable* (1791).

Morley, Edward William (1838–1923), US chemist. He worked with A. A. MICHELSON on the famous experiment in 1887 that demonstrated the absence in the universe of a stationary hypothetical substance called ETHER, that had been supposed to

carry light waves. See also p.857.

Morley, John, Viscount Morley of Blackburn (1838–1923), British Liberal politician and man of letters. He was an MP from 1883 to 1895 and 1896–1908, holding the offices of Chief Secretary for Ireland (1886, 1892–95) and Secretary of State for India (1905–10). He was also editor of the *Fortnightly Review* (1867–83) and the *Pall Mall Gazette* (1880–83). Morley wrote several biographies, among them lives of CROMWELL, BURKE, VOLTAIRE, COBDEN and GLADSTONE.

Morley, Robert (1908–), British actor and playwright. He made his stage debut in 1929 and appeared in many productions in repertory and in London. He made his first film in 1929, and has starred in many comedy roles. His films include *Major Barbara* (1940), *Oscar Wilde* (1960) and *Cromwell* (1970).

Morley, Thomas (1557–c. 1603), English composer who was organist of St Paul's Cathedral, London. He excelled at MOTETS, compositions for the LUTE and, above all, MADRIGALS. His *Plaine and Easie Introduction to Practical Music* (1597) is an essay on 16th-century music.

Mormon, Book of, scripture regarded as holy as the Bible by the Church of Jesus Christ of Latter-day Saints, or MORMONS. Joseph SMITH, founder of the Mormon Church, claimed that in 1827 a heavenly messenger called MORONI, delivered a set of inscribed gold plates to him. These plates, which later disappeared, held the record as told by Moroni's father, the prophet named Mormon, of a migration from Jerusalem to the Americas beginning in 600 BC, and of some sayings of Jesus found nowhere else.

Mormons, an ADVENTIST sect, the full name of which is the Church of Jesus Christ of Latter-day Saints. It was established in Manchester, New York, in 1830 by Joseph SMITH who claimed to have received from an angel the Book of MORMON, the source of Mormon doctrine. Believing that they were to found Zion, or a New Jerusalem, Smith and his followers moved west. They tried to settle in Ohio, Missouri, and Illinois, but were driven out. Other settlers resented and attacked Mormons for a number of reasons, one being their belief in polygamy. Joseph Smith was murdered in Illinois in 1844. Brigham Young then rose to leadership and in 1846–47 took the Mormons to Utah Territory, where they established Salt Lake City. Opposition to the Mormons continued, but they prospered through hard work. The Mormon president renounced polygamy in 1890, and Utah became a state of the Union in 1896.

Morning glory, any of several species of twining and trailing vines native to warm climates; the blue, purple, pink or white flowers are funnel-shaped with a flaring disc. Species include common morning glory, *Ipomoea purpurea*, with heart-shaped leaves, and *I. violacea* of tropical America, which bears seeds that contain ALKALOIDS. Family Convolvulaceae.

Morning sickness, nausea and vomiting in pregnancy, usually occurring in the second and third months. See also p.166.

Morocco, independent nation in NW Africa. The land is dominated by the Atlas ranges; the climate is semi-tropical on the Atlantic side of these mountains and Mediterranean in the N. Agriculture is the main activity, and citrus fruits, vegetables and cereal crops are grown in the W of the country. Morocco is also a leading exporter of phosphates; other mineral deposits include iron, manganese and zinc ores. The capital is Rabat. Area: 458,730sq km (177,116sq miles). Pop. (1979 est.) 19,470,000. See p.2100.

Morón, city in E Argentina, 16km (10 miles) S of and part of Greater Buenos Aires. It was settled in the 16th century as a post on the road between Buenos Aires and Chile. It is now an administrative centre. Pop. (1970) 485,983.

Moroni, angel who appeared to Joseph SMITH, founder of the MORMON Church. Claiming to be the son of Mormon, an earthly prophet and historian, he led Smith to golden plates on which Mormon had recorded the migration of the

Hebrews from Jerusalem to the North American continent. Smith's translation was called *The Book of Mormon*. See also MORMON, BOOK OF.

Moroni, Giovanni Battista (c. 1520–78), Italian painter who worked in the Bergamo and studied under Moretto. Although his religious paintings are dull and lack originality, his portraits are intimate, penetrating and dignified. Among such works are *Portrait of a Gentleman* (1563), *Antonio Navagero* (1565) and *Portrait of an Old Man* (c. 1565–70).

Moronobu, Hishikawa (1618–94), Japanese printmaker and master of UKIYO-E (colour print) who is credited with the first edition of single-sheet prints, thereby creating ukiyo-e as an artform. **Moros**, in Greek mythology, the supreme power, Doom or Destiny, the son of Night. Even the gods of the Olympic pantheon obeyed his decisions. Although Moros is seldom personified in the myths—being conceived as invisible and shadowy—his presence as a force is pervasive. See also FATES.

Morosini, Venetian noble family prominent from the 10th century. Four DOGES of Venice and two cardinals came from the family. Andrea Morosini (1558–1618) was official historian of the Venetian Republic and wrote *Historia Veneta ab anno 1521 usque ad annum 1615*. Francesco (1618–94), an illustrious general and naval commander, was elected doge in 1688.

Morpheme, the smallest unit of speech. It may be an entire word, eg "paint", or a part of one, eg "re" in "repaint". An inflectional morpheme is the added "s, es, ed, ing" of a plural or the endings added to verbs. A derivational morpheme is the "hood" in "motherhood".

Morpheus, in Greek mythology, the god of dreams, supposedly expert in sending the human form into the dreams of men. He was the son of Hypnos, the god of sleep.

Morphine, white crystalline ALKALOID derived from OPIUM. It is a depressant of the central nervous system and is used as an ANALGESIC. As with most strong analgesics, it has addictive properties. Morphine was first isolated in 1806 and named after the Greek god of dreams, MORPHEUS. See also HEROIN; METHADONE.

Morpho butterfly, large, tropical American BUTTERFLY noted for the brilliant blue metallic lustre of the upper surfaces of its wings. Family Morphidae.

Morphology, in grammar, study of the form of words, the branch of PHILOLOGY dealing with inflection and word-formation.

Morphology, biological study of the form and structure of living things and the relation between similar features in different organisms. It ranges from visible characteristics to microscopic structures.

Morris, William (1834–96), British artist, craftsman, writer, social reformer and printer. After attending Oxford University he came into contact with the PRÆRAPHETIC BROTHERHOOD and began to write poetry and to paint. Both of these activities reflected his love of the Middle Ages and in 1861 he founded a firm of decorators and designers, attempting a return to the craftsmanship of that period. The group produced carvings, wallpapers, carpets and furniture. In the 1880s he became interested in socialism, writing *The Dream of John Ball* (1886–87) and *News from Nowhere* (1890), in which he argued for the replacement of the machine age by skilled labour. His last venture was the KELMSCOTT PRESS, where he was responsible for typography, border design and binding.

Morris, W. R. See NUFFIELD, W. R. MORRIS, 1ST VISCOUNT.

Morris dance, English rustic dance probably deriving from pre-Christian rituals, performed as part of the MAY DAY and WHITSUN festivals. It is danced to pipes, tabors, and occasionally bagpipes. The dance was often performed along the roads from one village to another, although its character varied according to locality.

Morrison, Herbert Stanley (1888–1965),

British politician who helped to found the London Labour Party. He became Mayor of Hackney (1920–21) and was an MP three times before 1945. In 1955, after four years as deputy leader of the opposition, he was defeated by Hugh GAITSKELL in the contest for leadership of the LABOUR PARTY.

Morse, Samuel Finley Breese (1791–1872), US inventor and artist. Originally a successful portrait painter, Morse revived his earlier interest in electricity to experiment with a practical system for using electricity to send messages by telegraphy. In 1844 he telegraphed the message "What hath God wrought?" from Washington to Baltimore. He had developed a simple system of dots and dashes, now called the MORSE CODE, by 1837. See also pp.606, 634.

Morse code, code used for sending TELEGRAPH messages, either along wires or by radio telegraphy. It consists of dots and dashes created by the interruption of a continuous electric current or radio signal. The dashes are three times the length of the dots. The codes for letters of the alphabet, or numbers, vary in length from a single dot or dash to six dots or dashes or a combination thereof. See also pp.606, 634.

Mortality rate, in population studies, defined as the number of deaths occurring in a year, multiplied by a thousand, divided by the total population at the mid-year. Thus, for a total population of 1 million people and a death toll of 2,000 over a year, the mortality rate for that year is $(2,000 \times 1,000) \div 1,000,000 = 2.0$.

Mortar, in modern military usage, a portable weapon consisting of a short metal tube, baseplate and tripod. With the tube in a near-vertical position, inclined slightly towards the target, shells with explosive charges (often called bombs) are dropped into the open tube, the propulsive charge detonates and the shells shoot out to follow a high curved trajectory to the target. In the earlier history of artillery, the name "mortar" was often given to any large-bore cannon. See also pp.561, 562.

Mortar, in building construction, a material used to bind brick, stone, tile or concrete blocks into a structure. Modern mortar generally consists of a mixture of cement, sand and water; lime may be added to improve its spreading properties. See also pp.548–549.

Mortar, in chemistry, a bowl of smooth, hard material in which softer substances are ground or beaten with a pestle, a club-shaped tool.

Morte D'Arthur, Le (c. 1469), Arthurian prose romance by Thomas MALORY, first printed by William CAXTON (1485). Its 21 books deal principally with the quest for the Holy GRAIL, the death of KING ARTHUR and the disbanding of the fellowship of the ROUND TABLE. Malory borrowed much of his material from earlier texts.

Mortgage, transference of the ownership of property pledged as security for a loan of money. Until the loan is fully repaid with all interest due, the property pledged (mortgaged) is technically the possession of the mortgagee who lent the money to the nominal owner (the mortgagor). Often, especially in the buying of land or a house, the item mortgaged is itself the purchase for which the loan is required.

Mortimer, name of a noble and influential Anglo-Norman family which flourished between the 13th and 15th centuries. Roger de Mortimer, 1st Earl of March (1287–1330), secured his position in Ireland, opposed the DESPENSERS (favourites of EDWARD II) in Wales and was imprisoned in 1322. He escaped to France and returned to England in 1326 as the paramour of Isabella, Edward's queen. After Edward's deposition and murder, Mortimer virtually ruled England until seized and hanged by EDWARD III. Edmund de Mortimer, 3rd Earl of March and 1st Earl of Ulster (1351–81), was the son of Roger de Mortimer, 2nd Earl of March. In 1368 he married Edward III's granddaughter, Philippa, and thus gave the house of York its claim to the throne that led ultimately to the Wars of the ROSES. Sir

Morning Glory: its flowers open in early morning but close with the midday sun.

Morpho butterfly: the largest species, *morpho hecuba*, is 17.8cm (7in) across.

Morris dance: the traditional bells and handkerchiefs are essential to the dance.

Samuel Morse: the old Chamber of Deputies, 1822, painted by this artist and inventor.

Mortimer, John Clifford

Edmund de Mortimer, son of the 3rd Earl of March, was captured while helping to repress the rebellion of the Welsh prince Owen Glendower in 1402. He subsequently defected to Glendower's side and married his daughter. Roger de Mortimer, 4th Earl of March and 2nd Earl of Ulster (1374-98), son of the 3rd Earl of March, was heir presumptive to RICHARD II and accompanied him on his punitive expedition to Ireland. His subsequent popularity, however, incurred Richard's jealousy. He died fighting the Irish at Kells. Edmund de Mortimer, 5th Earl of March and 3rd Earl of Ulster (1391-1425), was recognized as Richard II's heir but was prevented from reigning by the usurpation of HENRY IV in 1399. He died childless but his claim to the throne passed through his sister Anne to her grandson EDWARD IV.

Mortimer, John Clifford (1923-), British dramatist, novelist and barrister. He published several novels before making his reputation as a dramatist in 1957, when *The Dock Brief*, a play with a legal setting, was produced on radio. His stage plays include *The Wrong Side of the Park* (1960), *The Bells of Hell* (1966) and *A Voyage Round My Father* (1970). He has also made various translations and written film scripts, including *John and Mary* (1969). His first wife, Penelope, is also a novelist. Her works include *The Pumpkin Eater* (1962) and *Long Distance* (1974). **Mortimer's Cross**, scene of 1461 battle in the Wars of the Roses, in which Yorkist forces, under Edward, Duke of York, defeated the Lancastrians. After the battle Edward proceeded to London and proclaimed himself King EDWARD IV.

Mortmain, term (taken from the French for "dead hand") meaning the ownership of land by religious, charitable or other corporations. It had a troubled history throughout the Middle Ages when corporations such as monasteries, exempt from the payment of feudal dues, acquired large properties. The law of mortmain was abolished in Britain in 1960, and such property is restricted to that necessary for charitable use.

Morton, Henry Vollam (1892-1979), British writer. After the success of his early works, he left journalism and took up writing full-time. His works, mainly travel books, include *In Search of England* (1927), and similar volumes about Ireland (1930), the Middle East (1940) and the Holy Land (1961).

Morton, James Douglas, 4th Earl of (c.1516-81), Scottish statesman. As Chancellor (appointed 1563) to MARY, QUEEN OF SCOTS he supported, but without enthusiasm, her marriage to Lord DARNLEY. He was subsequently involved in the plot to murder Darnley in 1567. After Mary married Lord BOTHWELL, Morton turned against the queen, who was forced to abdicate. Succeeding as regent in 1572, he administered Scotland efficiently but was criticized for introducing episcopacy. French influence at court finally caused his downfall and execution for complicity in Darnley's death.

Morton, Jelly Roll (1885-1941), US jazz pianist, bandleader and composer, real name Ferdinand Joseph LaMenthe. He played at first in the brothels of Storyville in New Orleans and began recording in 1923 with his group Morton's Red Hot Peppers. His music reflects his Creole origins.

Morton, William Thomas Green (1819-68), US dentist who demonstrated publicly, in 1846, the anaesthetic property of ether by painlessly extracting a tooth. Morton experimented with ether on animals and himself, but first used it on a patient at the suggestion of Charles T. Jackson with whom he later quarrelled for the credit. See also LONG, CRAWFORD W.

Morula, embryo cells in the process of splitting before the BLASTULA stage. The morula consists of a number of blastomeres, the cells formed from the fertilized egg as a result of cell division.

Mosaic, technique of surface decoration using tesserae, small pieces of material such as stone, pebbles, tile, glass, shell or metal; they are set closely together in an adhesive substance such as mortar, plaster

or resin, to form a decorative design or picture. The design is then grouted; it is caulked to fill the gaps between the tesserae and produce a flat surface. The technique was employed for floor and wall decorations as early as the 4th millennium BC in Mesopotamia. Pebbles were used in the Near East and were replaced in Greece in the 3rd century BC by cut marble tesserae. Roman mosaics commonly featured a central design or a portrait, surrounded by a decorative geometric border. In Byzantine times, the marble was replaced by tesserae of brightly coloured glass, especially golden yellow. The art developed rapidly in early Christian times especially in the 4th to 6th centuries and continued to be used for floors, church and interiors and wall decorations. As a modern technique, used frequently for surface decoration, the tesserae may be mixed with other materials for rich textural effects.

Mosaic disease, any of several VIRUS diseases of plants that result in mottling on leaves, giving rise to light green or yellow blotches. Some mosaics also cause curling and puckering of leaves and stunting of the plants. They are serious diseases affecting many crops, including apples, peaches, beans, cucumbers and tobacco.

Moscow (Moskva), capital and largest city of the USSR, in central Russian Republic (Rossijskaja SFSR), on the Moscow River; capital of the republic and of Moscow oblast. Archaeological remains indicate that the site has been inhabited since Neolithic times, but Russian records do not mention it until 1147. It became a principality by the end of the 13th century and, in 1367, the first stone walls of the KREMLIN were constructed. In 1341 Moscow captured the principality of Vladimir. By the end of the 14th century the city had emerged as the focus of Russian opposition to the MONGOLS. In 1478, Grand Duke Ivan III led a successful campaign against the principality of Novgorod. Polish troops occupied the city in 1610, but were driven out two years later. Moscow became the capital of the Grand Duchy of Russia from 1547 to 1712, when the capital was moved to St Petersburg. In 1812 Moscow, which was built almost entirely of wood, burned to the ground. NAPOLEON and his troops, who were occupying the city, were forced out by the fire. In 1918 Moscow became the capital of the USSR. The failure of the Germans to take the city during WWII was Germany's first major land defeat of the war. The Kremlin is the centre of the city and the administrative centre of the country. It includes palaces, churches and government buildings within its walls. Adjoining it are Red Square, the Lenin Mausoleum and the 16th-century cathedral of Basil the Beated (now an anti-religious museum). The city also has the University of Moscow (1755), Tretyakov Gallery, BOLSHOI THEATRE, many institutions of higher education and scientific institutes. Industries: metalworking, oil-refining, motor vehicles, film-making, precision instruments, chemicals, wood and paper products, tourism. Pop. (1980) 8,099,000. See also pp.1454-1455, 1455, 1679.

Moscow Art Theatre, USSR theatre, the most famous of all Russian theatrical organizations. It was founded in 1898 by STANISLAVSKY and NEMIROVICH-DANCHENKO. CHEKHOV's plays were first presented successfully there. The original company was composed of amateur actors from the Society of Art and Literature. It was at the Moscow Art Theatre that Stanislavsky developed his famous "method" of acting, which stressed the importance of the actor's inner identification with the character.

Moscow, Grand Ducy of. See MUSCOVY, GRAND DUCHY OF.

Moseley, Henry Gwyn Jeffreys (1887-1915), British physicist. His initial studies involved RADIOACTIVITY; later he discovered a relationship between the X-ray spectra of the elements and their atomic numbers. He discovered that the atomic number of an element, and not its weight, determines its major properties.

Moselle, river in France and Germany

which rises in the Vosges Mountains, NE France. It flows NW past Remiremont, Epinal and Toul, turns N to flow past Metz and Thionville and NE to leave France and form the Luxembourg-German boundary. It flows through Germany (where it is called the Mosel), emptying into the River Rhine at Koblenz. The Moselle is connected to the Rhine, Meuse and Seine rivers by canals. Grapes grown along its steep banks between Trier and Koblenz are used to make Moselle wine. Length: 515km (320 miles).

Moselle, dry white wine from the vineyards in the valley of the River Moselle, in France and Germany.

Moser, Annemarie (née Pröll) (1953-), Austrian skier. She was the women's world overall champion in 1971, 1972, 1973, 1974 and 1975, and a runner-up in the downhill and giant slalom events at the 1972 Olympic Games.

Moser, Lukas (fl. c.1430-c.1450), German painter who worked in Ulm. He is known for the altarpiece of *Mary Magdalene and Martha* (1431) in the church at Tiefenbrunn. The detail is realistic and advanced for its period.

Moses (c.13th century BC) in the biblical book of Exodus, the spiritual and temporal leader of the ancient Hebrew people. As a male child of the race which was enslaved in Egypt he was, by law, abandoned at birth, but was found by one of the pharaoh's daughters and brought up at court - which accounts for his Egyptian name. Following a call from God, perceived in a burning bush, Moses sought the pharaoh's permission to lead the Hebrews out of Egypt to find a new homeland. Only after several dire natural plagues had infested the land did the EXODUS take place, during which the tablets of stone on which the TEN COMMANDMENTS were inscribed were given to Moses on Mt Sinai. Because of an unrecorded offence against God, Moses was not allowed to set foot in the Promised Land of CANAAN but died within sight of it.

Moses, Grandma (Anna Mary Robertson) (1860-1961), US primitive painter. In her late seventies, when work as a farm wife proved too arduous, she took up painting. Her jolly scenes of country life based on recollections from her youth became world famous through prints and greetings cards. Well-known examples are *Out for the Christmas Trees* and *Thanksgiving Turkey*. She published her autobiography in 1952.

Moshoeshe II (1938-), King of Lesotho. He was Chief of Basutoland from 1960 to 1966, when he became king of the newly independent Lesotho. He was exiled for a short time, but returned in 1970. See also p.1737.

Moskva. See MOSCOW.

Moslem League. See MUSLIM LEAGUE.

Moslems. See MUSLIMS.

Mosley, Sir Oswald Ernald (1896-1980), British politician and founder of the British Union of Fascists (1932). He was a Conservative Member of Parliament (1918) but later joined the Labour Party, serving as Chancellor of the Duchy of Lancaster (1924). Dissatisfied with both the democratic left and right, he turned to FASCISM coupled with ANTI-SEMITISM. He was interned during WWII (1940-43) but after the war founded the Union Movement (1948), a new right-wing party. See also pp.1704-1705.

Mosque, Muslim place of worship. Mosques are usually decorated with abstract and geometric designs as the Muslim faith prohibits the imitation of God's creation. The building's parts include a *mihrab*, or prayer niche, which shows the direction of MECCA, a minaret, or tower, from which the MUEZZIN calls prayers, a courtyard for washing before prayer and a maktab, or school. Among the earliest mosques is that of Amr built in Egypt in 641-42. Although in early ISLAM any building could be used as a place of prayer, the Mosque of the Prophet at MEDINA, containing Mohammed's tomb, and the mosque at Mecca, containing the KAABA, have since become the foci of much Muslim pilgrimage and worship. See also pp.1278-1279.

Mosquito, long-legged, slender-winged insect, found throughout the world. The adult female sucks blood from warm-blooded animals, including man. Some species (such as those of the genus *Anopheles*) carry the parasites of diseases, including MALARIA, YELLOW FEVER, DENGUE, viral ENCEPHALITIS and FILARIASIS. The larvae are aquatic and are found in lakes, rivers, marshes, and other wet places. Adult length: 3-9mm (0.12-0.36in) Family Culicidae. See also DIPTERA; p.324.

Mosquito, British WWII bomber and reconnaissance aircraft, built by De Havilland. Known as the "wooden wonder", it could reach speeds of 640km/h (400mph). Variants of the Mosquito were used as night-fighters.

Mosquito Coast (Mosquitia), E coast of Honduras and Nicaragua, named after the indigenous Miskito Indians. It was disputed by Britain and the USA in the 19th century, and was made autonomous in 1860. It was divided between Nicaragua and Honduras in 1894; Nicaragua's claim to the whole area was refused by the International Court of Justice in 1960.

Mosquito fish, freshwater fish of the SE USA known for its ability to eat large amounts of mosquito larvae. Its colours are brown and grey with a bluish shimmer. Length: 6.3cm (2.5in). Family Poeciliidae; species *Gambusia affinis*.

Moss, Stirling (1929-), British racing driver who won his first Formula Three race in 1948. He won 16 grand prix events and finished second four times and third three times in the world championship. He retired from the sport after a serious crash at Goodwood in 1962.

Moss, any of about 14,000 species of small, simple non-flowering green plants that typically grow in colonies, often forming dense carpets. Mosses reproduce by ALTERATION OF GENERATION. They do not have specialized tissues for transporting water, food and minerals, although they do have parts resembling the stems, leaves and roots of the higher (flowering) plants. They grow on soil, rocks and tree trunks in a wide variety of land habitats, from the tropics to circumpolar regions, but thrive in shady damp places and some species live in freshwater lakes and streams. Because carpets of moss can absorb large amounts of water, they help to reduce soil erosion. See also BRYOPHYTE; pp.362-363.

Mossadeq, Mohammad. See MUSSADEGH, MUHAMMAD.

Moss animal, any of numerous species of mostly marine, aquatic invertebrates, generally of shallow coastal waters. Some appear moss-like; others assume fan-like or twig-like colonies and are white or pale in colour. Each individual has tentacles to gather food into the mouth. Phylum Bryozoa.

Mössbauer, Rudolf Ludwig, (1929-), German physicist and discoverer of the effect named after him. His doctoral thesis, published in 1958, dealt with the emission of GAMMA RAYS by radioactive nuclei within crystals. The definition of the frequencies of these rays became known as the MOSSBAUER effect, for which work he shared the 1961 Nobel Prize in physics with Robert HOFSTADTER.

Mössbauer effect, resonance effect observed in certain radioactive substances emitting GAMMA RAYS, is taken up by the atomic nuclei, so that the gamma rays have a sharply defined energy instead of a range of energies. They can then be re-absorbed by a similar nucleus. Motion of the source alters the frequency of the rays, by the DOPPLER EFFECT, and the Mössbauer effect may be used to study nuclear energy levels and molecular structure.

Most-favoured nation status, favourable terms of trade: tariff concessions received by one nation from another. The status is given normally between countries in a trade bloc and which join together under "common market" agreements, eg the EEC. The principle was included in GATT. **Mosul**, city in N Iraq, 354km (220 miles) NNW of Baghdad, on the River Tigris. It was the most important city in the area until the 13th century when it was

destroyed by the Mongols. It was occupied by the Ottomans (1534-1918) and came under British occupation and mandate in 1918. Mosul was awarded to Iraq by the League of Nations in 1926 after a dispute for its possession between Iraq and Turkey. Industries include oil refining and cement. Pop. 293,100.

Moten, Benjamin (Bennie) (1894-1935), US jazz pianist and band-leader. He was one of the founders of the Kansas City style which emphasized a flowing rhythm. On Moten's death his band was taken over by Count BASIE.

Motet, musical form prominent in all choral church music from c. AD 1200-1600. In the 13th and 14th centuries it consisted of three unaccompanied voice parts sung in Latin, the tenor part providing the *canto fermo*. The Renaissance motet of the 15th century, usually for four or five parts, was contrapuntal in style and those of Dunstable, Dufay and Obrecht are typical of this period. The purest examples of the motet are those of PALESTRINA, and after 1600 there were new developments in the form, including occasional obbligato accompaniment and texts in vernacular languages. Motets in English became known as ANTHEMS.

Moth, insect of the order LEPIDOPTERA, found in almost all parts of the world. It is distinguished from a BUTTERFLY mainly by its non-clubbed antennae, although there are a few exceptions. Most moths are nocturnal whereas almost all butterflies are active by day. The largest moths, with a wingspan of 28cm (11in) or more, are found in the tropics. Like a butterfly a moth undergoes complete METAMORPHOSIS and the adult emerges from a pupa formed from its larva (caterpillar). Also like a butterfly, it has a long coiled proboscis for sipping liquid food, particularly the nectar of flowers. See also pp. 7, 29, 43, 47, 188, 306, 307, 313, 316.

Moth balls, substance used to protect woollen clothes, carpets, furs, etc against attack by the caterpillar of the clothes moth. Wool can be mothproofed by incorporating insecticides into the dye, by immersing the fabric in a solution of DDT or the salts of aromatic sulphonate acids, or by impregnation with sodium fluorsilicate. Traditional mothproofing agents include camphor, naphthalene, and chlorinated hydrocarbons such as dichlorobenzene and hexachloroethane.

Mother Carey's chicken. See STORM PETREL.

Mother Courage and Her Children (1941), play by Bertolt BRECHT, with music by Paul Dessau. An epic chronicle play of the THIRTY YEARS WAR, it is intended as an allegorical indictment of humanity in the form of the profiteer Mother Courage, an itinerant pedlar. Audiences have, however, reacted with sympathy to her sufferings as she follows the war in her wagon, accompanied by her mute daughter and her two sons.

Mother Goose, traditionally in France a figure who told folk-tales. The phrase *Les Contes de ma Mère l'Oye* (Tales of Mother Goose) appeared in Charles PERRAULT's 1697 collection of tales. The name first appeared in England in a collection of nursery rhymes published by John NEWBURY c. 1780. He called the collection *Mother Goose's Melody or Sonnets for the Cradle*.

Mother-of-pearl, shiny substance lining many MOLLUSC shells, also called nacre. It is composed of a form of calcium carbonate deposited in layers interspersed with organic material. Diffraction of light causes the lustre and iridescence of mother-of-pearl. It is used in making buttons and jewellery, and for decorative inlay work.

Motherwell, Robert (1915-), US painter and writer. Associated with ACTION PAINTING, he is best known for his ABSTRACT EXPRESSIONISTIC works. He was the editor of *The Documents of Modern Art* series (1944-57).

Motion, accelerated, motion in which speed, or VELOCITY, increases. For example, a stone dropped over a cliff accelerates from zero velocity at a rate of 9.81m (32.2ft) per second per second, this

acceleration being due to the pull of the Earth's gravity. In general, linear acceleration is equal to the change in velocity divided by the elapsed time. Thus, if the speed of an object increases in 10 seconds from 10m per sec. to 20m per sec. its average acceleration is $(20-10)/10 = 1\text{ m per sec. (written } 1\text{ m sec.}^{-2})$. When an object rotates about an axis, its angular acceleration is given as the change in angular velocity divided by elapsed time, expressed in radians per second per second (written rad. sec.⁻²). A radian is a measure of angle: $2\pi\text{ radians}=360^\circ$.

Motion, laws of, three laws proposed by Isaac NEWTON in his *Principia* (1687) that form the basis of the classical study of motion and FORCE. According to the first law, a body resists changes in its state of motion—a body at rest tends to remain at rest unless acted on by an external force, and a body in motion tends to remain in motion at the same velocity unless acted on by an external force. The second law states that the change in velocity of a body as a result of a force is directly proportional to the force and inversely proportional to the mass of the body; ie if the change in velocity, or ACCELERATION, is a , the force is F , and the mass is m , then $a = F/m$. According to the third law, to every action there is an equal and opposite reaction. See also INERTIA; p. 822.

Motion, stellar, change in the position of a star including its PROPER MOTION and its RADIAL MOTION. See also p. 915.

Motion picture. See CINEMA.

Motivation, psychological process hypothesized to account for observed behaviour. Animals and human beings appear to be motivated to perform certain actions, such as seeking food and water. Motivation is supplied by a hypothetical impulse towards satisfying needs or achieving goals, this force being the drive. Motives may reflect internal, biological states, eg hunger or thirst; or they may be primarily learned and oriented towards external objects or incentives, eg money, possessions or status.

Motley, joint pseudonym of influential team of theatrical designers comprising Audrey Harris (1902-66), Margaret Harris (1904-) and Elizabeth Montgomery (1902-) who took their title from the name for a jester's diversified and multicoloured dress. In the 1930s, they established a reputation for working on all aspects of stage design from costumes and properties to scenic construction, in close co-operation with a play's director and, often, author. Their first joint designs were for the ous production of *Romeo and Juliet* in 1932. After that they worked consistently with major companies in Britain, notably at the OLD VIC and in the US.

Motmot, small bird of Central and South America. The blue diademed motmot (*Motmotus motmota*) has a green body, turquoise head and a serrated bill for crushing insects, nests are tunnelled in earthbanks. Length to 50cm (20in). Family Motmotidae.

Motocross. See SCRAMBLING.

Motonobu, Kano (1476-1559), Japanese painter who decorated palace and temple walls with his large works. He combined bright colours with well-defined brushstrokes.

Motor, mechanism that converts energy (eg heat or electricity) into useful work. The term is sometimes applied to the internal combustion ENGINE (which converts heat produced by burning gases into reciprocating or rotary motion), but is more often applied to the ELECTRIC MOTOR (which converts electrical energy into rotary motion). Electric motors vary in size from thumb-sized miniatures used in toys, through those in medium-sized domestic appliances (eg vacuum cleaners, food mixers and hand drills), to large motors such as those used in factories, lifts and diesel-electric locomotives. The linear motor is a new development proposed for high-speed train propulsion. Its principle is similar to that of rotary electric motors, but instead of a number of coils rotating (a rotor) within a fixed ELECTROMAGNET (a stator), the linear motor is

"unfolded" so that the "rotor" windings are fixed to the locomotive's path, and the "stator" windings are incorporated into the locomotive, which is both levitated and driven forwards. Rocket engines are motors that can leave the Earth's atmosphere because they carry both fuel and oxidizer. Ion motors are another proposed development, intended for spacecraft propulsion. A stream of ions, possibly from a nuclear reactor, is accelerated in a strong electrostatic field to produce a reaction, similar to that of rocket motors, which drives the spacecraft. See also pp. 506, 507, 600-601, 821, 869, 873, 876-877.

Motor boat, vessel smaller than a ship or motor yacht, powered by an internal combustion engine which usually drives a single screw. Motor boats vary in size from motorized dinghies 2m (6ft) or so in length to large cabin cruisers 20m (60ft) or more long. Engines of smaller craft are often of the easily detachable (outboard) type — which can, however, be extremely powerful. Larger motor boats have inboard marine engines. Fast motor boats include naval chasers, HYDROFOILS and stepped-hull boats such as power boats, all of which ride high out of the water at speeds of 35km/h (20 knots) upwards.

Motor bus, petrol or diesel powered passenger vehicle. The first motor bus, a petrol-driven coach which could carry eight passengers, was built by Karl Benz in 1895. Motor buses were introduced into Britain at the end of the 19th century and gradually replaced TRAMS because they were more versatile and economic to operate. See also pp. 500-501.

Motor car, road vehicle which first appeared in the 19th century. The first cars were propelled by steam, but such vehicles were not a success and the age of the motor car really dates from the introduction of the petrol-driven horseless carriages of Gottfried DAIMLER and Karl BENZ (1885-86). The internal combustion engine for these cars had been developed earlier by several engineers, most notably by another German, Nikolaus OTTO, in 1876. The main components of a motor car, from then till now, are a body or chassis to which are attached all other parts — including the engine or power plant, the transmission system for transferring the drive to the wheels, and the steering, braking and suspension mechanisms for guiding, stopping and supporting the car. The first cars were assembled by a few experts, but modern mass-production was begun in the early 1900s by Henry FORD and R. E. Olds in the USA. By this means, the cost of a car was drastically reduced, and many more people could afford one. In most modern motor car factories component parts are put together on assembly lines — slow-moving conveyor belts. Each worker usually has a specific task, eg fitting doors or crankshafts. Bodies and engines are constructed on separate assembly lines which converge when the engine is installed. Overhead rail conveyors move heavy components to and along the assembly lines, and lower them into position. At a later stage on the assembly line such items as lamps are fitted, and electrical, braking and control systems are tested. The fully assembled car is road tested before sale. See also pp. 426-427, 454-455, 492-499.

Motor cell, in botany, one of several cells which together are able to expand and contract, thus causing movement in a plant.

Motor cycle, two-wheeled automotive vehicle, that combines the principles of a BICYCLE and the INTERNAL COMBUSTION ENGINE. First designed in 1885 by Gottlieb DAIMLER, it did not become popular until about 1910. Motor cycles are classified in terms of engine capacity, which ranges from 50cc to 1200cc. There are two types of engine: four-stroke and two-stroke; transmission is by chain, although some early motor cycles had belt transmission. The clutch, accelerator and front braking controls are usually on the handlebars, and the gear change and rear brake are controlled by foot pedals. See also p. 490.

Motor cycle racing, sport in which motor

cyclists compete on road circuits, across country (scrambling and trials), on grass tracks, or on cinders (speedway). Road-racing motor cyclists contest an annual world championship of grands prix in Europe, South and North America, and Japan for 50cc, 125cc, 350cc, 500cc, 750cc and sidcar classes. British, German, and Italian machines were the most successful until the 1960s, when Japanese motor cycles swept aside all but the Italian MV Agusta. Until the 1970s, when the top riders operated a boycott, the most famous event was the Isle of Man Tourist Trophy (TT) held in the first two weeks of June. See also pp. 490-491.

Motor nerve, nerve carrying messages to the muscles from the BRAIN via the SPINAL CORD. The cell bodies of some motor NERVES form part of the spinal cord. The AXONS of these nerves, which are sheathed with MYELIN, pass from the spinal cord to connect with the muscles. These nerves are involved in REFLEX ACTIONS. Motor nerves are, however, also linked to the brain by the descending spinal tract. The cell bodies of this tract lie in the CEREBRAL CORTEX and their axons, which pass down the spinal cord, connect the nerves to the brain, so allowing voluntary, in other words conscious or deliberate, muscular control. See also pp. 126-129.

Motor racing, sport in which men and women use cars for competition. The first event of any significance was the 1894 Paris to Rouen motor trial, since when the sport has moved in a number of directions. The Federation Internationale de l'Automobile (FIA) classifies cars as production, prototype or racing, and divides those into specific groups according to the number made, modifications or, with single-seater racing cars, a formula. Within the groups there are further subdivisions into capacity classes. For example, Formula One grand prix cars have since 1966 been limited to an engine capacity of 3 litres (or 1.5 supercharged). Grand prix racing began in France in 1906 but only since 1950 has there been a world championship for drivers and the International Cup for manufacturers. Points are awarded to the first six places in grand prix races held world-wide throughout the year. Sports car drivers, however, have no championship, the International Championship of Makes being solely for constructors. Rallying is in the same position though there is a European championship, as there is for saloon-car racing and hill-climbing. In the USA, popularity is divided between single-seater racing and saloon-car racing on super-fast oval speedways, drag racing and, to a lesser extent, road-racing. The annual Indianapolis 500 is motor sport's richest event. Other branches of the sport, each with an avid following, are autocross, rallycross, stock-car racing, trials, off-road racing, and vintage car racing. Land speed records are kept for the various capacity classes of cars.

Motor scooter, small-wheeled MOTOR CYCLE that originated in Italy soon after WWII; the first was a 125cc model. The wheels are from 20 to 36cm (8-14in) in diameter. Power units are placed low, close to the rear wheel which may be driven by bevel gearing or a chain. See also pp. 490-491.

Motor Sports, set of sports in which competitors use MOTOR CARS, MOTORCYCLES and MOTOR BOATS. Typical motor sports are MOTOR RACING, MOTORCYCLE RACING and SCRAMBLING.

Motorway, in Britain, high-speed roads, often of six lanes, with no direct junctions and on which pedestrians, bicycles and animals are not permitted. Corresponding to freeways in the USA, motorways are much used for both industrial and personal communications. The first motorway, part of the M1 between London and Leeds, was opened in 1959. See also pp. 524-525.

Mott, Sir Frederick Walter (1853-1926), British neurologist. He researched the structure and function of the nervous system and in 1916 postulated the first diagnosis of shell-shock for soldiers who had been fighting in the trenches (WWI).

Mott, John Raleigh

Mott, John Raleigh (1865–1955), US religious leader who shared the 1946 Nobel Peace Prize with Emily G. Balch for his work in promoting co-operation between the churches. He began his work in 1888 when he became student secretary of the International Committee of the YMCA, a post he held until 1915. From 1926 to 1937 he was president of the World's Alliance of YMCAs. He wrote many books, including *Strategic Points in the World's Conquest* (1897) and *The Larger Evangelism* (1944).

Mott, Lucretia Coffin (1793–1880), US social reformer. A QUAKER, she championed intellectual freedom and opposed slavery. She helped found the American Anti-Slavery Society in 1833. She was also interested in women's position in society and with Elizabeth Cady STANTON, she organized the first women's rights convention at Seneca Falls, New York, in 1848.

Mott, Sir Nevill Francis (1905–), British scientist. He was professor of experimental physics at Cambridge (1954–71). He made important contributions in the field of QUANTUM MECHANICS, especially in the theory of atomic scattering, and in 1977 he was awarded the Nobel Prize in physics, jointly with Philip Anderson and John van Vleck, for their work on the electronic structures of magnetic and disordered systems.

Motte and baillie, early medieval style of CASTLE building, most common in England in the late 11th century. It comprised an artificial mound topped by a wooden building (the motte), surrounded by a larger enclosure protected by a wooden palisade (the baillie). Such castles were often later replaced by more permanent stone structures.

Mottelson, Ben Roy (1926–), Danish physicist, b. USA, who shared the 1975 Nobel Prize in physics with Aage N. BOHR and L. James RAINWATER for their co-operative research into the structure of atomic nuclei. In the 1950s it was found that atomic nuclei were not spherical, which led Rainwater to postulate that most nuclear particles form an inner nucleus while the remaining particles form an outer nucleus, the shape of each set of particles affecting the other set. He further proposed that enough energy could be created from this interaction to deform an otherwise symmetrical nucleus. From 1950 to 1953 Mottelson and Bohr provided experimental evidence to support this theory, which made Nuclear Fusion a practical possibility.

Mouflon, wild mountain-dwelling sheep of remote parts of Sardinia and Corsica. The coarse coat is mainly reddish brown on the back and white underneath. The male has large, downward-curving horns; the mouflon is smaller than the ARGALI and BIGHORN. Height: up to 70cm (28in) at the shoulder. Family Bovidae; genus *Ovis*. See also p.95.

Mould, any conspicuous mass composed of the MYCELIA (vegetative filaments) and fruiting bodies produced by numerous fungi of the division Mycota. The colour of the mould is due to the SPORES, borne on the mycelia. Many moulds live off fruits, vegetables, cheese, butter, jelly, silage and almost any dead organic material. *Rhizopus nigricans* is commonly seen on stale bread. ROQUEFORT, CAMEMBERT and STILTON cheeses involve the use of mould, eg species of *Penicillium*. Although many species are pathogenic, causing diseases in human beings, animals and plants, PENICILLIN and a few other ANTIBIOTICS are obtained from moulds. See also SLIME MOULD; FUNGICIDES; FUNGUS; pp.352–353.

Moulin Rouge, Paris dance hall, opened in 1889. Its attractions include a cabaret and a large garden, used for summer dancing and musical entertainment.

Moulmein, port city of S BURMA, at the mouth of the River SALWEEN, on the E shore of the Gulf of Martaban. Its industries include teak milling and shipbuilding. There is also a thriving export trade. Pop. (1974 est.) 202,000.

Moulting, process involving the shedding of the outermost layers of an organism and

their replacement. Mammals moult by shedding outer skin layers and hair, often at seasonal intervals – human beings do not moult but lose dead, dry skin continuously as it is replaced from below. Birds moult their feathers, and amphibians and reptiles their skin. In all cases the process is controlled by HORMONES and serves to replace worn out tissues of the skin of a growing animal that has become too small, with new ones. The moulting of insects and other arthropods is a more elaborate affair which is fundamental to growth. The process, also called ecdysis, involves the resorption into the body of calcium and other materials from the hard outer cuticle of the EXOSKELETON, so making the cuticle more fragile. The arthropod then swells its body and bursts free from the old cuticle, and slowly reforms a new one around its swollen body, so increasing in size.

Moulton, Forest (1872–1952), US astronomer who, with Thomas Chamberlain, (1843–1928), put forward a tidal theory of the evolution of the SOLAR SYSTEM. He developed George de Buffon's idea that the planets were formed by the action of a passing star which drew material out of the Sun. See also pp.924–925.

Mountain, part of the earth's surface that rises conspicuously higher, at least 380m (1250ft) higher than the surrounding area. Mountains have a restricted summit area, comparatively steep sides and considerable bare rock surface. They are identified geologically by their most characteristic features, FOLD, VOLCANICS or fault-block mountains. Mountains may occur as single isolated masses, as ranges and in systems or chains. See also pp.214–215, 268–269.

Mountain ash, any of several species of trees of the rose family, ROSACEAE. The European mountain ash, the rowan tree (*Sorbus aucuparia*), has white flowers and, later, orange-red berries. It grows to a height of about 13m (45ft). In Australia, several tall slender trees (eg of the genera *Fraxinus* and *Eucalyptus*) are also known as mountain ash.

Mountain building, geological process by which mountains are formed in one of three ways. First, FOLD mountains such as the HIMALAYAS are formed by a squeezing-in of rock layers, caused by movements of the tectonic PLATES of the Earth's CRUST. Second, block mountains such as the SIERRA NEVADA of North America are formed by vertical movements between geological FAULTS, leading to the tilting of large blocks of STRATA. Third, a typical VOLCANIC form from the molten rock and ash that piles up around its original vent hole. The extent and speed of this process is illustrated by Parícutín, a Mexican volcano that rose out of a cornfield to a height of 450m (1,475ft) from its base between 1943 and 1952.

Mountain cat, or Andean cat, the rarest wild cat in South America. It feeds primarily on rodents. Its coarse fur has striped markings and the tail is prominently ringed. Length 76cm (2.5ft) excluding tail. Family Felidae; species *Felis jacobita*.

Mountain climbing, sport and recreation known to have been enjoyed in the 3rd century BC. It gained popularity in Europe in the 18th and 19th centuries with the ascent of many European mountains including the MATTERHORN in 1865. The first mountaineering club, the Alpine Club, was formed in 1857. One of the most famous ascents was that of EVEREST in 1953 by HILLARY and TENZING.

Mountain goat, sure-footed, mountain dwelling RUMINANT native to the USA; although goat-like in appearance it is more closely related to the ANTELOPE. Both sexes are alike, with short, pointed horns and woolly underfur with a top coat of coarse, white, shaggy hair. Mountain goats feed primarily on mosses, lichens and scrub foliage. Height: 1m (3.3ft) at the shoulder. Family Bovidae; species *Oreamnos americanus*.

Mountain lion. See PUMA.

Mount Athos, mountain peak on the E part of the Acte peninsula, NE Greece. It has been inhabited since the 9th century by an independent community of monks

of St BASIL. Mount Athos became a theocratic republic in 1927, using a representative system introduced in 1783 by the patriarch Gabriel IV.

Mountbatten of Burma, Louis Francis Albert Victor Nicholas Mountbatten, 1st Earl (1900–79), British admiral. A great grandson of Queen VICTORIA, he had a distinguished naval career during WWII and, as Commander-in-Chief South-East Asia, commanded Allied operations against the Japanese in Burma. In 1947 he became India's last VICEROY and later, as Chief of the Defence Staff (1959–1965), worked to integrate the branches of the armed forces. He was killed by an IRA terrorist bomb while boating near his home in Ireland. See also pp.1699, 1731.

Mountbatten-Windsor, name of the British royal family since 1960. The name Windsor was adopted in 1917 (to replace Saxe-Coburg-Gotha) and Mountbatten was added to the name in honour of Prince PHILIP, whose surname it is.

Mount McKinley, park in central ALASKA, with spectacular mountain and forest scenery and a wide variety of wildlife. Mount McKinley, 6,194m (20,320ft), is the highest peak in North America. Area: 785,220 hectares (19,493 acres).

Mount Pleasant, principal sorting office of the Post Office in London and one of the world's largest. It is connected to six other sorting offices and two British rail stations (Liverpool Street and Paddington) by the Post Office underground railway. Completed in 1927, the automatically controlled railway is 10.5km (6.5 miles) long and carries up to 50,000 mailbags a day. The tunnels are 2.7m (9ft) wide and are, on average, 21m (70ft) below street level.

Mount Rushmore Park, memorial in SW SOUTH DAKOTA, USA, in the Black Hills. The busts of four US presidents, WASHINGTON, JEFFERSON, LINCOLN and ROOSEVELT, have been carved out of the granite face of Mt Rushmore and are visible for a distance of 97km (60 miles). Area: 494 hectares (1,220 acres).

Mount Vernon, estate in NE VIRGINIA, USA on the POTOMAC River 24km (15 miles) S of WASHINGTON D.C.; home and burial place of George WASHINGTON. The estate belonged to the Washington family until 1858. Purchased by the Mount Vernon Ladies' Association in 1860, it is now a national monument. The furnishings on the first floor and in Washington's bedroom are original. A museum was founded on the estate in 1853. Area: 3,240 hectares (8,000 acres).

Mount Wilson, observatory in California, USA, administered jointly with Mount PALOMAR as the Hale Observatories. George HALE was responsible for the construction of a 100in (254cm) reflecting telescope there. Completed in 1918, it remained the largest of its kind in the world for over 30 years. See also pp.920, 973, 990, 1000, 1004.

Mourne, mountains of, range in County Down, SE NORTHERN IRELAND, extending 24km (15 miles) NE to SW between Dundrum Bay and Carlingford Lough. They contain the highest peak in Northern Ireland, Slieve Donard, 852m (2,796ft).

Mourning Becomes Electra, (1931), trilogy of plays by Eugene O'NEILL, entitled *Homecoming*, *The Hunted* and *The Haunted*. They present a modern adaptation of the ELECTRA theme of Classical literature. The trilogy as a whole is an attempt at reproducing, in a modern context, a sense of fate, accessible to the Greeks because of their religious beliefs, but difficult to inculcate into a modern sceptical audience. The plays were made into a film (1947) and into an opera (1967) by Martin David Levy.

Mouse, any of numerous species of small common RODENTS found in a variety of habitats throughout the world; especially the omnivorous, brown-grey house mouse (*Mus musculus*) of the family Muridae, which also includes most of the Old World mice and rats. This prolific nest-builder, often associated with human habitation, is considered a destructive pest and is believed to carry disease-producing organisms. It may grow as long as 20cm (8in) overall, and has been bred for use in

laboratories and as a pet. Many species within the family Cricetidae are also called mice, as are pocket mice (Heteromyidae), jumping mice (Zapodidae) and marsupial mice (Dasyuridae). See also pp.88, 90, 92, 186, 318, 326.

Mousebird, also called colly, any of six species of small, crested, long-tailed, fruit-eating birds that live in South Africa; it is considered a pest in fruit-growing areas. Grey with brightly coloured markings, it scampers along branches, sometimes resembling a mouse. This gregarious bird builds a cup-shaped nest. Length: to 33cm (13in). Family Coliidae. See also p.73.

Mouse deer. See CHEVROTAIN; ARTIODACTYLA.

Mousetrap, The (1952), mystery MELODRAMA by Agatha CHRISTIE, based on her short story *Three Blind Mice*. Since its London opening in 1952 it has run continuously and has been played in most countries in the world. During a snowstorm a group of strangers takes shelter at a boarding-house. The party is cut off from the outside world and two murders take place before the mystery is solved.

Moussorgsky, Modest Petrovich. See MUS-SORGSKY, MODEST PETROVICH.

Mousterian culture, Stone Age industry associated with Neanderthal man, inhabiting W Europe and N Africa 80,000–35,000 years ago. It is named after the site at Le Moustier, in the Dordogne region, France, where a Mousterian skeleton was first discovered in 1908. The culture is designated by its type of pointed flaked flint tools. See also p.115.

Mouth, in animals, the anterior (frontal) end of the ALIMENTARY CANAL. In man and other higher animals it is the buccal cavity within the jaws, containing the teeth and tongue and leading on to the PHARYNX.

Mouth breeders, any of various species of fish, either the male or female of which carries the fertilized eggs in its mouth. After hatching, the young swim with the adult fish, returning to its mouth in times of danger. Included are the CICHLIDS, native to Central and South America, Africa and India. See also TILAPIA.

Mouth organ. See HARMONICA.

Mowat, Sir Oliver (1820–1903), Canadian statesman. A liberal lawyer, he was Vice-Chancellor of UPPER CANADA from 1864 to 1872. He achieved a certain amount of provincial autonomy and became Premier and Attorney General in 1872. He was knighted in 1892 and made Lieutenant-Governor in 1897.

Moya, John Hidalgo (1920–), British architect, b.USA. In collaboration with Philip Powell since 1946, he has won many awards for his works, which include extensions to colleges at Oxford and Cambridge in the 1960s, and the Chichester Festival Theatre (1962).

Mozambique, republic in SE Africa. A former Portuguese colony, it gained independence in 1975. The country has great potential for hydroelectricity, but as yet there is little manufacturing. The chief exports are cashew nuts, copra, cotton, sugar and tea. Invisible earnings come from the transit trade from neighbouring inland nations. The capital is MAPUTO. Area: 783,030sq km (302,328sq miles). Pop. (1979 est.) 11,750,000. See p.2101.

Mozart, Wolfgang Amadeus (1756–91), Austrian composer born in Salzburg. A child prodigy at the piano, he was taken by his father, Leopold (who was also a musician), on performing tours in Europe (1762–64) and England (1764–65) and by 1770 he had written four operas. In the 1780s he devoted himself to full-time composition. To this period belong some of the most sublime works ever composed, such as the operas *Marriage of Figaro* (1786) and *Don Giovanni* (1787) and the last eight of his 41 full-scale symphonies. In 1787, having almost given up hope of an imperial post, he was appointed court composer by the Austrian emperor. In the last year of his life, wracked by ill health, Mozart wrote the operas *The Magic Flute* and *La Clemenza di Tito*, the clarinet concerto and the *Requiem* (completed by a

pupil). He died in poverty and was buried in an unmarked grave. Together with J.S. BACH, Mozart is today rated as one of the greatest of all composers. In his short life he produced more than 600 compositions and exerted a potent influence on musical development. He perfected the Classical style and looked forward to the early Romanticism of BEETHOVEN and later, BRAHMS, with music that combined elegance of expression with profound emotion. See also KOCHER; pp.1453, 1485, 1598.

Mphahlele, Ezekiel (1919–), South African novelist, dramatist and short-story writer. He went to Nigeria in 1975 and since then has been attacking APARTHEID through his writings. *Down Second Avenue* (1959) is an autobiographical account of a young man's battle with apartheid.

Mrozek, Sławomir (1930–), Polish short-story writer and playwright. His witty and satirical short stories appeared in *Sion* (1957; tr. *The Elephant*, 1962) and *Utwory sceniczne* (1963; tr. *The Ugupu Bird*, 1968). His plays, which belong to the Theatre of the Absurd, include *Tango* (1965; tr. 1968) and *Policja* (1958; tr. *The Police*, 1967).

Muawiyah (c.602–680), early Muslim statesman and first Umayyad caliph. He became a scribe of MOHAMMED and later, under OMAR, was appointed the governor of Damascus. He succeeded to the caliphate after refusing to recognize ALI and, although many felt his rule lowered the office of caliph to a mere kingship, he attempted to reconcile the people of his empire and expand his territory in the name of ISLAM.

Mucha, Alphonse Marie (1860–1939), Czech designer and painter. He popularized the ART NOUVEAU style of which he was a leading exponent in his posters, eg in the *Poster for Job Cigarette Papers* (1898). Working in Paris, he designed theatre bills for Sarah BERNHARDT's performances, including *Medea* (1898) and *Hamlet* (1899). In his later career he reverted to a more classical mode, and painted decorative historical subjects.

Much Ado About Nothing (c.1598), comedy by William SHAKESPEARE. The plot concerns two parallel but contrasting relationships. The real focus of the play, however, is the sexual tension between Beatrice and Benedick, which is manifested in a series of witty verbal battles.

Mucopolysaccharide, class of POLYSACCHARIDE molecules composed of amino-sugars linked into repeating units that give a linear unbranched polymeric compound. They are structurally similar to GLYCOGEN and STARCH. CHITIN is a mucopolysaccharide which acts like CELLULOSE as a structural polysaccharide for many phyla of lower plants and insects. The shells of crabs, lobsters, crayfish and many insects mostly contain chitin combined with inorganic salts.

Mucoprotein, type of structural material of the living body, found particularly in the fibres of connective tissue. It is made up of a PROTEIN attached to a MUCOPOLYSACCHARIDE.

Mucor, genus of common MOULDS, found on the surfaces of bread, other foods and dead organic materials. The SPORES are borne in pin-like fruiting bodies which can be seen as dark dots against the white mould. Mucor and related species of FUNGI also reproduce by means of thick-walled spores, which can survive winter cold or drought. See also p.353.

Mucous membrane, lining of all body channels that communicate with the air, such as the mouth and respiratory tract, the digestive and urino-genital tracts and the various glands that secrete mucus.

Mucus, slippery, viscous fluid containing mucin, produced by MUCOUS MEMBRANES of the body. It serves for lubrication and protection: nasal mucus traps airborne particles; mucus of the stomach protects the lining from irritation by hydrochloric acid secreted during DIGESTION.

Mud, wet, sticky soil or sediment. The solid matter of mud has a smaller average particle size than that of SAND or SILT, and

some of its organic matter is held in colloidal suspension so that it will not settle out upon standing (see COLLOID). Marine oozes are muds formed largely from the shells of microscopic organisms of the PLANKTON. MUDSTONE is a fine-grained rock, a consolidated form of mud. See also p.210.

Mudfish, name given to a number of fishes that live in muddy water but are otherwise dissimilar. They include the killifish and the bowfin.

Mudie, Charles Edward (1818–90), British library owner and publisher. He started a book-circulating enterprise in 1842 and ten years later this became Mudie's Lending Library. It circulated carefully selected books to the public until it closed in 1937. He published the first English edition of Lowell's *Poems* (1844).

Mudpuppy, aquatic SALAMANDER of streams and rivers in S Canada and the USA. It has dark red gills at the sides of the neck and brown-spotted skin. Length: to 38cm (15in). Family Necturidae; species *Necturus Maculosus*.

Mudskipper, any of several genera of amphibian-like fish of tidal swamps in Africa, Asia and Australia. It can retain moisture in its gill cavities to survive out of water when the tide recedes. With its specialized pectoral fins it can hop on mud, and can even climb trees to cling with a sucker for several hours. Length: to 20cm (8in). Family Periophthalmidae. See also pp.58, 312, 332, 333.

Mudstone, rock made of consolidated MUD which, although firmer than clay, lacks the laminated structure and tendency to cleave to SHALE and sometimes decomposes into mud when exposed to the atmosphere.

Mud turtle, any of 12 species of freshwater, bottom-crawling TURTLES of the Americas. It has a short tail, fleshy chin barbels, and hinged, protective flaps at the front and rear of its undershell. Length: 15cm (6in). Family Kinosternidae; genus *Kinosternon*.

Muezzin, one who calls MUSLIMS to prayer. In small mosques, the call is given by the IMAM. In larger mosques, a muezzin is specially appointed for that purpose. If the mosque has a MINARET, or tower, the muezzin calls from the top of it.

Mufti, person who will give an opinion, or *fatwa*, on any point in the sharia (Islamic religious law). The Sharia is thought to be divine revelation, not human creation, and so this interpretation is of great value, although any judgment not concerned with such personal matters as marriage, divorce and inheritance may now be subject to modern legislation. Muftis were given official status in the OTTOMAN EMPIRE and the office of Mufti of Istanbul had considerable political influence. In the British army, mufti also described the civilian dress of one who normally wears a uniform.

Mufurira, city of N central Zambia, 34km (21 miles) NNE of Kitwe on the border with Zaire. Rich local copper deposits make the city the mining centre of the Copperbelt. Pop. (1972 est.) 142,000.

Muggleton, Lodowick (1609–98), English Puritan religious leader. He and his cousin John Reeve, claiming to be the prophetic witnesses in Rev. 11: 3–6, believed in the absence of divine interference in the world after God's revelation to them, denied the usefulness of prayer and the doctrine of the Trinity, and taught that Reason was the Devil's creation. The small sect known as Muggletonians continued until the early 20th century.

Mughals. See MOGUL EMPIRE.

Mugwumps, US political faction in the 1880s composed of independent, or liberal, Republicans. In the 1884 presidential election they deserted the Republican candidate, James G. Blaine (whom they considered corrupt) and supported the Democratic candidate, Grover CLEVELAND, who won the election.

Muhammed Ali. See ALI, MUHAMMAD.

Muhammed Ali (1769–1849) Egyptian soldier who became Viceroy of Egypt (1804–48). He fought against the French invasion of Egypt (1799) and gradually became independent of his nominal

master, the Ottoman sultan. He passed extensive reforms although the cost rather than the benefits fell to his subjects. He attacked the sultan, Mahmud II (1831–34; 1838–41), but an agreement was reached whereby the governorship of Egypt became hereditary in Muhammed Ali's family.

Muir, Edwin (1887–1959), Scottish poet. The contrast between his native Orkney and the harshness of Glasgow, where he moved when young, is a main theme of his *Autobiography* (1954). His poems make powerful use of myth and tradition. With his wife, Willa, he translated the works of many German writers, including Franz KAFKA. He was also known as a literary critic.

Muir, Karen (1952–), South African backstroke swimmer who, in 1965 aged 12 years 10 months 25 days, became sport's youngest ever-world record-holder (68.7 sec for the 110yd event). She went on to set 15 world records over 100m (110yd) and 200m (220yd), but was denied the chance of Olympic Games honours because of South Africa's non-attendance for political reasons.

Mukden. See SHENYANG.

Mulattoes, persons having one black (Negro) parent and the other white (European). They occur mostly in Central and South America, and the West Indies. Although some people from these regions are of mixed ancestry, the term is generally applied to those of lighter-coloured skin.

Mulberry, family (Moraceae) of trees and shrubs that grow in tropical and temperate regions and contain a milky latex. Other characteristics are simple leaves, unisexual flowers and the production of fibres or edible fruits. The 1,400 varieties include 12 species of *Morus*, deciduous trees with fleshy, edible fruits. The leaves of some species are used for feeding SILKWORMS. See also pp.652, 710, 711.

Mulberry harbour, nickname for two artificial floating harbours used by the Allied forces in WWII to facilitate the D-Day landings of 1944. During the 100 days following the landings, more than 4 million tonnes of stores and 2 million troops passed through the two harbours.

Mulch, layer of loose material placed on top of the soil and around growing plants. Mulches, including leaves, straw, pine-needles, woodchips, stones, newspaper and synthetics (fibreglass, plastic), are used to stabilize soil temperature, keep down weeds, nourish plants and conserve moisture. During winter mulches also protect herbaceous perennials, produce humus (if organic) and keep roots from freezing. Natural mulches include fallen leaves, bracken, grasses and snow.

Muldoon, Robert David (1921–), New Zealand politician and Prime Minister (1975–). He was Finance Minister (1967–72 and 1975–) and became leader of the National Party Opposition in 1974, a year before spearheading a landslide election victory. He became one of the most forceful and controversial leaders in New Zealand political history.

Mule, HYBRID offspring of a female horse and a male ass; it is different from the smaller hinny, which is the result of a cross between a male horse and a female ass. Brown or grey, it has a uniform coat and a similar body to a horse, but has the long ears, heavy head and thin limbs of an ass. Known since ancient times, the hardy mule is commonly used as a draught or pack animal. It is usually sterile. Height: 1.0m (5.8ft). See also p.189.

Mule deer, long-eared deer and a game animal that inhabits W USA from Alaska to Mexico. It is red-brown with a black-tipped white tail; the male bears antlers. It is generally solitary, but often gathers in herds in winter. Height: to 1.1m (3.5ft) at the shoulder. Family Cervidae; species *Odocoileus hemionus*.

Mulgan, name of two New Zealand writers, Alan Edward (1881–1962), father, and John (1911–45), son. Alan wrote the volume of verse *Aldebaran* (1937) and the novel *Spur of Morning* (1940). John's most famous book was the novel *Man Alone* (1939).

Mudskipper: its eyes, prominent on the head, can move in all directions.

Mulch, applied about 5 to 8cm (2 to 3in) thick, enriches the soil as it decays.

Robert Muldoon visiting a RNZN ship under conversion on the Clyde to a survey vessel.

Mule deer can walk at birth and after less than two years fend for themselves.

Mullein plants, both the stem and the leaves irritate human skin if touched.

Hermann Muller's works include *Out of the Night and Genetics, Medicine, and Man*.

Mullet feed at the surface by sucking in minute items of food.

Gerry Mulligan, in concert with Dave Brubeck, the American jazz pianist.

Mull, island off the w coast of Scotland, in Strathclyde Region, largest of the Inner Hebrides; separated from the mainland by the Sound of Mull and the Firth of Lorn. A mountainous island, its highest point is Ben More, rising to 971m (3,185ft). Sheep and cattle are raised, and the main industries are fishing and tourism. Area: 909sq km (351sq miles).

Mullah, Arabic word meaning "master". It is often given to men versed in the Sharia (Islamic religious law), but can apply to anyone acting in a religious capacity. There are therefore no qualifications that a man must gain to become a mullah, but he will usually have attended a *madrasah*, or religious school.

Mullein, hardy biennial plant of the genus *Verbascum*, including the common mullein (*V. thapsus*) that has 30cm (1ft) leaves and long, dense, yellow flower spikes; height: to 1.8m (6ft). Family Scrophulariaceae.

Müller, Friedrich Max (1823–1900), British linguist and Orientalist, b. Germany. Noted for his work on comparative mythology and religion, especially HINDUISM and ZOROASTRIANISM, he edited the *Sacred Books of the East* (51 vols) which include translations of major Oriental, non-Christian scriptures.

Muller, Gerhardt ("Gerd") (1945–), West German footballer whose prolific goalscoring feats helped his country to win the 1974 World Cup and the 1972 European Championship. His club, Bayern Munich, had many successes, including three European Cup wins (1974–76). He was European Footballer of the Year in 1970.

Muller, Hermann Joseph (1890–1967), US geneticist. He found that he could artificially increase the rate of mutations in fruit-flies (*Drosophila*) by the use of X-rays. He thus highlighted the human risk in exposure to radioactive material. For this work he was awarded the 1946 Nobel Prize in physiology.

Müller, Johannes Peter (1801–58), German physiologist and anatomist. Regarded as one of the founders of modern physiology, he conducted pioneer research into the nervous system, lymph and blood systems, hearing and EMBRYOLOGY.

Müller, Otto (1874–1930), German Expressionist painter and lithographer, known for his paintings of nudes and gypsy women. In 1910 he joined *Die Brücke*, a group of Expressionist painters based in Dresden. He taught at Breslau Academy from 1919 until his death. His works include *The Judgement of Paris* (c.1911) and *Self Portrait* (1922).

Müller, Paul Hermann (1899–1965), Swiss chemist who was awarded the 1948 Nobel Prize in physiology and medicine for his discovery of the use of DDT as an insecticide. In 1935 he began the search for a perfect insecticide, one toxic for a wide variety of insects with few poisonous effects on other life forms. He concentrated on chlorine-containing compounds and in 1939 tested DDT. In 1944 DDT was successfully employed against a typhus epidemic in Naples, and for more than 20 years was the most widely used insecticide. In the 1970s, however, it was implicated as a major pollutant and a hazard to animal life, resulting in its use being banned in many countries.

Müller, Wilhelm (1794–1827), German lyric poet, much of whose work was popular for its sympathy with the heritage of Greece in its struggle for independence. He published *Songs of the Greeks* (1821–24) and *Modern Greek Folk Songs* (1825), as well as the cycles *Die Schöne Müllerin* and *Die Winterreise*, which were set to music by SCHUBERT.

Muller, William James (1812–45), British landscape painter, of German extraction. Using mainly watercolour, his style was exotic and romantic in the scenes he painted of the Middle East where he travelled extensively. His English paintings show the influence of John CONSTABLE and David COX.

Mullet, or grey mullet, marine food fish found in shoals in shallow tropical and temperate waters throughout the world.

Its torpedo-shaped body is green or blue and silver. Size: to 91.4 cm (3ft); weight: 6.8kg (15lb). Among the 100 species is the widely distributed striped *Mugil cephalus*. Family Mugilidae. See also p.744.

Mulligan, Gerry (1927–), US jazz baritone saxophonist and composer. In the 1940s he was an important arranger, especially for Miles DAVIS; in the 1950s he led his own quartet, playing with a restrained, thoughtful style.

Mulliken, Robert Sanderson (1896–), US chemist. After studying at the Massachusetts Institute of Technology, he became professor at the University of Chicago. In 1966 he was awarded the Nobel Prize in chemistry for his fundamental work on CHEMICAL BONDS and the MOLECULAR ORBITAL THEORY.

Mullion, in architecture, slender, upright member dividing an opening, particularly a division between panes of a window or between windows. Although the mullion occurs in nearly all early architectural styles, it is most characteristic of GOTHIC stone tracery, where it is used to divide large windows into areas suitable for glazing.

Mulready, William (1786–1863), Irish artist trained in classical draughtsmanship at the Royal Academy, but who later specialized in Romantic genre paintings such as *Flight Interrupted* (1816), *The Sonnet* (c.1839) and *Shooting a Cherry* (1848). He illustrated many books and in 1840 the illustrated envelope he had designed for Sir Rowland Hill's new postal scheme met with such public ridicule that it was replaced by the Penny Black stamp which could be stuck to any envelope.

Multan, city in E central Pakistan, in the Chenab river valley approx. 322km (200 miles) SW of Lahore. An ancient settlement, the city was taken by Mahmud of Ghazni in 1006 and by TAMERLANE in 1398. The British took the city in 1849. Multan has several ancient Muslim tombs and a Hindu temple. Industries: textiles, iron founding, glassware, food-processing, pottery. Pop. (1972) 542,195.

Multi-party system, democratic political system in which more than two parties compete for office. It is characteristic of most Western democracies, where it is usually accompanied by an electoral system based on some kind of proportional representation.

Multiple birth, bearing of several offspring. Multiple births are common among small mammals but relatively rare in human beings in which the most usual form is TWINS. Identical twins develop from a single ovum which has divided shortly after FERTILIZATION by a single SPERM; fraternal twins arise from two individually fertilized ova. Multiple egg births are partly genetically determined and partly due to extrinsic factors, such as the mother's age. FERTILITY DRUGS sometimes cause several ova to be released and fertilized simultaneously, resulting in the birth of four or more offspring. See also pp.166–167.

Multiple myeloma, malignant TUMOUR of the bone marrow, occurring most often in middle age. Mild cases may be treated by surgery or irradiation.

Multiple personality, relatively rare and extreme form of personality dissociation in which two or more distinct and often contradictory personality patterns coexist. They may alternate and through AMNESIA be unknown to one another. Multiple personality should not be confused with the splitting of personality from reality in SCHIZOPHRENIA.

Multiple sclerosis, disease of the nervous system, usually of the white matter (which conducts nerve impulses). Degeneration occurs in the sheath covering the nerve fibres (myelin sheath), resulting in weakness, lack of co-ordination, and speech and visual disturbances. Affected people typically have relapses and remissions over many years. Its cause is unknown, but evidence suggests a possible viral origin. See also pp.1072–1073.

Multiple stars, stellar systems consisting of three or more stars orbiting around a common centre of gravity. An example is the

Mizar-Alcor system in the constellation of Ursa Major. Mizar, itself a double star, is accompanied by the fainter Alcor. See also p.989.

Multiplet, in nuclear physics, group of elementary particles, all HADRONS with about the same mass, identical in all other properties except electric charge, usually having two or three members. The NUCLEONS and PIONS form multiplets. In strong interactions, members of a multiplet are all equivalent. A supermultiplet is a larger, more sophisticated and symmetrical grouping of hadrons involving eight QUANTUM NUMBERS, all of whose members have identical spin.

Multiplier, in economics, concept that explains the effect of a change in the level of autonomous consumption, investment or government (public) spending on the GNP (gross national product), through its impact on increasing aggregate demand. Since this increase results in higher spending for goods and services, the incomes of those selling the goods also increase. When the multiplier process has been completed, enough new income has been created for new savings to equal the initial increase in investment or government (public) spending. The multiplier can also apply to changes in tax levels. The theory was first introduced in the USA in the 1930s, later to be propounded by KEYNES.

Mumford, Lewis (1895–), US writer and critic, best known for his essays on town planning and architecture, which include *The City in History* (1961) and *Roots of Contemporary Architecture* (1972). He also published works on a variety of subjects, including a psychological study, *Herman Melville* (1929) and *Renewal of Life* (1934, 1938, 1944, 1951), a tetralogy presenting his philosophy of modern civilization and urging scepticism concerning all systems.

Mumming, traditional British folk-play celebrating the passing of winter into spring and the triumph of good over evil. Such plays, presumably derived from pagan ritual, incorporate a common 17th century source which concerns the killing of a hero, such as St George or Robin Hood, by a villain, often a Turkish knight, and the arrival of the Doctor who revives the hero. Mumming texts were handed down secretly by word of mouth from father to son and were often embellished with references to local events and contemporary heroes such as Nelson. As part of the ritual, mummers (or masqueraders) had to hide their identities behind sooted faces or by wearing masks and ribbioned clothes such as those worn at Marshfield, Gloucestershire. Once a common Christmas or Easter entertainment in most British villages, mumming is now rarely performed.

Mummy, body treated with preservatives before burial. Mummification was most commonly practised in ancient Egypt, where the internal organs were first removed, the body soaked in resin and other substances and then wrapped in linen bandages. The Incas of South America, the original inhabitants of the Canary Islands, and several other people also practised mummification. Naturally preserved mummies have been discovered in Scandinavian peat bogs. See also p.1901.

Mumps, contagious disease, most common in children and caused by a myxovirus (one of a large group of VIRUSES that includes the influenza virus). It has an incubation period of about 18 to 22 days, after which fever and painful inflammation of the salivary glands begin, with marked swelling, especially in the parotid glands below and in front of the ears. MENINGITIS occasionally develops in some cases, and the infection may involve other organs such as the pancreas. In males past puberty, inflammation of the testes (orchitis) may occur, with the attendant slight risk of sterility. One attack of mumps generally results in immunity for life against further infection.

Mun, Thomas (1571–1641), English merchant and writer on economics. He became a director of the East India Company in 1615, and wrote *A Discourse of*

Trade, from England and unto the East Indies (1621), in which he attacked the idea that trade with India weakened England by draining it of bullion. He was an early proponent of the concept of the balance of trade.

Munch, Charles (1891–1968), French conductor. He directed the Paris Conservatoire Orchestra from 1937 to 1949 and succeeded Serge Koussevitzky as conductor of the Boston Symphony Orchestra from 1949 until 1962. He was well known for his interpretations of the works of French composers.

Munch, Edvard (1863–1944), Norwegian painter and printmaker. He made colourful lithographs and woodcuts and painted portraits and murals, but is best known for his paintings showing basic human emotions (such as fear), which were important in the birth of German Expressionism. Among his strongest works are *The Shriek* (1893), *The Kiss* (1895) and *Vampire*. See also pp.1654, 1655.

München. See **MUNICH**.

Munday, Anthony (1560–1633), English dramatist. After travelling to Europe in 1578 and observing Catholic refugees there, he entered the English College at Rome, masquerading as a Catholic. *The English Roman Life* (1582) is a record of his experiences. He is best remembered for his plays, which include *The Downfall of Robert Earl of Huntingdon* (1601) and *Sir John Oldcastle* (1600).

Mundurucu, large tribe of South American Indians, who speak the Tupi language and live in sw Para and SE Amazonas in Brazil. They were once one of the largest and most powerful tribes in that area but by about 1800 Brazilian colonists had annexed most of their territory. Today there are few remaining members.

Munich (München), city in s West Germany, on the River Isar; capital of Bavaria. Founded in 1158 by Henry the Lion, Duke of Saxony and Bavaria, the city became the residence of the Wittelsbach family, the dukes of Bavaria, in 1255. Occupied by the Swedes in 1632 and the French in 1800, Munich developed rapidly in the 19th century, when it became a city of more than 100,000 inhabitants. Bavaria became a state of the German Empire in 1871. In 1923, Munich was the site of the "Beer-hall Putsch", HITLER's unsuccessful attempt to overthrow the Bavarian government. Despite this, Munich became the headquarters of the Nazi Party. The city is world-famous for its annual beer festival, the Oktoberfest. It has the University of Munich (1472), the Renaissance-styled St Michael's Church (1597) and the Propyläen, a neoclassic gate. Industries: chemicals, brewing, pharmaceuticals, motor vehicles, food-processing, tobacco, optical instruments and tourism. Pop. (1979 est.) 1,229,693.

Munich Agreement (1938), pact signed by representatives of Britain, France, Germany and Italy. Neville Chamberlain for Great Britain and Edouard Daladier for France acceded to Adolf Hitler's demands for immediate German occupation of the Sudetenland area of Czechoslovakia. The pact also provided for plebiscites, but these were never carried out. The agreement averted war for a year but was to become a symbol of the democracies' policy of appeasement toward Hitler. See also pp.1700, 1700.

Munich Putsch (1923), attempted coup by Adolf Hitler and his Nazi Party to overthrow the republican government of Bavaria, known as the "Beer-hall Putsch" because it began in a beer-hall. The coup proved abortive and Hitler was arrested and sentenced to five years in the Landsberg fortress, of which he served only nine months.

Municipal Corporations, originally chartered self-perpetuating town councils in England. An act of 1835 abolished those oligarchies in 178 towns and made the councils subject to elections. In the next 50 years 62 more towns were incorporated and by an act of 1882 another 25. That act consolidated the various functions (of which the most important was public health) imposed on the corpora-

tions. The 1888 act made large municipalities county boroughs, with functions similar to those of county councils. Municipal corporations of every borough outside Greater London ceased to exist on 1 April 1974. See also **LOCAL GOVERNMENT**. **Munk, Kaj Harald Leininger** (1898–1944), Danish playwright and parish priest. Influenced by Shakespeare and Kierkegaard, his works such as *Cant* (1931), *Ordet* (*The Word*, 1932), *De Udvagte* (*The Elect*, 1933) and *Niels Ebbesen* (1943) are chiefly historical dramas. His play about anti-semitism, *Han sidder ved Smeltediglen* (*He sits at the Melting Pot*, 1938) was banned during the German WWII occupation of Denmark. He became a spiritual leader of the resistance and was finally killed by the Nazis.

Munnings, Sir Alfred James (1878–1959), British artist who specialized in painting sporting scenes and horses. A war artist in WWI, he was president of the Royal Academy (1944–49) and was renowned for his critical views on "modern" art.

Munro, Hector Hugh. See "SAKI".

Munro, Sir Leslie (1901–74), New Zealand diplomat and politician. He was ambassador to the USA (1952–58) and president of the UN General Assembly (1957–58).

Munrow, David John (1942–76), British musicologist who, without any formal musical education, did much to foster interest in medieval music and the instruments on which it was played. He founded the Early Music Consort of London in 1967 and arranged, composed and played much medieval and Renaissance music for both the theatre and the cinema.

Munster, province in s Republic of Ireland, on the Atlantic coast; largest of Ireland's four provinces. It includes the counties of CLARE, CORK, KERRY, LIMERICK, TIPPERARY (North and South) and WATERFORD. Area: 24,126sq km (9,315sq miles). Pop. (1979) 979,819.

Munsterberg, Hugo (1863–1916), US psychologist, b. Germany. He was a pioneer in applied psychology, bringing it into education, law and business. His publications include *Psychology and Industrial Efficiency* (1913) and *Psychology: General and Applied* (1914).

Munthe, Axel Martin Fredrik (1857–1949), Swedish writer. After studying medicine and becoming famous as a psychiatrist, he was appointed physician to the Swedish royal family. His works, mainly reminiscences about international events, include *Letters from a Mourning City* (1897) and *The Story of San Michele* (1929).

Muntjac, small primitive Asian deer. It is brown with cream markings and has tusk-like canine teeth and short, two-pronged antlers. Muntjacs are generally found alone or in pairs. There are two well known species, the Indian muntjac or barking deer (*Muntiacus muntjac*) and the Chinese muntjac (*M. reevesi*). Height: to 60cm (24in) at the shoulder; weight: to 18kg (40lb). Family Cervidae. See also p.312.

Münzer, Thomas (c.1489–1525), German ANABAPTIST. He became a Protestant in 1518, initially following Martin Luther; but by 1522 he was an opponent of Luther's ideas, believing in the authority of the spirit rather than the Scriptures. He preached revolt and attacked the procedure of infant baptism, claiming that God willed the overthrow of the social structure by ordinary men and women and the establishment of a virtuous, simple society with everything owned by the community. When the PEASANTS' WAR broke out, he and Heinrich Pfeiffer established a communistic theocracy at Mühlhausen, but with the defeat of the peasant party Münzer was beheaded.

Muon, negatively charged elementary particle (symbol μ^-), originally thought to be a meson but now classified as a LEPTON. It has spin $1/2$, a mass about 207 times that of the electron, and decays weakly into an ELECTRON, NEUTRINO and antineutrino.

Mural, scene or abstract depicted on a wall and executed in any of a variety of media. The earliest murals were Stone Age hunt-

ing scenes, painted using natural earth colours. The Egyptians, Greeks and Romans used ENCAUSTIC and TEMPERA painting as well as FRESCO which in the works of GIOTTO, MANTEGNA, GENTILE, Fra ANGELICO, MICHELANGELO and RAPHAEL reached the height of its expression in the Renaissance when mural painting was allied with architecture in new efforts to create illusions of space. In the 18th century, TIEPOLO made further innovations in representation; PUVIS DE CHAVANNES painted huge canvas murals in oils in a fresco style in the 19th century. The 20th century has accorded more public and social significance to the exterior mural as exemplified by the works of the Mexicans José Clemente Orozco and Diego Rivera and the WPA murals. Porcelain and liquid silicate enamels are among the media now used in modern murals.

Murad, name of five Ottoman sultans. Murad (c.1326–89, r.1360–89) expanded Ottoman rule into Europe. Murad II (1403–51, r.1421–51) consolidated these acquisitions and created the JANISSARIES. Murad III (1546–95, r.1574–95) continued Ottoman imperialist policy. Murad IV (1612–40, r.1623–40), ruled strongly but severely. Murad V (1840–1904), r.1876) tried to introduce constitutional government but was deposed after four months because of his insanity. See also pp.1354, 1560–1561.

Murasaki, Shikibu (c.980–c.1030), Japanese diarist and novelist. A lady at the court of the Empress Akiko, she kept a diary from 1007 to 1010, showing glimpses of court life in the capital. She is better known for her novel, *The Tale of Genji*, one of the first great works of fiction to be written in Japanese. See also p.1266.

Murat, Joachim (1767–1815), Marshal of France and King of Naples (1808–15). He helped to bring NAPOLEON to power in the coup of 1799, and as a reward married Napoleon's sister Caroline in 1800. In 1808 he was chosen to succeed Joseph Napoleon as King of Naples. A brilliant and dashing cavalry commander, Murat played an important part in Napoleon's victories, particularly at AUSTERLITZ (1805) and in the Russian campaigns (1812). During the HUNDRED DAYS he rejoined Napoleon but was defeated by the Austrians and fled to Corsica. He failed in an attempt to regain Naples, was arrested and executed.

Murchison, Sir Roderick Impey (1792–1871), Scottish geologist. His work on the rocks underlying the old red sandstone in s Wales led to the definition of the strata known as the SILURIAN System. He worked with Sir Charles LYELL on the Auvergne volcanics and with Adam SEDGWICK on the structure of the Alps. He later collaborated with Sedgwick on a study of the rocks that were to become known as the DEVONIAN System.

Murchison, river in Western Australia that flows w into the Indian Ocean. Once part of a thriving gold-mining region, it is now used mostly for irrigation. Reefs make it unnavigable. Length: 708km (440 miles).

Murchison Falls, waterfall in NW Uganda, E Africa, in the lower Victoria Nile, just above Lake Albert. The falls were discovered by Samuel Baker in the 1860s and are now part of the Murchison Falls National Park. Height: 40m (130ft).

Murcia, city in SE Spain, on the Segura river, 75km (47 miles) SW of Alicante; capital of Murcia province. Founded c.225 BC by Carthaginians, it suffered great damage during the SPANISH CIVIL WAR. It has a 14th-century cathedral, an 18th-century episcopal palace and a university (1915). Industries: vegetable canning, textiles, saltpetre, aluminium. Pop. (1970) 243,759.

Murder, unlawful killing of a person, performed with malice aforethought. Committed under sufficient provocation or in self-defence, a killing may not constitute murder; neither is it if the victim of an assault dies after a year and a day have passed. In 1965 the maximum penalty for murder in English law was changed from hanging to life imprisonment. See also MANSLAUGHTER.

Edvard Munch's *The Sick Child*. Most of his portraits are of women and girls.

Munich Agreement: Chamberlain on his return with the paper signed by Hitler.

Muntjac: the male emits frequent barks to warn other animals of danger.

Murcia is the name of a city and province in SE Spain: a view across the region.

Murder in the Cathedral

Murillo's *Children with Silver Coins* (1670-80); children were often his subject.

Muscles, tissues that enable animals to move, seen here in a human being.

Muscovy ducks feed mainly on plants, but also small fish, insects and worms.

Muses: a detail from Tintoretto's picture of the daughters of Zeus, at Hampton Court.

Murder in the Cathedral (1935), verse play by T.S. ELIOT, written for the 1935 Canterbury Festival, later made into a film, and an opera (1958) by Ildebrando PIZZETTI. It deals with the assassination of St Thomas à BECKET, Archbishop of Canterbury in the reign of HENRY II.

Murdoch, Jean Iris (1919-), British novelist and philosopher, b. Dublin. Her novels, complex and puzzling, include *Under the Net* (1954), *The Sandcastle* (1975) and *The Sea, The Sea* (1978, Booker Honourable Defeat (1970), *A Word Child* (1975) and *The Sea, The Sea* (1978, Booker Prize). Apart from her novels, she has written a critique, *Sartre, Romantic Rationalist* (1953).

Murdoch, Keith Rupert (1931-), Australian newspaper publisher. He publishes papers in Australia, the USA and Britain. In 1969 News International Ltd., of which he is chairman, bought the British newspapers, *The Sun* and *The News of the World*, and in 1981 *The Times* and *Sunday Times*.

Murdock, William (1754-1839), Scottish engineer and pioneer of the gas industry. After hearing of the work of Philippe Lebon with wood gas, he began experiments utilizing coal gas, generated in a retort, which proved superior. Murdock devised purifying and washing techniques for coal gas and the first gas-lights were established - in Soho, London - in 1802.

Murillo, Bartolomé Estebán (1617-82), Spanish painter. He was born and lived in Seville, where his series of 11 pictures showing the lives of the Franciscan saints brought him immediate fame. His early works show the influence of ZURBARÁN in the dramatic use of light and shadow. See also p.1532.

Murless, Charles Francis Noel (1910-), British horse-racing trainer who saddled more than 1,400 winners and was leading trainer nine times in a long career (1935-76). He trained a record 19 Classics winners: six 1,000 Guineas, two 2,000 Guineas, three Derbys, five Oaks, and three St Legers.

Murmansk, city in NW Russian Republic (Rossijskaya SSR), USSR, 1,006km (625 miles) N of Leningrad. Capital of Murmansk oblast, it is an ice-free port on the Kola Gulf of the Barents Sea, the largest city N of the Arctic Circle. Developed in 1916 as a supply port, it was occupied by us, British and French forces in 1918. During WWII it was a major port for Anglo-American convoys. There is a polar research station in the city. Exports: fish, lumber, apatite. Industries: fishing, shipbuilding, fish-canning, metal- and wood-working. Pop. (1975) 358,000.

Murngin, area in NE Arnhemland, Northern Territory, Australia after which a group of ABORIGINES is named. Tribal boundaries are usually clearly defined but occasionally there are indeterminate areas that are of no value to either tribe; the Murngin is such an area. The tribe has extremely large kinship groups, to the extent that even distant relatives are regarded as brothers.

Murphy, Alexander John ("Alex") (1939-), British rugby-league player and coach. A tough, dynamic halfback, he won 27 caps (1958-71) and led St Helens, Leigh and Warrington to victory in the Challenge Cup. As player-coach, he guided Warrington to four major trophy wins in the season 1973-74.

Murphy, William Parry (1892-), US physician. He made detailed studies of DIABETES and the liver treatment for pernicious ANAEMIA. For his work on anaemia he shared, with George WHIPPLE and George Richard MINOT, the 1934 Nobel Prize in physiology and medicine.

Murray, Lord George (1694-1760), Scottish Jacobite soldier. Prominent in both JACOBITE REBELLIONS (1715 and 1745), he was the architect of the victory at PRESTONPANS in 1745. He opposed the strategy that led to the defeat at CULLODEN, and afterwards fled to Holland.

Murray, Sir Gilbert (1866-1957), British Classical scholar well known for his translations of Greek drama. The author of several books on politics, he was active in the cause of world peace. He was chair-

man of the executive council of the LEAGUE OF NATIONS union from 1923 to 1938 and president of the general council of the UNITED NATIONS from 1947 to 1949.

Murray, Sir James Augustus Henry (1837-1915), Scottish philologist and lexicographer. His reputation was secured with the publication of his *Dialect of the Southern Counties of Scotland* (1873) and an article in the *Encyclopaedia Britannica* on the English Language. Planning and editing the Philological Society's *New English Dictionary* (later known as *The Oxford English Dictionary*) occupied him from 1879 to his death. Murray edited about half the work, which was completed in 1928.

Murray, James Stewart, 1st Earl of. See MORAY, JAMES STEWART, 1ST EARL OF

Murray, John (1741-1815), English-American religious leader, founder of the UNIVERSALIST denomination. A convert from METHODISM, he was excommunicated and emigrated to America in 1770 where at Gloucester, Mass., he established the first American Universalist church.

Murray, Sir John (1841-1914), British oceanographer and marine biologist, noted for his studies of ocean basins, marine deposition and the formation of coral reefs. He was a naturalist on the *Challenger Expedition* (1872-76).

Murray, Leslie (1938-), leading Australian poet, who has had a significant influence on the growth of modern Australian literary nationalism. His selected poems, *The Vernacular Republic*, were published in 1976.

Murray, river in Australia that rises in the Australian Alps of SE New South Wales, and flows W, forming the border between New South Wales and Victoria. It then flows S across South Australia, through Lake Alexandrina to empty into the Indian Ocean at Encounter Bay. It is navigable for small vessels only in its lower course, and is used for widespread irrigation. With its chief tributary, the Darling, it forms Australia's major river system. Length: 2,590km (1,609 miles).

Murrayfield, rugby union stadium in Edinburgh. The largest rugby union ground in Britain, with a capacity of 78,500, it has been the venue for Scotland's home international matches since 1925. Under-turf heating keeps the pitch in play during adverse weather.

Murre. See GUILLEMOT.

Murrumbidgee, river in SE Australia that rises in the Great Dividing Range and flows W to join the MURRAY RIVER. It is part of the Snowy Mts hydroelectric scheme and the Burrinjuck Dam stores water for irrigation. Length: 1,579km (981 miles).

Murry, John Middleton (1889-1957), British critic and editor. He edited the *Athenaeum* from 1919 to 1921 and founded his own review, the *Adelphi*, in 1923. His literary studies include *Keats and Shakespeare* (1925), *William Blake* (1933) and *Katherine Mansfield and Other Literary Portraits* (1949). He was Katherine MANSFIELD's second husband, and a close friend of D.H. LAWRENCE.

Murry, Kathleen. See MANSFIELD, KATHERINE.

Muru, MAORI custom of taking an offender's weapons, clothing, tools or food as a punishment. It served to distribute goods in an economically poor society.

Muscat (Masqat, Maskat), port and capital of OMAN, SE Arabia, on the Gulf of Oman. The city was held by the Portuguese from 1508 to 1648, when it passed to Persia until 1741, after which it became capital of Oman. Exports: fish and dates. Pop. (1980 est.) 25,000.

Muscat and Oman. See OMAN.

Muscle, type of body tissue that has the ability to contract. There are three basic types: skeletal muscle, smooth muscle and cardiac muscle. Skeletal muscle, or striated muscle, makes up the largest single tissue part of the human body, comprising about 40% of body weight. It is attached to the bones of the skeleton and is characterized by cross-markings, known as striations; it typically contains many nuclei per cell. Most skeletal muscles require conscious effort for contraction

(when they move the limbs and body), and are therefore also known as voluntary muscles.

Smooth muscle lines the digestive tract, blood vessels and many other organs. It is not striated and typically has only one nucleus per cell; nor is it under conscious control, and is therefore also known as involuntary muscle.

Cardiac muscle is found only in the heart and differs from the other types of muscle in that it beats rhythmically and does not need stimulation by a nerve impulse to contract. Cardiac muscle has some striations (but not as many as in skeletal muscle) and has only one nucleus per cell. See also p.148.

Muscle tone, continuous state of partial contraction of certain body MUSCLES which helps to maintain erect posture.

Muscone, active component of MUSK, derived from the musk glands of the male MUSK DEER and used as a base for expensive perfumes. It is a ringed compound with a molecular formula of C₁₅H₃₀O. See also CIVETONE; p.586.

Muscovite, sheet silicate mineral, hydrous potassium aluminium silicate, KAl₂(Si₃Al)O₁₀(OH)₂, and the most common mica. Found in many kinds of rocks, it crystallizes in hexagonal, tabular forms in the monoclinic system. Its name derives from its use as a glass in muscovy, Russia. It is clear or tinted with varied lustres. Hardness 2-2.5; s.g. 2.9.

Muscovy (Moscow), Grand Duchy of, state that existed in W central Russia, centred on Moscow, from the late 14th to mid-16th centuries. Its slow rise to prominence over adjacent principalities and the Tartars was partially due to the decline in importance of Kiev, the patronage of the rulers of the powerful Vladimir-Suzdal principality and its own strategic location on the Moskva River. It was also a prestigious religious centre and became the seat of the Russian Orthodox Church.

Muscovy Company (founded by royal charter in 1555), company of English merchants involved in trade with Russia. Based in London and working chiefly through the port of ARCHANGEL, it held a monopoly of Anglo-Russian trade until 1698. See also pp.1412, 1412.

Muscovy duck, tropical American perching duck with greenish black plumage and heavy red wattles. It has been domesticated worldwide and is bred for its succulent flesh. Species *Cairina moschata*.

Muscular dystrophy, any of a group of disorders in which the characteristic feature is progressive painless degeneration and ATROPHY of the muscles with no involvement of the nervous system. Of the three main types, the most common is pseudohypertrophic muscular dystrophy, in which the symptoms of muscular degeneration begin in childhood and consist of increasing weakness, a peculiar swaying gait and an initial apparent increase in muscle size (pseudohypertrophy), with subsequent atrophy. Those affected rarely reach maturity, since the heart and respiratory muscles become involved. This form of muscular dystrophy is sex-linked and primarily affects males. See also p.1071.

Muses, in Classical mythology, nine daughters of the Titan Mnemosyne (memory) and ZEUS. Each muse presided over a branch of literature, art or science. Calliope was the muse of epic poetry, Clio of history, Erato of love poetry, Euterpe of lyric poetry, Polyhymnia of song, Melpomene of tragedy, Terpsichore of choral dance, Thalia of comedy and Urania of astronomy.

Musgrave, Thea (1928-), British composer, b. Scotland. She studied under Nadia BOULANGER and taught at London University (1958-65). Her works include a clarinet concerto (1968) and the operas *The Voice of Ariadne* (1973) and *Mary, Queen of Scots* (1977). See also p.1768.

Mushroom, any of numerous relatively large fleshy fungi, many of which are gathered for food. The term is applied especially to stalked fungi with umbrella-shaped caps, such as the common edible field mushroom (*Agaricus campestris*). Inedible mushrooms are

generally called toadstools. Other fungi commonly called mushrooms include bracket fungi, puff-balls and MORELS. A typical mushroom fungus consists of two parts: an extensive underground cobwebby network of fine filaments – the MYCELIUM – which is the main body of the fungus, and a short-lived fruiting body – the familiar visible mushroom – which may spring up overnight. Since many mushrooms are poisonous, wild mushrooms should be eaten only after they have been unmistakably identified as edible species. Many rough-and-ready tests of edibility, such as indications that a mushroom may be eaten safely by insects, result every year in deaths or severe illness among mushroom gatherers. See also FUNGUS; pp.350,352-355.

Music, sound arranged for instruments or voices, in many ways and for many purposes, exhibiting a great variety of forms and styles both from place to place and from age to age. This article treats only of the chief developments in the history of Western music. The roots of Western music lie in the Christian church; medieval church music was based on traditions which came down from the Greeks and the Jews. The Greeks, possessors of a sophisticated mathematics, used scale systems based on the invention of Pythagoras and other thinkers of his time; they named the notes by the letters of the alphabet. The Jews, in their synagogues, developed the art of chanting. In the 4th century St Ambrose systematized the expanding volume of liturgical chants and formulated four MODES which was an early basis of musical organization. By the 11th century the stave (then of four lines only) had been invented. PLAINSONG (plainchant) music consisted of one vocal line, always set to words from the liturgy. But already in the 10th century there had appeared the anonymous text, *Musica Enchiridion*, in which was introduced the idea of two parallel voices, moving together at an interval of a fourth or fifth apart. In the early 13th century, Pérotin of France began to write music for three or four voices. With the addition of a religious text to the setting, such works became the first MOTETS.

Early part compositions were based on COUNTERPOINT, the horizontal (linear) aspects of the various parts in combination. The RENAISSANCE was the first great age of Western music, sacred and secular, in which inventiveness was at a peak and the standard musical forms refined. Distinguished composers of the period included GABRIELI, JOSQUIN DES PRÉS, MONTEVERDI and BYRD. Polyphonic writing was a blend of new harmonic thinking and the melodic progression of counterpoint. It reached its highest expression in the age of the BAROQUE which began in Italy, and culminated in Germany with the genius of BACH. Since the time of Bach, Austro-Germany has been the cradle of Western music. The development of harmony, in the classical period of music was the work of HAYDN and MOZART. The late works of

BEETHOVEN ushered in the next stylistic period in music, known as ROMANTIC. Famous 19th-century composers included SCHUBERT, MENDELSSOHN, BRAHMS, and WAGNER. By the 20th century the formal principles of composition had broadened and became more flexible. IMPRESSIONISM in music at the turn of the century marked a turn towards freer experimentation. Schoenberg invented a 12-note system which was a radical break from tonal composition and many composers have since written atonal music. Alongside them, however, composers like BRITTEN, SHOSTAKOVICH and Richard STRAUSS continued to compose within established tonal traditions of the preceding centuries. ELECTRONIC MUSIC is a product of this century and its major exponents include STOCKHAUSEN and XENAKIS.

Music, electronic. See ELECTRONIC MUSIC. **Musical**, genre of popular dramatic light entertainment exemplified by firm plot, strong songs and vivacious dance numbers developed, at the end of the 19th century, from the best elements of light opera, revue and BURLESQUE. The earliest exam-

ple of the form is generally reckoned to be *In Town* (1892), produced in London by George Edwardes, but the most popular musicals after that have originated in the USA with the work of such composers as George GERSHWIN, Jerome KERN, RODGERS and HAMMERSTEIN, Jules Styne and Stephen Sondheim. In Britain in the 1960s, Lionel Bart had considerable successes with *Oliver!* (1960) and *Blitz* (1952). Audiences in the 1970s responded strongly to the work of Tim Rice and Andrew Lloyd Webber's *Jesus Christ Superstar* (1971) which was followed by *Evita* (1978). Successful film musicals such as *West Side Story* (1961), *My Fair Lady* (1964) and *The Sound of Music* (1965) are generally based on stage originals, but original film musicals such as Busby BERKELEY's *Forty-Second Street* (1933), Vincente MINNELLI's *Meet Me in St Louis* (1944), and Stanley Donen's *On the Town* (1949) and *Singin' in the Rain* (1952) exemplified an integrated approach in which neither the cinematic nor the musical aspects were subordinate.

Musical form, the structural scheme which gives shape and artistic unity to a composition. The standard forms are binary, ternary, rondo and sonata. Each consists of a number of musical sections or subsections. Binary form consists of two sections which may be contrasted in idea, key or tempo but which complement each other within the musical entity. Ternary form consists of a re-statement of the first section after a middle section of contrasted material; an example is the minuet and trio. In rondo form the number of sections varies, but there is at least one re-statement of the first section. Sonata form, as its name suggests, evolved with the SONATA and is used most often for the first movement of a sonata or symphony. The exposition states two subjects which are developed musically in the development, or middle section, before re-stating the subjects of the exposition in the recapitulation. Various types of musical works, eg OPERA, SYMPHONY, SUITE, PRELUDE and FUGUE, and SYMPHONIC POEM, may also be termed forms of music in the broadest sense.

Musical instruments, variety of instruments for producing sound. They may be classified under five headings: stringed, wind, brass, percussion and keyboard. Stringed instruments may be plucked (harp, lute, guitar), sounded by friction with a bow (violin family) or struck (dulcimer). Wind instruments are flue-voiced (recorder, flute) or reed-voiced (single-reeded clarinet, double-reeded oboe and bassoon). Brass instruments are voiced by the vibration of the lips on a metal mouthpiece (horn, trumpet, trombone, tuba). Percussion instruments are struck, either on a stretched membrane (drums), metal (triangle, cymbals) or wood (xylophone). Keyboard instruments combine features of all the others: the piano's strings are struck by hammers; the harpsichord's are plucked; the organ has both flue and reed pipes. There are also various keyboard instruments in ELECTRONIC MUSIC. See also articles on individual instruments; BAND; ORCHESTRA; pp.1580-1581.

Musical notation, method of writing-down music – the "language" of music. As with any language which must necessarily be understood internationally, a standard form of musical notation is essential. Staff notation, eg using crotchets and quavers to represent notes, defines the absolute and relative pitches of notes and their time values. In the 11th century Guido d'Arezzo (d.1050) developed a system which fixed relative pitch by systematically positioning notes on a number of stave lines. Absolute pitch was defined by a coloured line ruled over certain notes (any C was yellow, any F was red). From this system modern clefs have evolved.

Music hall, stage for variety shows, originally tavern annexes, devoted to comic song, acrobatics, magic shows, juggling and dancing. Music halls in London included the Alhambra, The Empire and the London Pavilion. The popularity of the music hall was at its greatest in late Victorian and Edwardian England, but

went into decline with the advent of radio and motion pictures in the 1930s. It continued longer in the USA, where it was often known as vaudeville.

Musick, Master of the Queen's (King's), court position in Britain. Its origins lie in the 15th century, but the official title dates from 1626. The Master was then in charge of the court orchestra. In the 18th century the composition of court odes became an established part of his duties. The post is now virtually honorary, although ceremonial music for state occasions is occasionally composed. Malcolm WILLIAMSON succeeded Sir Arthur BLISS as Master in 1975. The most outstanding holder of the office this century was Sir Edward ELGAR.

Musicology, academic study of music in most of its aspects such as acoustics, form, rhythm, harmony, melody and mode but usually excluding performances or composition. Its major achievements have perhaps been made in historical research where 19th-century scholars first examined the development of Western music and 20th-century musicologists such as David MUNROW not only rescued the reputations of little-known composers through their researches but also generated wider interest in early music. Musical composition is usually treated as a separate discipline; ethnomusicology – the study of non-Western music – is essentially a branch of ANTHROPOLOGY.

Musique concrète, phrase used by the Frenchmen Pierre Schaeffer and Pierre Henry in 1948 to describe music made from real sounds occurring in the environment. They were recorded on tape as collages of sound and then manipulated by being played faster or slower, backwards or in fragments. A studio for such music was established by Radiodiffusion Française in 1950. A successful early composition was Henry's *The Veil of Orpheus* (1953). Later composers of *musique concrète* have included Iannis XENAKIS.

Musk, strong-smelling, semi-liquid substance obtained from a gland under the belly skin of the male MUSK DEER. It is used in the perfume industry because of its long-lasting and fixative qualities. The name is also given to any penetrating, odoriferous substance secreted by many animals, such as civets, muskrats and musk turtles. See also p.586.

Musk deer, small, timid forest and brushland DEER of central and NE Asian highlands. Both sexes have long, thick, bristly brown hair. The male has tusks instead of antlers and secretes MUSK, used in perfumes and soap. Height: to 61cm (24in) at the shoulder; weight: to 11kg (24lb). Family Cervidae; species *Moschus moschiferus*. See also p.586.

Musket, smoothbore firearm, fired from the shoulder. The first muskets were handled by two soldiers and fired from a portable rest. Quite inaccurate, they fired lead balls weighing approx. 60gm (2oz) and were about 1.7m (5.5ft) long. They evolved in the early 16th century in Spain from the earlier arquebus (or harquebus) and had an effective range of about 160m (525ft). Later versions were lighter and more accurate. Early muskets were detonated by a glowing fuse (MATCHLOCK) but later versions used the striking of a flint (FLINTLOCK). In the 19th century muskets were replaced by RIFLES, which had spiral grooves inside the barrels, and were capable of far greater accuracy. See also pp.556-557.

Musk ox, large, wild, shaggy RUMINANT, related to oxen and GOATS, native to N Canada and Greenland. In Europe and Siberia it was exterminated in prehistoric times. Its brown fur reaches almost to the ground, and its down-pointing, recurved horns form a helmet over the forehead. When threatened, the herd forms a defensive circle round the calves. Length: to 2.3m (7.5ft); weight: to 410kg (903lb). Family Bovidae; species *Ovibos moschatus*. See also ox; p.324.

Muskrat, large, aquatic RODENT (a type of VOLE) native to North America. The name comes from the MUSK secreted from two glands at the base of the tail. It is a good swimmer, with partly webbed hind feet and a long, scaly tail. Its commercially

Music hall entertainment included comedy, song and dance, and trained animals.

Musk deer: by day this shy creature hides in thickets, emerging at twilight to feed.

Musket of the 17th century. Although at first inaccurate, it revolutionized warfare.

Muskrats have a hairless, flattened tail that acts as a rudder in water.

Muslim

Mussel: its eggs are minute but each female in her life can produce up to 25 million.

Mutiny on the Bounty: the 1935 film starred Clark Gable and Charles Laughton.

Mycenae's hilltop location made it of great strategic importance in the E Peloponnese.

My Fair Lady: Rex Harrison and Julie Andrews in the Broadway production.

valuable fur (musquash) is glossy brown and durable. Muskrats inhabit tunnels or nests by a lake or stream. Length, including tail: to 53.5cm (21in); weight: to 1.8kg (4lb). Family Crisidae; species *Ondatra zibethica*. See also pp.92.

Muslim, one who is a believer in ISLAM and holds MOHAMMED to be the only true prophet. The Arabic word Muslim means "one who submits". There are thought to be 500 million Muslims in the world, mostly in Asia and Africa. See also pp.1278-1279.

Muslim League, political organization of the Indian subcontinent, founded in 1906 by Aga Khan III to protect and promote the political rights of Muslims in India. At first it co-operated with the Indian National Congress but, fearing Hindu domination, it turned to independent action. Under the leadership of Muhammad Ali JINNAH it called (1940) for the establishment of a separate Muslim state. During WWII the League, in contrast with the Congress Party, supported the British war effort. It became the dominant voice of independent Pakistan (1947), but by 1953 it had to contend with several competing parties. During the martial law imposed by Ayub KHAN (1958-63) it was officially banned. In 1962 it split into three factions: the Convention Muslim League, the Council Muslim League and the Payyum Muslim League. With Ayub's resignation (1969), the Convention faction ceased to exist. The Council faction fared poorly in 1970 elections and ceased to be a major political force in Pakistan. **Muslin**, any of several strong, light cotton cloths, woven simply and often sheer; muslin is named after Mosul, a city in Iraq, once known for the manufacture of costly muslin.

Musquash. See MUSKRAT. **Mussadeq, or Mossadeq, Muhammad** (1880-1967), Iranian statesman. He served in various public offices but retired when REZA SHAH rose to dictatorial power in 1925. Mussadeq resumed government service in 1944 and led the movement to nationalize Iranian oil interests. His movement was successful and he became Prime Minister in 1951. Political and economic crises caused his downfall in 1953. He was imprisoned (1953-56) and then placed under house arrest for the remainder of his life.

Mussel, any of several species of bivalve MOLLUSCS with thin ovoid shells. Marine species of the family Mytilidae are found throughout the world in dense colonies on sea walls and rocky shores, where they attach themselves by means of strands called byssus threads. The edible mussel, *Mytilus edulis*, is sometimes cultivated on ropes hanging from rafts. Freshwater mussels of the family Unionidae, found in northern continents only, produce PEARLS. See also pp.22-23, 328-329, 740-741, 746-747.

Musset, Alfred de (1810-57), French writer best remembered for his poems which, after 1834, appeared in the periodical *Revue des Deux Mondes* and reflect the disillusion felt by him and his contemporaries. They were also influenced by his love for the novelist George SAND. He wrote several successful stories and plays, as well as the four famous lyrics *Les Nuits* (1835-37).

Mussolini, Benito (1883-1945), Italian dictator, called Il Duce, founder of Europe's first FASCIST party. An active socialist in his youth he abandoned socialism shortly after WWI and embraced ultra-nationalism, organizing the Fascist Party between 1919 and 1921. His Fascist militia's march on Rome in 1922 ensured his appointment as Prime Minister. Parliamentary government was suspended in 1928 and possible conflict between the Roman Catholic Church and the state was avoided by the LATERAN TREATY (1929). The 1930s saw Mussolini's attack on Ethiopia (1935) and even closer ties with HITLER's Germany (the Rome-Berlin Axis). When France was on the verge of collapse (1940) during WWII, Mussolini entered the war as Germany's ally. Military failure caused his fall from power in

1943, but after his arrest he was freed by the Germans and set up in a puppet government in N Italy. With the German defeat (1945) he was captured and executed by Italian partisans. See also pp.1700, 1704, 1704-1705, 1708, 1709.

Mussorgsky, Modest Petrovich (1839-81), Russian composer, one of the "Mighty Five" who promoted nationalism in Russian music. His musical training was sketchy and he composed relatively few works. His finest is the opera *Boris Godunov* (1868-69). Other important works include the piano work *Pictures from an Exhibition* (1874) (later orchestrated by RAVEL) and *A Night on the Bare Mountain* (1867). He was more interested in expression and communication than form, and after his death much of his work was edited and revised, mostly by RIMSKY-KORSAKOV. See also pp.1582-1583, 1598.

Mustafa Kemal. See ATATÜRK KEMAL. **Mustang**, feral horse of the Great Plains of the USA, descended from horses that were brought from Spain. The mustang has short ears, a low-set tail, round leg bones, and can be any horse colour. During the 17th century there were 2-4 million mustangs, whereas today only about 20,000 survive in SW USA.

Mustard, any of various species of annual and perennial cruciferous plants (the group that also includes radish, cabbage, turnip, alyssum and stock), native to the temperate zone. These plants have pungent-flavoured leaves, cross-shaped, four-petalled flowers and carry pods. They include black mustard (*Brassica nigra*) whose seeds are ground to produce the condiment mustard, and white mustard (*Sinapis alba*) with seeds that produce a hotter mustard. Height: 1.8-4m (6-13ft). Family Cruciferae.

Mustard gas, poisonous gas first used in 1917 during WWI by the Germans. It is a blistering agent - one of the thioethers, a compound of carbon, hydrogen, sulphur and chlorine. By 1918 the Allies were also using this gas. It inflicted many casualties (causing blindness) but relatively few fatalities; its military use was eventually banned. See also p.575.

Mutation, sudden variation in an inherited characteristic of an individual organism that makes it different from the parent organisms. This change occurs in the DNA of the GENES, and can be passed on to the mutant's offspring. Natural mutations are rare, occur randomly, and usually produce an organism unable to survive in its environment. Occasionally the mutant is better adapted and, through natural selection, may become the next evolutionary generation. The mutation rate can be increased by exposing genetic material to X-rays, other ionizing radiation, or mutagenic chemical substance, such as MUSTARD GAS. Natural mutation is one of the means by which organisms evolve. See also NATURAL SELECTION: p.188.

Mute, person unable to speak. Mutism is a possible consequence of brain injury in which the speech areas are damaged. Most commonly in the past, however, it was a consequence of deafness at birth, particularly that caused by GERMAN MEASLES (rubella). The inability to hear brings with it a correspondingly great difficulty in learning to speak.

Mutiny on the Bounty, mutiny in the South Seas in 1789, led by Fletcher Christian, in which Captain William BLIGH of HMS *Bounty* and most of his ship's crew were cast adrift in an open boat. Bligh survived and three of the leaders were eventually taken back to England from PITCAIRN Island to face trial in 1808.

Mutis, José Celestino Bruno (1732-1808), Spanish naturalist and botanical explorer, who settled in Bogotá, South America in 1761. He cultivated plants for agricultural and medicinal purposes and made a collection of more than 24,000 plants. He wrote numerous botanical papers and was instrumental in founding the first conservatory in South America at Bogotá.

Mutoscope, early form of cinematograph, a peepshow devised by W. K. L. Dickson in 1895 to show "flick" books of photo-

graphs. Dickson made a camera to take the picture and had them printed on to cardboard. The Mutoscope did not need the artificial illumination upon which THOMAS EDISON's kinetoscope relied.

Mutton, flesh of sheep slaughtered at about one year old. It is stronger-flavoured, coarser textured and less popular than lamb, the meat of sheep less than one year old. See also pp.730-731.

Muybridge, Eadweard (1830-1904), US photographer, b. Britain, who emigrated to the USA (1852), where he became a pioneer of motion photography. He invented the Zoopraxiscope (1881) which projected animated pictures on a screen, a forerunner of the motion picture. In his major work, primarily after 1878, he recorded with a series of sequential still cameras, the movements of animals and humans. His *Animals Locomotion* (1887) consisting of 11 volumes containing some 800 plates of men, women, children and animals in action, has been of immense importance to artists. See also p.632.

MVD. See KGB.

Myasthenia gravis, disorder found mainly in young people that causes weakness of the muscles. Generally affecting the facial muscles first, it may spread to include those of the neck, trunk and limbs. Its cause is unknown, but symptoms may be repressed by drug treatment.

Mycelium, vegetative body of a FUNGUS, found underground. It is made up of a web of filaments (hyphae), sometimes massed like felt. See also pp.354, 355.

Mycenae, ancient city in NE Peloponnese, Greece, now ruined, approx. 11km (6 miles) N of modern Argos. Dating from the third millennium BC, Mycenae became the centre of the Mycenaean civilization (c.1580-1120 BC). The Mycenaeans entered Greece from the N, bringing with them advanced techniques, particularly in architecture and metallurgy. The city controlled the route from the Peloponnese to Corinth, being strategically placed to command the Argive Plain. The Mycenaeans traded with Crete, which also helped develop their culture, and by 1600 BC they dominated the Aegean. After 1200 BC the city began to decline with the invasions of the Dorians. It was destroyed in the 5th century BC but repaired by the Argives in the 3rd. By the 2nd century AD it was in ruins. Archaeological excavations by Heinrich Schliemann, begun in 1876, uncovered such notable remains as the Treasury of Atreus (also known as the tomb of Agamemnon), the Lion Gate which led into the city, beehive tombs, the city walls and many golden ornaments and weapons. See also pp.1171-1173, 1172-1173.

Mycology, science and study of FUNGUS. See pp.350-355.

Mycoplasma, any of about 15 species of the smallest known form of cellular life; they are usually considered to be bacteria. Most are parasites on birds and mammals, some live in stagnant water, and some play a part in such diseases as pleuropneumonia in cattle.

Mycorrhiza, or fungus root, association between certain fungi and the root cells of some vascular plants. The fungus may penetrate the root cells or form a mesh around them. Water and minerals enter the roots via these threads. Sometimes the fungus digests organic material for the plant.

Myelin, protective sheath around peripheral and some central nerve fibres which insulates the fibre to prevent loss of electrical impulse and allow rapid conduction. The disorder MULTIPLE SCLEROSIS attacks the myelin. See also p.1073.

Myer Emporium, chain of department stores and supermarkets in Australia. The largest retailer in the country, the company had a turnover of about a \$1,000 million and employed almost 30,000 people in the mid-1970s.

My Fair Lady, musical play with libretto by Alan Jay Lerner and music by Frederick Loewe, originally produced on Broadway in 1956 when it ran for 2,717 performances. It was equally successful when produced at Drury Lane, London.

Based on George Bernard Shaw's *Pygmalion*, it is the story of an English professor's successful efforts to educate a street waif into gentility and how he builds a relationship with her in the process. One of the most successful musicals ever produced, it was made into a film in 1964 starring Audrey Hepburn and Rex Harrison. **Mykonos** (Mikonos), mountainous island in SE Greece, in the Aegean Sea. One of the Cyclades (Kiklades) islands, it has an important tourist trade and fisheries. Area: 83sq km (32sq miles). Pop. (1971) 3,234.

Mylonite, any of several laminated fine-grained rocks formed when layers of parent rock fault, granulate or flow. It is chemically stable but partially melted and reduced to a powder by the movement of rock along a fault line and generally contains fragments of the parent rock. See also p.211.

Mynah, any of several species of tropical birds of SE Asia, S Africa, Australasia and the Pacific Islands; it is related to the STARLING. A natural mimic, especially the species *Gracula religiosa*, it imitates other birds in the wild and makes a popular pet. It feeds mainly on fruit. Length: to 33 cm (13in). Family Sturnidae.

Myocarditis, inflammation of the muscular tissue of the HEART, commonly caused by a VIRUS. Symptoms are pain, fever and a rapid pulse. Treatment depends on the underlying cause.

Myoglobin, protein found in animals. In vertebrates it is the pigment producing the red colour of muscle tissue. Like HAEMOGLOBIN, myoglobin combines readily with oxygen for use in rapidly contracting muscles. It has been used extensively in research into the structure of PROTEINS. In 1962 John C. KENDREW shared the Nobel Prize in chemistry for his construction of a three-dimensional crystalline model of sperm whale myoglobin. See also p.910.

Myopia, near-sightedness, a common disorder of vision in which near objects are seen sharply (in focus) but distant objects are hazy (out of focus). It is caused by the eyeball being either too long or the eye's lens bulging too much, so that light rays entering the eye are brought to a focus in front of the RETINA. It is easily corrected with concave lenses in spectacles or contact lenses. See also p.137.

Myosin, thick filamentous PROTEIN present in MUSCLE cells, associated with ACTIN in the contractile process. See also pp.125, 149, 910.

Myrdal, Karl Gunnar (1898–), Swedish economist. A professor of political and international economy at the University of Stockholm (1935–50; 1960–), he also served as executive secretary of the UN Economic Commission for Europe (1947–57). He is well known for *Political Element in the Development of Economic Theory* (1930) and for his massive study of US race relations, *An American Dilemma* (1944). He shared the 1974 Nobel Prize in economics with Friedrich von HAYEK.

Myriapoda, class of ARTHROPODS with bodies made up of many similar segments. Each segment has one or more pairs of legs. See also CENTIPEDE; MILLIPEDE.

Myron (fl.c.480–c.440 BC), Greek sculptor who worked mainly in bronze. He was noted for his animals, none of which have survived, and his athletes in action. Most of his work has been lost but is known through descriptions by ancient writers and two of them by copies, the *Discobolus* and *Athena and Marsyas*.

Myrrh, aromatic, resinous, oily gum obtained from thorny, flowering trees such as *Commiphora myrrha*. Known and prized since ancient times, it has commonly been used as an ingredient in incenses, perfumes and medicines. The gum is exuded from ducts when the bark splits or is cut for tapping.

Myrtle, any of numerous species of evergreen shrubs and trees that grow in tropical and subtropical regions; especially the aromatic shrub, *Myrtus communis*, of the Mediterranean region. Its leaves are simple and glossy; the purple-black berries which follow the white flowers were once dried and used like pepper.

Mysore, city in S India, 137km (85 miles) SW of Bangalore, in Karnataka (formerly Mysore) state. The city served as the capital of the Mysore kingdom from 1799 until 1956. It is the seat of Mysore University (1916), and has several palaces. Industries: textiles, chemicals, leather goods, cigarettes, sandalwood oil. Area: (state) 191,756sq km (74,037sq miles). Pop. (1976 est.) (state) 32,400,000 (city) 355,685.

Mystery plays, medieval English dramas based on religious themes. The plays were originally used by the clergy to teach their illiterate congregation the principal stories of the Bible. By the 14th century, however, the plays, although still based on religious topics, had become a form of popular entertainment. Each year, usually in England at the feast of Corpus Christi, when the days were long and there was a chance of good weather, the plays were performed by the various craft guilds in a town. Each guild chose an appropriate biblical episode, eg the carpenters Noah's Ark, the fishmongers Jonah and the Whale and the goldsmiths the Three Wise Men, performing the play on a large open float. The plays were rarely written down, and so varied from place to place and year to year, particularly as the actors used them to make topical jokes and poke fun at unpopular members of the community. In England the mystery plays from four places have survived: CHESTER, YORK, WAKEFIELD and Coventry.

Mysticism, personal religious experience seeking unity of self with God or the Transcendent. It is found in most major religions, and may involve the experience of trances or visions. Christian mystics have included the author of John's Gospel, the author of REVELATION, St PAUL, the author of *The Cloud of Unknowing*, Dame JULIAN OF NORWICH, St TERESA of Avila and St FRANCIS of ASSISI. Indian mysticism is based on YOGA, while mysticism in Judaism is apparent in HASIDISM. Mystics in the Far East have mostly been followers of TAOISM or BUDDHISM.

Mytens, Daniel (c.1590–c.1648), Dutch portrait painter born and trained in The Hague. By 1618 he was working in England, and he entered royal service in 1624. As painter to Charles I from 1625 he gained prestige for his portraits which included several of Charles and his queen, Henrietta Maria, and his masterpieces *The Duke of Hamilton* and *The Third Marquess of Hamilton* (both 1629). In about 1635 he returned to Holland.

Mythology, literally, telling of stories, but usually collectively defined as the myths of a particular culture. A myth occurs in a timeless past, contains supernatural elements and seeks to dramatize or explain such themes as the creation of the world and man, the institutions of political power, the cycle of seasons, birth, death and fate. Bronislaw MALINOWSKI held that all myths are validations of the patterns of behaviour and institutions established within a particular society, and so no culture is free from myths. Sir James FRAZER's *The Golden Bough* (first published in 1890) held that all myths are connected with fertility in nature, and showed that birth, death and resurrection are constantly recurring themes. Carl JUNG believed that mankind shares a collective unconscious, which is manifest in certain constant images which he called the archetypes. Robert GRAVES' book *The White Goddess* (1948) sought to base all Greek and Celtic myths on the early supplanting of matriarchal, agricultural cultures by warlike patriarchal peoples. Most mythologies have an established pantheon, or hierarchy, of gods who were more or less anthropomorphic. When one culture has predominated over another it has often taken elements from the defeated culture's mythology. For example, the Romans adopted many aspects of Greek and Etruscan mythology, and later absorbed elements of MITHRAISM, which in turn is believed to have originated in Iran. See also pp.1900–1909.

Myxoedema, disease caused by insufficiency of THYROID hormone resulting in fatigue, a tendency towards weight gain

and, in later stages, delusions. Treatment involves the administration of thyroid extracts. It is known as CRETINISM in children.

Myxomatosis, virus disease of rabbits, sometimes spread deliberately by farmers to exterminate them, notably in Australia where early campaigns killed many millions of animals. The disease is generally fatal, although there is evidence that some rabbit populations are becoming resistant. Among rabbit populations the disease is spread by physical contact and by insect vectors such as mosquitoes.

N

N, the 14th letter of the alphabet, derived from the Semitic letter *nun*, which represented a fish. It was adopted by the Greeks as the letter *nu*. In English the letter is always pronounced in the same way, except in a very few words (such as *condemn* and *hymn*) in which it is silent. See also pp.608–609.

Naafi, acronym for Navy, Army and Air Force Institutes, a non-profit-making organization that provides canteens and other facilities for British forces both at home and overseas. Its headquarters is at Claygate, Surrey.

Naber, John (1956–), US swimmer who at the 1976 Olympic Games won four gold medals (100m and 200m backstroke, the 4×200m freestyle relay and the 4×100m medley relay) and one silver medal (200m freestyle). His four golds were won in world-record times, and he became the first to swim the 200m backstroke in less than 2min.

Nabis (from Hebrew 'the prophets'), group of French painters who exhibited together between c.1889 and 1899. Reacting against the principles of IMPRESSIONISM, they based their style on GAUGUIN's pure colours and flat decorative style of painting. BONNARD and VUILLARD are the best known members of the group, which was led by Paul SÉRIER and also included ROUSSEL, Vallotton and MAILLOL.

Nablus, city of the W Bank, central Palestine. Excavations have revealed remains dating from c.1900 BC. It was the capital of the Samaritans, destroyed in 129 BC by John Hyrcanus I and rebuilt by HADRIAN. Formerly in Jordan, it came under Israeli administration in 1967. Nablus is a market centre for the surrounding region. Products include cereals, olives and soap. Pop. (1971 est.) 44,200.

Nabob, corruption of the title *nawab* which was usually given to a ruling Muslim nobleman in India. During the 18th century the term nabob was applied in Britain to anyone who had amassed great wealth in India, usually while in the service of the British East India Company. By extension the word may be applied to any man of wealth or political importance.

Nabokov, Vladimir (1899–1977), Russian-US author. He was brought up in the aristocracy of St Petersburg, but left Russia in 1919 and settled in Germany. He emigrated to the USA in 1940, but left for Switzerland in 1959. As well as being a renowned lepidopterist, he wrote many novels that extended the scope of language by exploring the precise connotations of words, sometimes by means of neologisms and trilingual puns. He wrote first in Russian and later in English. His novels include *Invitation of a Beige Lady* (1933), *Bend Sinister* (1947), *Lolita* (1955) and *Invitation of a Beige Lady* (1955).

Nabonidus (d.539 BC), last king of the Chaldean or New Babylonian Empire (r.556–539 BC). He was a pious ruler, but his espousal of the god Sin met opposition from the priests of Marduk. The ACHAEMENID Persian king CYRUS THE GREAT took Babylon in 539 BC without a struggle; Nabonidus was captured and exiled.

Nabopolassar (died c.604 BC), first king of the Chaldean or New Babylonian Empire (r.625–c.604 BC). Babylonia had

been a subsidiary state of the ASSYRIAN kingdom but after the death of ASHURBANIPAL, Nabopolassar, allied with the MEDES and the PERSIANS, brought about the fall of the empire and established his independence. See also p.1189.

Naboth, in the biblical book of 1 Kings, the owner of a vineyard which was coveted by King Ahab in his nearby palace. To possess it, Ahab's queen, Jezebel, had Naboth falsely accused of blasphemy and stoned to death.

Nabu, in Babylonian mythology, the son of MARDUK. Called Nebo in the Old Testament, Nabu was the Babylonian god of wisdom, especially in writing, being the scribe and messenger to the gods, writing man's destiny on the Tablets of Fate, and also being the god of justice. It was his temple which stood beside the huge ziggurat later called the Tower of Babel.

Nabulus. See NABULUS.

Nacreous cloud, in meteorology, cloud form resembling cirrus or almond-shaped altocumulus clouds. It shows strong irised (rainbow-tinted) patches. Observations of nacreous clouds are made mainly in Scotland and Scandinavia, and photometric measurements indicate that they occur at an altitude of approx. 20–30km (12–20 miles).

Nadar (1820–1910), French pioneer photographer, caricaturist and writer, real name Gaspard-Félix Tournachon. Among his superb photographic portraits are those of BAUDELAIRE and DORÉ. The first aerial photograph was taken by him from a balloon c.1856 and his studio photographs taken after 1858 were among the first made using electric light. His Parisian studio was a fashionable literary and artistic salon, and the first Impressionist exhibition was held there in 1874.

Nader, Ralph (1934–), US lawyer concerned with the rights of the public as consumers of goods and services. His call for improved car design, *Unsafe at Any Speed* (1965), led to new US legislation on car safety in 1966. He subsequently expanded his range of activities to include hazards in food and drugs, the use of nuclear power, the non-enforcement of job safety standards, and investigations of government organizations. His publications include *You and Your Pensions* (1973) and *Taming the Giant Corporation* (1976).

Nadi, Nedo (1894–1940), Italian fencer expert with foil, sabre and épée. Having won the individual foil at the 1912 Olympic Games, he won the individual and team foil, individual and team sabre, and team épée gold medals at the 1920 Olympic Games. No other fencer has won the foil and sabre titles at one Games, and his record of five gold medals at one Olympics remained unbeaten until 1972.

Nadir, in astronomy, point on the celestial sphere that is diametrically opposite the ZENITH and thus invisible to the observer.

Naevius, Gnaeus (c.270–201 BC), Latin epic poet and dramatist. He served in and chronicled the first PUNIC WAR, translated Greek tragedies and comedies into Latin, and was one of the earliest Roman poets. He died in Utica in Tunisia.

Naevus, red, blotchy BIRTHMARK. It consists of many blood vessels tangled together near the surface of the skin. If small enough a naevus can be removed by surgery or ELECTROLYSIS.

Naga, tribe inhabiting the Naga Hills of Assam, NE India, and the upper River Chindwin region of Burma. They were once notorious head-hunters, but today they are farmers, growing mainly rice. The Indian state of Nagaland was formed in 1961.

Naga, in Hindu mythology derived from a pre-Hindu cult, a divine serpent with a human head. The term later came to mean 'cobra'. Nagas were able to kill men with their venom but BRAHMA is said to have ordered them to bite only the wicked or those ordained for a premature death. The beautiful females, Nagini, sometimes left their jewelled palaces under the sea to marry mortals.

Nagaland, state in NE India; the capital is Kohima. It is an undeveloped region, whose inhabitants, the Nagas, live in a tri-

Nagasaki

bal society and derive from the Indo-Mongoloid ethnic group. Nagaland was established as a separate state in 1961, governed by a chief minister. There is a movement for independence, however, which has led to clashes between state troops and the Naga tribesmen. Area: 16,527sq km (6,381sq miles). Pop. (1971) 516,449.

Nagasaki, seaport in w Kyūshū, Japan. In the 15th century it was the first Japanese port to receive Western ships, although from 1643 to 1854 it was closed to foreigners. It was re-opened in 1859 and again became a centre of European and Christian influence in Japan. In August 1945, during WWII the inner city was destroyed by the second US atomic bomb. Today it is one of the country's leading ports. The largest industry is shipbuilding, and others include fishing and mining. Pop. (1974) 445,655. See also p.574.

Nagoya, city port in central Honshū, Japan, at the head of Ise Bay on the Pacific Ocean. It grew around a daimyo castle built in 1610. Today Nagoya is an industrial centre with iron and steel works, textile mills, fertilizer and chemical plants and aircraft factories. Pop. (1975) 2,080,000.

Nagpur, city in Maharashtra state in w central India, 427km (265 miles) N of Hyderabad. The city was founded in the 18th century as the capital of the kingdom of Nagpur, Marhatta, and passed to the British in 1853. It became the capital of Berar state (from 1903), and Madhya Pradesh state (1947-56). Nagpur University (1923) is in the city. Industries: cigarettes, textiles, pottery, glass, leather, pharmaceuticals, brassware. Pop. (1971) 866,076.

Nagy, Imre (1896-1958), Hungarian statesman, Premier 1953-55 and 1956. Expelled from the Communist Party in 1955 for alleged anti-Soviet nationalism, he was recalled to the premiership in 1956 in the wake of the anti-Soviet uprising of late October. He promised free elections, economic reforms and the abolition of the one-party dictatorship. He demanded the withdrawal of Soviet troops and freed Cardinal Mindszenty from prison. Although the USSR promised concessions, demonstrations continued and on 4 November Soviet troops and tanks moved in to suppress the insurgents. Nagy was executed in 1958. See also p.1792.

Naha, seaport city on the w coast of Okinawa island, Japan. Naha is also an important manufacturing centre. Its products include pottery, textiles and sugar. Pop. (1974) 306,446.

Náhuatl, most important tribal group and language of central Mexico. The best-known representatives are the Aztecs. Today approx. 1 million Indians speak the language and live mainly in the Mexican states of Michoacán, Puebla and Hidalgo. Scattered groups live in Veracruz and parts of Central America.

Nahuatl, American Indian language of the Aztec-Tanoan linguistic stock of North and Central America. It is descended from the ancient Aztec and is spoken today by some 800,000 people, mostly living in Mexico.

Nahum, seventh of the 12 minor prophets in the Old Testament. Perhaps the greatest poet of ancient Judah, he predicted the violently destructive fall of the capital of the hated Assyrians, Nineveh (612 BC). His strong nationalism, his hopes for the spiritual salvation of Judah, and his ideals of justice and faith were, however, entirely centred around the events of his own lifetime.

Naiads, in Greek mythology, female figures or nymphs identified with streams, rivers and lakes. Their cult was widespread in Greece, where it was believed that mortals could gain inspiration by drinking from springs watched over by particular naiads.

Naidu, Sarojini (1879-1949), Indian poet and politician. She is best known for her books of romantic verse in English about India, the last of which is *The Broken Wing* (1915). She was a social reformer and in 1925 became the first woman to be President of India's National Congress.

Nails, in anatomy, horny growths from the fingers and toes of primates, which grow from a root of cells situated in a fold of skin at the nails' base. This fold is easily damaged. Although different in appearance, nails, like feathers, are made of the same substance as hair, the fibrous protein KERATIN. The nails and claws of animals are worn down naturally; those of human beings are not, and as a result, would grow to extraordinary lengths if not cut. See also pp.150, 1074.

Nails, metal, small spikes used as fasteners since about 1000 BC. Nail manufacturers today use large and heavy machines which are fed with metal wire that passes through dies made of toughened steel. A die grips the wire firmly and a hammer advances to strike a short, exposed length to form the nail head. The nail is then cut and pointed automatically. Spiral-threaded nails such as those used for roofing, are made by passing wire between rollers with spiral grooves or flutes.

Nail varnish, lacquer-based cosmetic applied to the fingernails and toenails. It comprises a solution of nitrocellulose lacquer to which is added a plasticizer - to make the varnish spread and prevent brittleness - and colouring matter. Originally red or pink, nail varnishes are now produced in a wide variety of colours. See also pp.611, 611.

Naipaul, Vidiadhar Surajprasad (1932-), West Indian novelist and short-story writer. He was educated in Trinidad and at Oxford, and his work clearly reflects these influences. He later settled in London, taking up broadcasting and writing for periodicals. His novels include *A House for Mr Biswas* (1961), *In a Free State* (1971), for which he won the Booker Prize, and *Guerillas* (1975).

Nairn, town in Highland Region, NE Scotland, at the mouth of the River Nairn on the Moray Firth. Former county town of Nairnshire. It is a fishing port and holiday resort. Pop. (1974 est.) 8,900.

Nairne, Baroness Carolina Oliphant (1766-1845), Scottish Jacobite song-writer who wrote many well-known "folk" songs perhaps the most popular being *Charlie Is My Darling* and *Will Ye No Come Back Again*.

Nairnshire, former county in NE Scotland, on the s shore of the Moray Firth; since 1975 it has been a district in the Highland Region. On the coastal lowlands oats, potatoes and barley are the chief crops, and cattle are raised. Sheep are grazed on the s uplands. Industries include whisky distilling, granite quarrying, brick making and tourism. The county town was Nairn, where the district authority is now located. Area: 422sq km (163sq miles). Pop. (1974) 8,906.

Nairobi, city in s central Kenya; the capital and largest city of Kenya. Founded in 1899 at the site of a MASAI watering hole, Nairobi replaced Mombasa as the capital of the British East Africa Protectorate in 1905. During the 1950s the city was a centre of the MAU MAU rebellion. The first All Africa Trade Fair was held there in 1972. Nairobi has a National Park (1946), a University (1970), and several institutions of higher education. Industries: cigarettes, textiles, chemicals, food processing, furniture, glass, building materials. Pop. (1975 est.) 700,000.

Naismith, James A. (1861-1939), US sportsman. While working as a physical education instructor at the YMCA college in Springfield, Massachusetts, he originated the game of basketball in 1891. Many of the rules he outlined are still in use today.

Naivasha, lake in sw central Kenya, E Africa, in the Great Rift Valley; it has no outlet. The lake, the volcanic Crescent Island and the town of Naivasha on the NE shore are popular tourist attractions. Area: 280sq km (108sq miles).

Naked and the Dead, The (1948), novel by Norman Mailer. A panoramic work about the brutality and wastefulness of war, it follows one platoon during the US invasion of a small Pacific island held by the Japanese in WWII.

Nakhon Ratchasima (Khorat), city in NE Thailand, on the River Mun; capital of Nakhon Ratchasima province. The city

was founded in the 17th century but did not develop until the construction of the railway to Bangkok in 1890. It is a transport centre, being strategically placed at the entrance to a pass through the Khorat plateau. Copper is mined nearby. Pop. (1970) 102,095.

Nakuru, city in w central Kenya; the capital of Rift Valley province. Founded in 1904 as a European settlement, it is now a developing commercial centre with textiles and food processing industries. Pop. (1969) 47,800.

Nalanda, Buddhist monastic centre N of Rajgir, India. By tradition founded at the time of BUDDHA, the centre was probably built in the 5th century BC, and served as a school for Buddhist philosophers. Manuscripts copied there still exist, as do many religious sculptures in bronze and stone.

Namaqualand (Namaland), region in sw Africa, extending N-S from Windhoek in Namibia (South West Africa) to Cape province in South Africa, and from the Namib Desert W to the Kalahari Desert (E). It is an arid area and pastoral farming is the principal economic activity. Some copper is mined. Area: approx. 388,500sq km (150,000sq miles).

Namath, Joe William ("Broadway Joe") (1943-), US football player. He joined New York as a quarterback in the AMERICAN FOOTBALL League (1965). In 1967, he set the record for the most yards gained - 4,007 (3,664m) - by passing in a single season.

Nam-dinh, town in NE Vietnam, on the delta of the Red River (Hung Ho), 72km (45 miles) SE of Hanoi. It is a trade and transport centre.

Namib Desert, desert region in sw Africa, along the coast of Namibia between the Atlantic Ocean and the interior plateau. The area receives less than 1cm (½in) of rain each year and is almost completely devoid of vegetation. Diamonds are mined. Area: 170,000sq km (66,000sq miles).

Namibia, also known as South West Africa, is a territory governed by South Africa, its neighbour to the S. Most of the country consists of high plateau lands with an uninhabited coastal strip. Cattle are reared in the N and sheep in the S but Namibia's economy is based on its mineral resources. Diamonds, lead and uranium are mined. The capital is Windhoek. Area: 823,327sq km (317,887sq miles). Pop. (1975 est.) 883,000. See p.2101.

Namier, Sir Lewis Bernstein (1888-1960), British historian. He was born in Poland but studied in England and was Professor of history at Manchester (1931-53). His best-known works were *The Structure of Politics at the Accession of George III* (1929) and *England in the Age of American Revolution* (1930).

Namoi, river in SE Australia; it rises in the Liverpool Range, E New South Wales and flows NW to join the Darling River at Walgett. Length: 847km (526 miles).

Namp-o, city in w North Korea, on Korea Bay; formerly known as Chinnampo. Opened to foreign trade in 1897, it has become an important port for Pyongyang, the capital of North Korea. Industries include flour milling. Pop. 130,500.

Namur, town in s Belgium, at the confluence of the Meuse and Sambre rivers, 56km (35 miles) SE of Brussels; it is the capital of Namur province. The city fell to the French in 1692 but it was retaken by WILLIAM OF ORANGE in 1695. It was the scene of many battles during both World Wars. Industries: metallurgy, glass, livestock. Pop. (1980 est.) 100,712.

Nana (1880), novel by Emile ZOLA, written in the Naturalist manner. It is one of the Rougon-Macquart series of novels (1871-1893) tracing the complete social history of a family of the Second Empire. Nana, a beautiful, cruel and misguided Parisian courtesan, captivates and then ruins all the men she meets.

Nanak (1469-1539), founder of SIKHISM. Of Hindu parents and Muslim schooling, Nanak left his family to follow a call from God. In his preaching Nanak had most success in his native Punjab, proclaiming man's oneness under God.

Nance, Willis Raymond ("Ray")

(1913-), US jazz trumpeter, cornetist and violinist. He played with Earl HINES and Horace Henderson in the 1930s and with Duke ELLINGTON after 1940.

Nancy, city in NE France, on the River Meurthe, 287km (178 miles) E of Paris; capital of Meurthe-et-Moselle département. The city developed around the castle of the dukes of Lorraine and became capital of the duchy in the 12th century. The city passed to the French crown in 1766. Industries: iron products, glass, machine tools, textiles. Pop. (1975) 280,509.

Nanda Devi, mountain peak in the Himalayan system, Uttar Pradesh state, N India. It is one of the highest peaks in the country. Nandi Devi was not climbed until 1936, when an Anglo-American team reached the summit. Height: 7,793m (25,662ft).

Nandi, Negroid people of w Kenya. Traditionally a warrior people, they now live by intensive cultivation, especially of millet and corn, breeding cattle for ritual purposes. Their patrilineal society is characteristically divided into age-sets, males passing through seven grades from warriors to elders, the latter holding political and juridical authority.

Nanga Parbat, mountain peak in the Punjab Himalayan system, N India. It is the seventh highest peak in the world. After several unsuccessful attempts, it was scaled in 1953 by a team led by Herman Buhl. Height: 8,131m (26,676ft).

Nanking (Nanjing), city in E China, 242km (150 miles) W of Shanghai, on the River Yangtze. It served as the capital of China until the end of the 14th century, then again in 1928-37 and 1946-49. The treaty of Nanking (1842) ended the OPium war with Britain and opened five ports to foreign trade; Nanking was declared a treaty port in 1858 but not opened until 1899. It served as the seat of Sun Yat-sen's provisional presidency in 1912 and fell to Japan in 1937 during the SINO-JAPANESE war. The city has an iron and steel complex and oil refining and chemical plants. Pop. (1977 est.) 3,000,000.

Nanking, Treaty of (1842), peace settlement which ended the OPium war (1839-42) between Britain and China. An indemnity was paid, Hong Kong was ceded to Britain and the ports of Amoy, Foochow, Ningpo and Shanghai opened to British trade. Before 1842 only Canton had been allowed trading rights and Britain had no diplomatic representation. The treaty, which was supplemented by the Treaty of the Bogue (1843), was thus an early milestone in the opening up of China to the West. See also p.1622.

Nansen, Fridtjof (1861-1930), Norwegian explorer and statesman. He crossed the Greenland icecap on foot in 1888, and for his next expedition he constructed a ship, *Fram*, that could be frozen in the Arctic ice. This allowed him to drift to 84°N, and after leaving the *Fram*, he and F.H. Johansen reached 86°14'N in 1895, the farthest north man had yet gone. He was awarded the 1922 Nobel Peace Prize.

Nansen bottle, device, sometimes open-ended, used for the collection of subsurface water samples.

Nansen International Office for Refugees, founded under the auspices of the League of Nations in 1931 in honour of Fridtjof NANSEN in Geneva. It mainly assisted Armenian refugees from Turkey, "White" Russians and later German Jews.

Nan Shan (Qilianshanmái), mountain range in China, S of the SILK ROUTE through Kansu province. It includes peaks of more than 6,100m (20,000ft).

Nantes, city in NW France, on the River Loire, 172km (107 miles) W of Tours; the capital of Loire-Atlantique département. An ancient Gallic capital prior to the Roman conquest in the 1st century BC, it was captured by the Normans in the 9th century and held by the Dukes of Brittany until 1499 when it became part of France. HENRY IV issued the Edict of NANTES there in 1598. The city has the University of Nantes (1460), and a castle in the Gothic-Renaissance style. Industries: metals, dyes, clothing, bicycles. Pop. (1975) 453,500.

Nantes, Edict of (1598), law granting considerable religious freedom to French Protestants, the HUGUENOTS, promulgated by HENRY IV at Nantes. It guaranteed freedom of conscience, social and political equality, and established a special court, composed of both Catholics and Protestants, to hear disputes arising from the edict. Protestant worship was limited, however, to areas they already held (about 100 fortified towns) and was not permitted within five leagues of Paris. Secret agreements promised the crown's financial support of the armies garrisoned in the 100 towns. The last provision gave the Huguenots a virtual state within the state and was incompatible with the centralizing policies of Cardinal RICHELIEU in the 17th century. LOUIS XIII, acting on Richelieu's advice, withdrew the political and military provisions of the edict in 1629 and LOUIS XIV revoked it entirely in 1685. See also p.1407.

Nantucket, island in SE Massachusetts, USA 40km (25miles) S of Cape Cod, in the Atlantic Ocean. An important whaling centre until the mid-19th century, Nantucket is now a tourist resort and an artists' colony. Area: 148sq km (57sq miles). Pop. (1970) 3,774.

Naomi, in the Bible, wife of Elimelech and mother-in-law of the widow RUTH, whose later marriage to Boaz she arranged.

Napalm, gelatinous petroleum used in wartime to make bombs and as fuel for flame-throwers. It was developed during WWII, and widely used by the American forces in Vietnam. When napalm hits its target, it spreads out, clinging to and burning everything it touches. See also p.575.

Napata, ancient city in NE Sudan and the capital from c.750 to 590 BC of the kingdom of KUSH which restored Egypt following its destruction by Libyan mercenaries. In 590 Napata was sacked by the 26th Dynasty of Egypt but, although the capital was moved, it remained the religious centre of Kush.

Naphtha, any of several volatile liquid-hydrocarbon mixtures. In the first century AD, "naphtha" was mentioned by Pliny the Elder. Alchemists used the word for various liquids of low boiling-point. Several types of products are now called naphtha, eg coal-tar naphtha, shale naphtha and petroleum naphtha. Petroleum naphtha contains aliphatic hydrocarbons, boils at higher temperatures than petroleum and at lower temperatures than kerosene.

Naphthalene, important HYDROCARBON (C₁₀H₈) composed of two benzene rings sharing two adjacent carbon atoms. Naphthalene is soluble in ether and hot alcohol. It is used for making mothballs, dyes and synthetic resins, and is obtained from coal tar and the high-temperature cracking process of petroleum. It crystallizes in white plates; m.p. 80°C (176°F); b.p. 218°C (424°F).

Naphthol, name of two organic compounds derived from NAPHTHALENE. Both are colourless and crystalline and have the formula C₁₀H₇OH. 1-Naphthol is produced by heating 1-naphtholensulfonic acid with caustic alkali or by heating 1-naphthylamine with water under pressure. It forms into colourless crystals; m.p. 96°C (205°F); b.p. 288°C (550°F). 2-Naphthol is produced by a similar process to that for 1-naphthol. It, too, forms into colourless crystals; m.p. 124°C (255°F); b.p. 285°C (545°F).

Napier, Sir Charles James (1782-1853), British soldier and colonial administrator. He served in the PENINSULAR WAR in 1810 against the USA in the WAR of 1812 and kept order in N England during the Chartist agitation (1839-41). He saw service in India from 1841, provoking a war with the Sind in 1842, and governing the conquered province from 1843-53.

Napier, or Neper, John (1550-1617), Scottish mathematician. He treated mathematics as a hobby but in 1614 invented logarithms and the present form of the decimal notation. He developed "Napier's bones", calculating devices for simplifying mathematical calculations. See also p.788.

Napier, Robert Cornelis, 1st Baron

Napier of Magdala (1810-90), British army officer, b. Ceylon. He was a skilled military engineer and built roads, canals and defences in the Sikh wars (1845, 1848) and during the INDIAN MUTINY. He was Commander-in-Chief of India from 1870-76, became a general in 1874 and a field-marshal in 1883.

Napier, seaport in E North Island, New Zealand, on Hawke Bay. It is a food processing and shipping centre. Its exports include dairy products, fruits, vegetables and meats. Pop. (1970 est.) 38,200.

Naples (Napoli), in S central Italy, 188km (117 miles) SE of Rome, on the Bay of Naples. Founded c.600 BC as a Greek colony, Naples came under Roman rule in the 4th century BC, and under Byzantine rule in the 6th century AD. It became capital of the Kingdom of Naples from the 13th to the 19th centuries. Ceded to Austria in 1713, the city joined the Kingdom of Italy in 1860. Notable buildings include the Church of the Holy Apostles, said to have been founded by Constantine, a university (1224) and Virgil's tomb. Industries: textiles, steel, shipbuilding, aircraft. Pop. (1980 est.) 1,250,000.

Naples, school of, 17th-century school of painting, which flourished in S Italy and Spain. Based on the example of CARAVAGGIO (who stayed in Naples 1606-07), painters of the school characteristically depicted scenes of violent activity and made much use of heavy CHIAROSCURO. Its most notable painter was RIBERA.

Napo, river of NW central South America, rising in the N central mountains of Ecuador and flowing SE through Ecuador and Peru to join the River Amazon approx. 64km (40 miles) NE of Quito, Peru. Length: 1,127km (700 miles).

Napoleon I (1769-1821), general and Emperor of France. He was born Napoleon Bonaparte in Corsica and studied at the military academy in Brienne. He led the French liberation of Toulon from the British in 1793 and was promoted brigadier-general. His future was in doubt during the THERMIDOREAN REACTION, but after saving the NATIONAL CONVENTION from a right-wing uprising in Oct. 1795 he was given command of the army in Italy in 1796. He won important victories there against Austria, but failed in his attempt to drive the British from Egypt in 1798. In 1798-99 France lost most of Italy and Napoleon returned to France in Oct. 1799 and carried out the coup of 18th Brumaire (9 Nov. 1799) against the DIRECTORY. He set up the CONSULATE, and in Dec. 1799 became First Consul. He defeated the Austrians at Marengo in 1800, and at home centralized local government and the tax collection system. He established the Bank of France, reformed the legal system with the CODE NAPOLEON and made peace with the Roman Catholic Church with the Concordat of 1801.

He concluded the Treaty of Amiens with Britain in 1802, and crowned himself Emperor of the French in 1804, with Pope PIUS VII presiding. War broke out again in 1805 and he defeated Russia and Austria at AUSTERLITZ in 1805 and Prussia at JENA in 1806. He reorganized the German states and made members of his family rulers of Spain, Naples and Holland. However, he could not defeat the British at sea and led a disastrous expedition to Russia in 1812. He was forced to abdicate in April 1814 and was confined to the island of Elba. He escaped in March 1815, and seemed triumphant for a HUNDRED DAYS. He was finally defeated at WATERLOO in June 1815, abdicated once more, and was exiled by the British to St Helena, where he died.

In 1796 he married Josephine de Beauharnais. He was divorced from her in 1809 to marry Marie Louise of Austria in 1810. Their son was known as NAPOLEON II. See also pp.1550-1555.

Napoleon II (1811-1832), only son of NAPOLEON I and Marie-Louise. His full name was François-Charles-Joseph Bonaparte. In 1814 he was taken by his mother to Austria, and in 1818 his grandfather, FRANCIS I of Austria, conferred on him the title of duc de Reichstadt.

Napoleon III (1808-73), Emperor of the French (r. 1852-70), also known as Louis Napoleon. He was the nephew of NAPOLEON I. He twice attempted a coup in France (1836 and 1840) and won some popularity because of his utopian socialist views. He returned to France from exile in Feb. 1848 and was overwhelmingly elected President in Dec. 1848. He supported Pope PIUS IX against the Italian republicans in 1849, and in reaction to the ensuing opposition staged a coup in Dec. 1851 and was proclaimed emperor in Nov. 1852. During his reign France experienced both economic growth and political authoritarianism. Napoleon undertook expensive wars in Italy, SE Asia and Mexico, and in response to growing opposition instituted a liberal empire in 1870. He was deposed in September 1870 as a result of early French defeats in the Franco-Prussian war, and retired to England where he later died. See also p.1589.

Napoleonic Wars, series of wars during which France, under NAPOLEON I fought various coalitions of the other European powers. Britain was constantly at war with France from 1803-14, and then again in 1815; after Napoleon's invasion plans had been frustrated at TRAFALGAR, the main field of conflict between the two opponents was in Spain, during the PENINSULAR WAR (1808-14). Austria and Russia joined with Britain in the War of the Third Coalition in 1805, but Austria was defeated at ULM and AUSTERLITZ and forced to sign the peace of PRESSBURG. In 1806 Prussia entered the war, only to be defeated at Jena and AUERSTADT; and Russia, defeated at Friedland in 1807, signed the Treaty of Tilsit with Napoleon. In 1809, at WAGRAM, Austria was again defeated. Three years later, however, in 1812, Napoleon squandered an army in Russia, and the next year all his opponents united in the Fourth Coalition to defeat him at LEIPZIG. Forced to abdicate in 1814, Napoleon returned to power in 1815, but was finally defeated at WATERLOO. After the wars, Europe was re-organized at the Congress of VIENNA. See also pp.1551, 1551, 1553-1555, 1553-1555.

Napoli. See NAPLES.

Nappe, large-scale fold in rocks, thrown up by mountain-building processes and transported over large distances. The Alps are a system of several such nappes. See also p.215.

Nappy rash, skin irritation around genitals and anus of babies caused by wet or soiled nappies.

Naqsh-e-Rostam, ACHAEMENID archaeological site in Iran. Four rock tombs, including that of DARIUS THE GREAT, were discovered there together with relief sculpture dating from the 3rd century BC.

Nara, city in S central Honshu, Japan, 42km (26 miles) E of Osaka. Founded in 706, it was the first capital of Japan (710-84). Today it is a cultural and religious centre, having the oldest Buddhist temple in Japan. Pop. (1974) 247,082.

Naram-Sin (c.2254-c.2218 BC), fourth of the five kings of the S Mesopotamian dynasty of AKKADIA. He spent his reign trying to extend Akkadian power.

Narayan, Rasipuram Krishnaswamy (1906-), Indian novelist and short-story writer. He is famous for his tragicomic novels, written in English set in the fictional town of Malgudi in S India. They include *Waiting for the Mahatma* (1955), *The Man-Eater of Malgudi* (1961) and *A Horse and Two Goats* (1970).

Narayanganj, city in central Bangladesh, at the confluence of the Lakhya and Dhaleswari rivers. It is the region's chief river port and is an important jute trading centre as well as a major industrial city. Pop. (1974) 186,769.

Narbada (Narmada), river in central India. It rises near the MADHYA PRADESH-VINDHYA PRADESH border, flows W between the Vindhya Mountains and the Satpura Range, forms an estuary and enters the Gulf of Cambay. The river forms the traditional border between Hindustan (N) and Deccan (S). Length: 1,290km (801 miles).

Narcissus, in Greek mythology, a beauti-

ful youth who rejected the love of the nymph ECHO, and was induced by her to fall in love with his own reflection in a pond. He pined away because of his unrequited love and was turned into a flower. The term narcissism in psychology is derived from this legend.

Narcissus, any of numerous species of Old World bulbs, now almost universally popular garden flowers. Narcissi bloom in early spring. The long, pointed leaves surround yellow, orange or white trumpet-like flowers. Favourite species are the yellowish DAFFODIL (*Narcissus pseudonarcissus*) and jonquil (*N. jonquilla*). Family Amaryllidaceae.

Narcolepsy, disorder tending towards the chronic, wherein one falls suddenly and uncontrollably asleep during the day. Night sleep is disturbed. This may be caused by hardening of the arteries, syphilis of the central nervous system or brain injury.

Narcotics, depressive drugs used to reduce pain, diminish sensation and induce sleep. They can cause profound stupor, coma or convulsions when given in excessive doses. MORPHINE, CODEINE and meperidine (Demerol) are among the narcotics commonly used in medicine. Narcotics also produce some harmful side-effects, eg constipation and nausea.

Nares, Sir George Strong (1831-1915), British admiral and explorer who commanded the *Challenger* (1872-74) in its investigation of the oceans and ocean beds of the world. See also PE pp.82, 90.

Narew, river in NE Poland which rises near the Bialowieza Forest, flows W and SW into the Bug River near Warsaw. Length: 477km (296 miles).

Nariño, Antonio (1765-1823), Colombian revolutionary. He published a translation of the French DECLARATION OF THE RIGHTS OF MAN, and was deported to Spain in 1795. He returned to S America in 1797 and following the 1810 Revolution became President of Cundinamarca province. In 1821, after some six years in prison in Spain, he became Vice-President of Colombia. As a political leader, he worked towards a strong, centralist government.

Narlikar, Jayant Vishnu (1938-), Indian physicist who has conducted research in such areas as general relativity and gravitation, quantum theory, cosmology and astrophysics. His many publications include *Action at a Distance in Physics and Cosmology* (1974), written in collaboration with Sir Fred Hoyle.

Narmer. See MENES.

Narrencschiff, Das (1494), German satirical poem by Sebastian BRANT. In 115 sections and more than 7,000 lines, the poem castigates all types of human folly by employing the central image of a ship of fools. Evils such as adultery, blasphemy and gluttony are also pilloried, and in the later parts the Church and the Empire are attacked.

Narthex, entrance screen or partition in early Christian and Byzantine churches, found especially in France and Italy. It usually extended across the entire west front of the building creating a vestibule for penitents and converts under instruction who were not admitted to the church proper. As unrestricted entry into the church became normal in the 13th century, the narthex served no further ritual purpose.

Narváez, Pánfilo de (c.1480-1528), Spanish conquistador. He was the chief lieutenant to Diego de VELAZQUEZ in the conquest of Cuba in 1514. In 1520 Velázquez sent him to Mexico to arrest Hernán CORTÉS; but instead he was imprisoned by CORTÉS (1520-22). He returned to Spain but sailed to Florida in 1527, where he searched unsuccessfully for gold. See also p.1370.

Narvik, seaport in N Norway, on the Ofot Fjord; it has an ice-free harbour. It was founded in 1887 as a port for the Swedish iron mining towns of Kiruna and Gällivare. The fishing industry is important. Pop. (1971 est.) 13,200.

Narvik Expedition, attempt by British forces in WWII to prevent the Germans, who had occupied the city in April 1940,

Narwhal

Narwhal ; Greenland Eskimos eat its fat and make tools out of the tusks.

John Nash; the west wing of his elegant Park Crescent in London's Regent's Park.

Gamal Nasser's death was mourned by Egyptians throughout the world.

Ilie Nastase, the superb but sometimes temperamental tennis champion.

from using it as a shipping base for Swedish iron ore. A British expeditionary force briefly occupied (28 May–9 June 1940) the port, but were forced to abandon it when allied resistance on the western front crumbled.

Narwhal small, toothed Arctic whale. The male has a twisted "horn", half as long as its body, which develops from a tooth and protrudes horizontally through the upper lip. Its function is unknown. Length: up to 5m (16ft). Species *Mondodon monoceros*. See also pp.322–323.

NASA, acronym for National Aeronautics and Space Administration, US government body established in 1958 to administer civilian aeronautical and space research programmes. It has various departments throughout the USA: at Houston, Texas, is the Lyndon B. Johnson Space Center, responsible for manned space flights. Space rockets, both manned and unmanned, are launched from the John F. Kennedy Space Center at Cape Canaveral, Florida. In 1975 it employed 12,000 scientists, engineers and technicians.

Nasby, Petroleum Vesuvius, pseudonym of US journalist David Ross Locke (1833–88). From 1861 onwards he published the "Nasby Letters" in two Ohio newspapers, attacking the racialists of the time by presenting himself as an extreme proponent of their point of view which is damned by his illiterate style and stupidity. Collections of the letters were subsequently published, among them *The Nasby Papers* (1864) and *The Diary of an Office Seeker* (1881).

Nasca. See **NAZCA**.

Naseby, Battle of (14 June 1645), battle of the English Civil War in Leicestershire in which the Royalist troops under Prince Rupert were outnumbered and defeated by the Parliamentarians under Oliver Cromwell and Sir Thomas Fairfax. It was a decisive battle of the war.

Nash, John (1752–1835), British architect and town planner who was important in the development of the neo-Classical Regency style. He is famous for his design of Regent's Park and Regent Street in London. He also started plans for the remodelling of Buckingham Palace and rebuilt the Royal Pavilion Brighton (1815–23). See also p.1546.

Nash, John Northcote (1893–1977), British painter and wood engraver. A landscape artist, his style bears affinities with that of his brother Paul NASH, but remains closer to natural forms.

Nash, Ogden (1902–71), US poet. Among his many volumes of humorous and satirical poetry are *Free Wheeling* (1931), *The Face Is Familiar* (1940) and *The Christ-mass That Almost Wasn't* (1957). He wrote the lyrics for *One Touch of Venus* (1943), a musical comedy in collaboration with S.J. Perelman.

Nash, Paul (1889–1946), British painter and illustrator. The poetic, dreamlike style of his watercolour and oil landscapes was stimulated by **SURREALISM**, eg *The Menin Road* (1918) and *Landscape from a Dream* (1938). He was appointed an Official War Artist in 1917 and again in WWII.

Nash, Richard ("Beau") (1674–1762), arbiter of English fashion and court behaviour. It was he who set the tone of Bath, the most fashionable spa, in the 18th century by establishing a code of manners and propriety. His disapproval virtually abolished the practice of duelling.

Nash, Sir Walter (1882–1968), New Zealand politician and Prime Minister (1957–60). Born in Britain, he became a New Zealand MP in 1929. As Finance Minister (1935–49) he helped introduce the Labour Party's wide-ranging social security scheme. A doughty and tireless campaigner, he travelled extensively abroad and earned a reputation for passionate humanitarianism. See also p.1734.

Nashe, Thomas (1567–1601), English poet, pamphleteer and dramatist. His satirical writings include *Pierce Penniless His Supplication to the Divell* (1592) and *The Unfortunate Traveller* (1594), a picaresque prose narrative.

Nashville, state capital and port on Cen-

tral Tennessee, USA, on the Cumberland River. Settled in 1779 as Nashborough, it became state capital in 1843. Nashville was the scene of a decisive victory of Union troops over the Confederate army in December, 1864, during the American Civil War. It is a noted country music centre. There are several universities in the city. Industries: clothing, footwear, food processing, tyres, chemicals, publishing. Pop. (1980) 439,599.

Nasmyth, Alexander (1758–1840), Scottish painter. Influenced by Allan Ramsay, he became a prominent portrait and landscape painter. Two portraits of *Robert Burns* (1787–1828) are in the Scottish National Portrait Gallery, Edinburgh. His son Patrick (1787–1831) also painted.

Nasmyth, James (1808–90), Scottish inventor and engineer. He developed a foundry for making machine tools and steam-powered machines. In 1842 he patented a steam hammer designed to forge the drive shafts originally intended for the SS *Great Britain*.

Nasrid kingdom, the city of Granada in Spain during its rule from 1238 to 1492 by the Moorish dynasty named Nasrid. Founded by Muhammad ibn-Yusuf in 1230, it reached its zenith during the reign of Mohammed V (r.1356–91), who contributed much to the power and architecture of the city. It was conquered in 1492 by Ferdinand and Isabella of Spain and subjected to a brutal policy of Christianization.

Nassau, port of the NE New Providence Island in the British colony of the Bahama Islands. It is now the capital and commercial centre of the Bahamas. Founded in the 1660s by the English and named Charles Towne, it was renamed in 1695. Exports include fruit and vegetables. Pop. (1979 est.) 3,233.

Nassau, House of, European royal family named after a county on the E bank of the Rhine, founded by Walram I. The elder or German branch ruled Nassau until it was annexed by Prussia in 1866. Since 1890, Nassau has been the ruling house of the Duchy of Luxembourg. The younger (Dutch) branch, founded by Otto I, inherited Orange in 1544. Since the election of William the Silent (Prince of Orange) in 1579, members of this house have ruled the Netherlands almost continuously under the name of the House of Orange.

Nasser, Gamal Abdel (1918–70), Egyptian political figure, first President of the republic of Egypt (1956–70). He graduated from the Royal Military Academy in 1938, was wounded in action in the 1948 Arab-Israeli War and in 1950 was elected Chairman of the Free Officers movement. In 1952 he led the army coup that ousted King Farouk. As head of the Revolutionary Command Council Nasser controlled Egypt, although Gen. Muhammad Neguib was the nominal premier. Nasser became President in 1956, nationalizing the Suez Canal in the same year. He was President of the United Arab Republic 1958–61. After Egypt's defeat in the 1967 Arab-Israeli War he resigned but returned to office amid massive demonstrations in his support. Nasser promoted land reform and economic and social development through a programme called Arab socialism; the completion of the Aswan Dam (1970), built with Soviet assistance after the USA backed out, was the greatest achievement of this programme. Nasser is remembered for his pan-Arab beliefs and encouragement of third-world unity. See also pp. 1738–1739.

Nastase, Ilie (1946–), Romanian tennis player, known for his volatile personality. He was the first player from an Iron Curtain country to win the US Open (1972). In that year also he was beaten by Stan Smith in a classic Wimbledon final. Since then, Nastase's form has fluctuated because of his temperament, although he again reached the Wimbledon final in 1976, to be beaten by Björn Borg.

Nasturtium, annual trailing plant native to central and South America. Cultivated as a garden ornamental, it has round leaves and spurred, trumpet-shaped flowers of

yellow, salmon or scarlet. Among 80 species is the common nasturtium, or Indian cress, *Tropaeolum majus*. Family Tropaeaceae.

Natal, smallest province in the Republic of South Africa, bordered by the Indian Ocean (E), Swaziland (N), and the Orange Free State (W); the capital is Pietermaritzburg. It was named by Vasco da Gama who sighted the entrance to Port Natal (modern Durban) on Christmas Day, 1497. The area was then inhabited by Bantu-speaking Zulu people who were defeated in battle by the Boers in 1838. An Afrikaner republic was established 1838–39. Natal became a British colony in 1843, was granted internal self-government in 1893 and joined the Union of South Africa in 1910. The main industry is sugar refining, others include textiles, tanning and oil refining. Area: 86,967sq km (33,578sq miles). Pop. (1970) 4,236,770.

Nataraja, the Hindu god Shiva (Siva) in the form of the cosmic dancer or Lord of Dance; he is represented in this guise in most Saiva temples in S India. In the Cola bronzes of the 10th and 11th centuries he is shown dancing within a circle of fire on the figure of a dwarf, a symbol of man's ignorance. Shiva's hair streams out on each side and he has four arms; the posture of his hands and hair are highly significant. As the Nataraja he is said to be the source of motion within the cosmos.

Nathanael, in St John's Gospel, one of Jesus's disciples. His birthplace was Cana and his call by Jesus is related in John 1: 43–51. However, his name is not included in any of the lists of the twelve apostles in the other gospels, though most biblical scholars regard him as identical with St Bartholomew.

National Aeronautics and Space Administration. See **NASA**.

National anthem, music that at an international or state ceremony represents one specific country. Usually in the form of a song or hymn, the term can refer to the words alone; there are nevertheless examples of national anthems that are without words at all. The oldest is that of Great Britain; *God Save The King/Queen* has been sung on official and ceremonial occasions since 1745. The French national anthem, *La Marseillaise*, was composed as a marching song in 1792; the German *Deutschland, Deutschland über Alles*, authorized in 1922, was sung to the music of Haydn's *Emperor's Hymn* composed in 1797. The US *The Star-spangled Banner*, although written in 1814, was not officially adopted until 1931. In 1977 the Australians rejected the British national anthem and after a referendum chose *Advance Australia Fair* as the national tune.

National Assembly, name taken by the Third Estate of the French Estates-General on 17 June 1789. Ten days later, on the invitation of Louis XVI, it was joined by some members of the other two estates. It dissolved itself on 30 September 1791 after the promulgation of the new constitution of 1791. Its most important acts were the abolition of feudal rights and privileges (1789), the Declaration of the Rights of Man (1789) and the Civil Constitution of the Clergy (1790). Various other French parliaments have been given the same name. See also pp.1550–1551.

National Assistance Board, British government agency set up in 1948 to assist individual cases of poverty. It developed from the Unemployment Assistance Board, which was created in 1934 to aid the unemployed during the Depression and which became known as the Assistance Board in 1940 when it also became responsible for supplementary old age pensions. In 1948 it was named the National Assistance Board. In 1966 it was superseded by the Supplementary Benefits Commission within the Ministry of Social Security.

National Broadcasting Company (NBC), US pioneer radio and television organization, comprising more than 400 independently owned stations. It set up the first radio network in 1926 and introduced a regular television service in 1939.

National Coal Board, British organization that has administered the coal mining and distribution industry since its nationalization in 1946.

National Convention, the governing assembly of France from September 1792 to October 1795. It abolished the monarchy and voted to execute LOUIS XVI and MARIE ANTOINETTE. In 1793 it began the long French wars by declaring war against Britain. It was dominated after June 1793, when it was purged of the GIRONDIS, by the extreme JACOBINS and ROBESPIERRE. Robespierre was overthrown by the Convention in July 1794. It was dissolved and replaced by the Directory, according to the constitution of 1795.

National Covenant (1638), answer by the Scottish Presbyterians to the attempt of CHARLES I and Archbishop LAUD to introduce in 1637 a Scottish Prayer Book. Although it professed loyalty to the Crown and was widely signed, it provided a basis for the League of Parliament and Scots Covenanters at the outbreak of the ENGLISH CIVIL WAR.

National Debt. See DEBT, NATIONAL.

National Economic Development Council. See NEDDY.

National Film Theatre, founded in 1951 following the Festival of Britain; it was built on the site of the Telekinema in London. The policy of the NFT is to run seasons of films, normally linked by a common factor, eg director, actor, genre or studio. A second cinema was opened in 1970.

National Front, British political party committed to free enterprise and the repatriation of coloured immigrants. The party was founded in 1967 as a union of the League of Empire Loyalists and the British National Party. Although tainted by a neo-Nazi image, the popularity of the National Front steadily rose in the late 1970s, particularly in inner city areas. See also NATIONAL SOCIALISM.

National Government, coalition government in Britain of CONSERVATIVE, LABOUR and LIBERAL MPS, formed in August 1931 as a result of the economic crisis of 1929-31. Until 1935 it was led by the former Labour Prime Minister Ramsay MACDONALD, thereafter by three Conservatives, Stanley BALDWIN (1935-37), Neville CHAMBERLAIN (1937-40) and Winston CHURCHILL (1940-45). At the elections of 1935 National Government candidates won 432 seats. The coalition was continued to fight WWII. Not until 1945 was there another election, when the three parties dissolved their connection.

National grid (electric and gas), distribution networks that supply consumers in nearly all parts of Britain with electricity and gas. Electricity is fed to the grid by various power sources. On entering the grid, electricity is stepped up in voltage by transformers from thousands of volts to levels as high as hundreds of thousands of volts. This ensures maximum efficiency of transmission across the country along power lines which are mostly carried overhead by pylons, although some travel underground or underwater. Before being used, electricity from the grid is stepped down in voltage in substations, usually to a mains voltage of 240 volts AC. Gas supplies were, until recent years, provided by local coal gasification plants, or gasworks. With the coming of North Sea natural gas, the gas grid is now a national one.

National Health Service (NHS), in Britain, institution founded by the National Health Service Act introduced by a LABOUR government in 1946. The NHS undertook to provide comprehensive coverage for most health services including hospitals, general medical practice and public health facilities. It is administered by the Department of HEALTH AND SOCIAL SECURITY. The NHS is tripartite. General practitioners have registered patients; they may also have private patients and may contract out of the state scheme altogether. They refer patients, when necessary, to specialist consultants in hospitals for outpatient or inpatient treatment. Health visitors such as midwives and district nurses are the third arm of the service. The training of doctors and dentists and supervision of their schools are

outside the NHS. Hospitals are administered by regional boards which include governors of teaching hospitals. Public representation in England and Wales is provided by district community health councils.

National Insurance, state scheme in Britain to provide sickness and unemployment benefits and old-age pensions. It dates from the 1911 Act, which provided sickness benefits for all workers and unemployment benefits for some. The scheme was funded, as it still is, by compulsory contributions from employers and employees. During WWII a Ministry of Pensions and a Ministry of Labour (responsible for sickness and unemployment payments) were established. The Ministry of National Insurance was merged with the Ministry of Pensions in 1966 to form the Ministry of Social Security.

Nationalism, ideology according to which all people owe a supreme loyalty to their nation. Nationalist sentiment, drawing upon and extolling a common culture, language and history, can be a powerful unifying force. See also p.1651.

Nationality, legal status denoting membership in a nation or sovereign state. It is determined by birth or residence. The national has obligations to his country such as allegiance, military service and payment of taxes and, in turn, is owed diplomatic protection when abroad. Nationality is defined as an unalienable human right in the UN Universal Declaration of Human Rights.

Nationalization, acquisition for public ownership of business enterprises formerly owned by private individuals or companies. Local authorities have traditionally taken private property for such general purposes as the building of roads or public buildings, but the concept of nationalization has changed in the 20th century in that its purpose is now said to be to enhance social and economic equality; nationalization thus commonly takes place to further socialist principles of society. The Communist states of eastern Europe nationalized all industry and agriculture after WWII. In Great Britain the Labour government (1945-1951) nationalized a number of important industries, including coal, steel and transport. Illegal nationalization of foreign properties is termed expropriation. Opponents of nationalization point to nationalized industries' poor record of efficiency and profitability. See also p.1718.

National Labour Party, those Labour MPS in Britain who supported Ramsey MACDONALD in 1931 and joined the NATIONAL GOVERNMENT. The National Labour Party was never an independent political organization; in 1931, 13 MPS were elected under his title, and only eight were elected four years later.

National Liberation Front, *Front de Libération National* (FLN), revolutionary body that directed the Algerian war of independence against France between 1954-62. The war resulted in the Algerian proclamation of independence, and the FLN becoming an established political party.

National parks, protected areas where restraint on the killing of wildlife is enforced and forests, waters and other natural environments are preserved from commercial use. The main purpose of African national parks is game preservation. The USA was the first country to set aside large reserves for such preservation, and also for recreation. In Britain, national parks are not public property, and private land may be enclosed within the park boundaries. There are 10 national parks in England and Wales. There are none in Scotland or Northern Ireland, but in Scotland the government is currently examining the need for a park-system which would provide for both conservation and recreation. See also CONSERVATION; NATURE RESERVE.

National Physical Laboratory, establishment responsible for national systems of measurement and for technical aspects of physical standards. Located at Teddington, England, it carries out research into many fields of physics and engineering. It

was set up in 1900, sponsored by the Royal Society.

National Portrait Gallery, art gallery in St Martin's Place, London, housing portraits of outstanding men and women in British history. Built in 1858, the present building exhibits the work of British portrait painters dating from the 1400s.

National Savings, term applied in Britain to money saved by the public, in post office savings banks, trustee savings banks and government bonds and securities. Such money is effectively lent to the government, which uses it for various purposes, but which, like a bank, undertakes to repay the money either on demand or after a certain period, plus interest. The interest is usually tax free, as an incentive to saving. Governments of most countries provide various saving schemes, although the details and names of these vary from country to country. The amount of public saving can be a useful indicator of economic conditions; eg savings tend to increase in periods of economic difficulty.

National Socialism, or **Nazism**, doctrines and policies of the National Socialist German Workers' Party, which ruled Germany under Adolf HITLER from 1933 to 1945. Members of the party were first called NAZIS as a derisive abbreviation. The party's doctrines were the annulment of the Treaty of VERSAILLES, Aryan supremacy and racial purity, anti-Semitism and anti-Communism, together with German expansionism and the cult of the Führer. See also FACISM; pp.1673, 1673, 1691, 1691, 1714.

National Theatre, permanent theatre company usually subsidized by the state and housed in a permanent building where national classics of drama are performed in repertory. Unlike establishments in many other European countries, some more than 200 years old, the National Theatre of Great Britain only became a reality in 1963. Although suggested by David GARRICK in the 18th century, and later by a London publisher, Effingham Wilson in 1848, it was not until 1904 that the critic William ARCHER and the actor-manager Harley GRANVILLE-BARKER, with the support of Bernard SHAW, prepared detailed proposals. In 1913 they purchased a site in Bloomsbury, London, in the name of the Shakespeare Memorial National Theatre Committee. Lack of funds and WWII were the reasons for no further developments before WWII, although in 1938 another site was acquired, in South Kensington. In 1949 Parliament passed the National Theatre Bill, but only under the impetus of a free site and an offer of half the building costs from the (then) London County Council did the National Theatre Board come into existence in 1962. With Laurence OLIVIER as artistic director, the first National Theatre production, *Hamlet*, took place 22 Oct. 1963, at the Old Vic theatre where the company had its home for 13 years. In 1973 Peter HALL succeeded Olivier. New buildings designed by Sir Denys LADSON were officially opened in Oct. 1976, and comprise The Lyttelton Theatre (proscenium stage), The Olivier Theatre (open stage) and The Cottesloe Theatre (adaptable small-scale arena).

National Trust, British organization formed by Octavia Hill, Sir Robert Hunter and Canon H.D. Rawnsley in 1895 in order to acquire and own buildings and land worthy of permanent preservation. In 1907 by legislation the trust was given the power to declare its land inalienable. Today it protects about 530,000 acres of which it owns a large proportion, the rest being covenanted.

National Youth Theatre, student theatre group formed in 1956 by Michael Croft, after he had organized several school productions of Shakespeare. The group toured Europe and played at the Old Vic in 1965. Their production of Peter Terson's *Zigger-Zagger* at the Jeannette Cochrane Theatre in 1967 is often considered their biggest success. In 1981 the group's future was in question due to lack of funds, but sponsorship from Texaco, the oil company, ensured its continuity.

National Government; Ramsay MacDonald was the first leader of the coalition.

Nationalization of British steel was in 1949; it was de-nationalized 1953-67.

National parks; giraffes graze in the safety of the Nairobi National Park.

National Theatre; the foyer of the Lyttelton before a performance.

Nativity

Nativity scene, by Fra Angelico, now in the S. Marco Museum, Florence.

NATO: defence ministers at the start of a committee meeting at the Brussels HQ.

Giulio Natta, the Italian chemist who created the plastic polypropylene.

Natural gas from the North Sea is now supplied to homes and factories in Britain.

Nativity, term for the birth of a biblical figure most commonly applied to the birth of JESUS CHRIST although sometimes referring to that of the Virgin MARY or of JOHN THE BAPTIST. The date now usually given for Christ's nativity is 4 BC; 6 BC is a credible alternative, however. The prophet Micah foretold that Christ's nativity would take place in Bethlehem which, according to the Gospels of St MATTHEW and St LUKE, it did.

NATO, North Atlantic Treaty Organization, Western defensive alliance, which also promotes joint military aid and economic co-operation during peacetime. The original treaty, known as the North Atlantic Pact, was signed in Washington DC, USA in 1949. The original members were Belgium, Britain, Canada, Denmark, France, Iceland, Italy, Luxembourg, Norway, Portugal, The Netherlands and the USA. Greece and Turkey joined in 1952 and West Germany in 1955. NATO's headquarters are in Brussels. Its policy body is called the North Atlantic Council, and its military committee, from which France withdrew in 1966, is divided into three military commands and a regional planning group that aids the defence of North America. See also pp.1717, 1717, 1743.

Natrolite, hydrated silicate mineral, hydrous sodium aluminium silicate ($\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10} \cdot 2\text{H}_2\text{O}$). It has orthorhombic system square, needle crystals, with radiating nodules or compact fibrous masses. It is colourless or white, glassy and brittle. Hardness 5-5.5; s.g. 2.2. See also ZEOLITE.

Natta, Giulio (1903-), Italian chemist who shared the 1963 Nobel Prize in chemistry with K. ZIEGLER for their work on POLYMERS. In 1953 he began studying very large molecules and succeeded in polymerizing propylene to form polypropylene, a substance of great commercial importance.

Nattier, Jean Marc, the Younger (1685-1766), French painter. He painted historical subjects but was best known as a portrait painter, especially of court ladies. Among his sitters were Peter the Great and the daughters of Louis XV.

Natural childbirth, labour and delivery without analgesics. To achieve this, pregnant women follow a pre-natal course of lectures on physiology and are taught exercises designed to promote relaxation during delivery. This usually helps to minimize pain.

Natural gas, fossil fuel associated geologically with PETROLEUM. The fossil history of the two fuels is, in fact, the same, since they are both formed largely from the decomposition, at remote times in the past, of marine plankton. Among the most chemically stable products of this decomposition are the hydrocarbon compounds, most light of which is methane, CH_4 , the main constituent of natural gas. This gas, now a major fuel source for Britain, also contains a little ethane, C_2H_6 , and other heavier hydrocarbons.

Natural History and Antiquities of Selborne (1789), collection of letters written by Gilbert White, curate at his birthplace, Selborne, Hampshire, who spent most of his time observing the local countryside and wildlife and passing on notes and observations to men of similar interests, such as Daines Barrington and Thomas Pennant.

Natural History Museum, in South Kensington, London, the principal centre in the UK for research into animal and plant taxonomy. It is also a great tourist attraction, with visitors from all countries coming to see its major collections of animals preserved by taxidermy. These include a blue whale - the largest of all animals. Also exhibited are animal and plant fossils and reconstructions, and ores, rocks and meteorites. The museum is maintained by the Department of Education and Science, and admission is free. See also BRITISH MUSEUM; VICTORIA AND ALBERT MUSEUM.

Naturalism, late 19th-century literary movement which began in France and was led by Émile ZOLA. An extension of REALISM, it emphasized the importance of

documentation and was a literary adaptation of the principles of DETERMINISM. It emphasized the physiological qualities of man rather than his moral or rational thought processes and writers sought to represent unselective reality in all its emotional and social ramifications. A major exponent of naturalistic drama was August STRINDBERG. Naturalism, which led many writers towards Social REALISM, was over as a movement by the beginning of the 20th century but had a profound influence on the development of the modern novel. In the visual arts, the term describes an extension of Realism and signifies total fidelity to nature.

Naturalization, acquisition by a person of the NATIONALITY of a country that is not his native one. Requirements for becoming a national vary among countries and also within each country; residence for a minimum period, political asylum, family relationship and marriage are possible grounds for becoming a national. In some countries, naturalized nationals are not necessarily CITIZENS.

Naturalization, in nature, introduction of animals and plants to another country. The process of adaptation to different environmental and climatic conditions is known as acclimatization. It can result in biological changes in plant and animal species; for example, plants when introduced to a warmer climate may become more luxuriant, and in animals acclimatization may lead to changes in the size, colour and density of the coat.

Natural philosophy, term roughly equivalent to the phrase natural science. Natural philosophy embraces both the physical and life sciences as well as mathematics. Isaac NEWTON entitled his great treatise on mathematical physics, published in 1687, *Principia Mathematica Philosophiae Naturalis* (Mathematical Principles of Natural Philosophy).

Natural rights, concept found in the writings of the philosopher JOHN LOCKE, who held that man possessed fundamental rights. Among these were life, property ownership and political equality.

Natural selection, in EVOLUTION, theory that those individuals of a species who possess a better capacity for survival in a particular environment will survive to reproduce and thus increase in numbers. This theory, which was first put forward by Charles DARWIN in his book *On the Origin of Species* (1859), is also expressed as "the survival of the fittest". See also pp.182, 186.

Natural theology, teaching concerning God which claims to be derived from the natural light of reason as distinct from revelation. This distinction was first worked out by the medieval Christian Church, which taught that certain religious truths could be perceived by man solely through the use of his natural faculties. In the 17th and 18th centuries the term was also used to denote certain schools of thought, such as DEISM, which were opposed to revealed, dogmatic theological systems requiring the support of a supernatural authority.

Nature reserve, area of land, sometimes including inland waters and estuaries, set aside for the study and conservation of wildlife. In Britain there are many such reserves, some managed by the Nature Conservancy Council, others by local authorities and trusts, including the NATIONAL TRUST and the County Naturalists Trusts. Reserves in Britain are usually looked after by one or more nature wardens. In National Nature Reserves and in others selected for their geological, ecological, zoological or botanical interest, scientific work is carried out by government, university or amateur ecologists. Nature trails are outlined by the British Tourist Authority, and proposals for the protection of hitherto unreserved areas are considered by the Society for the Promotion of Nature Conservation. Great care is taken by the various authorities that no housing or industrial development take place on nature reserves, and considerable public interest has been aroused in the isolated cases in which subjects of special scientific interest have been

affected or destroyed.

Naturopathy, system of medical therapy that relies exclusively on the use of natural substances, such as sunlight and diet. Massage is also a treatment.

Nau, Jacques Jean David (c.1630-71), French pirate who was active against the Spaniards in the Caribbean.

Naucalpan (Naucalpan de Juárez), city in central Mexico 11km (7 miles) NW of Mexico City. The city is noted for its annual religious fiesta, held in September. Now an industrial suburb of Mexico City, the chief industry is textile manufacturing. Pop. (1970) 373,605.

Nauplius, earliest and free-swimming larval form of most CRUSTACEANS and a component of PLANKTON. It has three pairs of appendages, no trunk segmentation and a single median eye. It usually passes through several other larval stages before adult form is attained. See also p.30.

Nauru (Naoero), island republic of the Commonwealth in the W Pacific Ocean, W of the Gilbert Islands. Discovered in 1798 by the British navigator John Hunter, the island gained its independence in 1968. Its economy is based on the mining and export of phosphates. Area: 21sq km (8sq miles). Pop. (1975 est.) 8,000. See also p.2102.

Nausea, expectation of vomiting, which frequently follows; commonly caused by a digestive disorder and accompanied by an excess of saliva. Other causes are pain, shock, or liver or kidney disorders. Accompanied by vertigo, nausea may be a symptom of inner ear or brain disease.

Nausea (1938), early novel by Jean-Paul SARTRE, outlining the precepts of EXISTENTIALISM and attacking middle-class morality. Roquentin, who denies the existence of a divine purpose, feels an overwhelming disgust at the futility of life. Sartre writes with attention primarily to ideas rather than events or characters.

Nautical Almanac, publication of the hydrographic services of several countries that is produced to aid navigators. It includes detailed information on coastal waters, harbour facilities, winds, tides, currents, hazards and other data that cannot be shown on area charts.

Nautical mile, unit used to measure distances at sea. It is defined as the length of one minute of arc of the Earth's circumference of a great circle of the Earth. As the Earth is not a perfect sphere, this distance varies, and the equivalent in feet is now usually given as a rounded off figure of 6,080 or 1,853m. One nautical mile travelled per hour is a speed of one knot.

Nautilus, or chambered nautilus, CEPHALOPOD found in W Pacific and E Indian oceans at depths down to 200m (660ft). Its large coiled shell is divided into numerous, gas-filled chambers with the body located in the foremost chamber. Its head bear 60-90 retractable, thin tentacles without suckers, and it moves by squirting water from a funnel. Shell size approx. 25cm (10in). Family Nautilidae; genus *Nautilus*. See also MOLLUSC; pp.24, 26, 182.

Navajo, Athabascan-speaking tribe, the largest Indian group in the USA, famed for fine weaving and silverware. Their tribal reservations in Arizona and New Mexico are the most extensive in the country. In the early 1970s the Navajo numbered about 100,000.

Navarino, Battle of (1827), naval battle in which the British, French and Russian fleets, intervening in the Greek War of Independence, destroyed the Turkish-Egyptian fleet under IBRAHIM PASHA. See also p.1662.

Navarre, province and former ancient kingdom in N Spain, on the French border; the present capital is Pamplona. Originally inhabited by Vascones it was conquered by the Romans in the 1st century BC. After the fall of Rome in the 400s, Navarre resisted invasions by the Visigoths, Arabs and Franks for 400 years. The kingdom dominated Christian Spain in the early 11th century but was divided into three kingdoms in 1035. In 1512 the part was conquered by Ferdinand II of Aragon and incorporated into Castile in 1515. The N part passed to Henry IV,

King of France, in 1589. Its products include timber, cereals, vegetables and sugar beet. Area: 10,502sq km (4,055sq miles). Pop. (1970) 464, 867.

Nave, central and main aisle of a church or cathedral. It extends from the main entrance to the transepts, and excludes the secondary north and south aisles. It is traditionally the seating area for the congregation, in contrast to the chancel which is reserved for choir and clergy. The word "nave" derives from the Latin for "ship", perhaps because of the adoption of a ship as a symbol for the Church.

Navel, or umbilicus, depressed scar on the abdomen where the umbilical cord, severed at birth, once joined the fetus to the mother's placenta.

Navigation, science of determining the position of a ship or aircraft, and charting a course for guiding it from one point to another. Four main techniques are used: dead reckoning, piloting, celestial navigation and electronic navigation. Position (the point of the Earth's surface, established by LATITUDE AND LONGITUDE), direction (indicated as angular distance and measured in degrees of arc from true north), speed (rate of travel in nautical miles per hour), and distance may be plotted with special charts and instruments.

Navigation, aircraft, methods of determining the course and location of an aircraft. A pilot can check landmarks to note his progress (a system called pilotage) or he can use dead reckoning to fly a computed heading and speed, timing his arrival at checkpoints. The automatic direction-finder (ADF) can be tuned to low frequency radio stations to determine their relative bearing to his course. The static-free very high frequency omnirange (VOR) and distance measuring equipment (DME) are even more sophisticated radio devices that allow extremely accurate navigation. Inertial Guidance is capable of fixing a point precisely in space without reference to any ground-based equipment. See also pp.526, 646.

Navigation, celestial, method of determining position on or above the surface of the Earth by comparing computed lines of position with lines established with a sextant. Points of intersection of the plotted lines represent a celestial fix.

Navigation Acts, body of laws imposing protectionist trade restrictions upon foreign commercial shipping, an outgrowth of the economic theory of MERCANTILISM. In Britain, the Navigation Acts were a body of regulations, passed from 1651 onwards, whereby British trade with Asia, Africa and the Americas could be undertaken only by British vessels, and whereby products from the British colonies could not be exported direct to other European nations, but had to pass through a British port first. The Navigation Act of 1651 was one cause of war with the Dutch (1651-54) and later contributed to unrest in the American colonies. The Navigation Acts were not finally repealed until 1854.

Návpaktos, seaport of w central Greece, on the n shore of the Gulf of Corinth. Ancient Návpaktos was the departure point of the Dorians for the Peloponnese; when it was captured in 456 bc by Athens, it became the chief Athenian naval base on the Gulf of Corinth. Taken by the OTTOMAN TURKS in 1499 and known also as LEPANTO, it was the scene of a major victory by European forces over the Turks in 1571. It has been part of independent Greece since 1832. Pop. (1976) 10,000.

Navy, labourer who excavates canals, railways, drains and other earthworks. Originally labourers on canals, or navigations, navvies in the canal- and railway-building period of the 1800s moved from one public construction to another. Navy is also the name for an earth-digging machine, usually called a steam navy.

Navy. See ROYAL NAVY.

Naxalites, Indian nationalist Communist revolutionaries of w Bengal. Their founder was Charu Mazumdar (1915-72). They undertook a guerrilla war against the Indian government in the 1960s, but were severely repressed; several hundred suspected Naxalites and sym-

pathisers were imprisoned in the early 1970s.

Naxos, Grecian island in the Aegean Sea, the largest of the CYCLADES group. It was first colonized by Ionians, became a tributary of Athens in 470 bc and was held by the Ottoman Turks 1566-1830, when it became part of independent Greece. It is famous in myth as the island where THESEUS abandoned ARIADNE. Products include fruit, oil and wine. Area 414sq km (165sq miles). Pop. (1971) 14,201.

Naylor (or Naylor), James (1618-60), prominent English Quaker. In 1656 he rode into Bristol in imitation of Christ's entry into Jerusalem. He was punished and imprisoned for blasphemy.

Naylor, Bernard (1907-), British organist, conductor and composer; he founded the Little Symphony Orchestra in Montreal (1942) which he conducted until 1947. From 1954 he was a lecturer at Reading University. His *King Solomon's Prayer* (1953) for soprano, chorus and orchestra was commissioned by the Canadian Broadcasting Company for the coronation of Queen Elizabeth II.

Nazarenes, group of 19th-century German painters, founded in 1809 by Johann Friedrich OVERBECK and joined the following year by CORNELIUS in the monastery of Isodora near Rome. Their intention was to paint religious subjects in the style of later medieval and early Renaissance artists, especially DÜRER, PERUGINO and the young RAPHAEL. See also pp.1556, 1557.

Nazareth, town in N Israel, 29km (18 miles) SE of Hai Fu. Mentioned in the New Testament as the home of JESUS CHRIST, it was taken by the Crusaders in 1099 and recaptured by the Turkish sultan Baybars in 1263. It was annexed by the OTTOMAN TURKS in 1517 and during this century lay within the Palestine Mandate (1922-48). Nazareth was taken by Israeli forces in 1948. Today it is a centre of pilgrimage and also a market town for the surrounding area. Manufactures include processed food, textiles and leather goods. Pop. (1970 est.) 34,000.

Nazarite, or Nazirite, in ancient Judaism, one who made a vow for a period of time, usually 30 days, or for life, to follow certain observances, which normally included abstinence from wine. In addition, one did not shave and avoided corpses to maintain ritual cleanliness. The procedure disappeared during the Middle Ages.

Nazca, or Nasca, Indian civilization in the southernmost coastal valleys of Peru; it flourished 200 bc-AD 600. The Nazca, who developed without outside influence, were a relatively small group of farmers notable for their unique and highly stylized ceramics and textiles.

Naze, The (Lindesnes), cape in Vest-Agder county of S Norway, the southernmost point of the Norwegian mainland. It is the site of a 17th-century lighthouse.

Nazerat. See NAZARETH.

Nazism. See NATIONAL SOCIALISM.

Ndjamena (Fort-Lamy), port and capital city of CHAD on the River Chari. It is an important market for the surrounding region, which produces livestock, dates and cereals. Ndjamena's main industry is meat processing. Pop. 224,000.

Ndola, city in N central Zambia, s central Africa, 274km (170 miles) N of Lusaka. It is the commercial centre of a copper mining region. Other products include cement, chemicals, soap. Pop. (1972 est.) 235,000.

Ndongo, southern African kingdom of the Bantu Mbundu people during the 16th and 17th centuries. It was subject to the depredations of slave traders from the Congo, and gradually conquered by the Portuguese.

Neagh, Lough. See LOUGH NEAGH.

Neagle, Dame Anna (1904-), leading British actress, a former chorus girl (1926-30). Her theatre appearances include *As You Like It* (1934), *Emma* (1944), *Charlie Girl* (1965-71), *The First Mrs Fraser* (1976) and *Maggie* (1977). She appeared in the films *Victoria the Great* (1937), *Edith Cavell* (1939), *Odette* (1950), *The Lady With The Lamp* (1951) and *The Lady is a Square* (1958).

Neanderthal man, Middle PALAEO-LITHIC man, known from remains in Europe, around the Mediterranean region, and Asia. A Neanderthal man was first discovered in Neander Valley in w Germany in 1856. His body was thick and powerfully built, his face large with small cheek-bones, and his cranial capacity larger than modern man's. See also pp.114-116, 114-115, 118-119, 1156.

Neap tide. See TIDES.

Near-sightedness. See MYOPIA.

Nebo, Mount, mountain-top in N Jordan, at the N end of the Dead Sea. According to the Bible, MOSES saw the Promised Land before his death from this point. Height: 806m (2,644ft).

Nebraska, state in w central USA, in the Great Plains. The land rises gradually from the E to the foothills of the Rocky Mts in the W, and is drained chiefly by the Platte River, a tributary of the Missouri. The E half of the state is farmland where farmers grow cereal crops and raise cattle and pigs. Cattle are also grazed on the sand ridges farther W. Nebraska's economy is overwhelmingly agricultural and food processing is the major industry, but since WWII efforts have been made to diversify manufacturing, which now includes electrical machinery and chemicals. There are deposits of oil, and sand, gravel and stone are quarried. Nebraska's state capital is Lincoln; Omaha is the largest city and is also an important insurance centre.

The region was acquired under the LOUISIANA PURCHASE of 1803 and was unknown until the LEWIS AND CLARK EXPEDITION the following year. The territory of Nebraska was created in 1854. After the Homestead Act of 1862, thousands of settlers occupied the free land the act offered. The completion of the Union Pacific Railroad in 1869 brought further development to the region, which had been admitted to the Union in 1867. Area: 200,017sq km (77,227sq miles). Pop. (1980 est.) 1,570,006. See also p.2161.

Nebrija, Elio Antonio de (1444-1522), Spanish scholar. Generally thought to be Spain's greatest Renaissance Humanist, he spent ten years studying in Italy before returning to Spain to write *Introductiones latinae* (1481), a Latin grammar, *Vocabulario latinoespañol* (1492), a lexicon, and his greatest work *Gramática castellana* (1492), the first vernacular scientific grammar in Europe.

Nebuchadnezzar (Nebuchadrezzar), (d. 562 bc), second king of the Chaldean or New Babylonian empire (c. 604-562 bc). He defeated the Pharaoh Necho in battle at Carchemish in 605 bc but was himself defeated by Necho in 601 bc. He placed the puppet King Zedekiah on the Judean throne but was forced to destroy Jerusalem after a revolt. He was responsible for many buildings in BABYLON; for his Median wife he built the hanging gardens there which became one of the seven Wonders of the World. See also pp.1165, 1186.

Nebula, concentration of gas, chiefly hydrogen, and dust particles in interstellar space. Formerly referred to as galactic nebulae, these objects, from which stars are thought to originate, are assigned to two main classes: emission nebulae and reflection nebulae, both of which are described as bright nebulae. An emission nebula, such as the Trifid Nebula in Sagittarius, is largely gaseous and shines by the absorption and re-emission of energy from stars located within or near it. Reflection nebulae, which contain more dust, shine by reflecting light from nearby stars. An example of this type of nebulosity accompanies the Pleiades cluster. Dark nebulae absorb energy but do not re-emit it as visible light and are only rendered visible when they happen to obscure light from star fields lying beyond them, for example the HORSE'S HEAD NEBULA. See also pp.980-985, 980-985.

Neck, in man and other vertebrates, part of the body that connects the head and the torso. It contains the seven cervical vertebrae of the spinal column and, to the front, the throat or pharynx, which leads on to

Naxos; the town and harbour are on the west coast of the island.

Nazareth, although an Arab town, also has many different Christian churches.

Anna Neagle as Florence Nightingale, with the original lamp used in the Crimea.

Nebraska's cultivated fields are protected from erosion by belts of trees.

Necker, Jacques

the larynx, or voicebox. Farther down, this tube becomes the trachea, which carries air to the lungs. Behind the trachea lies the oesophagus, the tube which carries food to the stomach. Blood vessels of the neck include the carotid arteries and the JUGULAR veins.

Necker, Jacques (1732–1804), French financier and statesman, b. Switzerland. Finance minister under Louis XVI from 1776 to 1781, he was a popular minister but had little political acumen and was forced to resign. Recalled in 1788, his programme of reforms earned him the hatred of the court and he was dismissed on 11 July 1789. The storming of the BASTILLE forced Louis to reinstate him, but he finally resigned in 1790. See also p.1550.

Necrophilia, sexual attraction towards dead bodies. It is a rare deviation closely related to FETISHISM. Some cases of murder-rape may involve necrophilia.

Necrosis, death of plant or animal tissue caused by an outside agent, such as cuts, burns or diseases. A LESION, a sign of necrosis, is often a valuable guide in diagnosis.

Nectar, sweet liquid secreted by many plants. It consists mainly of a solution of GLUCOSE, FRUCTOSE and SUCROSE in water. The glands that produce it usually lie at the base of the flower petals, but may be found also in parts of the stem. Nectar attracts insects, which help with CROSS-POLLINATION. Bees turn nectar into HONEY.

Nectar, in Greek mythology, drink of the gods. AMBROSIA was their food.

Nectarine, variety of PEACH tree and its sweet, smooth-skinned, fleshy fruit. The tree and the stone within the fruit are indistinguishable from those of the peach. Family Rosaceae; species *Prunus persica nectarina*. See also p.688.

Neddy, short for the National Economic Development Council, an advisory body set up by the British Government in 1962 to carry out economic planning, with the aim of increasing the rate of economic growth in Britain. It came under the control of the Department of Economic Affairs in 1964. It is composed of representatives of employers, trade unions and the government, and its other aims are to overcome economic obstacles, stabilize industrial incomes and publicize the importance of new developments in industry. Its function of monitoring prices was taken over by the Prices Commission in 1973–74. Various sub-committees deal with particular industries.

Needlefish, any of several species of primarily marine fish found in tropical and temperate waters. Needlefish have long jaws with fine, needle-sharp teeth and long, slender bodies. Family Belontiidae. Length: 1.2m (4ft).

Needles, The, noted geographical feature consisting of three chalk stacks, situated to the w of the Isle of Wight, s England. A lighthouse is situated on the most westerly stack.

Needlework, work done with a needle: sewing and mending or ornamental work such as EMBROIDERY, appliqué, smocking, patchwork and quilting. KNITTING and CROCHET, which require special eyeless needles, are also included. Evidence survives of quilting and embroidery in Egypt as early as 3400 BC; embroidery was popular in Classical Greece and among the ancient Maoris, and had become an art form in Europe by the 12th century. Appliqué was first used by the Persians in the 9th century BC, and patchwork dates from the 6th century.

Neel, Louis Boyd (1905–), British conductor who founded the Boyd Neel Orchestra (1932), which became known throughout the world as a fine and disciplined string orchestra. After wwn Neel conducted the Sadlers Wells Opera (1944–5), gave many lectures and radio broadcasts and toured extensively. In 1971 he went on a world tour with the Hart House Orchestra of Toronto, which he founded in 1955.

Neel, Louis-Eugène-Félix (1904–), French scientist who shared the 1970 Nobel Prize in physics with H. ALFVÉN for their work in SOLID-STATE PHYSICS. Neel

studied the magnetic properties of solids and discovered antiferromagnetism in which the magnetic fields of small groups of atoms are aligned in opposite directions. His discoveries have been widely used in computer memories.

Neerwinden, battles of, two battles fought near the Belgian village of same name. The first, in 1693 during the War of the Grand Alliance, was a victory for a French army against Anglo-Dutch forces. The second, in which Austria defeated France, occurred in 1793 during the FRENCH REVOLUTIONARY WARS.

Nefertiti, or Nefretete (fl. 14th century BC), Queen of ancient Egypt; wife of AKHENATON, but overshadowed by her mother-in-law Ti. She is remembered for her support of her husband's innovative religious ideas and for her exceptional beauty, seen in the famous bust found at Tell el-Amarna.

Nefertum, in Egyptian mythology, son of PTAH and the lion goddess SEKHMET. Often depicted wearing an open lotus on his head and standing upon a crouching lion, he is sometimes shown with the head, sometimes with the body, of a lion.

Negev, desert region in Israel that covers approx. 60% of Israel's total land area. The chief city is Beersheba in the NW which has fertile land irrigated by the National Water Carrier Project. Towards the S, the area becomes more desolate. It was the scene of conflict between Egyptian and Israeli forces after the Palestine mandate in 1948. The area has good mineral resources including copper, phosphates, natural gas, gypsum, ceramic clay and magnesium ore. Area: 12,170sq km (4,700sq miles).

Negligence, in law, failure to exercise reasonable care towards material goods, other people or oneself, resulting in unintentional harm. The concept of liability for one's negligence dates from Roman times and is based on the supposed actions of a "prudent and reasonable" man. Most cases involving negligence are decided by a jury. In some circumstances, such as MANSLAUGHTER, negligence can be a criminal offence.

Negombo, city in w Sri Lanka, on the Negombo Lagoon. It is the agricultural trade centre for the produce of the surrounding area, primarily coconuts and cinnamon. The city is most noted for its manufacture of ceramics and brassware. Sri Lanka's international airport is at Negombo. Pop. (1978 est.) 64,000.

Negri Sembilan, state of Malaysia, SE Asia, on the Strait of Malacca; the capital is SEREMBAN. Originally a confederation of nine states, it came under British protection in 1874, became one of the Federated Malay States in 1895 and a state of Malaysia in 1963. Its products include rubber, rice and tin. Area: 6,708sq km (2,590sq miles). Pop. (1970) 479,312.

Negrito, pygmy people of the Philippines. Related to other SE Asian PYGMY groups, they are semi-nomadic forest and grassland dwellers, living by food gathering, hunting and fishing. They possess no distinctive language of their own, but speak the language prevalent in the area in which they live.

Negritude, philosophy first mentioned by Aimé CÉSAIRE in his *Return to My Native Land* (1939). He defined it as the recognition of the fact of being a Negro and the acceptance of this fact and of its cultural and historical consequences.

Negro, in anthropology, one of the major human racial groups, sometimes divided into Congoid and Capoid races, and including PYGMY populations. Generalized Negro physical characteristics include dark skin pigmentation; curly to spiral-tufted hair; full lips; a broad nose; and a high incidence of the R blood group. Negro people are indigenous to sub-Saharan Africa, but their migration (at one time forced through the activities of the slave trade) has established them as majority or minority groups in many other parts of the world, particularly in North America and the islands of the West Indies. See also pp.120–123, 120–123.

Nehemiah, in the OLD TESTAMENT of the BIBLE, one of the two books with EZRA

which tells the history of the JEWS from 538 BC to 432 BC. Many of the documents and lists that make up much of the books are written in Western Aramaic rather than in Hebrew.

Nehru, Jawaharlal Pandit (1889–1964), Indian leader. He joined the Indian independence movement in 1919, and in 1929 was elected President of the Indian National Congress. He became the first Prime Minister and Foreign Minister of India (1947–64). He led the new nation through its troubled beginning, launching programmes to industrialize and socialize India. In 1948 India became involved in a war over Kashmir with Pakistan, although in foreign policy Nehru advocated neutralism and pacifism. See also pp.1698, 1739.

Neill, Alexander Sutherland (1883–1973), Scottish educator. He founded an International School in Germany (1921), which moved to England (1924) and is now called Summerhill. It continues to be run on his ideas, which included allowing a child maximum freedom and encouraging spontaneity within a structure of self-government. He is the author of *Summerhill* (1962) and *Neill, Neill, Orange Peel* (1973).

Neilson, James Beaumont (1792–1865), Scottish inventor. Working as manager and engineer of Glasgow Gasworks (1817–47), he patented (1828) his invention of the hot-air blast method of smelting iron, which greatly advanced iron production technology.

Neilson, John Shaw (1872–1942), Australian poet who was brought up in the bush and had little formal education. His poems, although simple in structure, are penetrating, mystical insights filled with superb imagery. They include *Heart of Spring* (1919) and *Men of the Fifties* (1948).

Neisse (Nysa, Nysa Łużycka, Nisa), river in central Europe. It rises in NW Czechoslovakia and flows N, forming part of the post-1945 German-Polish border, before joining the Oder River S of Eisenhüttenstadt. Length: 256km (159 miles).

Nejd, plateau region in central Saudi Arabia. The WAHHABI leader IBN SAUD, gradually (1902–25) won it back from Turkish control and, following his capture of the HEJAZ (1925), the two regions became part of modern Saudi Arabia (1932). Area: 1,157,739sq km (447,000sq miles).

Nekrasov, Nikolai Alekseyevich (1828–78), Russian poet and editor of *The Contemporary* (1846–66). He encouraged young talent and published the early work of IVAN TURGENEV, Fyodor DOSTOEVSKY and Leo TOLSTOY. His own poetry expresses compassion for the Russian peasantry, especially in the satirical epic *Who can be Happy and Free in Russia?* (1879).

Nekton, the active swimming organisms at the sea's surface, considered as a whole. It includes the large migrating marine animals such as adult sharks, fish and whales. See also BENTHOS; PELAGIC; PLANKTON.

Nelson, Horatio Nelson, Viscount (1758–1805), British naval commander. He entered the navy in 1771 and from 1793 served in the Mediterranean under Admiral HODGKINS; he lost the sight of his right eye in action in Corsica. He fought with great distinction under Jervis at Cape St Vincent in 1797, and lost his right arm off Tenerife in the same year. He commanded the fleet that won a crushing victory over the French at the Battle of the Nile in 1798 and, promoted to Vice-admiral, he fought in the Battle of Copenhagen in 1801 (which disrupted the ARMED NEUTRALITY). Recalled to the Mediterranean in 1803, he blockaded Toulon for two years until the French fleet finally eluded him. He was killed at the ensuing Battle of TRAFALGAR (1805). See also pp.1554, 1555.

Nelson, city and port of New Zealand, on Tasman Bay, South Island. It is a centre of light industry and has an impressive Anglican cathedral. It is the home of the noted CAWTHRON INSTITUTE.

Nelson, river in Manitoba province, Canada; it flows NE from Lake Winnipeg into the Hudson Bay at Port Nelson. The

mouth of the river was discovered in 1612, and the river became a route for fur traders. Near its mouth the first HUDSON'S BAY COMPANY trading post was founded in 1670. Length: 644km (400 miles).

Nematode. See ROUNDWORM.

Nematophyton, large fossil plant, one of the earlier plants to invade the land, dating from about 400 million years ago. It had a stem about 60cm (24in) in diameter and appears to have been a highly developed ALGA, a relative of SEAWEEDS. See also p.272.

Nemea, city in ancient Greece. It was the site of a temple of ZEUS where and in whose honour the Nemean Games were held. These were established in 573 BC and held biennially. Nemea was also believed to be the place where HERCULES killed the NEMEAN LION.

Nemean Lion, in Greek mythology, beast that terrorized the valley of NEMEA. The slaughter of the lion was the first of HERCULES' twelve labours. Unable to club it to death, Hercules caught it and squeezed the life out of it. He wore its skin as a cape.

Nemertea, ribbon worm, or proboscis worm, also called Nemertinea, phylum or marine flat-worms similar to platyhelminthes and characterized by a protrusible proboscis, an anus and a circulatory system. Reproduction is sexual. Length: 2.54cm (1in) to several metres. The 600 species include the bootlace worm *Lineus geniculatus*. See also p.52.

Nemesis, in Greek mythology, personification of the gods' disapproval or jealousy and the retribution for wrong doing or sacrilegious activity. A goddess of fertility also called Nemesis was worshipped in Attica.

Németh, László (1901–), Hungarian dramatist and novelist. After giving up a career in medicine he turned to writing. His novels, mainly autobiographical, include *Gyász* (1935), *Szerdai Fogadósnép* (1940) and a social study *Izony* (1947; tr. *Revelation* 1965). His plays are mostly historical and include *Galilei*.

Nemirovich-Danchenko, Vladimir (1858–1943), Russian playwright and stage director who co-founded the MOSCOW ART THEATRE with STANISLAVSKY. **Néné, or Hawaiian goose**, unusual and rare species of goose found in the Hawaiian Islands. It has a brown-grey barred body and a black face. Length: about 65cm (25in). Family Anatidae; species *Branta sandvicensis*.

Nennius (fl.c.800), Welsh historian to whom is ascribed the set of manuscripts called *Historia Britonum*. It contains much on the early history of Britain and the Anglo-Saxon invasions. It also studies early British legends, especially the Arthurian legend. Most historians believe that the history is a revision by Nennius of an earlier work. See also pp.1154, 1154.

Neo-Classicism, revival of interest in the Classical arts, usually those of Greece and Rome, although in the 20th century the term more specifically refers to the return to classical values in the 18th century. Interest in Greek and Roman art began during the RENAISSANCE, but the self-conscious Neo-Classical movement did not occur until the mid-18th century. Reacting against BAROQUE and ROCOCO styles and inspired by the excavations of HERCULANEUM (in the 1740s), architecture, painting, sculpture and interior design were permeated by Greek and Roman models. Many people throughout Europe began to collect classical artefacts, and painters such as DAVID produced archaeologically exact interpretations of scenes of classical history. PALLADIAN architecture, which used the Greek forms of colonnade and portico, was explored by Robert ADAM, and in Napoleon's France the Empire style explored the possibilities of grandeur contained in Neo-Classicism. Continuing discoveries of classical remains after 1800, such as the ELGIN MARBLES which were procured from the Turks by Lord Elgin in 1803, kept interest in Neo-Classical architecture alive, particularly in the work of SOANE and NASH. In art, Greek line-drawing was popularized by WINCKELMANN and FLAXMAN, and its

austerity, purity of form and elevated emotions reigned supreme until the 1820s. Since 1800, Neo-Classicism had been questioned in all the arts by the advocates of ROMANTICISM, but it was enshrined in academic and official styles until a general widening in artistic tastes brought a move towards eclecticism in the mid 19th-century. In the 20th century, artists such as PICASSO, musicians such as STRAVINSKY and poets such as T. S. ELIOT and Ezra POUND went through a Neo-Classical period in the 1920s and 1930s; in this context the term refers to their return to formalism and reaction to EXPRESSIONISM. See also pp.1486, 1487, 1546, 1547.

Neo-classical music, style of composition from c. 1920 to 1950. In reaction to the emotionalism and "subjectivity" of Romantic music, the Neo-Classical movement returned to an emphasis on pure sound and the perfection of the form of the composition. Eighteenth-century forms such as the toccata, fugue and concerto grosso were revived, and emotional appeal became more subtle. Composers who explored classicism included STRAVINSKY, PROKOFIEV (eg his Symphony No. 1, the "Classical") and HINDEMITH. Parody and satire is also evident in works by such composers as MILHAUD.

Neo-Darwinism, development of Darwinism in which a distinction is made between genetic and acquired characteristics, the latter not being hereditary.

Neodymium, metallic element (symbol Nd) of the LANTHANIDE SERIES, first isolated in the form of its oxide in 1885. The pure metal was first obtained in 1925. Chief ores are monazite (phosphate) and bastnasite (fluorocarbonate). Properties: at.no. 60; at.wt. 144.24; s.g. 6.8-7.0; m.p. 1,010°C (1,850°F); b.p. 3,127°C (5,661°F); most common isotope Nd¹⁴² (27.11%).

Neo-Impressionism, late 19th-century painting style, originating in France and involving the use of POINTILLISM (also called Divisionism) and a formal composition far removed from the "snapshot" composition of IMPRESSIONISM. The style is seen at its purest in the works of SEURAT, its chief exponent, whose *Sunday Afternoon on la Grande Jatte* (1885) became the Neo-Impressionist exemplar. Other leading adherents include SIGNAC (the chief theoretician), CROSS and, briefly, GAUGUIN, van GOGH and TOULOUSE-LAUTREC.

Neolithic Age, or New Stone Age, period in man's evolution following the PALAEO-LITHIC, in which man first lived in settled villages, domesticated and bred animals, cultivated cereal crops and practised stone-grinding and flint-mining. See also pp.117, 119, 1158-1159.

Neomycin, ANTIBIOTIC drug, active against a variety of bacterial diseases. It is produced by a soil actinomycete.

Neon, gaseous non-metallic element (symbol Ne) of the inert gas group, discovered in 1898. It is present in the atmosphere (0.0018% by volume) and is obtained by the fractionation of liquid air. Its main use is in DISCHARGE TUBES for advertising signs. The element forms no compounds. Properties: at.no. 10; at.wt. 20.183; m.p. -248.67°C (-415.6°F); b.p. -246.05°C (-410.89°F); most common isotope Ne²⁰ (90.92%).

Neon lamps. See DISCHARGE TUBE.

Neon tetra, freshwater tropical characin fish found in the headwaters of the River Amazon; discovered in 1936. It is slender and brilliant blue, red and green, and is a popular aquarium fish. Length: 3.5-4cm (1.3-1.5in). Family Characidae; species *Paracheirodon innesi*.

Neophyte, in Greek, literally newly planted. The term applied to those newly initiated into the mystery religions such as the ORPHIC or Eleusinian cults during the height of Greek civilization. Later, the newly baptized of the early Christian Church were also called neophytes.

Neoplasm, TUMOUR in human beings and domestic animals caused by various factors, such as viruses, chemicals and injuries. See also pp.1062, 1063.

Neo-plasticism, style of painting advocated by the Dutch Group of artists known

as de STIJL in their 1917 periodical of that name. Led by Piet MONDRIAN, this group was important in that they helped to bring about co-operation between artists, sculptors, architects and industrial designers. They used the rectangle as their basic form in design and the primary colours (blue, red and yellow), together with white, black and grey. They believed that to reduce art to abstract, geometrical forms would free it entirely from the artist's personality.

Neo-Platonism, school of philosophy that reached its zenith between about AD 250 and AD 550. It was more than a revival or a new version of Platonic thought. It combined PYTHAGOREAN, STOIC PLATONIC and ARISTOTELIAN ideas with strains from JUDAISM, Oriental religions and CHRISTIANITY. Formative leaders of the movement were two 3rd-century philosophers, PLOTINUS and PORPHYRY, who tried to compete with the rising influence of Christianity. Its end came with the Arab conquest of Alexandria but its influence persisted throughout the Middle Ages and even during the Renaissance.

Neoprene, synthetic rubber very resistant to attack by corrosive chemicals and widely used in the chemical industry. It is a polymer of chloroprene, CH₂=CCl-CH=CH₂.

Neoptolemus, in Greek mythology, son of ACHILLES and a noted warrior, sometimes called PYRRHUS (or Pyrrhos). He was taken to the siege of TROY by Odysseus, where he was one of those chosen to be left inside the wooden horse, and where he killed Priam. He died a violent but mysterious death at Delphi. He also appears in *Philoctetes* by SOPHOCLES.

Neo-Pythagoreans, philosophical movement which began in the 1st century BC and continued until it was diluted by the rise of NEO-PLATONISM in the 3rd century AD. It combined Jewish and Hellenistic elements with the more religious and mystical aspects of PYTHAGOREAN thought and influenced Neo-Platonism.

Neorealism, Italian film movement during the period 1945 to 1950, which dealt with the harshness of life and death. Roberto ROSSellini directed the first such film, called *Open City* (1945), using non-professionals and real locations. Other directors were able to attack social conditions through specific issues; DE SICA looked at abandoned children in *Shoeshine* (1946) and at unemployment in *Bicycle Thieves* (1948).

Neoteny, persistence in an adult animal of larval characteristics, such as the retention of GILLS, as in some SALAMANDERS. An entire order of TUNICATES, the Larvacea, is permanently larval, never reaching a typical adult form. See also MUDPUDDY, p.54.

NEP. See NEW ECONOMIC POLICY.

Nepal, independent kingdom in central Asia, between India (S) and China (N). The land has three distinct regions: a s lowland area which has some arable farming, a central mountain range, and high mountains in the N extending to the HIMALAYAS. Most of the population is engaged in agriculture, and there is little industrial activity. The capital is Katmandu. Area: 140,797sq km (54,362sq miles). Pop. (1978 est.) 13,420,000. See p.2102.

Nephritis, also called glomerulonephritis or Bright's disease, an inflammatory disease of the KIDNEY. It is frequently caused by streptococcal infection, and may be chronic or acute. Sufferers of acute nephritis are best confined to bed, with a carefully regulated diet; chronic cases may be helped with artificial kidneys or kidney transplants. See also p.1078.

Nephron, microscopic filter of which there are over one million in the human KIDNEY. Each is a cup-like structure called a Bowman's capsule with an attached uriniferous tubule. The capsule surrounds a cluster of blood capillaries, and blood containing waste enters it. The tubule cells extract the water and wastes, and the blood leaves the nephron through the outgoing blood vessel of the capsule. See also p.161.

Nephrosis, disease of the KIDNEY charac-

terized by the presence of OEDEMA, large amounts of ALBUMIN in the urine and CHOLESTEROL in the blood. See also pp.160-161.

Nephthys, also called Maat or Nebhet, in Egyptian mythology, goddess of the dead and mother of ANUBIS by OSIRIS. Although originally probably a mother-goddess in pre-dynastic Egypt, she became a sister and equal of ISIS; both were the deities invoked in the death rites, often represented with outstretched wings protecting the souls of the dead.

Nepia, George (1905-), New Zealand rugby union player. Of Maori birth, he achieved rugby immortality as the 19-year-old full-back of the unbeaten 1924-25 ALL BLACKS, playing in all 30 matches of their tour of Britain and France. He also played in nine internationals for New Zealand (1924-30).

Neptune, Roman god, originally associated with fresh water but later identified with the Greek god POSEIDON and hence the sea. Salacia, a goddess of springwater, became his female counterpart. He was often depicted carrying a trident and riding a dolphin. His festival was in July, when fresh water was most scarce. Offerings were made to Neptune to assuage the water shortage.

Neptune, eighth planet from the Sun, observed in 1846 by Johann Galle and Heinrich d'Arrest. Neptune resembles the other giant planets (Jupiter, Saturn and Uranus) in having an atmosphere of hydrogen, methane and ammonia, a relatively low density and a rapid period of rotation. Neptune has two known satellites, Triton and Nereid. Mean distance from the Sun, 4,497 million km (2,794 million miles); mass, 17.2 times that of Earth; diameter, 49,500km (30,940 miles); rotational period, 15hr 48 min; sidereal period, 164.8 years. See also pp.926-927, 966-967, 1050, 1051.

Neptunium, radioactive metallic element (symbol Np) of the ACTINIDE group, first made in 1940 by NEUTRON bombardment of URANIUM. It is found in small amounts in uranium ores. The by-product Np²³⁷ is obtained in producing plutonium. Properties: at.no. 93; at.wt. 237.0482; s.g. 20.25; m.p. 640°C (1,184°F); b.p. 3,902°C (7,056°F); most stable isotope Np²³⁷ (2.14×10⁶ yr).

Nereid, in Greek mythology, a nymph of the sea or freshwater, a female spirit without malice for mankind. The nereids were said to be the daughters of Nereus, God of the sea, and of Doris, an Oceanid.

Nereid, in astronomy, one of two satellites of the planet Neptune. It has an eccentric orbit and is thought to be a captured asteroid. It comes within 1,400,000km (870,000 miles) of Neptune and has a diameter of less than 30km (200 miles). The sidereal period is almost one Earth year. See also pp.955, 967, 967, 1050, 1051.

Nereis, or ragworm, polychaete WORM that lives in sand or mud on the seashore. It is usually red or orange with numerous "paddles" on each side of its body. The forepart of its gut can be extended as a proboscis with a pair of jaws. Length: to 91cm (3ft). Family Nereidae. See also ANNELID; pp.2, 18, 19.

Nergal, in Mesopotamian religion, a secondary god depicted in Assyrian documents as a benefactor who restored the dead to life, heard prayers and protected crops and livestock. He is also depicted as a god of hunger and devastation, and became identified with the king of the underworld.

Neri, Saint Philip (1515-95), Italian priest, mystic and spiritual leader. In c.1533 he travelled to Rome and dedicated himself to God and a life of austerity, becoming a priest in 1551. In the same year he went to San Girolamo della Carità, attracting priests to what later became the Congregation of the Oratory, which received papal approval in 1575. An adviser to several popes and cardinals, he was influential in Henry IV's absolution in 1595 and averted conflict between Rome and France. He was canonized in 1622. Feast day: 26 May.

Nerina, Nadia (1927-), South African

Nemertea, or ribbon worm, shoots out its long proboscis to catch its prey.

Neo-Classical architecture revived the splendour of Greece and Rome.

Neon tetra is a species of decorative, highly colourful tropical fish.

Neoptolemus was famed in legend for his courage and also for his cruelty.

Nernst, Walther Hermann

prima ballerina, real name Nadine Judd. She studied in England from 1945 under Dame Marie Rambert and became prima ballerina of the Royal Ballet in 1951. In 1963 she created the title role in *Elektra*, a performance which earned her great acclaim.

Nernst, Walther Hermann (1864–1941), German chemist. He became professor at Göttingen and then in Berlin and was awarded the 1920 Nobel Prize in chemistry for his discovery of the third law of thermodynamics. His other important work was concerned with chain reactions in photochemistry. He wrote *Thermodynamics* (1893) and *The New Heat Theorem* (1918). See also pp.844–845.

Nero Claudius Caesar (AD 37–68), Roman Emperor (r. 54–68), born as Lucius Domitius Ahenobarbus. He was the son of AGRIPPINA II and the stepson of CLAUDIUS I, whom he succeeded. He murdered his brother Britannicus (AD 55), his mother (59) and his wife Octavia (62). He blamed the Christians for a serious fire in Rome in 64 and may have begun the first official persecution of Christians. After discovering a plot against him in 65, he had many distinguished Romans, including SENECA, his former adviser, executed. But he was overthrown in a military revolt and killed himself. See also p.1232.

Neruda, Jan (1894–1972), Czech lyric poet. He initially adopted ROMANTICISM, but later turned to a more realistic style. Among his works, which include prose and drama, are *Cosmic Songs* (1878) and *Ballads and Romances* (1883).

Neruda, Pablo (1904–73), Chilean poet, real name Neftalí Ricardo Reyes. He occupied a number of diplomatic posts after 1927 and was active in politics; he was elected a Communist Party senator in 1945 and supported the Marxist regime of Salvador ALLENDE (1970–73). Neruda's poetry transcended politics and dealt with the tragedy of the human condition in surreal imagery. His best-known work is *Canto General* (*General Song*; 1950). He was awarded the 1971 Nobel Prize in literature.

Nerva, Marcus Cocceius (c. AD 30–98), Roman Emperor from AD 96 to 98. After the despotism of DOMITIAN he reformed land laws in favour of the poor, revised taxation and tolerated the Christians. He adopted TRAJAN and handed over government to him.

Nerval, Gérard de (1808–55), real name Gérard Labrunie, French poet and prose writer. His writings reflect his obsession with mysticism and female dominance, and include *Les Filles du feu* (1854) and the sonnets *Les Chimères* (1854).

Nerve, collection of NEURONS (specifically AXONS) that link the various parts of the vertebrate nervous system with other organs in the body. Afferent or sensory NERVES transmit nervous impulses towards the CENTRAL NERVOUS SYSTEM. Efferent or motor NERVES transmit outwards from the central nervous system. Some nerves contain both afferent and efferent fibres, and are thus able to transmit both to and from the CENTRAL NERVOUS SYSTEM. Seven of the 12 pairs of cranial nerves, which link the brain with such sense organs as the eyes and ears, are examples of this. See also p.126.

Nerve cell. See NEURON.

Nerve cell membrane, membrane that surrounds the nerve cell, selectively allowing, or disallowing, the passage of substances in and out of the cell. It differs from other CELL MEMBRANES in projecting from the cell body in long structures resembling branches and twigs, called DENDRITES. See also pp.126–127.

Nerve centre, local concentration of interconnected nerves. In man, these are generally known as plexuses. They include the cervical plexus, supplying neck and diaphragm; the brachial, supplying the arms; the lumbar and sacral plexuses, supplying thighs and legs; and two plexuses of the AUTONOMIC NERVOUS SYSTEM: the solar plexus, supplying organs of the abdomen, and the cardiac plexus serving the heart. **Nerve gas,** extremely poisonous form of gas first developed as a weapon by the Germans in WWII but never used. Nerve

gases are often organic chemical compounds containing phosphorus. Their effect is to inactivate the enzyme cholinesterase and so prevent nerve messages reaching the muscles. The result is death within minutes by failure of respiratory and other systems. Inhalation of even small amounts of the gas, or any physical contact with the liquid chemical, is enough to cause death.

Nervi, Pier Luigi (1891–1979), Italian architect, noted for his innovative use of concrete in designs for large structures of great visual impact. His Giovanni Berta stadium at Florence (1932), famous for its cantilevered roof and stairs, and aircraft hangars at Orbetello (1940) established him as a major creative force in modern architecture. In the mid-1940s he invented ferro cemento, a strong, light corrugated concrete that he used in the Turin Exhibition Hall (1948). He also designed the UNESCO building, Paris (1954–58; with Marcel BREUER and Bernard Zehrfuss), the splendid Pirelli skyscraper in Milan (1958; with Gio Ponti), which has floors cantilevered from two tapering concrete pillars, the two domed sports stadiums in Rome (1957; 1959) and the Papal Audience Hall, Vatican (1971).

Nervo, Amado (1870–1919), Mexican poet who was also a journalist and a diplomat. He studied for the priesthood but turned to writing and became a leading figure of MODERNISMO. His best-known collections of verse include *Serenidad* (1914) and *Plenitud* (1918). He worked for several years in his country's diplomatic service, and was Mexico's Minister to Uruguay when he died.

Nervous breakdown, imprecise term commonly used to cover a wide range of conditions that can range from mental exhaustion to a number of mental illnesses. It usually refers to emotional conditions accompanied by such elements as DEPRESSION and ANXIETY. See also MENTAL ILLNESS.

Nervous system, mechanism that transmits information from one part of an animal body to another by means of nerve cells or NEURONS. In simple animals such as jellyfish and sea anemones, it consists of a nerve net without a centre, or brain. Stimulation of such animals produces a local muscular response in the region of the stimulus. More advanced animals have a concentration of nerve cells in the head that forms the brain and allows greater co-ordination. The human nervous system has two main parts. The central nervous system controls all voluntary muscles of the body, and is directed by the conscious will. The peripheral nervous system controls the voluntary and involuntary muscles of the body and the transmission of messages from the senses to the CENTRAL NERVOUS SYSTEM. See also pp.4–5, 124–129.

Nesbit, Edith (1858–1924), British writer, mainly of books for children. Her best-known stories were written in the period 1899–1913 and included *The Story of the Treasure Seekers* (1899) *Five Children and It* (1902) and *The Railway Children* (1908).

Nesfield, William Andrew (1793–1881), British painter of landscapes and a landscape gardener. He worked on the layout of Kew Gardens and St James's Park, London.

Ness, Loch, freshwater lake in N Scotland, running SW to NE along the geological fault of Glen More. It forms part of the Caledonian Canal. Since 1933 the Loch has featured in the news as the home of the LOCH NESS MONSTER. Length of loch: 38.4 km (24 miles); depth 230m (754ft).

Nest, structure built by a living organism to house itself, its eggs or its young. Nest-builders include some invertebrates, particularly social insects, and members of all the larger groups of vertebrates. The nests of ants, bees, wasps and termites may be highly elaborate and involve tunnels, passages and chambers. The nests of fish may be simple gravel scoops or enclosed structures, sometimes made of bubbles. Birds' nests vary enormously from simple cup-shaped arrangements of

twigs and other organic materials, to woven or knotted grass or leaves; some birds scrape a hollow in the ground to make a nest, others make nest-holes in cliffs, earth banks or trees. The most highly evolved animal to make a form of a nest is probably the GORILLA, which builds a new sleeping platform of leafy branches every night.

Nestlé, a Swiss-based industrial corporation that develops and manufactures food products, including canned milk, instant coffee and drinking chocolate. In the late 1970s it employed about 135,000 people throughout the world.

Nestorianism, Christian heresy according to which there are two separate natures in the incarnate Christ, the one divine and the other human, as opposed to the orthodox belief that the incarnate Christ is one person who is at once both God and man. The heresy, which was associated with the name of NESTORIUS (died c.451), bishop of Constantinople, was condemned by the Councils of EPHESUS (431) and of CHALCEDON (451). Nestorius was deposed and banished to the Libyan desert. The supporters of Nestorius, however, gradually organized themselves into a separate Church which called itself the "Church of the East" and had its centre in Persia. They were active in missionary work in Arabia, India and the Far East and have survived as a small community until modern times. See also CHRISTOLOGY; MONOPHYTISM; MONOTHELITISM.

Nestorius (d. c.451), patriarch of Constantinople (428–31), born of Persian parents. As patriarch he became involved in a theological dispute about the person of Christ, objecting to the title *Theotokos* (Mother of God) for the Virgin Mary. The Council of EPHESUS (431) condemned his belief in the two divine and human natures of Christ (NESTORIANISM) as a heresy, and Nestorius was deposed as patriarch.

Netball, seven-a-side ball game played by women. It is a variant of BASKETBALL, although the netball player may travel only two steps on receipt of the ball and is restricted to limited areas of the court. Only two players of each team are allowed in the shooting circle in order to take shots at the goal. The goal itself is the same size and height as that in basketball but without a backboard. A match lasts for one hour, divided into four equal parts plus intervals. The game was invented in the final decade of the 19th century, and is played chiefly in the English-speaking countries and the Commonwealth. The All-England Women's Netball Association was formed in 1926.

Netherlands, The, independent nation in NW Europe. A low-lying country with more than two-fifths of its land below sea-level, it relies on a system of dykes and dams for protection from the sea. Much land has been reclaimed and is used for pasture and arable farming; this forms an important part of the economy. Manufacturing industries have been developed since the end of WWII. The capital is AMSTERDAM. Area: 41,160sq km (15,892sq miles). Pop. (1980 est.) 14,091,014. See p.2102.

Netherlands, Revolt of the (1568–1648), also called the Eighty Years War, war by which The Netherlands won independence from Spanish Hapsburg rule. By 1576 the United Provinces (Dutch Republic) was formed. In 1579 the Catholic Walloon provinces defected and the rest of the republic had to struggle against Spain until a truce was called in 1609. The fight resumed in 1621 as part of the THIRTY YEARS WAR. Spain finally recognized Dutch independence in 1648.

Netherlands, The United, union of Belgium, Luxembourg and The Netherlands under one king, William I, son of William V of ORANGE, in 1815. It was arranged by the Congress of VIENNA at the end of the NAPOLEONIC WARS. In 1830 Belgium revolted against the union and declared its independence, which was formally accepted at the London Conference in 1839. In 1848 Luxembourg became an autonomous state with its own constitution and in 1890 it left the dual monarchy. **Netherlands Antilles,** autonomous group

of five main islands, and part of a sixth, in the West Indies, in the Caribbean Sea. The group includes Aruba, Bonaire, Curaçao (the largest island), Saba, Saint Eustatius, and the S half of Saint Maarten. The capital is Willemstad, on Curaçao. The islands were discovered in the 1490s by Christopher COLUMBUS, settled by the Spanish in 1527 and captured by the Dutch in 1634. Industries: oil refining, phosphates, tourism. Area: 993sq km (383sq miles). Pop. (1979) 256,000. See also p.2104.

Netherlands East Indies (Dutch East Indies), former overseas territory of The Netherlands which since 1949 has been INDONESIA. The area included Sumatra, Java, Madura, the Celebes, the Moluccas and parts of Borneo and the Lesser Sunda Islands. During WWII the region was occupied by Japan. After the war, international pressure prevented the Dutch from regaining control. Products include rice, rubber, tea, oil, tin, bauxite, coal and manganese.

Neto, Agostinho (1922–), Angolan poet, political leader and doctor. He became a leader of an Angolan cultural and political revival and was often imprisoned for his efforts to achieve Angola's independence. He became President of an independent Angola in 1975. His poetry is included in *Antologia da Poesia Negra de Expressão Portuguesa* (1958).

Netsuke, accessory of traditional Japanese dress, a toggle to secure the cord on which the inrō (a small box, often with several sections, holding medicines or snuff) would hang. In the 18th century it became fashionable to wear decorative wooden, ivory, metal or ceramic netsuke, and a genre of miniature carvings developed, which are now highly prized by collectors. The carvings are usually intricate, finely-worked representations of animals, commonplace objects or mythological subjects, although simple, abstract, or even natural netsuke (such as a weather-worn stone) are also known. Netsuke were also produced in the 19th and 20th centuries for the collectors' market; nevertheless these retained the characteristic pair of holes in the back or base through which a cord could pass.

Nettling, lake in S Central Baffin Island, Northwest Territories, Canada, which drains W into Fox Basin. The lake is frozen for most of the year. Area: 5,066sq km (1,956sq miles).

Nettle, any of numerous species of flowering plants of the genus *Urtica*, especially the stinging nettle (*U. dioica*), which is typical of the genus in that it has stinging hairs along the leaves and stem. It has heart-shaped serrated leaves, small green flowers and is sometimes used for medicinal or culinary purposes. Family Urticaceae. See also pp.371–372, 687.

Nettle rash, or urticaria, also called hives, intensely itchy skin eruption, the raised patches of which resemble nettle stings. It is an allergic reaction, usually to certain foods, but also to insect bites, contact with irritant plants and inoculations. Remedies include CORTISONE injections, the application of ANTIHISTAMINE creams, and avoidance of the particular substances to which the sufferer is hypersensitive. See also ALLERGY; pp.1063, 1074.

Network, electric, number of conductors and circuit components, such as resistors, capacitors and inductors, linked together to form a set of interconnected circuits. A passive network includes no source of energy, whereas an active network does. Direct current networks are governed by KIRCHHOFF'S LAWS, one of which states that the algebraic sum of the voltages in a closed circuit is zero and that the sum of all currents entering and leaving any given junction of a closed circuit is zero.

Netzahuacoyotl, city in Mexico state, S central Mexico; a suburb of Mexico City. It is on major transport routes into the capital and is an economically depressed residential area. Pop. (1970) 571,035.

Neue Sachlichkeit (New Objectivity), German art movement and also the title of the exhibition (1925) held at Mannheim. The movement, a return to straightforward realism, rejected EXPRESSIONISM and

even IMPRESSIONISM in favour of exact and minute representation of reality. Its principal exponents were Otto Dix and George Grosz.

Neumann, Franz Ernst (1798–1895), German scientist who, in two papers (1845, 1847), formulated the first mathematical theory of electromagnetic induction, the process of producing electricity from mechanical energy. In 1831 he extended the law of the heat of elements to molecular heat, postulating that molecular heat is equal to the total heat of each constituent atom. Neumann also did research into optics and crystallography. **Neumann, Johann Balthasar** (1687–1753), German Baroque architect influenced by the great geometrically planned buildings of BORROMINI and GUARINI. His secular works include the palaces of Brühl, Bruchsal and Würzburg, famous for their magnificent staircases. His major churches are the Vierzehnheiligen pilgrimage church, the Hofkirche, Würzburg, St Paulinus at Trier and the pilgrimage church at Neresheim. These elegant masterpieces are among the finest of German Baroque churches.

Neuralgia, acute, cyclic pain along a nerve. It may be the result of a VIRUS infection of the nerve, physical injury or VITAMIN DEFICIENCY. Analgesic drugs help relieve neuralgic pain.

Neurasthenia, earlier term for NEUROSIS. The term neurasthenia literally means "weakness of the nerves".

Neuritis, inflammation or degenerative lesion of the nerves accompanied by pain, paralysis and impaired reflexes. Causes are many and treatment is directed toward the cause.

Neurology, branch of medicine dealing with the diagnosis and non-surgical treatment of diseases of the NERVOUS SYSTEM. See also pp.1072–1073.

Neuron, nerve cell and basic structural unit of the NERVOUS SYSTEM. It is composed of a cell body and one or more DENDRITES and one axon. The dendrites and axon are nerve cell structures, extending beyond the cell body. Dendrites exchange impulses with neighbouring cells. An axon is usually longer and unbranched; it carries impulses longer distances. See also pp.126–127, 131.

Neurophysiology, study of the detailed structure and functions of NERVES and the nervous system. This includes the study of how nerve cells transmit their electrical impulses and how these are passed to other nerves and organs.

Neuroptera, order of carnivorous insects that include LACEWINGS and ANT LIONS; it is represented throughout the world. Members undergo complete metamorphosis from an egg, through larval and pupal stages to the adult form. Length: to 7 cm (3 in). See also pp.36–37.

Neurosis, personality disturbance marked by continual anxiety, depression, exaggerated fears or feelings of insecurity. It is considered a mild form of illness yet it usually affects significantly the way a person feels and acts towards others. See also pp.1106–1107, 1112.

Neurosurgery, surgical treatment of diseases and disorders of the NERVOUS SYSTEM. See also pp.1072–1073.

Neustria, western section of the kingdom of the FRANKS in the 6th, 7th and 8th centuries, formed when the empire of CLOVIS I was divided among his four sons (511). The ruler of the eastern section of the empire, Pepin of Austrasia, overcame Neustria in 687 and in 911 part of it (the area of present-day Normandy) was ceded to the Scandinavian pirates later known as NORMANS.

Neutrality, legal status of a policy of non-involvement in hostilities existing between nations. It is recognized by international law, mainly in the Declaration of Paris (1856) and the Hague Conventions V and XIII of 1907. The rights and obligations of neutral powers were codified by international treaties and conventions. A nation proclaiming its neutrality must be wholly impartial and refrain from helping or hindering any side. It must also protect its own territory from encroachment by belligerents.

Neutralization, in chemistry, reaction or TITRATION conducted in an aqueous medium between equivalent weights of an acid and a base to produce water and a salt, which is neither acidic nor basic, but has a pH of approximately 7. This process is often accompanied by the generation of heat. See also pp.900–901.

Neutrino, uncharged mass-less ELEMENTARY PARTICLE with SPIN $\frac{1}{2}$; it has little reaction with matter and is difficult to detect. There are two kinds: the ELECTRON NEUTRINO (symbol ν_e) is closely associated with the electron and is produced when protons and electrons react to form NEUTRONS, as in the Sun. The more common antineutrino occurs when a neutron decays. The muon neutrino (symbol ν_μ), associated with MUON, occurs in high-energy reactions. See also p.818.

Neutron, uncharged ELEMENTARY PARTICLE (symbol n) that occurs in the atomic nuclei of all chemical elements except the lightest isotope of hydrogen. It was first identified by James CHADWICK in 1932. In isolation it is unstable, decaying with a half-life of 11.3 minutes into a PROTON, ELECTRON and antineutrino. Its neutrality allows it to penetrate and be absorbed in nuclei and thus to induce nuclear transmutation and fission. It is a BARYON with SPIN $\frac{1}{2}$ and a mass slightly greater than that of the proton. See also p.812.

Neutron activation analysis, highly sensitive method of identifying the chemical composition of a substance by bombarding it with high-energy neutrons that are absorbed by the atoms present. The resulting radioactive nuclei emit radiation of an energy and decay rate characteristic of the original atoms, which can thus be identified. The quantity present can also be found with extreme precision.

Neutron flux, speed and rate at which NEUTRONS are released during the fission process in a controlled nuclear chain reaction. In a nuclear reactor, moderators of several kinds (especially DEUTERIUM and HYDROGEN) are used to absorb neutrons, and various spacing devices in the core reduce neutron speeds.

Neutron star. See PULSAR.

Neva, Battle of (1240), victory of the Novgorod Russians over the invading Swedes on the banks of the Neva River. Alexander Yaroslavich (later Nevsky) led the Novgorod forces which saved Russia from Swedish conquest.

Nevada, state in W USA. Much of it lies in the Great Basin, but the Sierra Nevada rise steeply from its W edge. Nevada's dry climate and steep slopes have hindered the development of an agricultural economy. Hay and lucerne (alfalfa) are the chief crops, and a little wheat and barley are grown; sheep and cattle grazing are much more important. Most of Nevada's economic wealth comes from its mineral deposits, which include, copper, lead, silver, gold, zinc and tungsten. The principal industrial products are chemicals, timber, electrical machinery, glass products and primary and fabricated metals. It is a tourist area and the main cities are Carson City (the state capital), Las Vegas and Reno, where gambling provides an important source of state revenue. The USA acquired the region in 1848 at the end of the MEXICAN WAR, before which the area had been visited by Spanish and British missionaries and fur trappers. Nevada was situated on the overland trail that took thousands of gold prospectors to California in 1849. When gold and silver were found in Comstock Lode in 1859, settlers flocked to Nevada. The territory of Nevada was organized in 1861 and admitted to the Union in 1864. The ghost towns created when the ores were depleted are today a tourist attraction. Area: 286,297sq km (110,539sq miles). Pop. (1980) 799,184. See also p.2161.

Névé. See FIRN.

Neville, Richard. See WARWICK, RICHARD NEVILLE, EARL OF.

Neville's Cross, Battle of (1346), English victory over the Scots. A Scottish army under David II, attempting to profit from Edward III's absence in France, invaded N England, but was shattered by English

forces at Neville's Cross, near Durham. David was captured.

Nevinson, Christopher Richard Wynne (1889–1946), British painter and print-maker whose work as a war artist (1917) is considered his best. He was influenced by CUBISM and FUTURISM and was a founder-member of the LONDON GROUP (1913). He also painted landscapes and portraits in a variety of styles.

Nevis. See ST KITTS-NEVIS.

Nevsky, Alexander. See ALEXANDER NEVSKY.

Nevus. See BIRTHMARK.

Newark, largest city in NE New Jersey USA, on the Passaic River and Newark Bay, connected to nearby New York City by tunnel. Founded in 1666 by the Puritans, Newark's industrial growth began after the American Revolution and with the development of transport routes. It has a college of engineering, dating from 1881. Newark's industries include electrical equipment, paints and chemicals. Pop. (1980) 1,965,304.

New Atlantis, *The* (c.1626), allegorical work of philosophy by Francis BACON. It concerns an imaginary island, Bensalem, where a philosophical commonwealth has been established to study the natural sciences. The pride of Bensalem is the university which, in contrast to English universities of the time is dedicated to serious scientific research.

Newbery, John (1713–67), British publisher, one of the first to produce books exclusively for children. He published a series of books called the *Juvenile Library*, including *Mrs Marjorie Two Shoes* and *Mother Goose's Melody* (c.1780). The US Newbery Award for children's literature is named after him.

Newberry, John Strong (1822–92), US geologist. After practising medicine in Cleveland (1851–55), he became professor of geology at Columbia University (1866–92). His publications include *Fossil Fishes and Fossil Plants of New Jersey* (1888) and *Paleozoic Fishes of North America* (1889).

Newbolt, Sir Henry John (1862–1938), British poet and writer, best known for his patriotic and naval verse. He practised as a barrister from 1887 to 1889 and from 1900 to 1904 edited *The Monthly Review*. In 1923 he was appointed to write two volumes of the official history of the naval operations of WWI. His works include *Admirals All* (1897), *The Year of Trafalgar* (1905) and *A Perpetual Memory* (1939).

New Britain, largest island of the Bismarck Archipelago, Papua New Guinea, in the SW Pacific Ocean, approx. 90km (55 miles) E of New Guinea; the main towns are Kimbe and Rabau. Discovered in 1606 by the Dutchman Jacques Lemaire, the island became a German protectorate in 1884; after WWI it was mandated to Australia. The island is mountainous, with several active volcanoes and hot springs. Products: copra, coconuts, cocoa, gold, copper, iron and coal. Area: approx. 36,674sq km (14,160sq miles). Pop. (1970 est.) 154,000.

New Brunswick, maritime province in E Canada, on the USA-Canada border. The land rises gradually from E to W and is drained chiefly by the St John and Miramichi rivers. More than three-quarters of the province is forested. The chief crops are hay, clover, oats, potatoes and fruit; dairy farming is also important. The principal industry in New Brunswick is timber; others include leather goods, pharmaceuticals and machinery, and fishing is important along the coast. There are valuable mineral deposits of zinc, copper, lead, coal and antimony. The principal cities are Fredericton, St John and Moncton.

The region was first explored by Jacques Cartier in 1534. With Nova Scotia, the area formed the French colony of Acadia. The colony was ceded to Britain in 1713, but the British were slow to settle it. Many Loyalists entered the region during the American War of Independence. This influx spurred the establishment of a separate colony of Nova Scotia, and the province of New Brunswick was established in 1784. A boundary dispute with

the USA was settled in 1842, and in 1867 New Brunswick joined NOVA SCOTIA, QUEBEC and ONTARIO to form the Dominion of Canada. Area: 73,437sq km (28,354sq miles). Pop. (1981 est.) 709,600. See also p.1997.

Newby, Percy Howard (1918–), British writer. He was lecturer in English (1942–46) and the controller of the BBC's Third Programme (1958–70). Among his numerous novels are *Something to Answer For* (1968; Booker Prize 1969), *A Lot to Ask* (1973) and *Kith* (1977).

New Caledonia (Nouvelle Calédonie), French overseas territory in the SW Pacific Ocean approx. 1210km (750 miles) E of Australia; the group takes its name from the main island, on which is the capital, NOUMÉA. Discovered in 1774 by Capt. Cook, the island became a French overseas territory in 1946. Products: copra, coffee, cotton, nickel, iron, manganese, cobalt and chromium. Area: 18,342sq km (7,082sq miles). Pop. (1975 est.) 136,000. See also p.2104.

Newcastle, Thomas Pelham-Holles, Duke of (1693–1768), English politician. He was a Whig who supported WALPOLE; he became Secretary of State (1724–54) and was the king's Chief Minister (1754–56; 1757–62). Throughout the period his control of patronage contributed significantly to the Whig ascendancy. See also p.1202.

Newcastle, William Cavendish, Duke of (1592–1676), English politician and soldier. He was appointed governor to the Prince of Wales in 1638. He was commander of royalist forces in the N during the Civil War, but after the Battle of MARSTON MOOR (1644) he lived in exile until 1660. He was created Duke of Newcastle in 1665.

Newcastle, city in New South Wales, SE Australia, 161km (100 miles) NE of Sydney. Founded in 1797 as King's Town, it is situated in the centre of Australia's largest coal-mining region, and is an important port, exporting coal, steel, wool and wheat. The city's university was founded in 1965. Industries: iron and steel, chemicals, textiles, shipbuilding, fertilizers. Pop. (1973) 146,460.

Newcastle upon Tyne, city in Tyne and Wear, NE England, and a major port on the River Tyne. A major wool-exporting port in the 13th century, and then a coal-shipping centre, Newcastle became one of England's chief ship-building centres. Heavy engineering is still important there. The city is the seat of the University of Newcastle (1937), and has an 11th-century castle and the remains of the 13th-century city walls. Pop. (1980) 289,000.

Newcombe, John (1944–), Australian tennis player. The last winner of the WIMBLEDON men's singles title in 1967 before the game became "open", he won it again as a professional in 1970 and 1971. With Tony ROCHE he won all the great doubles titles, including three successive victories at Wimbledon from 1968 to 1970.

New Comedy, type of Greek comedy which developed in the second half of the 4th century BC. Among its innovations were an urbanity of style and a cleverly managed plot. The only remaining complete example of this type of play is *Dyskolos* (in translation *Misanthrope*) by Menander (c.342–292 BC). See also pp.1208–1209.

Newcomen, Thomas (1663–1729), British engineer and inventor of the atmospheric steam engine. Assisted by John Calley, a plumber, he spent more than ten years perfecting the invention. A 1698 patent by Thomas Savery covered the principle, and Newcomen went into partnership with him, their first engine being built in 1712. For many years this type of engine was used to power pumps, particularly to drain mines. See also p.422.

New Deal, in US history, term for the social and economic programme of the administrations of Franklin D. ROOSEVELT, between 1933 and 1939. Elected in 1932 during the worst phase of the Great DEPRESSION (the severe economic crisis supposed to have been precipitated by the stock market crash of 1929), Roosevelt

New Delhi

promised a "new deal" to the American people, hence the name that was given to all the domestic reforms of his administration. These included programmes of agricultural and business regulation, inflation and price stabilization, and extensive public works. The second phase of the New Deal in 1935 introduced social security benefits, which included disability pensions, unemployment benefits, old age pensions, central mortgage finance and industrial relations legislation to strengthen the trade unions. Some of these measures were resisted by commercial interests and even the courts, but they eventually gained wide acceptance and became permanent features of US government policy.

New Delhi, capital of INDIA, located in the N of the country on the River Yamuna in Delhi Union Territory. Planned by the British architects Sir Edwin LUTYENS and Herbert Baker, it was constructed in 1912-29 to replace Calcutta as the capital of British India. Whereas the old city of Delhi (to the SW) is primarily a commercial centre, New Delhi has an administrative function. Its industries include textile production.

New Democratic Party (NDP), Canadian political party founded in 1961 when the CO-OPERATIVE COMMONWEALTH FEDERATION reorganized itself and entered into a close relationship with the Canadian labour unions. The party advocated a moderate socialist programme and, while under the leadership of David Lewis (1971-1974), gained control of provincial governments in Manitoba, Saskatchewan and British Columbia. In 1972 its 31 members in the House of Commons sided with the Liberal Party in a coalition government that lasted until 1974, when the NDP opposed the Liberal government's monetary policy (resulting in the elections of 1974). The NDP lost 15 of its seats in the 1974 election.

New Economic Policy (NEP) (1921-27), Soviet programme to restore the Russian economy and appease the peasantry after the civil war of 1918-20. It relaxed controls on trade and light industry, replaced the seizure of grain from peasants with a fixed amount being taken as tax, allowing the surplus to be sold on the open market, and permitted individual and communal forms of land tenure. The NEP, initiated by LENIN, was seen by some as a denial of Marxist ideals. It ended in 1927 with the forcible collectivization instituted by the first FIVE-YEAR PLAN. See also pp.1677, 2158.

New England, region in NE USA, made up of the states of MAINE, NEW HAMPSHIRE, VERMONT, CONNECTICUT, MASSACHUSETTS and RHODE ISLAND. The area is geographically cut off from the rest of the country by the Appalachian Mts. The soil is generally poor and agriculture has never been a major economic activity. The coastline provides excellent harbours, and fishing and shipbuilding soon became important. New England was the centre of events leading up to the AMERICAN WAR OF INDEPENDENCE. The region became highly industrialized after the war of 1812 and also developed as a centre of literature and learning, producing such writers as EMERSON, HAWTHORNE and THOREAU. Harvard University was founded as early as 1636. The geographical and political conditions of the region produced a New England "type", the Yankee, characterized by resourcefulness, thrift and self-discipline. The term was later applied to Americans in general. Area: 172,515 sq km (66,608 sq miles).

New English Art Club, exhibition society founded in 1886 by artists who favoured French IMPRESSIONISM and were out of sympathy with the Classicism of the Royal Academy. Steer, Sicker and Whistler were early members; later members included Augustus and Gwen John, Roger Fry and Paul Nash; Monet, Degas and Bertha Morisot were guest exhibitors. The club played a leading role in British art until the formation of the CAMDEN TOWN GROUP (1911) and the dominant LONDON GROUP (1913).

New Forest, region of forest and heath-

land in Hampshire, s England. It was established as a royal hunting ground in 1079 by WILLIAM I. His son, William Rufus, was killed by an arrow there in 1100. The Forest includes many species of trees, and pigs, cattle and ponies are reared there. It is managed by the Forestry Commission and the Court of Vevdevers. Area: approx. 383 sq km (148 sq miles).

Newfoundland, province in E Canada, on the Atlantic Ocean; made up of the mainland region of LABRADOR and the island of Newfoundland plus adjacent islands. The two parts are separated by the Strait of BELLE ISLE. The island is a plateau with many lakes and marshes. Labrador has TUNDRA in the N and the cold climate and lack of transport facilities throughout the region have hindered economic development. There are, however, valuable mineral resources that include copper, lead, iron and zinc. Timber is an important industry, and the Grand Banks off the coast is one of the world's best cod-fishing areas. ST JOHN'S is the capital. Norsemen are believed to have landed on the coast of Labrador c. AD 1000, and to have established a settlement on the N tip of Newfoundland. John CABOT reached the island in 1497, and Sir Humphrey GILBERT claimed it for Britain in 1583. The region was settled slowly and did not become a British colony until 1832, remaining apart from the rest of Canada until 1949, when it became that country's tenth province. Area 404,420 sq km (156,185 sq miles). Pop. (1976) 557,725. See also p.1997.

Newfoundland, rescue and working dog that was originally bred by fishermen in Newfoundland. It has a massive head with a square, short muzzle and small, triangular ears set close to the head. The full-chested, broad-backed body is set on short, strong legs and the tail is broad and long. The long coat may be black or black and white. Height: 71 cm (28 in) at the shoulder; weight: 68 kg (150 lb).

New France, French colony in N America corresponding roughly to Quebec, Ontario and the maritime provinces of Canada. Jacques CARTIER claimed the region for France in 1534. Quebec was founded in 1608. The Company of New France, founded in 1627 to trade in and settle the area, was disbanded in 1663 and the colony placed under a royal governor. In 1713 Acadia (Nova Scotia), Newfoundland and the Hudson Bay area were lost to Britain, and in 1763 the rest of New France was also transferred to Britain. See also pp.1614-1615, 2002-2003.

Newgate Prison, London prison, demolished in 1902, that used to be located on the site of the OLD BAILLY. It derived its name from its original position, from the beginning of the 13th century at least, at the New Gate to the City of London. It was damaged by fire in the Great Fire of London (1666) and during the Gordon Riots of 1780.

New General Catalogue (NGC), in astronomy, list of stellar clusters, nebulae and galaxies compiled by Danish astronomer Johan Dreyer in 1888, based on the observations of William HERSCHEL and his son John. Dreyer later published two Index Catalogues (IC) bringing the number of stellar objects listed in the catalogue to approx. 13,000. See also p.982.

New Georgia, island group in the British Solomon Islands, in the SW Pacific Ocean. The group takes its name from the main island. Area: approx. 5,180 sq km (2,000 sq miles). Pop. (1970) 22,264.

New Granada, historical administrative area centred on present-day Bogotá, Colombia (founded 1538), and at times including parts of Ecuador, Panama and Venezuela. The viceroyalty of New Granada was founded in 1718 and the name was used to describe independent Colombia during the period 1830-63, after which the name was changed to the United States of Colombia. See also p.2015.

New Guinea, island in the E Malay Archipelago, in the W Pacific Ocean; second-largest island in the world. It has a tropical climate and is mountainous. The island is divided into Irian Jaya (formerly Irian

Barat), a province of INDONESIA, and PAPUA NEW GUINEA, which was administered by Australia until 1975, when it became an independent state. Discovered in the early 16th century, the island was so named because of its resemblance to the Guinea Coast of W Africa. During the next two centuries, New Guinea was colonized by the Dutch (the W half that is now Indonesia), the Germans and the British (the part that is now Papua New Guinea). Products include copra, cocoa, coffee, rubber, coconuts and tobacco. Area: 885,780 sq km (342,000 sq miles). Pop. (1973 est.) 3,600,000. See also p.2104.

New Hampshire, state in NE USA, on the Canadian border. Much of the land is mountainous and forested. The principal rivers are the Connecticut and the Merrimack, and there are more than 1,000 lakes, the largest of which is Winnepesaukee. Farming is restricted by the terrain and poor, stony soil, and is mostly concentrated in the Connecticut valley. Dairy and market garden produce, hay, apples and potatoes are the chief products. New Hampshire, however, is highly industrialized. There is abundant hydro-electricity and the main industries are electrical machinery, paper and wood products, printing and publishing, leather goods and textiles. Tourism is also important. The principal cities are Concord, the state capital, Manchester and Nashua. English explorers visited the New Hampshire coast in 1603. The first settlement was founded in 1623. Although no fighting took place on the state's soil during the American Revolution, New Hampshire regiments were active throughout the campaigns. Area: 24,097 sq km (9,304 sq miles). Pop. (1975 est.) 818,000. See also p.2161.

New Hebrides (Nouvelles-Hébrides), volcanic island group in the SW Pacific Ocean, approx. 2,300 km (1,430 miles) E of Australia; governed jointly by Britain and France. The group consists of approx. 80 islands, which form a chain some 725 km (450 miles) in length. The main islands are Espiritu Santo, Efate, which has the capital VILA, Malekula, Pentecost, Malo and Tanna. Discovered in 1606 by Pedro Fernandez de Queiroz and explored by Capt. James COOK in 1774, the group was settled by the English and French in the early 1800s. The chief economic activities are fishing, farming and mining. Area: 14,760 sq km (5,699 sq miles). Pop. (1975 est.) 97,000. See also p.2105.

New Humanism, movement in literary and social criticism in the early 1900s, led by Irving Babbitt, a Harvard professor, and Paul Elmer More, an editor and writer. Reacting against realism and naturalism in modern literature, the movement sought to avoid the extremes of both religion and science and stressed the importance of human reason and freedom of will in ethical, artistic and intellectual considerations. New Humanist treatises include Babbitt's *Rousseau and Romanticism* (1919) and More's *Shelburne Essays* (1904-21; 1928-36).

Ne Win, U (1911-), Burmese military and political leader born Thakin Shu Maung. At the outbreak of WWII he helped the Japanese invade Burma, but in 1945 his Burmese Independence Army also turned against the Japanese. He became commander-in-chief of the army upon Burma's independence from Britain in 1948. In 1958 he deposed U NU and had himself appointed Prime Minister. U NU returned to office in 1960, but Ne Win deposed him again in 1962. He became President in 1974. See also pp.1995-1996.

New Ireland, mountainous island in the Bismarck Archipelago, Papua New Guinea. Sighted by the Dutch in 1616, the island was a German protectorate from 1884 to 1914. The main town and port is Kavieng. Products: coconut, copra, cocoa. Area: 8,651 sq km (3,340 sq miles). Pop. 50,600.

New Jersey, state in E USA, on the Atlantic coast s of New York City. The N of the state is in the Appalachian highland region; SE of this area are the piedmont plains, and more than half the state is

coastal plain. A variety of crops are grown, including potatoes, maize, hay and fruits, and dairy cattle and poultry are also important. New Jersey is, however, overwhelmingly industrial. Principal industries are chemicals, pharmaceuticals, rubber goods, textiles, electronic equipment, missile components, copper smelting and oil refining. The New Jersey coast is a highly developed resort area. The state capital is Trenton and large cities include Newark, Camden and Atlantic City.

The Italian explorer da Verrazano explored the New Jersey coast in 1524, but settlement did not begin until the 1620s, when NE New Jersey was settled at the same time as the Dutch colony of New Netherland. When the British took the colony, in 1664, the land between the Hudson and Delaware rivers was named New Jersey. During the AMERICAN CIVIL WAR and both World Wars, New Jersey's industries were a major supplier of war materials. Area: 20,295 sq km (7,836 sq miles). Pop. (1980) 7,364,158. See also p.2161.

New Kingdom, or New Empire (1570-332 BC), era of ancient Egyptian history, from the 28th to 30th Dynasties. The 18th Dynasty (to c.1342 BC), founded by Ahmose I after a confused century of HYKSOS rule, was the most flourishing period of ancient Egypt. The New Kingdom ended in 332 BC with Alexander the Great's conquest of Egypt.

Newlands, John Alexander Reina (1837-98), British chemist. In 1864 he announced his law of octaves, which arranged the chemical elements in a table of eight columns according to increasing atomic weight. The law was ridiculed until MENDELEEV included it in his own PERIODIC TABLE five years later.

Newlands, the name of two South African sports grounds, situated near each other in Cape Town. One is for cricket, the other for rugby union. The cricket ground, headquarters of Western Province, was first used for Test matches in 1888, when South Africa played an English touring side. The rugby ground, which is also the home ground for Western Province, saw its first international, against the British Isles, in 1891.

New Look, fashion for women designed in 1947 by Christian DIOR. It featured narrow shoulders, a small waist and a long full skirt, and emphasized the bust.

Newlove, John (1938-), Canadian poet. His poems, many of which deal with alienation and loss, are collected in *Grave Sins* (1963), *Moving in Alone* (1965), *Black Night Window* (1968), *Lies* (1972) and other volumes.

Newman, Barnett (1905-70), US painter who was closely associated with ABSTRACT EXPRESSIONISM; among the first to abandon the CUBIST idea of spatial composition. In *Who's Afraid of Red, Yellow and Blue* (1969-70) he uses huge expanses of primary colours as the sole source of visual impact. See also p.1687.

Newman, Cardinal John Henry (1801-90), British churchman and scholar. A fellow of Oriel College, Oxford (1822), and vicar of St Mary's Oxford, he became the centre of a group of high church Anglican enthusiasts, who made up the Tractarian or Oxford Movement after 1833. Newman joined the Roman Catholic Church in 1845. His autobiography, *Apologia pro vita sua* (1864), was a work of great spiritual revelation, and his *Idea of a University* (1852) argued for a liberal education. He was made cardinal in 1879.

Newman, Paul (1925-), US film actor, director and producer. He is known for his portrayals of cheeky, independent and wryly humorous anti-heroes in such films as *Cat on a Hot Tin Roof* (1958), *The Hustler* (1961), *Hud* (1963), *Cool Hand Luke* (1967), *Butch Cassidy and the Sundance Kid* (1969) and *The Sting* (1973), perhaps his most popular success.

Newmarket, famous English racecourse in Cambridgeshire. It is the headquarters of English racing and the venue of the National St. Two Classics, the 1,000 Guineas and 2,000 Guineas, are run there over the straight Rowley Mile course, and other major races include the Cambridge-

New Zealand spinach

shire Handicap, the Cesarewitch, and the Champion Stakes.

New Mexico, state in SW USA, on the Mexican border. The Sangre de Cristo Mts in the N flank the Rio Grande, which runs N to S through the state. The terrain includes desert, forested mountains and stark mesa; in the S and SW are semi-arid plains. The S Pecos and Rio Grande rivers are used to irrigate cotton crops; hay, wheat, dairy produce and chili beans are also important. Much of the land is pasture. A large proportion of the state's wealth comes from its mineral deposits, which include uranium, manganese, copper, silver, turquoise, oil, coal and natural gas. Timber and tourism are important industries. Santa Fé is the state capital and Albuquerque is the largest city.

The first permanent Spanish settlement was established in 1598 and Santa Fé was founded in 1610. After 1821 the region became a province of independent Mexico. The Santa Fé trail, a major route westwards opened in 1821, led across New Mexico. The USA acquired the region in 1848 at the end of the MEXICAN WAR, and the Territory of New Mexico was organized two years later. It entered the Union in 1912 as the 47th state. Area: 315,113sq km (121,665sq miles). Pop. (1980) 1,229,968. See p.2161.

New Model Army, national army formed in 1645 that won the ENGLISH CIVIL WAR for Parliament. It was planned to consist of 11 regiments of horse of 600 men each, 12 regiments of foot of 1,200 men each, and 1,000 dragoons (mounted infantrymen). Sir Thomas FAIRFAX was appointed Captain General in 1645. CROMWELL became the leader of horse just before the parliamentary victory at Naseby on 14 June 1645, and afterwards became its commander. The veterans of the New Model Army gave Cromwell the support he needed to take political control after the Civil War.

New Objectivity. See NEUE SACHLICHKEIT.
New Orleans, city in SE Louisiana between Lake Pontchartrain and the Mississippi River; the largest city in Louisiana and a major US port. It was held by the French and the Spanish before it was acquired by the USA under the LOUISIANA PURCHASE of 1803, and was the scene of the British defeat in 1815 by Andrew JACKSON in the WAR of 1812. The city fell to Union Naval forces during the AMERICAN CIVIL WAR. New Orleans is considered to be the home of JAZZ, centred on Bourbon Street in the French Quarter. It is also the home of the Annual MARDI GRAS and the site of several universities. Industries: food processing, petroleum, natural gas, oil and sugar refining, shipbuilding, tourism, aluminium, petrochemicals, paper products, furniture. Pop. (1980) 556,913.

New Plymouth, city and port in W North Island, New Zealand. Founded in 1841, it is New Zealand's chief dairy centre. Pop. (1979 est.) 44,600.

New Poor Law. See POOR LAWS.
Newport, city in SE Wales, on the River Usk, administrative centre of the county of Gwent. It was the scene of CHARTIST riots in 1839. Industries: steel, aircraft, aluminium, metal goods. Pop. (1979 est.) 133,100.

Newport, city in SE Rhode Island, USA, on S Rhode Island in Narragansett Bay. Founded in 1639, it was held by the British during the AMERICAN WAR of INDEPENDENCE. Newport served as joint state capital with Providence until 1900. The city has the US Naval War College, founded 1885. Tourism is the chief industry. Pop. (1980) 34,562.

New South Wales, state in SE Australia on the Tasman Sea. The terrain ranges from coastal lowlands to the eastern highlands to the western plains. The Murray River and its tributaries are used extensively for irrigation. Wheat, wool, dairy produce and beef are the principal agricultural products. The state has valuable deposits of coal, gold, iron ore, copper, silver, lead and zinc. New South Wales is the most important industrial state. Steel is the chief product. The capital is SYDNEY. Capt. James COOK first visited the area in 1770. He claimed the E coast of Australia for the

British. The first Australian settlement (1788) was at Botany Bay, S of Sydney. The territory developed in the first half of the 19th century with the growth of the wool industry. The colony included the territories of Tasmania, Queensland, Victoria, Northern Territory, South Australia and New Zealand until they became colonies in their own right between 1825 and 1863. New South Wales became a state of the Commonwealth of Australia in 1901. Area: 801,430sq km (309,180sq miles). Pop. (1979 est.) 5,078,500. See also p.1974.
New Spain, former administrative area within the Spanish colonial empire, centred on Mexico City. New Spain was the first permanent vice-royalty on the American mainland, created in 1535. It covered a vast area: present-day Mexico, Central America, SW USA, Florida, and the West Indies. See also p.2099.

Newspaper, periodical publication, usually daily or weekly, which conveys information and opinion about current events. Julius CAESAR is said to have instituted the first recorded newspaper, the *Acta Diurna*, which was posted daily in public places. But it was the invention and spread of printing after 1430 that primarily influenced the early development of newspapers, and in 1563 the Venetians produced news-sheets which were read aloud in public, and the cost of admission to such readings was a small coin known as a *gazeta*, which word became a common name for such official news-sheets. The *Oxford Gazette* was founded in 1665 and, becoming the *London Gazette* in the following year, is still published. The first English daily newspaper was the *Daily Courant* of 1702, and then many journals, such as *The Examiner* edited by SWIFT (1710-11), the *Tatler* (1709-11), and ADDISON and STEELE's *The Spectator* (1711-12), were published. The *Daily Universal Register* was founded in 1785 by John WALTER, becoming *The Times* in 1788. The invention of the first practicable telegraph in 1835 allowed news agencies such as REUTER and Associated Press to function, and improvements in high-speed printing have made possible large editions. Modern newspapers in the West rely to a great extent on revenue from advertising. In many countries newspapers carry great influence and governments or politicians have been made or broken by them, as in the US Watergate affair. See also pp.618-619.

Newsprint, type of paper used for newspapers. It is intended to have a short life, but must be strong enough for high-speed printing presses. Wood pulp, the major constituent of newsprint, is obtained from softwood logs which are crushed and ground. Water is added, along with fibrous materials such as hemp, wood and asbestos as well as glue and fillers. The mixture is spread on to wire screens, pressed, dried and polished by rolling before being sized. See also pp.594-595.

New Stone Age. See NEOLITHIC AGE.
Newt, any of numerous species of tailed AMPHIBIANS of Europe, Asia and North America. The common European newt, *Triturus vulgaris*, is terrestrial except during the breeding season, when it is aquatic and the male develops ornamental fins. Its body is long and slender and the tail is laterally flattened. Length: to 17cm (7in). Family Salamandridae. See also pp.64-65, 64.

New Testament, second part of the Bible, consisting of 27 books all originally written in Greek after AD 45 and all concerning the life and teachings of JESUS CHRIST as the Son of God. It begins with three SYNOPTIC GOSPELS (MATTHEW, MARK, LUKE) and a gospel which is more a sermon (JOHN); the ACTS OF THE APOSTLES then precedes 21 letters (EPISTLES), many of which are attributed to St PAUL and addressed to specific early Church communities, while others are to Christians at large; the New Testament ends with the mystic and perhaps prophetic REVELATION (or Apocalypse). The whole represents the new testament (or will) of God, bequeathing salvation to mankind, as opposed to the old covenant (OLD TESTA-

MENT) which Christians regard as having been superseded just as predictions within it prophesied.

New Thought Movement, loose-knit philosophical-religious organization in which the often contradictory beliefs of its adherents are based on an insistence on the power of the mind over the body, within a spirit of optimism. Originating in the USA in the 19th century, it has sometimes been likened to CHRISTIAN SCIENCE.
Newton, Alfred (1829-1907), British zoologist b. Switzerland. He promoted the first laws for the protection of birds, and was the editor of the ornithological journals *Ibis* and *The Zoological Record*. He wrote *A Dictionary of Birds* (1893-96).
Newton, Sir Isaac (1642-1727), English scientist. He studied at Cambridge and became professor of mathematics there (1669-1701). Many of his discoveries were made in the period 1664-66, but not published until later. His main works were *Philosophiæ Naturalis Principia Mathematica* (1687) and *Opticks* (1704). In the former he outlined his laws of MOTION and proposed the principle of universal GRAVITATION; in the latter he showed that white light is made up of colours of the SPECTRUM and put forward his particle theory of light. He also created the first system of CALCULUS in the 1660s, but did not publish it until Gottfried LEIBNIZ had published his own system in 1684. He built the first reflecting telescope in c. 1671, and studied alchemy and biblical chronology. He was president of the Royal Society (1703-27), and master of the mint after 1701. In 1705 he became the first man to be knighted for his scientific work. Newton engaged in violent scientific disputes with Robert HOOKE, John FLAMSTEED and Leibniz. See also pp.1436-1437.

Newton, unit of force in the MKS system of units. One newton is the force that gives a mass of one kilogram an acceleration of one metre per second per second. One pound weight exerts a force of 4.45 newtons.

Newton's Laws, three physical laws that govern the behaviour of FORCES, formulated by the English scientist Isaac NEWTON. The first law is a definition of force: an object remains at rest or moves at constant VELOCITY, unless it is acted upon by a force. The second law enables force to be calculated: force is proportional to the rate of change of MOMENTUM; this statement leads to the result that force is equal to the product of MASS and ACCELERATION. The third law states that every force has associated with it an equal and opposite force (a reaction). See also MECHANICS; pp.826-827.

New Towns, planned urban communities, designed to rehouse populations from large cities and create local employment. They were established in Britain under the New Towns Acts of 1946 and 1965, and about 30 new towns have been established there since WWII. Each new town is supervised by a Development Corporation.

New Wave. See NOUVELLE VAGUE.

New Year's Day, 1 January, one of the oldest of holidays and nowadays celebrated in almost all Western and European lands. In some places (eg Scotland and France) New Year's Day festivities are more elaborate than those for Christmas Day. It is generally celebrated (on the day or its eve) by music-making, sports meetings, general revelry and visiting among friends. It is a paid public holiday (Bank Holiday) in many countries. See also HOGMANAY.

New York, state in NE USA, bounded by the Canadian border, the Great Lakes, the Atlantic Ocean and three New England states. Much of it is mountainous, the Adirondacks (NE) and Catskills (SE) being the principal ranges. The W consists of a rolling plateau sloping down to Lake Ontario and the St. Lawrence valley. The Hudson and its tributary the Mohawk are the principal rivers. Agricultural produce in New York is varied. The state has orchards and vineyards, cereal crops, hay, potatoes, and market garden and dairy produce are important. New York is the leading manufacturing and commercial state in the USA. Its industries include clothing, machinery,

chemicals, electrical equipment, paper and optical instruments. The state capital is Albany, although New York City is by far the largest city.

Henry HUDSON, an English navigator working for the Dutch government, discovered New York Bay in 1609 and sailed up the river that bears his name, claiming the territory for the Dutch. The New Netherland colony was established in the Hudson valley; in 1664 it was seized by the British and renamed New York. The opening of the Erie Canal in 1825, which created a water route W through the Great Lakes, was an enormous stimulus to New York's economic growth. Throughout its history New York's economic strength and large population have given the state great influence in national affairs. Area: 128,401sq km (49,576sq miles). Pop. (1980) 17,557,288. See also p.2161.

New York City, city in SE New York State, at the mouth of the Hudson River; largest city (by population) in the USA and one of the three largest in the world. It is made up of five boroughs: MANHATTAN, the BRONX, BROOKLYN, QUEENS and RICHMOND. The greater metropolitan area extends into SW Connecticut, and parts of NE New Jersey and W LONG ISLAND. Manhattan Island was bought from the Indians in 1626 by the Dutch West India Co., and New Amsterdam was founded at the S end of the island. In 1664 the British took the colony and renamed it New York. Revolutionary sentiment in the colony was strong, but the city was unsuccessfully defended by George WASHINGTON in 1776, and the British held the city until 1781. Washington was inaugurated as the first US president in New York's Federal Hall in 1789. The founding of the Bank of New York by Alexander HAMILTON and the opening of the Erie Canal in 1825 made New York the principal US commercial and financial centre. Following the AMERICAN CIVIL WAR the city received a great influx of immigrants. The Greater New York Charter, unifying the five boroughs, was passed in 1897.

New York is a great cultural and educational centre. Its notable areas include WALL STREET, HARLEM, Fifth Avenue and Greenwich Village. Monuments and buildings of interest include the STATUE OF LIBERTY, St Patrick's Cathedral, EMPIRE STATE BUILDING, Rockefeller Centre, the World Trade Centre, United Nations and Pan Am buildings, the Metropolitan Museum of Art, Museum of Modern Art, Guggenheim Museum, Radio City Music Hall, LINCOLN CENTER and CARNEGIE HALL. New York has more than 30 universities and colleges, the METROPOLITAN OPERA COMPANY, the New York City Ballet and the New York Philharmonic Orchestra. One of the world's leading ports and an important financial centre, New York has clothing, chemicals, metal products, food processing, broadcasting, entertainment, tourism and publishing industries. The city's enormous debts were in the news during the late 1970s. Pop. (1980) 7,015,608.

New Zealand, independent Commonwealth nation in the S Pacific, consisting of two main islands, NORTH ISLAND and SOUTH ISLAND, separated by the Cook Strait. Its economy is based on dairy and related products. The most important dairy regions are located in North Island around the fertile plain of the Waikato River. Cereal crops are grown and lambs raised on the CANTERBURY PLAINS in South Island. Industry has been developed since WWII; food processing is important, also the manufacture of machinery and transport equipment. New Zealand's ability to sell meat, wool and dairy produce on the international market has created a prosperous economy. Britain is still the major supplier of imports although the USA and Japan are becoming important trading partners. The capital is WELLINGTON. Area: 268,676sq km (103,736sq miles). Pop. (1979 est.) 3,144,600. See p.2105.

New Zealand spinach, coarse annual plant (*Tetragonia expansa*) native to Australia, New Zealand and Asia, belonging to the family Aizoaceae. It is used in cooking.

Ney, Michel

Nice; the pavement near the beach is called the Promenade des Anglais.

Saint Nicholas, seen here in a painting by the Italian artist Piero della Francesca.

Tsar Nicholas II was too late instituting reforms demanded by the people.

Ben Nicholson; Painting 1937, a formal abstract much influenced by Mondrian.

Ney, Michel, Duc d'Elchingen, Prince de La Moskowa (1769–1815), French marshal. He fought in Revolutionary and Napoleonic armies from 1792, notably at Friedland (1807) and in the retreat from Moscow (1812). He urged NAPOLEON to abdicate in 1814 and was sent by the Bourbons to stop Napoleon from returning to Paris in 1815. He fought for Napoleon at WATERLOO, was condemned for treason by the Bourbons and executed.

Ngata, Sir Apirana Turupa (1874–1950), New Zealand politician. He became the first Maori barrister and solicitor and represented the Eastern Maori constituency as a Member of Parliament for 39 years. As Minister of Native Affairs (1928–34), he was instrumental in the improvement of the condition of Maoris, especially in education and agriculture.

NGC Catalogue. See NEW GENERAL CATALOGUE.

Ngo Dinh Diem. See DIEM, NGO DINH.

Nguabi, Major Marien (1938–77), President of the People's Republic of the Congo from 1969–77. His regime fostered one-party, centralized government. He was assassinated in March 1977.

Ngorongoro Crater, large depression in the GREAT RIFT VALLEY, Tanzania, surrounded by a rim 610m (2,000ft) high. The shallow lakes in its centre support birds and other wildlife. Area: 539sq km (208sq miles).

Nguni, group of Negroid peoples of s Africa, whose languages are closely related. They include the ZULU, SWAZI and XHOSA of Natal and the Transvaal, and a number of dispersed tribes (the Northern Nguni) who were driven north by the rise of the Zulu empire during the 19th century. Nguni society is traditionally polygamous and is based on agriculture and animal husbandry.

Nha-trang, seaport city in the s of the Republic of Vietnam, 80km (50 miles) N of Phan-rang. It was the site of a major US military base during the VIETNAM WAR. It is located on the South China Sea and is a commercial and fishing centre. Pop. (1968 est.) 101,908.

Niagara Falls, waterfalls on the Niagara River on the border of the USA (w New York) and Canada (se Ontario); divided by Goat Island into the Horseshoe, or Canadian, Falls and the American Falls. Father Louis HENNEPIN discovered the falls in 1678. The Canadian Falls are 48m (158ft) high and 792m (2,600ft) wide; the American Falls are 51m (167ft) high and 305m (1,000ft) wide.

Niamey, capital of Niger, Africa, in sw Niger on the River Niger. Located at the junction of two main roads and with good port facilities, it is the country's largest city and its commercial and administrative centre. Manufactures include bricks, food products and cement. Pop. (1975) 130,299.

Nibelungenlied, The, a Middle High German epic poem, written by an anonymous Austrian from the Danube region in the 13th century. The greatest achievement of early German literature, it is founded on old Scandinavian legends contained in the *Völsunga Saga* and the *Poetic Edda*, which deals with some of the same characters (Siegfried, Kriemhild, Brünhilde, Gunther, Gudrun and Hagan), but is primarily concerned with their personal rivalries and adventures rather than with events of national interest performed by idealized heroes. The epic was the inspiration for WAGNER's opera cycle *Der Ring des Nibelungen* (1853–74).

Nicaea, one of the chief cities of ancient Bithynia, Asia Minor. Two ecumenical councils were held there, in AD 325 and 787. It was captured by the SELJUK TURKS in 1078, taken by the Crusaders in 1097 and passed to the OTTOMAN TURKS in 1330. It is the site of the modern city of Iznik.

Nicaea, Councils of, two ecumenical councils held in Nicaea (now Iznik, Turkey). The First Council of Nicaea, held in AD 325, was the first ecumenical council in the history of the Christian Church and was convoked by the Emperor Constantine to resolve the problems caused to the Church and the Empire by the emergence of ARIANISM. It promulgated a creed,

affirming belief in the divinity of Christ and condemning Arianism. However, the creed generally known as the NICENE CREED does not seem to have been formulated at this council. The Second Council of Nicaea, held in 787, was the seventh ecumenical council and was summoned by the patriarch Tarasius to settle the ICONOCLASTIC CONTROVERSY.

Nicander, or Nicandros (fl. 185–135 BC), Greek poet and grammarian. He was also a priest of Apollo at Claros, Ionia. There remain extant of his works two poems on medical themes.

Nicaragua, republic in Central America, lying between Honduras (N) and Costa Rica (S). More than 50% of the land is covered with forests, which yield fibres, gums and various woods. The main economic activity, however, is agriculture; cotton, coffee beans and rice are grown. Nicaragua's industries include sugar refining and textiles. The capital is Managua. Area: approx. 130,000sq km (50,190sq miles). Pop. (1980 est.) 2,568,000. See p.2110.

Nicaragua, lake in sw Nicaragua; largest lake in Central America. The River Tipitapa carries to it the waters of Lake Managua, and the San Juan River drains it into the Caribbean Sea. It occupies part of an area that was ocean until surrounding land rose up and formed the lake. Salt-water fish such as sharks have adapted to the change from saline to fresh water. Area: 8,030sq km (3,100sq miles).

Niccolite, one of the chief ores of NICKEL, consisting of nickel arsenide (NiAs), often also with some cobalt, iron and sulphur; also called kupfernicker. It has hexagonal system crystals generally in columnar masses, rarely as tabular crystals. It is found in vein deposits and is copper-coloured, with an easily tarnished metallic lustre. Hardness 5–5.5; s.g. 7.8.

Nice, city in se France, on the Mediterranean coast; capital of Alpes-Maritimes département. Nice was founded by Phocaeans from ancient Massilia. In the 13th and 14th centuries it was part of the House of Savoy. France held it from 1792 to 1814, when it was returned to Savoy until 1860. It is a major centre of the French Riviera, and the Carnival of Nice is an annual event. The city is noted for its villas and such boulevards as the Promenade des Anglais. Industries: tourism, olive oil, perfumes, electronics. Pop. (1975) 437,566.

Nicene Creed, statement of Christian faith named after the First Council of NICAEEA, 325. It was once believed that the Creed was enlarged at the First Council of Constantinople in 381. It is, therefore, sometimes called the "Niceno-Constantinopolitan Creed". Its exact origin is, however, uncertain. The Nicene Creed defends the orthodox Christian doctrine of the TRINITY against the ARIAN heresy and affirms that Jesus Christ is "the only-begotten Son of God... of one substance with the Father". Its concluding section affirms belief in the Church, BAPTISM, the RESURRECTION of the dead and eternal life. The Nicene Creed is subscribed to by all the major Christian Churches and is widely used by them in their celebrations of the EUCHARIST. See also APOSTLE'S CREED; ATHANASIAN CREED.

Nicephorus, name of three Byzantine emperors. Nicephorus I (r. 802–11) deposed Empress Irene in 802, asserted the imperial authority over the Church and imposed heavy taxation on his subjects. He was killed fighting the BULGARS. Nicephorus II Phocas (912–69; r. 963–69) undertook military expansion against the ARABS and Bulgars, and was murdered at the command of his successor John I in league with Nicephorus' wife. Nicephorus III Botaniates was emperor from 1078 to 1081. During his reign the empire disintegrated and internal opposition forced his abdication.

Nicholas, Saint, patron saint of children and sailors, particularly in The Netherlands, Greece and the USSR. Traditionally he was Bishop of Myra in Asia Minor in the 4th century and is the subject of many legends. In one he secretly gave gold to three poor girls as their dowry. From this

came the custom of giving presents on his feast day, 6 December, a habit in most countries later transferred to Christmas. His name in one Dutch dialect, Sinte Klaas, became Santa Claus.

Nicholas, name of five popes. Nicholas I (r. 858–67) was born c. 819. He opposed the divorce of LOTHAIR of Lorraine and supported the claim of IGNATIUS to be Bishop of Constantinople, against Photius, who rejected the NICENE CREED. Nicholas II was pope from 1058 to 1061. Nicholas III (r. 1277–80) was born Giovanni Gaetano Orsi c. 1225. He reduced the influence in Rome of the German king Rudolf I and the Sicilian King Charles I of Anjou, and reformed the papal states. Nicholas IV was pope from 1288 to 1292. Nicholas V (r. 1447–55) was born Tommaso Parentucelli in 1397. He negotiated the Concordat of Vienna in 1448 with the Holy Roman Emperor, reasserting papal authority, and founded the Vatican library.

Nicholas, name of two Russian tsars. Nicholas I (1796–1855), a ruler noted for suppressing all political reform, ascended to the throne in 1825 and immediately crushed the DECEMBRIST revolt led by liberal noblemen who sought constitutional monarchy. He gained strategic territory for Russia in wars against Persia (1826–28) and Turkey (1827–29) and put an end to Polish independence in 1830–31. He expanded the secret police, increased censorship and banned political organizations. He died during the CRIMEAN WAR. Nicholas II (1868–1918) was the last tsar of Russia (1894–1917). During his reign, Russia made economic progress but became involved disastrously in war with Japan (1904–05). Revolution broke out in 1905 and he was forced to introduce representative government in the Duma. A new revolution broke out in 1917 following corrupt government and military defeats, and he was forced to abdicate. He and his family were probably executed in July, 1918.

Nicholas Nickleby (1839), novel by CHARLES DICKENS. Complex and melodramatic, the work criticizes 19th-century educational practices through the graphic descriptions of Dotheboys Hall. It also contains many well-drawn characters.

Nicholas of Cusa (1401–64), German philosopher, theologian, cardinal and mathematician. Writing on philosophy, theology, law and science, his work formed major advances in RENAISSANCE mathematics, astronomy and mysticism. **Nicholas of Verdun** (fl. c. 1150–1210), French enamellist and goldsmith. He was a pioneer in the development of early Gothic champlevé technique, in which compartments are hollowed from a metal base and filled with enamel. His most famous pieces are the altarpiece at Klosterneuburg (1181) and the reliquary of Our Lady at Tournai Cathedral (1205). See also pp. 1333, 1334.

Nicholas Oresme. See ORESME, NICHOLAS. **Nichols, Dudley** (1895–1960), US film writer whose impressive credits include *The Lost Patrol* (1934), *Stagecoach* (1939) and *Pinky* (1949). He produced and also directed *Mourning Becomes Electra* (1947). He won an Oscar for the script of John Ford's *The Informer* (1935).

Nichols, Peter Richard (1927–), British playwright who wrote many television scripts before his first stage play, *A Day in the Death of Joe Egg*, was produced in 1967. This was followed by further successes with *The National Health* (1969), *Forget-me-not Lane* (1971), *Chez Nous* (1973) and *Privates on Parade* (1977). He also wrote the screenplays for *Catch Us If You Can* (1965) and *Georgy Girl* (1966).

Nicholson, Ben (1894–1982), British painter, the son of Sir William NICHOLSON and one-time husband of Barbara HEPWORTH; he became a champion of ABSTRACT ART in Britain. He was influenced by CUBISM and Piet MONDRIAN, and from 1933 he developed a geometric abstract style which he expressed in austere carved and painted reliefs, eg *White Relief* (1935). He later produced a series of freely abstracted still-lives and landscapes which displayed his outstand-

ing draughtsmanship, and returned in the 1960s to reliefs. Nicholson lived in Cornwall from 1940 to 1956 and took up residence in Switzerland in 1958. Like Henry MOORE he contributed greatly to the international status of post-war British art. See also p.1687.

Nicholson, Jack (1937–), US film actor. He made his film debut in 1958 but attracted no attention until 1969 when he took a small part in *Easy Rider*. His other films include *Five Easy Pieces* (1970), *Carnal Knowledge* (1971) and *One Flew Over the Cuckoo's Nest* (1976), for which he won an Oscar.

Nicholson, Sir William Newnam Prior (1872–1949), British painter of portraits and landscapes who, with his brother-in-law James PRYDE, helped to develop the poster as an art form, under the pseudonym of "The Beggarstaff Brothers". He also made woodcuts of well known Victorians.

Nickel, metallic element of the first TRANSITION series, discovered in 1751. Its chief ores are pentlandite and NICCOLITE. The main commercial use is in stainless steels and other special alloys. Nickel is also used in coinage and as a hydrogenation catalyst. The metal is ferromagnetic. Properties: at.no. 28; at.wt. 58.71; s.g. 8.90 (25°C); m.p. 1,453°C (2,647°F); b.p. 2,732°C (4,950°F); most common isotope Ni^{58} (67.84%).

Nickel carbonyl, colourless, inflammable, toxic liquid, $Ni(CO)_4$. It is used in the MOND process for the production of pure nickel. Properties: s.g. 1.32 gm/cm³; m.p. –25°C (–13°F); b.p. 43°C (109.4°F).

Nickel processing, production of nickel for use in various alloys (mainly with iron, copper and chromium) and in its pure form. The main ores are nickel-iron sulphide (pentlandite) and nickel arsenide (niccolite). Refining is complex and involves the differential separation of the various compounds to obtain concentrated nickel sulphide (or arsenide), which is reduced to the pure nickel. Some nickel is refined using the MOND process.

Nicklaus, Jack William (1940–), US golfer. He became a professional golfer in 1961 and since then has won five Masters tournaments (1962, 1965, 1966, 1972, 1975); five US Professional Golf Association championships; four US Opens and three British Opens. By the early 1980s he was said to have won more money than any other golfer.

Nicobars. See ANDAMAN AND NICOBAR ISLANDS.

Nicodemus, Pharisee and member of the SANHEDRIN who is mentioned three times in the Gospel according to St JOHN. Nicodemus came to Jesus by night and evoked a discourse about Christian regeneration (John 3: 1–21). He asked the other Pharisees if they judged any man without a hearing (7: 50–52), and he helped JOSEPH OF ARIMATHEA bury Jesus (19: 39–42).

Nicol, William (1768–1851), British physicist who in 1828 invented an optical prism named after him. A Nicol prism consists of a rectangular crystal of Iceland spar split along a diagonal and rejoined with Canada balsam. Light passing through it is separated at the join into a reflected (ordinary) ray and a transmitted (extraordinary) ray, both polarized in different planes. See also POLARIZED LIGHT.

Nicolai, Otto (1810–49), German composer and conductor who in 1842 helped to found the Vienna Philharmonic Orchestra. His opera, *Il Templario* (1840), was successful at the time but his lasting masterpiece was the comic opera *The Merry Wives of Windsor* (1849).

Nicolet, Jean (1598–1642), French explorer in North America. He travelled with Samuel de CHAMPLAIN, and in 1634 began searching for the NORTHWEST PASSAGE. He was the first white man to explore Michigan, Green Bay and the Fox River.

Nicolle, Charles-Jules-Henri (1866–1936), French bacteriologist. He was awarded the 1928 Nobel Prize in physiology and medicine for his discovery (1909) that TYPHUS is transmitted by the body louse. He later distinguished between

classical typhus and murine typhus, which is passed on to man by the rat flea. He was head of the Pasteur Institute in Tunis (1902–32), which became a distinguished centre for bacteriological research under his direction.

Nicol prism, optical device used for the production of POLARIZED LIGHT. It is used in the polarizing microscope and also in GEOLOGY to examine thin sections of rock microscopically.

Nicomachean Ethics, work by ARISTOTLE setting forth part of his scientific and philosophical system based on the view that what is good for man is what man, by his nature, is seeking. In the *Ethics* Aristotle searches for the highest perfection of man and finally concludes that it is thought.

Nicosia (Lefkosia), capital city of Cyprus in the central part of the island. For 300 years descendants of Guy Lusignan ruled the island, using Nicosia as their capital. They were defeated by the Venetians in 1489 and many ruins of circular walls and fortifications survive from this period. The Ottoman Turks held the city from 1571 to 1878, when it passed to the British. Nicosia continued to be the capital after Cyprus became independent in 1960. It was the scene of serious fighting prior to 1960 and after the Turkish invasion of the island in 1974. Manufactures include cigarettes, textiles and footwear. Pop. (1978 est.) 121,500.

Nicotiana, genus of more than 100 species of plants of the family Solanaceae. *Nicotiana tabacum*, originally a tropical species, is the source of commercial TOBACCO, although *N. rustica*, a shrubby plant native to eastern USA, has a higher NICOTINE content and was used by American Indians. Other species include JASMINE TOBACCO, *N. glauca*, which has tubular flowers that open at dusk and emit a jasmine odour. See also p.357.

Nicotine, poisonous ALKALOID obtained from the leaves of TOBACCO, used in agriculture as a pesticide and in veterinary medicine to kill external parasites. Nicotine is the principal addictive agent in smoking tobacco.

Nictitating membrane, inner or third eyelid present in many vertebrates such as birds, reptiles and some mammals. A protective fold of transparent or translucent mucous membrane, it can be drawn over the eye.

Niello, method of decorating silver or gold objects with incised designs filled with a black metallic alloy. The technique was used in Roman and Oriental art and became extremely popular in Italy in the 15th century.

Nielsen, Carl (1865–1931), Danish composer, known internationally for his six symphonies. He also composed concertos for violin, flute and clarinet, two operas, a woodwind quintet, four string quartets and many other choral and piano pieces. Although he did not abandon familiar melody and harmony, his originality lies in the spontaneous use of established procedures in novel contexts, eg melodic shape is built around a particular note which, however, may be only transitory and not suggest true key.

Niemeyer, Oscar (1907–), the best-known Brazilian architect. An early advocate of modern architecture in Latin America, he was influenced by LE CORBUSIER, under whom he worked on the Ministry of Education and Health Building in Rio (1936–45). With Lucio COSTA, he designed the Brazilian Pavilion for the New York World Fair in 1938. With his casino, club and church of S. Francisco at Pampulha and a new holiday resort outside Belo Horizonte (1942–43), he came into his own with a completely new approach to architecture: elegant, lyrical, sub-tropical luxury expressed through curving, sculptural and highly expressive forms. In the late 1950s Niemeyer began designing the main public buildings at Brasília, including the governmental centre, a spectacularly expressive exercise in geometrical forms rising from a flat site.

Niemöller, Friedrich Gustav Emil Martin (1892–), German Protestant minister and theologian who turned to theology after having commanded a submarine in

wwi. He opposed Hitler's creation of a "German Christian Church", founded the Confessing Church and was arrested in 1938 because of his opposition to the Nazi Party. He was released in 1945 and in 1961 became a President of the World Council of Churches.

Niepece, Joseph Nicéphore (1765–1833), French chemist, inventor of the heliography process. Using camera and lens, he obtained unstable negatives in 1816, but by 1822 had developed the process sufficiently to achieve permanent images. He worked with Louis DAGUERRE from 1829 until his death, after which Daguerre perfected their process, known as daguerreotypy. Niepece also designed an early bicycle. See also pp.488, 628.

Nierenberg, William Aaron (1919–), US physicist who worked on the MANHATTAN PROJECT and taught at the University of California where he was appointed Director of the Scripps Institution of Oceanography in 1965. He became senior consultant to the president's science adviser in 1976.

Nietzsche, Friedrich Wilhelm (1844–1900), German philosopher and poet. He studied classical philology at Bonn and taught at Basel in 1869. He met Richard WAGNER in 1878 and his treatise *The Birth of Tragedy* (1872) shows Wagner's influence. In 1879 he abandoned philology for philosophy, and celebrated his new notion of the "superman" in *Also sprach Zarathustra* (Thus Spake Zarathustra) (1883–91). His aphoristic style was misunderstood but greatly influenced later German thinkers. His later works include *Beyond Good and Evil* (1886), *On the Genealogy of Morals* (1887) and *Ecce Homo* (1888). See also pp.1656, 1704, 1811, 1889.

Nieuwland, Julius Arthur (1878–1936), US chemist and Roman Catholic priest, at one time a leading authority on the chemistry of ACETYLENE. In 1920 he discovered a process for synthesizing a rubbery solid from acetylene and, with the du Pont Chemical Co. in 1929, developed the process and made "neoprene", the first synthetic RUBBER to be marketed. See also pp.588–589.

Niflheim, in Scandinavian mythology, the misty land to which the dead were sent. It existed in the far north and was eternally dark and cold. From the Hvergelmir well there, 12 rivers flowed. In some accounts it was a place where only evil persons went. It is also known as Hel.

Niger, landlocked, independent nation in w Africa. It consists of flat plateaus and plains, arid in the N with some pasture land in the S and W. The River Niger provides the only drainage. Products include millet, groundnuts and hides. Some uranium and tin ore are mined, although there is little manufacturing industry. The capital is Niamey. Area: 1,267,000sq km (489,189sq miles). Pop. (1979) 5,300,000. See p.2111.

Niger, major river in w Africa, which rises in the Fouta Djallon plateau in the SW Republic of Guinea and flows NE through Guinea into the Mali Republic where it forms an extensive inland delta. It then flows in a great curve NE, E and SE across the border into Nigeria and S into the Gulf of Guinea through another vast delta. The river's course was established by the explorers Mungo PARK (1796–97) and Richard and John LANDER (1830). The inland delta in the Mali Republic is part of an irrigation project that has reclaimed 499,780 hectares (1,235,000 acres) since 1930 and the delta at the Gulf of Guinea is a source of oil and palm oil. The Niger has been dammed at various points to create hydroelectric power. Length: 4,183km (2,600 miles).

Nigeria, independent nation of w Africa. Swamp and tropical rain forests make part of the country inaccessible and the rivers Niger, Benue and Cross provide important transport routes. Most of the people depend on farming and the country is almost self-sufficient in food production. Nigeria's economy is, however, based on oil, which accounts for more than 80% of all exports. The capital is Lagos. Area: 923,768sq km (356,667sq miles). Pop

(1978 est.) 95,000,000. See p.2111.

Night blindness, early symptoms of vitamin A deficiency. The VITAMIN is necessary for the production of RHODOPSIN, a retinal substance vital to vision during times of low illumination. Vitamin A is derived from CAROTENE, a constituent of carrots, and so the old belief that eating carrots helps one see in the dark has some basis in truth.

Night-flowering plant, any of numerous plants with flowers that open at night; the blooms are commonly sweet-scented and tubular in shape. The night-blooming CEREUS (Queen of the Night), with pure white flowers, is commonly cultivated.

Night heron, thick-billed, night-feeding bird of the Mediterranean and the Middle East. It has well developed, ornamental head plumes, especially at breeding time. Length: 71cm (28in). Family Ardeidae; genus: *Nycticorax*. See also HERON.

Nightingale, Florence (1820–1910), British nurse, b. Italy. She founded modern NURSING and is best known for activities in the CRIMEAN WAR. In 1854 she took a unit of 38 nurses to care for wounded British soldiers. Called "the Lady with the Lamp", she believed that nursing should continue night and day. In 1860 she founded the Nightingale School and Home for nurses training at St Thomas's Hospital, London. She was widely honoured and in 1907 became the first woman to be awarded the Order of Merit. Lytton Strachey's *Eminent Victorians* contains a highly perceptive portrait of her methods and formidable character.

Nightingale, migratory Old World songbird of the THRUSH family (Turdidae). The common nightingale of England and Western Europe (*Luscinia megarhynchos*) is ruddy-brown with light grey underparts. Length: 16.5cm (6.5in).

Nightjar, insect-eating, nocturnal bird found worldwide except for New Zealand and some other islands. It has a huge gape and a whirring cry. Length: 27cm (10.5in). See also p.73.

Nightshade, any of numerous species of flowering plants of the genus *Solanum* and a common name for DEADLY NIGHTSHADE, (*Atropa belladonna*). Also called bitter-sweet and woody nightshade, the common nightshade (*S. dulcamara*) yields poisonous red berries. Family Solanaceae.

Nihilism (literally "nothing-ism"), revolutionary theory followed by extremists in imperial (pre-1917) Russia. It called for the total destruction of existing society as a precondition to any new order.

Nihon-shoki, written history of Japan compiled in AD 720. It consists of 30 chapters containing legends of the mythical origins of Japan and historical records of the most powerful clans and the Japanese imperial family, and describes the influence of Chinese civilization and of Buddhism on the old Japanese culture.

Niigata, port on NW Honshu, Japan, at the mouth of the River Shinano; capital of Niigata prefecture. The port was opened to foreign trade in 1868, and exports oil, machinery and textiles. Industries: textiles, fishing, machinery, chemicals, paper, shipbuilding. Pop. (1974) 413,061.

Nijinska, Bronislava (1891–1972), Russian dancer and choreographer. She danced with the Maryinski Company in St Petersburg and the Ballets Russes and for that company choreographed *Les Noceurs* (1923) and *Les Biches* (1924), the most highly regarded of her choreographies. She became famous for her depiction of the follies of contemporary society. See also p.1759.

Nijinsky, Vaslav (1890–1950), Russian dancer, often regarded as the greatest male ballet dancer of the 20th century. Dancing with the Ballets Russes, his most noted roles were in *Petrushka*, *Daphnis and Chloé*, *Les Sylphides* and *Scheherazade*, all choreographed by FOKINE. From 1912 he choreographed such ballets as *L'Après-midi d'un faune*, *Jeux* and *Le Sacre du printemps* for DIAAGHELIEV. He retired in 1919. See also pp.1483, 1758–1759, 1759.

Nijmegen, city in E Netherlands, on the River Waal near the border with West Germany. One of the oldest Dutch cities,

The Nile is important as a waterway and as a source of irrigation.

Birgit Nilsson performed *Aida* at the New York Metropolitan Opera in 1963.

Chester W. Nimitz, Admiral of the Fleet, is welcomed to New York in 1945.

Marshall Nirenberg illustrates the part of a model of the DNA molecule.

it was founded by the Romans, and became a member of the HANSEATIC LEAGUE. The treaties of Nijmegen (1678-79), ending the DUTCH WARS, were signed there. Industries: machinery, electronic equipment, footwear, paper. Pop. 148,029. See also pp.1292, 1448-1449.

Nike, in Greek mythology, goddess of victory. Daughter of Pallas, she is associated with the main goddess of Athens, ATHENA; her temple stands on the ACROPOLIS within sight of the PARTHENON.

Nikon (1605-81), Russian priest and political leader, real name Nikita Minin. In 1652 he became head of the Russian Church as Patriarch of Moscow. He reformed Church discipline and introduced a new prayer book in 1855. His reforms created a schism in the Church and he was deposed in 1666.

Nile, river in NE Africa; longest river in the world. The Nile proper is formed at Khartoum by the convergence of the White Nile and the Blue Nile. It flows N from E Africa draining a basin covering 3,348,900sq km (1,293,000sq miles); enters a delta 19km (12 miles) N of Cairo and empties into the Mediterranean Sea. Egypt, Sudan and other African nations depend almost completely on the River Nile as a source of hydroelectric power and irrigation by means of an advanced system of dams, including Aswân High Dam, Gebel Aulia and Sannar. See also p.540.

Nile, Battle of the (1 Aug. 1798), naval action fought between the British fleet, commanded by Horatio NELSON, and the French in the Abukir Bay, N Egypt. NELSON's victory restored British prestige in the Mediterranean and, with the military victory under Sir Ralph ABERCROMBY, cut off NAPOLEON's venture in the Middle East. See also pp.1551, 1554.

Nilgai, also called bluebuck, large antelope that ranges in wooded areas of the Indian sub-continent; the male is blue-grey and the female red-brown. Both sexes have a short mane and white markings on the belly and throat. The male bears short, curved horns and a tuft of black hair at the throat. Height: to 1.4m (4.6ft). Family Bovidae.

Nilotes, large group of Negroid peoples of the upper River Nile region of the Sudan and Uganda. They are characteristically tall and slender. Nilotic peoples include the Luo of Kenya, the MASAI of Tanzania and Kenya and the Dinka, Shilluk and Nuer of the Sudan. There is a wide variety of cultures, ranging from the concept of divine kingship among the Shilluk to the political egalitarianism of the Luo and Nuer. See also p.121.

Nilotic languages, sub-group of the Sudanic or Nilo-Saharan family of African languages, spoken by peoples of E Africa from Tanzania to the Arab areas of the Sudan. It is divided into three branches - western (Shilluk, Nuer), eastern (MASAI, Turkana) and southern (Nandi, Suk).

Nilsson, Birgit (1918-), Swedish soprano who studied in Stockholm with Joseph Hislop. She first came to the public's notice at the Munich Opera from 1954 to 1956, where she sang Brünnhilde in WAGNER's *Die Walküre*; she then became established as the leading Wagnerian soprano of the day. In 1977 she sang the title role in Richard STRAUSS's *Elektra* at Covent Garden, London.

Nimbus, in art, a halo of light, often painted over or behind holy figures. It is usually circular and was transmitted from ancient art to early Christian art in the 4th century.

Nimeiry, Major-General Gaafar. See NUMEIRY, MOHAMMED JAAFUR AL.

Nimitz, Chester William (1885-1966), US admiral. He served with the Atlantic fleet's submarine division during wwI. In 1941 he became Commander of the Pacific fleet, a position he held throughout wwII and which gave him a decisive influence on US strategy. He was made chief of naval operations in 1945 and retired from the navy in 1947. See also p.1710.

Nimrod, biblical figure, son of CUSH and grandson of NOAH, referred to in Genesis as a "great hunter before the Lord". He founded a kingdom which included Babel,

ERECH (Uruk) and AKKADIA; he probably also built NINEVEH and Calah (NIMRUD). **Nimrud**, name of the ancient ASSYRIAN city of Calah, situated in modern Iraq. It was founded in the 13th century BC by Shalmaneser I and was restored and enlarged by Ashurnasirpal II (c.883-859 BC). See also pp.1160-1161, 1165.

Nin Anais (1903-77), US author b. France. An early student of JUNG, her novels are all intense psychological studies. They include *The House of aNcest* (1936), *Winter of Artifice* (1939) and *Spy in the House of Love* (1954). She has also published portions of her diaries and correspondence with Henry MILLER.

Nineteen Eighty-Four (1949), novel by George ORWELL about England in a world divided into three constantly warring totalitarian power blocs, where all human rights are suspended. Two lovers seek privacy, but the man is betrayed and broken by Big Brother's Thought Police.

Nineteen Propositions, terms put by parliament to CHARLES I of England on 1 June 1642, requiring that Parliament be given control over the appointment of royal Ministers, the army and the settlement of Church doctrine and organization. Charles' rejection of terms so humiliating to 17th-century kingship led to the ENGLISH CIVIL WAR.

Nineveh, ancient capital of Assyria, on the River Tigris opposite modern Mosul, Iraq. It existed as early as the 18th century BC, but its greatest development occurred during the reigns of SENNACHERIB (704-681 BC) and ASHURBANIPAL (668-c.627 BC). When Nineveh fell to Nabopolassar of Babylonia and his allies in 612 BC, the Assyrian Empire fell with it. See also pp.1188-1189, 1188-1189.

Niobe, in Greek mythology, Queen of THEBES, daughter of TANTALUS and wife of Amphion. She boasted of the number of children she had borne (either six or seven of each sex), and jeered at Leto for having had only two children. Leto's offspring, APOLLO and ARTEMIS, sons of Zeus, killed all of Niobe's children. Distraught, Niobe fled from Thebes. ZEUS turned her to stone at Mt Sipylus.

Niobium, once called columbium, metallic element (symbol Nb) of the second transition series, discovered in 1801. Its chief ore is pyrochlore. It is used in special alloy steels. Properties: at.no. 41; at.wt. 92.9064; s.g. 8.47; m.p. 2,468°C (4,474°F); b.p. 4,742°C (8,568°F); most common isotope Nb⁹³ (100%).

Nippon, Japanese name for Japan, short for *Nippon-koku*, meaning "Land of the Rising Sun", usually pronounced by the Japanese themselves *Nihon*.

Nippon Steel, international steel and iron industry, based in Japan. In 1976 it employed about 79,000 people throughout the world.

Nirenberg, Marshall Warren (1927-), US biochemist. He was awarded the 1968 Nobel Prize in physiology and medicine, together with Robert W. HOLLEY and Har Gobind Khorana, for his part in discovering how GENES determine cell function. Nirenberg found the key to the genetic code, and was eventually able to decipher the code triplets for nearly all of the 20 amino acids. See also pp.176-177, 906-909.

Nirvana (from the Sanskrit: "blowing out"), conception of salvation in the religions which originated in ancient India: HINDUISM, BUDDHISM and JAINISM. The Hindu conception was expressed in the BHAGAVAD-GITA: "That yogi who is internally happy, internally satisfied and internally illumined, attains extinction in the Supreme Being and becomes that Being". In Buddhism, nirvana is the attainment of a transcendent state of enlightenment through the extinction of all desires. In Jainism it means a state of eternal blissful repose. See also MOKSHA.

Nis, city in E Yugoslavia, on the River Nišava. The city was taken by the Ottoman Turks in 1386, and passed to Serbia in 1878. It served as the country's capital until 1901. It was occupied by the Germans in wwI and wwII and was taken by Soviet forces in 1944. It is now an important industrial city manufacturing

machinery, leather and tobacco. Pop. (1971) 127,654.

Nishapur, city in NE Iran. It was founded in the 3rd century AD by the SASSANID ruler, Shapur II, and became an important cultural centre with the founding of several colleges by Nizam al-Mulk. Today it is a market centre for the surrounding farming region which produces cotton, fruit and cereals. Local industries include mining for turquoise. Pop. (1972 est.) 40,000.

Nisus, in Greek mythology, name of two characters. Nisus, King of Megara, had an enchanted lock of purple hair which guaranteed his safety. While he was besieged by King MINOS, his daughter Scylla cut off the hair; Nisus was slain and turned into a sea-eagle. In Virgil's *Aeneid*, another Nisus was a Trojan who gave his life for an ARGONAUT, Euryalus.

Niterói, city in SE Brazil on the SE shore of Guanabara Bay opposite Rio de Janeiro. Originally an Indian settlement, it was founded by Portuguese colonists in 1671 and had become a provincial capital by 1835; it became a city in the following year. It is now an important industrial centre, with shipbuilding, metal and textile industries. Pop. (1970) 291,970.

Nitrate, salt or ester of nitric acid, HNO₃. Nitrate salts contain the nitrate ion, NO₃⁻, and some are important naturally occurring compounds, such as saltpetre (potassium nitrate) and Chile saltpetre (sodium nitrate). The salts are used as fertilizers and as a source of nitric acid. Nitric acid esters are covalent organic compounds with the structure R-O-NO₂ ("R" represents an organic group such as ethyl in ethyl nitrate).

Nitration, introduction of a nitro group (-NO₂) to the carbon atom of an organic compound, usually replacing a hydrogen atom. Strong nitric acid or a NITRATE salt with sulphuric acid are nitrating agents. The nitro compounds formed are useful chemical intermediates, as in the production of ANILINE from BENZENE, and several are explosives (such as trinitrotoluene, TNT). **Nitrazepam** (Mogadon), hypnotic drug with an empirical formula of C₁₅H₁₁N₃O₃. A very popular sleeping pill, Mogadon has an advantage over BARBITURATES in that a lethal dose is a high proportion of body weight. It is also used as a minor sedative.

Nitre (saltpetre), potassium nitrate, KNO₃, known and used since medieval times as an ingredient of GUNPOWDER. It is added to manufactured cigarettes to prevent their going out once lit.

Nitric acid, one of the strongest mineral acids, having the chemical formula HNO₃. It is a colourless liquid which fumes slightly in air and soon goes yellow as the result of decomposition into nitrogen dioxide NO₂. It attacks most metals resulting in the formation of NITRATES and is a strong oxidising agent. It is mostly made by oxidising ammonia over a CATALYST, and is used for many purposes, including the manufacture of explosives. **Nitriles**, organic chemical compounds containing the cyanide group -C≡N, connected to a HYDROCARBON group. They are used in organic synthesis, particularly for the manufacture of acrylic fabrics and synthetic rubber.

Nitro, in chemistry, designates the group -NO₂.

Nitrobenzene, aromatic nitro compound (C₆H₅NO₂), a pale yellow oily liquid smelling of almonds that is highly toxic. It freezes at 5.7°C (42.3°F) and boils at 211°C (411.6°F). Nitrobenzene is used in the manufacture of ANILINE and other organic chemicals.

Nitrocellulose. See CELLULOSE NITRATE.

Nitrogen, common gaseous element (symbol N) of group VA of the periodic table, discovered in 1772. It is the major component of the atmosphere (78% by volume), from which it is extracted by fractionation of liquid air. The main use is in the HABER PROCESS which produces ammonia for fertilizers - nitrogen is essential for plant growth. The element is chemically inert. Properties: at. no. 7; at. wt. 14.0067; m.p. -209.86°C (-345.75°F); b.p. -195.8°C (-320.4°F); most common isotope N¹⁴ (99.76%).

Nitrogen cycle, circulation of nitrogen

Nocturnal animals

through plants and animals in the BIOSPHERE. Plants obtain nitrogen compounds for producing essential proteins through assimilation. Nitrogen-fixing bacteria in the soil or plant root nodules take free nitrogen from the soil and air to form the nitrogen compounds used by plants to grow. The nitrogen is returned to the soil and air by decay or denitrification, accomplished by denitrifying BACTERIA. See also pp.191, 664, 664, 681.

Nitrogen fixation, incorporation of atmospheric NITROGEN into chemicals for use by organisms. Biological nitrogen fixation by micro-organisms provides most of the usable nitrogen. Nitrogen-fixing bacteria live in plant nodules, soil or water. All reduce nitrogen to AMMONIA or ammonium ions that synthesize compounds containing nitrogen or are released into soil or water. See also NITROGEN CYCLE.

Nitrogen mustard, any of a group of compounds that are similar in structure to MUSTARD GAS but in which sulphur is replaced by nitrogen. Several of these compounds are used in the treatment of malignant TUMOURS.

Nitroglycerine, oily liquid used in the manufacture of explosives and to relieve the symptoms of ANGINA PECTORIS. It was discovered by Ascanio Sobrero in 1847. See also pp.582-583.

Nitrous oxide, colourless gas, formula NO_2 , with a pleasant odour, used as an anaesthetic or analgesic during surgical or dental operations. It is also known as "laughing gas" since it produces exhilaration, sometimes accompanied by laughter.

Ni Tsan (1301-74), Chinese landscape painter. Considered one of the Four Great Masters of the Yuan dynasty, he was an influential and widely imitated artist. His landscapes are serene; he used only monochrome ink and popularized the slanting brush stroke technique. See also pp.1262-1263.

Niue, coral island in the central Pacific Ocean; a dependency of New Zealand. The port village is Alofi. Exports include copra and bananas. Area: 259sq km (100sq miles) Pop. (1971 est.) 5,100.

Niven, David (1910-), British film actor, b. Scotland. In the 1930s he worked in Hollywood, USA, and he was often cast as the typical Englishman. He gave fine performances in *Wuthering Heights* (1939) and *The First of the Few* (1942). His adaptability provided him with a steady succession of roles which included such comedies as *Around the World in Eighty Days* (1956) and *Murder by Death* (1976). He has written three best-selling autobiographies, *The Moon's a Balloon* (1971), *Bring On The Empty Horses* (1975) and *Go Slowly, Come Back Quickly* (1981).

Nixon, Richard Milhous (1913-), US Republican politician and 37th president. He was elected to the House of Representatives in 1946 and 1948 and to the Senate in 1950. He made a name as an anti-Communist on the House Un-American Activities Committee and was nominated as vice-presidential candidate at the Republican convention of 1952. He was Vice-President during EISENHOWER's administrations (1953-60). In 1960 he lost the presidential election to the Democratic candidate John KENNEDY. In 1962 he lost the election for the governorship of California and announced his retirement from politics. In 1968, however, he again won the Republican nomination for president and was elected. He was re-elected in 1972. In 1974 he was forced to resign because of the WATERGATE affair. His administrations were marked by the introduction of prices and incomes controls, the lowering of the voting age to 18 and the ending of military conscription. He was the first US president to pay a state visit to Communist China (1972). In 1973 his administration also ended the US involvement in the VIETNAM WAR.

Niza, Marcos de (c.1495-1558), Franciscan missionary and explorer. He led an expedition into New Mexico in 1539. His belief that the Zuni civilization contained the fabulous wealth of the Seven Golden Cities of Cibola led to Francisco Vázquez de Coronado's expedition in 1540.

Njal's Saga, long and powerful Icelandic

story, written anonymously in the 13th century and relating the violent events of a 50-year blood-feud that had happened 300 years previously. The central character is Njal Thorgeirsson who, at the end, is burned with all his family inside his house; the story has been also translated as *Burnt Njal's Saga*. Pessimistic but with comic episodes, it gives a vivid impression of Icelandic life in the heroic era.

Nkomo, Joshua Rhodes (1917-), Rhodesian politician. From involvement in black union politics he became President of the African National Congress in 1957, living abroad when it was banned in 1959. Returning to Rhodesia in 1960, he became President of the Zimbabwe African Peoples' Union (ZAPU) the following year. He spent much of the 1960s in prison and he was finally released in 1974 to become an executive member of the African National Congress. He came second to Mugabe in the 1980 elections, and formed with him the Governing Coalition.

Nkrumah, Kwame (1909-72), African political leader. Educated in Africa and the USA, he returned to the Gold Coast and formed the Convention People's Party in 1949. He advocated self-government and was imprisoned by the British in 1950. He was released in 1951, and became Prime Minister in 1952. Under his leadership the Gold Coast became independent in 1957. British Togoland joined it to form the new nation of Ghana and in 1960 Ghana became a republic with Nkrumah as President. Following a build-up of security forces, he made Ghana a one-party state in 1966, but was ousted by the military in 1966 and took refuge in Guinea. See also pp.1702-1703, 1703.

NKVD. See KGB.

No (Noh), form of Japanese symbolic drama during the 12th or 13th to the 15th centuries. It was influenced by ZEN BUDDHISM in the simplicity of its stage sets and scenery. The plots were taken chiefly from Japanese mythology and poetry; each play portrays but a single incident. With little character or plot development, each No play seeks to convey a moment of experience or insight. The techniques are highly stylized with the use of masks, music, dance and song. A No programme customarily presents a number of plays of contrasting types, and KABUKI drama had its origins partly in No.

Noah, in Genesis, son of Lamech and 10th in descent from ADAM. Chosen by God to be the only man righteous enough to survive the FLOOD, he built the ARK for himself, all his family and a pair of every animal. He and his sons, Ham, Shem and Japheth, and their wives were the ancestors of the human race after the Flood.

Nobel, Alfred Bernhard (1833-96), Swedish chemist, engineer and industrialist. He invented DYNAMITE in 1866, patented a more powerful form of blasting gelatine in 1876 and in 1888 produced ballistite, one of the first NITROGLYCERINE smokeless powders. With the immense fortune he made from the manufacture of explosives and from interests in the BAKU oil fields in Russia, he founded the NOBEL PRIZES, first awarded in 1901.

Nobelium, radioactive metallic element (symbol No) of the actinide group, made in 1957 by bombarding Cm^{244} with C^{13} nuclei. The element has been made only in trace amounts and has not been identified chemically. Properties: at. no. 102, most stable isotope No^{255} (half-life 3 min). See also TRANSURANIC ELEMENTS.

Nobel Prizes, awards given each year for outstanding contributions in the fields of physics, chemistry, physiology and medicine, literature and economics, and to world peace. Established in 1901 by the will of Swedish scientist Alfred Bernhard NOBEL, the prizes are awarded annually on 10 December. The economics prize was first awarded in 1969. The winning candidates are selected by four committees: the Swedish Academy of Science for physics, chemistry and economics; the Caroline Institute in Stockholm for physiology and medicine; the Swedish Academy in Stockholm for literature; and the Nobel Committee appointed by the Norwegian parliament, for peace. The Peace Prize is

awarded for outstanding work in promoting peace, international brotherhood and disarmament. This prize is presented in Oslo; others are awarded in Stockholm.

Nobili, Leopoldo (1784-1835), Italian physicist who was a pioneer in electrochemistry, a field in which he made important discoveries. He generated electricity using platinum ELECTRODES in an alkaline nitrate ELECTROLYTE and devised the astatic GALVANOMETER to measure the current. He also invented the THERMOCOUPLE and the thermopile (two types of thermometers).

Noble, Dennis (1899-1966), British baritone best known for his performances in operas by Verdi and Puccini. At the suggestion of the conductor Percy Pitt, he auditioned for Covent Garden, London, where in 1924 he made his debut in *Rigoletto*. He appeared subsequently in many of the famous opera houses in Europe and the USA. Although he moved to lighter stage entertainment in the 1940s he returned to the concert world periodically and was widely acclaimed for his performance in Sir William Walton's *Bellszaz's Feast*.

Noble gases, or inert gases, helium, neon, argon, krypton, xenon and radon—the elements forming the 0 group of the PERIODIC TABLE. They are very unreactive and will combine with only a few other elements (eg krypton, xenon and radon will react with fluorine). This low reactivity is because the noble gases have complete outer electron shells (helium's has two electrons and the rest have eight each), thus offering no VALENCY "hooks". The noble gases were once thought to be completely inert (non-reactive), hence their alternative name. They are also called the "rare gases", although argon and helium are quite common.

Noble metals, unreactive metals found naturally in the native, metallic state and not usually as chemical compounds or ores. They include SILVER, GOLD, PLATINUM, OSMIUM, IRIIDIUM, PALLADIUM, RHODIUM and RUTHENIUM. However, COPPER, also sometimes found as the native metal, is not included, whereas MERCURY, found both as the metal and as ores such as cinnabar, often is, so that the noble metals are at best a rather loose assemblage. Gold and platinum are precious metals used for jewellery for their lustre, resistance to tarnishing, ductility and malleability. Osmium, the heaviest of all metals, is alloyed with iridium to make osmiridium, used to tip fountain pen nibs. Platinum and palladium are used in industry as CATALYSTS.

Noctiluca, genus of plant-like flagellate PROTOZOA usually found floating near the surface of the sea. It is phosphorescent and has a round body with one large and one small flagellum at right angles to each other. Width: to 2mm (0.08in). Class Mastigophora.

Noctilucent cloud, cirrus-like cloud visible only at night when directly illuminated by the Sun at between 5°-16° below the horizon. The clouds may be silvery blue or orange-red in colour and occur at heights of 80-85km (50-53 miles). They probably consist of ice particles.

Nocturnal animals, species that hunt and feed by night, and rest or sleep during the day. They include both predators and prey, the balance of nature being maintained as during daylight hours. The term nocturnal is also used for crepuscular species, those which are particularly active at dawn or dusk. Other animals may be irregularly nocturnal in their habits. Truly nocturnal animals usually show marked adaptations to their way of life, large eyes being a common feature. The retina of an owl's eye contains a great number of rod cells to make use of the smallest amount of light, but contains no cone cells to discriminate colours, which, at low light intensities, become indistinguishable even to the eyes of human beings. BATS generally have poor eyesight, but their special adaptations include a reflected sound ("sonar") navigation system which ensures that they do not collide with obstacles during night flights. In hot deserts nocturnal activity is often an adaptation to climatic conditions.

Nitroglycerine is made by nitrating glycerine with nitric and sulphuric acids.

Richard Nixon, photographed during a television interview with David Frost.

Joshua Nkomo is the vociferous black leader in Zimbabwe's national struggle.

Alfred Nobel made a fortune from dynamite and established the prizes named after him.

Noise levels of Concorde being monitored near Kennedy Airport, New York City.

Sydney Nolan in his London studio, photographed with some of his paintings.

Nomads in Mongolia camp outside the feudal stockade of Prince Teh Weng.

Baron Nordenskjöld, in his ship Vega, sailed the north east passage in 1881.

Among small rodents and insectivores everywhere, foraging at night offers the advantage of invisibility from predators, except those with well-adapted night vision.

Nocturne, in music, a quiet piece endeavouring to reflect the atmosphere and mood of night-time. First used by John FIELD, the title was later used most by CHOPIN. In painting, the term was given to James McNeill WHISTLER's evocative paintings of the River Thames.

Noddy. See TERN.

Node, in astronomy, either of the two points in the orbit of a planet, comet or satellite etc., at which this orbit intersects the plane of the ECLIPSE. The ascending node occurs where the body crosses the ecliptic plane from south to north and the descending node from north to south.

Noel-Baker, Philip John, Baron (Life Peer) (1889-), British politician and international statesman. He was a Labour MP (1929-31, 1936-50) and became a junior Minister at the Departments of Air, Commonwealth Relations and Fuel and Power (1946-51). He was also captain of the British Olympic team in 1924. For 40 years' work for international peace he was awarded the Nobel Peace Prize in 1959.

Noguchi, Hideyo (1876-1928), Japanese bacteriologist known for isolating the causative agent of SYPHILIS in the central nervous system. He improved the technique of the WASSERMAN reaction and devised the Wasserman skin test. See also p.1109.

Noguchi, Isamu (1904-), US abstract sculptor. He was influenced by GIACOMETTI and Alexander CALDER, and his works are marked by great delicacy and employ all sorts of materials. He has constructed much open-air sculpture, including the Japanese garden for the Paris UNESCO building (1956-58).

Noise, any disturbing, often unwanted, sound. Common sources of noise are motor cars and lorries, jet engines, railway trains and factory machinery. Experiments carried out to determine the effects of noise on those workers involved in manufacturing industries show that output seems only to be seriously affected in work which requires mental concentration. Nevertheless, noise is often regarded as a form of acoustic pollution and many noise-abatement pressure groups have been formed to lobby the authorities to produce legislation to reduce noise to a more acceptable level. Noise is usually measured on a decibel scale: conversation is generally about 60dB, and pain starts at about 120dB. See also pp.833-834, 834.

Nola, town and episcopal see in Napoli province, Campania region, S Italy. It was an Etruscan city known as Nova before it was taken by the Romans in 313 BC. The town's Gothic cathedral was built between 1395 and 1402. There is a monument to Giordano BRUNO, who was born there, and the Emperor Augustus died in Nola in AD 14. Pop. (1971 prelim.) 26,460.

Nolan, Sidney (1917-), Australian painter, the acknowledged leader of the modern Australian movement. His early influences included European painters such as Paul KLEE; later his art was enriched by his admiration for Australian folklore and Aboriginal art and by the untamed grandeur of his native landscape. His famous *Ned Kelly* series (from 1946) expresses with intense power the violent life and death of the legendary outlaw, and the hypnotic atmosphere of the outback. The same almost Surrealist quality pervades all his work on Australian themes, including *Mrs Fraser* and *Glenrowan* (both 1957), as it does on other themes, eg *Leda* and *the Swan* (1960).

Nolde, Emil (1867-1956), German EXPRESSIONIST painter, a member of Die BRÜCKE, the SEZESSION and the BLAUE REITER. Influenced from c.1905 by Van Gogh, Munch and Ensor and after visiting Polynesia and the Far East (1913-14) by primitive art and religion, he painted landscapes and biblical scenes of ferocious impact, which he achieved by the use of intense colour and distortion of drawing. He also worked in etching, wood-cut and lithography.

Noli me tangere ("Do not touch me"), words spoken by JESUS CHRIST after His resurrection to MARY MAGDALENE on her recognition of Him. As quoted the phrase occurs in John 20:17 of the Vulgate (Latin Bible), but it may be used generally as a warning against approach.

Nollekens, Joseph (1737-1823), British sculptor who studied in Rome and returned to London in 1770. His work became fashionable, and among his most famous busts are those of Dr Johnson, the younger Pitt, Charles James Fox and Lawrence Sterne.

Nolo contendere (Latin for "I wish not to contend"), plea in US criminal law which is not itself an admission of guilt but has the same effect on the proceedings as if it were. A defendant pleading it may, however, deny the truth of charges in other proceedings which may arise from the same matter. The phrase has given rise to the popular expression "No contest".

Nomad, member of a wandering group of people who live mainly by hunting or herding and do not have fixed settlements. In contrast to early HUNTERS AND GATHERERS, nomads are often seasonal wanderers who follow the migrations of animals. Nomadism has been regarded as an intermediate state between hunter-gatherer and farming societies, but some peoples have abandoned farming for nomadism. Settled societies have often been invaded by warlike nomads, eg ancient Egypt by the HYKSOS, and, in the Middle Ages, W Asia and Europe by the MONGOLS. Today, nomadic groups survive only in the more remote parts of Africa, Asia and the Arctic. See also ARABS; BEDOUINS; ESKIMOS.

Nome, port in W Alaska on Norton Sound, 1,127km (700 miles) W of Fairbanks. It was founded in 1896 when gold was discovered locally. Roald AMUNDSEN arrived there in 1906, having negotiated the NORTHWEST PASSAGE. Nome is a centre for Eskimo handicrafts and has a US Air Force base. Extensive oil reserves exist near by. Industries: tourism and fishing. Pop. (1970) 2,488.

Nominalism, philosophical theory, opposed to realism, that denies the reality of universal concepts. Whereas realists claim that there are universal concepts such as roundness or dog that are referred to by the use of these terms, nominalists argue that such concepts cannot be known, and that the terms refer only to specific qualities common to the particular dogs or circles known. Nominalism was much discussed by the scholastic philosophers of the Middle Ages, especially ROSCELLINUS and William of OCCAM. It was taken up by Thomas HOBBS, by whom it was often seen as a sign of ethical relativism; and again became important in the 20th century, with the work of Nelson Goodman (1906-). See also p.1109.

Nomura, Kichisaburo (1877-1964), Japanese admiral and diplomat. Commander of the Japanese troops at Shanghai in 1932. He was appointed US ambassador in 1940 and was negotiating at the time of the PEARL HARBOR attack, of which he denied previous knowledge.

Nonalignment. See NEUTRALITY.

Nonconformity, general term for all the sects of British Protestantism which do not conform to the doctrines or discipline of the Church of England. The term arose in the 17th century when the sects, especially the CONGREGATIONALISTS, BAPTISTS and PRESBYTERIANS, but also the QUAKERS, proliferated. Persecuted by the CLARENDON CODE, TEST ACT and Corporation Acts, they were granted freedom of worship in 1689 and civil and political rights in 1828. The METHODISTS and UNITARIANS were added to their ranks in the 18th century.

Non-Euclidean geometry. See GEOMETRY.

Non-figurative art, type of painting, sculpture or decoration that makes no attempt to represent objects from the physical world. ABSTRACT ART is usually equated with non-figurative art.

Non-intervention, term used in international politics to denote a systematic refusal by a state or states to interfere in the affairs of another state.

Nonjurors, clergy of the Church of England and the Scottish Episcopal

Church who refused to take the oath of allegiance to King WILLIAM III and Queen MARY II on their accession in 1689, on the grounds that it would break their oath to King JAMES II. They comprised several bishops and about 400 priests, who were all deprived by Act of Parliament. The last nonjuring bishop died in 1805. The Nonjurors believed in the DIVINE RIGHT OF KINGS and NON-RESISTANCE.

Nonnus (fl. 5th century AD), Greek poet. His epic *Dionysiaca*, in 48 books, is noted for its inventive style and wealth of mythological lore. Most of it deals with Dionysus's expedition to India.

Nono, Luigi (1924-), Italian composer. An early follower of Anton von WEBERN, he gained international recognition with the *Canonic Variations* (1950), an orchestral work based on a note series of Arnold SCHOENBERG. He has composed several political works, including the anti-fascist opera *Intolerance* (1960), which incorporates recorded performance and film sequences and *Song for Vietnam* (1973).

Non-Proliferation Treaty (1968), agreement signed by the USSR, the UK, the USA and many other countries. It requires each participating nation, under the auspices of the UN International Atomic Energy Agency (IAEA), to agree that research and use of nuclear energy for peaceful purposes will not be redirected into military channels. See also SALT (STRATEGIC ARMS LIMITATION TALKS).

Non-resistance, doctrine arising in the late 16th century from the theory of the DIVINE RIGHT OF KINGS. It asserted the necessity of passive obedience to civil authority even when the commands of that authority contravened the individual subject's notion of the divine will. In England it was a policy advocated by the Anglican established Church not only for the use of Catholics and Dissenters, but also for Anglicans themselves to justify acquiescence in the Whig settlement of 1689.

Non-specific urethritis. See NSU.

Noot, Jonker Jan van der (c.1540-c.1595), Dutch poet, the first Dutchman to draw upon French and Italian RENAISSANCE influences. He published his first work, *The Little Wood* (1570), as a political exile in England, and his other writings include Petrarchan sonnets and the incomplete epic *Olympia*.

Nootka, Wakashan-speaking tribe of North American Indians, living along the W coast of Vancouver Island, British Columbia. They were once expert fishermen, and were the only Indians on Canada's Pacific coast to hunt whales. At one time there were approx. 6,000 Nootkas; they now number approx. 1,500.

Noradrenaline, substance secreted by the ADRENAL GLANDS. Chemically it resembles ADRENALINE and has a similar effect in stimulating the AUTONOMIC NERVOUS SYSTEM of the body, although its action is milder. Medically it is used to combat the fall in blood pressure that accompanies shock.

Nordenskjöld, Nils Adolf Erik, Baron (1832-1901), Scandinavian explorer and scientist. A geologist, mineralogist and mapmaker, he made several voyages to SPITSBERGEN, led an exploration of Greenland's inland ice in 1870 and later sailed the NORTH EAST PASSAGE.

Nordic, subdivision of the CAUCASIAN race, characterized by tall stature, fair skin, blond hair, blue eyes and long heads. This physical type predominates in Norway, Sweden and Denmark and occurs throughout N Europe. See also MS p.32.

Nordkapp. See NORTH CAPE.

Nördlingen, Battles of, two military engagements during the THIRTY YEARS WAR. The first (1634) was a victory for the Archduke Ferdinand's Hungarian army over the Swedes led by Gustav Horn. In the second (1645), French forces commanded by TURENNE defeated a Bavarian army. See also pp.1404-1405, 1404, 1420-1421.

Nore, The, sandbank in the River Thames estuary, off Sheerness, Kent; marked by a lightship established in 1732, the first of its kind to be used in English waters. The Nore is also the name given to the area as a whole, which was much used as an anchorage by naval vessels in the 17th and 18th

centuries. In 1797 sailors at the Nore mutinied against their harsh conditions; the mutiny was put down and its leader, Richard Parker, was hanged from the yardarm of his ship.

Norepinephrine. See NORADRENALINE.
Norfolk, Dukes of. See HOWARD (family).
Norfolk, county of E England. The land is mostly low-lying and is used mainly for agriculture. Its coastline is, for the most part, sandy. The region is drained by the rivers Waveney, Yare, Bure and Ouse, and also by the Broad— a lake and marsh area caused by medieval peat cuttings and a later rise in the sea-level. In the Middle Ages, Norfolk was a centre for the wool industry. Today the county produces cereals and root vegetables, and poultry farming is also important. Norwich, a shoe-manufacturing city, and King's Lynn are the main administrative centres. Area 5,353sq km (2,067sq miles).

Norfolk Broad. See BROADS, NORFOLK.
Norfolk Island, territory of Australia in the SW Pacific Ocean, approx. 1,450km (900 miles) E of Australia. Discovered in 1774 by Capt. James Cook, it became a British penal colony from 1788 to 1855. The island is noted for its beautiful pine forests. The chief economic activities are agriculture and tourism. Area: 34sq km (13sq miles). Pop. (1970 est.) 1,380.

Norfolk Island pine, evergreen pine tree (family Araucariaceae) native to the South Pacific, where it grows to 60m (200ft) in height. Branches grow in annual tiers of four to seven and bear bright green needles up to 1.3cm (0.5in) long. The tree is propagated by seeds or cuttings of tip growth. It is widely grown as a house plant in its sapling stage. Species *Araucaria excelsa*. See also ARAUCARIA.

Noricum, historical region S of the River Danube, now in Austria and West Germany. It became part of the Roman Empire under an Illyrian proconsul in c. 15 BC. Its capital was at Vindobona, the modern city of Vienna.

Norma (1831), two-act tragic opera by Vincenzo Bellini with a libretto by Felice Romani, first performed at LA SCALA, Milan. Set in ancient Gaul, the tragedy involves the attempt of Norma, a Druidic priestess, to regain the love of Pollione, a Roman proconsul, which ends with the death of both. The arias are written for the BEL CANTO style of singing and require considerable technical virtuosity. See also p.1598.

Norman, Frank (1931–), British writer whose reputation was established with the musical he wrote for THEATRE WORKSHOP with Lionel Bart, *Fings Ain't Wot They Used T'Be* (1959).

Norman architecture, ROMANESQUE architectural style of the Normans in England, N France and S Italy. The main structures were massive castles, churches and abbeys built of stone and free of intricate ornamentation. The rounded arch was widely used. Churches were cruciform in plan and were often topped by one or more square towers.

Norman Conquest, the invasion of England by WILLIAM, Duke of Normandy, who defeated King HAROLD at HASTINGS in 1066 and was crowned King of England. There was considerable resistance to William, but the chief Anglo-Saxon lords had submitted by 1071. William strengthened his position by granting English lands to his Norman barons and establishing Norman feudalism. The Church was also subjected to feudalism and Normanization; William resisted papal supremacy. Norman influence also became dominant in architecture, literature, language, law and the art of warfare. See also pp.1301-1302, 1301-1302.

Normandy, region and former province of NW France, bounded historically by Picardy (NE), Île-de-France (E), Maine (S), Brittany (SW) and the English Channel (W and N). It now includes the départements of Manche, Calvados, Eure, Seine-Maritime and Orne. Part of the Roman province of Gaul, it was absorbed into the Frankish kingdom of NEUSTRIA in the 6th century. Invaded by Norsemen in the mid-9th century, it was the seat of Duke William of Normandy who invaded

England in 1066. It was conquered by the French in 1202 and again in 1450. During WWII Normandy was the scene of the Allied invasion (June 1944) of German-occupied France. Forests, flat farmlands, and rolling hills characterize the land; the economy is based on livestock rearing and fishing.

Norman French, dialect of French spoken by the Normans at the time of the conquest of England (1066). Although co-existing with contemporary Anglo-Saxon, it was the language of the Anglo-Norman court and of literature in England for several centuries. It died out around the end of the 14th century.

Normans, warrior people of Scandinavian origin who settled in NW France. In 911, Charles the Simple gave ROLLO, the leader of bands of VIKING pirates, formal control of a coastal area which he and his descendants expanded to form the Duchy of Normandy. The Normans adapted Christianity and feudalism to their needs while still retaining their prowess in war; by 1050, groups of Normans had conquered Sicily, which became an important Mediterranean power under ROGER II, and in 1066 Duke WILLIAM THE CONQUEROR led a Norman army in the conquest of England. Norman knights played an important part in the 1st CRUSADE, and Anglo-Norman families conquered Wales and Ireland for the English crown. The Normans soon became absorbed into the societies they had conquered; Normandy itself was finally taken by the French in the 15th century.

Norms, social, standards of behaviour, either specified or understood, to which members of a social group are expected to conform. Social norms are enforced by the group through both positive and negative sanctions (rewards and punishments). They are in general observed because they are considered functional and moral.

Norms, in Germanic mythology, three maidens who spun or wove the fate of men, akin to the Greek Fates. Their names were Urth (Past), Verthandi (Present), and Skuld (Future). The Norms were depicted as living by Yggdrasil, the world tree, and were linked with both good and evil.

Norodom Sihanouk (1922–), Cambodian political figure; King (1941–55); Prime Minister (1955–60); Head of State (1960–70). Following a right-wing take over of the government in 1970, he established a government in exile in Peking. He returned to Cambodia as head of state with the KHMER ROUGE in 1975 but resigned in April 1976.

Norrie, Lord (1893–1977), British soldier and politician. He served in both World Wars and after governing South Australia (1944–52) he was Governor-General of New Zealand (1952–57).

Norrish, Ronald George Wreyforth (1897–1978), British chemist who shared the 1967 Nobel Prize in chemistry with Manfred EIGEN and George PORTER for research into very fast chemical reactions. Between 1949 and 1955 Norrish and Porter developed the technique of irradiating a gaseous system at equilibrium with extremely short sparks of high intensity, causing a momentary disturbance of the equilibrium. They measured the time taken for equilibrium to be regained and in this way could study chemical changes occurring in billionths of a second. Although of primarily theoretical importance, this work has potential applications in such areas as the hybridization of large molecules and ultrasonic communications.

Norrköping, port in SE Sweden, at the head of Bråviken, an inlet of the BALTIC SEA. Founded in the 14th century, the city was burned in 1719 by the Russians during the NORTHERN WAR. Industries: furniture, paper, food processing, electrical goods. Pop. 95,851.

Norsemen (Northmen). See VIKINGS.

North, Frederick, Lord North, 2nd Earl of Guilford (1732–92), British political figure. Chancellor of the Exchequer from 1767 to 1770 and Prime Minister from 1770 to 1782, he followed the policies of GEORGE III that led ultimately to the loss of

the American colonies. He resigned in 1782, but served as Secretary of State the following year with Charles James FOX. See also pp.1540, 1545.

North, one of the four cardinal points of the compass, opposite SOUTH, the two together defining the axis about which the Earth rotates. The term north is also used to denote one of the poles of a magnet.

North Africa, term applied to the region of the N African continent from the Mediterranean Sea to the Sahara Desert. It includes Morocco, Algeria, Tunisia, Libya and, usually, Egypt. The region is inhabited chiefly by Muslims; most settlements are confined to the coast and the lower valley of the River Nile. Economic and cultural ties with Europe have been pronounced throughout the region's history. During the 19th century much of the area was French or Italian territory. During WWII the Allies defeated German and Italian troops in North Africa. Agriculture in the region depends on irrigation. Mineral deposits include oil and iron ore. Area: approx. 5,570,000sq km (2,140,000sq miles).

North America. See AMERICA.

North America Nebula (NGC 7000), bright emission nebula in the constellation Cygnus. Its name derives from its shape, which resembles a map of North America. See also p.997.

Northampton, town in central England, on the Nene River, 97km (60 miles) NW of London; county town of Northamptonshire. The town has a Norman castle and one of the only four round churches in England. Industries: footwear, leather goods, engineering, motor accessories. Pop. 154,900.

Northamptonshire, county in central England. The land is undulating and is drained by the Welland and Nene rivers. Much of the land is devoted to pasture, wheat growing and forestry. There are extensive iron ore deposits and the iron and steel industry is important. Northamptonshire is also noted for the manufacture of footwear. NORTHAMPTON is the county town. Area: 2,367sq km (914sq miles). Pop. 467,843.

Northanger Abbey (1817), novel by Jane AUSTEN, completed in 1803. Catherine Morland, an attractive young girl under the influence of Mrs Radcliffe's *Mysteries of Udolpho*, one of the most famous of the so-called "horror school" of English Romanticism, falls in love with Henry Tilney, the son of a general. At the invitation of his father, who mistakenly supposes her to be rich, she visits them at Northanger Abbey where, due to her romantic imagination, she sees mystery and horror everywhere. Jane Austen used this novel to satirize the Radcliffe school of GOTHIC fiction.

North Atlantic Drift, ocean current, also called North Atlantic Current, which extends from SE of the GRAND BANK, Newfoundland, to the NORWEGIAN SEA. It is a warm current which, when mixed with the cold Arctic waters, produces the excellent fishing grounds of the northern European seas.

North Atlantic Treaty Organization. See NATO.

Northavon, county district in N and E AVON, England, created in 1974 under the Local Government Act (1972). Area: 461sq km (178sq miles). Pop. (1980 est.) 118,100.

North Borneo, former British protectorate (1888–1963) on the island of Borneo. The region became a state of Malaysia in 1963, when it was called SABAH.

North Briton, The, British newspaper begun in 1762 by John WILKES. It was a stridently anti-government paper, particularly hostile to the court and the Prime Minister, the Earl of BUTE. The seizure of issue no.45, which attacked George III's remarks in the speech from the throne on the PEACE OF PARIS in 1763, led to the prolonged Wilkes affair. See also p.1545.

North Cape (Nordkapp), promontory at the N tip of Magerøy island in the far N of Norway, considered to be the most northerly point of Europe. The Cape lies between the BARENTS SEA (E) and the NORWEGIAN SEA (W).

Norfolk Island pines were discovered during James Cook's second voyage.

Norma; set and costume design for the forest of the druids in Bellini's opera

Norman architecture is characterized by a rounded arch on short heavy columns.

North Cape, at Norway's northernmost tip, is a desolate promontory rising 330m.

North Carolina

North Carolina, state in E USA, on the Atlantic coast. The coastal plain is swampy near the shore and low-lying. Its w edge rises to rolling hills, and further w are the Blue Ridge and Great Smoky Mts. North Carolina is the leading producer of tobacco in the USA. Other important farm products are corn, soya beans, peanuts, pigs, chickens and dairy produce. Textiles and furniture manufacture are the leading industries. Others include timber, fishing, tourism, electrical machinery and chemicals. Mineral resources include phosphate, feldspar, mica and kaolin. The principal cities are Raleigh, the state capital, Charlotte, Greensboro and Winston-Salem. The first English colony in North America was founded on Roanoke Island, just off the coast, in 1585, but this was later abandoned. Permanent settlers moved into the region from Virginia in the 1650s. North Carolina was the first colony to strive for independence from Britain. Before the AMERICAN CIVIL WAR opinions in the state were sharply divided and North Carolina was the last to secede, which it did in May 1861, after fighting had already begun. Area: 136,523sq km (52,712sq miles). Pop. (1980 est.) 5,874,429. See also p.2161.

North Channel, strait between NE Ireland and SW Scotland, separating the Irish Sea from the Atlantic Ocean. Width (max): 23km (14 miles); length: approx. 120km (75 miles).

Northcliffe, Alfred Charles William Harmsworth, Lord (1865–1922), British journalist. He started as a freelance contributor to popular periodicals and gradually formed the world's largest periodical combine, the Amalgamated Press. He bought the London Evening News in 1894 and founded the *Daily Mail* (1896) and the *Daily Mirror* (1903). In 1908 he took over and revived the ailing *Times*. He was created viscount in 1917.

North Dakota, state in N Central USA, on the Canadian border. Situated in the geographical centre of North America, North Dakota experiences very cold winters but only warm summers. The region is generally low-lying and is drained by the Missouri and Red rivers. The state is overwhelmingly rural, and wheat, barley, rye and oats are the chief crops. Cattle rearing is, however, the most important economic activity. Oil is the principal mineral resource. There are also deposits of lignite and natural gas. Food processing is the major industry. The chief cities are Bismarck (the state capital), Fargo, Grand Forks and Minot.

French explorers first visited the region in 1738. The USA acquired the w half of the area from France in the LOUISIANA PURCHASE (1803) and the rest from Britain in 1818 when the boundary with Canada was fixed. Dakota Territory was organized in 1861 and divided into North and South Dakota in 1889, when both were admitted to the Union. The Missouri was a major route for pioneers going w, and the construction of the railways led to further development of the state. Area: 183,022sq km (70,665sq miles). Pop. (1980) 652,695. See also p.2161.

North Downs, range of chalk hills in SE England, stretching w from the coast at Dover and facing the South Downs across the Weald. They are drained by the Wey, Darent, Medway and Stour rivers. The highest point is Leith Hill, 294m (965ft).

North-East Derbyshire, county district in N central DERBYSHIRE, England, created in 1974 under the Local Government Act (1972). Area: 277sq km (107sq miles). Pop. 94,700.

North East Frontier Agency, Indian territory renamed Arunachal Pradesh ("Dawn's Province") in 1972, in the Himalayas on the India-China border. Once a district of Assam, it is administered separately within the Indian Union. Its population is predominantly Mongoloid. In 1962 it was invaded by the Chinese, who withdrew the next year, returning it to the Indians. Area: 81,426sq km (31,438sq miles).

Northeast Passage, now known as the Bering Strait, route for ships sailing between the Atlantic and Pacific oceans

along the N coasts of Europe and Asia. The route was discovered by Vitus J. BERING in 1728 and confirmed as being the Northeast Passage by Capt. James COOK in 1778. A successful navigation of the passage was accomplished in 1878–79 by Baron A. E. NORDENSKJÖLD in the *Vega*. Numerous expeditions had previously sought such a route to the riches and trading opportunities of the East.

Northern Cross (Cygnus or The Swan), northern constellation between Pegasus and Lyra. It contains several bright stars including DENEK (Alpha) of magnitude 1.3 and one of the three components of the Summer Triangle, and ALBIREO (Beta) which is a DOUBLE STAR. Chi is a long-period VARIABLE STAR with a period of 407 days. The MILKY WAY is particularly bright in this region and there are several stellar CLUSTERS. See also pp.988, 1013, 1013.

Northern Ireland, part of Great Britain, occupying the NE of Ireland. It is composed of fertile plains surrounded by low mountains. There are several large lakes, and of its rivers the principal ones are the Royle, Lagan and Bann. Over 80% of the land is farmed; the chief crops are potatoes and barley. Industry is becoming increasingly important. The country has been disrupted by riots since 1968 and British troops have been stationed in Northern Ireland since 1969. The capital is Belfast. Area: 14,121sq km (5,452sq miles). Pop. (1980 est.) 1,547,300. See also p.2112.

Northern Rebellion (1569–70), revolt against ELIZABETH I of England, led by the Earls of Northumberland and Westmorland. They sought a return to Roman Catholicism and the removal of the Queen's councillors. They also hoped to release MARY, QUEEN OF SCOTS from imprisonment at Tutbury. Their forces marched s as far as Selby (November 1569), but dispersed in December when opposed by royalist forces under the Earl of Sussex. A second revolt in January 1570 also failed. About 500 rebels were executed.

Northern Rhodesia. See ZAMBIA.

Northern Territory, territory in N Australia bounded by the Timor and Arafura seas (N), and the states of Western Australia (W), South Australia (S) and Queensland (E). Darwin is the capital and only seaport. The first settlement in 1824 failed and there was no further attempt at colonization until 1869. It became part of Australia in its own right in 1911, was divided into two regions in 1927 but was reunited in 1931. Today there is little farming but some government-aided stock-breeding. The territory's mineral resources are being exploited; manganese ore, bauxite and iron are mined. Area: 1,347,525sq km (520,280sq miles). Pop. (1979 est.) 115,900.

Northern War (1700–21), conflict between Sweden and Russia, with her allies Saxony-Poland and Denmark-Norway, arising chiefly from the desire of the neighbours of Sweden to break Swedish supremacy in the Baltic area. Charles XII of Sweden forced Poland to capitulate in 1706, then attacked Russia (1707). Relying on support from Ivan Mazepa, a Cossack leader, the Swedish forces penetrated the Ukraine but were destroyed at the battle of Poltava (1709) when this support was not forthcoming. The Swedish navy was defeated by Russia in 1714 and Russian armies invaded Sweden. Peace was restored by the treaties of Stockholm between Sweden, Poland and Denmark and of Nystadt, as a result of which Russia gained the Baltic provinces of Estonia, Livonia and part of Karelia, and emerged as a major power.

North Frisian Islands, group of Danish and German islands in the North Sea, off the coast of Schleswig-Holstein, West Germany, and s Jutland, Denmark. The chief islands are Sylt, Föhr, Nordstrand, Pellworm and Amrum, belonging to Germany, and Rømø, Fanø and Mønø belonging to Denmark.

North Hertfordshire, county district in Hertfordshire, England, created in 1974 under the Local Government Act (1972). Area: 374sq km (144sq miles). Pop. 105,000.

North Holland (Noord Holland), province of W Netherlands, between IJsselmeer (E) and the North Sea (W). A dairy-farming region, North Holland is famous for its tulips. Tourism is also important. The capital is Haarlem. Area: 2,911sq km (1,124sq miles).

North Island, smaller of the two islands that comprise New Zealand; separated from SOUTH ISLAND by Cook Strait. Its chief cities are Wellington, Auckland and Hamilton. Most of New Zealand's dairy produce comes from North Island which has four major livestock areas: the narrow northerly peninsula, the Waikato basin, the Taranaki plains and the Bay of Plenty. Other industries include wood pulp and paper at Kaingaroa, mining for iron sand and fishing. Area: 114,729sq km (44,297sq miles). Pop. (1971) 2,051,363. See p.2105.

North Korea. See KOREA, NORTH.

Northland, peninsula in North Island, New Zealand, extending NW from Auckland for 320km (200 miles). The area is under-developed and agriculture is the main industry. The only major town is Whangarei. Area: 36,713sq km (14,175sq miles). Pop. (1971 est.) 96,000.

North Pacific Current, broad, slow, cyclonic current of the N Pacific Ocean. It moves in a clockwise motion from the North Equatorial Current turns N by Japan and E in the N Pacific; it forms the California Current. See also p.203.

North Point, cape at the N end of W Prince Edward Island, SE Canada, on the Gulf of St Lawrence.

North Pole, northern end of the Earth's axis. Geographic north lies at 90° latitude, 0° longitude; magnetic north is at 76°20'N, 101°S (1970). The first attempts to reach the North Pole were made in the 17th century but it was not until 1909 that the US explorers Robert E. Peary and Matthew Henson were successful.

North Riding, former administrative district of Yorkshire, N England; in 1974 it was divided between the new counties of NORTH YORKSHIRE and CLEVELAND. The administrative centre was Northallerton. Area: 5,571sq km (2,127sq miles).

Northrop, John Howard (1891–), US biochemist who shared the 1946 Nobel Prize in chemistry with James SUMNER and Wendell STANLEY for their work on ENZYMES. In 1930 he crystallized the enzyme PEPSIN and demonstrated that it was a PROTEIN, thus resolving a long-standing dispute concerning the chemical nature of enzymes.

North Sea, part of the Atlantic Ocean, about 960km (600 miles) long and 560km (350 miles) wide, extending between the European continent (S and E) and Britain (W). In the S it is connected to the English Channel by the Strait of Dover. The cod and herring fishing grounds of the North Sea have always been of great value. In the 1970s it began yielding resources which proved vital to the U.K.'s ailing economy – oil and natural gas. High capital investment was required to extract them from beneath the sea-bed, and this inhospitable tract of water is now a major industrial site. Area: 574,980sq km (222,000sq miles). See also p.417.

Netherlands connecting Amsterdam with the North Sea. Built during 1865–76 to take ocean-going vessels, it renewed the importance of Amsterdam as a commercial port. Length: 27km (17 miles).

North Star, or Polaris, second magnitude star in the constellation of Ursa Minor, the LITTLE BEAR. It lies within 1° of the north celestial pole and is easily located via the "pointers" in the constellation of Ursa Major, the GREAT BEAR or the Plough. The North Star is of great navigational importance. See also pp.978, 1010, 1010–1011, 1013, 1013, 1018, 1019.

Northstead, Manor of. See CHILTERN HUNDREDS.

North Tyneside, county district in E central Tyne and Wear, England, created in 1974 under the Local Government Act (1972). Area: 84sq km (32sq miles). Pop. 193,000.

North Uist, island of the Outer Hebrides off the NW coast of Scotland, in the Western Isles Region. Industries include

cattle and sheep rearing, weaving, lobster fishing and seaweed processing. Pop. (1971) 1,807.

Northumberland, John Dudley, Duke of (1502–53), English statesman. He joined the regency council formed during EDWARD VI's minority and on the king's death proclaimed his daughter-in-law, Lady Jane GREY, queen. He was executed by MARY I.

Northumberland, Earls of. See PERCY FAMILY.

Northumberland, county in N England on the border with Scotland. The land slopes down from the Cheviot Hills in the NW, and the region is drained by the Tyne, Tweed, Blythe and Coquet rivers. The county is largely rural, the chief farming activities being cattle and sheep rearing. Coal is mined in the S. Area: 5,033sq km (1,943sq miles). Pop. (1979 est.) 289,800.

Northumberland Islands, coral island group off the E coast of Queensland, Australia, between the Great Barrier Reef and Shoalwater Bay. The group is made up of approx. 40 islands extending for 129km (80 miles). The largest is Prudhoe Isle. The islands include several tourist resorts.

Northumberland Strait, arm of the St Lawrence Gulf, separating Prince Edward Island and Nova Scotia and New Brunswick on the Canadian mainland. Length: 290km (180 miles). Width: 19–48km (12–30 miles).

Northumbria, kingdom of, Anglo-Saxon kingdom in N England and S Scotland, formed by the union of BERNICIA and DEIRA in the early 7th century AD. It was the supreme English kingdom in the 7th century. The decision in 664 of its king Oswy to support Roman Christianity rather than Celtic was decisive for the English Church. The arts also flourished at this time; BEDE wrote and the LINDISFARNE GOSPELS were illustrated in Northumbria in the 8th century. The kingdom declined with Danish attacks from 866, and it became an earldom in 944. See also pp.1273, 1273, 1288.

North Vietnam. See VIETNAM.

North West Company, Canadian fur trading syndicate, organized by eastern fur traders in 1783 to minimize the disadvantages of competition. It became a rival, however, of the HUDSON'S BAY COMPANY. It sent its traders, called the Nor'Westers, deep into the wilderness, itself assuming the cost of transporting furs to Montreal along the St Lawrence, and extending its trading domain to the Arctic and Pacific Oceans. The trading posts of Fort William (founded 1805) and Astoria (founded 1811) were threatened by the Red River settlement (1812), leading to virtual warfare with the Hudson's Bay Company. Both companies merged in 1821. See also pp.1491–1492, 1491–1492, 1614.

North-West Frontier Province, province in NW Pakistan bounded by Afghanistan (N and W); the capital is Peshawar. Located near the Khyber Pass, it is a region of high mountains divided by fertile valleys. The economy is based on agriculture: wheat, maize, barley and tobacco are grown. There is some exploitation of mineral resources and a limited number of manufacturing industries including food processing and paper making. Area: 103,696sq km (40,037sq miles). Pop. (1972 est.) 8,402,000.

Northwest Passage, sea route around northern Canada and Alaska between the Atlantic and Pacific oceans. Martin FROBISHER first attempted to sail through the Passage in 1576 and was followed by many famous explorers including Sir Humphrey GILBERT who died on his attempt in 1583. Roald AMUNDSEN made the first complete navigation (1903–06), through Lancaster Sound. A Royal Canadian Mounted Police schooner crossed in one season (1944). The route was not regarded as commercially feasible until the giant ice-breaker the *Manhattan*, equipped with computer-controlled navigational equipment, crashed through the passage in 1969, breaking in excess of 650 miles of surface ice in ten days. It is now an important commercial area because of its huge reserves of oil.

Northwest Territories, province in N Canada, including more than one-third of the country. It is made up of mainland Canada N of latitude 60°N and hundreds of islands in the Arctic Archipelago, the largest of which are Baffin and Victoria islands. The region is divided into three districts: Mackenzie, on the NW mainland; Keewatin, on the NE mainland; and Franklin, which includes the Arctic islands. Much of the N and E of the province is tundra, inhabited by Eskimos and Indians. Most economic development has occurred in Mackenzie district which has large tracts of softwoods and rich mineral deposits that include lead, copper, zinc, gold, uranium and oil. Fishing is also important in the Great Slave Lake. Yellowknife is the capital.

The HUDSON'S BAY COMPANY acquired a large area of NW Canada W of Hudson Bay under charter from Charles II in 1670. In 1869 the Canadian government bought the land from the company. Some of the land was added to the provinces of QUEBEC and ONTARIO. MANITOBA (1870), ALBERTA (1905) and SASKATCHEWAN (1905) were also established in the area. The present boundaries of the Northwest Territories were set in 1912. Area: 3,379,000sq km (1,304,903sq miles). Pop. (1976) 42,609. See also p.1997.

Northwest Territory, region of the Ohio River E of the Mississippi River and S and W of the Great Lakes. It became the first US territory in 1783 by the Treaty of Paris; the states of Indiana, Ohio, Illinois, Michigan, Wisconsin and a part of Minnesota were later created from it. See also p.1626.

North Wiltshire, county district in NW WILTSHIRE, England, created in 1974 under the Local Government Act (1972). Area: 778sq km (301sq miles). Pop. 105,500.

North York, one of the five boroughs of Toronto, S Ontario, Canada, on the Humber River. Since WWII controlled industrial and residential development has taken place, and there are many parks and recreational areas. It includes York University (1959). Pop. 504,150.

North Yorkshire, county in N England, formed in 1974 from parts of the former North, East and West Ridings of YORKSHIRE. The administrative centre is York. Area: 8,309sq km (3,208sq miles). Pop. 663,200.

Norton Sound, inlet of the Bering Sea on the W Alaska coast between Seward Peninsula and the mouth of the Yukon River; it was discovered in 1778 by Capt. James Cook. Length: approx. 322km (200 miles); width: (max.) 150km (90 miles).

Norway, independent nation occupying the western and most northerly parts of the Scandinavian peninsula. The country is generally mountainous; its arable land is restricted to the heads of the fiords and the plains in the E. A highly industrialized country, Norway has abundant natural resources in the way of fast-flowing rivers for hydroelectricity, and offshore oil; the fishing and timber industries are also of great importance. Iron and steel are manufactured. The capital is Oslo. Area: 323,886sq km (125,053sq miles). Pop. (1980) 4,078,900. See also p.2114.

Norwegian current, NE continuation of the NORTH ATLANTIC DRIFT flowing N along the Norwegian coast into the Barents Sea. The warmth of the current running through the Norwegian Sea keeps that sea generally ice-free.

Norwegian elkhound, N European hunting dog that originated in W Norway. It has a wedge-shaped head and small, high-set ears. The square body is set on straight, medium-length legs and the tail is high-set and tightly curled. The dense, smooth coat is usually shades of grey. Height: 52cm (20.5in) at shoulder.

Norwegians, people of Scandinavia who were prominent in the VIKING raids from c.800 to c.1050. The Norwegian and Danish Vikings raided to the West and by the end of the ninth century had settled much of Britain. The Norwegians were prominent in the NW and also reached the

Shetlands, Hebrides, Orkneys and Faroes and Iceland. Norwegian expeditions reached Greenland c.986 and the coast of N America c.1000. Their best-documented settlement was of Iceland which by 1100 had a population of over 70,000. The last attempt to extend power was Harald Hardrada's unsuccessful invasion of England in 1066.

Norwegian Sea, part of the extreme NE Atlantic Ocean, verging on the Arctic Ocean and lying between Norway (E) and Greenland (W). The part along the coast of Greenland is sometimes called the Greenland Sea.

Norwich, city in Norfolk, E England. It has been an important market town since the 11th century and has many fine churches dating from the medieval period; St Giles Hospital dates from the 13th century, and it has a grammar school founded by EDWARD VI. Its industries include textiles, machinery and footwear. Pop. (1980) 119,300.

Norwich School of Artists, English school of landscape painting roughly comparable to the Italian local schools. In 1803 the Norwich Society was founded by John CROME. He developed the school, and annual exhibitions were held from 1805 to 1825. He was succeeded as president by John COTMAN in 1821. The paintings of these artists and others of the group, including James Stark, Robert Ladbrooke and David Hodgson, are well represented in the Norwich museum.

Norwich terrier, small hunting dog bred in England in the 19th century. It has a wide head, a fox-like muzzle and erect ears. The short, compact body is set on short, powerful legs; the tail is commonly docked. Its wiry coat may be red, brown or black. Height: to 28cm (12in) at the shoulder; weight: to 6kg (14lb).

Nose, in human beings, other primates and some vertebrates, the prominent structure between the eyes; it contains the OLFACTORY ORGAN and serves as the opening to the respiratory tract, warming and moistening the air and cleaning it at MUCOUS MEMBRANES. It has two cavities separated by a wall of CARTILAGE; the external openings are the nostrils. The floor of the nose and roof of the mouth are formed by the palatine bone or hard PALATE and the soft palate. During swallowing, the soft palate closes the back of the nose to prevent food from entering.

Nosebleed, haemorrhage from the nose caused by various conditions. Inflammation, ulcers, severe head injury, vascular disease, scurvy and haemophilia are among the conditions that may cause nosebleed. It is controlled by rest and application of a cold compress.

Nose cone, rocket, portion of a SPACECRAFT that must be designed to withstand heat caused by friction when re-entering the atmosphere. Blunt shapes heat up less than narrow ones, since they form a bow shock wave that is detached from the cone and heats the atmosphere around it rather than the vehicle itself. Nose cones are often equipped with heat shields to dissipate heat by ABLATION.

Nostradamus (Michel de Nostredame) (1503-66), French seer and astrologer. After practising as a doctor and reputedly curing several people of the plague, he began making astrological predictions in 1547. These were published in rhyming quatrains in *Centuries* (1555) and represented one verse for every year from then till the end of the world (in the 1990s); to avoid prosecution as a magician, however, he completely changed the order of the verses so that no time sequence was discernible. Many individual verses do seem to be of startlingly detailed relevance to historical events from that century to this. See also pp.1890-1891.

Notary, or notary public, public official, usually a solicitor, who authenticates certain documents such as deeds, certificates and contracts by witnessing them.

Notation, scientific, representation of numbers, physical quantities, units, operations, atoms and molecules, etc., by symbols in quantifying scientific data. An international notation in science and

mathematics is available, which enables scientists to communicate, irrespective of their native languages.

Not by Bread Alone (1956), novel by Vladimir DUDINSEV, one of the most outspoken in modern Soviet literature. It describes the inventor Lopatkin's fight against military and bureaucratic opposition.

Note, in music, sound of a particular pitch or frequency. The word also refers to the written symbol that represents the sound.

Notes from the Underground (1864), psychological novel by Fyodor DOSTOEVSKY. It deals with a single episode in the life of a man who is alienated from others and unable to form genuine relationships. It is important in Dostoevsky's work because of its exposition of his philosophical viewpoint.

No theatre. See NO.

Notochord, in chordates and the early embryonic stages of vertebrates, the flexible, primitive backbone; in mature vertebrates it is replaced by the SPINE of the cushioning intervertebral discs.

Notre-Dame (1163-c.1250), early Gothic cathedral in Paris. The design features a wide nave and double ambulatory, and the W façade was imitated in many French churches. Other features include the bold flying BUTTRESSES of the apse, between which were added chapels (1296), and the 13th-century ROSE WINDOW in the TRANSEPTS.

Notre Dame de Paris, novel by Victor HUGO, known in English as *The Hunchback of Notre Dame*. First published in 1831, it tells of a hunchbacked bell-ringer who loves Esmeralda, a young gypsy who is condemned to be hanged through the vindictive machinations of a priest whose love she has spurned.

Nottingham, Charles Howard, 1st Earl of (1536-1624), English nobleman. Appointed Lord High Admiral by his cousin ELIZABETH I and serving from 1585 to 1618, he commanded the English fleet against the Spanish ARMADA in 1588, led the Cadiz expedition with the Earl of ESSEX in 1596 and was created earl in 1597. See also p.1411.

Nottingham, city in N central England, on the River Trent, county town of Nottinghamshire. It is the traditional birthplace of ROBIN HOOD who is thought to have lived, with his outlaws, in the nearby Sherwood Forest. It is now an important centre of communications and transport. Nottingham is famous for the manufacture of fine lace, cotton and hosiery. Other products include bicycles, electronic equipment, coal and pharmaceuticals. Pop. (1980) 278,600.

Nottinghamshire, county in central England. The land slopes down from the E ridges of the Pennines in the W to the lowlands of the E. The principal river is the Trent. Wheat, barley and sugar-beet are the chief crops; beef and dairy cattle are also important. There are rich deposits of coal in the county. Nottinghamshire has long been noted for its textile industries which include lace, hosiery, cotton and silk. Nottingham is the county town. Area: 2,164sq km (836sq miles). Pop. 974,100.

Notus, in Greek mythology, south wind created from a union between Eos, the goddess of the dawn, and her husband Astraeus. From the same union came the stars, Boreas (the north wind) and Zephyrus (the west wind).

Nouakchott, capital city of Mauritania, in the SW part of the country, approx. 8km (5 miles) from the Atlantic Ocean. Originally a small fishing village, it was chosen as the capital of the republic in 1957 and a development programme was started. Nouakchott now has an international airport, is located on a major road and is the site of modern storage facilities for petroleum. Light industries have also been developed and handicrafts are of significance. Pop.103,500.

Nouméa, seaport city in SW New Caledonia Island, S Pacific Ocean; the capital of the French overseas territory of New Caledonia. The city was used a French penal colony from 1864-94 and served as an Allied airbase during WWII. Pop. (1971 est.) 49,315.

Noun, the part of speech used to name a person, place, object or idea. It can be concrete, abstract, proper, common or collective and generally functions as subject, object or indirect object of the verb in the sentence.

Nous, term used by HOMER to refer to the mind; pre-Socratic philosophers used it to refer specifically to reason, as opposed to perception by the senses. PLATO considered nous to be the rational part of the soul.

Nouveau roman (New novel), experimental form pioneered by Alain ROBBE-GRILLET, Samuel BECKETT and Nathalie SARRAUTE in the 1950s, influenced by FRANZ KAFKA and James JOYCE and by film techniques. Its characteristics are meticulously detailed description, avoidance of value judgments and a consciousness of the artificiality of time sequences.

Nouvelle Vague (New Wave), journalistic term describing the work of young French film directors during the period 1958-61. It embraced the idea that the director of a film was in effect the "author" (auteur) of the piece. Alain RESNAIS, Jean-Luc GODARD and Louis MALLE were amongst those who made personal statements through the art of film. Examples include *Les quatre cents coups* (1959) by TRUFFAUT and *A bout de souffle* (1960) by Godard.

Nova (plural novae), faint star that undergoes unpredictable increases in brightness by several magnitudes, apparently due to explosions in their outer regions, and then slowly fades back to normal. These phenomena are relatively common, and some, eg the recurrent novae, show comparatively frequent brightness variations. See also VARIABLE STAR; pp.987, 992-993, 993.

Novachord, electronic musical instrument, a simple electric organ, played on a single manual (keyboard). Tones simulating the organ and other instruments are produced by a series of 12 vacuum tube oscillators with a separate oscillator for each note of the chromatic scale.

Novak, Joseph. See KOSINSKI, JERZY.

Novalis (1772-1801), German romantic poet and novelist, real name Friedrich von Hardenberg. His chief work, *Heinrich von Ofterdingen*, was unfinished at the time of his early death from tuberculosis. His grief at the death of his fiancée Sophie von Kühn is beautifully expressed in *Hymns to the Night* (1800).

Nova Lisboa, town in Angola, SW Africa; formerly known as Huambo. It serves as a market centre for the surrounding area and exports cereals, skins and fruit. Pop. 89,000.

Nova Scotia, maritime province in E Canada, made up of mainland peninsula and the adjacent Cape Breton Island and a few smaller islands. The land is generally low-lying, rolling country and there are extensive forests. Dairying is important in the NW, and the principal crops are hay, apples, grain and vegetables. There are valuable coal deposits on Cape Breton Island; gypsum and salt are also mined. Fishing is very important, cod, lobster and haddock being the largest catches. Other industries include shipbuilding, steel-making, fish and food processing. The principal cities are Halifax, the capital, Sydney, Glace Bay and Dartmouth.

The first settlement of Nova Scotia was made by the French at Port Royal in 1605. The French named the area Acadia. During the 17th and 18th centuries the French and British disputed ownership of the region. Thousands of Loyalists fled to the area during the American War of Independence. Nova Scotia joined NEW BRUNSWICK, QUEBEC and ONTARIO to form the Dominion of Canada in 1867. Area: 55,490sq km (21,425sq miles). Pop. (1976) 828,571. See also p.1996.

Novatianus (c.200-c.258), Roman theologian. Disappointed at Pope Cornelius' lenient treatment of Christians who had compromised with paganism, he joined the rigorist party, becoming antipope (251). Although orthodox in doctrine, his followers (Novatianists) were excommunicated. Novatianus himself was martyred by VALERIAN.

Novaya Zemlya

Novaya Zemlya, two islands in the Arctic Ocean off the NE coast of the Russian SFSR. The N island is ice-covered all the year round while the S island has tundra vegetation and a sparse population that exists by trapping and fishing. Area: 81,279sq km (31,382sq miles). Pop. (est.) 400.

Novel, narrative prose fiction that is longer and more detailed than a short story. The word is derived from the Latin *novus* ("new") and the Italian *novella* (short tale with an element of surprise). The novel was established as a literary form in the 18th century and Samuel Richardson's *Pamela* (1740) is generally considered to be the earliest example of serious fiction in English. A novel uses plot and characters to create a picture of life, either past, present or in the future. It may be of almost any length, and among the categories are picaresque, in which a hero lives through certain adventures (eg Daniel Defoe's *Jonathan Wild*, 1725); psychological, in which the inner life of one or more characters is developed (eg J.D. Salinger's *Catcher in the Rye*, 1951); and social, which may portray a large number of people (eg Leo Tolstoy's *War and Peace*, 1863-69).

Novelas ejemplares (1613), 12 tales by Miguel de Cervantes, including *The Force of Blood*, *The Little Gypsy and Rinconete y Cortadillo*. The last named concerns the adventures of Rinconete and Cortadillo in the Seville underworld. The "exemplary" nature of the tales lies in their moral significance rather than moralizing by the author.

Novella, short, highly structured prose narrative. The form was developed by Boccaccio in the *Decameron*, and has been very popular with German authors since the 18th century. In modern times novella refers to a work of prose fiction that is longer than a short story but shorter than a novel.

Novello, Ivor (1893-1951), Welsh composer and playwright of sentimental romantic musicals and plays. The son of the celebrated Welsh soprano, Dame Clara Novello Davies, his first play was *The Rat* (1921). His popular musicals included *Glamorous Night* (1935), *Careless Rapture* (1936) and *The Dancing Years* (1939), in all of which he also starred.

November, eleventh month of the Gregorian calendar, comprising 30 days. It was the ninth month of the ancient Roman calendar (its name derives from Latin *novem*, "nine"). By the Anglo-Saxons it was called "blood-month" (for it was then that cattle were slaughtered) or "wind-month".

Novembergruppe, group of EXPRESSIONIST artists formed in Germany in 1918 by Max Pechstein and César Klein. Other artists associated with it included Walter Gropius, Ludwig Mies van der Rohe, Lyonel Feininger, László Moholy-Nagy, Alban Berg, Kurt Weill and Bertolt Brecht. The group supported socialism and believed in the unification of the arts; their major exhibition was held in Berlin in 1929.

Noverre, Jean Georges (1727-1810), French choreographer and ballet reformer. His reforms included abolishing the mask and replacing the series of conventional meaningless gestures which then constituted ballet with the *ballet d'action* in which dance and story were united. He published his ideas in *Lettres sur la danse et sur les ballets* in 1760. See also p.1483.

Novgorod, city in the NW Russian SFSR, USSR, on the River Volchov, 160km (100 miles) SSE of Leningrad. One of Russia's oldest cities, it was originally a Varangian trading town, conquered by Rurik c.862, and governed from Kiev until the 12th century, when it became capital of a vast territory and was called Novgorod the Great. Ruled by Prince Alexander Nevski 1238-63, the city fell to Moscow in 1478; its downfall was completed by Ivan the Terrible in 1570 and the Swedes in 1616. During WWII it was held by the Germans (1941-44) and greatly damaged. Its modern industries include distilling, meat packing and flour milling. Pop. (1980) 192,000. See also pp.1454, 1455.

Novi Sad, port city in E Yugoslavia, on the River Danube. An important industrial centre, its manufactures include farm machinery, electro-chemical equipment and textiles. Pop. (1971) 214,048.

Novocaine, trade name of a local anaesthetic used by doctors and dentists. It is a synthetic ALKALOID, full name procaine hydrochloride which, unlike the related and more powerful COCAINE, is not habit-forming.

Novosibirsk, city in the S Russian SFSR, USSR, on the River Ob, 628km (390 miles) E of Omsk. Founded in 1896 after the construction of the Trans-Siberian Railway, it grew quickly, surpassing Omsk as Siberia's leading city in the 1930s. During WWII it received complete industrial plants moved from war areas of the W USSR. Its products include agricultural and mining machinery, chemicals and textiles. Pop. (1980) 328,000.

Novotny, Antonin (1904-75), Czechoslovak President (1957-68). He was also first secretary of the Czechoslovak Communist Party. He developed a policy of close co-operation with the USSR which became unpopular with the party's nationalistic factions, forcing him to resign in 1968 in favour of Dubček. He was reinstated in 1971 following the ascendancy of Soviet factions within the party.

Novum Organum (1620), philosophical work by Francis Bacon, named after Aristotle's logical treatises, which Bacon sought to replace by his method of INDUCTIVE LOGIC. Bacon revolted against syllogistic reasoning, which he contended discovered nothing. Man's "natural light" could be extended and his life improved practically by experimental reasoning. Argument should proceed from the specific, through successive stages arranged in tabular form, to general propositions.

Novy Mir (Russian "new world"), influential Soviet literary periodical founded in 1925 and for long edited by the poet Tvardovsky. DUDINTSEV's novel *Not by Bread Alone* was first published in *Novy Mir* in 1956. The periodical has also published controversial work by SOLZHENITSYN such as *One Day in the Life of Ivan Denisovich* (1962).

Nowell (Noel), Alexander (c.1507-1602), English religious scholar. A fellow of Brasenose College, Oxford, he was exiled during the Catholic Queen Mary's reign, but was appointed Dean of St Paul's on his return to England in 1560. He is remembered for his three *Catechisms*, the *Small* (1549), *Middle* and *Large* (1570).

Nowlan, Alden (1933-), Canadian writer whose poems are based on the small New Brunswick town where he lives. His works include *The Rose and the Puritan* (1958), *Wind in a Rocky Country* (1961) and *Playing the Jesus Game* (1970).

Noyes, Alfred (1880-1958), British poet, probably best-known for his poem *The Highwayman*. His works include *Drake* (1906-08), *Tales of the Mermaid Tavern* (1913) and the trilogy *The Torchbearers* (1922-30). Noyes also wrote criticism and fiction.

Noye's Fludde, church pageant opera in one act by Benjamin Britten with libretto based on the text of a Chester MYSTERY PLAY. It was first performed at the Aldeburgh Festival in 1958. Ideally performed in a church, it was written especially for children's voices and boys' bugle classes and recorder groups.

NSU, or nonspecific urethritis, venereal infection, the agent for which is as yet unknown. It is called nonspecific to distinguish it from GONORRHOEA which also causes inflammation of the urethra. See also VENEREAL DISEASE.

Nu, or Nun, in Egyptian mythology, the personification of CHAOS or the Ocean from whom all things arose. He is depicted as a man partially immersed in water supporting the beings of his creation.

Nu, U (1907-), Burmese political figure who was active in securing Burma's independence from Britain (1948) and became its first Prime Minister, serving until 1956. He left his post briefly to reorganize the Anti-Fascist People's Freedom League. After the ruling party split, he resigned. Prime Minister again in 1957-

58 and in 1960 he was deposed by Ne Win in 1962 and imprisoned until 1966. He went into exile in Thailand in 1969, returning to Burma in 1970.

Nuba, collective name for a group of several unrelated peoples inhabiting a region of S Sudan. Most Nuba peoples are farmers and many tribes cultivate terraces on rugged granite hillsides. Animal husbandry is also practised. The Nuba peoples are in constant conflict with the Sudanese administration, whose authority many of them refuse to accept. Although ISLAM has made some converts, the predominant religious rituals are closely linked to agricultural fertility rites; in the more remote regions, the men go naked and the women wear lip and nose ornaments.

Nubia, ancient state in NE Africa. It was conquered in the 20th century BC by the Egyptians. Egypt itself came under Nubian rule in the 8th and 7th centuries BC, although this rule was terminated by a series of Assyrian invasions c.670 BC. The kingdom, with a new capital at Dongola, was converted to Christianity in the 6th century AD but finally collapsed in the 14th century. See also pp.1166-1167, 1180-1182.

Nubian Desert, uninhabited region in the NE Republic of the Sudan. It is the W part of the Sahara Desert, between the River Nile and the Red Sea, and consists of a large sandstone plateau. Area: approx. 233,100sq km (90,000sq miles).

Nuclear battery, any packaged source of power that utilizes NUCLEAR ENERGY and provides electricity or heat for long periods. It is usually fuelled by plutonium-238 or spontaneously fissionable elements such as strontium-90.

Nuclear disarmament. See DISARMAMENT; SALT (Strategic Arms Limitation Talks).

Nuclear, or atomic, energy, energy released during a nuclear reaction as a result of the conversion of mass into energy, according to Albert Einstein's equation in his theory of RELATIVITY, $E = mc^2$. Nuclear energy is released in two ways - by fission and by fusion. Both methods depend on the release of the binding energy of the atomic NUCLEUS. When fission occurs the nucleus of a heavy atom disintegrates into two smaller ones in which the BINDING ENERGY PER NUCLEON is higher than in the original nucleus. The difference in total binding energy is carried away by the two or three NEUTRONS released in the fission. In a fusion reaction two light nuclei combine to form a heavier nucleus, with the release of binding energy. See also pp.399, 429, 434-435, 444, 574-575, 814-815, 814-815, 820, 1150, 1150.

Nuclear engineering, branch of engineering concerned with the design, construction and operation of nuclear power plants and particle ACCELERATORS as well as coolant, shielding and moderator devices. See also NUCLEAR ENERGY.

Nuclear family, in anthropology, term used to describe a family unit of two adults joined by conjugal link with their children. Ideally the nuclear family provides economic and emotional security to both the parents and children. See also KINSHIP; pp.1828-1829, 1832.

Nuclear fuel, various chemical and physical forms of URANIUM and PLUTONIUM used in nuclear reactors. Fluid fuels are required in homogeneous reactors; heterogeneous reactors use various forms of fuels - pure metals or alloys, as well as oxides or carbides. The fuel must have a high thermal conductivity, be resistant to radiation damage and be easy to fabricate. See also p.434.

Nuclear fuel enrichment, separation of the fissionable ISOTOPE uranium-235 from the more abundant uranium-238 isotope. Gaseous uranium hexafluoride undergoes diffusion separation utilizing cascades of barriers with microscopically small pores. The difference in mass between the two isotopes is minimal, but sufficient so that the heavier, slower-moving U-238 molecules are concentrated on one side. High-speed centrifugal-force separation methods are also used. See also p.434.

Nuclear fusion. See NUCLEAR ENERGY.

Nuclear ice-breaker, first large floating vessel to be powered by a NUCLEAR REAC-

TOR. The ice-breaker *Lenin* was built in 1957 by the USSR and has been followed by other nuclear ice-breakers.

Nuclear magnetic resonance (NMR), absorption of radio waves by certain nuclei in the presence of a strong magnetic field. In this field the nucleus, as a result of its SPIN, can have slightly different energy values. It can make transitions between these energy values, acquiring the energy by absorbing radio-frequency radiation of the appropriate wavelength. See also p.905.

Nuclear physics, branch of physics concerned with the structure and properties of the atomic NUCLEUS. The principal means of investigating the nucleus is the SCATTERING experiment, carried out in particle ACCELERATORS, in which a nucleus is bombarded with a beam of high-energy ELEMENTARY PARTICLES and the resultant particles analysed. Other information is obtained by studying their magnetic moments and SPIN and any fission and fusion products. Study of the nucleus has led to an understanding of the processes occurring inside stars and has enabled the building of NUCLEAR REACTORS and NUCLEAR WEAPONS. See also pp.814-815.

Nuclear power, generation of electric power from nuclear fission. The first NUCLEAR REACTOR to generate electric power commercially began operation in 1956 at CALDER HALL, Cumberland. The stimulus to these and later developments was the consideration that, weight for weight, a nuclear fuel such as uranium-235 yields about 3,000,000 times as much energy as the fossil fuels coal and oil. By the 1960s, Britain and the USA had developed large nuclear power industries and had exported nuclear reactors and nuclear technology to many other countries. Other developments included engines powered by nuclear reactors: in 1954 the first nuclear submarine, *Nautilus*, was launched in the USA, and in 1957 the first nuclear-powered ice-breaker, *Lenin*, was launched by the USSR. In the international reactor market, competition was particularly fierce between various British designs involving gas-cooled reactors. By the 1970s, doubts became widespread about the safety and real economics of nuclear power programmes, doubts which have yet to be removed. See also pp.434-435, 820.

Nuclear radiation, refers to all the types of emissions of waves and particles from the nuclei of atoms as the result of natural or induced RADIOACTIVITY. Natural radioactivity is the spontaneous breakdown of unstable nuclei, such as those of radium or uranium-235, with the release of ALPHA and BETA PARTICLES and GAMMA RAYS. Alpha (α) particles are identical with nuclei of atoms of helium gas: they travel very fast but have little penetrating power and so are relatively harmless. Beta (β) rays or particles are electrically charged and are identical with high energy ELECTRONS or POSITRONS. They have greater penetrating power. Gamma (γ) rays are very high frequency X-rays, and are dangerously penetrating. Other emissions from nuclei include PROTONS, NEUTRONS, and NEUTRINOS. These and yet other particles, called MESONS, result from the interactions of cosmic rays with the upper atmosphere, and from the bombardment of materials with high speed particles in particle accelerators.

Nuclear reactor, device which utilizes the energy of the atomic NUCLEUS to generate useful power. This energy binds together the NUCLEONS, or sub-atomic particles, that make up the nucleus. In a nuclear reaction the fuel is a radioactive heavy metal, usually uranium-235 or plutonium-238. In these metals the nuclei of atoms break down spontaneously by radioactive disintegration, releasing fast NEUTRONS. These sub-atomic particles have great energy but no electric charge and they are able to pass through other atoms without being attracted by positively charged nuclei or negatively charged electrons. In the solid metal fuel however, at least one neutron from each disintegration will strike the nucleus of another atom directly, causing it to break

up and emit more neutrons. In this way a cascade effect, or chain reaction, is set up. In a large enough mass of metal (a CRITICAL MASS), when insufficient neutrons can escape from the surface, the chain reaction will proceed rapidly to a violent explosion, as in the atomic bomb. In a nuclear reactor the chain reaction is controlled by the use of materials such as cadmium which absorb neutrons. These materials take the form of rods which are lowered into the reactor between the fuel elements, also in rod form, so as to limit the chain reaction to provide large amounts of heat. This heat is taken up by a circulating coolant, often liquid sodium, which in turn gives up its heat in a high-pressure boiler to raise steam for the generation of electric power. This description fits fast reactors which utilize the energy of fast neutrons only.

In moderated reactors, neutrons are slowed down by solid materials such as carbon and beryllium, or, in heavy water reactors, by the heavy isotope of hydrogen - deuterium - present in the water (which acts also as a coolant). Fast breeder reactors use enriched fuels blanketed with uranium-238, the commonest uranium isotope. As the fuel becomes used up, neutrons absorbed by the uranium-238 convert, or breed it into plutonium, which is extracted and used as a fuel for other nuclear reactors. Whatever its type, a nuclear reactor generates, not only heat, but also highly lethal amounts of radioactivity, and for this reason is heavily shielded in lead and thick concrete. See also pp.434-435.

Nuclear submarines, underwater vessels powered by NUCLEAR REACTORS, pioneered by the USA with *Nautilus*, launched in 1954. *Nautilus* travelled 100,000km (62,000 miles) in its first two years of service and in 1958 voyaged under the polar ice cap. A successor travelled more than 57,000km (35,000 miles) submerged. In 1959 the USA launched an improved, more streamlined vessel, with a power plant comprising a nuclear reactor cooled by pressurized water which is fed to a heat exchanger, where it generates steam in a separate water loop; the steam is fed to turbo-generators which drive the submarine. The reactor and pressurized water loop are highly radioactive and are shielded from the rest of the engine. Such submarines have no need to refuel and may remain submerged for years at a time. By 1971 the USA had about 90 of these submarines but the USSR, which began production of nuclear submarines in the early 1960s, overtook US production by the early 1970s. The weaponry in US nuclear submarines is now part of the Trident system, which replaced POLARIS. Each armed nuclear submarine has enormous firepower and is difficult to detect and to destroy. For these reasons, they play a key role in military strategy and are an important deterrent. See also p.569.

Nuclear Test-Ban Treaty (1963), treaty signed in Moscow by the USSR, Britain and the USA. It committed these three major powers to halt all nuclear tests in the atmosphere, under water and in outer space and permitted only underground explosions. It was intended to deter additional countries from acquiring NUCLEAR WEAPONS, and thereby to slow the arms race and ease international tensions. France and China are not signatories to the treaty.

Nuclear weapons, devices whose enormous explosive forces derive from nuclear fusion or fission reactions. The first atomic bombs were dropped by the USA on the Japanese cities Hiroshima and Nagasaki in August 1945. The bombs consisted of two stable subcritical masses of uranium or plutonium which, when brought forcefully together, caused the CRITICAL MASS to be exceeded, thus initiating an uncontrolled nuclear fission reaction. In such detonations huge amounts of energy and harmful radiation are released: the explosive force can be equivalent to 200,000 tonnes of TNT. The much more powerful hydrogen bomb (or thermonuclear bomb), first tested in 1952, consists of a fission bomb that on explosion provides a

temperature high enough to cause nuclear fusion in a surrounding solid layer, usually lithium deuteride. The explosive power can be that of several million tonnes (megatonnes) of TNT. Devastation from such bombs covers a wide area: at 20km (12 miles) from a 15 megatonne bomb all flammable material bursts into flame. See also NUCLEAR ENERGY; pp.574-575.

Nuclease, ENZYME found in animal organs. It can split NUCLEIC ACIDS into NUCLEOTIDES and into nucleosides or their components.

Nucleic acids, giant chemical molecules present in all living cells and in viruses. They are of two types, DNA and RNA, both of which play fundamental roles in heredity. Chemically, they are polymers of NUCLEOTIDES. See also GENE; CHROMOSOME. **Nucleon**, collective term for any of the constituents of the NUCLEUS of an atom: the NEUTRON and PROTON, the BARYON members of a MULTIPLET of two (doublet). They are considered as manifestations of a single state of matter. See also p.812.

Nucleosynthesis, production of all the various chemical elements that exist in the universe from one or two simple atomic nuclei. It is believed to have occurred by way of large-scale nuclear reactions during cosmogenesis and still to be in progress in the Sun and other stars. Starting with hydrogen and helium, repeated nuclear fusion reactions can account for most of the elements up to iron. Elements heavier than iron can be explained in terms of repeated reactions involving the capture of NEUTRONS by nuclei.

Nucleotide, complex naturally occurring chemical group that contains a nitrogen base linked with a sugar and an acid phosphate. Nucleotides are the building blocks of NUCLEIC ACIDS, in the molecules of which they are linked together by bonds between the sugar and phosphate groups. Nucleotides also occur freely in a CELL as various COENZYMES, such as ADENOSINE TRIPHOSPHATE (ATP), the principal carrier of chemical energy in the metabolic pathways of the body.

Nucleus, region in most cells which contains the CHROMOSOMES and GENES, the units of inheritance, and is essential for life in most cells. Exceptions include bacteria and blue-green algae in which the chromosomes are scattered in the CYTOPLASM and mature red blood cells. The nucleus, usually spherical in shape, manufactures RIBOSOMES, essential for the synthesis of RNA. Cell division involves the splitting of the nucleus. See also p.174.

Nudibranch, marine GASTROPOD, usually found on seaweeds. The shell and mantle cavity have been lost and there are finger-like respiratory organs along the sides of the body. Length: 10mm (0.4in) to about 20cm (8in). Species include the sea lemon *Archidoris*.

Nuer, Nilotic-speaking people who live, mostly by raising cattle, in the Sudan. Their population in the 1960s numbered approx. 300,000. There is little unity among the tribes and much feuding is settled by payment in cows, which is made official through the mediation of a priest of their sky-god religion.

Nueva Galicia, former colonial region of Spain in W Mexico; it encompasses the modern states of Jalisco, Nayarit and Sinaloa. It was the scene of the Mixton War (1541). Known at first as the Presidency of Nueva Galicia, its independence declined as administrative authority was transferred to Mexico City.

Nuevo León, state in NE Mexico; the capital is Monterrey. It has a mountainous terrain, with lowland plains and numerous rivers in the E. The W and N is semi-arid desert country. The area was occupied by US troops during the Mexican War and became a state in 1824. Today the plains area produces cereals, cotton and sugar cane; other products include iron, steel and chemicals. Area: 64,556sq km (24,925sq miles). Pop. (1970) 1,694,689. **Nuffield, William Richard Morris, 1st Viscount** (1877-1963), British motor-car manufacturer and philanthropist, who began business in 1892 as a cycle repairer. He opened a car factory at Cowley, near Oxford, in 1912, and the first Morris

Oxford car appeared in 1913. He introduced low-price, mass produced cars and revolutionized the British car industry. Morris Motors Ltd was founded in 1919. In 1952 he became chairman of the British Motor Corporation (BMC), which was an amalgamation of the Morris and Austin companies. Equally famous as a public benefactor, he founded Nuffield College, Oxford, in 1937 and the NUFFIELD FOUNDATION in 1943.

Nuffield Foundation, trust founded in 1943 by the motor-car manufacturer Richard Morris (1877-1963), who later became 1st Viscount NUFFIELD. He directed that £10,000,000 of common stock of Morris Motors Ltd be used by the Foundation to improve the health, social welfare and education of the poor.

Nugent, Elliot (1899-), US playwright, actor and director. He worked with his father J. C. Nugent on numerous plays, including *The Poor Nut* (1925) and *Money to Burn* (1930). He wrote *The Male Animal* (1940) with James THURBER.

Nukualofa, capital town of the independent Kingdom of Tonga, on the N coast of Tongatabu Island, in the SW Pacific Ocean. The royal palace and government buildings are located there. Pop. (1980 est.) 18,312.

Nullarbor Plain, large plateau in S Australia, once a sea-bed. It has no surface water and there is little vegetation. The plain is the site of an important rocket research and production centre. Area: approx. 260,000sq km (100,000sq miles).

Numantia, ancient town in Spain, on the River Douro N of modern Soria, in Old Castile. The Celtiberian tribe of Numantia resisted Roman conquest from 195 BC until 133 BC when Scipio Aemilianus took the city after an eight-month siege, completing the Roman conquest of Spain.

Numbat, or banded anteater, squirrel-like Australian marsupial that feeds on TERMITES. The female, unlike most marsupials, has no pouch. The young cling to the teats of her belly until they are a few weeks old. The numbat has a long snout and lateral white bands on its red-brown coat. Length: 46cm (18in). Species *Myrmecobius fasciatus*. See also p.90.

Number, complex, in mathematics, a number that may be expressed in the form $x + iy$, where x and y are real numbers and i is equal to the square root of minus one ($i = \sqrt{-1}$). The complex numbers were introduced to solve such equations as $x^2 + 1 = 0$ - that is, $x = \pm i$. A number which may be expressed as iy is called imaginary.

Number, prime, positive or negative integer, excluding one and zero, that has no factors other than itself or one. Examples are 2, 3, 5, 7, 11, 13 and 17. The integers 4, 6, 8, ... are not prime numbers since they can be expressed as 2×2 , 2×3 , $2 \times 2 \times 2$, ... that is, as the product of two or more primes. A mathematical function that will generate the series of prime numbers has not been found; research is presently involved in this problem.

Number, rational, in mathematics, any number that can be written in the form a/b where a and b are INTEGERS. Such numbers include all integers and FRACTIONS. A number that cannot be so expressed is called an IRRATIONAL NUMBER, examples of which include $\sqrt{2}$ and π .

Number base, number of units in a number system that is equivalent to one unit in the next higher counting place. Thus 10 is the base of the decimal system: only the ten digits 0-9 can be used in the units, tens, hundreds, etc. Each number system has a number of symbols equal to its base. In the BINARY SYSTEM (base 2) there are two symbols, 0 and 1. See also pp.778-780.

Numbers, fourth book of the Bible and of the PENTATEUCH. It includes two census lists of the Israelites (hence its name from the Greek); many laws given by God to MOSES; a history of events during the 40-year march to the Promised Land (hence the Hebrew title *Bemidbar* (In the Wilderness)); and the announcement that JOSHUA was to be Moses's successor.

Number systems, counting methods which use various NUMBER BASES. The decimal system, for example, has a base of ten, the

Nuclear submarine; HMS Revenge, Britain's fourth Polaris submarine, built in 1969.

Nudibranch, a shell-less marine gastropod that feeds mainly on sea anemones.

Nuer; a storage gourd used by the farming peoples who live beside the Nile.

Lord Nuffield made his fortune in the motor industry and became a philanthropist.

Number theory

Numerals; Roman numerals carved on milestones from various provinces.

Nuremberg Trials; the evidence revealed the statistics of Nazi war crimes.

Rudolf Nureyev danced in Paris with the Kirov Ballet before seeking asylum, 1961.

Nursing; Florence Nightingale worked originally in conditions such as these.

duodecimal system a base of twelve. Digital computers base their calculations on the BINARY SYSTEM, of base two.

Number theory, branch of mathematics concerned with the properties of whole numbers or integers and special classes of integers such as PRIME NUMBERS and perfect numbers. The 4th-century BC Greek mathematician EUCLID proved that the number of primes was infinite, and one of the unresolved problems in number theory is the formulas for the generation of the primes. In 1640 Pierre de FERMAT showed that the numbers $F_n = 2^{2^n} + 1$, for $n = 0, 1, 2, 3$, and 4 were prime. $F_4 = 65,537$. He thought that F_n was prime for all n , but in the 18th century Leonhard EULER showed that $F_5 (= 4,294,967,297)$ was a composite number, made up by multiplying together two other primes. Perfect numbers, another facet of number theory, are the sums of their divisors, such as $6 = 3 + 2 + 1$ and $28 = 14 + 7 + 4 + 2 + 1$. It is not known whether there exist any odd perfect numbers.

Numairy (Nimeiri), Mohammed Jaafar al- (1930–), chief of state in the Sudan. He took control after a military coup in 1969 and was made President in 1971. He was responsible for the end of a 17-year civil war with the southern Sudanese and defeated a Communist revolt in 1971. A Libyan-backed coup in 1976 failed, and led to a strengthening of ties with Egypt. **Numeral,** symbol used alone or in a group to denote a number. Arabic numerals are the 10 digits from 0 to 9. Roman numerals consist of seven letters or marks. The formation of numbers from numerals depends on the NUMBER SYSTEM used. See also p.780.

Numerator, in mathematics, top number in a rational number or fraction. The bottom number is known as the DENOMINATOR. For example, in the fraction $\frac{2}{3}$, 2 is the numerator, 3 the denominator.

Numidia, ancient region of NW Africa roughly corresponding to modern Algeria. It was part of the Carthaginian empire until the PUNIC WARS, when the Numidian king Masinissa allied with Rome. The country prospered independently from 206 BC until the Jugurthine War Subjugated by Rome, it survived the VANDAL invasion of the 5th century AD but lost its remaining political importance after the Arab invasion of the 8th century. **Numismatics,** study or collection of coins, tokens, medals and similar objects as works of art, for investment, or as a source of historical information. Coins, for example, preserve old forms of writing and bear portraits of eminent people; they also assist in the study of early customs and help to clarify economic and trade relations. The largest coin market in the world is in London.

Nun, female member of a religious order who has taken vows of MONASTICISM. Nuns can belong to either an Enclosed order (one of prayer and meditation within a closed community) or an order which encourages its members to work in the world for the welfare of society at large.

Nun, letter occurring 14th in the Hebrew alphabet and equivalent to the Roman N. **Nunatak,** mountain peak or hill that rises above a surrounding glacier. Nunataks become more common towards the edge of ice sheets, and are most common along the coast of Greenland.

Nuneaton, county district in NE WARWICKSHIRE, England, created in 1974 under the Local Government Act (1972). Area: 79sq km (30sq miles). Pop.(1974 est.) 111,900.

Nuñez Vela, Blasco (d. 1548), first Viceroy of Peru (1543–1548). He was sent to Lima to end the civil war and imposed the New Laws of Bartolomé de LAS CASAS. Gonzalo PIZARRO defeated him and he was executed.

Nunivak, island off SW Alaska, USA, in the Bering Sea. It was discovered by the Russians in 1821. Fogbound for most of the year, Nunivak has a small Eskimo population engaged mainly in hunting and fishing. Area: 4,209sq km (1,625sq miles).

Nunn, Trevor (1940–), British stage director, appointed artistic director of the ROYAL SHAKESPEARE COMPANY in 1968. His

many notable productions included *As You Like It* (1977) and a widely acclaimed musical version of *The Comedy of Errors*. **Nupe,** Kwa-speaking Negroid people of Nigeria who live mainly around the confluence of the Niger and Kaduna rivers. Their society is hierarchical and they live by fishing and agriculture. Their skill as craftsmen is famous throughout West Africa. They are noted particularly for their glass beads, cloth, brass and leatherwork. Most Nupe are Muslims.

Nur-ad-Din (Nureddin) (c. 1118–74), ruler of Syria. He united Muslim forces in Syria and, making use of the gathering anti-Frankish JIHAD, took Damascus in 1154. While Nur-ad-Din's army fought the Crusaders in Syria SALADIN took control of Egypt; conflict was avoided by the former's death.

Nuremberg (Nürnberg), city in Bayern state, S West Germany, 151km (92 miles) NW of Munich on both sides of River Pegnitz. It became a free imperial city in 1219 and the centre of the German Renaissance during the 15th and 16th centuries. It passed to Bavaria (Bayern) in 1806 and was the location of the annual congress of HITLER's National Socialist Party. After WWII it was the site of the trials of Nazi war criminals (1945–46). Today Nuremberg is an important and commercial centre. Its manufactures include chemicals, textiles and machinery. Pop. (1979 est.) 484,184.

Nuremberg Laws, German laws promulgated in 1935 by the National Socialist government of Adolf HITLER. They deprived Jews, including all persons who were of Jewish descent, of the rights of citizenship and prohibited marriage of Jews and non-Jews.

Nuremberg Trials (1945–46), war crimes trials of WWII German leaders held at Nuremberg, Germany, by the International Military Tribunal established by Britain, France, the USSR and the USA. Under the presidency of Lord Justice Geoffrey Lawrence, Nazis were tried for crimes against humanity. Twelve were sentenced to death, including Hermann GOERING, Joachim von RIBBENTROP and Alfred ROSENBERG; others were imprisoned. German civilians, such as judges, were tried by a US military tribunal at Nuremberg.

Nureyev, Rudolf (1938–), Soviet ballet dancer and choreographer, who became a soloist with the Kirov Ballet, Leningrad in 1958. While on tour in Paris in 1961 he defected from the USSR. He is noted for his spectacular technical virtuosity and sensitive dramatic character portrayal. Major ballets in which he has had leading roles have included *Giselle*, *Swan Lake* and *Romeo and Juliet* and he has often partnered Margot FONTEYN. In 1977 he choreographed *Romeo and Juliet* (Prokofiev) for the London Festival Ballet and in that year played the title role in the film *Valentino*. See also p.1759.

Nurhachi (1559–1626), organizer and creator of the MANCHU state. The Manchus spread S and conquered all China, ruling as the CH'ING DYNASTY. Nurhachi created the Manchu military banner organization for control and mobilization and developed a writing system for administrative purposes, laying the foundations for almost three centuries of Manchu power.

Nurmi, Paavo Johannes (1897–1973), Finnish middle- and long-distance runner. Known as the "Flying Finn", he set 22 world records between 1920 and 1932 and won 12 Olympic medals, 9 gold and 3 silver. In the 1924 Olympics he won both the 1,500m and the 5,000m within 90 minutes. The favourite for the 1932 Olympic MARATHON, he was disqualified having lost his amateur status.

Nürnberg. See NUREMBERG.

Nursery rhymes, verses said or sung to amuse small children, generally brief and usually anonymous. International parallels of many suggest an ancient origin of rhymes such as *Humpty-Dumpty*, while others, including *Twinkle, Twinkle Little Star* and *Mary Had a Little Lamb*, were composed in the 19th century. Many entered the repertoire as popular ballads or songs for adults. Others, like counting and alphabet rhymes, are designed to

instruct. Despite many scholarly investigations, there is little to suggest political significance in most of the rhymes, although real figures can sometimes be identified.

Nursery school, school for children between the ages of two and five. Developed in Europe in the 19th and 20th centuries, especially after WWI, such schools aim to prepare children socially and educationally for primary school and help to relieve pressure on working parents.

Nurse shark, carpet SHARK found in shallow tropical and subtropical waters of the Atlantic and E Pacific, particularly in inshore areas. This sluggish fish is yellow to grey-brown above and lighter below. It is recognized by thick, fleshy whiskers near its mouth. Length: 2.5m (8.5ft); weight: 150–170kg (330–370lb). Family: Orectolobidae; species *Ginglymostoma cirratum*. See also CHONDRICTHYES.

Nursing, profession which has as its general function the care of people who, through ill-health, are unable to care for themselves. Modern nursing, which includes administering prescribed treatment, and patient and family health education, is continually broadening its range of services. Caring for the sick was a concern of ancient civilizations but was particularly emphasised by the early Christian Church; many religious orders and, later, chivalric orders, performed such "acts of mercy". The Sisters of Charity, founded in 1633, have been instrumental in the development, expansion and reform of nursing in a number of countries. In the 18th century the need for reform in nursing was revealed and, by the end of the 19th century, certain principles of Florence NIGHTINGALE's teaching had been adopted in England and the US. These resulted in the general upgrading and secularisation of the profession, with widely improved instruction for nurses by instructor nurses and doctors in independent schools with access to hospitals. Services today include midwifery, care of the mentally ill, medical and surgical nursing in hospital clinics, and public health education programmes.

Nusku, in Mesopotamian mythology, a solar deity, god of fire and light, son of SIN, the moon god. Nusku was the messenger of the gods and sometimes took Sin's place as a dispenser of justice.

Nut, in Egyptian mythology, originally a mother-goddess, later goddess of the arch of the sky. In this role she was depicted touching the Earth with her fingertips and toes while her star-studded belly formed the sky's vault. She also appeared in the form of a cow supported at each of her legs and at her starry underside by Shu, the Egyptian equivalent of Atlas, who later replaced her in this aspect. Nut served also as protector of the dead (whom she provided with fresh air) and can be found on the lids of sarcophagi.

Nut, dry, one-seeded fruit with a hard woody or stony wall. It develops from a flower that has petals attached above the ovary (inferior ovary). Nuts are often formed in association with modified leaves (bracts); the cup of an acorn is formed from fused bracts. A nut does not open at maturity. See BEECH; CHESTNUT; HICKORY; WALNUT; pp.1710–1711.

Nutation, oscillating movement (period 18.6 years) superimposed on the steady precessional movement of the Earth's axis so that the precessional path of each celestial pole on the CELESTIAL SPHERE follows an irregular rather than a true circle. It results from the varying gravitational attraction of the Sun and Moon on the Earth, due to variations in their distances from Earth and in their relative directions. See also PRECESSION.

Nutcracker, widely distributed, crow-like bird of evergreen forests of the Northern Hemisphere. It picks the seeds out of the cones of pine, spruce, cedar and larch, stores them in autumn and eats them in winter. A projection inside the bill turns it into a highly efficient seed cracker or nutcracker. The European thick-billed nutcracker (*Nucifraga caryocatactes*) is a typical species. Family Corvidae. Length: 30cm (12in). See also p.304.

Nutcracker, The (1892), ballet in two acts with music by TCHAIKOVSKY, and choreography by Lev Ivanov. The story was adapted by Marius Petipa from *Nutcracker and the Mouse King* by E. T. A. Hoffman. It was first performed in St Petersburg.

Nuthatch, bird found mainly in the Northern Hemisphere and occasionally in Africa and Australia. It is bluish grey above and white, grey or chestnut underneath. It hops in short jerks upwards, downwards and sideways on tree trunks and branches where it wedges a nut into a crevice, opening it with its sharp bill. It also feeds on insects, spiders and seeds, often visiting parks and gardens. Length: 9–19cm (3.5–7.5in). Family Sittidae.

Nutmeg, evergreen tree native to tropical Asia, Africa and America. Cultivated commercially, it has dark brown leaves, pale yellow flowers and yellow, apricot-like fruits. The 500 species include *Myristica fragrans*, native to the Moluccas. Height: up to 18m (60ft). Its seeds yield the spice nutmeg, and its seed covering the spice mace. Family Myristicaceae. See also pp.706–707.

Nutrient solution, either a natural solution, such as seawater, or man-made, that provides most of the substances necessary for an organism to sustain life and growth. Vital nutrients include inorganic phosphates and nitrogen salts, which are needed to produce living tissue, silicates for building shells and trace quantities of vitamins.

Nutrition, all the processes by which whole plants and animals take in and make use of food substances. A study of nutrition involves identifying the kinds and amounts of nutrients necessary for growth and health. Nutrients are generally divided into PROTEINS, CARBOHYDRATES, FATS, MINERALS and VITAMINS. Human nutrition and diet has been made into a special discipline and its study is undertaken by doctors, physiologists, biochemists and agriculturalists. There are between 50 and 60 nutrients essential to life and these are classified according to their chemical structure or function into one of five categories mentioned above. See also pp.162–163.

Nuvolari, Tazio (1892–1953), Italian motor-racing driver. Small of stature but full of vitality, he is rated among the foremost drivers of the 1930s, and his controlled use of the 'four-wheel drift' for cornering gave him great advantages. His many victories include 16 major grands prix, the Le Mans 24-hour race, the Mille Miglia (twice) and the Targa Florio (twice).

Nux vomica, seed of *Strychnos nuxvomica* a tree native to SE Asia; it is one source of the alkaloid STRYCHNINE. Like belladonna and CURARE, strychnine was used as a poison, but is now available in medicine. See also pp.1062, 1091.

Nyakyusa, Negroid people of SW Tanzania. Their society is traditionally polygamous and their livelihood based on agriculture. Staple crops include bananas, maize and millet; rice and coffee are cash crops. Cattle are important as a symbol of wealth. Traditionally, young people of the same neighbourhood form new villages as they reach puberty, so that a village dies out with its inhabitants.

Nyasa, Lake (Lake Malawi), lake in E central Africa, in the GREAT RIFT VALLEY; bordered by Tanzania (N), Mozambique (E) and Malawi (S and W); third-largest lake in Africa. It is fed chiefly by the Ruhuhu River and drained by the Shire. Discovered by the Portuguese explorer Caspar Bocarro in 1616, the lake was visited and named by LIVINGSTONE in 1859. Area: approx. 29,604sq km (11,430sq miles).

Nye, Robert (1939–), British novelist and poet. After producing several short stories, children's books and a novel, *Doubtful* (1967), he gained fame with *Falstaff* (1976), a racy novel in the form of fictional memoirs.

Nyenchentangla Range, mountain range in S Tibet, W China, parallel with the Himalayas and N of the Brahmaputra River. It extends 966km (600 miles) E-W.

The highest point is Nyenchentangla Peak 7,086m (23,250ft).

Nyerere, Julius Kambarage (1922–), first President of Tanzania, formerly Tanganyika. He served as a legislator and Chief Minister in the Tanganyikan territorial government. An African nationalist leader, he became President of an independent Tanganyika in 1962 and in 1964 manoeuvred the union of Tanganyika and Zanzibar into a republic as Tanzania. As a political theorist, Nyerere's socialist views, published as *Freedom and Unity* (1967) and *Freedom and Socialism* (1968), have had considerable influence in Africa. He is a strong adherent of Pan Africanism and a leading influence in the Organization of African Unity. He has given strong support, both moral and material, to guerrillas fighting in Rhodesia and South Africa.

Nylon, any of numerous synthetic materials consisting of polyamides developed in the US in the 1930s. It is formed into fibres, filaments, bristles or sheets by extrusion through spinnings and drawing. Nylon is characterized by elasticity and strength and is used chiefly in yarn, cordage and moulded products. Hard and tough or soft and rubbery nylon products can be made by varying the chemical balance. See also pp.590–592.

Nymph, in Greek mythology, a long-lived female spirit that was said to be a guardian of natural objects. Several forms were said to exist, all identified with a specific location, and most commonly with trees and water. Oceanids, Nereids and Naiads were all water spirits; Oreads inhabited mountains and grottoes; the Napaeeae were to be found in groves and glens; Dryads and Hamadryads were always associated with forests and trees.

Nymph, young insect of primitive orders that do not undergo complete METAMORPHOSIS. Nymph is used to designate all immature stages after the egg. The nymph resembles the adult and does so more closely with each successive MOULTING. Some examples are the aquatic nymphs of dragonflies, mayflies and damselflies.

Nymphomania, insatiable sexual appetite in a female. Frantic and insatiable sexual behaviour is more indicative of this uncommon disorder than heightened sexual desire or strong need for sexual gratification.

Nystagmus, involuntary eye movement, resulting from an early loss of central vision, dizziness, barbiturate intoxication or inner ear or brain disease.

Nzinga Nkuwu, or King John I (died c.1506), King (manikongo) of the Kongo, a kingdom around the mouth of the River Congo in Africa. He met the first Portuguese explorers of his lands in the 1480s, quickly accepted Christian teachings and helped to establish a Portuguese mission.

O, 15th letter of the alphabet, derived in its present form from the Phoenician alphabet, passing then to the Greeks, who called it *omicron*, "short o". It passed unchanged from the Latin alphabet into the various Romance languages, including English. In English *o* is a vowel and may be pronounced with a short sound, as in *not*, or a long sound, as in *note*. An even longer sound is produced by a double *o* (as in *boat*). Combined with *a* the long *o* sound is preserved (*coat*); with other vowels characteristic diphthongs are produced (*hoist* and *route*). See also pp.608, 609.

Oahu, mountainous island in Hawaii, between Molokai and Kauai islands. It is the third-largest and economically the most important of the Hawaiian Islands; Honolulu, the state capital, is on the S coast. Oahu has important military installations including Pearl Harbor. Its industries include tourism and fishing. Area: 1,549sq km (598sq miles). Pop. (1970) 629,145.

Oak, common name of almost 300 species of the genus *Quercus*, related to beeches, which are found in abundance throughout temperate areas of the Northern Hemisphere and at high elevations in the tropics. Some species are shrubs, but most are hardwood trees that grow 18 to 30m (60–100ft) tall. Leaves are simple, often lobed and sometimes serrated. Male flowers hang in long yellow catkins; the female ones appear singly or in small clusters and produce the fruit – small nuts called acorns. The texture and colour of the bark vary widely among the many species, and according to the age of each tree; *CORK* comes from the bark of a Mediterranean species. From medieval times to the advent of steam, oak timber was prized for shipbuilding, and has long been valued by craftsmen for its durability and the beauty of its intricate grain.

Oakley, Annie (1860–1926), US entertainer, real name Phoebe Anne Oakley Mozee. From childhood she was an expert shot, eventually beating a noted marksman, Frank E. Butler, who married her. She was the star of Buffalo Bill's Wild West Show for 17 years from 1875. Irving BERLIN's musical *Annie Get Your Gun* (1946) is based on her life.

Oaks, The, one of the English Classic horse races, an event for three-year-old fillies, known as "The Ladies Race". It was established in 1779, and run over a 1½-mile (2.4km) course at Epsom. The Oaks was named after the nearby residence of the 12th Earl of Derby, whose horse *Bridget* was the first winner.

Oarfish, any of several deepwater marine ribbon fish. Its long thin body has a dorsal fin extending along its entire length. Two long oar-like pelvic fins protrude from beneath the head. Length: to 6m (20ft). Genus *Regalecus*. See also p.340.

OAS, (Organisation de l'Armée Secrète) terrorist group opposed to Algerian independence. It was set up in 1961 by disaffected army officers and French settlers in Algeria when it became clear that President DE GAULLE was preparing to come to an agreement with the FLN (Algerian nationalists) to give the country independence. The terror tactics of the OAS affected both Algeria and metropolitan France, but failed to prevent the declaration of Algerian independence on 3 July 1962.

OAS (Organization of American States), an organization comprising 23 North and South American countries including the USA and Canada, pledged to seek solutions to international disputes affecting America. It is the result of the Pan American Union held in Bogotá. The OAS was founded on the principles of the US MONROE DOCTRINE, namely that any attack on an American country by another country would be regarded as an attack on all.

Oasis, area in a desert that is made fertile by the presence of water. It can be formed by the passage of rivers through the desert or by underground waters reaching the surface. Larger oases, eg on the River Nile, support a large agricultural population. See also pp.217, 217, 229.

Oasthouse, or hop kiln, building designed for drying hops used in brewing. A natural or forced draught of heated air is passed through the hops to dry them; the pointed, pivoted cowl of the oasthouse prevents backdraughts. See also p.700.

Oastler, Richard (1789–1861), British radical reformer, nicknamed the "factory king". In the 1830s and 1840s he was a leader of the mass movements of the working class to repeal the Poor Law of 1834 and to gain a maximum ten-hour day in the textile factories, which came into effect as the Ten Hours Act (1847).

Oat, cereal plant native to W Europe and cultivated throughout the world; it grows well even in poor soils. The flower is composed of numerous florets that produce one-seeded fruits. Mainly fed to livestock, oats are also eaten by human beings, particularly as a breakfast food. Family Gramineae; species *Avena sativa*. See also pp.652, 676–677.

Oates, Joyce Carol (1938–), US novelist, short-story writer and poet. Her first book of short stories, *By the North Gate*,

appeared in 1963. Her works are a grim assessment of modern American life; they are chronicles of violence and economic and emotional deprivation. Other works are *A Garden of Earthly Delights* (1967), *Them* (1969) and *The Assassins* (1975). **Oates, Captain Lawrence Edward Grace** (1880–1912), British explorer who accompanied Capt. Robert SCOTT on the Antarctic expedition of 1910–12. Oates sacrificed his own life by deliberately crawling out into a blizzard because, crippled by frostbite, he was slowing the party on its return journey from the South Pole.

Oates, Titus (1649–1705), English priest who invented the story of the POPISH PLOT. The son of an Anabaptist preacher, he was ordained into the Church of England but was imprisoned for perjury in 1674. He joined the Roman Catholic Church in 1677, but was later expelled from Spanish and Dutch seminaries. In 1678 he and Israel Tonge invented a story of a JESUIT plot to murder CHARLES II. Although Oates was convicted of perjury for this in 1685, he was pardoned in 1688. In 1693 he became a Baptist, but that Church expelled him in 1701.

Oath, appeal to God to witness the truth of something. In a corporal oath, usually taken by a person before he gives evidence in a court of law, the witness swears to the truth of a statement. A promissory oath relates to a promise to do something in the future, eg an Oath of Allegiance. In English courts the witness places his hand on a Bible and repeats after the officer administering the oath "I swear by Almighty God that...". It is also legally permissible to affirm the truth of a statement rather than take an oath (See AFFIRMATION).

OAU (Organization of African Unity), association of 42 African states for their co-ordinated development and unity in defence of African independence, founded in 1963 in Ethiopia. It arose out of the Pan-African movement and works towards a united African front in international affairs. Yearly summit conferences are held.

Ob, river in W Siberia, USSR; with its principal tributary, the Irtysh, it is the fifth-longest river in the world, 5,150km (3,200 miles) long. Formed at the confluence of the Biya and Katun' rivers SW of Bisk, the Ob flows NW then NE through the lowlands of W Siberia. It continues N and then E to enter the Gulf of Ob, an arm of the Kara Sea within the Arctic Ocean. The river is approx. 19km (12 miles) wide in its lower course. The Ob is frozen for six months of the year but it remains an important trade route. Length: 3,410km (2,120 miles).

Obadiah, fourth of the 12 minor prophets in the Old Testament; the book of Obadiah has only 21 verses. Sometimes called Abdias, he is thought to have lived in the first half of the 6th century BC because he calls for vengeance upon the Edomites, who refused to help the Israelites at the fall of Jerusalem to the Babylonians (586 BC).

Obligato, in music, an accompanying vocal or instrumental part that complements the MELODY. It is commonly in double time and continues even when the tune pauses. Originally, however, the term was used to describe the section of the music that had to be played exactly as written in which the composer did not allow the improvisation common in earlier BAROQUE music.

Obelia, genus of plant-like COELENTERATES that are composed of a colony of several sub-individuals or POLYPS. Each species is concerned with the production of free-swimming MEDUSA forms which carry the reproductive organs. Sperm and eggs are released by the medusae and fertilized eggs subdivide, settle, grow and then bud asexually. See also p.12–13, 12.

Obelisk, Egyptian monolith, often carved from red granite, usually a tapering square-based column with a pyramid-shaped point. Pairs of obelisks stood at the entrance to Egyptian temples and their decorative hieroglyphs suggest an association with sun worship. Many obelisks were removed to Italy by the Romans and one

Oberammergau

of the largest, 32m (105ft) high, weighing c.230 tonnes) is still standing in Rome. The oldest extant obelisks date from about 2000 BC, and the two *Cleopatra's needles* in New York's Central Park and on London's Thames Embankment, date from 1500 BC, long before the reign of CLEOPATRA herself.

Oberammergau, small village in upper Bavaria, West Germany, famous for the performances of its *PASSION PLAY*. This takes place once every 10 years; the practice originated in 1634 in fulfilment of a vow made by the inhabitants during an outbreak of the plague.

Oberon, in medieval folklore, the king of the fairies and husband of *TITANIA*. He first appeared in English literature in a prose translation (c.1534) by Lord Berners of the French romance *Huon de Bordeaux*. Perhaps the most familiar use of the character is in William SHAKESPEARE's *A Midsummer Night's Dream*; here the author is believed to owe much to the earlier French work. Oberon is shown as a magical figure with an impish servant, PUCK. Later Christoph WIELAND, a German poet, wrote the epic *Oberon* (1780), inspired by Shakespeare's character. Carl WEBER also wrote an opera *Oberon* (1826) about him.

Oberon, second-largest of the five satellites of the planet Uranus. It orbits at a distance of 586,230km (364,107 miles) from Uranus and has a diameter of approx. 1,600km (995 miles). It has a sidereal period of 13.46 days. See also pp.966, 966.

Oberth, Hermann Julius (1894–), German physicist, b. Austro-Hungary, who made a fundamental contribution to the development of astronautics. He conducted experiments to simulate and study the effects of weightlessness and designed a long-range, liquid-propellant rocket. During WWII he worked on German rocket development under Wernher von BRAUN. Oberth later worked on solid-propellant, anti-aircraft rockets.

Obesity, condition in which excessive amounts of fat are stored beneath the skin and within organs. Medically it is defined as an accumulation of body fat sufficient to impair health. People who are overweight risk diseases of the kidney, arteries and heart, and have a shorter life expectancy than those of normal weight. Obesity is usually caused by overeating – the consumption of more calories than the body can use. Hormone imbalance, glandular defects and genetic predisposition may also be factors, although they are far less common. See pp.162, 1077.

Objet trouvé, in art, French term meaning "object found" and usually referring to inanimate items (eg rope and driftwood) which take on aesthetic significance as part of an assemblage. Such objects were often used in DADAIST and SURREALIST art, and have remained as part of the artist's vocabulary.

Oblast, administrative and territorial district in the USSR, a division of one of the constituent republics. If the people in a particular territory are of a nationality different from most others in the republic to which it belongs, that territory usually becomes an autonomous oblast.

Obolomov (1859), Russian satirical novel by Ivan GONCHAROV. Obolomov, an indolent nobleman, succeeds in wasting his life despite the efforts of his friend Stolz to stir him into action. The word "Obolomovism" was coined to describe lethargic aristocrats in Russia c.1860.

Oboe, woodwind musical instrument (from the French *hautbois*) with a range of 24 octaves. It has a slightly flared bell and, like the *BASSOON*, is a double-reed instrument. The oboe somewhat resembles the clarinet and has a plaintive tone. The earliest true oboes were used in the French court shortly after the mid-17th century. See also pp.1580-1581.

Obote, Apollo Milton (1924–), Ugandan Prime Minister and President (1966–71). He created the Uganda People's Congress in 1960, and was instrumental in the country's gaining independence two years later. He worked for greater national unity, but was ousted by Idi AMIN in 1971. In the 1980 elections

following Amin's downfall, he was returned to power.

Obrénović dynasty, Serbian dynasty which ruled 1815–42 and 1858–1903, established at the end of Turkish domination. The first in line, Miloš (1780–1860), led the Serbian revolt against the Turks in 1815 but was forced to abdicate in 1839. His son Milan was briefly reinstated, followed by his brother Michael who (until 1842 and again 1860–68) continued his father's policy of achieving complete Serbian liberation. The line became extinct with the murder of Alexander in 1903. See also p.1560.

O'Brien, Edna (1932–), Irish novelist. Her first novels, *The Country Girls* (1960) and *The Lonely Girl* (1962), established her reputation. She has published one play, *A Pagan Place* (1971), based on her novel of the same title.

O'Brien, Michael Vincent (1917–), Irish trainer of racehorses who trained three consecutive Grand National winners and four Derby winners. He trained *Nijinsky*, the first triple crown winner since 1935. He also trained winners of two Irish Derbys, the Prix de l'Arc de Triomphe and the Washington International.

O'Brien, William (1852–1928), Irish nationalist leader, who was an MP from 1883 to 1895. He formed the agrarian movement called the United Irish League in 1898 and took part in the conference which preceded the LAND ACT of 1903. He formed the "All for Ireland" party in 1910, but caused it to withdraw from the 1918 elections, thereby handing power to SINN FEIN.

O'Brien, William Smith (1803–64), Irish nationalist. He entered Parliament as an Irish member in 1828 and supported Roman Catholic emancipation. In 1843 he joined Daniel O'CONNELL's Repeal Association to end Irish union with Britain but left to set up the more militant YOUNG IRELAND Movement. He was arrested in 1848 for insurrection and sentenced to death, but his sentence was commuted to transportation. Released in 1854, he was pardoned in 1856.

Observatory, astronomical, location of telescopes and other equipment for astronomical observations. Large optical telescopes are housed in domed buildings sited usually well away from the smoke of cities, high up in mountain areas. These observatories rotate to face any area of the sky, the telescope being exposed by the retraction of a panel in the dome. Radio observatories are open sites containing one or more large radio telescopes, usually having the shape of a parabolic dish. The largest radio-telescopes have been built in natural mountain hollows: one in Puerto Rico, for example, is 300m (975ft) across. Observatories of the future will include telescopes carried by orbiting satellites. See also pp.920-921.

Obsidian, rare grey to black glassy volcanic rock. High in silica, it is the uncrystallized equivalent of RHYOLITE and GRANITE. Hardness 5.5; s.g. 2.4. It polishes well and makes an attractive semi-precious stone. See also p.262.

Obstetrics, branch of medicine that deals with pregnancy, labour, childbirth and the care of women immediately following childbirth. It also treats any abnormalities of pregnancy. See also p.1088.

Ocarina, small keyless musical wind instrument of metal or terracotta, shaped like an elongated egg. It was invented in late 19th-century Italy and is popular for its simplicity and low cost.

O'Casey, Sean (1880–1964), Irish playwright. His first play, *The Shadow of a Gunman* (1923), immediately made him famous. *Juno and the Paycock* (1924), a tragedy of the Dublin slums, was followed by *The Plough and the Stars* (1926), a drama centred on the EASTER RISING of 1916. O'Casey moved to England in 1926 and his later works, such as *The Silver Tassie* (1928), are in an expressionistic style, very different from the realism of his early plays. He never again attained, however, the standard of his first works. Apart from his plays his most important work is a fictional autobiography, written in six volumes, which originally appeared be-

tween 1939 and 1956 and was re-issued as a collection, *Autobiographies*, in 1963. See also p.1767.

Occam (Ockham), William of c.1300–c.147). English theologian and philosopher. Writing against the Pope, and in favour of Franciscan ideas of poverty and the empire, caused him to be excommunicated. He was a leader of the Nominalist school of philosophy. Contributing to the development of formal logic, he employed the principle of economy known as OCCAM'S RAZOR. See also p.1328.

Occam's Razor, principle of economy of explanation named after the 14th-century philosopher William of OCCAM. He said that explanatory principles should not be needlessly multiplied. It is an important scientific principle according to which any process has a minimum number of causal links.

Occident, The, term meaning the west. Formerly applied to the countries of Western Europe, it is now generally taken to include also the Americas.

Occiput, also called occipital region, in insects the plate of the EXOSKELETON that forms the back of the head; in vertebrates the area of the head at the joint between the skull and the spinal column.

Occult, the supernatural, especially referring to the forces of darkness. The term is commonly used, however, to describe all man's attempts to predict, forestall or induce events by employing hidden powers, secret knowledge or external forces. In this context the term describes divination by all means other than by mere observation, and includes ASTROLOGY, fortune-telling, the I CHING and the KABBALA. In strong contrast, Satanists and practitioners of black magic in their rites call upon occult forces in an entirely selfish aim: to gain personal power over others. The invoking of such forces, especially by means of such apparatus as OUIJA BOARDS, is extremely dangerous and has led to documented cases of demonic possession. See also pp.1890-1891.

Occultation, in astronomy, the temporary concealment of one celestial body by another, especially of a star by the Moon or a planet. Lunar occultation is of particular importance because it has served accurately to pinpoint a number of notable radio sources.

Occupational diseases, disorders to health produced by working conditions. They extend over the whole field of medicine, from the physical injuries so often incurred by miners, tunnellers and divers to the duodenal ulcers and coronary thrombosis suffered widely by people in sedentary, stressful occupations. More specifically, workers in various trades are liable to suffer from the bad effects of prolonged contact with harmful substances: miners' pneumoconiosis, bladder cancer in rubber processors, leukaemia among workers with radioactive materials and mercury and lead poisoning among workers in extractive processes are a few of many examples recorded this century.

Occupational therapy, programme to help physically or mentally disabled and handicapped people develop skills to enable them to lead normal lives and be usefully employed. This type of treatment includes interesting occupations and pastimes to overcome a particular handicap. A person with an artificial leg, for example, might be taught to dance. Occupational therapy is often called "curing by doing", since the patient himself must carry out the activity.

Ocean, continuous body of water that surrounds the continents and fills the Earth's great depressions. There are five main oceans, the ATLANTIC, PACIFIC, INDIAN, Arctic, and Antarctic and they cover 71% of the Earth's surface. The oceans may be divided by distinct region (Littoral, Pelagic and Abyssal) or by depth region (CONTINENTAL SHELF, CONTINENTAL SLOPE, deep sea plain and the deeps). The ocean floor is not flat but has a varied topography like land, with vast mountain chains, valleys and plains. Ocean water consists of about 3.5% dissolved minerals, hence its salty taste. It is constantly moving in currents and waves. See also pp.232, 238-239.

Oceanarium, large salt-water aquarium for the study and display of sharks and other marine fishes, marine mammals such as dolphins, porpoises and killer whales, and octopus, squid and many lesser invertebrates.

Ocean floor, bottom of the ocean, covered to various depths with marine sediments, both inorganic and organic. Weathered materials, washed and blown off the land, and chemically precipitated from sea water sink to form fine and coarse inorganic sediments. There are always accompanied by organic materials derived from marine organisms, most abundantly the chalky shells of countless tiny organisms of the PLANKTON. Sediments vary in thickness and extent with the topography of the ocean floor, the main zones being the littoral, the continental shelf, submarine mountains and abyssal trenches. See also pp.238-239.

Oceania, collective name for the lands of the Pacific Ocean. In its widest sense the term includes all islands between Asia and the Americas, excluding the Ryuku and Aleutian Islands and the Japan archipelago, as well as Taiwan, Indonesia and the Philippines (whose people are more closely related to those of the Asian mainland). More generally, however, Oceania refers to the islands of Melanesia, Micronesia and Polynesia and, usually, Australasia (Australia and New Zealand).

Oceanic art, art of the peoples of the islands of the South Pacific (Melanesia, Micronesia and Polynesia). Much of their art involves objects used in religious rites, masks and stylized portrayals of the human face. Among the more notable of these are the giant stone ancestor-cult figures of EASTER ISLAND, MAORI wood carvings and the carved drums, masks, stools and shields of NEW GUINEA. Oceanic artists are greatly admired and respected in their communities.

Oceanic currents, movement of sea water between layers of varying temperature and density, caused by wind friction at the surface. Ocean circulation is produced by CONVECTION, with warm currents travelling away from the equator, cooler water moving from the poles. In the Southern Hemisphere the oceanic currents move in an anti-clockwise system, whereas in the Northern the system is clockwise, an effect of centrifugal force caused by the Earth's rotation. There are about 50 major currents, the most notable of which are: the Gulf Stream of the N Atlantic, the warm Japan current of the N Pacific, the Humboldt (Peru) current off the W coast of South America and the cold Falkland current in the S Atlantic. These currents frequently affect the climates of land masses which they pass. See also p.254.

Ocean liner, ship used for the conveyance of passengers from one port to another, as distinct from freight or mixed freight cargoes. The modern era of the ocean liner reached its zenith in terms of speed and luxury with the two Cunard liners, *Queen Mary* and *Queen Elizabeth*. See also pp.474-475.

Ocean of Storms (Oceanus Procellarum), area on the Moon, a "sea" in the W Northern Hemisphere, separated from the Mare Imbrium by the Carpathian Mts. The area includes the crater Aristarchus, generally considered to be the brightest ray crater on the Moon. See also pp.934, 934.

Oceanography, science of the marine environment which studies oceans and seas past and present, the shorelines, sediments, rocks, muds, plants, animals, temperatures, tides, winds, currents, formation and erosion of abyssal depths and heights, and the effect of neighbouring land masses. See also pp.232, 234, 236, 238, 482.

Ocean sunfish, oval fish of the Molidae family, most species of which appear to be tailless. Marine sunfish inhabit warm seas and often swim near the surface of the water. Two species of the genus *Mola* may grow to 2.5m (8ft) in length.

Oceanus, in Greek mythology, a Titan and, with Tethys, parent of 3,000 rivers and numerous daughters, the Oceanids. The Greeks imagined the earth was flat,

and that the world was encircled by Oceanus, a river flowing from the Underworld, on whose banks lived the spirits of the dead.

Ocelot, small, spotted cat that lives in scrub and rocky or forested areas of USA, Central and South America. Its valuable fur is yellowish or rust marked with elongated dark spots. It feeds on small birds, mammals and reptiles. Length: to 1.5m (4.9ft). Family Felidae; species *Felis pardalis*. See also pp.87, 315.

Ochoa, Severo (1905–), us biochemist b. Spain, who emigrated to the USA in 1941. He shared the Nobel Prize in physiology and medicine with Arthur Kornberg for work on the synthesis of ribonucleic acid (RNA), the hereditary material of some viruses and deoxyribonucleic acid (DNA), the hereditary material of most cells.

Ocho Rios, port in N Jamaica, in the West Indies. It is a popular tourist resort. Pop. (1970 est.) 6,900.

Ochre, yellowish or red pigment made by mixing a type of iron ore (LIMONITE or HAEMATITE) with fine clay and grinding the dried product to a powder.

Ochs, Adolph (1858–1935), us newspaper publisher under whose direction the New York Times became one of the world's influential newspapers. He began his career selling papers and then became a printer's apprentice. At the age of 20 he was publisher of the Chattanooga Times. He bought the failing New York Times in 1896 and gave it the slogan "All the news that's fit to print", which is still printed on its front page. Ochs abhorred sensational journalism and demanded non-partisan reporting from his staff.

Ochtersvelt, Jacob (c.1635–c.1710), Dutch portrait and society painter whose work was much influenced by Pieter de Hooch and, through him, by his contemporaries VERMEER, TERBORCH and METSU. In his interior scenes, Ochtersvelt showed a marked preference for orange-coloured fabrics.

Ockeghem, Johannes (c.1425–95), Flemish composer, pupil of DUFAY and teacher of Josquin DES PRÉS. He was composer at the courts of three French kings.

Ockham, William of. See OCCAM (OCKHAM), WILLIAM OF.

O'Connell, Daniel (1775–1847), Irish nationalist leader, known as The Liberator. A practising lawyer during the late 1790s, he joined the United Irishmen but refused to take part in the revolt of 1798, preferring peaceful means for the attainment of Catholic emancipation and parliamentary reform. He founded the Catholic Association in 1823 and became, an MP at Westminster after the introduction of Catholic emancipation in 1829. He led the small group of Catholic Irish MPs supporting the Whigs in return for reforms which, however, were not forthcoming. O'Connell proceeded to work for the repeal of Anglo-Irish legislative union and founded the Repeal Association in 1839. In 1844 he was imprisoned for three months after a series of mass meetings throughout Ireland. He then played only a minor political role owing to ill-health. See also pp.1642, 1642.

O'Connor, Feargus Edward (1794–1855), Irish politician. An MP for Cork (1832–35), he clashed with Daniel O'Connell, established the CHARTIST newspaper Northern Star in 1837, and gained great popularity in N England. Elected MP for Nottingham in 1847, he presented the Chartists' petition in the following year.

O'Connor, James Arthur (1792–1841), Irish landscape painter, who first exhibited at the Royal Academy in 1822. Trained as an engraver, he turned to painting, modelling his work on that of Richard Wilson. His best landscapes are those he painted in Belgium and Prussia. He was a close associate of Francis Danby.

O'Connor, Rory (c.1116–98), last Irish high king. He became King of Connaught in 1156 and King of all Ireland in 1166. After the Anglo-Norman invasion he was forced to acknowledge HENRY II of England as his liege Lord (1175).

O'Connor, Thomas Power (1848–1929), Irish journalist and political figure. As

member for Galway in the British Parliament of 1880, he supported PARNELL and wrote *The Parnell Movement* (1886). He represented Liverpool in the House of Commons (1885–1929), during which time he founded several newspapers, including *T.P.'s Weekly* (1902).

Octane number, indication of the anti-knock properties of a liquid motor fuel. It represents the percentage by volume of iso-octane in a reference fuel consisting of a mixture of iso-octane and normal heptane that matches the knocking properties of the fuel being tested. The higher the number, the less likely the possibility of the fuel detonating. See also p.441.

Octans, or The Octant, faint constellation in which the south celestial pole is located. Sigma Octantis, the star closest to the pole, is of the fifth magnitude; the brightest star is Nu Octantis. See also p.1015.

Octave, in music, the interval between any given note and another one that is exactly twice (or half) the frequency of the first and thus, acoustically, a perfect consonance. For example, a note of frequency 880Hz sounds an octave higher in pitch than one of 440Hz. This interval is so called because in Western music it encompasses the eight notes of the DIATONIC scale.

Octavian. See AUGUSTUS.

October, the tenth month of the year, with 31 days. It was the eighth month in the early Roman calendar and its name is derived from the Latin for eight, *octo*.

October Revolution. See RUSSIAN REVOLUTION.

Octopus, predatory cephalopod mollusc with no external shell. Its sac-like body has eight powerful suckered tentacles. It moves by "jet-propulsion" and crawling, and commonly hides in crevices or among debris on the bottom of shallow seas. Many of the 150 species are small, but the common octopus (*Octopus vulgaris*) can grow to a length of 9m (29ft). Family Octopodidae. See also pp.2, 24, 25.

O'Dalaigh, Cearbhall (Carroll O'Daly) (1911–78), President of the Republic of Ireland (1974–76). He was Irish editor of the *Irish Press* (1931–40), Attorney General (1946–48; 1951–53) and Chief Justice and President of the Supreme Court (1961–73). He was Judge of the Court of Justice of European Communities, Luxembourg in 1973, and became President of the First Chamber of the Court of Justice of European Communities in 1974.

Odds, in betting and games of chance, the financial returns offered to a gambler in proportion to his wager. For example, odds of 3:2 indicate that a bet of two money units will, if successful, win three. Such odds do not indicate true mathematical probabilities, which in horse-racing and similar sports are not precisely calculable. See also pp.808–809.

Ode, unspecific type of verse, originating in the choral songs of Greek festivals. It is usually lengthy, elaborate in manner and lyrical in mood. The first great writer of odes was PINDAR, who wrote them to a fixed pattern of versification. More simple were the personal lyrical odes of HORACE and CATULLUS. The ode became popular again in Italy during the RENAISSANCE. In 17th-century England it was taken up by JONSON, HERRICK and MARVELL. In the 19th century it was popular with WORDSWORTH, SHELLEY and, especially, KEATS.

Odense, city and port in s central Denmark, 137km (85 miles) wsw of Copenhagen. It was founded in the 10th century and has been an episcopal see since then. Odense has a 14th-century Gothic cathedral and is regarded as a great cultural centre, as well as being an industrial and commercial city. Industries include shipbuilding, metalworking and food processing. Pop. (1980) 168,528.

Oder, second-longest river in the catchment basin of the Baltic Sea. It rises in the mountains of NE Czechoslovakia, flows N and W through SW Poland, past Wrocław, turning N to form the Polish–East German border and reaching the Baltic Sea at Szczecin, NW Poland. The river has been an important water route for N Europe

since early times, serving a large area with many navigable tributaries, notably the rivers Neisse and Warta. The main port, Szczecin, is Poland's largest. Length: 886km (550 miles).

Oder-Neisse Line, frontier established between Germany and Poland at the Yalta Conference (Feb. 1945). From the Baltic Sea to the Czechoslovakian border, it followed the rivers Oder and Neisse. The us and British governments originally opposed the line because it would make Poland excessively dependent upon the USSR, and no agreement was achieved at Yalta. After disputed areas, including Danzig, had in effect been arbitrarily incorporated into Poland, the POTSDAM CONFERENCE (Aug. 1945) recognized the line pending a peace treaty with Germany, and allowed large numbers of Germans to be deported to Germany. East Germany and Poland recognized the line in 1950; the West German government did not accept it until 1970.

Odessa, city in the Ukraine (Ukrainskaja SSR), USSR, 40km (25 miles) NE of the mouth of the River Dniester on Odessa Bay. In the 14th century the city was known as Khadzhi-Bey. Under that name, it passed to the Turks in 1764 and came under Russian control in 1791. It was made a port and naval base in 1794 and named Odessa in 1795. It was occupied by Axis forces during WWII. Odessa is now the centre of a fishing and whaling fleet and its other industries include shipbuilding and repairing, oil-refining and the manufacture of heavy machinery. Pop. (1980) 1,057,000.

Odets, Clifford (1906–63), us playwright and one of the best-known social protest dramatists of the 1930s. Influenced by ANTON CHEKHOV and the acting school of STANISLAVSKY, he helped to organize the Group Theatre in 1930. His plays include *Awake and Sing* (1935), his first full-length play, considered to be his best; *Waiting for Lefty* (1935), an expressionist one-act drama; *Golden Boy* (1937); and *The Country Girl* (1950).

Odin, the principal god in Norse mythology. He is usually identified with the Teutonic god Woden and considered to be the god of wisdom, culture, war and death. He lived with the Valkyries in VALHALLA, into which he received the souls of dead warriors. See also p.1907.

Odinga, Oginga (1911–), Kenyan leftist political leader who opposed the British in the Kenyan quest for independence. As the head of the Kenya People's Union he also opposed his former close associate Jomo KENYATTA in the mid-1960s and was imprisoned between 1969 and 1971.

Odo, Bishop of Bayeux (c.1036–97), Norman warrior-priest, half-brother of WILLIAM the Conqueror. Odo became Bishop of Bayeux in 1049 because of his family connections with the ruling house of Normandy. He fought at William's side at the Battle of HASTINGS and was made Earl of Kent in 1067. He then played an important role in Anglo-Norman politics, and may also have commissioned the BAYEUX TAPESTRY.

Odoacer (Odovakar) (c.433–93), chief of the Germanic Heruli people and conqueror of the West Roman Empire. The Heruli were Roman mercenaries until 476 when they declared Odoacer King of Italy. He deposed Romulus Augustulus and established his authority over Italy, proving himself a capable ruler. In 489 the Ostrogoth King Theodoric the Great invaded Italy. Odoacer took refuge in Ravenna which surrendered in 493. Theodoric invited him to a banquet where he was betrayed and murdered.

Odonata, order of primitive winged insects found throughout the world. DAMSELFLIES, in the suborder Zygoptera, have thin bodies with wings held vertically along the body when at rest. The long, slender, aquatic nymphs have three leaf-like gills on the abdomen. DRAGONFLIES, in the suborder Anisoptera, have heavy bodies with wings held horizontally when at rest. The stout nymphs have gills at the anal end. All prey on insects; none attacks man. Length: 18–193mm (0.7–8in). See also pp.36–37.

Odontology, study of the structure, development and diseases of the teeth. It is closely allied with DENTISTRY, the practice of treating diseases of the mouth.

Oduber Quirós, Daniel (1921–), President of Costa Rica (1974–78). He held a number of administrative and diplomatic posts prior to his election as the candidate of the National Liberation Party (1965) and President of the Congress of Costa Rica (1970–74).

O'Duffy, Eoin (1892–1944), Irish politician and soldier. He was Chief of Staff of the IRA (1921–22), in charge of the forces of the Irish Free State (1924–25), and head of its police (1922–33). As a prominent member of the United Ireland Party, his authoritarian ideas led him to organize an Irish Brigade to fight for Franco (1936–37) during the SPANISH CIVIL WAR. This lost him much support.

Odysseus, or Ulysses, Greek hero of HOMER's epic poem, the ODYSSEY. King of the city-state of Ithaca, husband of the faithful PENELOPE and father of Telemachus, he was an astute and brave warrior, although in post-Homeric legend he is depicted as a wily, untruthful man. It was Odysseus who devised the stratagem of the wooden TROJAN HORSE in order to enter Troy. The extent of his wanderings and the problems he encountered have featured throughout literature. See also p.1208.

Odyssey, The, epic poem of 24 books attributed to the ancient Greek poet HOMER. The story of ODYSSEUS, King of Ithaca, it tells of his journey home from the Trojan Wars after 10 years of wandering. To win back his wife PENELOPE and his kingdom he enlists the help of his son Telemachus and kills the suitors who have been wooing Penelope in his absence.

OECD, Organization for Economic Co-operation and Development, international consultative body set up in 1961 by the major Western trading nations. Its aims are to stimulate economic growth and world trade by raising the standard of living in member countries and by coordinating aid to less developed countries.

Oedema, swelling in the body caused by accumulation of watery liquid, as the result of an abnormal leakage from blood capillaries and lymph vessels; formerly called dropsy. It is a symptom particularly of NEPHRITIS (inflammation of the kidney) but also occurs in heart and liver disease as an allergic reaction and in pregnancy.

Oedipus, in Greek mythology and literature, son of Laius, King of Thebes, and of Jocasta, father of ANTIGONE, Ismene, Eteocles and Polyneices by his own mother. In the 5th-century BC the playwright SOPHOCLES told how Oedipus was saved from death as an infant and raised in Corinth, how he inadvertently killed his father, solved the riddle of the SPHINX, and became King of Thebes. There he married Queen Jocasta, unaware that she was his own widowed mother.

Oedipus complex, in psychoanalytic theory, incestuous fantasy in which a child desires the parent of the opposite sex. SIGMUND FREUD held that children pass through this stage between the ages of three and five. The son desires his mother and subconsciously hopes for his father's death, by which the son may replace him in his mother's attentions. A daughter has analogous feelings; desire for her father and a subliminal desire for her mother's removal. The complex for females is sometimes termed the Electra complex.

Oedipus Rex (c.420 BC), tragedy by SOPHOCLES, one of the greatest in Greek literature. OEDIPUS, King of Thebes, unknowingly kills his father (Laius) and marries his mother, JOCASTA. She hangs herself when the truth is revealed, and Oedipus blinds himself.

Oehlschlager, Adam Gottlob (1779–1850), Danish poet and dramatist. Influenced by German Romanticism, his poetry includes *The Golden Horns* (1803), *Midsummer Night's Play* (1803) and *Aladdin* (1805). Oehlschlager used Norse myths in his plays *Hakon Jarl* (1807) and *Baldur the Good* (1807). In 1829 he was given the title of Scandinavian Prince of Poets.

Oested, Hans Christian

Hans Oersted founded the Danish Engineering College and was its president.

Jacques Offenbach is the subject of this caricature by André Gill.

John Ogdon and his wife, Brenda Lucas, are both famed concert pianists.

Georg Ohm formulated the law linking voltage, current and electrical resistance.

Oersted, Hans Christian (1777–1851), Danish physicist and professor at Copenhagen University. He took the first steps in elucidating the relationship between electricity and magnetism, thus founding the science of ELECTROMAGNETISM. The OERSTED unit of magnetic field strength is named after him. He was also the first scientist to isolate pure metallic aluminium in 1825.

Oersted, unit of magnetic field strength in the CGS SYSTEM, equal to the magnetic field that would cause a unit magnetic pole to experience a force of one dyne in a vacuum. It is named after Hans Christian OERSTED.

Oerter, Alfred (1936–), US discus-thrower. He won the Olympic gold medal in the discus event in 1956, 1960, 1964 and 1968. He held the world record for the event from 1962 to 1964.

Oesophagus, muscular tube, part of the alimentary canal (or gut) which carries swallowed food from the pharynx (throat) to the stomach. In adults it is about 30cm (12in) long. See also p.160.

Oestrogen, female SEX HORMONE which is first secreted by a girl at PUBERTY, and leads to the development of the secondary sexual characteristics that turn her body into a woman's: breasts, body hair and redistributed fat. Oestrogen is also a constituent of the contraceptive PILL. See also pp.155, 164, 165, 1076, 1102.

O'Faolain, Seán (1900–), Irish novelist and short-story writer. His books examine and portray life in Ireland, and that nation's difficulty in reconciling past history with present reality. Collections of stories include *A Purse of Coppers* (1937), *I Remember! I Remember!* (1962), and *The Talking Trees* (1970). Among his novels are *A Nest of Simple Folk* (1933), *Bird Alone* (1936) and *Come Back to Erin* (1940). He also wrote several biographies and studies of Ireland, notably *An Irish Journey* (1940) and *The Irish* (1949). See also p.1767.

Offa (d.796), King of MERCA (r.757–96). He made Mercia the foremost Anglo-Saxon kingdom of Britain by gaining territory from WESSEX and the Welsh and controlling the wealthy areas of Kent and Sussex. Offa styled himself *Rex Anglorum* (King of the English). It is probable that he built OFFA'S DYKE. See also p.1288.

Offaly, county in Republic of Ireland, Leinster province. It is mainly flat and marshy and drained by the rivers Shannon, Barrow, Brosna and Nore. The chief occupation is agriculture, particularly potatoes, cereals and cattle-raising. There is also a distilling industry. The county town is Tullamore. Area: 1,997sq km (771sq miles). Pop. (1971) 51,834.

Offa's Dyke, earthenwork fortification in England and Wales running from the mouth of the River Dee, Clwyd, to Chepstow, Gwent. It was probably built in the reign of OFFA, King of Mercia (r.757–96), and was designed to mark the Welsh-Mercian border. Its ditch and high rampart were intended to reduce raiding by the Welsh tribes. See also pp.1288, 1319.

Offenbach, Jacques (1819–80), French composer. His great reputation was founded on his brilliance as a composer of operettas: he wrote more than 90, the most famous being *Orpheus in the Underworld* (1858). His only serious opera, *The Tales of Hoffman* (1881), is one of the masterpieces of French opera.

Offertory, in the EUCHARIST of all Christian Churches, the presentation of the elements, bread and wine, upon the altar as a sacrificial offering to God from His people. The whole of this part of the service, with the accompanying prayers and any music, is commonly called the offertory. In Anglican and other Churches following the REFORMATION, the term has been extended to include the money taken at the collection.

Office of the UN High Commissioner for Refugees, organization founded in 1951 to replace the International Refugee Organization (1946–50). Although its administrative costs are financed from the regular budget of the UNITED NATIONS, its fieldwork is carried out with voluntary

pledges because it is believed that governments should take the main responsibility for refugees. Thus the work of the Office, which has branch offices in more than 60 countries, consists mainly of negotiating agreements with governments regarding their acceptance and acknowledgement of refugees' rights. The High Commissioner is responsible to the UN General Assembly and is responsible for the operations undertaken by the Office.

Offset printing, method of printing used widely for magazines and other publications produced in large numbers. It is carried out on presses which have three rollers. The image to be printed – text or illustration – is produced photographically on a printing plate, usually of metal, which is wrapped around one of the rollers. The plate is dampened and the image rejects the moisture, but absorbs the ink which is then applied with rollers. As the press rolls, the image is transferred to a middle, offset, rubber-coated roller, from which it is transferred to paper passing around a third roller. This process, known as offset LITHOGRAPHY, is suitable for long runs because the printing plate with its flat image is not as quickly worn as are directly-printed plates containing raised or sunken images. See also LETTERPRESS PRINTING; pp.614–615.

Of Human Bondage (1915), novel by W. Somerset MAUGHAM about a lame medical student and his passion for a heartless waitress. The book, partly autobiographical, made Maugham's reputation as a serious writer. The film made of it in the USA in 1934 established Bette DAVIS as a major film actress.

O'Flaherty, Liam (1897–), Irish novelist. After working in London and sailing around the world (1918–21) he took up writing, living in Dublin. His novels include *The Informer* (1925), *The Puritan* (1931), *Famine* (1937) and *Insurrection* (1950). He also wrote many volumes of short stories and two autobiographical works, *Two Years* (1930) and *Shame the Devil* (1934).

Of Mice and Men (1937), novel by John STEINBECK. It is about Lennie Small, a huge feeble-minded man, and his friend George Milton, both itinerant labourers whose dreams of a Utopian future together are shattered when Lennie unintentionally kills a woman. Steinbeck successfully dramatized the novel in the same year, and it was filmed in 1939.

Ogaden, region of SE Ethiopia, on the border of the Somali Democratic Republic. It is a desert region inhabited chiefly by Somali nomads. It was conquered by Ethiopia in 1891. During the late 1970s Somalia and Ethiopia disputed sovereignty of the area.

Ogbomoshu, city in SW Nigeria, approx. 80km (50 miles) NNE of Ibadan. It was a HAUSA stronghold against Fulani invasions in the early 19th century. It is now a processing and shipping centre for the surrounding region. Products include tobacco, cattle and fruits. Pop. (1975 est.) 432,000.

Ogdon, John (1937–), British pianist and composer. After studying at the Royal Manchester College of Music, he won considerable recognition in Britain in the late 1950s and established his international reputation in 1962 when he was joint winner of the Tchaikovsky Competition in Moscow with Vladimir ASHKENAZY. His compositions, principally for piano, include preludes and a concerto.

Ogeden, city in N Utah, USA, 53km (33 miles) N of Salt Lake City. It was settled by MORMONS in 1846 and is thought to be the oldest continuously settled area in the state. Its industries include food processing and electronic equipment. Pop. (1970) 69,478.

Ogee, double-curved line, half concave and half convex, like the letter S. An ogee arch, introduced into Europe in c.1300, consists of four arcs, so combined to produce the double-curve effect. The word is also used for a double-curved moulding.

Ogham, **Ogam** or **Ogum**, alphabetic writing of the Irish (Gaelic) and Pictish languages during and after the 4th century AD. The script took the form of horizontal

or diagonal lines carved across the edges of upright rectangular stones; its usage had dwindled by the late Middle Ages.

Ogilvy, Angus James Bruce. See ROYAL FAMILY.

Oglethorpe, James Edward (1696–1785), British general and colonist. After military service in the Austrian army, he returned to England (1722), was elected to Parliament, and became interested in social reform. Taking a group to North America, he founded the colony of Georgia (chartered in 1732) for imprisoned English debtors; he founded Savannah in 1733. He successfully defended the colony in the war between Spain and England.

OGPU. See KGB.

Ogwr, county district in SW MID-GLAMORGAN, s Wales, created in 1974 under the Local Government Act (1972). Area: 285sq km (110sq miles). Pop. (1974 est.) 128,100.

O'Hara, John (1905–70), US author, many of whose short stories and novels are sharp observations of American urban life. His novels include *Appointment in Samarra* (1934); *Butterfield 8* (1935); *Pal Joey* (1940), which was also a successful musical comedy; *Ten North Frederick* (1955), for which he won the 1956 National Book Award in fiction; *From The Terrace* (1959); *Ourselfes to Know* (1960) and *The Big Laugh* (1962).

O. Henry. See HENRY, O.

O'Higgins, Bernardo (1778–1842), South American revolutionary who became commander of Chile's anti-royalist forces in 1813. In 1817, with SAN MARTIN, he defeated the Spanish and was named supreme director of Chile, the independence of which he proclaimed in 1818. His reforms aroused much opposition, however, and in 1823 he was exiled to Peru, where he died.

O'Higgins, Kevin Christopher (1892–1927), Irish politician who joined the SINN FEIN movement during WWI. He became Minister of Justice and Vice-President of the Executive Council in the provisional Irish government of 1922. In 1927 he was appointed Minister of External Affairs, and in the same year was assassinated.

Ohio, state in E central USA, bounded by Lake Erie in the N. Mostly low-lying, rolling country, the state is drained chiefly by the Ohio, Scioto, Miami and Muskingum rivers. Ohio's large farms produce hay, maize, wheat, soya beans and dairy foods, and cattle and pigs are raised. The state is highly industrialized. The leading industries are car and aircraft manufacture, transport equipment, primary and fabricated metals, machinery and plastic and rubber goods. Ohio leads the nation in the production of sandstone. Oil and natural gas, clay, salt, lime and gravel are also produced and there are large deposits of coal. The major cities are Columbus (the state capital), Cincinnati and the lake ports of Toledo and Cleveland, which handle large amounts of iron and copper ore, coal, oil and finished goods.

French and English traders operated competitively in the area in the early 18th century. Britain acquired the land in 1763 at the end of the French and Indian Wars. It was ceded to the USA after the American War of Independence and in 1787 it became part of the Northwest Territory. The first settlement came a year later. Ohio was accepted into the Union in 1803, and the construction of railways and canals accelerated the state's development. Area: 106,764sq km (41,222sq miles). Pop. (1975 est.) 10,797,419. See also p.2161.

Ohio, river in E central USA, formed at the confluence of the Allegheny and Monongahela rivers at Pittsburgh, in W Pennsylvania. It flows W and then SW to join the Mississippi River at Cairo, Illinois. The Ohio River valley is a highly industrialized region and large quantities of coal, oil, steel and manufactured articles are shipped along the river. There are various flood-control schemes to prevent spring flooding and to improve navigability. Length: 1,571km (976 miles).

Ohm, Georg Simon (1787–1854), German physicist. He was appointed profes-

sor at Munich in honour of his discovery of the relationship (OHM'S LAW) linking current, ELECTROMOTIVE FORCE and resistance in an electric circuit. His name is also given to the unit of electrical resistance. **Ohm**, unit of electrical resistance, equal to the resistance between two points on a conductor when a constant potential difference of one VOLT between them produces a current of one AMPERE.

OH-maser emission, stellar, in astronomy, spectral emission of the hydroxyl radical from certain radio sources, characterized by extremely narrow lines of high intensity. One explanation of the effect is that the radio waves are being amplified by stimulated emission in some form of celestial MASER.

Ohm's law, statement that the amount of steady current through a material is proportional to the voltage across the material. Propounded by the German physicist Georg Simon OHM, Ohm's law is expressed mathematically as $V/I=R$ (where V is volts, I is the current in amperes and R is the resistance in ohms). See also p.880.

Oh, What A Lovely War! (1963), musical satire about WWI leaders and generals, developed by Charles Chilton, Joan Littlewood and members of THEATRE WORKSHOP within the format of an Edwardian PIERROT show. Richard ATTENBOROUGH directed a film version in 1969.

Oil, general term to describe a variety of substances, whose chief shared characteristics are viscosity at ordinary temperatures, a density less than that of water, inflammability and insolubility in water, and solubility in ether and alcohol. They are in other ways too different to be classified together chemically. Thus there are mineral oils, most notably petroleum, used as fuels, and animal and vegetable oils (fatty oils or fats), used as food, lubricants and as a major ingredient of soap. In addition there are essential oils from plants which, unlike fatty oils, are volatile. The fatty oils, which are fixed, are of two kinds: drying, such as linseed or poppyseed oil, and non-drying, such as olive and castor oil. See also pp.838-839.

Oil, North Sea, term used for the considerable deposits of the lighter type of crude oil, first discovered off the coast of The Netherlands in 1959. The area has since been divided into sectors, each belonging to a nation whose territorial waters include part of the North Sea. One of the most important is the Ekofisk field off S Norway. It was in this field, however, that a disastrous blowout occurred in 1977, spilling an enormous quantity of oil into the sea. Discoveries have also been made closer inshore, eg in the Moray Firth off NE Scotland. In 1979 total output of all types of crude oil from the North Sea was 90,583,000 tons. See also pp.417, 438-439.

Oil, vegetable, oil prepared from certain plants and essential to the human diet. Vegetable oils release more energy per unit of weight than any other food. They are commercially extracted from the fruit or seeds of SOYA, GROUNDNUT, MAIZE, COTTON, RAPE, SUNFLOWER, COCONUT and OLIVE. Sunflower oil and soya oil are commonly used in the preparation of margarine or used as cooking oil. See also pp.680, 680, 710-711, 712-713.

Oilbird, or guacharo, nocturnal N South American bird, coloured brown and black, with white spots. An ECHOLATION system enables it to navigate in the dark. The local Indians used to boil the nestlings to obtain oil for their torches. Length: 33cm (13in); wingspan: 76cm (30in). Family Steatornithidae; species *Steatornith caripensis*.

Oil extraction, process by which crude oil is brought to the Earth's surface and transported to a refinery. A borehole is made into the Earth's crust and the oil reservoir emptied with the help of NATURAL GAS pressure or pumps. The discovery of undersea deposits, as in the North Sea, has meant that many new techniques for extracting and transporting the oil have had to be developed in order to avoid pollution and blowouts. See also pp.416-417, 438-439.

Oil painting, method of painting in which

an oil base is used for paint pigments; the term is also applied to pictures painted by this method. Sometimes a diluting material, such as turpentine or a substitute is used to thin the oil-based paint. Jan van EYCK is credited with the innovations that led to the gradual replacement of TEMPERA by oil painting in Europe in the 15th century. The use of canvas as a primary painting surface also began at this time when Venetians such as TITIAN and TINTORETTO used oils successfully with little underpainting. In the 17th century RUBENS used oils in the Flemish tradition, placing transparent colours over a ground primed with white paint. REMBRANDT used a dark ground and thin paint for shadows, and heavier paint for the lighter areas in his pictures. HALS and VELÁZQUEZ also experimented with the use of oils. The traditional use of glazes (layers of thin paint, one on top of the other) was often replaced by direct painting during the 19th century when many schools of painters, eg the IMPRESSIONISTS and NEO-IMPRESSIONISTS, developed different techniques of oil painting, and this experimentation continues today.

Oil palm, tree grown in humid tropical regions of W Africa and Malagasy, source of oil for margarine and soap. The long feather-shaped fronds rise from a short trunk. Height: 9-15m (30-50ft). Family Palmaceae; species *Elaeis guineensis*.

Oil refinery, large industrial chemical complex in which crude oil (petroleum) is refined. This involves many processes whereby the oil is split into its major fractions such as gasoline, kerosene, diesel oil, lubricating oil and bitumen. These are obtained by fractional DISTILLATION, but many refineries carry out further operations on some of these fractions. These include catalytic "cracking", alkylation - increasing the octane rating of petrol - HYDROGENATION and POLYMERIZATION. See also p.440.

Oil rig, platform, either floating or on legs resting on the sea bottom, used for drilling for offshore oil or natural gas in the NORTH SEA and off the coasts of Australia, California and the N of South America. Rigs are generally sited in comparatively shallow water on the continental shelf. The gas or oil is transported ashore either in tankers or through undersea pipelines.

Oil shale, dark-coloured, soft rock containing hydrocarbon compounds which can be distilled off as shale oil. Oil shales yielding more than a small percentage of oil can be valuable as fuels and as sources of organic chemicals. They are found in many countries, sometimes in vast deposits; that of the Green River shales in the USA alone has been estimated to contain 960,000 million barrels of oil. See also pp.416-417.

Oil well, shaft through which crude oil (petroleum) is brought to the surface from underground deposits. Wells are usually drilled with a rotating shaft bearing a drill bit which, for cutting through hard rock, may be diamond-tipped. Rock particles are pumped from the hole as a fluid slurry, which also lubricates and cools the drill. Proven wells are cased with steel piping and topped above ground with an oil take-off arrangement, often of the type known as a Christmas tree. See also pp.416-417, 438-439.

Oistrakh, David (1908-74), Russian violinist. His interpretation of the violin repertoire, both in the concert hall and on records, earned him the reputation of being the greatest violinist of his day. PROKOFIEV and other modern Russian composers wrote works especially for him. His son and pupil, Igor (1931-) is a virtuoso violinist.

Ojibwa, or Chippewa, Indians, group of Algonquian-speaking North American Indians. In the 17th century they were constantly at war with the SIOUX over possession of the rich fields of wild rice on the shores of Lake Superior but eventually drove them across the Mississippi River. They then continued their expansion westwards into North Dakota. Since then they have lived mainly on reservations in Michigan, Wisconsin, Minnesota and North Dakota. Today they number about

80,000 in both the USA and in Canada. **Okapi**, hoofed mammal of the giraffe family. A very shy animal, it lives in the dense rain forests of equatorial Africa and was not discovered until 1900. It is brown with zebra-like stripes on its legs and hind-quarters. The tongue is extremely long. Males have small, hair-covered horns. Height: to 1.6m (5.2ft) at the shoulder. Family Giraffidae; species *Okapia johnstoni*. See also pp.310, 311.

Okara, Gabriel Imomotimi Gbaingbain (1921-), Nigerian author. In 1959 he went to the USA to study journalism, but returned to Africa to write poetry, published in *Black Orpheus* (nos 1,3 and 6) and a novel, *The Voice* (1964). In his writing he draws on African mythology and religion, trying to resolve the conflict between traditional and Western ideas.

Okeechobee, lake in S central Florida, N of the Everglades. The largest fresh water lake in the USA, it is fed by the Kissimmee River and drained by the Caloosahatchee River. It is part of the Okeechobee (Cross-Florida) Waterway System. Area: 1,890sq km (730sq miles).

O'Kelly, Seán Thomas (1883-1966), Irish politician. He was a founder of the SINN FEIN movement and Speaker of the first Dáil Éireann (1919-21). He was Vice-President of the Executive Council and Minister for Local Government and Public Health (1932-39) and Minister of Finance (1939-45). From 1945 to 1959 he was President of Ireland.

Okinawa, largest of the Okinawa Islands, Japan, in the Ryukyu Islands Chain, SW of mainland Japan, in the W Pacific Ocean. It is an island of volcanic origin and is densely forested in the N. The inhabitants, most of whom live in the S, engage in agriculture and fishing. The island was taken by American troops in WWII as it provided the USA with an airfield close to mainland Japan; it was returned in 1971. Area: 1,176sq km (454sq miles). Pop. (1970) 945,111.

Oklahoma, state in central S USA. The W of the state is part of the Great Plains. The E is mountainous. The area is drained chiefly by the Arkansas and Red rivers. Wheat and cotton are the leading cash crops but livestock raising is the most important farming activity. Although many mineral deposits are found in the state, oil and natural gas form the basis of Oklahoma's economic wealth. Most of the state's industries process raw materials. The major cities are Oklahoma City, the state capital, and Tulsa. Much of the area was acquired by the USA from France in the LOUISIANA PURCHASE of 1803. During Andrew JACKSON's presidency (1829-37) Congress created the Indian Territory in the region for AMERICAN INDIANS moved by the Federal Government from states in the E. White cattle farmers who had settled to the W of this area organized the Territory of Oklahoma in 1889. The two territories were merged to form the state of Oklahoma in 1907. Area: 181,089sq km (69,918sq miles). Pop. (1980) 3,025,266. See also p.2161.

Oklahoma!, musical play by Richard RODGERS and OSCAR HAMMERSTEIN II, originally produced on the Broadway stage in 1943. The slight story is set in 19th-century Oklahoma Territory. It was also the first of the series of musical successes by the famous Rogers and Hammerstein partnership.

Oklahoma City, largest city and capital of Oklahoma State, USA, situated on the North Canadian River. The area was opened to homesteaders and settled during the land rush in 1889. The city was made the state capital in 1910, and prospered with the discovery of rich oil deposits in 1928. Industries: oil refining, stockyards, meat packing, grain milling, cotton processing, steel products, aircraft. Pop. (1980) 401,002.

Okra, also called gumbo, annual tropical plant with red-centred yellow flowers. The unripe green fruit pods are eaten as a vegetable. Height: 0.6-1.8m (2-6ft). Family Malvaceae; species *Hibiscus esculentus*. See also pp.685, 685.

Olaf, the name of five kings of Norway. Olaf I Trygvason (c.964-c.1000;

Oilbird is the only nocturnal bird that depends entirely on fruit for food.

David Oistrakh won the Brussels International Contest for violinists in 1937.

Okapi; it was not until 1958 that an okapi born in captivity survived.

Oklahoma; cereal crops and oil are important factors of the state's economy.

Olbers, Heinrich Wilhelm

Old Bailey: the facade displays symbols of justice and retribution.

Old English sheepdog's hair needs brushing to keep it clean and untangled.

Old Testament; Adam and Eve are banished from the Garden of Eden.

Old Vic, under Lilian Baylis' management, presented every Shakespeare play.

r.995–1000), the great grandson of HAROLD I, (r.995–1000). He spent much of his youth on viking raids but was later converted to Christianity. Olaf II Haraldsson (c.995–1030) was also converted to Christianity and continued to gain Norwegian acceptance for Christianity. His reign (1016–28) is remembered for his religious code (1024). He was canonized in 1131 and is the patron saint of Norway. Olaf III Haraldsson (d.1093; r.1066–93), known as "the quiet" (Kyrri), ruled jointly with MAGNUS II until the latter's death in 1069. Peace and the spread of Christianity characterized his reign. Olaf IV Haakonson (1370–87; r.1380–87), became King of Norway in 1380, under a regency, but Norway was governed by his mother as regent, who also succeeded him. Olaf V (1903–; r.1957–) succeeded his father, HAARON VII. He took an active part in the struggle for liberation after the German occupation (1940) of Norway during WWII. In 1944 he assumed supreme command of the Norwegian forces. He was regent for his father 1955–57.

Olbers, Heinrich Wilhelm Matthias (1758–1840), German astronomer and physician. He discovered five comets and the asteroids, Pallas (1802) and Vesta (1807). He also devised a new method of calculating a comet's orbit. In 1826 Olbers proposed his famous paradox: if there are an infinite number of stars, evenly distributed in space, the sky should remain solidly bright with no darkness on the Earth. His explanation, that interstellar dust obscures the light, was discarded in the 1970s in favour of the theory that expansion of the universe dims the light from distant objects.

Olbrich, Joseph Maria (1867–1908), architect born in Silesia (now Czechoslovakia). He studied under Otto Wagner, one of the founders of the modern movement in European architecture. With GUSTAV KLIMT, Olbrich was co-founder of the VIENNA SECESSION, and in 1897–98 designed and built the Secession building in Vienna.

Olcott, Col. Henry Steel (1832–1907), American journalist and THEOSOPHIST. He founded the Theosophical Society with Helena Blavatsky in 1875 and went to live and work in India soon afterwards.

Old age, last period of a human being's life, generally after the age of 70. Old age is usually characterized by physical changes, eg loss of hair, failing sight and a general slowing of the body's systems. This physical deterioration is most visible in those body tissues which do not regenerate easily because they are largely composed of non-living materials: the bones, joints, and connective tissue. Brain cells also do not regenerate but their progressive loss is not, apparently, a major factor in ageing. Tissues largely made up of living cells, such as the skin and glands, are more or less in a state of constant repair, although this slows as the body's age increases. See also pp.1144–1147.

Old age pensions. See PENSIONS AND NATIONAL INSURANCE, MINISTRY OF.

Old Bailey, common name for the Central Criminal Court, in London, derived from the street in which it is situated. It became a CROWN COURT in 1971. The judges entitled to sit in the court include the Lord Mayor of London and the Aldermen as well as the Recorder of London and the Common Serjeant who are circuit judges. Judges at the Central Criminal Court are still addressed by the title "My Lord".

Oldcastle, Sir John (c.1377–1417), English soldier and LOLLARD leader. Under HENRY IV he performed valuable military service in Wales, where he became a friend of the Prince of Wales (later HENRY V). An enthusiastic supporter of John WYCLIFFE and his teachings, he was condemned for this heresy in 1413. He escaped from the TOWER OF LONDON and was involved in Lollard conspiracies until 1417 when he was recaptured and executed.

Old Catholic Church, religious movement rejecting the dogma of PAPAL INFALLIBILITY which had been announced by the Vatican Council of 1870. The Old Catholics set up churches in German and

Dutch-speaking Europe, which later united in the Union of Utrecht in 1889, and since then the Archbishop of Utrecht has been head of the International Old Catholic Congress. Old Catholics have much affinity with Anglicans, and achieved communion with the Church of England in 1931. There are more than 450,000 members in Germany, Switzerland, Austria, The Netherlands, Poland and the USA.

Old Curiosity Shop, *The* (1841), novel by CHARLES DICKENS. It is famous for its characterizations of Little Nell, the angelic heroine, Quilp, the grotesque villain, and Kit Nubbles, who is devoted to Little Nell.

Oldenbarneveldt, Johan van (1547–1619), Dutch statesman. He fought with WILLIAM THE SILENT for Dutch independence but was executed for treason by MAURICE OF NASSAU.

Oldenburg, Claes (1929–), US painter and sculptor, a leading member of the POP ART school. He has painted grotesquely distorted figures and gigantic sculptures, such as *Lipstick* (1969) at Yale University.

Oldenburg Dynasty, family that ruled Denmark (1448–1863) and Norway (1450–1814). After the death of Christopher III, King of Denmark, Norway and Sweden, Denmark and Norway elected Christian, Count of Oldenburg, as their monarch in 1448 and 1450 respectively. Christian was also King of Sweden from 1450–57. The Treaty of Kiel (1814) separated the two states, and following the death of FREDERICK VII in 1863, the Danish Crown passed to his cousin's husband, the Duke of Glücksburg.

Old English, the English language as spoken and written between c.450 and 1100. It is known also as Anglo-Saxon and had a vocabulary of about 50,000 words. It comprised four main dialects, spoken by the Germanic tribes which invaded England in the 5th century: Northumbrian and Mercian, spoken by the Angles; Kentish, spoken by the Jutes; and West Saxon, spoken by the Saxons. The best of Old English literature such as *BEOWULF*, was written in Northumbrian, but West Saxon became the chief dialect as a result of ALFRED THE GREAT's political influence over much of England in the late 9th century.

Old English sheepdog, working dog, originally bred in England early in the 18th century. It has a square head, square jaws and medium-sized ears carried flat against its head. The compact body is set on sturdy legs. Its tail is commonly docked, which gives rise to its other name – bobtail. The coarse, shaggy coat may be grey, grey-brown or grey-blue with white markings. Height: to 66cm (26in) at the shoulder; weight: to 30kg (66lb).

Oldfield, Barney (1877–1946), US racing driver who in 1903 became the first man to drive at a speed of 60mph (96.6km/h). In 1910 he reached a speed of 131.7mph (212km/h) which set a new world record.

Oldham, county district in Greater Manchester, NW England, created in 1974 under the Local Government Act (1972). Area: 140sq km (54sq miles). Pop. (1976 est.) 227,500.

Old Kingdom, period of Egyptian history from the 3rd to 8th dynasties (c.2686–2160 BC), during which the PYRAMIDS were built. Texts of the period tell of trading with Lebanon and of expeditions to Libya, Nubia and Sinai. It is probable that the Old Kingdom ended in a civil war between the royal family and provincial nobles.

Old-man's-beard. See CLEMATIS.

Old Moore's Almanac, British astrological magazine. First published in 1699 by Francis Moore, a London physician, to promote his pills, it contained weather predictions based chiefly on astrology. It is still published each year, but now covers more topics than the weather and no longer promotes pills.

Old Norse literature, literature of the Scandinavian Norsemen from the 9th to 12th centuries. It is mainly mythological poetry and sagas. The work was set down in stone and wood, but survived orally and was recorded in the 12th–14th centuries in Eddaic (alliterative) and Skaldic (complex and artificial) Icelandic verse. The SKALDS

became a separate group which only the initiated could comprehend.

Oldowan, type of stone tool dating from the early PLEISTOCENE period (c.2.5 million years ago). The name comes from the Olduvai Gorge in Tanzania, where archaeologists found the first tools of this kind. Made from quartz or basalt stones, the edges were chipped away to form tools capable of chopping, scraping or cutting. Oldowan tools were made for about 1.5 million years, but were gradually superseded by better-made ones of the ABBEVILLIAN type. See also p.771.

Old red sandstone, geological term for fresh-water deposits of the Devonian Period found in Britain, especially Scotland. These strata are noted for their fish fossils among which are jawless fishes (ostracoderms), the first jawed fishes (placoderms) and by the Middle "Old Red" period the first true bony fishes (osteichthyes). Deposits of equivalent age are found in Canada, Greenland, the USA, central Asia and Australia.

Old Stone Age. See STONE AGE.

Old Testament, first part of the Bible, of which some dates from the time of the Kingdom of DAVID (c.1000 BC), although much more dates from the revision of all religious texts carried out at the time of the BABYLONIAN CAPTIVITY (c.580 BC). Originally written for the most part in Hebrew or Aramaic, it comprises the PENTATEUCH (Genesis to Deuteronomy); the Historical Books (Joshua to Kings); the Wisdom Books (eg JOB, Proverbs); the Major Prophets (eg ISAIAH, Jeremiah); the 12 Minor Prophets (Hosea to Malachi); and the miscellaneous Writings (eg PSALMS, Song of Solomon). There is also a collection of books written in the final three centuries BC, known as the APOCRYPHA (including Tobit, Judith, Esther, Macabees, Ecclesiasticus, Baruch, some of Daniel, and occasionally the tiny Letter of Menasses), commonly inserted among the Writings and the Prophets. The number, order and names of the books vary slightly between Jewish and Christian traditions; texts for both are based on a 3rd-century BC Greek text, the SEPTUAGINT, a translation into the common language of the Jews of the DIASPORA.

Old-time dances, name for several dances of European and US society in the 19th century, not to be confused with modern ballroom dances of the post-WWI era. The most famous of them, which held sway throughout the 19th century, was the waltz. The basic steps of old-time dancing are the one-step and the two-step.

Old Trafford, name of two sports grounds in Manchester, England. One is the ground of Lancashire County Cricket Club, and the other is that of Manchester United Football Club. The cricket ground was opened in 1857 and TEST MATCHES have been played there regularly since 1884. It has a capacity of about 30,000 people. The football ground was opened in 1908 and holds about 58,000.

Olduvai Gorge, site in Tanzania where remains of primitive man have been found. The gorge is 40km (25 miles) long and 100m (320ft) deep; it runs through the Serengeti Plain. The fossils of ancient man and his forebears are preserved in the layers of lake sediment and volcanic rock which make up the sides of the gorge, enabling man's chronological development to be traced. Louis LEAKEY (1903–72), who spent most of his life working at Olduvai, uncovered four beds, or layers, of remains which date from c.2 million years ago to c.10,000 years ago. In 1964, he announced the discovery of *Homo habilis*, whom he believed to have been a direct ancestor of modern man.

Old Vic, London theatre. Built in 1818 as the Royal Coburg Theatre, it later became the Royal Victoria Hall and served as a temperance music-hall. It was soon known affectionately as the Old Vic. It became well-known under the management of Lilian BAYLIS for its Shakespearean productions. With the purchase of the Sadler's Wells Theatre in 1931, the Vic-Wells company was formed. Drama and opera and ballet performances were alternated between two theatres. In 1935

the opera and ballet programmes were restricted to Sadler's Wells and the drama to the Old Vic. From 1963 to 1976 it was the home of the NATIONAL THEATRE of Great Britain.

Old Wives' Tales, The (1908), one of the "Five Towns" novels by Arnold BENNETT. It contrasts the lives of sisters Constance and Sophia Baines who were modelled on two undistinguished, elderly women Bennett had seen in a Parisian restaurant.

Oleander, poisonous, Eurasian, evergreen shrubs of the genus *Nerium*. The best-known is probably the rosebay (*N. oleander*). They have milky poisonous sap, clusters of white, pink or purple flowers and smooth leaves. The fruits may be fleshy, berry-like or dry pods that split to release seeds for dispersal by the wind. Family Apocynaceae.

Oleaster, small, spiny-branched, deciduous tree, native of Eurasia. It has narrow leaves with hairy silver undersides and small, fragrant silver-scaled flowers that yield yellow, olive-shaped fruits. Height: to 6m (20ft). Family Elaeagnaceae; species *Elaeagnus angustifolia*.

Olefins, or **alkenes**, hydrocarbon chemical compounds which have open-chain molecules containing one double bond. The simplest is ethylene, $H_2C=CH_2$. The general formula of olefins is C_nH_{2n} . They are important industrially for their ability to form addition compounds: these include the well-known polymers POLYETHYLENE and PVC (polyvinyl chloride).

Oleic acid, organic chemical compound, formula $C_{17}H_{33}COOH$, having a long-chain molecule which is unsaturated (containing a double bond). It is the unsaturated acid found most commonly in edible oils and fats such as mutton fat.

Olfactory nerve, the nerve of SMELL, the name of one of the 12 pairs of cranial nerves present in all vertebrate animals. Its nerve cells (neurons) lie in the brain and their long shafts, or axons, extend to their sense receptors in the upper part of the nasal cavity. See also pp.142-143.

Olga, Saint (c.890-969), first Russian saint. The widow of the assassinated Prince Igor I of Kiev, she was regent for her son from 945 to 964. She was canonized for her unremitting attempts to bring Christianity to the Kievans; she herself was probably baptized in c.957. Olga showed little Christian forgiveness however, ordering her husband's murderers to be scalded to death.

Oligarchy, system of government in which power is concentrated in the hands of a few, who rule without the requirement of popular support and without external check on their authority.

Oligocene epoch, extent of geological time from about 38 to 26 million years ago. It is the third of five epochs of the Tertiary Period; during it the climate cooled. Many modern mammals evolved, including early elephants, man-like apes and *Mesohippus*, an ancestor of the modern horse. Only a few archaic mammals, such as titanotheres, survived into the epoch, and they became extinct before it ended. See also p.268.

Oligochaeta, class of ANNELID (segmented) worms, characterized by long, naked bodies bearing a few bristles on each segment. Earthworms are the best-known oligochaetes, but many are fresh-water worms as small as 1mm (0.025in) long. Giant Australian earthworms grow up to several metres long. See also p.19.

Oliphant, Margaret (1828-97), Scottish novelist, biographer and historical writer. Her best-known novels are *Salem Chapel* (1863) and *Miss Marjoribanks* (1866). Later works exhibit an interest in the occult.

Oliphant, Sir Mark (1901-), Australian nuclear physicist who did much work on the nuclear disintegration of LITHIUM. He was a member of the atomic bomb team at Los Alamos (1943-45) and became Australian representative on the UN Atomic Energy Commission in 1946.

Olivares, Gaspar de Guzman, Condé-Duque de (1587-1645), Chief Minister of PHILIP IV of Spain from 1621-43. The heavy taxes he levied to fight Portuguese

and Catalonian rebels brought about his downfall.

Olive, tree, shrub or vine and its fruit. The common olive tree, *Olea europaea*, is native to the Mediterranean region and is cultivated in other warm regions. It has leathery, lance-shaped leaves, a gnarled and twisted trunk and may live for more than 1,000 years. The fruit, which is picked green in an unripe condition or black and ripe, is bitter and inedible before processing; it must be treated with an alkaline solution and brine. Height: to 9m (30ft). Family Oleaceae. See also OLIVE OIL; pp. 710-711, 712-713.

Olivine, rare green mineral, of secondary origin, found in copper deposits. It is a hydrous arsenate (salt of arsenic acid) of copper.

Olive oil, yellowish liquid oil, containing oleic acid, obtained by pressing olives. It is used for cooking, as a salad oil, in the manufacture of soap and in medicine. It contains an extremely low proportion of the fatty acids.

Oliver, Isaac (c.1556-1617), French-born painter of miniatures who worked mainly in England. His work includes religious and Classical scenes as well as portraits of Tudor and Stuart gentry. He was a follower of Nicholas HILLIARD but used a more naturalistic style.

Oliver, King (1885-1938), us jazz cornetist, composer and pioneer jazz bandleader, real name Joseph Oliver. He formed King Oliver's Creole Jazz Band (1922), which became the leading exponent of Dixieland jazz and started the careers of many jazz musicians such as Louis ARMSTRONG. Oliver composed many classic blues and jazz songs including *The Canal Street Blues* and *The Chattanooga Stomp*, (with A. Picou).

Oliver Twist (1837-38), novel by Charles DICKENS about Oliver, an orphan who escapes from a workhouse to London and falls in with a gang of juvenile thieves led by Fagin, a master pickpocket. It is occasionally marred by sentimentality but succeeds in its criticism of the Poor Law and the institution of the workhouse.

Olives, Mount of, low range of hills E of Jerusalem, also called Mt Olivet. According to the Bible, Jesus went down from the Mt of Olives to make His triumphal entry into Jerusalem, returning there on the night of His betrayal by JUDAS ISCARIOT in the "garden" of GETHSEMANE. The Mt of Olives is named in Acts 1 as the place from which He ascended into Heaven, and today the Church of the Ascension stands on the spot where the event is believed to have occurred.

Olivier, George Borg (1911-), Maltese politician. He became Prime Minister as leader of the Maltese Nationalist party (1953-55), and, after acting as leader of the opposition (1955-58), became Prime Minister again (1962-71).

Olivier, Laurence Kerr, Baron Olivier of Brighton (1907-), British actor. He made his debut at Stratford-upon-Avon in 1922, as Katharine in *The Taming of the Shrew*. He was a leading actor by 1928, playing romantic roles (*Beau Geste*, 1929) and comic ones (*Private Lives*, 1930). In 1937 he joined the OLD VIC. He played Hamlet, Henry V and Macbeth in his first season, Iago in his second. He was director of the NATIONAL THEATRE (1963-73). He won an Academy Award for the film of *Hamlet* in 1949. He was the first actor to be created a life peer (1970).

Olivine, group of independent tetrahedral silicates [(Mg,Fe),SiO₄]. The group includes fosterite, tephroite, monticellite fayalite, and peridot. Olivine has orthorhombic system crystals, of usually granular masses. Its colours range among green, brown and grey and it is glassy and brittle. Hardness 6.5-7; s.g. 3.3. See also p.258.

Olm, amphibian related to the SALAMANDER with degenerate eyes covered by skin. Olms inhabit the underground waters of limestone caves in SE Europe. Because they live in darkness, they lack skin pigmentation. The olm senses its prey by detecting currents or vibrations through the water. Species *Proteus anguineus*. See also p.64.

Olmec, one of the earliest known cultural periods of the pre-Columbian New World, developed by the Olmec Indians (c.1100-800 bc). They carved in jade and stone and their artefacts include stone altars and pillars and perfectly ground concave mirrors of polished haematite. Their homeland seems to have been central Mexico, from the Pacific coast of Guerrero to Veracruz, but evidence of their culture has been found as far as central Guatemala. See also pp.1178, 1364-1365.

Olmedo, José Joaquín (1780-1847), Ecuadorian poet and political figure. He celebrated Latin American independence in his best-known work, *La Victoria de Junín: Canto a Bolívar* (1825). He was elected the first Vice-president of Ecuador in 1830, and sought to promote Latin American culture, particularly that of the indigenous Indians.

Olmstead, Frederick Law (1822-1903), us landscape architect. He designed Central Park in New York City (1857-61) and the Capitol grounds in Washington, DC (1874-95). He helped to acquire the Yosemite Valley, California, for a national park.

Olongapo, city on Luzon, the Philippines, on the NE coast of Subic Bay. It has excellent port facilities and was formerly the site of a US naval base. The Japanese occupied the city during WWII. Pop. (1975 est.) 134,453.

Olympia, city of ancient Greece, one of its most important religious centres. Games held there (776 BC-AD 393) every fourth year in honour of ZEUS gave rise to the modern idea of the OLYMPIC GAMES. Buildings included the Temple of Zeus, which housed the elaborately adorned statue of the god by PHIDIAS, one of the SEVEN WONDERS OF THE WORLD. Archaeological excavations have unearthed great temples, the celebrated statue of Hermes of Praxiteles, other buildings and the stadium. By repute there was also a hippodrome, which has not been found.

Olympia (1863), oil painting by Édouard MANET, now in the Louvre, Paris. The painting caused a scandal when first exhibited in 1865; its portrayal of a nude woman bypassed all the artistic conventions of the time in showing her as a self-conscious individual, whose nakedness was overtly sexual and in no way idealized.

Olympic Games, the world's major international amateur athletic competition held every four years. The games were first celebrated in 776 BC in OLYMPIA, Greece and were held every four years until 393 AD when they were abolished by the Roman Emperor. They originated from a 200m running race and were gradually extended to include a wide variety of events. The modern summer games were initiated by Baron de Coubertin and were first held in Athens, Greece, in 1896. Women did not compete until 1912. In 1924 a separate Olympics was held for winter sports. The games were cancelled during WWI and WWII. Summer events include archery, basketball, boxing, canoeing, cycling, diving, equestrian sports, fencing, field hockey, handball, judo, gymnastics, polo, rowing, soccer, shooting, swimming, athletics (including the DECATHLON and modern PENTATHLON), volleyball, water polo, weightlifting, wrestling and yachting. Winter events include the biathlon, bobsledding, ice hockey, skating and skiing. Additionally, the host country may name a sport of its choice. The control of the games is vested in the International Olympic Committee, which lays down the rules and chooses venues. Although contestants represent countries, the events are officially competed for individually. A gold medal is awarded for first, a silver for second and a bronze for third. The Modern Olympics are a costly, international event that is broadcast and televised, and held in a different country every four years.

Olympics of the Paralyzed. See PARAPLEGIC GAMES.

Olympio, Sylvanus (1902-63), Togolese politician. He was President of the Colonial Assembly (1946-52) and Premier (1958-60). He led the fight for Togo's

Olives live longer than most other trees and bear fruit once every two years.

King Oliver (trumpet) and Louis Armstrong (slide trumpet) in the Creole Jazz Band.

Sir Laurence Olivier in the title role in his 1948 film production of *Hamlet*.

Olympia; excavations reveal the remains of many historic buildings and statues.

Olympus

Onagers have, in some areas, become rare or even extinct through overhunting.

One Day in the Life of Ivan Denisovich: Tom Courtenay in the film version.

Eugene O'Neill said his task was "to dig at the roots of the sickness of today".

Lars Onsager became a professor at Yale and an American citizen in 1945.

independence from France (1960). After independence he became the first President of the new republic in 1961. He was assassinated in January 1963, in the first successful army coup in Africa since the Sahara Desert.

Olympus, in Greek mythology, abode of the gods located on the summit of a mountain symbolized by Mt Olympus, the highest mountain in Greece. Beyond a cloud-gate guarded by the Horae (the seasons), dwelt the gods, each in his own palace, repairing to ZEUS' great hall to feast on AMBROSIA and NECTAR.

Omaha, port in E Nebraska, USA, on the Missouri River; the largest city in Nebraska. The area was ceded to the US government in 1854, and it developed rapidly as a supply depot for westward travellers, and later as an industrial centre. It was the capital of Nebraska Territory from 1854 to 1867. A leading livestock market and meat processing centre, it has oil refining, food processing industries, and manufactures farm machinery, ball-bearings, electric signs, paints and railway equipment. It is a major insurance centre. Pop. (1980) 312,929.

Oman, officially named the Sultanate of Oman, an independent Arab nation on the SE Arabian peninsula, on the Arabian Sea and the Gulf of Oman; until 1970 the British dependency of Muscat and Oman. A powerful state in the mid-19th century, it declined after the 1870s, coming under British influence as a dependency of the British Government of India. Oil is the principal export. Fishing is an important industry and sugar-cane, dates, olives and cereals are the main crops. The capital is MUSCAT. Area: 212,457 sq km (82,030 sq miles). Pop. (1980 est.) 820,000. See p.2115.
